The British Invasion refers to the fleet of British bands that floated in the wake of the Beatles' hysterical success when they burst upon America in January 1964. It is commonly acknowledged that Beatlemania was generated not only by their fresh new sound but also by certain historical factors which had nothing to do with the Beatles. The first great pop revolution, rock 'n' roll, had begun around 1954 with Bill Haley and the Comets' "Rock Around the Clock" and a string of hits by Elvis, but had died out quickly for a number of reasons: in 1957 Little Richard withdrew from rock to pursue religion; in March 1958, Elvis was drafted into the army; later that year, Jerry Lee Lewis's brief success came to a halt when it was discovered that he had married his 14-year-old cousin; on February 3, 1959, Buddy Holly, Ritchie Valens, and the Big Bopper died in a plane crash; and Chuck Berry was arrested in 1959 and imprisoned from 1962 to 1964. Thus rock was decimated. College students were getting interested in folk music, and a folk/pop hybrid spread to the mainstream through Peter, Paul and Mary and countless other folksinging trios. But there was nothing as visceral and exciting to appeal to youth as rock 'n' roll. The Beatles had been introduced to the American market through "Please, Please Me" in February 1963, and the album *Introducing the Beatles* in July on the Vee-Jay label. Neither made much impression upon youths. Things were good; America was on top of the world; and we did not need British pop. But this optimism, spearheaded by the young and promising President Kennedy, was shattered with his assassination in November 1963, leaving Americans in a state of shock and depression.

The Beatles burst upon this scene with the buoyant, exuberant sound of "I Want to Hold Your Hand," followed by an appearance on the "Ed Sullivan Show" on February 7, 1964. They followed up with a bewildering string of hits which chased away the clouds, and made Americans forget their troubles. It was partly their charming British accents, their quick, sharp wit, and group charisma which charmed Americans during interviews. The matching lounge suits and mop-top haircuts were also new and exciting. Superficial as these factors seem, they must have contributed to the overall effect of Beatlemania, considering the poor reception of the Vee-Jay offerings the previous year, when no television publicity had been provided to promote the Beatles' humor. But this time, their new American label, Capitol, dumped \$50,000 on a publicity campaign to push the Beatles.

Such an investment could only be made possible by their incredible success in England. Part of the reason Beatlemania and the attendant British Invasion were so successful is because the brew had been boiling in England for several years. But American record labels, confident of their own creations, ignored British pop, disdain-ing it as an inferior imitation of their own. They felt that England did not have the right social dynamics: they lacked the spirit of rebellion and the ethnic/cultural diversity which spawned American rock 'n' roll.

British youth partly shared this view of their own culture. They had an inferiority complex towards American rock 'n' roll and

American youth, which they perceived as more wild and carefree. This image was conveyed to them through such cult films as *The Wild One* and *Rebel without a Cause*. But the British also responded to the music of black Americans, and embraced the blues more readily than most Americans, who were often ignorant of the blues and still called it “race music.” Among British youth, particularly the art school crowd, it became fashionable to study the blues devotedly, form bands, and strive for the “purity” of their black idols (this “purist” attitude was analogous to the “authenticity” fetish of folk music around the same period). Hundreds of blues bands sprouted up in London. Most significant were John Mayall’s Bluesbreakers, Cyril Davies’ Allstars, and Alexis Korner’s Blues Incorporated. Each of these seminal bands produced musicians who would move on to make original contributions to rock. Bluesbreakers provided a training ground for Eric Clapton and Jack Bruce, who went on to form Cream; Peter Green, John McVie, and Mick Fleetwood, who later formed Fleetwood Mac; and Mick Taylor, who eventually replaced Brian Jones in the Rolling Stones. The All-Stars boasted Eric Clapton, Jimmy Page, and Jeff Beck, who all passed through the loose-knit band before, during, or after their stints with the Yardbirds. Blues Incorporated hosted Mick Jagger, Keith Richards, Brian Jones, and Charlie Watts, all of whom eventually formed the Rolling Stones.

In the early 1960s the Rolling Stones and the Animals clung to the purist image common among white blues bands, although they didn’t really play pure, authentic blues. The Stones resisted the commercialism of the Beatles, until Lennon and McCartney wrote “I Wanna Be Your Man” for them, and showed them how easy it was to score a hit record. The rest of the British Blues scene took notes from the Beatles’ success. Unlike the early Stones, the Kinks and the Who were open to pop influences, and attracted the Mods as their followers. The Kinks and the Who were very similar in spirit. Both were searching for the same sound—something new, subversive, and edgy—but the Kinks beat the Who to it with the spastic simplicity of “You Really Got Me,” the hardest, most intense rock ever heard at that time. The Who rose to the challenge with “My Generation.” The Kinks broke into the American top ten long before the Who did, though the Who eventually surpassed them in popularity and artistry. However, the two bands displayed a remarkably parallel development throughout their careers.

The Yardbirds had started out as blues players, but Clapton was the only purist in the group. After he left in protest of their pop hit, “For Your Love,” the new guitarist, Jeff Beck, combined the guitar virtuosity of whiteboy blues with the avant-gardism of Swinging London, and transformed the Yardbirds into sonic pioneers. After an amazing but all too brief series of recordings which were way ahead of what anyone else was doing, the band mutated into Led Zeppelin, who carried the torch of innovation into the 1970s.

But most bands were less successful at merging their developing blues style with the pop appeal of American radio. Since the establishment held a firm hand over the BBC, most bands at the time (and there were thousands) developed in a club environment, with few aspirations of a pop career. They developed an essentially “live” style, designed to excite a crowd but not always suited for close, repeated listening on vinyl. Manfred Mann tried to maintain a dual identity by delivering pop fluff like “Doo Wah Diddy Diddy” to finance their more earnest pursuit of blues and jazz. Most British bands of the time attempted this double agenda of commercial success and artistic

integrity, with only the commercial side making it across the Atlantic. For Americans, the British Blues scene remained the “secret history” of the British Invasion for several years. The Beatles introduced this developing artform to a vast market of baby boomers who had not seen the movement growing, and they were flooded with a backlog of talent. The Beatles already had two albums and five singles in England when Capitol released “I Want to Hold Your Hand” in America. By April 1964, the Beatles filled the top five positions in the Billboard charts. It was this surplus that made the British Invasion seem so exciting, in spite of the fact that Americans were generally only exposed to the more commercial side of the movement, based on the record companies’ guesswork of what would sell in the States.

Thus the Beatles had both a short-term and long-term influence. They inspired countless imitators who cashed in on their success, and most of these turned out to be the one-hit wonders who comprised the bulk of the British Invasion. But they also proved to the more serious musicians that one could still be relevant and innovative in a pop format. They broke down the prudish “purity” of the British blues players and (with Dylan’s help) the insular “authenticity” of the American folkies. The British Invasion would have been a flash-in-the-pan phenomenon if it had not beckoned the blues and folk artists to come out and play.

But Americans couldn’t always tell the difference between the mere imitators and the artful emulators. The Zombies looked very promising with the haunting vocals and keyboard solos of “She’s Not There,” “Tell Her No,” and “Time of the Season,” but they were never heard from again after their first album flopped. On the other hand, neither the Spencer Davis Group nor Them produced an impressive body of memorable recordings, but they became famous for their alumni, Steve Winwood and Van Morrison respectively. The Hollies started out with Beatlesque buoyancy in “Bus Stop” (1966) and then proceeded to snatch up any fad that came along, sounding suspiciously like Credence Clearwater Revival on “Long Cool Woman in a Black Dress.” Several tiers below them were Gerry and the Pacemakers, the Dave Clark Five, Herman’s Hermits, and the Searchers. The Searchers are sometimes credited for introducing the jangly, 12-string-guitar sound later associated with folk rock (though they didn’t actually play 12-string guitars!). Many of these bands didn’t even produce enough highlights to yield a decent Greatest Hits collection.

The British Invasion ended when the Americans who were influenced by the Beatles—Dylan, the Byrds, and the Beach Boys—began to exert an influence on the Beatles, around late 1965 when the Beatles released *Rubber Soul*. This inaugurated the great age of innovation and eclecticism in rock which yielded 1966 masterpieces: the Beatles’ *Revolver*, the Stones’ *Aftermath*, the Yardbirds’ *Roger the Engineer*, and the Byrds’ *Fifth Dimension*. Henceforth the Beatles’ influence was less monopolizing, and British and American rock became mutually influential. The so-called Second British Invasion—led by newcomers Cream, Led Zeppelin, Jethro Tull, and the redoubled efforts of the Beatles, the Stones, and the Who—is a misnomer, since it ignores the burgeoning American scene led by the Velvet Underground, Frank Zappa, the Doors, the Grateful Dead, and so many others. The first British Invasion constituted an unprecedented influx of new music crashing upon a relatively stable musical continuum in America. The next wave of British rock, impressive as it was, mingled with an American scene that was equally variegated and inspired.

Broadway

If Hollywood is synonymous with the cinema, Broadway has come to signify the American theater. From its humble beginnings in downtown New York City in the early nineteenth century, to its heyday as the Great White Way in the mid-twentieth century, to its status as one of America's chief tourist attractions at the end of the twentieth century, Broadway has lured both aspiring actors and starstruck theatergoers for well over a century, becoming, in the

process, one of America's chief contributions to global culture. As the home of the American musical theater and the breeding ground for both popular and cutting-edge drama, Broadway has helped to nurture America's performing arts, even as it has enticed the greatest stars of England and Europe to its stages. In a nation that struggled long and hard to define itself and its artistic community as separate from yet equal to Europe, Broadway stands as one of America's greatest success stories.

As early as 1826, New York City had begun making a name for itself as the hub of the nascent American theater. That year, the Park Theatre featured the debut of the first two American-born actors who would go on to achieve fame and fortune in the theater—Edwin Forrest and James H. Hackett. Later that same year, the 3,000-seat Bowery Theatre opened; it was the first playhouse to have both a press agent and glass-shaded gas-jet lighting. The grand new venue would soon become legendary for the frequently rowdy working-class theatergoers it would attract. Over the next 20 years, Americans flocked to the New York theater district in increasing numbers, and in 1849, when the celebrated British actor William Macready brought

An enormous billboard overlooking Broadway in New York City, 1944.

his *Macbeth* to the Astor Place Opera House, Edwin Forrest supporters turned out en masse to protest the British star. On May 10th, a riot of over 1,000 resulted in the death of 22 people.

During the mid-nineteenth century, the biggest stars of the American theater were Fanny Kemble and Edwin Booth. Booth's 100 performances of *Hamlet* at the Winter Garden would stand as a record for the Shakespearean tragedy until John Barrymore's 1923 production. In addition to European classics, among the most popular of American plays was *Uncle Tom's Cabin*, which, in its first production, ran for 325 performances. But while both dramas and melodramas drew steady audiences, a new kind of revue called vaudeville, featuring burlesques and other musical entertainment, was beginning to come into fashion at the Olympic Theatre.

By 1880, Broadway had become the generic term for American theater. Shows would premiere in the New York theater district, which was then centered downtown at Union Square and 14th Street. From New York, road companies would then travel to other cities and towns with Broadway's hit shows. That year, the world's most famous actress, France's Sarah Bernhardt, would make her American debut at the Booth Theatre. Over the remaining 20 years of the nineteenth century, many of the great English and European actors and actresses such as Lillie Langtree, Henry Irving, and Eleanora Duse, would come to Broadway before making triumphal national tours. Among the most popular American stars of this period were Edwin Booth and his acting partner, Lawrence Barrett; James O'Neill, father of playwright Eugene O'Neill; and Richard Mansfield.

One of Broadway's most successful playwright-cum-impresarios of the late nineteenth and early twentieth century was David Belasco, who made his Broadway debut in 1880 with *Hearts of Oak*, a play that touted stage realism to the degree that the audience could smell the food being served in a dinner scene. European realists such as Henrik Ibsen were also well received in America. But Broadway devoted equal, if not more time, to the growing desire for "family entertainment," and vaudeville became all the rage.

In 1893, the American Theatre opened on 42nd Street, an area that had previously been residential. In ensuing years, the theater district would gradually inch its way uptown to Times Square. By the end of the century, most theaters were located between 20th and 40th Streets, and vaudeville had firmly established itself as the most popular form of family entertainment in America. In just 75 years, the American theater had set down such deep roots that acting schools had begun to open around the country; organizations for the welfare of aging theatrical professionals were formed; and the first periodical devoted exclusively to the stage, *Theatre Magazine*, was founded.

With the start of the twentieth century came the beginnings of the modern American theater. In 1900, three brothers from Syracuse, New York—Sam, Lee, and J.J. Shubert—arrived in New York City, where they quickly made their presence felt. They not only leased the Herald Square Theatre, but they put Broadway star Richard Mansfield under contract and hired booking agent Abe Erlanger. The Shuberts were following the lead of other producers and booking agents, such as the Theatre Syndicate and the United Booking Office, who had begun the theatrical monopolies that soon came to rule Broadway—and the nation. When the Shuberts brought Sarah Bernhardt to the United States for her farewell tour in 1905, the Syndicate blocked her appearance in legitimate theaters throughout the United States. As a publicity ploy, the Shuberts erected a circus tent in New York City, in

which the great star was forced to appear, garnering nationwide publicity, and \$1 million in profits. It was during this contentious period that actors began to realize that they needed to form an organization that would guarantee their rights, and in 1912, Actors Equity was founded.

Throughout the beginning of the century, feuds between competing producers, impresarios, theater circuits, and booking companies dominated Broadway, with such famous names as William Morris, Martin Beck, William Hammerstein, and the Orpheum Circuit all getting into the fray. But amidst all the chaos, the American theater continued to grow in both quality and popularity, as new stars seemed to be born almost every day. One of the most distinguished names on turn-of-the-century Broadway was that of the Barrymore family. The three children of actor Maurice Barrymore—sons Lionel and John and daughter Ethel—took their first Broadway bows during this period, rising to dazzling heights during their heyday.

Florenz Ziegfeld, another of the leading lights of Broadway, had made his debut as a producer in 1896. His *Follies of 1907* was the first of the annual music, dance, and comic extravaganzas that would come to bear his name after 1911. Other producers soon followed suit with similar revues featuring comic sketches and songs. Among the most popular of these were the Shuberts' *Passing Shows*, George White's *Scandals*, and Irving Berlin's *Music Box Revues*. Many composers who would go on to great heights found their starts with these revues, including Irving Berlin, Jerome Kern, and George Gershwin. But even more significantly, these revues catapulted singers and comedians to a new kind of national stardom. Among the household names featured in these reviews were Fanny Brice, Lillian Lorraine, Marilyn Miller, Bert Williams, Ed Wynn, Will Rogers, and Al Jolson.

By the 1910s, music had become an increasingly significant force on Broadway, and a slew of new young composers had begun to make their marks—including Cole Porter and George M. Cohan. By 1917, the United States had entered World War I, and Broadway embraced the war effort, with tunes such as Cohan's "Over There" and "You're a Grand Old Flag" becoming part of the national consciousness. But as Broadway began to hold increasing sway over popular taste, experimental theater groups such as the Provincetown Players began to crop up downtown near Greenwich Village, where brash young playwrights such as Eugene O'Neill and Edna St. Vincent Millay penned work that veered radically from Broadway melodrama and mainstream musical entertainment. These off-Broadway playhouses emphasized realism in their plays, and soon their experimentation began to filter onto Broadway.

In 1918, the first Pulitzer Prize for drama was awarded "for the original American play, performed in New York, which shall best represent the educational value and power of the stage in raising the standards of good morals, good taste, and good manners." And by 1920, Eugene O'Neill had his first Broadway hit when the Neighborhood Playhouse production of *The Emperor Jones* moved to the Selwyn Theatre. In 1921, he would win his first Pulitzer Prize for drama for *Anna Christie*. He would win a second Pulitzer in the 1920s—the 1927 prize for *Strange Interlude*. The new realism soon came to peacefully coexist with melodrama and the classics, as the acting careers of such leading ladies as Laurette Taylor, Katherine Cornell, and Eva Le Gallienne, and husband-and-wife acting sensations Lynn Fontanne and Alfred Lunt flourished.

Eugene O'Neill's 1921 "Negro drama," *The Emperor Jones*, also heralded a remarkable era of the American theater. Inspired by

the burgeoning theatrical movement of Ireland, a powerful African-American theater movement had begun to develop during the late 1910s and the 1920s. Plays about the “Negro condition” soon found their way to Broadway and a number of significant African-American stars were born during this era. Chief among these were the incomparable Paul Robeson and Ethel Waters. But with the onslaught of the Great Depression, American concerns turned financial, and African-American actors soon found that mainstream (white) Americans were more focused on their own problems, and many of these actors soon found they were out of work.

But despite the proliferation of superb drama on Broadway, musical theater remained the most popular form of entertainment during the 1910s, and by the 1920s a powerful American musical theater movement was growing in strength and influence under the guidance of Cohan, Kern, Gershwin, Porter, and the team of Richard Rodgers and Lorenz Hart. Songs from such 1920s musical comedies as Gershwin’s *Girl Crazy*, Porter’s *Anything Goes*, Rogers and Hart’s *A Connecticut Yankee* soon became popular hits, and performers such as Ethel Merman, Fred Astaire, and Gertrude Lawrence achieved stardom in this increasingly popular new genre.

In 1927, a new show opened on Broadway—one that would revolutionize the American musical theater. *Showboat*, written by Jerome Kern and Oscar Hammerstein II, was the first musical in which character development and dramatic plot assumed equal—if not greater—importance than the music and the performers. In this groundbreaking musical, serious dramatic issues were addressed, accompanied by such memorable songs as “Ol’ Man River” and “Can’t Help Lovin’ Dat Man.” Music, lyrics, and plot thus became equal partners in creating a uniquely American contribution to the musical theater. Over the next 40 years, Broadway witnessed a golden age in which the modern musical comedy became one of America’s unique contributions to the world theater. Richard Rodgers teamed up with Oscar Hammerstein II on such classic productions as *Oklahoma!*, *Carousel*, *South Pacific*, *The King and I*, and *The Sound of Music*. Another successful duo, Alan Jay Lerner and Frederick Loewe contributed *Brigadoon*, *My Fair Lady*, and *Camelot*. Other classic musicals of this era included Frank Loesser’s *Guys and Dolls*; Burton Lane and E.Y. Harburg’s *Finian’s Rainbow*; Cole Porter’s *Kiss Me, Kate*; Jule Styne’s *Gypsy*; and Leonard Bernstein and Stephen Sondheim’s *West Side Story*. This wealth of material naturally produced a proliferation of musical stars, including Mary Martin, Carol Channing, Chita Rivera, Gwen Verdon, Alfred Drake, Zero Mostel, Rex Harrison, Richard Kiley, Robert Preston, John Raitt, and Julie Andrews.

Although the American musical theater was flourishing, drama also continued to thrive on Broadway. Following the Crash of 1929, however, Broadway momentarily floundered, as Americans no longer had the extra money to spend on entertainment. And when they did, they tended to spend the nickel it cost to go to the movies. And, in fact, many of Broadway’s biggest stars were being lured to Hollywood by large movie contracts and the prospect of film careers. But by 1936, the lights were once again burning brightly on the Great White Way—with playwrights such as Lillian Hellman, Maxwell Anderson, John Steinbeck, Noel Coward, Thornton Wilder, Clifford Odets, and William Saroyan churning out critically-acclaimed hits, and American and European actors such as Helen Hayes, Sir John Gielgud, Jose Ferrer, Ruth Gordon, Tallulah Bankhead, and Burgess Meredith

drawing-in enthusiastic audiences. A new generation of brash young performers such as Orson Welles, whose Mercury Theater took Broadway by storm during the 1937-38 season, also began to make their mark, as Broadway raised its sights—attempting to rival the well-established theatrical traditions of England and the Continent.

By the start of World War II, Broadway was booming, and stars, producers, and theatergoers alike threw themselves into the war effort. The American Theatre Wing helped to organize the Stage Door Canteen, where servicemen not only were entertained, but also could dance with Broadway stars and starlets. Throughout the war, Broadway stars entertained troops overseas, even as hit shows such as *Oklahoma!*, *This is the Army*, *The Skin of Our Teeth*, *Life with Father*, and *Harvey* entertained theatergoers. But change was afoot on the Great White Way. After the war, New York City was flooded with GIs attending school on the U.S. government’s dime. Young men and women flocked to the city as the new mecca of the modern world. And amidst the thriving art and theater scenes, a new breed of actor began to emerge during the late 1940s and throughout the 1950s, trained in the Stanislavski-inspired method by such eminent teachers as Lee Strasberg and Stella Adler. Among these young Turks were future film and theater stars Marlon Brando, Montgomery Clift, James Dean, Paul Newman, Joanne Woodward, and Kim Stanley. Soon a whole new kind of theater took form under the guiding hand of hard-hitting directors such as Elia Kazan and through the pen of such playwrights as Tennessee Williams, whose passionate realism in hit plays such as *Cat on a Hot Tin Roof*, *The Glass Menagerie*, and *A Streetcar Named Desire* changed the face of the American theater.

In 1947, the American Theatre Wing created the first Tony awards—named after Antoinette Perry—to honor the best work on Broadway. But by the 1950s, the burgeoning television industry had come to rival Broadway and Hollywood in influence and popularity—and soon had superseded both. Statistics revealed that less than two percent of the American public attended legitimate theater performances. But Broadway continued to churn out hit musicals at the same time that it remained a breeding ground for cutting-edge new American drama—such as that being written by Arthur Miller (*Death of a Salesman* and *The Crucible*). And, for the first time in almost thirty years, African Americans were finding work on the Great White Way; in 1958 playwright Lorraine Hansberry won the Pulitzer Prize for drama for *Raisin in the Sun*, while director Lloyd Richards made his Broadway debut.

On August 23, 1960, Broadway blacked out all its lights for one minute—it was the first time since World War II that all the lights had been dimmed. Oscar Hammerstein II had died; an era had ended. During the 1960s, Broadway continued both to expand its horizons as well as to consolidate its successes by churning out popular hits. After a rocky start, *Camelot*, starring Richard Burton and Julie Andrews, became a huge hit in 1960—the same year that a controversial production of Eugene Ionesco’s *Rhinoceros* opened on Broadway. Throughout the decade, mainstream entertainment—plays by the most successful of mainstream playwrights, Neil Simon, and musicals such as *A Funny Thing Happened on the Way to the Forum*, *Funny Girl*, and *Man of La Mancha* occupied equal time with radical new work by playwrights such as Edward Albee (*Who’s Afraid of Virginia Woolf*) and LeRoi Jones. By late in the decade, the new mores of the 1960s had found their way to Broadway. Nudity, profanity, and homosexuality were increasingly commonplace on

stage, following the success of such hit shows as *Hair* and *The Boys in the Band*. A slew of musicals aimed at the younger generation, incorporating new sounds of soft rock, followed with Stephen Schwartz's *Godspell*; Andrew Lloyd Webber and Tim Rice's *Jesus Christ, Superstar*; and the Who's *Tommy*.

Meanwhile, avant-garde English and European dramatists such as Harold Pinter, Tom Stoppard, and Samuel Beckett brought their radical new work to Broadway, even as a new kind of musical—the concept musical, created by Stephen Sondheim in such hits as *Company* and *Follies*—took the American musical theater in a whole new direction. In this new form of a now time-honored American tradition, narrative plot was superseded by songs, which furthered serial plot developments. Other successful musicals of the type were Kander and Ebb's *Cabaret* and *Chicago*, and Michael Bennett's immensely popular *A Chorus Line*. During the 1970s, two producer-directors who had begun working in the mid-1950s rose to increasing prominence—Hal Prince, who was the guiding hand behind most of Sondheim's hit musicals; and Joseph Papp, whose Public Theatre became the purveyor of New York's high brow and experimental theater.

With the election of President Ronald Reagan in 1980 came an era of conservatism in which Broadway became the virtual domain of two men—composer Andrew Lloyd Webber and producer Cameron Macintosh. *Les Misérables*, *Cats*, *Evita*, *Phantom of the Opera*, *Sunset Boulevard*, and *Miss Saigon* were among the most successful of the mega-musicals that took over Broadway for more than decade-long runs. At the same time, however, Broadway was hit by the AIDS epidemic, which from 1982 on began to decimate its ranks. Called to activism by the apathy of the Reagan administration, the Broadway community began to rally behind the gay community. In plays from this period such as *Torch Song Trilogy*, *Bent*, *M. Butterfly*, and *La Cage aux Folles*, homosexuality came out of Broadway's closet for good. And during the decade, increasing numbers of African-American actors, playwrights, and plays found a permanent home on the Great White Way—from the South African-themed plays of Athol Fugard, to the Pulitzer Prize-winning work of August Wilson, to musicals about the lives of such musicians as Fats Waller and Jelly Roll Morton. Broadway also became increasingly enamored with all things English during the 1980s—from the epic production of *Nicholas Nickleby*, to the increasing presence of top English stars such as Ian McKellen, to the increasing infatuation with the mega-musicals of Andrew Lloyd Webber. But homegrown playwrights such as David Mamet, Neil Simon, John Guare, and August Wilson nonetheless continued to reap the lion's share of the critic's awards, including Pulitzers, New York Drama Critic's Circle, and Tonys.

In the late 1980s, a new phenomenon hit Broadway when Madonna starred in *Speed the Plow*. In her critically acclaimed performance, the pop and film star boosted Broadway box office sales to such a degree that producers soon began clamoring to find Hollywood stars to headline their plays. Throughout the 1990s, as the mega-musicals of Andrew Lloyd Webber, and popular revivals such as *Damn Yankees*, *Guys and Dolls*, and *Showboat* dominated the box office, Broadway producers sought to make profits by bringing in big names to bolster sales. Over the course of the decade, Hollywood stars such as Kathleen Turner, Robert De Niro, Nicole Kidman, and Glenn Close opened plays and musicals on the Great White Way. But the district received a multi-billion dollar facelift when Disney came into the picture, creating a showcase for its hugely successful musical

ventures such as *Beauty and the Beast* and *The Lion King*. But despite what many critics saw as the increasingly commercialization and suburbanization (playing to the tourists) of Broadway, powerful new voices continued to emerge in the plays of Wendy Wasserstein (*The Heidi Chronicles*), Tony Kushner (*Angels in America*), and Jonathan Larson (*Rent*).

At the millennium, Broadway remains one of America's singular contributions to both high and popular culture. Despite the puissance of the film and television industries, the lure of the legitimate theater remains a strong one. Broadway is at once a popular tourist attraction and the purveyor of the tour de force that is the theater. With its luminous 175-year history sparkling in America's memory, Broadway can look forward to a new century filled with change, innovation, extravaganza, and excess—as the continuing mecca of the American theater.

Brokaw, Tom (1940—)

As the anchor on *NBC Nightly News*, Tom Brokaw has a history of getting there first in the competitive world of network newscasting. He won the Alfred I. Dupont Award for the first exclusive one-on-one interview with Mikhail Gorbachev in 1982, and was the only anchor on the scene the night the Berlin Wall collapsed. He was also first to report on human rights abuses in Tibet and he conducted an exclusive interview with the Dalai Lama. From the White House to the Kremlin, Brokaw has witnessed and reported on many of the twentieth century's biggest events.

Tom Brokaw

Born in Bristol, South Dakota, in 1940, the son of Anthony (Red) and Jean Brokaw, he moved often as the family followed his father, a construction worker, who built army bases and dams during the 1940s. His high school years were spent in Yankton, South Dakota, where he first faced television cameras, appearing with a team of students on *Two for the Money*, a network game show. While a student he began his broadcasting career as a disc jockey on a Yankton radio station and experienced one of his most embarrassing moments. He was asked to interview a fellow student, Meredith Auld, the new Miss South Dakota, whom he been dating. Tom was so excited that he forgot to turn off the mike when the interview was over, and all the Yankton listeners heard his sweet nothings broadcast over the air.

He spent his freshman year at the University of Iowa, where he says he “majored in beer and coeds.” He transferred to the University of South Dakota and in his senior year began working at KTIV-TV in Sioux City. After graduation, Tom married Meredith and applied for a job at KMTV in Omaha. They offered him \$90 a week, but Tom held out for \$100. Explaining why he needed the extra ten dollars, Tom said, “I was the first college graduate in my family, just married, and with a doctor father-in-law a bit unsure about his new son-in-law’s future.” The station finally agreed to his terms on the condition that he would never be given a raise. “And they never did,” he added.

In 1976 Tom moved into the big time in the Big Apple, replacing Barbara Walters as the host of NBC’s *Today Show*. As he tells it, he “made a lot of friends” on the program, but he always knew that his “real interest was in doing day-to-day news exclusively.” After six

successful years on the morning show, he got his wish. He and Roger Mudd began co-anchoring the *NBC Nightly News* after John Chancellor retired in 1981. Within a year Mudd left the show, leaving Brokaw as the sole anchor, and in 1982 his reputation rose in the wake of his much publicized interview with Gorbachev.

Television critics have complimented Brokaw’s low key, easy-going manner, comparing it with Dan Rather’s rapid-fire delivery and Peter Jennings’s penchant for showmanship. He is particularly noted for his political reporting, having covered every presidential election since 1968 and having served as his network’s White House correspondent during the Watergate era. He has also shown versatility in other network assignments, heading a series of prime-time specials examining some of the nation’s most crucial problems and acting as co-anchor on *Now with Tom Brokaw and Katie Couric*.

Brokaw is also author of *The Greatest Generation*, a book published in 1998 about his personal memories of that generation of Americans who were born in the 1920s, came of age during the Great Depression, and fought in World War II. He also has written for the *New York Times* and the *Washington Post*, as well as *Life Magazine*. He is best known, however, as the anchor who reported news from the White House lawn, the Great Wall of China, the streets of Kuwait during Operation Desert Storm, the rooftops of Beirut, the shores of Somalia as the American troops landed, and, most famous of all, the Berlin Wall the night it collapsed.

—Benjamin Griffith

Bronson, Charles (1921—)

Charles Bronson is an American original. He is one of the earliest and most popular tough guys. His lengthy career and dozens of film credits make him a critical figure in the development of the action-adventure film. His steely-eyed stare and his signature moustache are themselves cultural icons. Although Bronson’s career began on the stage and he once had his own television series, Bronson is probably best known for his role as Paul Kersey in the *Death Wish* series of films.

Born into grinding poverty as Charles Buchinski, the eleventh of fourteen children, Bronson spent many of his formative years in the coal mining town of Ehrenfield, Pennsylvania. After working to help support his family in the mines and after serving his country as a tail gunner on a B-9 bomber in World War II, Bronson moved to Atlantic City. It was on the Jersey Shore that Bronson developed a taste for acting while he roomed with fellow star-to-be Jack Klugman. Dreams

Charles Bronson (left) and Henry Fonda in a scene from the film *Once Upon a Time in the West*.

of a career on the stage took Bronson to New York, Philadelphia, and then to Pasadena, where he was spotted in 1950 playing the lead in the play *Command Decision*.

From early on, Bronson was regularly cast in roles that fit his arduous background. The post war American penchant for war films and westerns was well suited for an actor with Bronson's history and image. Often times he was cast in the role of a gritty gunslinger or rugged military man. Chief among such roles were his performances in *Machine Gun Kelly*, *The Dirty Dozen*, *The Magnificent Seven*, and as Natalie Wood's punch-happy boyfriend in *This Property is Condemned*.

Like many other American cultural phenomena, Bronson's career did not hit the big time until he won over European audiences. Though he had been working steadily stateside, Bronson's film career got its biggest boost in the late 1960s, when he began working in Europe. It was on the continent that his particular brand of American charisma gained its first massive audience. His triumphs in Europe rejuvenated Hollywood's interest in Bronson and movie offers began rolling in. His return to Hollywood was sealed with his role in the

thriller *Rider on the Rain*, which helped him win a Golden Globe award for most popular actor.

Bronson's film career culminated in 1974 with the release of *Death Wish*, a movie about a mild mannered architect out to avenge the murder of his wife. The movie has been credited with spawning an entire genre of vigilante action films that draw on the frustrations of the white middle class over urban crime and violence. Four sequels would follow, each filmed in the first half of the 1980s when middle class paranoia about drugs and crime was perhaps at an all-time peak. Hollywood has often sought to replicate the sort of success Paramount Pictures had with *Death Wish*. Dozens of films featuring ordinary-man-turned-vigilante were churned out in the wake of this film. Key among the early entrants into this subgenre was the *Walking Tall* series of films. Perhaps the last and culminating film among these angry-white-male films was the Michael Douglas flick, *Falling Down*, which caused a great deal of controversy over its racially charged depiction of whites, blacks, and Asians.

Charles Bronson is one of the few Hollywood actors who can legitimately claim success in five decades. The evolution of his

characters in the 1970s mark Bronson as one of the few actors to successfully make the leap from westerns and war movies, into the modern, urban-oriented action-adventure era. Though he is largely considered a tough guy, he has played many other roles. Frequently lost in popular memory was Bronson's television series *Man With A Camera*, which ran for two years in the late 1950s. Bronson has also starred in several comedies, a musical, and some children's fare. In the 1990s Bronson has returned to the small screen and has had co-starring roles opposite Christopher Reeves, Daniel Baldwin, and Dana Delany in several made-for-TV productions, including *Family of Cops*.

The Brooklyn Dodgers

As the first team to break baseball's color barrier with the signing of Jackie Robinson in 1947, the Brooklyn Dodgers captured America's imagination during the 1950s, when they fielded a brilliant team of men with nicknames like Duke, The Preacher, PeeWee, and Skoonj. Unable to beat their cross-town rivals, the New York Yankees, in World Series after World Series, the Dodgers became media darlings—a team of talented, loveable, but unlucky underdogs. Cheered on by their legendary loyal fans, the Dodgers finally beat the Yankees in 1955, only to break Brooklyn's heart by leaving for Los Angeles two years later.

The borough of Brooklyn first fielded a baseball team in 1849, as members of the Interstate League and then the American Association. When Brooklyn joined the National League in 1890, the team was nicknamed the Bridegrooms. The club won the pennant that year, but by the end of the decade they had gone through six different managers and had not won another championship. They had, however, acquired a new nickname which finally stuck. As Roger Kahn notes in *The Boys of Summer*, "Brooklyn, being flat, extensive and populous, was an early stronghold of the trolley car. Enter absurdity. To survive in Brooklyn one had to be a dodger of trolleys." Thus, the team became the Trolley Dodgers, which was later shortened to the Dodgers.

The Dodgers reclaimed the National League pennant in 1900, only to see their championship team disperse when many of their players joined the newly formed American League the following year. The team's ownership was also in a state of flux. But a young employee of the team, Charles Ebbets, managed to purchase a small amount of stock and gradually work his way up the ladder. Ebbets eventually took over the team and secretly began buying up land in Flatbush. In 1912, he built Ebbets Field, a gem of a ballpark, which would provide baseball with its most intimate setting for over 40 years.

At first it seemed as if the new field would only bring the team good luck. In 1916, the Dodgers won the pennant and then played in

its first World Series. Managed by the dynamic Wilbert "Uncle Robbie" Robinson and led by the incredible hitting of Casey Stengel, the Dodgers nonetheless lost the series to the Boston Red Sox that year, whose team featured a young pitcher named Babe Ruth.

In 1920, the Dodgers took the pennant again, only to lose the series to the Cleveland Indians. Then, for the next two decades, the team fell into a miserable slump, despite being managed by such baseball legends as Casey Stengel and Leo "the Lip" Durocher. But the Dodgers never lost their loyal fans, for, as Ken Burns notes in *Baseball: An Illustrated History*, "No fans were more noisily critical of their own players than Brooklyn's—and none were more fiercely loyal once play began." The team's misfortunes were widely chronicled in the press, who dubbed the team the "Daffiness Dodgers." But sportswriters were oddly drawn to the team, despite its losing ways, and they portrayed the team as an endearingly bad bunch of misfits. The team soon became known as "Dem Bums" and their dismal record the subject of jokes in cartoons, newspaper columns, and even Hollywood movies.

In 1939, Hall of Fame broadcaster Red Barber became the distinctive voice of the Dodgers. He announced the first baseball game ever televised in August 1939. Two years later, president Larry McPhail and coach Leo Durocher had put together a great team, described by Ken Burns as "noisy, hard-drinking, beanballing, and brilliant on the basepaths." They finally won another pennant, and faced the Yankees in a World Series that would lay the groundwork for one of baseball's best rivalries. The Bronx Bombers, led by the bat of Joltin' Joe Dimaggio, won in five games. And, as Burns has written, "The Brooklyn *Eagle* ran a headline that would become a sort of Dodger litany in coming seasons: WAIT TILL NEXT YEAR."

Following the loss, the Dodgers brought in Branch Rickey from St. Louis to be their new general manger. One of baseball's greatest minds, Rickey, a devout, teetotaling Methodist, had revolutionized the game of baseball by developing the farm system. Rickey had long sympathized with the plight of African Americans, who were barred from major league baseball and played in their own Negro Leagues. He believed that "The greatest untapped reservoir of raw material in the history of the game is the black race. The Negroes will make us winners for years to come, and for that I will happily bear being called a bleeding heart and a do-gooder and all that humanitarian rot." But Rickey would be called a lot worse when he decided to break baseball's color barrier following World War II.

Rickey set out to find a great African American player "with guts enough not to fight back" against the abuse he would be bound to endure. He found Jackie Robinson, a brilliant young athlete from Southern California. In 1947, Robinson became the first African American to play major league baseball, when he broke in with the Brooklyn Dodgers. His presence on the field unleashed a torrent of racial hatred, but both Robinson and Rickey stuck to their guns. Baseball would never be the same.

In Robinson's first year in the big leagues, the Dodgers won the National League pennant and Robinson was voted baseball's first Rookie of the Year. On a multi-talented team that featured Duke Snider, Roy Campanella, Pee Wee Reese and Gil Hodges, Robinson's athleticism and competitiveness brought the Dodgers to new heights. Nonetheless, they lost the Series once again to the Yankees. And Brooklyn fans were forced once again to "Wait Till Next Year."

During the early 1950s, Walter O'Malley became president of the organization, Red Barber was joined in the booth by another future Hall of Famer broadcaster, Vin Scully, and the Dodgers fielded teams of such talent that they continued to win every season. The

Several members of the Brooklyn Dodgers after winning the first game of the 1952 World Series: (from left) Joe Black, Duke Snider, Chuck Dressen, Pee Wee Reese, and Jackie Robinson.

1953 team, dubbed the “Boys of Summer,” won a record 105 games. But they still could not win the World Series. As Roger Kahn has written, “You may glory in a team triumphant, but you fall in love with a team in defeat . . . A whole country was stirred by the high deeds and thwarted longings of The Duke, Preacher, Pee Wee, Skoonj, and the rest. The team was awesomely good and yet defeated. Their skills lifted everyman’s spirit and their defeat joined them with everyman’s existence, a national team, with a country in thrall, irresistible and unable to beat the Yankees.”

Finally, in 1955, the Dodgers did the unthinkable. They beat the Yankees in the World Series. Two years later, something even more unthinkable occurred. In what historian and lifelong Brooklyn Dodgers fan Doris Kearns Goodwin calls an “invidious act of betrayal,” team president Walter O’Malley moved the Dodgers to Los Angeles and an unforgettable era of baseball history came to a close.

Brooks, Garth (1962—)

Garth Brooks, the best-selling recording artist of all time, symbolizes the evolution of “new wave” country music in the late twentieth century. Brooks was popular in the late 1980s and throughout the 1990s with a blend of country, honky-tonk, and rock that signaled country’s move into the mainstream of popular music. From his first self-titled album in 1989, the Oklahoma singer achieved fame

Garth Brooks

beyond the traditional country listener base to achieve acceptance by a mass audience. Between 1989 and 1996 he sold more than sixty million albums. Prior to Brooks’s third album, *Ropin’ the Wind*, it was nearly impossible for a country artist to sell a million copies, and no country recording had ever premiered at the top of the pop charts. His stage performances, which were filled with many special effects such as fantastic lighting displays, explosions, and even a harness that allowed him to sing while swinging over his enthusiastic crowds, resembled the stadium rock extravaganzas of the 1970s. Brooks combined his onstage identity as the modern country superstar with an offstage persona emphasizing country music’s traditional values of family, patriotism, and devotion to one’s fans.

Troyal Garth Brooks, born on February 7, 1962, in Tulsa, Oklahoma, had a strong interest in country music from childhood. His mother, Colleen Carroll Brooks, had been a minor country singer in the 1950s who had recorded several unsuccessful albums for Capitol. After earning an athletic scholarship to Oklahoma State University for his ability with the javelin, Brooks began singing in Stillwater clubs where he had worked as a bouncer. In 1986, he married Sandy Mahl, a woman he had once thrown out of a bar after a restroom altercation. The couple moved to Nashville in 1985 after Brooks’s graduation with an advertising degree. The young singer’s initial attempt to find fame in the world of country music was a complete failure, and the pair returned to Oklahoma after a mere twenty-three hours in Nashville. Two years later, a more mature Brooks returned to the country music capital and began his career by singing on new songwriter’s demo tapes. By 1988, he had been signed by Capitol Records and his first single “Much Too Young (To Feel This Damn Old)” earned much popular acclaim. His subsequent singles—“If Tomorrow Never Comes,” “Not Counting You,” and “The Dance”—each became number-one hits and marked Brooks’s rising crossover appeal.

By 1992, Garth Brooks was a true popular culture phenomenon. He had a string of hit songs and a critically praised network television special (*This Is Garth Brooks*), and he had sold millions of dollars worth of licensed merchandise. *Forbes* magazine listed him as the thirteenth-highest-paid entertainer in the United States, the only country music performer to have made the ranking. Unlike previous country stars, such as Johnny Cash, Kenny Rogers, and Dolly Parton, Brooks made country music fashionable to those beyond its core constituency, a circumstance he credits to the diversity of his early musical influences. Among those whom Brooks cites as having affected his style are such diverse artists as James Taylor, Cat Stevens, John Denver, the Bee Gees, and even some heavy-metal bands. His expanded appeal also stems from his choice not to limit his songs to the traditional country music themes. Brooks’s “We Shall Be Free” is an anthem for the oppressed for its advocacy of environmental protection, interracial harmony, and the acceptance of same-sex relationships. His most controversial work of the period, “The Thunder Rolls,” dealt with the issues of adultery, wife beating, and revenge. Brooks’s desire to expand country presentation and subject matter attracted a sizable audience unknown to earlier country performers. Brooks is considered the leader of a new wave of country vocalists including Travis Tritt, Clint Black, and Alan Jackson.

While Brooks expanded country’s scope, he carefully worked to maintain his image as a humble country performer, endorsing various charities and repeatedly professing his overwhelming devotion to his family. In 1991, he considered forsaking his career to become a full-time father. Brooks’s most popular offstage act, however, was his

devotion to his fans: he signed hundreds of autographs after each show and, most importantly, demanded that his ticket prices remain affordable to the average person.

Few performers in any genre can claim the crossover success exhibited by Garth Brooks in the 1990s. His domination of the country and pop charts proved that “country” was no longer a niche format but one acceptable to mainstream audiences. His achievements were recognized in March, 1992, when he was featured on the cover of *Time*, which credited him for creating “Country’s Big Boom.” His ability to meld traditional country music sounds and sensibilities with pop themes allowed country to advance to new heights of popularity.

Brooks, Gwendolyn (1917—)

Poet Gwendolyn Brooks’s writings explore the discrepancies between appearance and morality, between good and evil. Her images are often ironic and coy; her work is distinctly African American. She won the Pulitzer Prize in 1950, the first time an African American writer received the award. Born in Topeka, Kansas, Gwendolyn Brooks published her first poem at age 13. By 1941 she had moved to Chicago and began studying at the South Side Community Art Center. In the 1960s she turned to teaching until 1971. More recently, she became Illinois Poet Laureate and an honorary consultant in American literature to the Library of Congress. Her publications include *Street in Bronzeville* (1945), *Annie Allen* (1950), *Maud Martha* (1953), *In the Mecca* (1968), and *Report from Part One* (1971).

Kent, George E. *A Life of Gwendolyn Brooks*. Lexington, Kentucky, University Press of Kentucky, 1990.

Brooks, James L. (1940—)

Emmy Award-winning television writer-producer, James L. Brooks made an extraordinary feature film debut in 1983 with *Terms of Endearment*, winning five Academy Awards, including Best Screenplay, Director, and Picture. Three further films (including the Oscar-nominated *Broadcast News*, 1987) followed at wide intervals, while Brooks confined himself to wielding his considerable influence

on popular movie and television culture behind the scenes. As a producer of such hits as *Big* (1988), *The War of the Roses* (1989), and *Jerry Maguire* (1996), he confirmed his acute instinct for material with strongly defined characters and popular appeal. Born in New Jersey and educated at New York University, the former television newswriter made his major breakthrough with the creation of *The Mary Tyler Moore Show* before producing such high-rating series as *Taxi*, *Cheers*, *Lou Grant*, and *Rhoda*. In 1997, he returned to filmmaking, writing, producing, and directing the Oscar-nominated *As Good as It Gets*.

Brooks, Louise (1906-1985)

Louise Brooks, American silent film actress and author, achieved only moderate fame in her film career, but emerged as the focus of a still-growing cult of admirers in the 1970s, sparked by the renewed critical interest in her performance as the doomed hedonist Lulu in G. W. Pabst’s *Pandora’s Box* (1929). The publication of critic Kenneth Tynan’s *New Yorker* article “The Girl in the Black Helmet” captured the imagination of readers who appreciated her caustic wit and her tales of Hollywood, and also romanticized her hermit-like retreat in Rochester, New York, after a life of alcoholism and excess. Her sleek dancer’s body and trademark black bob remain an icon of high style and eroticism. She inspired two comic strips as well as numerous film and literary tributes. Brooks became a bestselling author in the 1980s with her memoir *Lulu in Hollywood*.

—Mary Hess

Brooks, Mel (1926—)

A woman once accosted filmmaker Mel Brooks and angrily told him that his 1968 comedy *The Producers* was “vulgar.” “Madame,” he said with an air of pride, “it rises below vulgarity.” Mel Brooks spent a career as a comedy writer, director, and actor offending vast segments of his audience, while simultaneously making them laugh uproariously. His series of genre spoofs meticulously recreated the feel and look of westerns, horror films, and sci-fi classics, only to upend clichés with an assortment of double-entendres, anachronisms, musical production numbers, Jewish American references, and jokes

Mel Brooks

about bodily functions. The creators of such 1990s phenomena as *South Park* and *There's Something About Mary* are direct descendants of Brooks' comic sensibility.

Brooks was born Melvin Kaminsky on June 28, 1926 in Brooklyn, New York. A boyhood friend was drumming legend Buddy Rich, who taught Brooks how to play. Brooks performed at parties and, during the summers, at largely Jewish resorts in the Catskills in upstate New York. After World War II, Brooks started performing comedy while social director of Grossinger's, the most prestigious Catskills resort, where he became friends with comedian Sid Caesar.

In 1950 Brooks joined the writing staff of NBC television's variety series *Your Show of Shows*, starring Caesar and Imogene Coca. The anarchy of these writing sessions was immortalized in Carl Reiner's 1960s sitcom *The Dick Van Dyke Show* and Neil Simon's 1994 play *Laughter on the 23rd Floor*. Nobody, Caesar's colleagues agreed, was more anarchic than Brooks. When *Your Show of Shows* lost an Emmy for best writing, Brooks stood up from his seat in the auditorium and yelled, "Nietschke was right—there is no God!"

Reiner and Brooks would often improvise comedic characters during the manic writer's meetings. One morning, Reiner introduced Brooks as the only living witness to Christ's Crucifixion. The persona of the "2000 Year Old Man" was born. What began as a private joke eventually became the subject of five comedy albums over a 35 year span. Brooks' character had seen it all and done it all over two millenia, yet his needs and demands were small. "I have over 42,000 children," he once proclaimed, "and not one comes to visit." The Stone Age survivor claimed that the world's first national anthem began, "Let 'em all go to hell, except Cave Seventy Six!"

With Buck Henry, Brooks created the television sitcom *Get Smart!*, a savage sendup of the James Bond films, in 1965. Maxwell Smart (Don Adams) was a thorough incompetent who could not master his collection of Bond-like gadgets, such as a shoe-phone. The bad guys were usually caught with the aid of Smart's truly smart assistant, Agent 99. The series lasted five seasons.

During the 1950s and 1960s Brooks worked on several unsuccessful Broadway shows, and he began wondering what would happen if two guys deliberately decided to produce the worst musical ever. The result was the 1968 classic *The Producers*, Brooks' directoral debut. Zero Mostel and Gene Wilder played the title characters who decide to stage "Springtime for Hitler," a lighthearted toe-tapper about the Nazi leader (complete with dancing SS troopers). Mostel and Wilder collect 100 times more capital than needed. To their dismay, "Springtime for Hitler" becomes a smash hit and the pair, unable to pay their many backers, wind up in jail. The film became a cult hit, and Brooks won an Oscar for Best Screenplay.

Blazing Saddles (1973) inverted virtually every Western movie cliché. Black chain gang workers are ordered to sing a work song—and quickly harmonize on Cole Porter's "I Get a Kick Out of You." Cowboys eating endless amounts of beans by the campfire begin loudly breaking wind. The plot had black sheriff (Cleavon Little) unite with an alcoholic sharpshooter (Wilder) to clean up a corrupt Old West town. Brooks himself appeared in two roles, a Yiddish Indian chief and a corrupt governor. The film offended many (some thought the village idiot, played by Alex Karras, insulted the mentally retarded) but became the highest grossing movie comedy of all time.

Brooks followed with what most consider his masterpiece, *Young Frankenstein* (1974). Gene Wilder starred as the grandson of the famous doctor, who himself attempts to bring a dead man (Peter Boyle) to life. Once resurrected, Boyle ravishes Wilder's virginal fiancée (Madeline Kahn), to her ultimate pleasure. Wilder devises a brain transplant with Boyle; Wilder gives Boyle some of his intellect, while Boyle gives Wilder some of his raging libido. The film was beautifully shot and acted, and the image of Peter Boyle as the Frankenstein monster in top hat and tails singing "Putting on the Ritz" to an audience of scientists ranks as one of the most inspired in cinematic history.

Silent Movie (1976) was the first Hollywood silent movie in four decades. Brooks, Marty Feldman, and Dom DeLuise played film producers trying to sign film stars (including Paul Newman, Burt Reynolds, Liza Minelli, and, Brooks' real-life wife, Anne Bancroft) to appear in their silent comedy. *High Anxiety* (1978) satirized Hitchcock films, starring Brooks as a paranoid psychiatrist. *History of the World, Part One* (1981) sent up historical epics; the most memorable scene was a musical comedy number set during the Inquisition, ending in Busby Berkeley style with nuns rising from Torquemada's torture tank atop a giant menorah. Brooks continued his series of movie satires during the 1980s and 1990s. *Spaceballs* (1987) sent up *Star Wars*, while his other films included *Robin Hood: Men in Tights* and *Dracula: Dead and Loving It*.

Upon being introduced to his future second wife (since 1964), the glamorous stage and film actress Anne Bancroft, he told her, "I would KILL for you!" He occasionally did cameo roles in film and television, winning an Emmy as Paul Reiser's uncle on the situation comedy *Mad About You*. In inimitable fashion, Brooks once defined comedy and tragedy: "Tragedy is when I cut my finger on a can opener, and it bleeds. Comedy is when *you* walk into an open sewer and die."

Brown, Helen Gurley

See *Cosmopolitan*; *Sex and the Single Girl*

Brown, James (1933—)

Known as the “Godfather of Soul,” this influential African-American singer was, in the 1950s and 1960s, one of the seminal figures in the transformation of gospel music and blues to soul. Also known as “Soul Brother Number 1” and “The Hardest Working Man in Show Business,” Brown amassed a record-setting total of 98 entries on *Billboard's* top-40 R&B singles chart while influencing scores of performers such as Sly and the Family Stone, Kool and the Gang, and Prince, as well as contemporary rap and hip-hop performers. Brown is also a charter member of the Rock and Roll Hall of Fame and has won numerous awards for his recordings. Despite these professional successes, Brown is notorious for his “bad-boy” reputation stemming from several run-ins with the law over the years; he served prison time as a youth for theft and later for resisting arrest and traffic violations. He also experienced serious personal and business troubles in the 1970s, complicated by a longstanding dispute with the IRS over millions of dollars in back taxes that were resolved in part by his hiring of the radical attorney William Kunstler.

Born James Joe Brown, Jr. on May 3, 1933 in Barnwell, South Carolina, Brown early on became accustomed to grinding poverty and the struggle for survival. The family lived in a shack in the woods without plumbing or electricity. His father, Joe Garner Brown, made a living by selling tree tar to a turpentine company. Brown's parents separated when he was four and he continued to live with his father. The family moved to Augusta, Georgia, where his father left him under the guardianship of an aunt who ran a whorehouse. Brown earned money for rent and clothing by buck dancing for soldiers and by shining shoes.

Young James Brown's musical talent emerged at an early age. His father gave him a harmonica that he taught himself to play, and Brown sang gospel with friends, emulating the Golden Gate Quartet. Other members of the Augusta community guided his musical development: the famous Tampa Red taught him some guitar, and Leon Austin and a Mr. Dink taught him piano and drums respectively. Brown listened to gospel, popular music, blues, and jazz. His exposure to Louis Jordan and His Tympany Five's short film *Caldonia* convinced him that he should be an entertainer. At the age of 11, Brown won an amateur-night contest at the Lenox Theater for singing

James Brown

“So Long” and started a trio called Cremona in which he played piano, drums, and sang.

Mired in poverty, Brown began resorting to petty theft for his personal wardrobe, then began stealing automobile parts, for which he was arrested and sentenced to 8-to-18 years in the penitentiary, and later transferred to the Georgia Juvenile Training Institute. While in prison, he formed a gospel quartet, earning the name “Music Box” from his fellow inmates and insisting that gospel music helped him keep his sanity. While incarcerated, he met Bobby Byrd, a musician with whom he would later have a long-lasting professional relationship. After securing an early release based on good behavior and a promise to his parole board to develop his creative talents, Brown settled in Toccoa, Georgia, where he lived with Bobby Byrd’s family and worked at a car dealership while immersing himself in gospel music after hours. Brown formed a group called the Gospel Starlighters, which eventually evolved into the Famous Flames, an R&B group that consisted of Bobby Byrd, Sylvester Keels, Doyle Oglesby, Fred Pullman, Nash Knox, Baby Roy Scott, and Brown. Later, Nafloyd Scott would join the group as a guitarist.

In 1955, a studio recording of “Please, Please, Please” became the group’s first hit, which became a regional favorite. Ralph Bass, a talent scout signed the group for the King/Federal record label. In 1958, the group recorded “Try Me,” which rose to the number one spot on the R&B chart. Based on this recording, the group solidified and began to fill major auditoriums with its strong black following. Several hits ensued, but it was the 1963 release of the album *Live at the Apollo* that catapulted Brown into national recognition when it rose to the number two spot on *Billboard*’s album chart. Radio

stations played the album as if it were a single and attendance at Brown’s concerts increased dramatically.

Throughout most of his career Brown has been sensitive to political and social issues. Though he never graduated from high school, his 1966 recording “Don’t Be a Drop Out” posted at number four on the R&B chart, and he approached Vice President Hubert Humphrey with the idea of using the song as the theme for a stay-in-school campaign aimed at inner-city youth. His prominence in this effort encouraged activist H. Rap Brown to urge the singer to be more vocal in the black-power movement, which James Brown often found too extreme for his tastes. Still, during the civil-rights activism of the 1960s, he purchased radio stations in Knoxville, Baltimore, and Atlanta as a way of giving greater clout to blacks in the media, and his recording “Say It Loud—I’m Black and I’m Proud” became one of the unofficial theme songs of the new black consciousness. During those years, Brown wielded political clout and garnered respect and attention in the black community, though he endured criticism in some circles for his association with Humphrey and his later friendship with President Richard Nixon—the singer endorsed Humphrey for President in 1968 and Nixon in 1972, and performed at Duke Ellington’s inaugural gala for Nixon in January of 1969. Earlier, in the wake of the urban unrest following the April 1968 assassination of Dr. Martin Luther King, Jr., Brown interrupted his stations’ programming with live broadcasts in which he urged nonviolence. In Boston the following day, he acceded to a request by Mayor Kevin White to appear on a live television program advocating a similar response.

While Brown and the Famous Flames secured a number of top ten hits on the R&B charts, “Papa’s Got A Brand New Bag” earned Brown his first top ten single on the pop side. Hit after hit followed on both the top ten R&B and pop charts, including “I Got You (I Feel Good)” in 1965, “It’s a Man’s Man’s Man’s World” in 1966, “Cold Sweat (Part I)” in 1967, and “I Got the Feelin’” in 1968. Having made his political statement in “Say It Loud—I’m Black and I’m Proud,” Brown dropped the Flames and began refining his group, with drummer Clyde Stubblefield providing increasing rhythmic complexity. “Mother Popcorn” in 1969, and “Get Up (I Feel Like Being a) Sex Machine” in 1970 signaled changes in his style.

In 1971, Brown formed a new group, the JB’s, and signed with Polydor Records, which soon released two hits, “Hot Pants,” and “Make It Funky.” In 1973, he suffered three serious setbacks: the tragic death of his son, Teddy, in an automobile accident, the withdrawal from his group of his old friend, keyboardist Bobby Byrd, and an IRS demand for payment of \$4.5 million in back taxes. He later blamed Polydor for some of his troubles, writing in his 1990 autobiography *James Brown: The Godfather of Soul*: “The government hurt my business a lot, a whole lot. But they didn’t destroy me. Polydor did that. It was basically a German company, and they didn’t understand the American market. They weren’t flexible; they couldn’t respond to what was happening the way King [Records] could. They had no respect for the artist” Troubles continued to mount for Brown during the 1970s: The popularity of disco diminished interest in his kind of music; he was implicated in a payola scandal; his second wife, Deirdre Jenkins, left him; and he was arrested during a 1978 performance at New York’s Apollo Theater because he had left the country in defiance of a court order restricting his travel while the financial affairs of his radio stations were under investigation.

The evolution of Brown’s musical style can be divided into three stylistic periods. The first period, in the mid-1950s, consists of ballads (“Please, Please, Please,” “Try Me,” and “Bewildered”) based on

popular song forms in a gospel style that are delivered, for that time, in a raw supplicating manner. The second period, in the early to mid-1960s, consists of songs based on a modification of the twelve-bar blues form with gospel vocal styles and increasingly tight and moderately complex horn arrangements used in a responsorial fashion. Compositions from this period include “Night Train” (not an original composition), “I Feel Good,” “Papa’s Got a Brand New Bag,” and “I Got You.” The third period, from the late 1960s and beyond, finds Brown as an innovator breaking away from standard forms and a standard singing approach to embark on extensive vamps in which the voice is used as a percussive instrument with frequent rhythmic grunts, and with rhythm-section patterns that resemble West African polyrhythms. Across these three periods, Brown moves on a continuum from blues and gospel-based forms and styles to a profoundly Africanized approach to music making. Most significantly, Brown’s frenzied and rhythmically percussive vocal style, based on black folk preaching and hollering, combine with his polyrhythmic approach to generate movement and to recreate in a secular context the ecstatic ambience of the black church. Brown’s innovations, especially in his latter period, have reverberated throughout the world, even influencing African pop. From the mid-1980s, as found in his composition “The Funky Drummer,” Brown’s rhythms, hollers, whoops, screams, and vocal grunts have informed and supplied the core of the new hip-hop music. His influence on artists such as Public Enemy and Candy Flip is evident.

In the midst of his travails during the 1970s, Brown turned to religion and also sought the legal help of William Kunstler. He broke with Polydor Records and began to play in rock clubs in New York. He appeared in several films, including the role of a gospel-singing preacher in *The Blues Brothers* (1980), a part in *Dr. Detroit* (1983), and a cameo appearance in *Rocky IV* (1985), in which he sang “Living in America.” It reached number four on the pop charts, his first hit in more than a decade.

Even after these triumphs, Brown again began encountering trouble with the law. In December, 1988 he was dealt two concurrent six-year prison sentences for resisting arrest and traffic violations during an incident in Atlanta in September of that year, when he had brandished a shotgun in a dispute over the use of his private bathroom in his office. After a high-speed police chase and charges of driving under the influence of drugs, he was arrested and convicted only aggravated assault and failing to stop for a police car. As he explained to Jesse Jackson, “I aggravated them and they assaulted me.” He was paroled in 1991, after appeals by Jackson, Little Richard, Rev. Al Sharpton, and others. Brown continued to tour and record in the 1990s. He appeared at New York’s Paramount Theater in March, 1992, with his new band, the Soul Generals and his female backup group, the Bittersweets. In 1994, his name again appeared on the crime-blotter pages in an incident involving the assault of his wife, Adrienne. Four years later, in 1998, he was charged with possession of marijuana and unlawful use of a firearm.

In the 1990s, Brown became a vocal supporter of the campaign to suppress X-rated lyrics in rap songs by asking rap artists not to include samples of his songs in such works. It was estimated by one critic that 3,000 house and hip-hop records have made use of his original music since the 1980s. In 1987, Brown was one of the first ten charter members elected to the Rock and Roll Hall of Fame, and in 1992, he was honored at the American Music Awards ceremonies with an Award of Merit for his lifetime contribution to the genre.

Brown, Jim (1936—)

Jim Brown was simply one of the best football players ever. In just nine seasons in the National Football League, Brown collected eight rushing titles en route to setting new records for most yards in a season and most career rushing yards. A three-time MVP, Brown was inducted into the Pro Football Hall of Fame in 1971.

Born on the coastline of Georgia, Brown moved to Long Island, New York, and attended Manhasset High School where he earned all-state honors in basketball, track, and football. After high school Brown declined a minor league contract with the New York Yankees, opting to play football at Syracuse University instead. While playing for the Orangemen he earned All-American honors in both football and lacrosse.

In 1957 he was drafted by the Cleveland Browns of the National Football League, and in his first season he led the Browns to the Championship game. That year Brown also won the league rushing title, which earned him the Rookie of the Year Award. But in his opinion his freshman campaign was not “spectacular.” In spite of Brown’s modesty, fans thought otherwise as he quickly became a

Jim Brown

crowd favorite because of his seemingly fearless and tireless running style.

In 1963 Brown made history when he rushed for a league record 1883 yards. That season he had games of 162 (yards), 232, 175, 123, 144, 225, 154, 179, and 125. "I was twenty-seven years old. I never ran better in my life," said Brown. The following year Brown led his team to the NFL Championship, but in 1965 he shocked football fans by announcing his retirement in the prime of his career.

The popular Brown did not slip quietly into retirement however; he capitalized on his fame by becoming Hollywood's "first black man of action" by starring in several movies such as *Rio Conchos* (1964), the box office hit *The Dirty Dozen* (1967), and other films including *The Grasshopper* (1970), *Black Gunn* (1972), and *Tick . . . Tick . . . Tick . . .* (1970). In 1972 he starred in the world's first authentic blaxploitation movie, *Slaughter*, which was filmed in Mexico on a \$75,000 budget. This placed him into competition with other black stars of that genre including Fred Williamson, Jim Kelly, and Pam Grier. Brown's most popular film and to some extent his most controversial was *One Hundred Rifles* (1969), in which Raquel Welch was his love interest. This was one of the first films involving a love scene between a black man and a white woman. "We took a publicity shot of me, with no shirt on, and Raquel, behind me, her arms seductively across my chest. For American film it was revolutionary stuff," said Brown.

In addition to football and acting Brown also was devoted to improving the conditions of the black community. In the late 1960s he formed the Black Economic Union to assist black-owned business and after leaving the silver screen he became a community activist.

In his day, Brown was one of the few athletes who could transcend the playing field and become part of the broader American culture. Even today, he is the standard by which all other NFL runners are measured.

Brown, Les (1912—)

A band leader for nearly 60 years, Les Brown and his "Band of Renown" were best known as a first-class swing band operating primarily in the pop-music field. Brown was a student at Duke University from 1932-35, where he formed his first dance band, the Duke Blue Devils. After that band folded in September, 1937, Brown worked as a freelance arranger for Larry Clinton and Isham Jones. He formed a new band in 1938, and throughout the 1940s became increasingly well-known, featured on television touring with Bob Hope to entertain service men at Christmas. The band reached its peak when Doris Day was featured as vocalist in 1940 and again from

1943-46. The orchestra's best-remembered arrangements were written by Ben Homer, who also composed the band's theme song, "Sentimental Journey."

Brown, Paul (1908-1991)

Paul Brown, founder and first head coach of both the Cleveland Browns and Cincinnati Bengals, played a major role in the evolution of football. He was the first coach to use detailed game plans, playbooks, and classroom learning techniques. He hired the first full-time coaching staff. He also initiated the use of intelligence tests to measure learning potential and film replays and physical tests such as the 40-yard dash to evaluate players. Brown was also the first coach to send plays in from the bench and to use facemasks on helmets. As a professional coach with the Browns (1946-62) and Bengals (1968-75), he compiled a 222-112-9 record including four AAFC (All-American Football Conference) and three NFL titles. His coaching proteges include Don Shula and Bill Walsh, coaches who led their

Coach Paul Brown and the Cleveland Browns.

respective clubs to Super Bowl championships. Brown was inducted into the Professional Football Hall of Fame in 1967.

Browne, Jackson (1948—)

Romantic balladeer turned political activist, Jackson Browne is one of America's most enduring singer-songwriters. Raised in Southern California, Browne joined the Nitty Gritty Dirt Band while in high school, but quit to pursue a solo career in New York, where he hung out at Andy Warhol's Factory and fell in love with singer Nico. After signing with David Geffen, Browne came home and became part of the L.A. music scene that included Joni Mitchell, the Eagles, and Crosby, Stills and Nash. Browne's first album was released to strong reviews in 1972 and his first single, "Doctor My Eyes," climbed to number eight on Billboard's Top 100. With his poetic songwriting and boyish good looks, Browne's next four albums won both critical

Jackson Browne

Man holding Kodak Brownie camera, 1900.

acclaim and commercial success. In the 1980s, Browne became an outspoken liberal activist and his songwriting began to take on a strongly political cast. After a very public split with actress Darryl Hannah in 1991, Browne's songs once again turned confessional. Long regarded as one of the most important artists to come out of Southern California, Jackson Browne remains one of the music industry's most complex and fascinating figures.

Brownie Cameras

The Brownie Camera revolutionized popular photography worldwide by bringing it within the reach of all amateurs, including children. Commissioned by George Eastman and manufactured by the Eastman Kodak Company, it was launched in February, 1900. A small box camera that utilized removable roll-film and a simple rotary shutter, the new Brownie sold for just one dollar, plus fifteen cents extra for film. Its name was derived from Palmer Cox's familiar and beloved pixies, whose image Kodak incorporated into its brilliant and concentrated advertising campaign; even the box in which the cameras were packaged featured Cox's colorful characters. The Brownie was an immediate success: 100,000 sold within a single year. Various features were added over the next few decades, including color on the Beau Brownie of the early 1930s, and flash contacts on the Brownie

Reflex introduced in 1946. Many special Brownies were also made, such as the Boy Scout Brownie (1932, 1933-34) and the New York World's Fair Baby Brownie (1939). The last Brownie model, the Brownie Fiesta, was discontinued in 1970.

Brubeck, Dave (1920—)

Jazz legend Dave Brubeck is famous both as a composer and pianist. As the leader of the Dave Brubeck Quartet with alto saxophonist Paul Desmond, he achieved overwhelming popular success in the 1950s and 1960s. The Quartet's experimentation with unusual time signatures produced works like "Blue Rondo a la Turk" and "Take Five" among others, and Brubeck introduced millions of enthusiastic young listeners to jazz. In less than a decade, the Dave Brubeck Quartet became one of the most commercially successful jazz groups of all time.

Although some jazz traditionalists felt that Brubeck was playing "watered-down" bebop to sell records, his music brought jazz back into the mainstream of popular music. "Take Five" became Brubeck's signature tune, and it remains one of the most widely recognized jazz compositions in the world.

Bruce, Lenny (1925-1966)

From the late 1940s until his death in the 1960s, Lenny Bruce's unique comedy included social commentary, "lewd" material, and pointed personal monologues. He addressed issues of sex, race, and religion, and often did so using profanity. Many of his era called his humor "sick," and Journalist Walter Mitchell referred to him as "America's #1 Vomic." Police arrested Bruce numerous times for obscenities, which helped him to become a champion of First Amendment rights and of freedom of speech in general. His work on and off stage permanently changed the face of comedy, particularly stand-up comedy, and pushed the limits of what was considered "socially acceptable" in many mediums. By 1990s standards his material was quite tame and is commonly found on television or even in "PG" rated films, but during his time his work was radical. Many well-known comedians, including Joan Rivers, Jonathan Winters, and

Lenny Bruce

Richard Pryor, have attested to Bruce's profound influence on their work.

From approximately the 1920s to the early 1950s, most comedians came out of vaudeville. Comedy, or more precisely jokes, were interspersed in people's vaudeville acts. Jack Benny, for instance, was a vaudeville star who originally did jokes between his violin playing; he eventually played some violin between his jokes or comedy routines. Comedians did a series of "classic" joke-book type jokes, or occasionally a variation on these. In the late 1940s and into the 1950s, comedy began to change with the cultural changes of the times. The United States was experiencing a push towards conservatism; middle-class mores were pervasive and commonly exemplified in such light "comedy" shows as *Father Knows Best* and *Donna Reed*. Additionally, McCarthyism had people fearful of anything "different" they said being held against them. There was, however, also a strong backlash against this conservatism typified in the "Beatnik" movement, including artists such as Allen Ginsburg and Lawrence Ferlinghetti. Bruce was part of this counter-culture movement.

Bruce was born Leonard Alfred Schneider on October 13, 1925 in Mineola, New York. His father, Mickey, was a podiatrist and his mother, Sadie, played bit parts as an actor and did routines in small comedy clubs under the names of Sally Marr and Boots Mallow. From a very young age, Bruce's mother took him to burlesque and nightclubs. Her willingness to expose him to this style of "open sexuality" influenced most of his career. Bruce's very early career was doing conventional comedy routines in the "Borscht Belt"—the Jewish area of the Catskills where many (Jewish) comedians, such as

Danny Kaye and Jerry Lewis, got their start; he also did comedy routines in strip clubs. In 1942, Bruce enlisted in the Navy, serving until 1945, when he was dishonorably discharged for claiming to be obsessed with homosexual ideas.

Bruce started developing his own notable style, which not only included the “obscenities” he is often remembered for, but also a running social commentary told in fast-paced, personally-based monologues that used various accents and voices to emphasize his pointed style. He received his first national recognition when he was on the *Arthur Godfrey Talent Show* in 1948. Soon after, his career was furthered when his act at a San Francisco nightclub, Anne’s 440, was reviewed by influential cutting-edge columnists Herb Caen and Ralph Gleason (who later wrote many of Bruce’s liner notes for his recordings). Some of his early recordings, all under the Fantasy record label, include *Interviews of Our Times*, *American*, and *The Sick Humor of Lenny Bruce*.

Two quintessential personal events also happened during these “earlier” years—Bruce met stripper Honey Harlow in 1951, whom he married that year in June, and he was introduced to heroin, which became a life-long habit and another reason for his many arrests. Harlow had six abortions, some say at the insistence of Bruce, and later gave birth to a daughter, Brandie Kathleen “Kitty,” in 1955. When Bruce and Harlow divorced in 1957, Bruce was awarded custody of Kitty.

In the early 1960s Bruce’s career skyrocketed, and by February 1961 he performed to a full house at Carnegie Hall. While he was popular with people immersed in the counter-culture movement, he also attracted many mainstream and even conservative people. Mainstream comedians, such as Steve Allen, understood, appreciated, and supported his comedy; Bruce appeared on Allen’s television show three times. Others were highly insulted, not just by his “obscene language,” but, for instance, by what they considered his blasphemous attitudes towards organized religion. His act “Religions, Incorporated,” in which he compared religious leaders to con artists and crooks, infuriated some and made others praise the raw intelligence and honesty of his comedy. Other people were critical, but titillated by his humor. Bruce often told the story about how people said they were horrified by his common “threat” to urinate on his audience, but when he would not do it people would complain and ask for their money back.

The 1960s brought Bruce’s long series of arrests for narcotics and obscenities, as well as his being banned from performing. In September 1961, he was arrested for possession of narcotics, though the charges were dropped because he had authorized prescriptions—but in October 1962 he was once again arrested for possession of narcotics in Los Angeles. With his January 1, 1963 arrest for narcotics possession, however, some began to question whether the circumstances surrounding his arrests were, at the very least, “suspicious”; his convictions were based on testimony by an officer who was at the time suspected of smuggling drugs. Conversely, though, Bruce himself once turned in a small-time drug dealer in exchange for his own freedom from a drug charge.

Bruce’s first and probably best known arrest for obscenity was in October 1961. He used the word “cocksucker” in his act at the San Francisco Jazz Workshop; the word violated the California Obscenity Code. (A number of reviewers have pointed out that in the 1980s Meryl Streep won an Academy Award for the movie *Sophie’s Choice*, where she also used the term “cocksucker.”) With lawyer Albert Bendich—who represented Allen Ginsberg when he was charged

with obscenity for his book *Howl*—Bruce eventually emerged victorious and the event was seen as a landmark win for First Amendment rights.

In October 1962, Bruce was arrested for being obscene during his act at Hollywood’s Troubador Theater. In the same year, after two Australian appearances, he was kicked out of Australia and banned from Australian television; he was also deported from England twice. In April 1963, on arriving in England, he was classified as an “undesirable alien” and sent back to the United States within two hours. Upon arrival in the United States, customs agents stripped and internally searched Bruce. Soon after, he was arrested for obscenity in both Chicago and Miami. In 1963, Bruce also published his autobiography, *How To Talk Dirty and Influence People*, and it was eventually serialized in *Playboy* magazine. Despite—or perhaps because of—these events, Bruce continued to make recordings throughout the early 1960s, including *To Is a Preposition, Come is a Verb, The Berkeley Concert*, and *Live at the Curran Theatre*.

Another of Bruce’s pivotal and very influential obscenity arrests occurred in April 1964 at New York’s Cafe A Go-Go, where Tiny Tim was his warm-up act. Over 100 well-known “alternative” artists and activists, including Dick Gregory, Bob Dylan, Joseph Heller, James Baldwin, and Gore Vidal, signed a petition which Allen Ginsberg helped write. The petition protested New York using obscenity laws to harass Bruce, whom they called a social-satirist on par with Jonathan Swift and Mark Twain. Bruce himself said he did not believe his arrest was about obscenity, but rather his views against the system. New York’s District Attorney of that time, Richard Kuh, felt Bruce should not be shown mercy because he lacked remorse; Bruce openly stated he had no remorse and was only seeking justice. On November 4, 1964, his work was deemed illegal for violating “contemporary community standards” and for being offensive to the “average person.” This was a severe blow to Bruce, as clubs were afraid to hire him: if New York City responded in such a way, other clubs around the United States would surely be shut down if he were to perform in them. In October 1965, Bruce went to the San Francisco office of the Federal Bureau of Investigation (FBI), complaining that California and New York were conspiring against his rights. Not surprisingly, the FBI took no action.

Between difficulty being hired, his drug addiction, and his financial concerns, Bruce found himself in an extremely difficult predicament. A few days after complaining to the FBI he filed bankruptcy in Federal Court. A few months later, under the influence of drugs, he fell 25 feet out a window, resulting in multiple fractures in both his legs and ankles. His last performance was at the Fillmore West in San Francisco in June 1966, where he played with Frank Zappa and The Mothers of Invention. Two months later, on August 3, 1966, Bruce was dead from a so-called accidental overdose of morphine. Some say the police staged photographs of the scene to make it look as if he accidentally overdosed. Regardless of the circumstances, conspiracy and harassment were on Bruce’s mind when he died—at the time of his death he was in the midst of writing about the Fourth Amendment, which guarantees people protection against “unreasonable search and seizure.”

Sadly, Bruce neither lived to see his New York obscenity conviction overruled in 1966, nor the dramatic changes that much of his pioneering work helped catalyze. Ironically, by the 1970s, many plays, books, and movies, were produced about Bruce that romanticized and glorified his work. In death, he became part of the mainstream entertainment world that often shunned him. The most well-known and mainstream of these productions was the 1974 film

Lenny, based on the play by Julian Barry and starring Dustin Hoffman as Bruce. Indeed, despite his incredible influence, many born after his time thought of Bruce only as Hoffman's portrayal in this stylized film. Paradoxically, only eight years after his death, the film *Lenny* was only given an "R" rating for routines that got Bruce arrested time and time again. That his own work was considered so "tame" just a short time after his death is perhaps a testimony to the degree of change Lenny Bruce really initiated.

Bryant, Paul "Bear" (1913-1983)

Legend, hero, homespun philosopher, not to mention fashion statement in his houndstooth check hat, Paul "Bear" Bryant has been called a combination of "ham and humble pie." A museum and a football stadium in Tuscaloosa, Alabama, bear his name, and a movie, released in August 1984, called, simply, *The Bear*, recounts his life. His wife, however, didn't like the film; she couldn't imagine actor Gary Busey playing her husband. "Papa was *handsome*," she said, and it was not only she who thought this. Men as well as women agreed that Bear Bryant was a good-looking man. Morris Franks, a writer for the *Houston Chronicle*, averred, "No Hollywood star ever made a more dramatic entrance. He would jut that granite-like jaw out, turn his camel's hair topcoat collar up and be puffing on a cigarette." The coach evinced a wide-ranging appeal; even his life was a sort of romance. He married his college sweetheart, Mary Harmon, a University of Alabama beauty queen, and for 48 years she remained by his side as best friend, alter ego, and helpmate to the man who had once wrestled a bear in his home state of Arkansas for five bucks and won.

Paul Bryant satisfied America's craving for rags-to-riches and larger-than-life stories. As the eleventh of twelve children, young

Paul grew up dirt poor in rural Arkansas, in a place called Morro Bottom that consisted of six houses on Morro Creek. The Bryant home was made up of four small rooms, a big dining room, and a little upstairs area; but Paul thought of it as a plantation, and in the mornings and evenings before and after school, he worked behind the plow. He didn't own a pair of shoes until age 13, but as he affirmed to the boys who played on his teams, "If you believe in yourself and have pride and never quit, you'll be a winner. The price of victory is high but so are the rewards."

Bryant played college football at the University of Alabama on the same team as Don Hudson, who was thought to be the greatest pass-catching end in football in 1934. Nicknamed "Old 43" or "the Other End," Paul may not have been *The End*, but he became a hero after playing a game against rival Tennessee with a broken leg. When the team doctor removed his cast, Bryant was asked if he thought he could play, and the rest is legend. Number 43 caught an early pass and went for a touchdown. Later in the game, he threw a lateral to a player who scored another. Examining the X-rays of the broken bone, Atlanta sportswriter Ralph McGill, who had initially been doubtful about the injury, acclaimed Bryant's courage, but Bear, in typical big-play fashion, replied, "It was just one little bone."

Bryant went on to head coaching jobs at Maryland, Kentucky, and Texas A & M, before returning to the University of Alabama. When asked to come back to his alma mater, Bryant gave his famous "Mama Called" speech to the fans and players at A & M. He said, "When you were out playing as a kid, say you heard your mother call you. If you thought she just wanted you to do some chores, or come in for supper, you might not answer her. But if you thought she *needed*

Paul "Bear" Bryant

you, you'd be there in a hurry." Bryant served as head coach at the University of Alabama from 1958 to 1982, where he led the Crimson Tide to 323 victories and six national championships. He was named the National Coach of the Year in 1961, 1971, and 1973, and SEC Coach of the Year ten times.

Although he guided the Crimson Tide to thirteen SEC titles, Coach Bryant stood for more than winning; he was a role model. His players maintain that he taught them about life. The coach liked to say that life was God's gift, and a commitment should be made to put something into it.

Paul Bear Bryant never failed in his dedication to the sport he loved. After his death, Bryant's heartfelt eulogies describing what the Bear meant to Alabama, to coaching, and to the players who had been molded by him, led author Mickey Herkowitz to conclude that college football without Bryant would be like New Year's Eve without a clock. It was estimated that some 100,000 mourners lined the interstate from Tuscaloosa to Birmingham, Alabama, to pay their last respects to a small town boy known as Bear. "Thanks for the Memories, Bear," their signs read, "We Love You," and "We'll Miss You." A hero had fallen, but he is remembered. Many feel he can never be replaced.

—Sue Walker

Bryner, Yul (1915-1985)

In 1951 Yul Brynner, a Russian-born Mongolian, made a multi-award-winning Broadway debut in *The King and I*, and in 1956 he won the Best Actor Oscar for the screen version. He shaved his head for the role, and it is to this image of baldness as a badge of virile exoticism that he owed his subsequent prolific and highly paid film career during the 1960s and 1970s, as well as his continuing status as a twentieth-century icon. Seemingly ageless, he continued to star in revivals of the show until shortly before his much-publicized death from lung cancer. Much of his early life is shrouded in self-created myth, but he arrived in the United States in 1941, having worked as a trapeze artist with the Cirque d'Hiver in Paris until injury intervened. A largely mediocre actor, who appeared in increasingly mediocre films, relying on his mysterious, brooding personality, he is also remembered for his roles as the pharaoh in *The Ten Commandments* (1956) and the black-clad leader of *The Magnificent Seven* (1960).

Bubblegum Rock

Bubblegum rock emerged in the late 1960s as a commercial response to demographic changes in the rock music industry. With major rock artists such as the Beatles and the Rolling Stones maturing after 1967 toward more adult styles, both musically and lyrically, as they and their audiences grew up, they left behind a major segment of the rock music marketplace: the pre-teen crowd. The music industry rushed to capitalize on this younger market by assembling studio musicians to record novelty songs with catchy hooks and sing-along lyrics and packaging them as real "bands." The approach worked, resulting in a string of hits including, among many others, "Yummy Yummy Yummy" by Ohio Express, "Simon Says" by 1910 Fruitgum Company, and "Sugar Sugar" by the Archies. The genre peaked in 1969, but the tradition continued into the 1990s with such groups as Hanson that appealed to the pre-teen market.

Buck, Pearl S. (1892-1973)

Author and humanitarian activist Pearl S. Buck almost single-handedly created the prism through which an entire generation of Americans formed its opinion about China and its people. Her work and personality first came to the attention of a wide audience in 1931, with the publication of her signature novel *The Good Earth*, based on her experiences growing up in China with a missionary family during the convulsive period from the Boxer Rebellion to the civil wars of the 1920s and 1930s. She wrote more than seventy other books—many of which were best-sellers and Book-of-the-Month Club selections—and hundreds of pieces in many genres, including short stories, plays, poetry, essays, and children's literature, making her one of the century's most popular writers. As a contributing writer to *Asia* magazine (later *Asia and the Americas*), published by her second husband, Richard Walsh, she brought a precocious "Third-World" consciousness to Americans by advocating an end to colonialism while advancing the causes of the peasantry, especially women.

In 1938, Buck became the first of only two American women to win the Nobel Prize for literature, though her books have fallen out of favor with critics and academicians and she is rarely anthologized today or studied in college literature courses. Her work has remained a sentimental favorite of millions of readers around the world. Contemporary Chinese-American writer Maxine Hong Kingston has credited Buck with acknowledging Asian voices, especially those of women, for the first time in Western literature. Biographer Peter Conn declared in his 1996 study *Pearl S. Buck: A Cultural Biography* that "never before or since has one writer so personally shaped the imaginative terms in which America addresses a foreign culture. For two generations of Americans, Buck invented China." He quoted historian James Thomson's belief that Buck was "the most influential Westerner to write about China since thirteenth-century Marco Polo." Living in the United States during the second half of her life,

Pearl S. Buck

Buck was prominent in many progressive social movements, lending her support to causes on behalf of disarmament, immigrants, women, and racial minorities. Her outspoken activism, especially during and after World War II, earned her an FBI dossier and the ire of McCarthyists in the 1950s.

Pearl Buck was born Pearl Sydenstricker in Hillsboro, West Virginia, on June 26, 1892, the daughter of Presbyterian missionaries Absalom and Carie (Stulting) Sydenstricker, who were then on leave from their post in China, to which they returned when Pearl was three months old. Except for a brief foray in the States around the time of the Boxer Rebellion, Pearl stayed in China until 1910, when she enrolled in Randolph-Macon Woman's College in Virginia, graduating as president of the class of 1913 and remaining as a teaching assistant in psychology. She returned to China soon afterwards to care for her ailing mother and remained there for most of the next twenty years, during which time she took an avid interest in the daily lives of Chinese peasants as well as the intellectuals' movements for reforms in literature and society that, in 1919, coalesced in the May 4 movement. Since she was fluent in Chinese language and culture, Buck came to support the new wave in Chinese literature, a dissident movement that called for a complete reconstruction of literature as a

way of promoting political and social change. In 1917, she had married John Lossing Buck, an agricultural missionary, and moved with him to Nanhsuchou, where she experienced firsthand the backwardness and poverty that would later find its way into the pages of her fiction and nonfiction.

During the 1920s, Buck began interpreting China to American readers through articles she wrote for the *Atlantic*, the *Nation*, and other magazines. In 1924 she and her husband returned briefly to the United States, both to pursue masters degrees at Cornell University, hers in English and his in agricultural economics. Using a masculine pen name, she won a prestigious campus literary prize for her essay "China and the West," which criticized China's traditional treatment of women and girls while praising the achievements of Chinese art and philosophy. The couple returned to Nanjing but were forced to flee in 1927 during the Chinese civil war, taking refuge in Japan for a while before returning to Shanghai. They were soon alienated by the corruption and elitism of Chiang Kai-shek's Kuomintang and by the violence of Mao Zedong's Communists. Motivated by a need to find a suitable school for their mentally retarded daughter, Carol, the Bucks returned to the United States in 1929 thanks to a Rockefeller Foundation grant for John's agricultural survey work. Pearl had already begun to write novels about her experiences in China; the first of them, *East Wind, West Wind*, was published by John Day in 1930. It was among the first serious novels to interpret to American readers the upheavals in traditional Chinese society, particularly in terms of the changing role of women. On March 2, 1931, John Day published Buck's second novel, *The Good Earth*. The book became an overnight sensation after Will Rogers lauded it on the front page of the *New York Times* as "not only the greatest book about a people ever written but the best book of our generation." *The Good Earth* won Buck a Pulitzer Prize in 1932, was translated into some thirty languages, and was made into a popular motion picture. MGM's offer of \$50,000 for the film rights was at the time the most lucrative deal between an author and a Hollywood studio. Buck's always precarious financial situation improved considerably, and she found herself much in demand as a lecturer and writer. She moved to the United States permanently in 1932, the year John Day published her third novel, *Sons*.

Like a prophet without honor in her own country, however, Buck soon found herself the target of criticism from church leaders who objected to the absence of a positive Christian message in *The Good Earth*, as when a Presbyterian bureaucrat complained to Buck that "the artist in you has apparently deposed the missionary." A year later, in the presence of church officials at a Presbyterian women's luncheon in New York, she courageously denounced typical missionaries as "narrow, uncharitable, unappreciative, ignorant" in their zeal for conversion, which put her at the center of an already gathering storm critical of the missionary endeavor. Her break with denominational orthodoxy was sealed in an article she wrote for *Cosmopolitan*, "Easter, 1933," in which she repudiated dogmatism and found humanitarian parallels between the teachings of Christ and the Buddha; shortly after its publication, she resigned as a Presbyterian missionary.

Buck continued writing fiction about China, and John Day published her fourth novel, *The Mother*, in 1934, about the tribulations of an unnamed Chinese peasant widow abandoned by her husband and condemned by custom to a life of loneliness and sexual frustration. In June of 1935, she got a Reno divorce from her husband and, that same day, married Richard Walsh, her editor/publisher at John Day. Buck had already begun to assume a significant role in the

company's affairs, especially in the editorial direction of *Asia* magazine, which he had just taken over. With Walsh and Buck at its helm, the periodical quickly changed from being a travel-oriented publication to a serious journal of ideas, with contributions by Lin Yutang, Bertrand Russell, Rabindranath Tagore, Margaret Mead, Agnes Smedley, and other noted writers and intellectuals. As a contributor, Pearl Buck expressed her growing dissatisfaction with Chiang Kai-shek's policies while remaining anti-Communist herself.

During this period, the Walshes adopted four children, and in 1936 John Day published Buck's memoir of her mother, *The Exile*. A commercial as well as critical success, it was soon followed with *Fighting Angel*, a memoir of her father. As a boxed set, the two were offered as a joint Book-of-the-Month Club selection, *The Flesh and the Spirit*. It was during this period that Buck began to ally herself with American pacifist and disarmament groups, such as the Women's International League for Peace and Freedom, as well as with the Urban League and other groups advocating racial desegregation. She also became increasingly concerned about the rise of Nazism and the plight of Jews in Europe. The couple founded the China Emergency Relief Committee, with Eleanor Roosevelt as its honorary chair, to give humanitarian aid to victims of Japanese aggression in East Asia.

In 1938, Pearl Buck became the fourth woman and the first American woman to be awarded the Nobel Prize for literature, a decision that was greeted with derision in some American literary circles, who felt Buck was too much of a "popular" writer to deserve such an honor. When told of the award, she remarked in Chinese "I don't believe it," adding in English, "It should have gone to [Theodore] Dreiser." While the prize was given for the entire body of her work, the twin biographies of her parents were specifically cited as her finest works. In her Nobel lecture, she argued that the great Chinese novels should be regarded as highly in the West as the works of Dickens or Tolstoy.

Just before the United States became involved in World War II, Walsh and Buck founded the East and West Association "to help ordinary people on one side of the world to know and understand ordinary people on the other side." This group, and the other non-governmental organizations in which they were involved, helped solidify a network of American business people and intellectuals that was instrumental in developing American attitudes toward Asia in the postwar period. Also during the 1940s, Buck became more deeply interested in women's issues at home. In 1941 she published *Of Men and Women*, a collection of nine essays on gender politics that challenged the patriarchal hegemony in American society. A *New York Times* critic even argued that Buck's view of gender resembled that of Virginia Woolf's. Resisting the "official" stance of mainstream women's organizations, Buck became a fervid supporter of more radical women's-rights groups that first proposed the Equal Rights Amendment to the U.S. Constitution, though Buck still hesitated to call herself "a feminist or active in women's suffrage."

Buck's novel *Dragon Seed* was published in 1942, after the United States had entered the Pacific War. The book, which called particular attention to war as an example of savagery against women, drew much of its narrative from actual events, such as the Japanese rape of Nanjing, and it also urged its Chinese protagonists to endure privation and create a new, more humanitarian society. At home, she was among the most vociferous critics of segregation and racial discrimination, which she thought unworthy of the noble cause for which American sacrifices were being made. She supported the growing claims of African Americans for equality, and emerged as a strong proponent of the repeal of exclusion laws directed against

Chinese immigration. Buck had been under FBI surveillance since her pacifist activities in the 1930s, and her appearance at rallies with such leftist activists as Paul Robeson and Lillian Hellman earned her a 300-page dossier, one of the longest of any prominent writer. During the postwar era, Buck was accused of membership in several "Communist Front Organizations."

Although she continued to write, little of her later fiction achieved the literary stature of her earlier work, with the possible exception of *Imperial Woman* (1956), a fictionalized account of the last Empress Dowager Tz'u-hsi, who had ruled China during Buck's childhood there. Her autobiography, *My Several Worlds*, was published in 1954; a sequel, *A Bridge to Passing*, appeared in 1962. Her activism continued unabated, however, and she founded Welcome House, an adoption agency for interracial children, especially for Amerasians, which placed children with adoptive parents regardless of race. During the 1960s, her reputation escaped untarnished when her companion, Ted Harris—her husband, Richard Walsh, had died in 1953—was vilified in the press for alleged irregularities and personal wrongdoing in connection with the Welcome House organization.

In the early 1970s, when relations with Communist China began to thaw, Buck hoped to visit China with the Nixon entourage, but her request for a visa was turned down by the Chinese government who accused her works of displaying "an attitude of distortion, smear and vilification towards the people of new China and its leaders." It was obvious that her record of leftist activism did not engender support within the Nixon administration. She became ill soon afterwards, and after a bout with gall bladder complications, she died on March 6, 1973.

Buck Rogers

Long before *Star Trek* and *Star Wars*, there was *Buck Rogers*, the first comic strip devoted to science fiction. Debuting early in 1929, it introduced readers to most of its stock features, including rocket ships, space travel, robots, and ray guns, concepts considered by most to be wildly improbable, if not downright impossible. A graduate of a pulp fiction magazine, Anthony "Buck" Rogers served as a sort of ambassador for the science fiction genre, presenting many of its premises, plots, and props to a mass audience. Indeed, it was *Buck Rogers* that inspired a wide range of people, from creators of comic book superheroes and future astronauts to scientists and Ray Bradbury. *Buck Rogers in the 25th Century*, as the strip was initially titled, helped introduce the United States to the possibilities of the future, such as space travel and the atomic bomb, while simultaneously offering quite a few wild and exciting adventures.

Buck Rogers was the creation of Philadelphia newspaperman Philip Francis Nowlan, who was forty when he sold his first science fiction story to *Amazing Stories*. Titled "Armageddon—2419 A.D.," it appeared in the August 1928, issue, and featured twenty-nine-year-old Anthony Rogers, who got himself trapped in a cave-in at an

abandoned Pennsylvania coal mine. Knocked out by an accumulation of radioactive gases, Rogers slept for five centuries and awakened to a world greatly changed. America was no longer the dominant power in the world. In fact, the nation was a “total wreck—Americans a hunted race in their own land, hiding in dense forests that covered the shattered and leveled ruins of their once-magnificent cities.” The world was ruled by Mongolians, and China was the locus of power. Finding that the Han Airlords ruled North America, Rogers joined the local guerilla movement in its fight against the conquerors, and took advantage of 25th century anti-gravity flying belts and rocket guns, as well as his own knowledge, to concoct winning strategies against them.

His partner was Wilma Deering, destined to be *the* woman in his life, who he met soon after emerging from the mine. A dedicated freedom fighter, Wilma was considerably more competent and active than most comparable female science fiction characters of the time. Rogers and Wilma, along with their other new comrades, saved America in Nowlan’s sequel, “The Airlords of Han,” which appeared in *Amazing Stories* the following year. By that time, Anthony Rogers, newly-named Buck, was the hero of his own comic strip.

John F. Dille, who ran his own newspaper feature syndicate in Chicago, noticed Nowlan’s initial story in *Amazing Stories*, and encouraged him to turn it into a comic strip, “a strip which would present imaginary adventures several centuries in the future—a strip in which the theories in the test tubes and laboratories of the scientists could be garnished up with a bit of imagination and treated as realities.” Dille picked artist Dick Calkins to work with Nowlan, who was already on the syndicate staff and had been trying to interest his boss in a strip about cavemen and dinosaurs. Apparently assuming that someone who could depict the dim past ought to be able to do the same for the far future, Dille put Calkins on the team. *Buck Rogers in the 25th Century*, a daily strip at first, began on Monday, January 7, 1929, the same day, coincidentally, that the *Tarzan* comic strip was launched.

Readers responded favorably to *Buck Rogers*, and it began picking up papers across the country. One early fan was a young fellow in the Midwest by the name of Ray Bradbury. Many years later, he recalled the impact that the early strips had on him: “What, specifically, did Buck Rogers have to offer that instantly ‘zapped’ us into blind gibbers of love? Well, to start out with mere trifles—rocket guns that shoot explosive bullets; people who fly through the air with ‘jumping belts’; ‘hovercrafts’ skimming over the surface of the earth; disintegrators which destroyed, down to the meanest atom, anything they touched; radar-equipped robot armies; television-controlled rockets and rocket bombs; invasions from Mars; the first landing on the Moon.”

Among the regular characters, in addition to Buck and Wilma, were Dr. Huer, scientific genius, inventor, and mentor to Buck; Black Barney, a reformed air pirate; Killer Kane, slick-haired traitor and recurrent villain; and Buddy Deering, teenage brother of Wilma. When a Sunday page was added early in 1930, it was devoted chiefly to Buddy’s adventures. It was intended to appeal to youthful readers who supposedly made up the majority audience for Sunday funnies. Buddy spent much of his time on Mars, where he was often involved with young Princess Aura of the Golden People. In separate daily sequences, Buck also journeyed to the Red Planet, but concentrated on battling the evil Tiger Men. The Martian equivalent of the Mongols, the Tiger Men had come to earth in their flying saucers to kidnap human specimens. When they grabbed Wilma for one of their experiments, Buck designed and built the world’s first interplanetary rocket ship so that he could rescue the victims who had been taken to

Mars. “Roaring rockets!” he vowed. “We’ll show these Martians who’s who in the solar system!”

Astute readers in the 1930s may have noticed that the Sunday pages were considerably better looking than the daily strips. That was because a talented young artist named Russell Keaton was ghosting them. He remained with the feature for several years. When he left to do a strip of his own, he was replaced by another young ghost artist, Rick Yager. *Buck Rogers*, especially on Sundays, was plotted along the lines of a nineteenth-century Victorian picaresque novel. There was a good deal of wandering by flying belt, rocket ship, and on foot. Characters drifted in and out, appeared to be killed, but showed up again later on after having assumed new identities. Reunions and separations were frequent. The strip’s trappings, however, were far from Dickensian, offering readers the latest in weapons, modes of transportation, and lifestyles of the future. By 1939, the atomic bomb was appearing in the strip. With the advent of World War II, most of the villains were again portrayed as Asians.

Buck Rogers also played an important role in the development of the comic book. A reprint of a *Buck Rogers* comic book was used as a premium by Kellogg’s in 1933, which was before modern format comic books had ever appeared on the newsstands. In 1934, *Famous Funnies*, the first regularly-issued monthly comic, established the format and price for all comic books to follow. The *Buck Rogers* Sunday pages, usually four per issue, began in the third issue. It also seems likely that Buck Rogers and his associates, who were among the first flying people to be seen in comic books, had an influence on the flying superheroes who came along in the original material funny books of the later 1930s.

Almost as impressive as Buck’s daring exploits 500 years in the future, was his career as a merchandising star during the grim Depression era. In 1932, a *Buck Rogers* radio show began airing, heard every day in fifteen-minute segments and sponsored by Kellogg’s. The serial was heard in various forms throughout most of the decade and into the next. In 1933, the first Big Little Book devoted to the futuristic hero was printed. Buck Rogers was marketed most successfully in the area of toys. Commencing in 1934, Daisy began manufacturing Buck Rogers rocket pistols; that same year the Louis Marx company introduced a toy rocket ship. The zap guns were especially popular, so much so that Daisy began producing them at night and on Saturdays to meet the demand.

Buck Rogers conquered the silver screen in the 1930s. Universal released a twelve-chapter serial in 1939, with Buster Crabbe as Buck, and Constance Moore as Wilma. Anthony Warde, who made a career of playing serial heavies, was Killer Kane. Not exactly a gem in the chapter play genre, *Buck Rogers* took place on Earth and Saturn. The serial was later condensed into a 101-minute feature film. Under the title *Destination Saturn*, it occasionally shows up on late-night television.

Nowlan was removed from the strip shortly before his death in 1940, and Calkins left in 1947. Rick Yager carried on with the Sunday pages and the dailies before Murphy Anderson took over. By the late 1950s, George Tuska, also a graduate of the comic books, was drawing both the Sunday and the daily strips. Science fiction writers such as Fritz Leiber and Judith Merrill provided scripts. The Sunday strip ended in 1965, and the daily two years later. But Buck Rogers was not dead.

He returned, along with Wilma and Doc Huer, in a 1979 feature film that starred Gil Gerard. That production led to a television series and another comic strip, written by Jim Lawrence, drawn by Gray

Morrow, and syndicated by the *New York Times*. None of these latter ventures was particularly successful, and more recent attempts to revive Buck Rogers have been even less so.

Buckley, William F., Jr. (1925—)

William F. Buckley Jr. found fame as the voice of conservatism. Founder of the *National Review*, the conservative journal of opinion of which he was editor-in-chief until 1990, Buckley also worked as an influential political advisor and popular novelist. Buckley aptly described the effect of his *National Review* through his character Boris Bolgin in his spy novel *Who's on First*. “Do you ever read the *National Review*, Jozsef?”, asks Boris Bolgin, the chief of KGB counter intelligence for Western Europe, ‘It is edited by this young bourgeois fanatic. Oh, how they cried about the repression of the counter-revolutionaries in Budapest! But the *National Review* it is also angry with the CIA for—I don’t know; not starting up a Third World War, maybe? Last week—I always read the *National Review*, it makes me so funny mad—last week an editorial said’—he raised his head and appeared to quote from memory—‘The attempted assassination of Sukarno last week had all the earmarks of a CIA operation. Everybody in the room was killed except Sukarno.’”

William Frank Buckley, Jr. was born in New York City in 1925 into a wealthy Connecticut family of Irish decent. He grew up in a devout Christian Catholic atmosphere surrounded by nine brothers and sisters. He attended Millbrook Academy in New York and then served as a second lieutenant in World War II. After his discharge in 1946 he went to Yale bringing with him, as he wrote, “a firm belief in Christianity and a profound respect for American institutions and traditions, including free enterprise and limited government.” He found out that Yale believed otherwise. After graduating with honors in 1950, he published the public challenge to his alma mater *God and Man at Yale* in 1951. It brought him instant fame. He claimed that Yale’s “thoroughly collectivist” economics and condescending views towards religion could only lead towards a dangerous relativism, a pragmatic liberalism without a moral heart. What America required and conservatism must supply was a fighting faith, noted David Hoeverler in *Watch on the Right*, and William ‘Bill’ Buckley, Jr. was just the man for the job.

In 1955 he founded the *National Review*, creating one of the most influential political journals in the country. His syndicated column, *On the Right*, which he started to write in 1962, has made its weekly appearance in more than 300 newspapers. Not only in print has he been America’s prime conservative voice, Buckley also hosts the Emmy award-winning show *Firing Line*—Public Broadcasting Service’s longest-running show—which he started in 1966. The

Young Americans for Freedom Movement (1960) which aimed at conservative control of the Republican Party was Buckley’s brain-child. He has written and edited over 40 books which include political analyses, sailing books and the Blackford Oakes spy novels and has been awarded more than 35 honorary degrees. In 1991 he received the Presidential Medal of Freedom. As a member of the secretive Bilderberg Group and the Council on Foreign Relations—founded in 1921 as an advisory group to the President—he also plays an important political advisory role. His spy novels, however, show most clearly how much he perceived the Cold War to be essentially a spiritual struggle.

Remarking to his editor at Doubleday, Samuel Vaughan, that he wanted to write something like ‘Forsyth,’ Vaughan expected a Buckley family saga in Galsworthy’s *Forsythe Saga* tradition. But Buckley was referring to Frederick Forsyth’s *The Day of the Jackal* and produced *Saving the Queen*, which made the best-seller lists a week before its official publication date. After watching the anti-CIA movie *Three Days of the Condor*, Buckley—who himself worked briefly (nine months) as a CIA covert agent—set out to write a book in which “the good guys and the bad guys were actually distinguishable.” That history is the “final” fiction is one of the themes of his Blackford Oakes novels that always take as their starting point an historical “fact.” But his main interest lay in countering the charges that there was no moral difference between Western intelligence and its Soviet counterpart. In his *Craft of Intelligence*, former CIA Director Allen Dulles, who figures frequently in Buckley’s novels, claimed that “Our intelligence has a major share of the task of neutralizing hostile activities. Our side chooses the objective. The opponent has set up the obstacles.” Buckley frames it differently in his novel *Stained Glass*: “Our organization is defensive in nature. Its aim is to defeat your aggressive intentions. You begin by the dissimilarities between Churchill and Hitler. That factor wrecks all derivative analogies.”

Buckley’s conservatism is deeply spiritual but never orthodox. In a direct contradiction of conservative and Republican politics, he claimed in a 1996 cover story of the *National Review* “The War on Drugs Is Lost,” that “the cost of the drug war is many times more painful, in all its manifestations, than would be the licensing of drugs combined with an intensive education of non-users and intensive education designed to warn those who experiment with drugs.” In his syndicated column he wrote of his sister’s cancer chemotherapy and her need for medical marijuana. Buckley’s public stand and personal drama are closely related. In *Watch on the Right*, David Hoeverler sees this communal and familial conservative pathos as a defining quality of Buckley’s character: “The conservative movement for Buckley was a family affair, it flourished with friendships within and struck forcefully at the enemy without.” Nine of the ten Buckley children at one time contributed to the *National Review*.

Being Catholic always mattered more to him than being conservative, Gary Willis noted in his *Confessions of a Conservative*. When asked in an *Online Newshour* interview about his book *Nearer, My God: An Autobiography of Faith*, how his Christian belief influenced his views on conservatism, he laughed his reply: “Well, it’s made me right all the time.”

Buckwheat Zydeco (1947—)

Stanley “Buckwheat” Dural, Jr. is one of the premier performers and representatives of the black Creole dance music of southwest Louisiana known as zydeco. In 1979, after playing for nearly three years in Clifton Chenier’s band, he added Zydeco to his nickname and formed the Ils Sont Partis Band, which takes its title from the announcer’s call at the start of each horse race at Lafayette’s Evangeline Downs, in the heart of French-speaking Louisiana. An accomplished accordionist, Buckwheat has perhaps done more than anyone else to popularize zydeco and increase its appeal within a wider popular culture. He played for President Clinton’s inaugural parties and for the closing ceremonies of the 1996 Summer Olympics in Atlanta. His tunes now find their way on to television commercials and movie soundtracks, but even multiple Grammy Award nominations have not diminished his allegiance to what he calls his “roots music.”

Budweiser

Along with Coca-Cola, Budweiser beer is America’s drink. One out of five alcoholic drinks sold in America is a Bud, and, now that the King of Beers is being sold in more than 60 countries worldwide, Budweiser is the world’s most popular beer. This lightly-hopped, smooth lager has a long history in the United States, but it was beginning in the 1970s that Budweiser became a true icon of American culture, thanks to a model of commercial development that is the envy of the world. Faced with increasing competition from the Miller Brewing Company, Budweiser parent Anheuser-Busch began putting the Budweiser name everywhere: on coolers, blimps, and boxer shorts; on football games, car races, and other sports. The company’s carefully crafted advertising campaigns were equally ubiquitous: “This Bud’s for you”; “Budweiser . . . The King of

A large, inflatable Budweiser beer can on Cocoa beach in Florida.

Beers”; the Bud Bowl; the Budweiser frogs and lizards; and, of course, the Budweiser Clydesdales all kept the Budweiser brands alive in the consumers’ mind. The brewery bought the St. Louis Cardinals baseball team and opened theme parks in Florida and Virginia; these were family entertainments, but the ties to the beer brands were always evident. Such marketing tactics were backed by the most efficient beer production and distribution systems in the world.

The Anheuser-Busch brewing company traced its history back to St. Louis breweries in the mid-1800s. In 1865, the brewery produced 8,000 barrels; these numbers grew quickly when Budweiser Lager Beer was introduced in 1876. The brewing company expanded horizontally, purchasing bottlers and glass companies. Soon it controlled all the means for producing its beer and in 1901 Anheuser-Busch was well on its way to being America’s brewery, breaking the million-barrel mark for the first time with 1,006,494 barrels. With the nation under the grips of National Prohibition in 1920, the brewery unveiled Budweiser near-beer (selling 5 million cases) and began manufacturing ice cream. With the retraction of Prohibition in 1933 the company introduced the Budweiser Clydesdales, which have remained an icon of the company’s commitment to tradition. In the 1950s, the company implemented plans to open Busch drinking gardens in various cities, in an attempt to tap into a European tradition. In addition, advertising gimmicks became a significant part

of Bud's appeal. From the Clydesdales of the 1930s, advertisers welcomed "Bud Man" in 1969, a campaign which sought to tie the beer to gender roles and expectations of masculinity. Today, Budweiser still uses the saying "This Bud's for you," but it most often aims toward a broader, un-gendered public with advertising gimmicks such as the "Bud Bowl" and talking frogs. Budweiser was also one of the first beers to incorporate requests for responsible-drinking in its advertisements in the late 1980s.

In 1980 Budweiser made history by expanding into the global marketplace with agreements to brew and sell in Canada, Japan, and elsewhere. This corporate development fueled Anheuser-Busch's staggering rise in production, which exceeded 100 million barrels per year in the late 1990s and gave the company nearly half of all beer sales worldwide and around 40 percent of beer sales in the United States. Budweiser—along with the brand extensions Bud Light, Bud Dry, and Bud Ice—is thus poised to become to the rest of the world what it already is to the United States: a mass-produced, drinkable beer that symbolizes the "good life" made possible by corporate capitalist enterprise. Beer purists and fans of locally-produced microbrews may decry the bland flavor and lack of body of the world's best-selling beer, but millions of beer drinkers continue to put their money down on the bar and ask for a Bud.

Buffalo Springfield

Despite releasing three accomplished albums which were innovative and influential exemplars of the "West Coast sound" of the mid- to late 1960s, Buffalo Springfield only had a limited impact on the public consciousness during its brief and tempestuous heyday. However, the continued cultural resonance of their solitary hit single, "For What It's Worth," combined with the subsequent critical acclaim and commercial success of its alumni, has ensured Buffalo Springfield of a somewhat mythical status in popular music history.

The genesis of Buffalo Springfield proceeded slowly through various musical styles and right across the North American continent. Stephen Stills and Richie Furay met in folk music mecca Greenwich Village, and first played together in an eccentric nine-man vocal ensemble called the Au Go Go singers, which released an obscure album in 1964. Fellow singer-songwriter Neil Young encountered Stills in Ontario, and Furay in New York, before befriending bassist Bruce Palmer on the Toronto coffee-house music scene. Young and Palmer joined a blues-rock group, The Mynah Birds, which was

Members of the group Buffalo Springfield c. 1967, featuring Stephen Stills (top) and Neil Young (right).

briefly signed to Motown in 1965. The four young musicians finally came together as a group when Stills and Furay spotted the two Canadians in a Los Angeles traffic jam in early 1966. Supplemented by another Canadian, experienced session drummer Dewey Martin, the fledgling Buffalo Springfield were, in the words of Johnny Rogan, "potentially the most eclectic unit to appear on the West Coast scene since the formation of the Byrds."

Byrds' bassist Chris Hillman arranged for Buffalo Springfield to play at the prestigious Los Angeles club Whisky A Go Go, and the gigs immediately attracted such local luminaries as David Crosby, the Mamas and Papas, and Sonny and Cher. Furay, Stills and Young would later assert that Buffalo Springfield peaked during these early live appearances, and that by comparison, in Young's words, "All the records were great failures." The band released the first of those records in July 1966, Young's precocious "Nowadays Clancy Can't Even Sing" backed with Stills' "Go and Say Goodbye." The single was not a commercial success, but it provides a suitable example of the contrast at this time between Stills' stylish but typical "teenybop" narratives of young love, and Young's more lyrically obtuse repertoire. As Stills later noted, "He [Young] wanted to be Bob Dylan and I wanted to be The Beatles."

Buffalo Springfield's eponymous debut album was released in February 1967. The lyrics to Young's "Burned," "Out of My Mind" and "Flying on the Ground Is Wrong" all alluded to the effects of fashionable psychedelic drugs. Buffalo Springfield achieved commercial success with their next single, "For What It's Worth," which reached number 7 on the national chart. An artistic leap for Stills, the

song was a coolly sardonic study of the violent action of police against hippy protesters on Sunset Strip in late 1966. Though “For What It’s Worth” captured the significance of the conflict between the authorities and the emerging “counterculture,” the single’s sales were concentrated in California, suggesting that middle America had little empathy with such provocative lines as “What a field day for the heat [police]/A thousand people in the street.”

By early 1967, Buffalo Springfield was riven with problems. Palmer had been charged with possession of drugs and deported back to Canada, and Young began to work with former Phil Spector associate Jack Nitzsche. The group played an acclaimed concert with Palmer and without Young at the Monterey Pop Festival in June 1967. Renegade Byrd David Crosby substituted for Young at this legendary zenith of the hippy era. Young returned to Buffalo Springfield in September 1967 and the band released their second long-player. Though *Rolling Stone* pertinently observed that “This album sounds as if every member of the group is satisfying his own musical needs,” the diverse and ambitious *Buffalo Springfield Again* is an acknowledged classic. The album included Young’s impressionistic six-minute collage “Broken Arrow,” Stills’ guitar and banjo epic “Bluebird,” and “Rock ’n’ Roll Woman,” an ode to Jefferson Airplane singer Grace Slick co-written by Stills and Crosby.

Buffalo Springfield unravelled in early 1968: Palmer was busted and deported again in January, and in March, Young, Furay and the latest bassist, Jim Messina, were arrested on a drugs charge with Cream member Eric Clapton. When Buffalo Springfield finally disbanded in May, *Rolling Stone* cited “internal hassle, extreme fatigue coupled with absence of national success and run-ins with the fuzz.” The hippy argot rather disguised the extent to which the internecine egotism of Stills and Young, even more than the drug busts, had dissolved Buffalo Springfield. It was left to Furay and Messina to organise tracks recorded at the end of 1967 for the inevitably inconsistent *Last Time Around*, released in August 1968 after Buffalo Springfield had disbanded.

Stills joined Crosby in the prototypical “supergroup” Crosby, Stills and Nash; Young became a significant solo artist and occasionally augmented CSN; and Furay and Messina formed the country-rock outfit Poco. A reunion of the original members occurred in 1982, but it never advanced beyond rehearsals. Despite being inducted into the Rock ’n’ Roll Hall of Fame in 1997, Buffalo Springfield remains disproportionately represented in popular culture by “For What It’s Worth,” a standard of the soundtracks to many documentaries and movies (*Good Morning Vietnam*, *Forrest Gump*) about the cultural conflicts of the 1960s. In 1998, the song was more imaginatively utilised by rap group Public Enemy in the title song for the film *He Got Game*. Stills’ famous riff and lyrics were combined with the rhymes of Public Enemy’s frontman, Chuck D, in an inspired meeting of two radically different forms and eras of political popular music.

Buffett, Jimmy (1946—)

Devoted fans—affectionately dubbed Parrot Heads—find escapism in Jimmy Buffett’s ballads, vicariously experiencing through his strongly autobiographical songs Buffett’s life of beaches, bars, and boats. Yet Buffett’s life has been far more than rum-soaked nights and afternoon naps in beachside hammocks. Even though Buffett relishes his image of “the professional misfit,” this millionaire “beach bum” is actually an ambitious and clever entrepreneur.

Born on Christmas Day, 1946 in Pascagoula, Mississippi, Jimmy Buffett spent most of his youth in the Catholic school system in Mobile, Alabama. During college he learned to play the guitar and started singing in clubs. While attending the University of Southern Mississippi, about 80 miles from New Orleans, Buffett played regularly at the Bayou Room on Bourbon Street. Once he had a taste of performing, his life course was set. Even though he married and took a job at the Mobile shipyards after college, Buffett continued to spend his nights playing at hotel cocktail lounges.

Lacking the money to move to Los Angeles, where Jimmy had a job offer at a club, the Buffetts moved instead to Nashville. Buffett made a living by writing for *Billboard* magazine, but he also continued to write new songs. The first of these songs to get recorded was “The Christian?” on Columbia Records’ Barnaby Label. In 1970, Buffett recorded an album, *Down to Earth*, for the Barnaby label. Sales were so disappointing that Barnaby did not release Buffett’s next album, *High Cumberland Jubilee*, recorded in 1971, until 1977. Buffett hired a band and toured in an attempt to promote his first

Jimmy Buffett

album, but within a few months he ran out of money. Career frustrations took a toll on his marriage.

In his mid-twenties, Buffett found himself broke, divorced, and hating Nashville. Then in 1971, Jimmy Buffett took a trip that changed his life and his music. Fellow struggling singer Jerry Jeff Walker invited Buffett down to his home in Summerland Key, just 25 miles from Key West. It was the beginning of Key West's "decade of decadence," and Buffett quickly immersed himself in the Conch subculture's nonstop party that they referred to as the "full-tilt boogie." To maintain the freedom of his new lifestyle Buffett ran up bar tabs, literally played for his supper, and got involved in the local cottage industry—drug smuggling.

The lifestyle and the local characters became the substance of Buffett's songs. The first of the Key West-inspired songs appeared in 1973 when he landed a record deal with ABC/Dunhill and recorded *A White Sport Coat and a Pink Crustacean*. The tongue-in-cheek "The Great Filling Station Holdup" made it to number 58 on Billboard's country charts. The most infamous song from the album, "Why Don't We Get Drunk (and Screw)," became a popular jukebox selection and the favorite Buffett concert sing-along song.

ABC's rising star, Jim Croce, died in 1973, and the record company looked to Jimmy Buffett to fill his shoes. They even promoted Buffett's next album, 1974's *Living and Dying in 3/4 Time*, with a fifteen-minute promotional film that showed in ABC-owned theaters. "Come Monday" made it all the way to number 30 on the billboard pop charts. For years, Buffett had been making reference to, even introducing, his mythical Coral Reefer Band. In the summer of 1975 he put together an actual Coral Reefer Band to tour and promote his third ABC/Dunhill album, *AIA*. The album contains "A Pirate Looks at Forty," which became a central tale in the mythos Buffett was spinning, and a virtual theme song for every Buffett fan as they neared middle age. 1976's *Havana Daydreamin'* got good reviews and fed the frenzy of his growing cult following; but it was 1977's *Changes in Latitude, Changes in Attitude* that was the defining moment of his career. The album's hit single, "Margaritaville," stayed in the Billboard Top 40 charts for fifteen weeks, peaking at number eight. That summer "Margaritaville" permeated the radio and Buffett opened for the Eagles tour. The exposure helped *Changes in Latitude, Changes in Attitude* go platinum.

The song "Margaritaville" gave a name to the place fans escaped when they listened to Jimmy Buffett's music. And Margaritaville was wherever Jimmy Buffett was playing his music, be that Key West, Atlanta, or Cincinnati. Supposedly it was at a concert in Cincinnati in the early 1980s that Eagles bassist Timothy B. Schmidt looked out at the fans in wild Hawaiian shirts and shark fin hats and dubbed them Parrot Heads. By the late 1980s the Parrot Head subculture had grown to the point that Buffett had become one of the top summer concert draws. The concerts were giant parties with colorful costumes, plentiful beer, and almost everyone singing along out of key with the songs they knew by heart. The concerts were more about the experience than about hearing Jimmy Buffett sing.

Buffett soon found ways to extend the experience beyond the concerts. Although he continued to average an album a year, he also began to develop diverse outlets for his creativity, and aggressively marketed the Margaritaville mythos. The Caribbean Soul line of clothing appeared in 1984, and in 1985 he opened Jimmy Buffett's Margaritaville store in Key West. A few months after opening the store, he sent out a 650 copy initial mailing of *Coconut Telegraph*, a combination fan newsletter and advertising flyer for Buffett paraphernalia. It was in the April 1985 issue that the term Parrot Head was first

officially used to refer to Buffett's fans. By the end of the decade, the newsletter had 20,000 subscribers.

Buffet reasoned that anyone who wanted to read his newsletter would buy a book with his name on it. His first literary effort, in 1988, was *Jolly Mon*, a children's book he co-wrote with his daughter Savannah Jane. The following year, Buffett's collection of short stories, *Tales from Margaritaville*, became a bestseller. His first novel, *Where is Joe Merchant?*, warranted a six figure advance and became a bestseller in 1992. By this time Buffett had opened a Margaritaville cafe next to the store in Key West. Eventually, he opened Margaritaville clubs and gift shops in New Orleans, Charleston, and Universal Studios in Florida.

More than anything else, Jimmy Buffett is a lifestyle artist. Whether it be a Caribbean meal, a brightly colored shirt, a CD, or a live performance, Buffett transports his fans to the state of mind that is Margaritaville.

Bugs Bunny

One of the most beloved animated characters of all time, Bugs Bunny proved the likable combination of casual and wise guy who speaks insouciantly with a Brooklyn accent (voiced by Mel Blanc). Bugs has been both comic aggressor and straight man, but his essence is that he is always sympathetic, responding only to provocation (a character wants to eat him, wants him as a trophy, as a good luck piece, as an unwilling participant in an experiment, etc.). Bugs never engages an opponent without a reason, but once he is engaged, it's a fight to the finish with Bugs the comic winner. He can be mischievous, cunning, impudent, a rascally heckler, a trickster, saucy, and very quick with words, but he is never belligerent and prefers to use his wits rather than resort to physical violence.

An embryonic version of Bugs first appeared in Ben Hardaway's 1938 cartoon "Porky's Hare Hunt," in which the rabbit is a screwy tough guy in the wacky and wild tradition of early Daffy Duck. The character is given a screwball, Woody Woodpecker kind of laugh, hops about wildly, and even flies, using his ears as propellers. He has Bugs' penchant for wisecracks ("Here I am, fatboy!"), as well as Bugs' occasional appeals to sympathy ("Don't shoot!"). He also expresses Bugs' later catchphrase (borrowed from Groucho Marx in *Duck Soup*), "Of course you realize, this means war!" However, the white hare is also more aggressively wacky than the later character and would torment his opponents mercilessly.

The character was designed by former Disney animator Charles Thorsen, and although unnamed in the cartoon itself, was christened Bugs Bunny because the design sheet for director Ben "Bugs"

Hardaway was designated "Bugs' Bunny." Hardaway also guided the hare through his second outing (and his first in color) in "Hare-um Scare-um." Director Frank Tashlin alleged that "Bugs Bunny is nothing but Max Hare, the Disney character in 'The Tortoise and the Hare.' We took it—Schlesinger took it, whoever—and used it a thousand times." While both are brash and cocky characters, Bugs was both wilder and funnier, eventually developing into a very distinctive character. Animator and later director Robert McKimson redesigned Bugs Bunny into the modern figure seen in the 1990s.

Bugs faced a number of antagonists over the years, the most famous being Elmer Fudd (voiced by Arthur Q. Bryan), a large-headed hunter with a speech impediment. The pair were first teamed by Charles "Chuck" Jones in "Elmer's Candid Camera," with Elmer stalking the "wascally wabbit" with a camera instead of his usual gun. The team was then appropriated by Fred "Tex" Avery for "A Wild Hare," in which some of Bugs' rougher edges were softened to make him less loony and annoying. Avery also coined Bugs' signature opening line, "Eh, what's up, Doc?" as a memorably incongruous response to a hunter preparing to pepper him with bullets.

Bugs really hit his stride under the direction of Bob Clampett in such cartoons as "Wabbit Trouble," "Tortoise Wins by a Hare," "What's Cooking, Doc?," "Falling Hare," and "The Old Grey Hare." Clampett's Bugs was one of the funniest and wildest incarnations of the character and is much more physical than he later became. These cartoons were later compiled into a feature, *Bugs Bunny Superstar*, where Clampett took sole credit for inventing Bugs Bunny. This did not set well with Jones, who when it came time to assemble *The Bugs Bunny/Road Runner Movie* credited every Bugs Bunny director except Clampett.

Director Friz Freleng specialized in pitting Bugs against Yosemite Sam, a runt-sized alter ego of Freleng himself equipped with an oversized hat, eyebrows, and mustache. Freleng found that Elmer Fudd was too sympathetic and wanted to create an outright villain in Sam. Sam's attempts to get the better of Bugs, the varmint, were eternally and comically frustrated. Sam made his first appearance in "Hare Trigger," and Freleng's Bugs and Sam won an Academy Award for their teaming in "Knighly Knight Bugs."

However, Bugs' finest interpreter was Chuck Jones, who always felt that the rabbit should be motivated to wreak his mischief by an antagonist who tries to push the supposedly timid woodland creature around. Jones found his conception of Bugs materializing in "Case of the Missing Hare," "Super-Rabbit," and "Hare Conditioned." Jones and gag man Michael Maltese created terrific comic sparks by allowing Bugs to play straightman to the forever frustrated Daffy Duck whose plans to get Bugs shot instead of himself constantly go awry. Three titles stand out: "Rabbit Fire," "Rabbit Seasoning," and "Duck! Rabbit! Duck!"

Jones also created the musically based classic Bugs cartoons "Long-Haired Hare," "Rabbit of Seviolle," "Baton Bunny" and "What's Opera, Doc?" as well as using the character to parody the conventions of fairy tales, science fiction, and other genres in "Haredevil Hare," "Frigid Hare," "Bully for Bugs," "Beanstalk Bunny," and "Ali Baba Bunny." These are among the funniest cartoons ever created and ample reason for Bugs' enduring popularity.

Bumper Stickers

The bumper sticker was first used after World War II when new developments in plastic materials led to the production of paper strips with adhesive on the back which allowed them to be fastened onto car bumpers. The first bumper stickers were used almost exclusively during political campaigns to promote candidates and parties. This continued until the mid-1960s when personal statements such as "Make Love, Not War" or "America—Love It Or Leave It" began to appear. The bumper sticker has become a form of folk broadcasting, allowing anyone who owns a car to send out a slogan or message to anyone who happens to read it. Ranging from the serious to the satirical, many of the popular messages which appear on bumper stickers can offer valuable information about Americans' attitudes and concerns over religion, politics, regionalism, abortion, the environment, or any other debatable issue.

Bundy, Ted (1946-1989)

Ted Bundy, perhaps the most notorious serial killer in American history, was executed amidst much media attention in Florida on the morning of January 24, 1989, for the murder of a 12 year-old girl. At the time of his execution, Bundy had also been convicted for the murders of two Florida State University students and was confessing to the murders of more than 20 other women across the length of the United States. Investigators, however, suspect Bundy actually committed anywhere between 36 to 100 murders in a killing spree that may have begun when he was a teenager in the Pacific Northwest and ended in north Florida. The media spectacle and public celebration outside the walls of the Florida death-house where Bundy was executed climaxed a long-term public fascination with one of the country's most photogenic, charismatic, and seemingly intelligent multiple murderers. Details of Bundy's gruesome murders, his remarkable escapes from police custody, and his "fatal attraction" for women have all managed to circulate throughout American popular mythology.

Ted Bundy's early history is at once ordinary and portentous. Bundy was born Theodore Robert Cowell on November 24, 1946, to Eleanor Louise Cowell in a home for unwed mothers in Burlington,

A car encrusted with bumper stickers.

Vermont. Ostracized by community and family after her pregnancy became an open secret, Louise traveled from her parents in Philadelphia to give birth to Ted, left him at the home in Burlington for a few months to discuss Ted's future with her family, and then finally brought Ted back to the Cowell house. Three years after that, Louise moved with Ted to Tacoma, Washington, to stay with his uncle Jack, a man whose education and intelligence Bundy much admired as he grew up. In Tacoma, Louise met and married a quiet man named Johnnie Bundy, and Ted's last name became Bundy. Much of the literature on Bundy, both popular and academic, focuses on the fact that his mother Louise was unwed and that the father's identity to this day remains a matter of conjecture. Bundy himself frequently downplayed the significance of his illegitimacy to his chroniclers, but he also on occasion implied how his youthful discovery that he was a "bastard" forever changed him.

Also debated in the extensive Bundy literature is the extent to which emotional and/or physical abuse distorted his development. All through the years of Bundy's public notoriety, he and some of his immediate family members insisted that, for the most part, his childhood was a loving, harmonious time. Since a series of psychiatric examinations of Bundy in the 1980s, however, doctors such as Dorothy Lewis have brought to light more of Bundy's early domestic traumas and many have come to believe that Bundy was emotionally

damaged by witnessing his grandfather's alleged verbal and sometimes physical rages against family members. In any event, it seems clear that Bundy developed a fascination for knives and stories of murder quite early in his life—as early as three years of age. During his adolescence, Bundy became secretly obsessed with pornography, voyeurism, and sexually violent detective magazines.

As Bundy matured into a young man, he consciously cultivated an image or public face not dissimilar to how he perceived his uncle Jack: refined, educated, witty, public spirited, and stylish. Early on, he became active in community church events and the Boy Scouts. He later achieved modest academic success in high school and college, eventually attaining admission to law school. He became a worker for the Washington State Republican Party, strongly impressing then Governor Dan Evans. He manned the phone lines at a suicide crisis center and (ironically) studied sexual assault for a Seattle investigatory commission.

Much of Bundy's image making seemed designed to manipulate women in particular. Though the level of Bundy's sex appeal has been exaggerated and romanticized by the media, particularly in the highly rated 1986 NBC television movie *The Deliberate Stranger* (where he was played by handsome actor Mark Harmon), Bundy did engage in a number of romantic relationships during his life. Again, it has become standard in Bundy lore to focus on his relationship with a beautiful,

Ted Bundy (center) at his trial, 1979.

wealthy student when he was a junior in college. When the woman jilted Bundy, he vowed to become the kind of sophisticated man who could win her back. When they subsequently became engaged, Bundy coldly rejected her. According to writers such as Ann Rule, this woman is the physical and cultural prototype of Bundy's victims, who tended to be pretty, longhaired, and privileged co-eds. Another of Bundy's long-term lovers, a woman who wrote about her life with Bundy under the penname of Liz Kendall, has become publicly emblematic of the female intimates in Bundy's life who were so damaged by the revelation that he had killed dozens of women and yet remain strangely compelled by the memory of his personality. Even after his 1976 conviction for kidnapping a Utah woman brought Bundy to the national spotlight as a suspected serial killer, he continued to attract favorable female attention, eventually marrying a woman named Carole Boone in a bizarre courtroom ceremony during his second murder trial in 1980.

Bundy's criminal career stretched from coast to coast. He began murdering young college women in Washington State in 1974, either by sneaking into their homes in the middle of the night to abduct and kill them or by luring them with feigned helplessness and/or easy charm from the safety of a crowd into his private killing zone. He next moved on to Utah, where he attended law school by day and killed women by night. He also committed murders in Colorado and Idaho

during this time. In August of 1975, Bundy was arrested for a traffic violation and while he was in custody, police investigators from Utah and Washington compared notes and realized that Bundy was a viable suspect in the multi-state series of murders and kidnappings. Bundy was convicted in the kidnapping and assault of a young Utah woman, sent to prison, and later extradited to Colorado to stand trial for murder. During a lull in the legal proceedings at a courthouse in Aspen in 1977, Bundy escaped from an open window and remained free for five days. Recaptured, Bundy again escaped six months later, this time from a county jail. The second escape was not discovered for hours—time enough for Bundy to be well on his way to his eventual destination at Florida State University (FSU) in Tallahassee. At FSU, Bundy killed two sorority women in the Chi Omega House and shortly thereafter killed a 12 year-old girl in Lake City. These were the last of Bundy's murders.

Bundy's arrest and conviction for the Florida murders twice earned him the death penalty: in 1979 and 1980. His appeals lasted for years, but it became apparent in late 1988 that Bundy would be executed in January of 1989. In a desperate ploy to buy more time, Bundy began confessing details of select murders to investigators from across the country, including Robert Keppel, one of the original detectives assigned to Bundy's murders in the Pacific Northwest. Bundy also granted a widely publicized videotaped interview to

evangelist James Dobson, during which Bundy blamed the pernicious influence of pornography for the murders. In spite of the last-minute confessions, however, Bundy was executed in “Old Sparky,” Florida’s electric chair, as a mob of spectators outside Raiford Prison waved signs with such slogans as “Burn Bundy Burn” and “Chi-O, Chi-O, It’s Off to Hell I Go.”

Bungalow

Though we may say so of the American ranch house, the bungalow serves as the archetypal style of American housing. As ideas of homemaking and house planning took shape around the turn of the twentieth century, designers sought a single style that embodied the evolving American ideals in a form that could be dispersed widely. While the sensibility of home design may have seemed modern, it in fact grew out of a regressive tradition known as the Arts and Crafts movement. The bungalow—meaning “in the Bengali style”—with its simplicity of design and functionality of layout, proved to be the enduring product of modernist thought combined with traditional application.

In the late nineteenth century, massive industrial growth centered Americans in cities and often in less than desirable abodes. The arts and crafts movement argued for society to change its priorities and put control back in human hands. One of the most prominent popularizers of the Arts and Crafts movement in the United States was Gustav Stickley. Inspired by William Morris and others, Stickley began publishing *The Craftsman* in 1901 in hopes of initiating a social and artistic revolution. Reacting against industrialization and all of its trappings (from tenement squalor to the dehumanization of labor), Stickley offered readers designs for his well-known furniture and other materials—all handmade. The plans in *The Craftsman* led naturally to model houses, featuring both interior and exterior plans. The Stickley home, wrote the designer-writer, was a “result not of elaborating, but of elimination.” Striking a Jeffersonian chord, Stickley sought a design that would fulfill what he called “democratic architecture”: a way of living for all people. The design for this

unpretentious, small house—usually one-storied with a sloping roof—became known as bungalow and would make it possible for the vast majority of Americans to own their own home.

The homes of such designs played directly into a growing interest in home management, often referred to as home economics. At the turn of the twentieth century, American women began to perceive of the home as a laboratory in which one could promote better health, families, and more satisfied individuals with better management and design. The leaders of the domestic science movement endorsed simplifying the dwelling in both its structure and its amenities. Criticizing Victorian ornamentation, they sought something clean, new, and sensible. The bungalow fulfilled many of these needs perfectly.

While popular literature disseminated such ideals, great American architects also attached the term to the greatest designs of the early 1900s. Specifically, brothers Charles and Henry Green of California and the incomparable Frank Lloyd Wright each designed palatial homes called bungalows. Often, this terminology derived from shared traits with Stickley’s simple homes: accentuated horizontality, natural materials, and restraint of the influence of technological innovation. Such homes, though, were not “democratic” in their intent.

The most familiar use of “bungalow” arrived as city and village centers sprawled into the first suburbs for middle-class Americans, who elected to leave urban centers yet lacked the means to reside in country estates. Their singular homes were often modeled after the original Stickley homes or similar designs from *Ladies’ Home Journal*. Housing the masses would evolve into the suburban revolution on the landscape; however, the change in the vision of the home can be traced to a specific type: the unassuming bungalow.

Burger King

Burger King is a fast-food restaurant franchise that, along with McDonald’s, has come to typify the U.S. “hamburger chain” concept that saw thousands of identical outlets spring up along the nation’s highways after World War II and, later, in cities and towns from coast to coast and around the world. With its orange-and-white signs, Burger King, the “Home of the Whopper,” was founded in Miami in 1954 by James McLamore and David Edgerton. Its first hamburgers were sold for 18 cents, and its flagship burger, the Whopper, was introduced in 1957 for 37 cents. Opened a year before rival McDonald’s was franchised, Burger King was the first among the fast food drive-ins to offer indoor dining. By 1967, when the Pillsbury Corporation bought the company, there were 274 Burger King restaurants nationwide, employing more than 8,000 people. As of the end of 1998, there were 7,872 restaurants in the United States and 2,316 in more than 60 countries selling 1.6 billion Whopper sandwiches each year. Despite complaints from nutritionists about the fatty content of fast-food meals, many time-pressed consumers prefer them for their convenience and economy.

Burger King carved out its own niche in fast-food merchandising by means of several factors: its distinctive Whopper product, a cooking method that relies on flame-broiling instead of frying, and the company's aggressive and creative advertising campaigns. Even so, Burger King remains a distant second to its chief competitor, holding only 19 percent of the market compared to McDonald's 42 percent. The two fast-food giants have long had an ongoing rivalry, each claiming superior products, and even marketing competitive versions of each others' sandwiches. One of Burger King's most successful advertising campaigns in the 1970s mocked the uniformity and inflexibility of its rival's fast-food production with the slogan, "Have it Your Way," implying that customized orders were more easily available at Burger King than at McDonald's.

In 1989, Pillsbury was bought by a British firm, Grand Metropolitan (now Diagio), which acquired Burger King in the bargain. Knowing little about the American tradition of fast food, the British corporation tried to "improve" on the burger/fries menu by offering sit-down dinners with waiters and "dinner baskets" offering a variety of choices. This well-intentioned idea sent profits plummeting, and Burger King did not truly recover for nearly a decade. Also in the late 1990s, Burger King, in cooperation with government attempts at welfare reform, joined an effort to offer employment to former welfare clients. Critics pointed out that fast-food restaurant jobs in general are so low-paid and offer such little chance of advancement that their usefulness to individual workers is limited. Occasionally the defendant in racial discrimination suits, the corporation that owns Burger King was taken to task in 1997 by the Congressional Black Caucus for discriminatory practices against minority franchise owners. The company has increased its investments in African-American banks and its support for efforts of the fledgling Diversity Foods in Virginia in its efforts to become one of the largest black-owned businesses in the United States.

Despite Burger King's second position after McDonald's, the market for fast food is large. Perhaps one of Burger King's own past slogans sums up the outlook of the franchise best, "America loves burgers, and we're America's Burger King."

Burlesque

The word "burlesque" can refer either to a type of parody or to a theatrical performance whose cast includes scantily-clad women. The second art form grew out of the first: "burla" is Italian for "trick, waggery," and the adjective "burlesca" may be translated as "ludicrous." Borrowed into French, "burlesque" came to mean a takeoff on an existing work, without any particular moral agenda (as opposed to satire). The genre enjoyed a robust life on the French stage throughout the nineteenth century, and found ready audiences in British theaters as well.

The first American burlesques were imports from England, and chorus lines of attractive women were part of the show almost from the start. In 1866, Niblo's Garden in New York presented *The Black Crook*, its forgettable plot enlivened, as an afterthought, by some

imported dances from a French opera, *La Biche au bois*. Public reception was warm, according to burlesque historian Irving Zeidman: "The reformers shrieked, the 'best people' boycotted it," but the bottom line was "box receipts of sin aggregating over \$1,000,000 for a profit of \$650,000." The show promptly spawned a host of imitations—*The Black Crook Junior*, *The White Crook*, *The Red Crook*, *The Golden Crook*—capitalizing shamelessly, and profitably, on Niblo's success.

Two years later an English troupe, Lydia Thompson and Her Blondes, made their New York debut at Woods' Museum and Menagerie on 34th St., "sharing the stage," writes Zeidman, "with exhibitions of a live baby hippopotamus." The play this time was F.C. Burnand's classical travesty *Ixion*, in which the chorus, costumed as meteors, eclipses, and goddesses, thrilled the audience by flashing their ruffled underpants in the Parisian can-can style.

The Thompson company was soon hired away to play at Niblo's in an arabesque comedy called *The 40 Thieves*. The orientalist turn soon worked its way into other shows, including those of Madame Celeste's Female Minstrel Company, which included numbers such as "The Turkish Bathers" and "The Turkish Harem." (Even as late as 1909, Millie De Leon was being billed as "The Odalisque of the East," i.e., the East Coast.) Orientalism was just one avenue down which American burlesque in the last three decades of the nineteenth century went in search of its identity in a tireless quest for plausible excuses to put lots of pretty women on stage while still managing to distinguish itself from what were already being called "leg shows." Minstrelsy and vaudeville were fair game; so were "living pictures," in which members of the troupe would assume the postures and props of famous paintings, preferably with as little clothing as could be gotten away with. (This method of art-history pedagogy was still being presented, with a straight face, half a century later as one of the attractions at the 1939 New York World's Fair.)

By the turn of the century, burlesque shows could be seen on a regular schedule at Manhattan's London Theatre and Miner House and across the East River in Brooklyn at Hyde and Behman's, the Star, and the Empire Theatres. Philadelphia offered burlesque at the Trocadero, 14th Street Opera House, and the Arch, Kensington, and Lyceum Theatres. Even staid Boston had burlesque at the Lyceum, Palace, and Grand Theatres as well as the Howard Atheneum, where young men who considered themselves lucky to catch a glimpse of an ankle if they stood on street corners on rainy days (according to Florence Paine, then a young businesswoman in the Boston shoe trade), "could go to see women who wore dresses *up to their knees*." (And wearing tights; bare legs would not come until later, even in New York.)

A "reputable" burlesque show of the Gay Nineties, according to Zeidman, might have a program such as was offered by Mabel Snow's Spectacular Burlesque Company: "New wardrobes, bright, catchy music and pictures, Amazon marches, pretty girls and novelty specialty acts." By 1917, according to Morton Minsky (proprietor, as were several of his brothers, of a famous chain of New York burlesque houses) the basic ingredients of burlesque were "girls, gags, and music." Minsky describes in detail the first time he saw one of his brothers' burlesque shows at the Winter Garden that year, the first half of which included a choral number (with much kicking of legs in unison, Minsky notes), a comedy skit, a rendition of Puccini's "Un bel di," a turn by a "cooch dancer" (or hootchy-kootch, vaguely derived from Near Eastern belly dancing and the prototype of what would later be called "exotic dancing"), a serious dramatic sketch about a lad gone wrong who commits suicide, a second chorus,

A view from the wings of a typical burlesque show.

an appearance by the company soubrette (originally the saucy maid-servant in French comedy, the term later came to mean a woman who sang such parts), another comedy skit, a third chorus, some vaudeville acrobats, and a choral finale with the entire company, reprising the earlier numbers. A similar but shorter mix followed the intermission. This would remain the structure of Minsky shows for the next two decades.

Nor was such entertainment limited to the East Coast. Burlesque prospered at such houses as the Mutual Theater in Indianapolis, the Star and Garter in Chicago, and the Burbank Theatre in Los Angeles. The Columbia Amusement Company, under the leadership of medicine-show veteran Sam Scribner, operated a circuit called the Eastern Wheel whose chief rival, the Empire Circuit or Western Wheel, it absorbed in 1913. Scribner managed to balance business instinct and a personal goal of creating a cleaner act, and for a time the Columbia Wheel offered what it called “approved” burlesque while competing with upstart organizations (such as the short-lived Progressive Wheel) with its own subsidiary circuit called the American Wheel, whose “standard” burlesque featured cooch dancers, comic patter laced

with double-entendre, and runways for the chorus line extending from the stage out into the audience (an innovation first imported to the Winter Garden by Abe Minsky, who had seen it in Paris at the Folies Bergère). The American Wheel offered 73 acts a year, playing to a total audience of about 700,000 in 81 theaters from New York to Omaha.

Though Scribner’s quest for clean burlesque ultimately proved quixotic, he was neither hypocritical nor alone. The founding editor of *Variety*, Sime Silverman, took burlesque shows seriously as an art form, though he too recognized that this was an uphill fight at best, writing in a 1909 editorial that “Were there no women in burlesque, how many men would attend? The answer is the basic principle of the burlesque business.” (*Billboard*’s Sidney Wire concurred, flatly asserting in 1913 that “Ninety percent of the burlesque audiences go to burlesque to see the girls.”) This fact was not lost on the Mutual Circuit, which arose to put Columbia Entertainment out of business in the 1920s, nor on the Minskys, whose theaters flourished until the final crackdown on New York burlesque under Mayor Fiorello LaGuardia and License Commissioner Paul Moss in 1937.

Although the leggy chorus line was an indispensable element of burlesque shows from the start (and would survive them by a half-century with the perennial Rockettes at Radio City Music Hall) the cooch dance became a burlesque standard only after promoter Abe Fish brought Little Egypt and Her Dancers, a troupe of Syrians specializing in the sexually suggestive “awalem” dances performed at Syrian weddings, to the World’s Columbian Exposition at Chicago in 1893. The transition from cooch dancer to striptease was gradual. Soubrettes in the earliest days of burlesque often showed off their youthful bodies even as they sang and danced in solo numbers, but some, like Rose Sydell of the Columbia Wheel, were star clotheshorses instead, displaying breathtakingly elaborate costumes on stage.

Still, as the public responded favorably to more flesh and less clothing as the years wore on, the soubrette’s song-and-dance role came to be supplanted by the striptease artist. By 1932, according to Zeidman, there were “at least 150 strip principals, of whom about 75 percent were new to the industry.” The sudden rise in demand for strippers was partly a corollary of rising hemlines on the street, so that, as one writer for *Billboard* pointed out, “leg shows lost their sex appeal and, in self-defense, the operators of burlesque shows introduced the strutting strips . . . as far as the police permitted.” (Ironically it was one police raid in 1934, at the Irving Palace Theatre, that eliminated runways in New York, somewhat to the relief of theater owners, for whom they were ill suited to the innuendo and soft lighting effects that were part and parcel of an effective strip act.)

Star strippers included Sally Rand, whose two-fan dance got a nod in the popular song “I’m Like a Fish Out of Water,” and Gypsy Rose Lee, who solved the jammed-zipper menace by holding her costume together with pins which she would remove one by one and throw to the audience. (Lee would go on to write a mystery novel, *The G-String Murders*, and an autobiography, *Gypsy*, also made into a movie). Other celebrated strippers included Anna Smith (said to have been the first to cross the line between above-the-waist nudity and baring her bottom), Carrie Finnell, Margie Hart, Evelyn Meyers, and Ann Corio.

By the late 1930s many burlesque shows had ceased to be much more than showcases for strippers. A burlesque troupe which would have had one soubrette and a half-dozen comics at the time of the World War I now often had at least five or six strippers and as few as two comics and a straight man. In New York, burlesque was effectively put out of business by LaGuardia and Moss by the end of 1937, although it survived in New Jersey for a few more years in theaters served by shuttle buses running from Times Square until its mostly-male audience was called off to war.

Though many performers from the burlesque circuits toured with the USO during World War II and the Korean conflict, burlesque itself barely survived into the postwar world, and most houses were closed for good by the mid-1950s. (Boston’s Old Howard, vacant for several years, burned beyond repair in 1961.) In 1968 Ann Corio’s book *This Was Burlesque* and Norman Lear’s film *The Night They Raided Minsky’s* were released, both nostalgic retrospectives on a vanished era.

Nevertheless, “legitimate” American entertainment, especially comedy, owed a lasting debt to burlesque throughout most of the twentieth century, for many of the nation’s stars had either gotten their start or worked for some time in the genre, including Fannie Brice, Eddie Cantor, Lou Costello, Joey Faye, W. C. Fields, Jackie Gleason, Al Jolson, Bert Lahr, Pinky Lee, Phil Silvers, Red Skelton, and Sophie Tucker. Burlesque enriched America’s vocabulary as

well, with such terms as bump and grind, flash, milking the audience, shimmy, and yock.

Burma-Shave

From 1925 to 1963, a brushless shaving cream called Burma-Shave became a ubiquitous and much-loved part of the American scene—not because of the product itself, but because of the roadside signs that advertised it in the form of humorous poems. Motorists in 43 states enjoyed slowing down to read six signs spelling out the latest jingle, always culminating in the Burma-Shave trademark. A typical example might be “PITY ALL / THE MIGHTY CAESARS / THEY PULLED / EACH WHISKER OUT / WITH TWEEZERS / BURMA SHAVE.” The inspiration of Burma-Vita, a family-owned business in Minneapolis, the signs caught the public fancy with their refreshing “soft sell” approach. The uniqueness of the venue was another plus, and in time the Burma company took to offering jingles that promoted highway safety and similar public services—still finishing off, however, with that sixth Burma-Shave sign. Even the public itself was eventually invited to help create the jingles. The Burma-Shave phenomenon was a public relations technique without precedent, and its popularity was reflected in everything from radio comedy sketches to greeting cards. Though long gone, the Burma-Shave signs remain a fondly recalled memory of American life in the mid-twentieth century.

In the early 1920s, the Odell family of Minneapolis, Minnesota, marketed, albeit without much success, a salve which, because key ingredients came from Burma, they called Burma-Vita. The next product that they developed was a refinement of brushless shaving cream, which they naturally dubbed Burma-Shave. The Shave wasn’t

selling much better than the Vita when family member Allan Odell happened to notice a series of roadside signs advertising a gas station—"GAS," "OIL," "RESTROOMS," etc.—and he had a brainstorm. "Every time I see one of these setups," he thought, "I read every one of the signs. So why can't you sell a product that way?" In the autumn of 1925, the Odells drove their first experimental signposts into the soon-to-be-freezing soil along the side of two roads outside Minneapolis. These first serial messages were neither humorous nor poetic—but they worked. For the first time, the Odells started receiving repeat orders from druggists whose customers traveled those two highways.

As their business started thriving, the Odells began to develop the pithy, light-hearted, rhyming jingles for which Burma-Shave quickly became famous. Hitherto, advertising orthodoxy had stipulated that most ad-copy should be verbose and serious. Obviously, verbosity was out of the question when the medium was a series of roadside signs instead of a magazine page. And the Odells preferred not to browbeat their potential customers while they were enjoying a drive in the country. The result was such refreshingly unpretentious verse as the following: "DOES YOUR HUSBAND / MISBEHAVE / GRUNT AND GRUMBLE / RANT AND RAVE / SHOOT THE BRUTE SOME / BURMA-SHAVE." Or: "THE ANSWER TO / A MAIDEN'S / PRAYER / IS NOT A CHIN / OF STUBBY HAIR / BURMA-SHAVE." It was discovered that the time it took a driver to go from one sign to the next afforded him more seconds to absorb the message than if he were reading an ad in a newspaper. What's more, as Alexander Woollcott pointed out, it was as difficult to read just one Burma-Shave sign as it was to eat one salted peanut. And the humorous content, so unlike the common run of dreary ad copy, further served to endear the signs to the driving public. Families would read them aloud, either in unison or with individual members taking turns.

Eventually the Burma-Shave jingles were as universally recognized as any facet of contemporary Americana. A rustic comedian could joke about his hometown being so small that it was located between two Burma-Shave signs. The signs themselves often figured in the radio sketches of such notable funnymen as Amos n' Andy, Fred Allen, Jimmy Durante, and Bob Hope. The popularity of the signs encouraged the Odells to devote a certain portion of their jingles each year to such public service causes as fire prevention and highway safety, as in: "TRAIN APPROACHING / WHISTLE SQUEALING / PAUSE! / AVOID THAT / RUN-DOWN FEELING!" Eventually, the public was brought into the act via heavily promoted contests that invited people to come up with their own jingles, many of which were bought and used. Often, the attention given the signs in the media amounted to free public relations and goodwill for the Burma-Shave company.

Ironically, one of the greatest instigators for free publicity was the company's announcement in 1963 that they would be phasing out the signs. Although this news was greeted by a wave of national nostalgia, the fact was that the Burma-Vita company—one of the last holdouts against corporate takeovers—had finally allowed itself to be absorbed into the Phillip Morris conglomerate, and they could no longer justify the expense of the signs in light of the decreasing return on its advertising investment. It was simply a different world than the one in which the Burma-Shave signs had been born, and it was time to retire them gracefully. While it lasted, their fame had seemed all pervasive. As one 1942 jingle put it: "IF YOU / DON'T KNOW / WHOSE SIGNS / THESE ARE / YOU CAN'T HAVE / DRIVEN VERY FAR / BURMA-SHAVE." That the mythos of Burma-Shave

has outlasted the physical reality of the signs is evidenced in the fact that they are still being parodied and imitated to this day—and, whenever this is done, people still get the joke.

—Preston Neal Jones

Burnett, Carol (1933—)

One of the best-loved comedians of the twentieth century, Carol Burnett set the standard for the variety shows of the 1960s and 1970s. *The Carol Burnett Show* (1967-1979) offered a blend of music and comedy and showcased the popular stars of the period. The highlight of the show for many, however, was the opening when Burnett

A scene from *The Carol Burnett Show*.

answered questions from her audience. A number of her characters have become legend, including the char lady, Eunice, Norma Desmond, and the gum-chewing, wise-cracking secretary. Perhaps the most memorable skit of the series took place when Burnett played Scarlet O'Hara to Harvey Korman's Rhett Butler. Decked out in her green velvet curtains, complete with rods, Carol Burnett demonstrated why she is the queen of comedy. The Eunice skits may have been closer to Burnett's own roots than any of the others, allowing her to laugh at the painful memory of growing up with alcoholic parents and being constantly torn by the constant bickering of her mother and the beloved grandmother who raised her. The role of Mama in the Eunice skits was played by Vicki Lawrence, who won her place on the Burnett show because of her resemblance to Burnett. After the show went off the air, Lawrence continued the role in *Mama's Family* (1983-90) and was occasionally visited by Burnett.

Carol Burnett was born on April 26, 1933, in San Antonio, Texas. Her parents left her with Nanny, her maternal grandmother, and moved to Hollywood, seeking success, which proved to be elusive. In her autobiography, *One More Time: A Memoir by Carol Burnett*, Burnett traces a history of poverty, disillusionment, and enduring love growing up in a family that could never seem to deal with reality. She talks of "Murphy," a folding bed that was never folded, as if it were a player in the drama that made up her family life. Perhaps it was. It represented stability for her, since the bed frequently contained her grandmother, the most significant influence on her life. Upon graduating from high school, Burnett had few hopes of realizing her dream of attending UCLA to pursue an acting career, when an envelope containing \$50 mysteriously showed up in her mail box. Years later when she wanted to move to New York to pursue a Broadway career, another benefactor loaned her \$1000 with the stipulations that she pay it back in five years and that she help others who needed it. The move to New York was fortuitous for Burnett, allowing her to move both herself and her younger sister toward a more stable, affluent lifestyle.

Burnett married Don Soroyan, her college boyfriend, in 1955 while striving for success in New York. As her career blossomed, his did not, and they divorced in 1962. Burnett had achieved her dream of playing Broadway in 1959 with *Once Upon A Mattress*, but it was television that would prove to be her destiny. She began by winning guest shots on variety shows, such as *The Steve Allen Show* and *The Garry Moore Show*. Her big break came when she was invited to sing her comedic rendition of "I Made A Fool of Myself Over John Foster Dulles" on *The Ed Sullivan Show*. Dulles, of course was the sedate, acerbic Secretary of State at the time. When Garry Moore won a spot on the prime time roster, he invited Burnett to come along; she appeared regularly on his show from 1959 to 1962. She won an Emmy in 1962, and after that there was no stopping her. In 1963 she married producer Joe Hamilton, with whom she had three daughters: Carrie, an actress, Jodie, a businesswoman, and Erin, a homemaker and mom. Even though Burnett and Hamilton divorced, they remained close until his death.

Carol Burnett was never afraid to fight for what was important to her. As a young actress told to call agents and producers after she was "in something," she put on her own show. As an established actress, she successfully sued the tabloid, *The National Enquirer*, for claiming she was drunk in public. As a mother, she publicly fought to rescue one of her daughters from drug addiction, and she generously shared her pain and frustration with others, trying to help those in similar situations or who were likely to be so. Burnett continues to battle for a number of charitable causes, including AIDS.

Despite her assured place in the field of comedy, Carol Burnett broke new ground with such dramatic roles as the mother of a slain soldier in television's *Friendly Fire* (1979). She won critical acclaim for her hilarious turn as Mrs. Hannigan in the movie version of *Annie* (1982). Thirty-five years after winning her first Emmy on *The Garry Moore Show*, Burnett won an Emmy for her portrayal of Jamie Buchman's mother in the popular television series, *Mad About You*. In 1998 Burnett returned to television playing opposite Walter Matthau in *The Marrying Fool*. After almost four decades in television, Carol Burnett remains an integral part of the American psyche and an enduring memorial to television's "Golden Years."

Burnett, Chester

See Howlin' Wolf

Burns, George (1896-1996), and Gracie Allen (1895-1964)

George Burns and Gracie Allen formed one of the most renowned husband and wife comedy teams in broadcasting throughout the 1930s, 1940s, and 1950s. The cigar-chomping Burns played straight man to Allen's linguistically subversive and enchantingly ditzzy housewife in a variety of entertainment media for thirty-five years. After meeting in 1923 and performing their comedy routine on the vaudeville circuit and in a few movies, the team reached its professional peak in broadcasting, first on radio and then on television. Their *Burns and Allen Show* on CBS television from 1950 to 1958 proved particularly innovative as it contained sitcom plots that were bracketed by Burns's vaudeville-inspired omniscient narration and monologues. Their act seemed to be a caricature of their offstage marriage and working relationship, and the duo openly courted the conflation. After Allen died in 1964, Burns eventually continued his career on his own in films and on television specials, but he never quite got over losing Gracie. He lovingly incorporated his late wife in his performances and best-selling memoirs, as if encouraging Allen to remain his lifelong partner from beyond the grave.

Allen was, quite literally, born into show business. Her father, George Allen, was a song-and-dance man on the West Coast who, upon retirement, taught dance and gymnastics in a homemade gym in his backyard. The youngest daughter in the San Francisco-based Scottish/Irish family of six, Allen first appeared on stage at the age of three singing an Irish song for a benefit. Her older sisters became accomplished dancers and while on the vaudeville circuit would occasionally include Gracie in their act. Gracie's true gift however, lay not in song and dance, but in comedy. Recognizing this, she began to play the fool for her sisters and then as a "Colleen" in an Irish act.

George Burns and Gracie Allen.

Burns also started his career as a child performer. Following a fairly typical rags-to-riches story of a vaudevillian headliner, Burns (born Nathan Birnbaum) was the son of a poor Austrian Jewish family in New York's Lower East Side. As a small child he performed for pocket change on street corners and saloons in the neighborhood, eventually forming a child act, the Pee Wee Quartet, when he was seven years old. Working in small-time vaudeville by the time he was a teenager, the aspiring vaudevillian joined a number of comedy teams under various names including Harry Pierce, Willie Delight, Nat Burns, and finally, George Burns.

In 1923, Allen and Burns met in Union Hill, New Jersey, while both were looking for new partners. At the time, Allen was rooming with Mary Kelly (later to be known as Mary Livingstone), Jack Benny's girlfriend. Kelly introduced Allen to Burns, who had just split with his partner Billy Lorraine. Originally interested in becoming Lorraine's partner, Allen eventually agreed to try working with Burns. At first Allen played the straight part, but they quickly discovered that the audience laughed at Allen much more than Burns. "I knew right away there was a feeling of something between the audience and Gracie," said Burns in a 1968 interview. "They loved her, and so, not being a fool and wanting to smoke cigars for the rest of my life, I gave her the jokes." Working for many years as what was known in the business as a disappointment act—an on-call position for cancellations—they transformed a traditional "dumb Dora act" into something far more complicated.

After traveling around the country on the Keith-Orpheum circuit playing onstage lovers, Allen and Burns initiated their offstage relationship in 1925. Following a somewhat whirlwind courtship, the

pair were married on January 7, 1926. Just as their romance had solidified into marriage, their act started to crystallize into two very distinct characters—one frustratingly obtuse and the other patently down-to-earth. Yet, there was an obvious intelligence behind the pair's verbal sparring. Burns, who wrote the majority of their material, called it "illogical logic"—an alternative linguistic universe in which the character of Gracie was the sole inhabitant. Their act went on to be highlighted in such films as *Fit to Be Tied* (1931) and *The Big Broadcast of 1932*. But, it was their variety-format radio program *The Adventures of Gracie* (later known as *Burns and Allen*, 1932-1950) that really won the hearts and minds of American audiences. Playing a young boyfriend and girlfriend for the program's first eight years, they eventually chose to place their characters within the domestic setting of a Beverly Hills home. This allowed them to introduce new material and base their characters on their own lives as a middle-aged married couple raising children in suburbia.

During their years on radio the press focused intently on their private lives, often trying to answer the question of whether or not Allen was as daffy as her onstage character. Articles in fan and women's magazines covered every detail of the entertainers' domestic life, including their friendship with fellow luminaries and neighbors the Bennys, as well as their adoption of two children, Sandra and Ronnie. Burns and Allen were exceptionally adept at using the media attention they received to extend the narrative of their program into the realm of "reality." Not only did they purposely muddy the distinction between their lives and that of their characters, but they also played on-air stunts to their maximum effect. For example, in 1933, Gracie began a protracted hunt for her "missing brother," a stunt concocted by a CBS executive to raise their ratings. This enabled her to acquire extra air by guest starring on Jack Benny's and Eddie Cantor's programs under the guise of continuing her search, and to attract attention from other media outlets. The press played right along, photographing her looking for her brother at New York landmarks and printing letters from fans claiming to have had sightings of him. George Allen, Gracie's real brother, was forced into hiding because of the incredible attention and pressure he felt from radio listeners and the press. In 1940 Allen topped her missing brother gag by announcing that she would run for president. Campaigning under the slogan "Down with common sense, vote for Gracie," the stunt, which was originally planned as a two-week, on-air gag, snowballed. The mayor of Omaha offered to host a national "surprise ticket party" convention for Allen, and the president of the Union Pacific Railroad gave her a presidential train to travel from Los Angeles to Omaha in a traditional "whistle stop" campaign.

By the time television became an option for the comedy duo in the late 1940s, Burns and Allen were among the most well-known and beloved comedians of their generation. Like most radio stars, they were initially reluctant to test the new medium. So, in an effort to avoid television's taxing weekly production schedule and propensity to devour material, they scheduled their live program *The Burns and Allen Show* to appear only every other Thursday. Although it contained many of the basic elements of their radio show, their television program's narrative structure and characterizations became more nuanced. Besides the few minutes of vaudeville routine that would end the show (including the now famous lines "Say goodnight, Gracie!"), Gracie and their neighbors would exist solely within the narrative world of their sitcom. Burns, however, crossed back and forth between the sitcom set and the edges of the stage from which it was broadcast. Talking directly to the camera and the studio audience,

Burns would comment on the plot or Gracie's wacky antics, introduce a song or dance act, or tell some jokes. He would then jump across the stage and enter into the plot in progress. Burns came up with this strategy as a way to link the show together—blending elements of the variety format with the domestic sitcom. Burns's technique was incredibly effective and helped the program last through television's tumultuous transition in the mid-1950s from the variety show to the sitcom, which killed off other once-popular variety programs such as *Texaco Star Theatre*.

In 1958, Allen said "Goodnight, Gracie" for the last time. By retiring from show business because of chronic heart problems, Allen forced the couple's run on television to a close. Burns tried to continue on television playing a television producer in *The George Burns Show*, but the program was canceled after only one season. He attempted to revive his television career after Allen's death in 1964 of a heart attack, but almost every program he starred in was short-lived. It wasn't until 1975, when Burns was given the co-starring role in *The Sunshine Boys* with Walter Matthau, that his career recuperated. He went on to make a few more films (including the *Oh God!* films), star in some television specials, and write several books. He never remarried and, despite the occasional jokes of his sexual prowess, remained in love with Gracie. Burns opened his 1988 memoir *Gracie: A Love Story* by saying, "For forty years my act consisted of one joke. And then she died." Burns passed away in 1996 at the age of one hundred, famous for his longevity and endless dedication to his wife, his friends, and his fans.

Burns, Ken (1953—)

Documentary filmmaker Ken Burns received Oscar nominations for two early works, *Brooklyn Bridge* (1981) and *The Statue of Liberty* (1986). But it was his miniseries *The Civil War* (1990) that brought new viewers to public television and to documentaries and made Burns the most recognizable documentary filmmaker of all time. The style of *The Civil War* merged period images with the voices of celebrities reading the diaries and letters of Civil War participants. Burns followed *The Civil War* with *Baseball* (1994) and *Lewis & Clark: The Journey of the Corps of Discovery* (1997).

—Christian L. Pyle

Burr, Raymond (1917-1993)

Like so many actors before and after him, Raymond Burr found one of those roles that he did so much to define, but which, at the same time, virtually defined him. His portrayal of a lawyer in the mystery television series *Perry Mason*, which ran from 1957 to 1966, and in 26 made-for-television movies, set firmly in the minds of the viewing public what a defense lawyer should look like, how he should behave, and how trials should transpire. Realistic or not, his success, his interaction with clients, suspects, the police, and the district attorney, established in people's imaginations a kind of folk hero. For many, "Perry Mason" became shorthand for lawyer, as Einstein means genius or Sherlock Holmes means detective. This compelling image held sway for years before the profession was subjected to so much negative scrutiny in real life and in the media. Yet, Burr, again like so many others, did not achieve overnight fame. His role as Perry Mason overshadowed decades of hard work in radio, the theater, and films, as well as his business and philanthropic successes and personal tragedies.

Raymond William Stacy Burr was born on May 21, 1917 in New Westminster, British Columbia, Canada. When he was six years old, his parents separated, and his mother took him and his siblings to Vallejo, California. His earliest taste of acting came in junior high school drama classes, followed by a theatrical tour in Canada in the summer of his twelfth year. As he grew up, he held a variety of jobs: in the Forestry Service, and as a store manager, traveling salesman, and teacher. He furthered his education in places as diverse as Chungking, China, Stanford, and the University of California, where he obtained degrees in English and Psychology. He also worked in radio, on and off the air, wrote plays for YMCA productions, and did more stagework in the United States, Canada, and Europe. While he was working as a singer in a small Parisian nightclub called Le Ruban Bleu, Burr had to return to the United States when Hitler invaded France.

In the early 1940s, he initiated a long association with the Pasadena Playhouse, to which he returned many times to oversee and participate in productions. After years of trying, he landed a few small roles in several Republic Studios movies, but returned to Europe in 1942. He married actress Annette Sutherland and had a son, Michael, in 1943. Leaving his son with his grandparents outside London while Annette fulfilled her contract with a touring company, Burr came back to the United States. In June 1943, Annette was killed while flying to England to pick up Michael and join her husband in America when her plane was shot down.

Burr remained in the United States, working in the theater, receiving good notices for his role in *Duke of Darkness*, and signing a contract with RKO Pictures in 1944. Weighing over 300 pounds, a problem he struggled with all his life, Burr was usually given roles as a vicious gangster or menacing villain. Late in the decade he was in various radio programs, including *Pat Novak for Hire* and *Dragnet* with Jack Webb. A brief marriage that ended in separation after six months in 1948, and divorce in 1952, was followed by the tragic death of his son from leukemia in 1953. His third wife died of cancer two years later. Despite the misfortunes in his personal life, the roles he was getting in radio, such as *Fort Laramie* in 1956, and in films, continued to improve. By the time *Perry Mason* appeared, he had been in *A Place in the Sun* (1951), as the district attorney, which played a part in his getting the role of Mason, Hitchcock's *Rear Window* (1954), and the cult classic *Godzilla* (1954). After years of being killed off in movies, dozens of times, according to biographer Ona L. Hill, he was about to experience a complete role reversal.

Ken Burns (right) at hearing on Capitol Hill.

The first of over eighty Perry Mason novels by Erle Stanley Gardner had been published in 1933. Ill served, Gardner felt, by earlier movie versions of his hero, and dissatisfied with a radio program which ran for twelve years, he was determined to have a strong hand in the television series. Burr auditioned for the part of the district attorney on the condition that he be allowed to try out for the lawyer as well. Reportedly, Gardner spotted him and declared that he was Perry Mason. The rest of the cast, Barbara Hale as his secretary Della Street, William Hopper as private eye Paul Drake, William Talman as the district attorney, and Ray Collins as Lt. Tragg, melded, with the crew, into a kind of family that Burr worked hard to maintain. In retrospect, it is difficult to imagine the program taking any other form: from its striking theme music to the core ensemble of actors to the courtroom dramatics. He also gave substance to the vaguely described character from the books, fighting unrelentingly for his clients, doing everything from his own investigating to bending the law and playing tricks in court to clear them and finger the guilty. In the words of Kelleher and Merrill in the *Perry Mason TV Show Book*, he was “part wizard, part snakeoil salesman.”

One of the pieces of the formula was that Mason would never lose a case. One of the shows in which he temporarily “lost” generated thousands of letters of protest. When asked about his unblemished record, Burr told a fan, “But madam, you only see the

cases I try on Saturday.” Despite many ups and downs, including hassles between Gardner and the producer and scripts of varying quality, the show ran for 271 episodes. Though his acting received some early criticism, Burr eventually won Best Actor Emmys in 1959 and 1961. The program was criticized for casting the prosecutor as the villain, the police as inept, and the lawyer as a trickster, but most lawyers, along with Burr, felt that the shows like *Perry Mason* “opened people’s eyes to the justice system,” according to Collins’ *the Best of Crime and Detective TV*. Burr developed an interest in law that resulted in his speaking before many legal groups and a long association with the McGeorge School of Law.

In March 1967, Burr reappeared on television as wheelchair-bound policeman Ironside in a pilot that led to a series the following September. Assembling a crime-solving team played by Don Galloway, Barbara Anderson, and Don Mitchell, Burr, gruff and irascible, led them until early 1975 and in 1993’s *The Return of Ironside* movie. In 1976-77 he starred as an investigative reporter in *Kingston Confidential*. Major activities in the early 1980s included a featured role in five hours of the multipart *Centennial* and in *Godzilla '85*. He was associated with the Theater Department at Sonoma State University in 1982 and some programs at California Polytechnic State University. In December 1985, he reprised his most famous role in *Perry Mason Returns*, which led to a string of 25 more TV movies.

In spite of his busy career and many personal and medical problems, Burr still found time to become involved in various business projects and charitable works. In 1965, he purchased an island in Fuji, where he contributed substantially to improving living conditions and the local economy. He also grew and sold orchids there and in other places around the world, and had ventures in Portugal, the Azores, and Puerto Rico. He collected art, and for several years helped operate a number of art galleries. During the Korean War he visited the troops twelve times, and made ten “quiet” trips to Vietnam, usually choosing to stop at far-flung outposts. Though the latter were controversial, he insisted, according to Hill in *Raymond Burr*: “I supported the *men in Vietnam*, not the war.” Besides financially supporting many relatives and friends over the years, he had over 25 foster and adopted children from all over the world, in many cases providing them with medical care and educational expenses. He was involved in numerous charitable organizations, including the Cerebral Palsy Association, B’nai B’rith, and CARE, and created his own foundation for philanthropic, educational, and literary causes.

Burr was a complex man. Kelleher and Merrill describe him this way: “Approachable to a point, yet almost regally formal. Quiet, but occasionally preachy. Irreverent yet a student of [religions]. Intensely serious, yet a notorious prankster . . . [and] generous to a fault.” Unquestionably, he worked incessantly, often to the detriment of his health, seldom resting for long from a myriad of acting, business, and philanthropic projects. His diligence seems to have been as much a part of his personality as his generosity. It was in many ways emblematic of his life and character that, despite advanced cancer, he finished the last Perry Mason movie in the summer before he died on September 12, 1993.

Burroughs, Edgar Rice (1875-1950)

Perhaps best known as the creator of Tarzan the Apeman, Edgar Rice Burroughs did much to popularize science fiction and adventure fantasy during the first half of the twentieth century. When he turned to writing in his mid-thirties after a mediocre and varied business life, Burroughs met with quick success when his first publication, *Under the Moons of Mars*, was serialized in *All-Story* magazine in 1912.

Edgar Rice Burroughs

Noted for his fertile imagination, Burroughs created several imaginary societies for his popular adventure series: one set on Mars, one in the primitive world called Pellucidar located inside the earth, and another on Venus. His Tarzan series (started in 1918) was also set in an imaginary Africa, much to the dismay of some readers. The constant theme running through Burroughs’ stories was a detailing of how alien or primitive societies inspired heroic qualities in characters. Typically Burroughs’ stories depicted powerful men saving beautiful women from terrible villains. Besides Tarzan, Burroughs’ most famous character was Virginian gentleman John Carter of his Mars series, who became the “greatest swordsman of two worlds.” Though his plots were often predictable and his characters lacked depth, Burroughs successfully captured readers’ interest in life-and-death struggles brought on by environmental impediments. His slapdash depictions of how primitive environments catalyze greatness in humans have continued to entertain readers and inspire more intricate science fiction writing.

Burroughs, William S. (1914-1997)

During the 1950s, William S. Burroughs blazed many trails to and from the elucidation of human suffering, and his obsession with the means to this end became an enduring facet of popular culture. He exuded the heavy aura of a misogynistic, homosexual, drug-addicted gun nut, both in life and in print. Yet he inspired a generation of aimless youths to lift their heads out of the sands of academe, to question authority, to travel, and, most importantly, to intellectualize their personal experiences.

Born William Seward Burroughs February 5, 1914 in St. Louis, Missouri, he was the son of a wealthy family (his grandfather invented the Burroughs adding machine) and lived a quiet mid-Western childhood. He graduated from Harvard, but became fascinated with the criminal underworld of the 1930s and sought to emulate the gangster lifestyle, dealing in stolen goods and eventually morphine, to which he became addicted. He moved to Chicago for a time to support his habit, then to New York City where, in 1943, he met Jack Kerouac and Allen Ginsberg at Columbia University. He encouraged these younger hipster prodigies to write, and they were impressed by his dark wit and genteel poise wizened through years of hard living, though they rarely joined him in his escapades.

In 1947 Burroughs entered into a common law marriage to Joan Vollmer, a Benzedrine addict whom he had also met at Columbia. They moved to New Orleans where drugs were more easily obtainable, and later to Texas where they grew oranges and marijuana, raised two children (one was Bill's), and lived in drug-addled poverty. On the advice of a friend, Burroughs began work on a "memory exercise" which would become his first book—*Junky: Confessions of an Unredeemed Drug Addict*—published in 1953 under the pseudonym William Lee.

Then, on September 6, 1951, while in Mexico City on the run from the law, Bill shot and killed Joan, allegedly during their "William Tell routine." After a night of heavy drinking, Bill suggested she place a glass on her head, and he would shoot at it from across the room. "Why I did it, I do not know," he later claimed. "Something took over." His son went to live with his parents, but Burroughs was never prosecuted. Instead, he embarked upon a quest to exorcize what he called "The Ugly Spirit" which had compelled his lifestyle choices and now convinced him he "had no choice but to write my way out."

Burroughs fled to South America in search of the mystical drug *yage*, and wrote *The Yage Letters* (1963) to Allen Ginsberg. Soon Bill was back in New York City, still addicted and on the run, and eventually ended up in The International Zone of Tangier, Morocco. He, however, hallucinated "Interzone," an allegorical city in which "Bill Lee" was the victim, observer, and primary instigator of heinous crimes against all humanity. He began "reporting" from this Interzone—a psychotic battleground of political, paranoid intrigue whose denizens purveyed deceit and humiliation, controlling addicts of sex, drugs, and power in a crumbling society spiritually malnourished and bloated on excess.

When Kerouac and Ginsberg came to Tangier in 1957, they found Burroughs coming in and out of the throes of withdrawal. He had been sending them "reports," reams of hand-written notes which they helped to compile into Burroughs' jarring magnum opus *Naked Lunch* (1959), a work he "scarcely remembers writing." This novel's blistering satire of post-World War II, pre-television consumer culture, and its stark presentation of tormented lost souls, were the talk of

William S. Burroughs

the burgeoning beatnik scene in the States, as were its obscene caricatures and "routines" that bled from a stream of junk-sick consciousness.

Burroughs was soon regarded as the Godfather of the Beat Generation, a demographic that came of age during World War II while Bill was out looking for dope, and which aimed to plumb the depths of existence in post-modern America. Mainstream appeal would prove elusive to these writers, though, until *Naked Lunch* became the focus of a censorship trial in 1965. The proceedings drew attention—and testimony—from such literati as Norman Mailer, John Ciardi, and Allen Ginsberg, whose reputation had grown as well. After the furor died down, *Naked Lunch* remained largely an underground hit. Burroughs also stayed out of sight, though he published *The Soft Machine* (1961), *The Ticket That Exploded* (1962), and *Nova Express* (1964) using an editing technique with which he had been experimenting in Tangier and called "cut-ups": the random physical manipulation of preconceived words and phrases into coherent juxtapositions.

In the 1970s, Burroughs holed up in his New York City "bunker" as his writing became the subtext for his gnarled old junky image. Though he had been an inspiration to authors, he found himself rubbing elbows with post-literate celebrity artistes yearning for the Ugly Spirit. Later, Burroughs enjoyed a spate of speaking tours and

cameos in films. He also published books revisiting the themes of his early routines, and in 1983 was inducted into the American Academy and Institute of Arts and Letters. He later recorded and performed with John Giorno Poetry Systems, Laurie Anderson, Material, the Disposable Heroes of Hiphoprisy, and Kurt Cobain of Nirvana, among others. In the 1990s his face and silhouette, as well as his unmistakable thin, rattling voice quoting himself out of context, were used to promote everything from running shoes to personal computers. He spent most of his last years in seclusion in Lawrence, Kansas, where he died August 2, 1997.

Burroughs' influence on popular culture is evident in every medium, though he is more often referred to than read. From subversive comedic diatribes on oppressive government to the gritty realism of crime drama, from the drug chic youth culture enjoys (and has enjoyed since the early 1960s) to paranoia over past, present, and future drug wars, Burroughs made hip, literate cynicism both popular and culpable.

Buster Brown

Buster Brown first appeared in the *New York Herald* on May 4, 1902. Accompanied by his dog Tige, Buster Brown was a mischievous young boy given to playing practical jokes. He resolved weekly to improve his ways, but always strayed. The strip was the second major success for Richard Outcault (1863-1928) who had earlier created the Yellow Kid. Outcault licensed the image and the name of his character to a wide variety of manufactures and the name Buster Brown is probably more familiar to Americans as a brand of shoes or children's clothing than as the title of a comic strip. Unlike Outcault's early work *Buster Brown* was distinctly a comic strip appearing weekly in twelve panel full page stories. Once again William Randolph Hearst lured Outcault to his newspapers and *Buster Brown* commencing there January 21, 1906. The resulting court cases over copyright determined that Outcault owned all subsidiary rights to the Buster Brown name having purchased them for \$2 when he signed with the *Herald* to produce the strip. Outcault derived considerable income from his licensing efforts and his advertising agency, which produced over 10,000 advertisements for Buster Brown related products. The last original episode of the strip was published December 11, 1921.

Butch Cassidy and the Sundance Kid

This 1969 film, the first deconstructionist Western, set the tone for future buddy comedies, helped revive the Western film genre, and made a superstar out of Robert Redford, whose Sundance Institute has become the major supporter of independent films. Also starring Paul Newman as Butch and Katherine Ross as Etta Place, and directed by George Roy Hill, this lighthearted, "contemporary" Western paved the way for modern Westerns such as *Young Guns* and *The Long Riders*.

Butch Cassidy and the Sundance Kid was based on the lives of two actual Old West outlaws—Robert Leroy Parker (Butch) and Harry Longbaugh (Sundance). By the 1890s, Butch was the head of the largest and most successful outlaw gang in the West, known as both the Wild Bunch and the Hole-in-the-Wall Gang. Butch was chosen leader based solely on his personality; he was a poor shot who never killed anyone until later in life. Sundance, who got his nickname from spending eighteen months in jail in Sundance, Wyoming, was a gang member and a phenomenal gunman who, incidentally, did not know how to swim (a fact yielding the film's best joke). Based at their hideout at Hole-in-the-Wall near Kaycee, Wyoming, the gang members robbed banks and trains throughout the West. When the railroads hired the Pinkerton Agency to catch the gang and the agency formed a relentless superposse, Butch, Sundance, and female companion Etta Place moved to South America and bought a ranch in Argentina. They tried to make an honest living but eventually began robbing banks in several South American countries. It is believed they were killed after being trapped by troops in Bolivia—although some maintain that Butch and Sundance spread the story after another pair of outlaws was gunned down by Bolivian troops.

Screenwriter William Goldman first came across the Butch Cassidy story in the late 1950s, and he researched it on and off for the next eight years. An established novelist, Goldman decided to turn the story into a screenplay for the simple reason "I don't like horses." He didn't like anything dealing with the realities of the Old West. A screenplay would be simpler to write and wouldn't involve all the research necessary to write a believable Western novel. From the outset, this screenplay established itself as more contemporary than the typical Western or buddy film. In the film, Butch and Sundance do what typical Western movie heroes never do, such as run away halfway through the story or kick a rival gang member in the groin rather than fight with knives or guns. While there had been buddy films in the past, including those starring Abbott and Costello, and Bob Hope and Bing Crosby, those films were joke factories, variations on old vaudeville routines. Part of the challenge for Goldman was to write dialogue that was funny without being too funny; nonstop jokes abruptly interrupted by a hail of gunfire would be too great a transition to expect an audience to make. Goldman found the right tone, a kind of glib professionalism emphasizing chemistry over jokes, and it is the chemistry between Newman and Redford that made the film such a success.

This glib professional tone since has been put to good use in a number of other films and television shows, as in the *48 Hours* and *Lethal Weapon* films. *Butch Cassidy and the Sundance Kid* also led to the sequel, *Wanted: The Sundance Woman*, and the prequel, *Butch and Sundance—The Early Years*; and Newman and Redford successfully teamed up again for *The Sting* (1973).

Butkus, Dick (1942—)

If a Hollywood scriptwriter were authoring a football movie and needed to conjure up an ideal name for a hard-nosed middle linebacker who breakfasted on nails and quarterbacks, he could do no better than Dick Butkus. Not only was Butkus, who played in the National Football League between 1965 and 1972, the dominant middle linebacker of his era, but he singlehandedly redefined the position. What made him extra-special was his well-earned reputation for being one of the toughest and most feared and revered players ever to

play the game. Butkus also brought a high level of intelligence and emotion to the playing field, which only embellished his physical talents.

If the stereotypical quarterback is a pretty boy who comes of age in a sun-drenched Southern California suburb, Butkus' background fits that of the archetypal dirt-in-your-fingernails linebacker or tackle: he grew up on Chicago's South Side, as the ninth child in a blue-collar Lithuanian family. He attended the University of Illinois, where he won All-America honors in 1963 and 1964; in the latter year, he was a Heisman Trophy runner-up. In 1965, the 6'3", 245-pounder was a first-round draft pick of the Chicago Bears. During his nine-year career with the Bears, which ended prematurely in 1973 due to a serious knee injury, Butkus had 22 interceptions, was All-NFL for seven years, and played in eight Pro Bowls.

On the football field he was all seriousness, and a picture of non-stop energy and intensity. Butkus would do whatever was necessary to not just tackle an opponent but earn and maintain everlasting respect. He was noted for his ability to bottle up his anger between Sundays, and free that pent-up fury on the playing field. Occasionally, however, he was not completely successful in this endeavor, resulting in some legendary alcohol-soaked escapades involving his pals and teammates along with tiffs with sportswriters and in-the-trenches

Dick Butkus

haggling with Bears owner-coach George Halas. Of special note is his long-standing feud with Dan Jenkins of *Sports Illustrated*, who wrote a piece in which he labeled Butkus “A Special Kind of Brute with a Love of Violence.”

After retiring from the Bears, Butkus became a football analyst on CBS’s *NFL Today* and went on to a career as a television and film actor. He would win no Oscar nominations for his performances in *Hamburger*. . . *The Motion Picture*, *Necessary Roughness* and *Gremlins 2: The New Batch*, and no Emmy citations for *My Two Dads*, *The Stepford Children*, *Superdome* and *Half Nelson*. But his grid credentials remain impeccable. Butkus entered the Football Hall of Fame in 1979, and is described in his biographical data as an “exceptional defensive star with speed, quickness, instinct, strength . . . great leader, tremendous competitor, adept at forcing fumbles. . . . People [still] should be talking about the way Dick Butkus played the game,” noted broadcaster and ex-NFL kicker Pat Summerall, over a quarter century after Butkus’ retirement. Along with fellow linebackers Ted Hendricks, Willie Lanier, Ray Nitschke, Jack Hamm, Jack Lambert, and Lawrence Taylor, he was named to NFL’s 75th Anniversary Team.

Ever since 1985, the Dick Butkus Award has been presented to the top collegiate linebacker. Herein lies Butkus’ gridiron legacy. To the generations of football players in the know who have come in his wake—and, in particular, to all rough-and-tumble wannabe defensive

standouts—Dick Butkus is a role model, an icon, and a prototypical gridiron jock.

Butler, Octavia E. (1947—)

As the premier black female science fiction writer, Octavia E. Butler has received both critical and popular acclaim. She describes herself as “a pessimist if I’m not careful, a feminist, a Black, a former Baptist, an oil-and-water combination of ambition, laziness, insecurity, certainty and drive.” Butler’s stories cross the breadth of human experience, taking readers through time, space, and the inner workings of the body and mind. She frequently disrupts accepted notions of race, gender, sex, and power by rearranging the operations of the human body, mind, or senses. Ironically, her significance has been largely ignored by academics. Her notable books include *Kindred*, *Wild Seed*, *Mind of My Mind*, *Dawn* and *Parable of the Sower*. She has won the coveted Hugo and Nebula awards for “Speech Sounds” and “Bloodchild,” and in 1995 was awarded a MacArthur “Genius” grant for pushing the boundaries of science fiction.

Butterbeans and Susie

The married couple Jodie (1895-1967) and Susie Edwards (1896-1963), performing as Butterbeans and Susie, were among the most popular African American musical comedy acts of the mid-twentieth century. From 1917 until Susie’s death in 1963, they toured regularly. Their act featured double entendre songs, ludicrous costuming, domestic comedy sketches, and Butterbeans’ famous “Heebie Jeebie” dance. Racial segregation shaped their career in important ways—their recordings were marketed as “Race” records, and at their peak they played primarily in segregated venues. Their broad humor exploited racial stereotypes in a manner reminiscent of minstrel shows. Yet within the world of African American show business such strategies were common, and clearly Butterbeans and Susie’s antics delighted African American audiences. Butterbeans and Susie achieved success by working with dominant racial images within the discriminatory racial structures of America.

Buttons, Red (1919—)

In 1952, *The Red Buttons Show* was widely acclaimed as the most promising new show on television, and its star was featured on the cover of *Time* Magazine. Millions of children did their versions of Buttons's theme song, hopping and singing "Ho! Ho!, He! He!, Ha! Ha! . . . Strange things are happening." Indeed, strange things did happen. By the end of the second season the show's popularity had declined and CBS dropped it. It did no better when NBC briefly picked up the show the following season. Buttons was out of work in 1957 when he was selected to play the role of Sergeant Joe Kelly in the film *Sayonara*. He won an Academy Award as best supporting actor for this tragic portrayal and went on to appear in 24 other movies.

Born Aaron Chwatt in the Bronx borough of New York City in 1919 and raised on the Lower East Side of Manhattan, he was the son of an immigrant milliner. He contracted the show business bug when he won first place in an amateur-night contest at age 12. By age 16 he was entertaining in a Bronx tavern as the bellboy-singer, and the manager, noting his bright-colored uniform, gave him the stage name

Red Buttons

of Red Buttons. Adding stand-up comedy to his talents, Buttons worked in Catskill Mountain resorts and later joined a burlesque troupe as a baggy-pants comic.

Buttons made his Broadway debut in 1942, playing a supporting role in a show called *Vickie*. When he was drafted for World War II service in the army, he was assigned to special services as an entertainer. He appeared in the stage and film productions of *Winged Victory*, a patriotic show designed to encourage the purchase of war bonds.

When CBS offered a contract in 1952 for *The Red Buttons Show*, a broad experience in show business had prepared Buttons well. He had already developed some of his most popular characters—a punchy boxer named Rocky Buttons, a lovable little boy named the Kupke Kid, a hapless, bungling German named Keeglefarven, and the jinxed, luckless Sad Sack. He also did husband-and-wife sketches with Dorothy Joiliffe (later with Beverly Dennis and Betty Ann Grove) in a style to be emulated by George Gobel in the late 1950s.

When the show moved to NBC, it started as a variety show, but the format was soon changed to a situation comedy. Buttons played himself as a television comic who was prone to get into all kinds of trouble. Phyllis Kirk, later to become a star in Broadway musicals, played his wife; Bobby Sherwood was his pal and television director, and newcomer Paul Lynde played a young network vice president who had continual disputes with the star. Dozens of writers worked on the show at various times, but nothing seemed to click, and it was scratched after one season.

After his Tony Award success with the movie *Sayonara*, Buttons's Hollywood career took off. Appearing in *Imitation General*, *The Big Circus*, and *One Two Three* led in 1961 to a role in that year's Hollywood blockbuster, the film portrayal of the World War II invasion of Normandy, *The Longest Day*. Buttons is remembered for his portrayal of a lovable, sad sack paratrooper whose parachute is impaled on a church steeple in a small French town, leaving him hanging while the camera recorded his animated facial expressions.

He is also remembered for his comic role in the 1966 remake of *Stagecoach*, starring Bing Crosby and Ann Margaret. He received an Academy Award nomination for best supporting actor in 1969 for *They Shoot Horses, Don't They?* This was a grim tale about a marathon dance contest during the Great Depression. He was also featured in the 1972 underwater disaster saga, *The Poseidon Adventure*.

Frequent guest spots on television talk shows and the continuation of his film career as a both a comic and serious character actor until 1990 kept Buttons before the public. He had an extended and important career in show business, but some remember that on the networks he was never able to fulfill the exalted promise of his first show in its first season.

The Byrds

The Byrds began as a folk-rock band in 1965 led by Jim McGuinn (later renamed Roger following his conversion to Subud). The harmonies arranged by David Crosby and McGuinn's electric twelve-string guitar gave them a rich, fresh sound. Often described as the American Beatles, The Byrds were nevertheless distinctly original. On their first two albums, *Mr. Tambourine Man* and *Turn! Turn! Turn!* (1965), they covered Bob Dylan and traditional folk songs, and wrote their own material. On "Eight Miles High" (1966) McGuinn exhibited the influence of Indian ragas and the improvisational style of John Coltrane. The Byrds explored a psychedelic sound on *Fifth Dimension* (1966) and *Younger than Yesterday* (1967). They continued in the folk/psychedelic style on *The Notorious Byrd Brothers* (1968), but Crosby left halfway through the recording of this album, later forming Crosby, Stills, and Nash. The Byrds' next album,

Sweetheart of the Rodeo (1968), detoured into country-western. Throughout the next five albums, the band suffered numerous personnel changes. McGuinn remained the only original member, but somehow the newcomers persuaded him to continue recording country music and The Byrds abandoned their exploratory spirit. They disbanded in 1973. Today The Byrds are remembered for the classics of their folk and psychedelic period, some of which were immortalized in the film *Easy Rider* (1969).

C

Cabbage Patch Kids

The Cabbage Patch Kids doll-craze was an unprecedented phenomenon among children and their parents that swept America during the 1980s, reflecting, perhaps, the cultural leanings of an era intent on expressing family values. By comparison with the Cabbage Patch collecting mania, later collectors of the mass-marketed Beanie Babies, Tamagotchis, and Tickle Me Elmos in the 1990s had it easy.

The 16-inch, soft-bodied Cabbage Patch dolls, the ultimate “must have” toy, were in such high demand during the 1983 Christmas season that the \$25 retail Kids were “adopted” on the black market for fees as high as \$2,000. Toy manufacturer Coleco Industries never expected that their homely, one-of-a-kind Kids—complete with birth certificates and adoption papers—would be the impetus behind department-store stampedes across the country, resulting in sales of over six million dolls during their first nine months on the market.

Xavier Roberts, a dollmaker in Columbus, Georgia, began “adopting” his Little People—soft-sculpture, handmade Cabbage Patch prototypes—out of Babyland General Hospital in 1979. Roberts’ gimmicks—from adoption papers and pledges, to hiring “doctors” and “nurses” to deliver dolls from Babyland’s indoor Cabbage Patch every few minutes to the delight of visitors—won his company,

A Cabbage Patch Kid complete with birth certificate.

Original Appalachian Artworks, a licensing deal with Coleco in late 1982. By the late 1980s, Roberts’ hand-signed Little People were worth up to 60 times their original \$75-200 cost. When Coleco filed for bankruptcy in May 1988, Mattel (one of the manufacturers who had passed on licensing rights to the dolls in 1982) took over the Cabbage Patch license.

The mythos that Roberts created for his Cabbage Patch Kids—born from a cabbage patch, stork-delivered, and happy to be placed with whatever family would take them—encouraged the active participation of parents and children alike, and fostered strong faith in the power of fantasy, but the American public’s reaction to the dolls was anything but imaginary. By virtue of their homely, one-of-a-kind identities, and the solemnity with which buyers were swearing to adoption pledges (due in no small part to the dolls’ scarcity), Cabbage Patch Kids became arguably the most humanized playthings in toy history: some “parents” brought their dolls to restaurants, high chair and all, or paid babysitters to watch them, just as they would have done for real children.

The psychological and social effects of the Kids of the Cabbage Patch world were mixed. Adoption agencies and support groups were divided over the advantages and disadvantages that the dolls offered their “parents.” On one hand, they complained that the yarn-haired dolls both desensitized the agony that parents feel in giving children up for adoption, and objectified adoptees as commodities acquired as easily as one purchases a cabbage. On the other hand, psychologists such as Joyce Brothers argued that the dolls helped children and adults alike to understand that we do not have to be attractive in order to be loved. The dolls, proponents argued, helped erase the stigma that many adopted children were feeling before the Kids came along.

When before Cabbage Patch Kids did American mass-market toy consumers demand one-of-a-kind, personalized playthings? Who since Xavier Roberts has been at once father, creator, publicist, and CEO of his own Little “Family”? Cabbage Patch Kids’ popularity hinged on a few fundamental characteristics: a supercomputer that ensured that no two Kids had the same hair/eye/freckle/name combination, Roberts’ autograph of authenticity stamped on each Cabbage tush, an extended universe of over 200 Cabbage-licensed products, and the sad truth that there were never enough of them to go around.

Cable TV

Considering the fact that in the late 1990s many experts view existing television cables as the technological groundwork for what may be the most important and far reaching media innovations since

the printing press, the origins of cable television are quite humble. In the early 1950s millions of Americans were beginning to regularly tune in their television sets. However, a large number of Americans in rural areas were not able to get any reception. Just as these folks wanted TV, so too did television companies want them, for the more people that watched, the more money the networks (ABC, CBS, and NBC) and their advertisers made. Hence, the advent of community antennae television (CATV), commonly known as "cable TV," a system in which television station signals are picked up by elevated antennas and delivered by cables to home receivers. By the late 1990s the majority of American households were cable subscribers. Because of cable's rise to prominence, the ways in which Americans are entertained have been irrevocably transformed. Furthermore, many people think that in the twenty-first century new innovations utilizing cable technology will lead to revolutionary changes in the ways in which Americans live their daily lives.

In the early years of cable many saw it as an additional venue through which to offer more viewing choices to consumers. But for the most part, in the 1950s and 1960s the Federal Communications Commission (FCC) was reluctant to grant licenses to cable operators, ostensibly due to fear of putting the mostly local UHF stations out of business. It is likely, however, that pressure on the FCC from the networks, who didn't want additional competition, also played a role in the FCC's reluctance to grant licenses to cable operators. While there was some optimism about the possibilities for cable TV in the early 1950s, in the early 1960s the progress of cable television was slowed to a near standstill by a series of court cases. At issue was whether or not the FCC had control over cable broadcasts, which were transmitted through cables rather than airwaves. Cable companies were literally pirating the broadcasts of local stations, which legitimately threatened their existence. Although the cable industry won some early cases, heavy pressure from the networks resulted in the FCC declaring itself as having jurisdiction over cable broadcasts. Cable companies fought the ruling, but the courts upheld it. The FCC established prohibitive regulations that severely limited cable TV's growth potential, thus protecting the financial interests of local stations and, more importantly, the networks.

However, in 1972 the FCC finally began allowing satellite transmissions to be used by cable TV operators, which resulted in the beginning of the cable revolution when a small Time Warner subsidiary named Home Box Office (HBO) transmitted the motion picture *Sometimes a Great Notion* over a cable system in Wilkes-Barre, Pennsylvania. Although it would be three years before HBO became a national presence, that first transmission altered forever the shape of American television by paving the way for commercial cable service, which first became widely available to consumers in 1976. Early cable customers generally had to have a satellite dish in order to pick up the signals. The dish provided a better picture than traditional TV, as well as a greater number of stations, but it proved to be cost prohibitive to too many customers for it to be financially successful. Cable providers quickly adapted and created a system in which a cable could be attached to just about anyone's TV, provided one lived in an area where cable TV was available. Providers soon realized that most people would willingly pay a monthly fee for better reception and more channels. Public demand for cable TV grew so fast that companies could barely keep up with demand. In 1972 there were only 2,841 cable systems nationwide. By 1995 that number had grown to 11,215. Concurrently, the percentage of households subscribing to cable service jumped from 16.6 percent in 1977 to nearly 70 percent in 1998.

By the mid-1970s the commercial possibilities of cable became apparent. The problem for cable operators was how to attract an audience to their channels when the networks were already free and in nearly every home in America. Conversely, the networks could see that cable would only become more prevalent. The question for them was how could they get in on the cable bonanza. The solution was both ingeniously simple and immensely profitable. The networks agreed to sell their old shows to the cable networks, who would in turn run them endlessly; thus was born the concept of "syndication." For a while this arrangement worked quite well. The networks, on the basis of their original programming, continued to dominate the market, especially during the lucrative 8 PM to 11 PM time slot known as "Prime Time" because of the amount of people (consumers) that watch during those hours. The cable networks were able to enjoy profitability because even though they paid exorbitant franchise fees for the rights to broadcast the networks' old shows, they didn't have to invest in costly production facilities.

As a result of this arrangement between networks and cable operators, an interesting thing happened among the American populace. Whereas previous generations of TV viewers were generally only aware of the TV shows that originated during the lifetime, beginning in the late 1970s Americans became TV literate in a way they had never been before. Americans who came of age after the rise of cable soon became generally conversant in all eras of television programming. Fifteen year olds became just as capable of discussing the nuances of *The Honeymooners*, *I Love Lucy*, and *Star Trek* as they were the shows of their own era. Partly because of cable, television trivia has become shared intelligence in America; however, this shared cultural knowledge is not necessarily a good thing, for it has, for many, been learned in lieu of a more traditional and useful humanistic and/or scientific education. Accordingly, in the late 1990s Americans are collectively more uninformed about the world in which they live than at any other time in the twentieth century, which can be attributed at least in part to the fact that most Americans spend much more time watching TV than they do reading all forms of printed media combined. Cable was originally thought to have great potential as an educational tool. But even though there are a few cable networks that educate as well as entertain, for the most part cable stations are just as subservient to advertising dollars as their network counterparts. As a result, advertising dollars play a large role in dictating the direction of cable programming, just as they do on network television.

For a number of years cable networks were content to run a combination of old network programming, a mix of relatively new and old Hollywood movies, and occasional pay-per-view events such as concerts and sporting events. The first cable network to gain a national foothold was Ted Turner's TBS "Superstation," which ran a format similar to that of the networks, sans original programming. But by the early 1980s it became clear to most cable operators that in order to achieve the financial success they desired cable channels were going to have to come up with their own programming. Thus was born the greatest period of television programming innovation seen to that point. Since their ascent to television dominance in the early 1950s, the networks attempted to appeal to as wide a general audience as possible. The cable networks correctly assumed that they couldn't compete with the networks by going after the same type of broad audience. Instead, they followed the example set by radio after the rise of television in the early 1950s: they developed specific subject formats that mixed syndicated and original programming and attracted demographically particular target audiences for their advertisers.

Americans quickly had access to an unprecedented quantity of television stations; unfortunately, in most cases television's quality did not rise concurrently.

Nevertheless, many of the resulting stations have contributed significantly to the direction of American popular culture. The herald of cable TV's importance to popular culture was a channel known as Music Television, or MTV. Started in 1981, its rise to success was as meteoric as it was astonishing. For American youth MTV became their network, the network that provided the soundtrack for the trials and tribulations of youths everywhere. Michael Jackson and Madonna's status as cultural icons would not be so entrenched were it not for their deft use of MTV as a medium for their videos. Beavis and Butthead would have never caused such a ruckus among concerned parents were it not for MTV. And the music industry, which was flagging in the early 1980s, might not have survived were it not for MTV, which was a virtual non-stop advertisement for recording artists. Neither the "grunge" revolution started in the early 1990s by the incessant playing of Nirvana's "Smells Like Teen Spirit" video nor the ensuing gangster rap, hip hop, and swing movements would have occurred were it not for MTV. The trademark jump cutting found in MTV videos has crossed over to become common place in network television and Hollywood movies. But perhaps the most important realization was for advertisers, who suddenly had unlimited access to a youthful audience never before thought to be a viable consumer market. MTV's audience specific success opened the floodgates for the cable channels that followed.

Among the many cable channels that have made their mark on American culture are the themed channels such as ESPN and ESPN 2, Court TV, C-SPAN, The Weather Channel, Comedy Central, Black Entertainment Television, The Animal Channel, Lifetime, Arts & Entertainment, and the Food Channel. In addition, seemingly countless news channels have followed on the heels of Ted Turner's Cable News Network (CNN), which made its debut in 1980. There are also a number of shopping channels, on which companies can not only hawk their products, but sell them directly to the people as well. For advertisers, cable has greatly increased access to the American buying public, which has resulted in immense profits.

And yet, despite its inarguably providing countless and diverse contributions to popular culture, ranging from the wall to wall televising of O.J. Simpson's murder trial and President Clinton's impeachment to a mainstream venue for *South Park*, *The Simpsons*, and endless wrestling events, many find it difficult to characterize cable's overall contribution to American culture as positive. Clearly television is an incredible medium for entertainment and advertising, but as William F. Baker and George Dessart argue in *Down the Tube: An Inside Account of the Failure of American Television*, that it should be used almost exclusively for such purposes is a tragedy. Regrettably, television's potential as an educational tool has never been realized. For every Ken Burns documentary there are a hundred episodes of *The Jerry Springer Show*. As a result, the rise of cable has only increased the size of the vast wasteland that is television.

After the success of so many cable stations, the networks realized they were missing out on the financial gold mine. They profited from the sale of their shows to cable networks, but the real money came from ownership. However, it was illegal for a network to own a cable system. But in 1992 the FCC dropped this regulation; the networks could now own cable systems. What followed was literally a feeding frenzy, as the networks both battled with each other to buy existing cable networks and scrambled to start their own. What resulted was the illusion of even greater choice for the American

viewing public. Although there were way more channels, there weren't appreciably more owners due to the fact that the networks quickly owned many of the cable systems. Despite their claims to the contrary, in actuality, in the late 1990s the networks controlled television almost as much as they always had.

In 1992 Vice President Al Gore began singing the praises of "the information superhighway," a synthesis of education, goods, and services to be delivered through American televisions via existing cable systems. Cable has always offered the possibility of two-way communications. With the proper devices, Americans could send out information through their cables as well as receive it. The technology was not new, but its implementation was. Although at the time Gore was considered by many to be a futuristic dreamer, industry insiders quickly saw that two-way, or "interactive," TV could be the wave of the future. By incorporating interactive technology, cable TV could transform American TVs into incredible machines capable of being a TV, a computer, a superstore, a stereo, a library, a school, a telephone, a post office, a burglar alarm, and a fire alarm all at once. However, a relatively obscure computer network known as the "internet" already utilized two way phone lines to provide its users with interactive ability. The phone companies saw the internet's potential and beat cable TV to the punch. By the late 1990s the internet was in as many as half of all American homes and businesses. But phone lines aren't as effective at transferring information as cables. Fortunately for the phone companies, FCC deregulation in the early 1990s made it possible for them to own cable networks as well. Whether we want it or not, it is just a matter of time before interactivity comes to American televisions. But, judging by how fast and pervasively the once free form internet became commercialized, it is hard to say whether interactive TVs will change lives for the better or just intensify the already oppressive amount of advertising to which Americans are constantly subjected.

In addition to the networks and phone companies buying cable networks, in the early 1990s other corporations began purchasing the networks and phone companies. The reign of independent cable mavericks such as Ted Turner gave way to a new age of corporate cable barons. By the late 1990s cable and network television was largely controlled by a half dozen massive media conglomerates, one of which is Rupert Murdoch's News Corp., which owns countless companies, including Twentieth Century Fox studios, the Los Angeles Dodgers, and Fox Television. The money making possibilities for corporations like Murdoch's are virtually endless. For example, Fox TV not only features new episodes of its own original shows, such as *The X Files* and *The Simpsons*, it also runs them endlessly once they're syndicated. The L.A. Dodgers frequently appear on Fox's Major League Baseball broadcasts. And Twentieth Century Fox feature films routinely make their television debuts on Fox TV. All of these activities result in profits for the parent company, Fox News Corp. Furthermore, corporate ownership can threaten what integrity TV has, as evidenced in the summer of 1998 when Disney, which owns ABC, reportedly killed a negative ABC Nightly News story about how Disney World's lack of background checks resulted in their hiring criminals. Although the ownership of television was largely in the hands of relatively few monopolies, in the late 1990s there was growing public and government rumblings about the increasing "conglomeratization" of America, which led to the backlash and subsequent anti-trust case against Bill Gates's Microsoft

Corporation. But as of 1999 cable television's many channels are in the hands of a few and, despite appearances, Americans' TV options remain quite limited.

As James Roman writes in *Love, Light, and a Dream: Television's Past, Present, and Future*, the pioneers of cable television "could never have realized the implications their actions would come to have on the regulatory, economic, and technological aspects of modern communications in the United States." In 1999 cable television is America's dominant entertainment and information medium, and, due to the fact that 70 percent of Americans subscribe to some form of cable TV, will remain so for the foreseeable future. For cable subscribers, the future is approaching at breakneck speed. Without consulting the public, the conglomerates have already made their decisions concerning the direction of cable TV; in only a few short years fully interactive television will almost certainly become a reality and American life, for better or worse, will likely experience changes in ways not yet imagined. And what about the 30 percent of those for whom cable, either for financial or geographical reasons, is not an option? Will they be able to compete in an increasingly interactive world or will they be permanently left behind? Will the advent of interactive TV create yet another social group, the technologically disadvantaged, for whom a piece of the pie is not a realistic aspiration? Is it at all possible that the people who have cable will defy all prognostications and not embrace the new technologies that will purportedly change their lives for the better? As of 1999 these remain unanswerable questions but it is likely that the direction of American popular culture in the early twenty-first century will be dictated by their outcome.

—Robert C. Sickels

Cadillac

For several decades of the twentieth century, the Cadillac, a car made by General Motors' luxury automobile division, was the most enduring symbol of middle-class achievement for status-conscious Americans. Nowhere is the past and somewhat faded glory of the Cadillac sedan more visible than in the affluent suburbs of Detroit, where silver-haired retired automotive-industry executives and their elegantly-coiffed wives, each stylized living relics of another era, can still be seen tooling around in dark-hued Seattles, while in other such enclaves of prosperity across America, luxury cars from Germany and Japan have long dominated this demographic.

The most popular luxury carmaker in the United States began its history in 1902 in Detroit as one of the many new, independent automobile companies in town. Founded by Henry Leland, who gave it the name of the seventeenth-century French explorer who had founded Detroit, Cadillac earned a devoted following with a reputable and technologically innovative engine. Absorbed into the General Motors family in 1909, the carmaker enhanced its reputation over the years by numerous engineering achievements. For instance, Cadillac was the first car company to successfully use interchangeable parts that fit into the same model and did not require costly hand-tooling. In 1912, a new Cadillac was introduced with the Delco electric ignition and lighting system. The powerful V-8 engine was also a Cadillac first, and its in-house advertising director (the man who later founded the D'Arcy MacManus agency), began using the advertising slogan "Standard of the World." Another print ad, titled "The Penalty of Leadership," made advertising history by never once mentioning Cadillac by name, a master stroke of subtlety.

Harley Earl, the legendary automotive designer, began giving Cadillacs their elegant, kinetic look in the 1920s. He is credited with introducing the first tailfin on the new designs in the late 1940s, inspired in part by the fighter planes of World War II. A decade later, nearly all American cars sported them, but Cadillac's fins were always the grandest. Purists despised them as style gimmicks, but the public adored them. In the postwar economic boom of the 1950s the Cadillac came to be viewed as the ultimate symbol of success in America. They were among some of the most costly and weightiest cars ever made for the consumer market: some models weighed in at over 5,000 pounds and boasted such deluxe accoutrements as imported leather seats, state-of-the-art climate and stereo systems, and consumer-pleasing gadgets like power windows. The brand also began to take hold in popular culture: Chuck Berry sang of besting one in a race in his 1955 hit "Maybellene," and Elvis Presley began driving a pink Caddy not long after his first few chart successes.

Cadillac's hold on the status-car market began to wane in the 1960s when both Lincoln and Chrysler began making inroads with their models. Mismanagement by GM engendered further decline. Cadillac production reached 266,000 cars in 1969, one of its peak years. That model year's popular Coupe DeVille (with a wheelbase of over ten feet) sold for \$5,721; by contrast the best-selling Chevrolet, the Impala, had a sticker price of \$3,465. There were media-generated rumors that people sometimes pooled their funds in order to buy a Cadillac to share. In the 1970s, the brand became indelibly linked with the urban American criminal element, the ride of choice for pimps and mob bosses alike. Furthermore, more affluent American car buyers began preferring Mercedes-Benz imports, and sales of

The 1931 Cadillac

such German sedans (BMW and Audi also grew in popularity) began to eclipse Cadillac. The car itself “became the costume of the *nouveau-riche*—or the *arrivistes*, rather than those who enjoyed established positions of wealth,” wrote Peter Marsh and Peter Collett in *Driving Passion: The Psychology of the Car*. “People who are busy clambering up the social ladder still imagine that those at the top share their reverence for Cadillacs.”

Combined with the spiraling away of the brand’s cachet, the periodic Middle East oil crises of the decade made “gas guzzlers” such as the heavy V-8 Cadillacs both expensive and unfashionable. Furthermore, mired in posh executive comfort and unable to respond to the market, Detroit auto executives failed to direct the company toward designing and making smaller, more fuel-efficient luxury cars. Engineering flaws often plagued the few such models that were introduced by Cadillac—the Seville, Cimarron, and Allante—and gradually the brand itself began to be perceived as a lemon. GM allowed Cadillac to reorganize in the early 1980s, and the company somewhat successfully returned to the big-car market by the mid-1980s, but by then had met with a new host of competition in the field—the new luxury nameplates from the Japanese automakers, Acura, Lexus, and Infinity.

Still, the Caddy remains a symbol of a particularly American style and era, now vanished. When U.S. President Richard Nixon

visited the Soviet Union in May of 1972, he presented Premier Leonid Brezhnev with a Cadillac Eldorado, which the Communist leader reportedly very much enjoyed driving around Moscow by himself. The Cadillac Ranch, outside of Amarillo, Texas, is a peculiarly American art-installation testament to the make: it consists of vintage Caddies partially buried in the Texas earth, front-end down.

Caesar, Sid (1922—)

Sid Caesar was one of the most familiar and talented television performers of the 1950s. His skills as a dialectician, pantomime, and monologist made him a favorite of the critics and a fixture on Saturday night television from 1950 to 1954. Along with co-star Imogene Coca and a writing staff that included Carl Reiner, Mel Brooks, Larry Gelbart, and a young Woody Allen, Caesar captivated the new television audience with film parodies, characterizations, and sitcom-style sketches on NBC's *Your Show of Shows*. Caesar was also infamous for his dark side, an apparent byproduct of his comedic brilliance. A large man, carrying up to 240 pounds on his six-foot-one-inch frame, articles in the popular press described his eating and drinking habits as excessive and his mood as mercurial. In an age when many top comedy television performers suffered physical and mental breakdowns from the exacting demands of live television production, Caesar stood out as a damaged man prone to self-destruction and addiction. He was one of the first broadcast stars to talk openly about his experiences in psychotherapy.

Surprisingly, Caesar did not begin his career in entertainment as a comedian, but rather as a saxophonist. Brought up in Yonkers, New York, by European Jewish immigrant parents, as a child Caesar

Sid Caesar and Imogene Coca

developed his abilities as a dialectician by mimicking the voices of the Italian, Russian, and Polish émigrés who patronized his parents' restaurant. But it was the customer who left behind an old saxophone in the restaurant who had the most direct impact on Caesar's career as an entertainer. The young Caesar picked up the instrument and over the years became an accomplished musician. After graduating from high school, Caesar moved to Manhattan, played in various orchestras, and took summer work at Jewish hotels in the Catskills (commonly known as the "borscht belt"). Although contracted as a musician, he began to appear in the hotel program's comedy acts as a straight man and was so successful that he eventually decided to emphasize his comedic skills over his musical talent.

Theatrical producer Max Liebman, who worked with Caesar on revues in the Catskills and Florida, was central to Caesar's entry into the nascent medium of television. After years performing on stage, in nightclubs, and in the Coast Guard recruiting show "Tars and Spars" (later made into a Hollywood film), the budding comedian was paired with Imogene Coca in Liebman's production "Admiral Broadway Revue." At Liebman's prodding, NBC President Pat Weaver saw the show, and he signed the entire cast and staff to do a television version of their production under the same title. But the program's sponsor, Admiral, a major manufacturer of television sets, found the program too expensive for its limited advertising budget. Weaver encouraged Liebman to give television another try, using most of his original cast and staff for a ninety-minute Saturday night program eventually titled *Your Show of Shows*. Premiering in February of 1950 and following on the heels of shows such as *Texaco Star Theatre*, *Your Show of Shows* was conceived as a fairly straightforward vaudeville-style variety program. However, with its talented cast and writing staff, the show developed into more than just slapstick routines, acrobatic acts, and musical numbers. Although ethnic jokes, borscht-belt-style monologues, and sight gags were considered central to the success of early variety programs, Caesar proved that these basics could be incorporated into a highly nuanced and culturally rich program that would appeal to popular and high culture tastes simultaneously. His film parodies and array of characters such as jazz musician Progress Hornsby, the German Professor, and storyteller Somerset Winterset became the most popular and memorable aspects of the show.

As a result of his unique talents, critics began to call Caesar television's Charlie Chaplin, and one usually tough critic, John Crosby of the *New York Herald Tribune*, considered the comedian "one of the wonders of the modern electronic age." Yet, despite such ardent admiration, Caesar could not quiet the insecurities that had plagued him since childhood. Known for his overindulgence of both food and alcohol, it was said that Caesar would finish off a fifth or more of Scotch daily. In an attempt to control his addiction, doctors prescribed sedatives. However, the "cure" fueled the drinking habit as Caesar took his medication with his daily dose of alcohol. This combination intensified his bouts with depression and worsened the quick temper that often revealed itself on the set or in writing meetings.

The season after *Your Show of Shows* ended its run in 1954, Caesar immediately returned to television with *Caesar's Hour* on Monday nights on NBC. Although many of his problems were well-known in the industry and by his fans, in 1956 he spoke on the record about his emotional issues and subsequent entry into psychoanalysis in an article in *Look* magazine. Claiming that analysis had cured him of his depression and addiction, Caesar blamed his psychological

state on the emotional neglect of his parents during childhood. He revealed that “On stage, I could hide behind the characters and inanimate objects I created. Off stage, with my real personality for all to see, I was a mess . . . I couldn’t believe that anyone could like me for myself.”

Despite his public proclamation of being cured, Caesar continued to suffer. After his second television program was taken off the air in 1957 because it no longer could compete against ABC’s *The Lawrence Welk Show*, the comedian’s mental and physical health declined even further. Although he returned to television a few more times during his career, he was never quite the same. During the 1960s and 1970s he appeared in bit roles in movies such as *Grease*, *History of the World, Part I*, and *It’s a Mad, Mad, Mad, Mad World*, but he spent most of his time in isolation grappling with his problems. It wasn’t until 1978 that he had completed his recovery. In his seventies he continued to nurture a small but respectable movie career in *The Great Man Swap* and *Vegas Vacation*, but he remained best known as one of the most intelligent and provocative innovators of television comedy.

Cagney and Lacey

The arrival of *Cagney and Lacey* in 1982 broke new and significant ground in television’s ever-increasing proliferation of popular cop series in that the stars were women—a pair of undercover detectives out there with New York’s finest, unafraid to walk into the threat of violence, or to use a gun when necessary. Effectively, writers Barney Rosenzweig, Barbara Avedon and Barbara Corday offered audiences a female *Starsky and Hutch*, cleverly adapting the nuances of male partner-and-buddy bonding to suit their heroines. Although jam-packed with precinct life and crime action, the series was character driven, with careful attention given to the private lives of the two detectives, sharply contrasted for maximum interest in both the writing and the casting. Mary Beth Lacey, dark-haired, New York Italian working-class, combined her career with married life and the struggle to raise her children; Christine Cagney, more sophisticated, more ambitious, single, blonde, and very attractive, struggled with a drinking problem. The relationships between them and their male colleagues were beautifully and realistically brought to life by Tyne Daly and Sharon Gless, respectively. Gless was a late addition, brought in to counter criticisms that the show was too harsh and

Sharon Gless (left) and Tyne Daly in a scene from the television movie *Cagney and Lacey: The Return*.

unfeminine: Loretta Swit had played Cagney in the pilot, followed by Meg Foster in the short first series, which failed to find favor in its depiction of women in so unglamorous a context. However, with Gless in tow, the show’s treatment of female solidarity and hard-hitting issues won the CBS show a huge popular following, and lasted for seven seasons until 1988.

Cagney, James (1899-1986)

One of the greatest tough-guy personas of twentieth-century film, James Cagney worked hard to refine his image to meet his responsible Catholic background. The result was a complex set of characters who ranged from the hard-working immigrant striving to make his way in America, to the American hero of Cold War times who fought to preserve our way of life against Communist infiltrators. Cagney’s various personas culminated in one as different from the others as can be imagined—he began to play characters on the edge of (in)sanity. It is his image as a tough guy, however, that is most enduring.

In 1933, during the filming of *Lady-Killer*, Darryl F. Zanuck sent a memo to his crew of writers in which he detailed the studio’s requirements for the Cagney persona: “He has got to be tough, fresh, hard-boiled, bragging—he knows everything, everybody is wrong but him—everything is easy to him—he can do everything and yet it

James Cagney in a scene from the film *White Heat*.

is a likeable trait in his personality.’’ During the 1930s, Cagney’s uptempo acting style—the rat-a-tat-tat of his reedy voice—and his distinctly Irish-puck appearance, created a decidedly lower-East side aura. He was a city boy.

Cagney was born in New York City on July 17, 1899. Although studio publicity promoted stories about a tough east-side upbringing and life above a saloon, Cagney was, in fact, raised in the modest middle-class neighborhood of Yorkville. Two of his brothers became doctors. On screen, however, Cagney played tough guys—characters who were immigrants fighting to fit in identified.

Public Enemy, Cagney’s first starring role, remains famous for an enduring still of Cagney, with lips pursed, hair awry, and eyes enraged, smashing a grapefruit in Mae Clarke’s face. But it was Tom Powers’ contempt for assimilation that alarmed educators and reformers. In 1932, armed with the Payne Fund Studies, a group of reformers feared that immigrant youths over identified with certain screen stars and surrendered their parents’ values for falsely ‘‘Americanized’’ ones. In his popularization of the Payne report, Henry James Forman echoed these fears when he identified one second-generation

Italian youth’s praise for Cagney: ‘‘I eat it. You get some ideas from his acting. You learn how to pull off a job, how he bumps off a guy and a lot of things.’’

Because of the uproar from reformers and the ascendancy of President Roosevelt and his accompanying call for collective action, Warner Brothers shifted their image of Cagney. He no longer embodied lost world losers but common men fighting to make it in America. And Cagney’s image of fighting to make it spoke to New York’s immigrants (Italians, Jews, Poles, Slavs), who in 1930 comprised 54.1 percent of New York City’s households. From 1932-39 (a period in which he made 25 films), Cagney represented an ethnic in-between. As an Irish-American, he was an icon for immigrants because he represented a complex simultaneity—he was both a part of and apart from Anglo-Saxon society. In a series of vehicles, Cagney was the outlaw figure, a character who did not want to conform to the dictates of the collective, and yet, through the love of a WASPish woman or the demands of the authoritative Pat O’Brien (the Irish cop figure in *Here Comes the Navy* [1934] and *Devil Dogs of the Air* [1935]) Cagney harnessed his energies to communal good.

Regardless of how Cagney's image was read by immigrants, sociologists, and reformers, he was not happy with how he perceived Zanuck and the Warner Brothers' script writers had structured his persona. A devout Catholic and a shy, soft-spoken man off-screen, he was tired of roughing up women and playing street punks on screen. Three times (1932, 1934, 1936) he walked off the studio lot to protest his typecasting. In March 1936, Cagney won a breach of contract suit against Warner Brothers, and later that year signed with Grand National where he filmed *Great Guy* (1936) and *Something to Sing About* (1937). Unfortunately, neither effort changed his persona, and with Grand National falling into receivership, Cagney returned to Warner Brothers.

To enhance Cagney's return, Warner Brothers immediately teamed him with old pal and co-star Pat O'Brien in *Angels With Dirty Faces* (1938). As Rocky Sullivan, Cagney received an Academy Award nomination and the New York Critics Award for best actor. The film's most memorable scene features Cagney's death-row walk in which his "performance" switches the Dead End Kids' allegiances from one father figure (Cagney) to another (O'Brien). It is an explosive moment of ambiguity in which a character destroys his reputation for the audience in the film (the Kids) but gains, through his sacrifice, saintliness from the audience in the theater (largely immigrant).

By the 1940s, Cagney's image had radically changed under the pressures of the Martin Dies' "Communist" innuendoes. With war raging in Europe the competing images in Cagney's persona (the anarchic individual at odds with the collective; the Irish-American trying to make it in WASP—White Anglo-Saxon Protestant—society) were transformed into a homogenized pro-United States figure. The plight of the immigrant was replaced by Warner Brothers' all-American front to the Axis. *Yankee Doodle Dandy* (1942) culminated the change as Cagney was galvanized into a singing, dancing super-patriot. Cagney won an Academy Award for this dynamic performance.

Following a second try at independence (United Artists, 1943-48), the post-World War II Cagney struggled to maintain a contemporary persona. Much of his New York City audience had grown up and moved to the suburbs. Too old and lace-curtain Irish to remain an ethnic in-between, the post-war Cagney bifurcated into two types: a strong-willed patriarch or a completely insane figure who needed to be destroyed. *White Heat* mirrored the switch in emphasis. No longer was Cody Jarret fighting to realize the immigrant dream; instead he fought a mother complex.

On March 18, 1974 more than 50 million Americans watched Cagney accept the American Film Institute's second annual life-time achievement award. Although he had fought Zanuck, Wallis, and the studio's construction of his "tough, fresh, hard-boiled" image, he embraced it during the tribute. In his acceptance speech Cagney thanked the tough city boys of his past: "they were all part of a very stimulating early environment, which produced that unmistakable touch of the gutter without which this evening might never have happened." James Cagney died on Easter Sunday, 1986.

Cahan, Abraham (1860-1951)

The flowering of Jewish-American fiction in the 1950s and 1960s had its origin in the pioneering work of Abraham Cahan: immigrant, socialist, journalist, and fiction writer. With William Dean Howells' assistance, Cahan published *Yekl: A Tale of the New York Ghetto* (1896) and *The Imported Bridegroom* (1898). But it is *The Rise of David Levinsky* (1917) that is his masterwork. Using Howells's *Rise of Silas Lapham* as his model, Cahan explores an entire industry (ready-made clothing) and immigrant experience (Eastern European Jews) by focusing on a single character and his bittersweet ascent from Russian rags to Manhattan riches. A major work of American literary realism, *The Rise of David Levinsky* is also an example of reform-minded Progressivism and began as a series of sketches in *McClure's Magazine* alongside the work of muckrakers Upton Sinclair and Ida Tarbell. Although he is best remembered for this one novel (rediscovered in 1960 thanks to the popularity of a later generation of postwar Jewish-American writers), Cahan's most influential act was the founding of the world's leading Yiddish newspaper, the *Jewish Daily Forward*, in 1902.

Cakewalks

An elegant and stately dance created by African slaves on Caribbean and North American plantations, the cakewalk enjoyed a long history. During slavery, plantation owners judged the dance and the finest dancer was rewarded with a cake. It became the first African-American dance to become popular among whites. The cakewalk was featured in several contexts including the minstrel show finale, early black musicals including *Clorindy, or The Origin of the Cakewalk* in 1898 and *The Creole Show* in 1899, and on ballroom floors thereafter. The cakewalk embodied an erect body with a quasi-shuffling movement that developed into a smooth walking step.

Caldwell, Erskine (1903-1987)

Although Erskine Caldwell gradually descended into obscurity, during his heyday in the 1930s and 1940s his books were perennial best-sellers. Notorious for the explicit sexuality in his novels about Southern poor whites, Caldwell withstood several obscenity trials and saw his work banned on a regular basis. Caldwell's trademark mixture of sex, violence, and black humor garnered various reactions. Southerners in particular felt that Caldwell pandered to stereotypes of the South as a land of ignorance, sloth, and depravity, but many respected literary critics saw burlesque humor, leftist political activism, or uncompromising realism in Caldwell's writing. Caldwell's major fiction included *Tobacco Road* (1932), *God's Little Acre* (1933), *Kneel to the Rising Sun and Other Stories* (1935), *Trouble in July* (1940), and *Georgia Boy* (1943). In addition to novels and short stories, Caldwell coauthored a number of photograph-and-text books with his second wife, photographer Margaret Bourke-White, the most popular of which were *You Have Seen Their Faces* (1937) and *Say, Is This the U.S.A.?* (1941).

Caldwell was born in rural White Oak, Georgia. He inherited his social conscience from his father, a minister in the rigorous Associated Reformed Presbyterian Church. Because of his father's ministry, Caldwell's family moved frequently, and their financial situation was often strained. Caldwell had little formal education. His mother taught him at home during his early childhood, and he never formally graduated from high school. He later spent brief periods at three different colleges but never obtained a degree. After a long series of odd jobs and some newspaper work for the *Atlanta Journal*, Caldwell moved to Maine in 1927 to concentrate on writing fiction. He would never again live in the South, though he made occasional visits for documentary projects or creative inspiration.

Caldwell's early years in Maine were spent in utter poverty. His first three books attracted little attention, but his fourth, *Tobacco Road*, defined his career and made him rich. Published in 1932, *Tobacco Road* featured Jeeter Lester and family, a brood of destitute sharecroppers in rural Georgia. The dysfunctional Lester clan starved and stole and cussed and copulated throughout the book, which initially received mixed reviews and posted lackluster sales. Jack Kirkland changed all that when he translated *Tobacco Road* into a phenomenally successful Broadway play. The play ran from December of 1933 through March of 1941, an unprecedented seven-year stretch that was a Broadway record at the time. Touring versions of the play traveled the nation for nearly two decades, playing to packed houses throughout the country. Caldwell's book sales skyrocketed.

Through the 1940s Caldwell's books continued to sell well in dime-store paperback versions with lurid covers, but reviews of his new books were increasingly harsh. Though he continued writing at a prolific pace, Caldwell was never able to repeat the critical success of his earlier work. The quality of his work plummeted, and his relationships with publishers and editors, often strained in the past, deteriorated further.

Despite Caldwell's waning literary reputation, he had a lasting impact on American popular culture. A pioneer in the paperback book

trade, he was one of the first critically acclaimed writers to aggressively market his work in paperback editions, which were considered undignified at the time. Most of Caldwell's astonishing sales figures came from paperback editions of books that were first published in hardback years earlier. These cheap editions were sold not in bookstores, but in drug stores and magazine stands; consequently they reached a new audience that many publishers previously had ignored. Sexually suggestive covers aided Caldwell's sales and forever changed the marketing practices for fiction. His censorship battles made Caldwell a pivotal figure in writers' battles for First Amendment rights. Without question, however, Caldwell's greatest legacy has been his depiction of Southern poor whites. The Lesters have been reincarnated in *The Beverly Hillbillies*, *Snuffy Smith*, *L'il Abner*, *The Dukes of Hazzard*, and countless other poor white icons. Though its origin seems largely forgotten, the term "Jeeter" survives as a slang expression for "poor white trash."

Calloway, Cab (1907-1994)

Known as "The Hi-De-Ho Man," jazz singer, dancer, and bandleader Cab Calloway was one of the best-known entertainers in the United States from the early 1930s until his death in 1994. Calloway's musical talents, however, were only part of the story. His live performances at Harlem's Cotton Club became legendary because of Calloway's wild gyrations, facial expressions, and entertaining patter.

Born Cabell Calloway on Christmas Day, 1907, in Rochester, New York, Calloway spent most of his childhood years in Baltimore. The younger brother of singer Blanche Calloway, who made several popular records in the early 1930s before retiring, Cab discovered show business during his teen years, frequenting Chicago clubs while attending that city's Crane School. When Calloway encountered financial difficulties, he naturally turned to moonlighting in the same clubs, first as an emcee and later as a singer, dancer, and bandleader.

Although Calloway was attending law school and his hopes for a career in that field looked promising, he elected to drop out and try to make it as a singer and dancer. He led a successful Chicago group, the Alabamians, who migrated to New York but found the competition

Cab Calloway

too harsh to survive. Calloway had better luck with his next group, the Missourians, appearing in the Broadway revue *Connie's Hot Chocolates* in 1929.

Soon after, Calloway was offered a position as the headline act at the Cotton Club, and he readily accepted. He also had begun recording, and in 1931 produced his best-known single, "Minnie the Moocher." Minnie and her companion, Smokey Joe, were the first of many fictional characters Calloway invented to entertain his audiences. He continued Minnie's saga with such "answer" records as "Minnie the Moocher's Wedding Day" and "Mister Paganini, Swing for Minnie," which took a satirical look at classical music. He continued to develop his talents as a jazz singer and was one of the first "scat" singers, improvising melodies while singing nonsense lyrics. Blessed with a wide vocal range, Calloway employed it to his fullest advantage, especially on his famous "hi-de-ho" songs, which included "You Gotta Hi-De-Ho" and the "Hi-De-Ho Miracle Man."

Calloway's orchestra was a showcase and proving ground for some of the most prominent musicians in the history of jazz. Walter "Foots" Thomas, Doc Cheatham, Danny Barker, Dizzy Gillespie, and Ike Quebec, among many others, gained notoriety by appearing with Calloway, who paid higher salaries—and demanded better work—than any other bandleader.

Calloway had so much visual appeal that he was cast in several movies, including *Stormy Weather* (1943). More recently, Calloway played a thinly veiled version of himself in the 1980 blockbuster *The Blues Brothers*, dispensing fatherly advice to protagonists Jake and Elwood Blues (John Belushi and Dan Aykroyd) as well as turning in a spectacular performance of "Minnie the Moocher" at the film's climax.

Although the single "Blues in the Night" was a major hit in 1942, Calloway found little commercial success after the Depression years. With the end of the big-band era after World War II, Calloway reluctantly disbanded his orchestra in 1948 and thereafter performed solo or as a featured guest in other groups. His love of entertaining led him to continue performing for fans until his death in 1994.

Calvin and Hobbes

Imaginative, hilariously drawn, at times philosophical—all the while retaining a child's perspective—this daily and Sunday comic strip has been compared to the best of the classic comics. Written and drawn by Bill Watterson, *Calvin and Hobbes* debuted in 1985 and featured the adventures of Calvin, a hyperactive, overly imaginative, bratty six-year-old, and his best friend, the stuffed tiger Hobbes. Other regularly appearing characters included Calvin's stressed out parents; Susie Derkins, the neighborhood girl; Miss Wormwood, the much put-upon school teacher; Mo, the school bully; and Rosalyn, the only baby-sitter willing to watch Calvin.

Part of the charm of the strip was the fact that Watterson often blurred the distinction between what was imaginary and what was "real." Calvin saw his tiger as real. When Calvin and Hobbes were by themselves, Watterson drew Hobbes as a walking tiger with fuzzy cheeks and an engaging grin. When another character appeared with Calvin and Hobbes, Hobbes was drawn simply as an expressionless stuffed tiger. The "real" Hobbes was more intellectual than Calvin and also liked to get "smooches" from girls, unlike the girl-hating Calvin (though both were founding members of G.R.O.S.S.—Get Rid of Slimy girls).

Unlike Dennis the Menace, *Calvin and Hobbes* went beyond the hijinks of a holy terror. It explored childhood imagination and the possibilities of that imagination. For instance, one of Calvin's chief toys besides Hobbes was a large cardboard box. When it was right side up, the box was a time machine that transported Calvin and Hobbes back to the Jurassic. When Calvin turned it over, the box became the transmogrifier, which could transmogrify, or transform, Calvin into anything he wished. The transmogrifier was later converted into a duplicator, producing lots of Calvins. Imagination sequences such as these have been imitated by other comic strips such as Jim Borgman and Jerry Scott's *Zits*.

Calvin's imaginary world contained other memorable characters and devices. Calvin became the fearless Spaceman Spiff whenever he needed to escape the doldrums of school or the rebuke of his parents, who clearly loved but did not always like Calvin, a view of the family different from many others seen on the comics page. Calvin would don a cape and cowl and become Stupendous Man. His repertoire also included a tyrannosaur, or Calvinosaur, a robot, and a werewolf. Calvin also liked to sit in front of the television set, a behavior Watterson satirized, evidencing his contempt of television as opposed to personal imagination.

Most of the strips featured Calvin's antics, such as hitting Susie with a snowball or running away from his mother at bath time. Other

common gags included his reluctance to eat dinner, his hatred of school and homework, and his antagonism toward Rosalyn. Calvin also enjoyed building deformed or dismembered snowmen on the front lawn. Besides these gags, though, the strip would at times deal with the philosophical nature of humanity as seen by a child and a tiger. Given the names of the characters, this was only to be expected. The comic strip's title characters are named after John Calvin and Thomas Hobbes. Calvin was a Protestant reformer famous for his ideas on predestination and the sovereignty of God. Calvin believed men, and children, to be sinners. Hobbes, author of the *Leviathan*, believed in submission to the sovereign of the state, since he too believed men were evil. Watterson occasionally commented on such issues between his two characters, usually as they headed down a hill in either a wagon or a sled.

Watterson ended *Calvin and Hobbes* in 1995. Watterson was known to dislike the deadlines, commercialization, and restraints of syndicated comics, which most likely motivated his retirement. While Watterson never permitted merchandising of his Calvin and Hobbes characters, *Calvin and Hobbes* reprints remained in stores, and Calvin images, though most likely unlicensed, continued to be displayed in cars and trucks. *Calvin and Hobbes* collections include *Something under the Bed Is Drooling* (1988), *Yukon Ho!* (1989), and *The Calvin and Hobbes Lazy Sunday Book* (1989).

Like Gary Larson of *The Far Side*, Watterson had a unique honor bestowed on him by the scientific community. On one adventure, Calvin and Hobbes explored Mars. When the Mars Explorer sent back pictures of Mars, NASA scientists named two of the Mars rocks Calvin and Hobbes.

Camacho, Héctor “Macho” (1962—)

In 1985, boxer Héctor Camacho, known for his flashy style and flamboyant costuming as a “Macho Man” and “Puerto Rican Superman,” became the first Puerto Rican to have won the World Boxing Championship (WBC) and World Boxing Organization (WBO) championships in the lightweight division. Born in Bayamón, Puerto Rico, in 1962, Camacho won 40 of his first 41 fights culminating with his victory over José Luis Ramos for the WBC lightweight championship. In 1987, Camacho moved up to the super lightweight division, in which he fought only seven sluggish battles before retiring in 1994. The two highlights of this latter career were his victory over World Boxing Association (WBA) lightweight champion Ray “Boom Boom” Mancini in 1989 and his 1992 fight with Julio César Chávez for a \$3 million payoff.

Camelot

Camelot, a musical by Alan Jay Lerner and Frederick Loewe based on T.H. White's version of the Arthurian romance *The Once and Future King*, was one of the most successful Broadway musicals of the 1960s. The original production starred Julie Andrews, Richard Burton, and Robert Goulet. Songs included “I Wonder What the King Is Doing Tonight,” “Camelot,” “How to Handle a Woman,” “C'est Moi,” and “If Ever I Would Leave You.” The 1967 film version featured Richard Harris, Vanessa Redgrave, and Franco Nero. *Camelot* contemporized the era of King Arthur and made the legend accessible and appealing to 20th-century audiences through the use of 1960s popular music styles, a skillful libretto, and well-known performers. The influence of *Camelot* extended well beyond the musical theater. It became a symbol of the administration of President John F. Kennedy, an era—like that of King Arthur—whose days were cut tragically short. The *Oxford History of the American*

People (1965) even ends with a quote from the show: “Don’t let it be forgot that once there was a spot, for one brief shining moment that was known as Camelot.”

Camp

“Camp asserts that good taste is not simply good taste; that there exists, indeed, a good taste of bad taste.” In her well known 1964 piece, *Notes on Camp*, Susan Sontag summarized the fundamental paradox that occupies the heart of “camp,” a parodic attitude toward taste and beauty which was at that time emerging as an increasingly common feature of American popular culture. Avoiding the draw-out commentary and coherence of a serious essay format, *Notes on Camp* dashes off a stream of anecdotal postures, each adding its own touches to an outline of camp sensibility. “It’s embarrassing to be solemn and treatise-like about Camp,” Sontag writes. “One runs the risk of having produced a very inferior piece of Camp.” And she was right. To take camp seriously is to miss the point. Camp, a taste of bad taste which languishes between parody and self-parody, doesn’t try to succeed as a serious statement of taste, but stages its own failure as taste by doing and overdoing itself. In this way, failure is camp’s greatest triumph and to take it away through a serious analysis would, for Sontag, be tantamount to an annihilation of the subject. In fact, since camp’s self-parody leaves no durable statement of taste, it should only be spoken of as a verb: “camping,” the act of subverting a taste by exaggerating its pomp and artifice to the point of absurdity.

Writing in 1964, Sontag already had a short history of popular camp to reflect upon. From the mid 1950s, a peculiar sense of the beauty of bad taste had crept into American culture thorough the pages of *MAD* magazine and the writings of Norman Mailer—a parodic smirk that would creep across the face of counter culture of the 1960s and ultimately etch itself deeply into the American cultural outlook. By the mid 1960s, camp’s triumphs were many: the glib, colorful, and disposable styles of Pop gave way to the non-conformity of hippie camp, which in turn inspired 1970s glam-rock camp, the biting camp of punk and the irony and retro of the 1980s and 1990s camp, while throughout the inflections of gay and drag camp were never far away. In each case, camp’s pattern is clear: camp camps taste. Less a taste in itself, more an attitude toward taste in general, camp’s failed seriousness exaggerates to absurdity the whole posture of serious taste, it “dethrones seriousness,” and reveals the vanity and folly that underlies every expression of taste. And camp’s failure is contagious. By affirming style over substance, the artifice of taste over the content of art, and by undermining one’s own posture of good taste by exaggerating its vanity and affect, camp exposes the lie of

taste in general—without confronting it with a superior standard. Sontag writes: “Camp taste turns its back on the good-bad axis of ordinary aesthetic judgment. Camp doesn’t reverse things. It doesn’t argue that the good is bad or the bad is good. What it does is to offer for art (and life) a different—a supplementary—set of standards.” Free from seriousness, camp can be cruel or kind: at moments camp offers a boundless carnival of generosity to anyone willing to don a disguise and share in the pomp and pretense that is taste, while at other moments camp’s grotesque vanity might fly into jealous rage at the competitor, the campier than thou, that threatens to rain on the charade.

Sontag traces camp to its origins as a gay sensibility in the writings of Oscar Wilde and Jean Genet, who sought to dethrone the seriousness of Victorian literary convention and the tastes of the French bourgeoisie. In America, camp largely emerged from the need to dethrone the conformity and banality of the consumer culture of the 1950s. “Pop” styles sprang out of a reaction to the conformity imposed by the mass-produced culture provided by a “society of abundance,” which unconvincingly advocated the virtues and pleasures of life in a world of consumer goods. By the 1960s, that promise was less and less convincing, and the adornments of the suburban home seemed sadly inadequate as stand-ins for human satisfaction. The colorful, flamboyant and garish styles of “Pop” provided some relief for an American middle class increasingly inundated with “serious” consumer tastes in which it had no trust. In Britain a group of painters calling themselves The International Group (whose members included Richard Hamilton, John McHale, and Magda Cordell) set out to sing the praises of the new culture of plenty in a slightly off-key refrain: Hamilton’s famous 1956 collage of a suburban living room asks with a conspicuous sincerity, “Just What Is It That Makes Today’s Homes So Different, So Appealing?” The piece lampoons the optimism and complacency of the new domestic bliss, while celebrating its artifice. Camping the Americanization of the 1950s, British Pop spread quickly to the garrets of New York where Roy Lichtenstein, Jasper Johns, and Andy Warhol quickly picked up the trick of praising the land of opulence with the tongue squarely in the cheek.

“Pop” resonated in the mainstream of American cultural life with the first of what would be many terrifically successful British Invasions. Dethroning the “good taste” of mass culture with stylish overkill, pop clothing, decoration, and graphics were exaggerated, colorful and garish, silly and trite. The fashions of Mary Quant, the photography of David Bailey, and ultimately the music of the Rolling Stones and the Beatles offered stylistic excess as the antidote to the “square” tastes of the older generation. The pop-psychedelic expressions of later years would confirm the superiority of mockery over taste. The fad *Vogue* dubbed “Youthquake” trumpeted the shallow excessiveness of a youthful taste as an endorsement of style over substance—a camping of mass culture. Commercial imagery, camped in this way, shaped the counter culture of the 1960s, from the Beatles’ *Sergeant Pepper* album cover to Warhol’s soup cans to the garish colors of psychedelic attire to the magazine clipping collages that covered many a teenager’s bedroom walls: camping was at once subversive, clever, and affirming of one’s taste for bad taste. One image in particular expresses this camping of mass culture that was the achievement of Pop: Twiggy, the slim and youthful British model who took Madison Avenue by storm in 1967, was pictured in a *New Yorker* article posing in Central Park, surrounded by children, all of whom wore Twiggy masks, photographic representations of the face of the model. Camping the artifice of mass stardom had become part of stardom itself.

It was, however, the camp of the drag queen that would ultimately triumph in the counter culture, and claim the camp legacy for the next decade. As early as Warhol's Factory days, where Manhattan drag queens like Candy Darling and Holly Woodlawn were featured prominently in such films as *Chelsea Girls* (1966), drag had always had a cozy relationship with the counter culture. The relationship became closer after the Stonewall riots of 1969, when drag style emerged as the motif that gave rock a disturbing and intriguing gender ambiguity. By the early 1970s, rock became increasingly open to camp inflections of drag: Mick Jagger developed a strutting, effeminate stage presence; David Bowie, Elton John, and Alice Cooper brought excess and artifice together with gender ambiguity that was taken directly from lively drag scenes and the queens who populated the 1970s gay scene. The raucous screenings of Jim Sharman's 1974 *Rocky Horror Picture Show* and John Waters' 1973 *Pink Flamingos* remain an enduring rite of college frat life.

As the 1970s wore on, New Wave and Punk movements drew on camp's preoccupation with dethroning the seriousness of taste. Such early punk acts as the New York Dolls sharpened the whimsy of Sharman's Dr. Frankenfurter character into a jarring sarcasm, less playful and flamboyant, more the instrument of an outraged youth, cornered by the boredom and banality of a co-opted counter-culture, a valueless society and the diminished hopes of a job market plagued by economic recession. Unlike the witticisms of Wilde and the flourish of Marc Boland and other dandies of glam rock, Punk's version of camp was meant to sting the opponent with a hideous mockery of consumer pleasure. The Sex Pistols' *Holiday in the Sun* album begins with a droning comment on low budget tourism: "cheap holiday in other people's misery," while the B-52s' manic celebration of the faux leisure of consumerism chided the ear with shrill praises of "Rock Lobster" and "Girls of the U.S.A." Punk camp, however, would have to be de-clawed before it could achieve mainstream influence, which ultimately happened in the early 1980s with the invasion (again from Britain) of such campy "haircut" acts as Duran Duran and Boy George's Culture Club. The effect of punk camp on American popular culture has yet to be fully understood, though it seems clear that ironic distance (cleansed of punk's snarl) became a staple of the culture of the 1980s and 1990s. Retro (a preferred terrain of camp, which finds easy pickings in tastes already rendered "bad" by the relentless march of consumer obsolescence) preoccupied the 1980s, where the awkward styles of the 1950s could be resurrected in such films as *Back to the Future*, and every aging rock star from Paul McCartney to Neil Young could cop a 50s greaser look in an effort to appear somehow up to date, if only by appealing to the going mode of obsolescence.

If irony and detachment had by the 1990s become defining features of the new consumer attitude, the camping of America is partly to blame, or credit. However, the 1990s also witnessed an unprecedented mainstreaming of drag in a manner quite different from that of the 1970s. In the 1990s, figures like Ru Paul and films like *Wigstock* signaled the visibility of drag styles worn by the drag queens themselves, not by straight rockstars taking a walk on the wild side. That drag could metamorphose over twenty years from a psychological aberration and criminal act to a haute media commodity testifies to the capacity of American culture to adjust to and absorb precisely those things it fears most. In the camping of America, where the abhorrent is redeemed, the drag queen fares well.

Campbell, Glen (1936—)

After establishing himself as a reputable session guitarist for acts including the Monkees and Elvis Presley in the early 1960s, Glen Campbell came into his own as a country vocalist with a decided pop twist. Delivering pieces by ace songwriters like Jimmy Webb, Campbell's hit singles of the mid-1960s—most notably "Wichita Line-man" and "By the Time I Get To Phoenix"—fused the steel guitar sound of country with lilting string arrangements. By the early 1970s, Campbell had placed a number of singles in the upper tiers of both pop and country charts, and was even given the helm of his own popular variety show, *The Glen Campbell Good Time Hour*, but after "Southern Nights," his final number one hit, Campbell kept a relatively low profile.

Campbell, Naomi (1971—)

Discovered while shopping in 1985, British model Naomi Campbell became an instant success in the United States, where she metamorphosed from a sweet schoolgirl into a polished—and, many would say, primadonna—professional. Her long dark hair, fey eyes, and feline figure established her as the first and for a long time the only black supermodel; her looks were distinctively African in origin but appealed to conservative Caucasian consumers as well. Her 1994 novel about the fashion business, *Swan*, focused primarily on white characters but made an impassioned argument in favor of widening modeling's ethnic base; she also recorded an album and starred in other artists' music videos. Guarding her stardom jealously, Campbell sometimes refused to appear in fashion shows alongside other black models, and she was known for making outrageous demands for hotel rooms and entertainment. Campbell eventually had to face accusations of abuse from modeling agencies and a former assistant.

Camping

Humans tamed the first campfires over 500,000 years ago, and the word "camp" itself comes from the Latin *campus*, or "level field," but recreational camping as a popular cultural practice did not emerge in the United States until the end of the nineteenth century, when large numbers of urban residents went "back to nature," fleeing the pressures of industrialization and increased immigration for the temporary pleasures of a primitive existence in the woods.

The camping movement began in earnest in the mid-nineteenth century, when upper-class men from New York, Boston, and other northeastern cities traveled to the Catskills, the Adirondacks, and the White Mountains to hunt, fish, and find solace in the beauty and sublimity of untrammelled nature. Encouraged by such books as William H. H. Murray's *Adventures in the Wilderness; or, Camp-life in the Adirondacks* (1869), these men sought to improve their moral

and physical health and test their masculinity against the wilderness, much as their working-class brethren had tested it on the battlefields of the Civil War. They also set the tone of nostalgic nationalism that would characterize camping throughout the twentieth century, identifying themselves with idealized images of the pioneer frontiersmen as rugged individualist and the American Indian as Noble Savage.

By the end of the nineteenth century, and especially after the "closing of the frontier" in 1890, camping had developed into an established middle-class activity, one that relied as much on cities and industries as it sought to flee them. Its increasing popularity could be seen in the formation of outdoor clubs, such as the Boone and Crockett Club (1887) and the Sierra Club (1892); the publication of camp manuals, such as George W. Sears's *Woodcraft* (1884) and Horace Kephart's *Camping and Woodcraft* (1906); and the appearance of related periodicals, such as *Forest and Stream* (1873), *Outing* (1882), and *Recreation* (1894). Easy access to remote areas was made possible by the railroads, and the growth of the consumer culture—as evidenced by the development of department stores, such as Montgomery Ward (1872), and the mail-order business of Sears, Roebuck (1895)—provided campers with the proper gear for their wilderness voyages. At the same time, however, many campers supported the

A group of boys at camp toasting marshmallows over an open fire.

conservation and preservation movements, which helped to establish the first national parks and forests.

The same forces of urbanization and industrialization that influenced the popularity of recreational camping among adults also affected the development of organized camping for children and young people. Although a long summer vacation made sense for a rural, agricultural population, technological advancements, and the expansion of the cities made this seasonal break from compulsory education increasingly obsolete in the late nineteenth century. Nevertheless, many schools continued to close for the months of June, July, and August, and parents, educators, and church leaders were forced to look elsewhere for ways to keep children occupied during the hot summer months. Camp provided the perfect solution.

The first organized camping trip in the United States is said to have occurred in 1861, when Frederick William Gunn and his wife supervised a two-week outing of the Gunnery School for Boys in Washington, Connecticut, but the first privately operated camp did not appear until 1876, when Joseph Trimble Rothrock opened a camp to improve the health of young boys at North Mountain in Luzerne County, Pennsylvania. The oldest continuously operating summer camp in the United States—"Camp Dudley," located on Lake Champlain—was founded in 1886 by Sumner F. Dudley, who had originally established his camp on Orange Lake, near Newburgh, New York. By 1910, the organized camping movement had grown extensive enough to justify the founding of the American Camping Association, which by the 1950s boasted more than five thousand members.

Classifiable as either day camps or residential camps, summer camps have generally provided a mixture of education and recreation in a group-living environment in the out-of-doors, and their proponents have claimed that the camps build character, encourage health and physical fitness, enhance social, psychological, and spiritual growth, and foster an appreciation for the natural world. The majority of camps have been run by nonprofit organizations, such as the Boy and Girl Scouts, Camp Fire Girls, Boys' and Girls' Clubs, 4-H Clubs, Salvation Army, YMCA, YWCA, YM-YWHA, and churches, synagogues, and other religious groups. Others have been private camps run by individuals and corporations, or public camps run by schools, municipal park and recreation departments, and state and federal agencies. Especially notable in the twentieth century has been the advent of innumerable special-interest camps, such as Christian and Jewish camps, sports camps, computer camps, language camps, space camps, weight-loss camps, and camps for outdoor and arts education.

Recreational camping developed in parallel with organized camping in the early twentieth century, influenced in part by the popularity of such nature writers as Henry David Thoreau, John Muir, and John Burroughs. Equally influential was the mass-production of the automobile and the creation of the modern highway system, which led to the development of motor camping and the formation of such organizations as the American Automobile Association, the Recreational Vehicle Association, and the Tin Can Tourists of America. The growth of camping reached a milestone in the 1920s, with camping stories being written by Ernest Hemingway and Sinclair Lewis; new products being developed by L. L. Bean and Sheldon Coleman (whose portable gas stove appeared in 1923), and the first National Conference on Outdoor Recreation being held in 1924.

The postwar suburbanization of the United States, combined with advances in materials technology and packaging, helped to turn camping into a mass cultural activity in the late twentieth century, one whose popularity not only affected the management of natural areas

but also called into question its own reason for being. Nearly ten million recreational vehicles, or RVs, were on the road in the late 1990s, forcing national parks to install more water, sewer, and power lines and close less desirable tent-camping sites. Meanwhile, the introduction of aluminum-frame tents in the 1950s, synthetic fabrics in the 1960s, freeze-dried foods in the 1970s, chemical insect repellents in the 1980s, and ultra-light camp stoves in the 1990s allowed campers to penetrate further into the backcountry, where they often risked disturbing ecologically sensitive areas. With the invention of cellular telephones and global positioning satellites, however, many campers have begun to wonder whether their days as primitive recreators may in fact be numbered, and whether it will ever again be possible to leave technology and civilization behind for the light of an evening campfire and the silence of a beeperless world.

Cancer

Cancer is not a single disease, but rather a monster with many faces. Doctors and scientists have listed more than 200 varieties of cancer, each having different degrees of mortality, different means of prevention, different hopes for a cure. Carcinomas hit mucous membranes or the skin, sarcomas attack the tissues under the skin, and leukemia strikes at the marrow—and these are just a few varieties of cancer. Cancers are all characterized by an uncontrolled proliferation of cells under pre-existing tissues, producing abnormal growths. Yet popular attitudes toward cancer have been less bothered with medical distinctions than with providing a single characterization of the disease, evoking a slow and painful process of decay that comes as a sort of punishment for the patient. "Cancerphobia" is, as Susan Sontag and James T. Patterson have shown, deeply rooted in American culture.

Cancer is a very ancient disease, dating back to pre-historic times. Archeological studies have allowed scientists to detect breast cancer in an Egyptian mummy, while precise descriptions of different

cases of cancer started in the eighteenth century. The word cancer comes from the Latin “cancer-cancri” and the Greek karkinos (used by Hippocrates in the fifth century B.C.), meaning both cancer and crab. The two words are linked via images of creeping, voracity, and obliqueness. Just like crabs, cancers creep inside the organism and eat away at it. The association of cancers and crabs has lasted throughout the centuries: Rudyard Kipling used the expression “Cancer the Crab,” and an American cartoon booklet from the 1950s shows a giant crab crushing its victims with its huge pincers, the words “Cancer the killer” appearing above the scene. Adopting a typically apocalyptic mood, Michael Shimkin claimed that American citizens had defeated the “pale rider of pestilence” and the “cadaverous rider of hunger,” but that they now had to face two different riders—“one in shape of a mushroom cloud and one in the shape of a crab”.

In the United States, cancer made its first big public appearance with the illness and death in 1884-1885 of the national hero who had led the Union troops to victory in the Civil War: Ulysses S. Grant. Public use of the word cancer, as James Patterson has pointed out, had been uncommon until then. Grant’s cancer received exceptional newspaper coverage and the readers of the age were fascinated by it. Unofficial remedies and healers came to the forefront, positing for the first time what would be a recurrent dichotomy in the history of cancer research: the orthodox medicine of the “cancer establishment” versus the unorthodox medicine of the “cancer counter-culture.” Cancer, with its slow but unrelenting progression, seemed the very denial of several developments taking place during the late nineteenth century (such as higher life expectancy and economic growth) which contributed to the people’s perception of the United States as the land of progress and opportunity for a well-to-do life. The denial of death played an important part in this quest for a well-to-do life, and James Patterson explains that this particular attitude “account[s] for many responses to cancer in the United States during the twentieth century, including a readiness to entertain promises of ‘magic bullets.’ In no other nation have cancerphobia and ‘wars’ against cancer been more pronounced than in the United States.” Since the late 1970s, the war on cancer has been coupled with a fierce battle against smoking (which medical specialists have singled out as the main cause of lung cancer), a battle featuring scientific researchers pitted against tobacco lobbies and their powerful advertising experts.

Military metaphors have been widely used in the battle against cancer. One of the posters of the American Society for Control of Cancer from the 1930s urges us to “fight cancer with knowledge”; the message appears below a long sword, the symbol of the Society. As part of the growing pressure for a national war on the disease during the 1960s, cancer activists asked for more money to be devoted to research and prevention by claiming that cancer was worse than the Vietnam War; the latter had killed 41,000 Americans in four years, while the former had killed 320,000 in a single year. Nixon was the first president of the United States to declare war on cancer. In January 1971, he declared in his State of the Union message that “the time has come when the same kind of concentrated effort that split the atom and took the man on the moon should be turned toward conquering this dread disease.” Later in the same year, two days before Christmas, Nixon signed the National Cancer Act (which greatly increased the funds of the National Cancer Institute, or NCI) and called for a national crusade to be carried out by 1976, the two hundredth anniversary of the birth of the United States. And yet this program revealed itself to be too optimistic and the association of cancer and Vietnam reappeared. People started to compare the inability of the NCI to deliver a cure to the disastrous outcome of the

Vietnam War. Dr. Greenberg, a cancer researcher, declared in 1975 that the war on cancer was like the Vietnam War: “Only when the public realized that things were going badly did pressure build to get out.” Gerald Markle and James Petersen, comparing the situation to the fight against polio, concluded that “the war on cancer is a medical Vietnam.”

The military rhetoric of wars and crusades has also been applied to drugs, poverty, and other diseases in our society. Susan Sontag has claimed that military metaphors applied to illnesses function to represent them as “alien.” Yet the stigmatization of cancer leads inevitably to the stigmatization of the patients as well. Many scientific attempts to explain the causes of cancer implicitly blame patients. As late as the 1970s, Lawrence LeShan and Carl and Stephanie Simonton claimed that stress, emotional weakness, self-alienation, depression, and consequent defeatism were the distinctive features of a “cancer personality” and could all be causes of cancer. Sontag maintained that the theory that there was “a forlorn, self-hating, emotionally inert creature” only helped to blame the patient. This particular focus on stress was also based on a traditionally American distrust of modern industrialized civilization and urban life, which were to be blamed for the intensification of the pace of living and the consequent rise in anxiety for human beings. The wide circulation of these ideas pointed to popular dissatisfaction with most official medical explanations of cancer. Not surprisingly, cancer itself has become a powerful metaphor for all that is wrong in our society. Commentators often talk about the cancer of corruption effecting politics or about the spreading cancer of red ink in the federal budget. No other disease has provided metaphors for such a wide range of social and economic issues.

“Cancerphobia” has been a constant source of inspiration for popular literature, cinema, and television. While cancer was mainly a disease for supporting actors (Paul Newman’s father in *Cat on a Hot Tin Roof*, 1958) in the 1950s and 1960s, since the 1970s cancer movies have often served as vehicles for stars such as Ali McGraw and Ryan O’Neal in *Love Story* (1970), James Caan in *Brian’s Song* (1972), Debra Winger in *Terms of Endearment* (1983), Julia Roberts in *Dying Young* (1991), Jack Lemmon in *Dad* (1989), Tom Hanks and Meg Ryan in *Joe Versus the Volcano* (1990), Michael Keaton in *My Life* (1993), and Susan Sarandon and Julia Roberts in *Stepmom* (1998). Most of these few-days-to-live-stories are melodramatic, tear-jerking accounts of cancer which rely on the popular perception of the illness as mysterious and deceiving. In *Terms of Endearment*, Debra Winger discovers she has cancer almost by chance and dies shortly after having declared that she feels fine. In *Dad*, Jack Lemmon’s cancer disappears, giving everyone false hopes, only to reappear fatally after a short while. These stories are often told with a moralizing intent: cancer is perceived as providing opportunities for the redemption of the characters involved in the drama—in *Terms of Endearment*, Winger and her husband Jeff Daniels, who have both been unfaithful, reconcile at her deathbed; in *Dad*, cancer brings Jack Lemmon and his son Ted Danson closer together after years of estrangement; and in *Stepmom* the disease rekindles female bonds that had been obscured by misunderstandings and rivalries over men. And in *Love Story* and *Dying Young*, cancer serves as the medium through which two young people from different economic backgrounds are brought together despite their parents’ opposition.

The (melo)drama of cancer in American culture is characterized by an enduring dichotomy of hope and fear. The official optimism for a cure, such as that placed in the 1980s on interferon, a protein able to stop the reproduction of cancerous cells, has always been countered by obstinate popular skepticism. Medical progress has been unable to

discourage popular faith in unorthodox approaches to the disease. On the contrary, as James Patterson has argued, popular skepticism has often been fostered by “the exaggerated claims for science and technological medicine” and still makes cancer retain its malignant grip on the American popular imagination as “an alien, surreptitious, and voracious invader.”

—Luca Prono

Candid Camera

As a television show, *Candid Camera* enjoyed immense popularity with American viewers at mid-twentieth century even as it fundamentally changed the way in which Americans perceived behavior on the television screen and their own vulnerability to being observed. The catch phrase “candid camera” had been current in American English by the 1930s, thanks to the development of fine-grained, high-speed films which made spontaneous picture-taking of unselfconscious subjects a staple of news and backyard photographers alike, freeing them from the constraints of long exposures and conspicuously large apparatus. But it was Allen Funt’s brash sequences of ordinary people caught unawares on film that made “candid camera” synonymous with uninhibited surveillance of our unguarded moments, whether for the amusement of the studio audience or the more sinister purposes of commercial and state-sponsored snooping.

Funt was a former research assistant at Cornell University. His prior broadcast experience included gag-writing for the radio version of *Truth or Consequences*, serving as a consultant to Franklin D. Roosevelt’s wife, Eleanor, for her radio broadcasts during her husband’s presidency, and independent radio production for such programs as *Ladies Be Seated*. During the Second World War he served in an Army Signal Corps unit in Oklahoma, where, using equipment assigned to him for recording soldiers’ letters home, he began hidden-microphone taping of gripes by his fellow servicemen for broadcast on Armed Forces Radio. Funt’s *Candid Microphone*, a postwar civilian version of the same idea, was first broadcast in 1947. A year later, he took the show to television, and ABC carried it—still as *Candid Microphone*—from August through December of 1948. The program, now renamed *Candid Camera*, shuffled among the three networks for the next five years, ending with NBC in the summer of 1953.

Allen Funt of *Candid Camera*.

After a seven year hiatus, *Candid Camera* was revived on CBS, where it ran from October of 1960 through September of 1967. Co-hosting the show in its first season was Arthur Godfrey, followed by Durward Kirby for the next five years, and Bess Myerson (ironically destined to become New York City’s consumer-affairs director) in 1966-1967. As its fame spread, *Candid Camera* was imitated even overseas: in Italy, a program called *Lo Specchio Segreto* (“I See It in Secret”), emceed by Nanni Loy, first aired in 1964 on the RAI network; it too spawned numerous imitations. Funt, meanwhile, returned to America’s airwaves with a syndicated version of the program, *The New Candid Camera*, which was broadcast on various networks from 1974 to 1978. Moviegoers were also exposed to *Candid Camera*, both in Funt’s 1970 film *What Do You Say to a Naked Lady?* and in a generous handful of 1980s home-video reprints of episodes from the shows as well.

Some of Funt’s stunts have become classics in the manipulation of frame and the reactions of the unsuspecting victims (almost always punchlined by Funt or one of his accomplices saying “You’re on *Candid Camera*.”) In one sequence, a roadblock was stationed at a border-crossing from Pennsylvania into Delaware to turn motorists back with the explanation, “The state is full today.” Taste was a timeless source of merriment: an airport water cooler was filled with lemonade; and customers in a supermarket were asked to sample and comment on a new candy bar made with ingredients in a combination designed to be revolting.

The relationship between the television studio and the psychology laboratory was not lost on Funt, who told readers of *Psychology Today* that he had switched from sound recording to television

because he “wanted to go beyond what people merely said, to record what they did—their gestures, facial expressions, confusions and delights.” By comparison with later (and sassier) imitators such as *America’s Funniest Home Videos* and *Totally Hidden Video*, both of which premiered in the late 1980s, Funt was scrupulous about declining to air, and actually destroying, off-color or overly intrusive footage. *Candid Camera* aspired to be humor but also art: “We used the medium of TV well,” Funt would write proudly. “The audience saw ordinary people like themselves and the reality of events as they were unfolding. Each piece was brief, self-contained and the simple humor of the situation could be quickly understood by virtually anyone in our audience.”

The New Candid Camera returned to television in the 1990s, now touted as “the granddaddy of all ‘gotcha’ shows” and co-hosted by Funt’s son Peter, who as a child had made his debut on the show posing as a shoeshine boy charging \$10 a shoe. Although the revival was not renewed by King Productions for the 1992-1993 season, specials continued to be made throughout the decade, mixing contemporary situations (a petition drive in Toronto advocating joint United States-Canada holidays, a fake sales rep selling a fictitious and overpriced line of business equipment to unsuspecting office managers) with classic sequences from the old shows. By this time Allen Funt, now in his eighties, was living comfortably in retirement.

Caniff, Milton (1907-1988)

A popular and innovative adventure-strip artist, and one who was much imitated, Milton Caniff began drawing newspaper features in the early 1930s and kept at it for the rest of his life. He was born in Hillsboro, Ohio, in 1907 and raised in Dayton. Interested in drawing from childhood, in his early teens he got a job in the art department of the local paper. By the time he was in college at Ohio State, Caniff was working part-time for the *Columbus Dispatch*. It was there that he met and became friends with Noel Sickles, the cartoonist-illustrator who was to have such a profound effect on his approach to drawing. Caniff created three continuity strips: *Dickie Dare*, *Terry and the Pirates*, and *Steve Canyon*. From almost the beginning, his story lines

Milton Caniff

and dialogue were relatively sophisticated, influenced by the movies, as was his drawing style, which used cinematic shots and impressionistic inking.

Canova, Judy (1916-1983)

Comedienne Judy Canova was one of the hidden gems American popular culture, ignored by critics and overlooked by ratings systems that valued big city audiences yet beloved by audiences in smaller markets. As a musical comedienne whose lifelong comic persona was that of a yodeling country bumpkin, Judy Canova was famous on stage, screen, and radio throughout the 1930s, 1940s and 1950s, but largely because of the perceived low status of her audience, her popularity has often been overlooked.

Judy Canova was born Juliette Canova on November 20, 1916, in Starke, Florida. Her career in show business began while she was still a teenager when she joined with her older brother and sister in a musical trio which played the club circuit in New York. In addition to belting out many of the same country songs she would perform for the rest of her life, Canova also developed her comic persona during this period as well—that of a good-natured, horse-faced, broadly grinning hillbilly whose lack of education and etiquette was transcended by boisterous good spirits, an apparent absence of pretense, and a naive humor with which her audience could both identify and feel superior to simultaneously. “I knew I would never be Clara Bow,” she later recalled. “So I got smart and not only accepted my lack of glamour, but made the most of it.” She usually wore her hair in pigtailed, and soon began wearing the checkered blouses and loosely falling white socks which helped emphasize her almost cartoonlike appeal. The comic portrait was soon completed with the development of a repeated catchphrase (“You’re telling I”) and her use of what film historian Leonard Maltin has referred to as “an earsplitting yodel.” With her character firmly in place by the early 1930s, it remained only for Canova to find the appropriate outlet for its display.

Canova’s film career reached its high point in 1935 with her brief appearance in the Busby Berkeley-directed *In Caliente*, in which she performed what biographer James Robert Parish refers to as “her most memorable screen moment.” In the middle of leading lady Winifred Shaw’s serious performance of the soon-to-be popular “Lady in Red,” Canova appeared in hillbilly garb and belted out a comic parody of the song in a performance singled out by audiences and reviewers alike as the highlight of the movie. This success fueled her stage career, leading to a notable appearance in the *Ziegfeld Follies of 1936*, but Paramount’s attempt to make her a major film star the following year (in *Thrill of a Lifetime*) didn’t pan out, and Canova’s movie career was shifted to the lower budget projects of Republic Studios. Here she starred in a series of consistently popular musical comedies (*Scatterbrain* (1940), *Sis Hopkins* (1941), and *Joan of Ozark* (1942) being among the most successful) in which she played her well-established “brassy country bumpkin with a heart of gold” in stories which enabled her to deliver a lot of bad puns and yodel songs while demonstrating both the comic naiveté and moral superiority of “the common people.” Behind the scenes, however, Canova was anything but the untutored innocent she played onscreen, and she is important as one of the first female stars to demand and receive both a share of her film’s profits and, later, producing rights through her own company.

While she was a minor star in the world of film, Canova was a major success in radio. Earlier performances on the Edgar Bergen-Charlie McCarthy *Chase and Sanborn Hour* (including a highly publicized “feud” in which Canova claimed that the dummy had broken up her “engagement” to Edgar) garnered such response that *The Judy Canova Show* was all but inevitable. Even in her own time, however, much of Canova’s popularity was “hidden” by conventional standards, and it was not until 1945 when the new Hooper ratings system (which measured the listening habits of small-town and rural audiences for the first time) revealed that Canova’s program was one of the top ten radio shows on the air. *The Judy Canova Show* remained popular until its demise in 1953, a casualty of the declining era of old-time radio. Radio allowed Judy to give full vent to the characteristics which had endeared her to her audience, playing a country bumpkin (with her own name) hailing from Unadella, Georgia, but making constant visits to the big city to visit her rich aunt, and

passing a fastpaced series of corny jokes and songs with a series of stock characters. A typical episode would be certain to have Pedro the gardener (Mel Blanc) apologize to Judy “for talking in your face, senorita,” Judy telling her aunt that she would be happy to sing “Faust” at the aunt’s reception since she could sing “Faust or slow,” and close with Judy’s trademark farewell song, “Goodnight, Sweetheart.”

After the end of her radio show, Canova continued her stage career (including a primary role in 1971’s notable revival of the musical *No, No Nanette*), made a few forays into early television, and even attempted a more serious dramatic role in 1960’s *The Adventures of Huckleberry Finn*. For the most part, however, she lived comfortably in retirement, often accompanied by her actress daughter Diana, product of her fourth marriage. The comic persona she created, and the ethic it expressed, remain popular today in sources as diverse as *The Beverly Hillbillies* and many of the characters played by the hugely successful Adam Sandler, both of whom owe a large if “hidden” debt to a horsefaced yodeler with falling socks who never let the city folk destroy her spirit.

Canseco, Jose (1964—)

Baseball’s Rookie of the Year in 1986, slugging outfielder Jose Canseco helped the Oakland Athletics to World Series appearances from 1988 to 1990, while becoming the first ballplayer ever to hit over 40 homers and steal 40 bases in a season (1988). Auspicious beginnings, teen-idol looks, and Canseco was suddenly the sport’s top celebrity. As big money, 1-900 hotlines, and dates with Madonna ensued, Canseco’s on-field and off-field behavior became erratic. Headlines detailed a weapons arrest, reckless driving, and an acrimonious public divorce. Traded away from Oakland in 1992, he blew out his arm in a vanity pitching appearance and topped blooper reels when a fly ball bounced off his head for a home run. Having dropped out of both the limelight and the lineup, he eventually recovered to hit 46 homers for Toronto in 1998 (the same year his former Oakland “Bash Brother” Mark McGwire hit a record 70).

Cantor, Eddie (1882-1964)

Dubbed “Banjo Eyes” for his expressive saucer-like orbs, and “The Apostle of Pep” for his frantically energized physical style, comic song-and-dance man Eddie Cantor came from the vaudeville tradition of the 1920s, and is remembered as a prime exponent of the now discredited blackface minstrel tradition, his brief but historic movie association with the uniquely gifted choreographic innovator Busby Berkeley, and for turning the Walter MacDonald-Gus Kahn song “Making Whoopee” into a massive hit and an enduring standard. In a career that spanned almost 40 years, Cantor achieved stardom on stage, screen, and, above all, radio, while on television he was one of the rotating stars who helped launch the *Colgate Comedy Hour*.

Cantor’s is a prototypical show business rags-to-riches story. As Isadore Itzkowitz, born into poverty in a Manhattan ghetto district and orphaned young, he was already supporting himself in his early teens as a Coney Island singing waiter with a piano player named Jimmy Durante before breaking into burlesque and vaudeville (where he sang songs by his friend Irving Berlin), and made it to Broadway in 1916. The small, dapper Jewish lad became a Ziegfeld star, appearing in the *Follies of 1917* (with Will Rogers, W.C. Fields, and Fanny Brice), 1918, and 1919. In the first, he sang a number in blackface,

Eddie Cantor and Dinah Shore

and also applied the burnt cork to team in a skit with black comedian Bert Williams, with whom he would work several times over the years. Irving Berlin wrote the 1919 songs and Cantor introduced “You’d be Surprised.” A bouncy, hyperactive performer, he rarely kept still and would skip and jump round the stage, clapping his white-gloved hands while performing a song. He also rolled his prominent eyes a lot and a Ziegfeld publicity hack came up with the Banjo Eyes sobriquet.

After a falling out with Flo Ziegfeld, Cantor starred in other people’s revues for a few years. Reconciled with Ziegfeld, he starred in the musicals *Kid Boots* and *Whoopee!* The first became the silent screen vehicle for his Hollywood debut in 1926; the second, based on a play *The Nervous Wreck*, cast Cantor as a hypochondriac stranded on a ranch out West, introduced the song “Making Whoopee,” and brought him movie stardom when Samuel Goldwyn filmed it in 1930. *Whoopee!* was not only one of the most successful early musicals to employ two-tone Technicolor, but marked the film debut of Busby Berkeley, who launched his kaleidoscopic patterns composed of beautiful girls (Betty Grable was one) to create a new art form. The winning formula of Berkeley’s flamboyance and Cantor’s insane comedic theatrics combined in three more immensely profitable box-office hits: *Palmy Days* (1931), which Cantor co-wrote; *The Kid from Spain* (1932), in which Berkeley’s chorus included Grable and Paulette Goddard; and, most famously, the lavish, and for its day outrageous, *Roman Scandals* (1933), in which the young Lucille Ball made a fleeting appearance. A dream fantasy, in which Cantor is transported back to ancient Rome, the star nonetheless managed to incorporate his blackface routine, while the “decadent” production numbers utilized black chorines in a manner considered demeaning by modern critics.

Meanwhile, the ever-shrewd Cantor was establishing himself on radio ahead of most of his comedian colleagues. In 1931 he began doing a show for Chase and Sanborn Coffee. By its second year, according to radio historian John Dunning, it was the highest rated show in the country. The star gathered a couple of eccentric comedians around him, beginning with Harry “Parkyakarkus” Einstein, who impersonated a Greek, and Bert Gordon, who used a thick accent to portray The Mad Russian, while, over the years, the show also featured young singers such as Deanna Durbin, Bobby Breen, and Dinah Shore. Cantor remained on the air in various formats until the early 1950s, backed by such sponsors as Texaco, Camel cigarettes, toothpaste and laxative manufacturers Bristol Myers, and Pabst Blue Ribbon beer. His theme song, with which he closed each broadcast, was a specially arranged version of “One Hour with You.”

After his flurry of screen hits during the 1930s, Cantor’s movie career waned somewhat, but he enjoyed success again with *Show Business* (1944) and *If You Knew Susie* (1948), both of which he produced. A cameo appearance in *The Story of Will Rogers* (1952) marked the end of his 26-year, 16-film career, but in 1950 he had begun working on television, alternating with comedians such as Bob Hope, Martin and Lewis, and his old buddy Durante, as the star of *Colgate’s Comedy Hour*. In the autumn of 1952 Cantor had a serious heart attack right after a broadcast and left the air for several months. He returned in 1953, but began gradually withdrawing from the entertainment world.

Eddie Cantor wrote four autobiographical books, and in 1953, Keefe Brasselle played the comedian in a monumentally unsuccessful

biopic, *The Eddie Cantor Story*. In 1956 the Academy honored him with a special Oscar for “distinguished service to the film industry.” In 1962, the year he published the last of four autobiographical books, he was predeceased by his wife, Ida, immortalized in the song, “Ida, Sweet as Apple Cider,” to whom he was married for 48 years. Eddie Cantor died two years later. His screen persona was not, and is not, to everyone’s taste, and in life, some found him egocentric and difficult. He remains, however, inimitable.

Capital Punishment

Throughout the twentieth century, America remained one of the few industrialized countries which carried out executions of criminals. Most trace this attitude to the Biblical roots of the country and the dictum of “eye for an eye” justice. Those who wished to abolish the death penalty saw the practice as bloodlust, a cruel and unusual punishment anachronistic in modern times. In the late 1990s, the issue remains a controversial one, with many states opting for the death penalty. In response and with an ironic twist, America has searched for ways to carry out executions as quickly and painlessly for the condemned as possible.

At the turn of the twentieth century, America was trying to shake a lingering sense of Old West vigilante justice. Thomas Edison, among others, had campaigned for the relatively humane death offered by electrocution. By the 1900s the electric chair had already become the most popular form of execution, supplanting hanging. In 1924 Nevada instituted and performed the first gas chamber execution, which many believed again was the most humane method of execution to date.

Spearheading the movement against the death penalty was attorney Clarence Darrow, best known as defense counsel in the Scopes Trial. Few were surprised when in 1924 Darrow, a champion of lost causes, represented 18-year-old Richard Loeb and 19-year-old Nathan Leopold, notorious friends and lovers who kidnapped and murdered a 14-year-old boy. Darrow advised the two to plead guilty in an attempt to avoid the death penalty. In what has been characterized as the most moving court summation in history, lasting over 12

hours, Darrow succeeded in convincing the judge to sentence the boys to life in prison. Darrow commented, “If the state in which I live is not kinder, more human, and more considerate than the mad act of these two boys, I am sorry I have lived so long.” In spite of his eloquent pleas, support for the death penalty remained high, with the highest number of executions of the century occurring in the 1930s.

In one of the most notorious cases of the twentieth century, the Italian immigrant workers Nicola Sacco and Bartolomeo Vanzetti were convicted of murder and sentenced to death in 1920. Worldwide response to their sentencing was overwhelming. The case against them was not airtight—many believe later evidence suggested their innocence. But their status as communists spelled their doom. According to the editors of *Capital Punishment in the United States*, “Many people believed that they were innocent victims of the frenzied ‘Red Scare’ that followed World War I, making every foreigner suspect—especially those who maintained unpopular political views.” Celebrities such as George Bernard Shaw, H.G. Wells, Albert Einstein, and Sinclair Lewis protested the verdicts, to no avail as the two were executed in the Massachusetts electric chair in 1927.

The so-called “Trial of the century,” the case of the kidnapping and murder of the Lindbergh baby in 1935, also involved an immigrant: German-born defendant Bruno Hauptmann, convicted in 1935 and executed for the crimes in 1936. The trial defined the term “media circus,” with columnist Walter Winchell at the forefront calling for swift punishment of Hauptmann. In spite of compelling circumstantial evidence linking Hauptmann to the crime, his proclamation of his innocence to the end—even after being offered commutation of his sentence in return for his confession—made many uncomfortable because the case still seemed to lack closure.

Fear of communism ran at a fever pitch in the 1950s, contributing to the execution of Julius and Ethel Rosenberg for treason in 1953. Convicted of passing information about the atomic bomb to the Soviet Union, the Rosenbergs were blamed by the trial judge for communist aggression in Korea and the deaths of over 50,000 people. Polls at the time showed enormous support for the death penalty in cases of treason, largely due to the media notoriety of the Rosenberg case. Still, a groundswell of reaction against the sentencing occurred, forcing President Eisenhower himself to uphold the decision. While the case against Julius Rosenberg was strong, the case against Ethel was not, and many attribute her death as a casualty of the Cold War communist scare.

After the Rosenbergs, the majority of executions in the United States involved murderers. The Charles Starkweather case in the 1950s helped shape public perception of serial killers. After kidnapping 14-year-old Caril Ann Fugate as a companion, Starkweather went on a killing spree from Nebraska through Montana, murdering 11 people. When captured, Starkweather relished the media attention as if he were a Hollywood star; he fancied himself a James Dean type, heroically rebelling against society. Later, Bruce Springsteen’s song “Nebraska,” along with the 1973 movie *Badlands*, would immortalize the Starkweather persona—both also helped form the basis of the killers in the movies *Wild at Heart*, *True Romance*, and *Natural Born Killers*.

No one, however, defined the image of the serial killer more completely than Charles Manson. He also linked himself to the popular media; his obsession with the Beatles’ *White Album*, in particular the song “Helter Skelter,” became the impetus for the

savage murders he orchestrated through his “family” of followers. During his trial he alternately declared himself Christ and Satan, at one point shaving his head and tattooing an “X” (later modified to a swastika) between his eyes. Though Manson did not personally commit murder, he was convicted in 1971 and sentenced to die. While he waited on death row, the Supreme Court ruled in 1972 that the death penalty was not applied equally and was therefore unconstitutional. As a result, over 600 prisoners on death row, including Manson, had their sentences commuted to life. In the years that followed, Manson regularly came up for parole. Throughout the 1980s and 1990s, Manson resurfaced on television interview shows, still seeming out of his mind. The specter of such a criminal possibly being released always spurred a fresh outpouring of public outrage. Very likely as a direct result of the Manson case, support for the death penalty continued to rise, reaching a record high of 80 percent in 1994.

Once the states rewrote uniform death penalty laws that satisfied the Supreme Court, executions resumed when Utah put Gary Gilmore to death in 1977. A circus atmosphere surrounded this case, as both supporters and opponents of the death penalty crowded outside the prison. Gilmore’s face appeared on T-shirts as he too became a national celebrity. Gilmore himself, however, actually welcomed the death penalty; he refused all appeals and led the campaign for his right to die. Later, Norman Mailer wrote a bestselling book entitled *The Executioner’s Song*, which was subsequently made into a popular film.

When Ted Bundy was convicted as a serial killer in 1980, he put a vastly different face on the image of murderer. Bundy was handsome and personable, traits which enabled him over two decades to lure at least 30 women to their deaths. During his numerous appeals of his death sentence Bundy claimed that consumption of pornography had molded his behavior, warping his sense of sexual pleasure to include violence against women. While his pleas helped raise debate over the issues of pornography, they failed to save his life and Bundy was executed in 1989.

The drifter Henry Lee Lucas, whose confessions to over 600 murders would make him the most prolific murderer of the century, was sentenced to death in 1984. His exploits were fictionalized in the cult movie *Henry: Portrait of a Serial Killer* (1990). Later, however, Lucas recanted all of his confessions and his sentence was commuted to life in prison in 1998.

Television talk show host Phil Donahue, a death penalty opponent, campaigned vigorously in the 1980s to televise a live execution. Some thought the idea merely a macabre publicity stunt while others thought the public should be made to witness its sanctioned form of punishment. Although Donahue was unsuccessful in his attempts, in 1995 the academy award winning movie *Dead Man Walking* intimately depicted the last days of convicted murderer Patrick Sonnier. The movie’s portrayal of the incident suggested that even death by lethal injection—first used in Texas in 1982 in an effort to achieve a more humane ending—was neither antiseptic nor instantaneous.

In 1997 the case of Karla Faye Tucker was brought to the attention of the national media in an effort led by television evangelist Pat Robertson. Tucker, a convicted double murderer, reportedly had experienced a religious conversion while on death row. Based on this and a profession of remorse for the crimes she committed, Robertson argued for mercy. Tucker’s image captured the imagination of many Americans: she was a young, attractive woman with a mild demeanor, not at all the serial killer image America had come to expect from its

death-row inmates. While Tucker was not granted a new hearing and was executed by lethal injection in 1998, her case influenced the staunchest traditional supporters of the death penalty. For many religious conservatives, the Tucker case reminded them that any search for a truly humane punishment must eventually confront the entire spectrum of emotions . . . not only revenge, but also the qualities of mercy.

Capone, Al (1899-1947)

Perhaps the most recognizable figure in the history of organized crime in the United States, Al Capone gained international notoriety during the heady days of Prohibition when his gang dominated the trade in bootleg alcohol in Chicago. Known as “Scarface” for the disfiguring scars that marked the left side of his face, Capone fascinated Chicago and the nation with his combination of street brutality, stylish living, and ability to elude justice during the 1920s. Even after his conviction on charges of tax evasion in 1931, Capone remained a dominant figure in the national culture, with the story of his rise and fall—which author Jay Robert Nash has succinctly described as being from “rags to riches to jail”—serving as the archetype of gangster life in film and television portrayals of American organized crime.

Capone was born to Italian immigrant parents on January 17, 1899, in the teeming Williamsburg section of Brooklyn, New York. By age eleven he had become involved with gang activities in the neighborhood; he left school in the sixth grade following a violent incident in which he assaulted a female teacher. Developing expert street-fighting skills, Capone was welcomed into New York’s notorious Five Points Gang, a vast organization that participated in burglary, prostitution, loan-sharking, and extortion, among its myriad criminal activities. He came under the influence of Johnny Torrio, an underboss who controlled gambling, prostitution, and influence peddling in Williamsburg. Under Torrio, Capone worked as an enforcer and later got a job as a bouncer and bartender at the gang-controlled

Al Capone (left)

Harvard Inn. During this time an altercation with a knife-wielding bar patron resulted in the famous scars that came to symbolize Capone's violent persona. He was arrested for suspicion of murder in 1919 in New York City, but the charges were dismissed when witnesses refused to testify against him. He followed Torrio to Chicago later in the same year after killing another man in a fight.

Posing as a used furniture dealer, Capone quickly became a significant force in the underworld of Chicago, where the number of corrupt law enforcement and government officials helped to create an atmosphere of lawlessness. When the Volstead Act outlawed the manufacture and distribution of liquor in 1920, Capone and Torrio entered into a bootlegging partnership, and Capone assassinated the reigning syndicate boss, "Big Jim" Colosimo, to clear the way for their profiteering. The combined operations of prostitution and bootleg liquor were generating millions of dollars in profits in the mid-1920s, but the Torrio-Capone organization repeatedly battled violently with rival gangs in the city, most notably with the operations headed by Dion O'Bannion on Chicago's north side. Following O'Bannion's murder in November 1924, Torrio was convicted of bootlegging and several days later was wounded in a retaliatory attack by O'Bannion's men. He subsequently left the city, and Capone gained full control of the multimillion dollar criminal activities in gambling, prostitution, and liquor.

The late 1920s saw increasingly reckless violence in the streets of Chicago among the warring criminal factions. Several attempts were made on Capone's life by his enemies, including an attempted poisoning and a machine-gun attack on Capone's headquarters in

suburban Cicero by the O'Bannions in 1926. In the most notorious event of the period, which became known as the St. Valentine's Day Massacre, Capone hired a crew to kill rival Bugs Moran on February 14, 1929. Capone's operatives, posing as police officers, executed all seven men they found in Moran's headquarters. Moran, however, was not among the victims, and the public expressed outrage at the brutal mass murder. By 1930 Capone had effectively eliminated his criminal competitors, but he faced a new adversary in federal authorities. When it was discovered that he had failed to pay income taxes for the years 1924 to 1929, the Internal Revenue Service made its case, and Capone was convicted of tax evasion in October 1931. He was sentenced to eleven years in federal custody but was released because of illness in 1939. He had developed paresis of the brain, a condition brought on by syphilis, which he likely had contracted from a prostitute during the 1920s. Suffering diminished mental capacity, Capone lived the remainder of his life in seclusion at his Palm Island, Florida, estate. He died in 1947.

Capote, Truman (1924-1984)

Truman Capote is one of the more fascinating figures on the American literary landscape, being one of the country's few writers to cross the border between celebrity and literary acclaim. His wit and media presence made for a colorful melange that evoked criticism and praise within the same breath. For many, what drew them to him was, for lack of a better word, his "attitude." Capote relished deflating fellow writers in public fora. In a televised appearance with Norman Mailer, he said of Jack Kerouac's work, "That's not writing. That's typewriting." In his unpublished exposé, *Answered Prayers*, his description of Jean-Paul Sartre and Simone de Beauvoir at the Pony Royal Bar in Paris could hardly have been less flattering: "Walleyed, pipe-sucking, pasty-hued Sartre and his spinsterish moll, de Beauvoir, were usually propped in a corner like an abandoned pair of ventriloquist's dolls." And when wit had been set aside, he could be just downright abusive, as when he described Robert Frost as an "evil, selfish bastard, an egomaniacal, double-crossing sadist." Capote's place in the twentieth century American literary landscape, however, is clear. He contributed both to fiction and nonfiction literary genres and redefined what it meant to join the otherwise separate realms of reporting and literature.

The streak of sadism that characterized Capote's wit stemmed largely from his troubled childhood. Capote was born Truman Streckfus

Truman Capote

Persons on September 30, 1924 in New Orleans, the son of Archyulus (Archie) Persons and Lillie May Persons Capote. At the age of four, his parents divorced, and Truman became the itinerant ward of various relatives in Alabama, several of whom would serve as inspiration for his fictional creations in such works as his classic short tale "A Christmas Memory" and first novel, *Other Voices, Other Rooms*. When he was ten years old, he won a children's writing contest sponsored by the *Mobile Press Register* with his submission of "Old Mr. Busybody." Apropos of his later claim to fame as literary gossip par excellence, the story itself, according to Capote, was based on a local scandal that ended his brief writing career in Monroeville, Alabama, for the next half-decade. At age 15, Capote rejoined his mother and her second husband, Joseph Capote, in New York, where he attended several local boarding schools. At age 17, Capote decided to leave school for good, taking work as a copyboy at *The New Yorker*.

From *The New Yorker*, Capote soaked up much of the literary atmosphere. He also spent his leisure hours reading in the New York Society Library, where, he claimed, he met one of his literary heroines, Willa Cather. Capote's career at *The New Yorker* ended after two years when he supposedly fell asleep during a reading by Robert Frost, who promptly showed his ire by throwing what he was reading at the young reporter's head. A letter to Harold Ross from the fiery Frost resulted in Capote's dismissal, and with that change in circumstances, Capote returned to Alabama to labor three years over his first major work, *Other Voices, Other Rooms* (1948). Between 1943-46, as Capote worked on his novel, a steady stream of short stories flowed from his pen, such as "Miriam," "The Walls Are Cold," "A Mink of One's Own," "My Side of the Matter," "Preacher's Legend," and "Shut a Final Door." The response to the *Other Voices, Other Rooms* was immediate and intense. The lush writing and homosexual theme came in for much criticism, while the famous publicity shot of Capote supine on a couch, languidly staring into the camera's eye invited an equal mix of commentary and scorn.

Capote was only 23 years of age when he became a literary star to be lionized and chastened by the critical establishment. Hurt and surprised by the novel's reception, although pleased by its sales, Capote left to tour Haiti and France. While traveling, Capote served as a critic and correspondent for various publications, even as he continued to publish annually over the next three years *Tree of Night and Other Stories* (1949), *Local Color* (1950), and *The Grass Harp* (1951). By 1952, Capote had decided to try his hand at writing for stage and screen. In 1952, Capote rewrote *The Grass Harp* for Broadway and later in 1954 a musical called *House of Flowers*. During this period, he also wrote the screenplay *Beat the Devil* for John Huston. None fared particularly well, and Capote decided to avoid theater and movie houses by resuming his activities as a correspondent for *The New Yorker*. Joining a traveling performance of *Porgy and Bess* through the Soviet Union, he produced a series of articles that formed the basis for his first book-length work of nonfiction, *The Muses Are Heard*.

Capote continued to write nonfiction, sporadically veering aside to write such classics as *Breakfast at Tiffany's* and his famous short tale, "A Christmas Memory." The former actually surprised Capote by the unanimously positive reception it received from the literary establishment (including such curmudgeonly contemporaries as Norman Mailer). In late 1959, however, Capote stumbled across the story that would become the basis for his most famous work, *In Cold Blood*. Despite the remarkable difference in content, *The Muses Are Heard* trained Capote for this difficult and trying work that helped establish "The New Journalism," a school of writing that used the literary devices of fiction to tell a story of fact. The murder of the Clutter family in Kansas by Perry Smith and Dick Hickok was to consume Capote's life for the next six years. Although many quarreled with Capote's self-aggrandizing claim that he had invented a new genre that merged literature with reportage, none denied the power and quality of what he had written. Whatever failures Capote may have experienced in the past were more than made up for by the commercial and critical success of *In Cold Blood*.

Capote would never write a work as great as *In Cold Blood*, and with good reason, for the six years of research had taken a terrible toll. He did, however, continue to write short stories, novellas, interviews, and autobiographical anecdotes, all of which were collected in such works as *A Christmas Memory*, *The Thanksgiving Visitor*, *House of Flowers*, *The Dog's Bark*, and *Music for Chameleons*. On August 25, 1984, Truman Capote died before completing his next supposedly major work, *Answered Prayers*, a series of profiles so devastating to their subjects that Capote underwent a rather humiliating ostracism from the social circles in which he had so radiantly moved. Still, no one disputes Capote's contribution to literature as a writer who taught reporters how to rethink what they do when they ostensibly record "just the facts."

—Bennett Lovett-Graff

Capra, Frank (1897-1991)

Although he is one of the most successful and popular directors of all time, Frank Capra is seldom mentioned as one of Hollywood's great film auteurs. During his peak, as well as in the years that followed, critics referred to his work as simplistic or overly idealistic, and labeled his unique handling of complex social issues as "Capricorn." The public on the other hand loved his films and came back again and again to witness a triumph of the individual (predicated on the inherent qualities of kindness and caring for others) over corrupt leaders who were dominating an ambivalent society.

The Italian-born Capra moved to the United States at age six, where he lived the "American Dream" he would later romanticize in his films. Living in Los Angeles and working to support himself through school, he sold newspapers, and worked as a janitor before graduating with a degree in Chemical Engineering from Caltech (then called Throop Polytechnic Institute) in 1918. After serving in the military Capra stumbled onto an opportunity in San Francisco when he talked his way into directing the one-reel drama *Ballad of Fultah Fisher's Boarding House* in 1922. The experience was significant in that it convinced the young engineer to move back to Los Angeles and pursue a film, rather than an engineering, career. Upon returning to Los Angeles, Capra began the process of learning the film business from the ground up. Starting as a propman and later becoming a "gag writer," Capra worked with directors Hal Roach and Mack Sennett before hooking up as a director with silent comedian Harry Langdon.

Capra directed parts of three films produced during the peak of Langdon's career, including *The Strong Man* (1926), before the two went their separate ways. Langdon is rumored to have tarnished the young Capra's name, which, despite his success, made it impossible for him to find work in Hollywood. Unwilling to give up, Capra went to New York for an opportunity to make a film with a new actress, Claudette Colbert, titled *For The Love of Mike* (1927). Although the film was Capra's first flop, he signed a contract with studio head Harry Cohn and began his relationship with Columbia Pictures. Capra remained at Columbia for 11 years, and during this time he made at least 25 films. All but two of them made money for the studio and Capra is credited by many as being the key to Columbia's rise to the status of "major" Hollywood studio.

During his early years with Columbia some of Capra's most memorable works were the "service films" including: *Submarine* (1928), *Flight* (1929), and *Dirigible* (1931). While producing profitable films at a fast pace for the studio, Capra decided in 1931 that he wanted to tackle tougher social issues. While the country was in the throes of the Depression, Capra hooked up with writer/collaborator

Robert Riskin, with whom he worked off and on for almost 20 years. Together, Capra and Riskin produced a string of five Oscar-nominated films between 1933 and 1938. Included in this group were: *Lady for a Day* (1933, nominated for Best Picture and Best Director); *It Happened One Night* (1934, winner Best Director); *Mr. Deeds Goes to Town* (1936, nominated Best Picture, winner Best Director); *Lost Horizon* (1937, nominated Best Picture); and *You Can't Take it With You* (1938, winner Best Picture and Best Director). Although Capra continued to collaborate with Riskin on two of his most memorable works, *Mr. Smith Goes to Washington*, (1939) and *It's a Wonderful Life* (1946) were penned in collaboration with others. It is, of course, impossible to gauge how much credit Riskin deserves for Capra's meteoric rise in Hollywood. Some observers have suggested that even though Riskin wasn't involved in films like *Mr. Smith Goes To Washington*, the form and structure clearly follow the pattern the two successfully developed during their years of collaboration. Others, like Capra himself, would point to the successful films without Riskin as proof that the common denominator was the individual who insisted his name come before the title of the film. Capra even called his autobiography *The Name Above the Title*, and claims that he was the first to be granted this status. Whether or not Capra's claim has validity, there is no doubt that people all over the country flocked to the theaters during the 1930s and 1940s to see films directed by Frank Capra.

Capra's films regularly engaged political and social issues, and in his professional life he was equally active. Capra served as the President of the Academy of Motion Pictures Arts and Sciences during a crucial period of its development. During his tenure Capra oversaw a strengthening of the Academy and their annual Oscar banquet. In 1936 he worked with the Screenwriters Guild to avoid a boycott of the awards banquet, and in 1939 while serving as head of the Directors Guild, Capra resigned his post with the Academy to lead a director's boycott of the Oscars which was instrumental in gaining key concessions from the Academy. Never afraid to tackle tough political issues in his films, Capra was no stranger to controversy or difficult decisions in his professional career either.

While most of us today know Capra best from the perennial holiday favorite *It's A Wonderful Life*, the Capra myth is most solidly grounded in *Mr. Smith Goes To Washington*. After the film was previewed in Washington, D.C., it is rumored that Columbia was offered \$2 million (twice the cost of the film) not to release the film. The alleged leader of this movement to shelve the film was Joseph P. Kennedy, who was then Ambassador to Great Britain. Kennedy was not alone in his concern over the film's impact. In response to *Mr. Smith Goes To Washington*, Pat Harrison, the respected publisher of the Harrison Reports, asked exhibitors to appeal to Congress for the right to refuse films that were "not in the interests of our country." Ironically, this film was perhaps Capra's most patriotic moment—presenting the individual working within the democratic system to overcome rampant political corruption. Needless to say, Capra and Columbia refused to have the film shelved. The status of *Mr. Smith Goes to Washington* was further established several years later when the French were asked what films they wanted to see prior to the occupation, and the overwhelming choice was none other than Capra's testimony for the perseverance of democracy and the American way, *Mr. Smith Goes To Washington*.

Following *Mr. Smith*, Capra demonstrated his patriotic duty by enlisting in the United States Signal Corps during World War II.

Although he had served in the military before, and was old enough to sit this one out, Capra had an intense desire to prove his patriotism to his adopted land. While a member of the Armed Forces, Capra oversaw the production of 11 documentaries under the series title *Why We Fight*. The series was originally intended to indoctrinate American troops and explain why it was necessary for them to fight the Second World War. When the first documentaries were completed Army and government officials found them so powerful that they felt the films should also be released to theaters so that everyone in America could see them. Considered by many to be some of the best propaganda films ever made, the *Why We Fight* series is still broadcast and used as a teaching tool today.

Following the war, Capra found success with *It's A Wonderful Life* and *State of the Union*, but he increasingly came to feel out of step with a changing film industry. While his themes had struck a chord with the Depression era society, his films seemed saccharin and out of touch in prospering post-war America. Moving to Paramount in 1950, Capra claimed that he became so disillusioned with the studio that he quit making films by 1952. In his autobiography he blames his retirement on the rising power of film stars (compromising the ability to realize his artistic vision), and the increasing budgetary and scheduling demands that studios placed upon him. Joseph McBride, in *The Catastrophe of Success*, however, points out that Capra's disillusionment coincided with the questions and difficulties surrounding the House Committee on Un-American Activities (HUAC) communist witch-hunt, which ended many Hollywood careers.

During a regrettable period of postwar hysteria Capra, despite his military service and decorations, was a prime-target for Senator Joseph McCarthy's Red-baiting committee. Although Capra was never called to testify, his past associations with blacklisted screenwriters such as Sydney Buchman, Albert Hackett, Ian McLellan Hunter, Carlton Moss, and Dalton Trumbo (to name a few) led to his being "greylisted" (but employable). Determined to demonstrate his loyalty he attempted to rejoin the military for the Korean War, but was refused. When invited as a civilian to participate in the Defense Department's Think Tank project, VISTA, he jumped at the opportunity, but was later denied necessary clearance. These two rejections were devastating to the man who had made a career of demonstrating American ideals in film. Capra later learned that his application to the VISTA was denied because he was part of a picket-line in the 1930s, sponsored Russian War Relief, was active in the National Federation for Constitutional Liberties (which defended communists), contributed to the Joint Anti-Fascist Refugee Committee in the 1940s, and had a number of associates who were linked to the Communist Party.

Significantly, Capra made few films once the blacklisting began, and none of them approached his previous critical and box office success. By 1952, at the age of 55, Capra effectively retired from feature filmmaking to work with Caltech and produce educational programs on science. Once one of the most popular and powerful storytellers in the world, Capra's disenchantment with the business and political climate of filmmaking left him disconnected from a culture that was rapidly changing. Although he did make two more major motion pictures *A Hole in the Head* (1959) and *Pocketful of Miracles* (1961), Capra would never again return to the perch he occupied so long atop the filmmaking world. In 1971 he penned his autobiography *The Name Above the Title*, which served to revive interest in his work and cement his idea of "one man, one film." And

since his death in 1991, Frank Capra has been honored as one of the seminal figures in the American century of the cinema.

Captain America

Captain America is one of the oldest and most recognizable superhero characters in American comic books. A flagship property of Marvel Comics, Captain America has entertained generations of young people since the 1940s. Perhaps no other costumed hero has stood as a bolder symbol of patriotic American ideals and values. Indeed, the history of Captain America can not be understood without attention to the history of America itself.

Captain America sprang forth from the political culture of World War II. In early 1941, Joe Simon and Jack Kirby created the character for Marvel Comics, which was struggling to increase its share of the comic-book market. As early as 1939, comic books had periodically featured stories that drew attention to the menace of Nazi Germany. Simon and Kirby, who were both Jewish, felt very strongly about what was happening in Europe under the Nazis and were emboldened to defy the still powerful mood of isolationism in America. Captain America would make the not-very-subtle case for American intervention against the Axis powers.

The cover of the first issue of *Captain America Comics* portrayed the superhero in his red-white-and-blue costume, punching Adolf Hitler in the mouth. That brash image set the aggressive tone for the entire series. In the first issue, readers were introduced to Steve Rogers, a fiercely patriotic young American. Physically inadequate for military service, Rogers volunteers for a secret government experiment to create an army of super soldiers. After drinking a serum developed by Dr. Reinstein, Rogers is transformed into a physically perfect human fighting machine. Immediately thereafter, a Nazi spy assassinates Dr. Reinstein, whose secret formula dies with him, thus insuring that Rogers will be the only super soldier. Donning a mask and costume derived from the American flag and wielding a striped shield, Rogers adopts the identity of Captain America and pledges to wage war against the enemies of liberty at home and abroad.

Assisted by his teenage sidekick Bucky, Captain America spent the war years safeguarding American interests against conniving German and Japanese agents. Simon and Kirby dreamed up some of the most delightfully grotesque Axis caricatures to pit against the heroes. Foremost among these was the Red Skull, a sinister Nazi mastermind who became Captain America's perennial archenemy. Jack Kirby's artwork for the series was among the most exuberant, energetic, and imaginative in the field and helped to establish him as one of the most influential superhero comic-book artists.

Captain America quickly became Marvel's most popular attraction and one of the most successful superheroes of the World War II years. Despite some early hate mail from isolationists who did not appreciate the Captain America's politics, the character found an avid readership among young people receptive to the simple and aggressive Americanism that he embodied. More than any other superhero, Captain America epitomized the comic-book industry's unrestrained assault on the hated "Japanazis." Indeed, the star-spangled superhero owed so much to the wartime popular culture that he seemed to drift when the war ended. During the postwar years, Captain America's sales declined along with those of most other costumed superheroes. Even the replacement of Bucky with a shapely blond heroine named Golden Girl failed to rejuvenate interest in the title. In 1949 Marvel cancelled Captain America.

Marvel revived the hero in 1954 and recast him for the Cold War era. Now billed as "Captain America—Commie Smasher," the hero embarked on a crusade to purge America of Reds and traitors. Reentering the glutted comic-book market at a time when horror comics predominated and McCarthyism was going into decline, it was little wonder that this second incarnation of Captain America became a short-lived failure.

The Captain's third resurrection proved far more successful. In 1964, at the height of Marvel's superhero renaissance, Stan Lee and Jack Kirby revived the hero in issue number four of *The Avengers*. The story explained that Captain America's absence over the years was due to the hero having literally been frozen in suspended animation since the end of World War II. In keeping with Marvel's formula of neurotic superheroes, the revived Captain America struggled with an identity crisis: Was he simply a naive relic of a nostalgic past? Could he remain relevant in an era when unquestioning patriotism was challenged by the turmoil of the Civil Rights movement, the Vietnam War, and youth revolts?

By the early 1970s, Captain America symbolized an America confused over the meaning of patriotism and disillusioned with the national mission. The hero himself confessed that "in a world rife with injustice, greed, and endless war . . . who's to say the rebels are wrong? I've spent a lifetime defending the flag and the law. Perhaps I should have battled less and questioned more." Accordingly, Captain America loosened his longtime affiliation with the U.S. government and devoted himself to tackling domestic ills like poverty, pollution, and social injustice. He even took on a new partner called the Falcon, one of the first African-American superheroes.

In a memorable multi-part series unfolding during the Watergate scandal, Captain America uncovered a conspiracy of high-ranking U.S. officials to establish a right-wing dictatorship from the White House. This story line, written by a young Vietnam veteran named Steve Englehart, left Captain America deeply disillusioned about American political leadership—so much so that for a time he actually

discarded his stars and stripes in favor of a new costume and identity of "Nomad—the Man Without a Country." But Captain America returned shortly thereafter, having concluded that even in this new age of cynicism, the spirit of America was still alive and worth defending.

Captain America has remained a popular superhero in the last decades of the twentieth century. The character may never be as popular as he was during World War II, but as long as creators can continue to keep him relevant for future generations, Captain America's survival seems assured. Although his patriotic idealism stands in stark contrast to the prevailing trend of cynical outsider superheroes like the X-Men, the Punisher, and Spawn, Captain America's continued success in the comic-book market attests to the timelessness and adaptability of the American dream.

Captain Kangaroo

For those who were either children or parents from 1955 through 1991, the perky theme music of *Captain Kangaroo*, accompanied by the jingling of the Captain's keys as he unlocked the door to the Treasure House, arouses immediate feelings of nostalgia. The longest running children's television show in history, *Captain Kangaroo* dominated the early morning airwaves for over 30 years, offering a simple and gently educational format for very young children.

The central focus of the show was always the Captain himself, a plump, teddy bear-like figure with Buster Brown bangs and a mustache to match. Much like another children's television icon, Mister Rogers, the Captain welcomed children to the show with a soft-voiced sweetness that was never condescending, and guided viewers from segment to segment chatting with the other inhabitants of the Treasure House. Bob Keeshan created the comforting role of Captain Kangaroo, so named because of his voluminous pockets. His friends on the show included a lanky farmer, Mr. Greenjeans, played by Hugh Brannum, and Bunny Rabbit and Mr. Moose, animated by puppeteer Gus Allegritti. Zoologist Ruth Mannecke was also a regular, bringing unusual animals to show the young audience.

Captain Kangaroo also had regular animated features such as "Tom Terrific and His Mighty Dog Manfred." One of the most popular segments was "Story Time," where the Captain read a book out loud while the camera simply showed the book's illustrations. It is "Story Time" that perhaps best illustrates Bob Keeshan's unassuming approach to children's entertainment, operating on the theory that children need kind and patient attention from adults more than attention-grabbing special effects.

A typical moment from the *Captain Kangaroo* show.

Keeshan got his start in the world of television early, working as a page at NBC when he was a teenager in Queens, New York. He left New York to perform his military service in the Marines, then returned to NBC where he got a job with the newly-popular *Howdy Doody Show*. He created and played the role of Clarabell the Clown on that show and was so successful that in 1955 CBS offered to give him his own show. Keeshan created *Captain Kangaroo*, and the show ran for 30 years on CBS. In 1984, it moved to PBS (Public Broadcasting System), where it continued to run for another six years.

A father of three, and later a grandfather, Keeshan had always been a supporter of positive, educational entertainment for children. Even after leaving the role of the Captain, he continued to be an advocate for children: as an activist, fighting for quality children's programming; as a performer, planning a cable television show about grandparenting; and as a writer, producing gently moralistic children's books as well as lists for parents of worthwhile books to read to children.

The soft-spoken Keeshan was so identified with the role of Captain Kangaroo that he was horrified when, in 1997, Saban Entertainment—producers of such violence- and special effects-laden shows as *Power Rangers* and *X-Men*—began to search for a new, hip Captain to take the helm of *The All-New Captain Kangaroo*. Saban had offered the role to Keeshan, but withdrew the offer when

he insisted on too much creative control over the show. Keeshan did not want modern special effects and merchandising to interfere with the Captain's gentle message. "I really think they believe that kids are different today than they were in the 1960s or 1970s," he said. "That's nonsense. They're still the same, still asking the same questions, 'Who am I? Am I loved? What does the future hold for me?'" In the end, however, Saban chose to stay with the proven formula by choosing John McDonough to play the new Captain. Neither hip nor slick, McDonough is a middle-aged, soft-spoken lover of children, not so different from Keeshan's Captain.

In an ironic twist, in 1995, the Motion Picture Association of America, trying to forestall legislation against violence in children's programming, insisted that violence in programming does not lead to violent activity. In fact, they suggested that the opposite might be true and that perhaps *Captain Kangaroo* and other mild programming of the 1950s led directly to the unrest of the 1960s and 1970s. Though Keeshan scoffed at the implication, the tactic seems to have worked and the legislation was defeated.

The media now abounds with choices of children's programming. With dozens of cable channels, children's shows can be found somewhere on television almost 24 hours a day. If that fails, parents can buy videos to pop in whenever some juvenile distraction is needed. In 1955, when the Captain debuted, and for many years

afterwards, there were only three television channels that broadcast from around six a.m. until midnight. For children seeking entertainment, for parents seeking amusement for their children, even for adults seeking something to wile away the early morning hours, there was only *Captain Kangaroo*. For these people, the Captain was like an old friend, quietly accepting and unchanged over 30 years on the air.

In the 1960s, country music performers The Statler Brothers had a hit song, “Countin’ Flowers on the Wall,” where a young man describes his bleak and sleepless nights after being left by his girl. Perhaps no one born after the video-and-cable era will be able to completely grasp the desolate joke in the lines, “Playin’ solitaire ‘til dawn / With a deck of fifty-one / Smokin’ cigarettes and watchin’ / *Captain Kangaroo* / Now, don’t tell me / I’ve nothing to do.”

Captain Marvel

Captain Marvel was among the most popular comic-book superheroes of the 1940s. Created in 1940 by Bill Parker and C.C. Beck for Fawcett Publications, Captain Marvel was an ingeniously simple premise. When teenager Billy Batson speaks the magic word “Shazam,” he transforms into a muscular adult superhero. Like DC Comics’ Superman, Captain Marvel possessed superhuman strength, invulnerability, and the power of flight.

Captain Marvel enlisted along with most other comic-book superheroes into World War II and did his part to disseminate patriotic propaganda about the virtues of America’s war effort. He was the top-selling comic-book character of the war years—even outperforming Superman for a time. By 1954, however, falling sales and a long-standing lawsuit by DC over the character’s alleged similarities to Superman forced Captain Marvel into cancellation. DC later purchased the rights to the character and has published comic books featuring him since the 1970s.

Car 54, Where Are You?

The situation comedy *Car 54, Where Are You?*, which ran on NBC from 1961 to 1963, occupies a unique place in television history. While it is a truly humorous look at the shenanigans of the police officers assigned to the fictional 53rd precinct in the Bronx, it is most often remembered as a minor cult classic filled with performers better known from other series and for its catchy opening theme song. The show focused on patrol-car partners Gunther Toody (Joe E. Ross) and Francis Muldoon (Fred Gwynne) as they attempted to serve and protect the citizens of New York. A more unlikely pairing of police officers had never been seen on television. Toody was a short and stocky, often slow-witted, talkative cop, and Muldoon was a tall and gangly, usually laconic, intellectual. Episodes were filled with the usual sitcom fare as the partners’ bumbling caused misunderstandings within their squad, such as the time Toody attempted to make a plaster cast of a fellow patrolman’s aching feet and chaos ensued. Each week the pair caused their superior, Captain Block, to become infuriated as they made more trouble for the Bronx than they resolved.

In many respects, *Car 54, Where Are You?* can be considered somewhat of a sequel to the popular 1950s sitcom *You’ll Never Get Rich*, which is also known as *The Phil Silvers Show*. That series, created by writer-producer-director Nat Hiken and starring comedian Phil Silvers as Sergeant Bilko, focused on the misadventures of an oddball assembly of soldiers at Fort Baxter, a forgotten outpost in Kansas. Hiken was a gifted writer who had worked on Fred Allen’s

A publicity shot from the television show *Car 54, Where Are You?*

radio show and later contributed to Milton Berle's *Texaco Star Theater*. The Silvers show had been a great hit as Sgt. Bilko and his motor pool staff schemed, gambled, and tried to avoid all types of work. When that series ended in 1959, Hiken decided to translate some of its comic sensibility to another setting. Like its predecessor, *Car 54* was a series about men who failed to live up to the dignity of their uniform. Unlike the schemers of Fort Baxter, however, the police of the 53rd precinct were trying their best—though often failing. Hiken filled the series with many performers featured on the earlier show. Joe E. Ross had played Mess Sergeant Rupert Ritzik “the Lucretia Borgia of Company B.” The character of Gunther Toody was an exact replica of the Ritzik character even down to his trademark expression of “ooh-ooh-ooh.” Toody's nagging wife Lucille was played by Beatrice Pons, the actress who had appeared as Mrs. Ritzik. Fred Gwynne, who had been a Harvard educated advertising man, was also a featured player on the Bilko show. Furthermore, many of the other officers had been seen as soldiers at the mythical Fort Baxter.

The core of the series was the great friendship Toody and Muldoon had forged from their many years patrolling the streets in Car 54. Their contrasting natures had meshed perfectly despite the fact they had absolutely nothing in common. Author Rick Mitz best captured their relationship when he described the pair by noting, “Toody was the kind of guy who would say that he thought he should get a police citation for ‘having the cleanest locker.’ Muldoon was the kind of guy who would say nothing.” Many episodes took place away from the police station and explored the partners' home lives. Toody and his frustrated wife often included the shy bachelor into their evening plans. One of the series' best episodes centered on Toody's mistaken idea that Lucille and Muldoon were having an affair. Surrounding them was a cast of top character actors including Paul Reed, Al Lewis, Charlotte Rae, Alice Ghostley, and Nipsey Russell. Many of these performers would later graduate to star in their own TV shows. All the characters on the program depicted an ethnic reality little seen on early television. Toody's Jewishness and Muldoon's Irish-Catholic background were more realistic than the bland characters, with no discernable heritage, seen on other programs. The series was also distinguished by Hiken's decision to film on the streets of New York. Sets were constructed on the old Biograph Studio in the Bronx. For street scenes, Toody and Muldoon's patrol car was painted red and white to indicate to New Yorkers that it was not actually a police vehicle. In black-and-white film, Car 54's unique colors looked identical to the genuine New York police vehicles.

When it premiered in 1961, the series caused some controversy after several police associations claimed it presented a demeaning picture of police officers. The police department in Dayton, Ohio dropped their own Car # 54 from the fleet after constant teasing from the public. However, most viewers understood the series was intended as a satire that bore little relation to the lives of actual police officers. Viewers' affection for the show was evident in Nyack, New York where a patrol car stolen from the police station parking lot was nicknamed “Car 54.” The series ended in 1963 after failing to match the success of Hiken's earlier Phil Silvers program. Neither Nat Hiken, who died in 1968, nor Joe E. Ross, who passed away in 1982, ever again achieved the limited success they found with *Car 54*. Following the show's cancellation, Fred Gwynne and Al Lewis (who played Sgt. Schnauzer) achieved TV immortality playing “Herman”

and “Grandpa” on the monster sitcom *The Munsters*. Gwynne died in 1993.

The sitcom *Car 54, Where Are You?* is an energetic series that never really attained a mass audience. Its presentation of the misadventures of Officers Toody and Muldoon gained a small cult audience that only expanded after the series began to be replayed on cable's Nick at Night network. An awful 1994 movie version update of the show (which was filmed in 1991) starred David Johansen and John C. McGinley as Toody and Muldoon. It also featured rising stars Rosie O'Donnell and Fran Drescher. Viewers of the original sitcom can ignore the film and enjoy a quirky short-lived series that offers an amusing update of the Keystone Kops. Furthermore, after one viewing it's almost impossible to forget that opening theme, which began: “There's a holdup in the Bronx / Brooklyn's broken out in fights / There's a traffic jam in Harlem that's backed up to Jackson Heights. . . .”

Car Coats

Car coats originated in the United States in the 1950s with the American migration to suburbia. Popular through the 1960s, they were designed to be convenient for driving, at hip to three-quarter length. Car coats were regulation outerwear: woollen, semi-fitted, frequently double-breasted, with various design features such as back-belts and toggles. The same coat is known to 1990s consumers as the stadium, toggle, or mackinaw coat.

—Karen Hovde

Caray, Harry (1919-1998)

In his 53 years as a Major League Baseball broadcaster, Harry Caray's boisterous, informal style, passionate support for the home team, and willingness to criticize players and management made him a controversial fan favorite; and towards the end of his career, something of an anachronism. During his first 25 seasons (1945-69) with the St. Louis Cardinals, KMOX's 50,000 watt clear channel signal and an affiliated network of small stations in the South, Southwest, and Midwest gave Caray regional exposure. He is perhaps best known for his catch phrase “Holy Cow,” and the sing-along-with-Harry rendition of “Take Me Out to the Ballgame.” Caray achieved national prominence when he moved to WGN and the

Harry Caray

Chicago Cubs in 1983. Cable television was then in its infancy, and largely on the strength of its sports programming, WGN became one of the first national superstations.

Carey, Mariah (1970—)

An uproar of praise accompanied Mariah Carey's 1990 musical debut. Her first single, "Vision of Love," immediately established her as a major talent and showcased her trademark vocal sound: a masterful, multi-octave range, acrobatic phrasing, ornamented vocal trills, and uncanny, piercing notes in her upper vocal register. It was a sound that was clearly influenced by soul music tradition, yet one that Carey made uniquely her own. Unlike many popular singers, she wrote or co-wrote much of her music. Because of her beautiful and visually striking appearance, she gained additional popularity as a sex

symbol, appearing continually—often seductively or even scantily dressed—in national magazines. She found great success year after year, following her debut, and was, for nearly a decade, America's most popular musician.

Carlin, George (1938—)

During the 1960s, George Carlin revolutionized the art of stand-up comedy. He employed observational humor, adding a comic twist to everyday occurrences in order to comment on language, society, sports, and many mundane aspects of American daily life. His captivating stage presence and seemingly endless supply of material enabled him to succeed in giving comedy concerts. Rarely before had a comedian drawn such large crowds to a theater just to hear jokes.

George Carlin was born on May 12, 1938, in the Bronx, New York City. With one older brother, Pat, George grew up in Morningside Heights, which he calls "White Harlem," and took the title of his album *Class Clown* from his role in school as a child. He dropped out of high school and enlisted in the Air Force. He ended up in Shreveport, Louisiana, where he became a newscaster and DJ at radio

George Carlin

station KJOE, while still serving in the Air Force, and after his discharge continued worked in radio, moving to Boston in 1957 where he joined radio station WEZE.

Over the next few years, Carlin had many radio jobs, and in 1959 he met newsman Jack Burns at KXOL in Fort Worth, Texas. Teaming with Burns in the early 1960s, he moved to Hollywood where he came to the attention of Lenny Bruce. Burns and Carlin secured spots in mainstream comedy clubs and made an appearance on *The Tonight Show* with Jack Paar. When Jack Burns left the team to work with Avery Shrieber, George Carlin began to make a name for himself as a stand-up comedian, and during the decade became a fixture on television, appearing on the Johnny Carson, Mike Douglas, and Merv Griffin shows, and writing for Flip Wilson. His first comedy album, *Take-Offs and Put-Ons*, came out in 1972.

Also in 1972, he was arrested after doing his “Seven Words You Can Never Use on Television” routine at a Milwaukee concert. The charges were thrown out by the judge, but George Carlin will forever be associated with an important test of the First Amendment as applied to broadcasting—the routine was later the crux of a Supreme Court case, *FCC v. Pacifica Radio*, whose station WBAI in New York City broadcast the offending album. The case helped launched the FCC’s “safe harbor” policy, allowing profanity on the air only after 10 PM (later changed to midnight and then extended to a 24-hour ban on indecent material).

Carlin continued releasing albums, *Occupation: Foole, FM/AM*, and *Toledo Window Box*, among others, and earning Grammy awards. Throughout the 1970s, 1980s, and 1990s, Carlin kept a public career in comedy going through television and movie appearances, recordings and live concerts, frequently performing at colleges and music festivals. He has continued developing his particular brand of humor, with its combination of satire, wordplay, and social commentary.

Carlton, Steve (1944—)

During the second half of his major league pitching career, Steve Carlton did not speak to reporters, preferring to let his left arm do the talking for him. Out of such determined resolve Carlton fashioned an exceptional career that left him destined for the Baseball Hall of Fame. A multiple Cy Young award winner, second only to Nolan Ryan in career strikeouts, Carlton became the first major leaguer since Robert Grove and Vernon Gomez to be universally known as “Lefty.”

A Miami native, Carlton signed with the St. Louis Cardinals franchise and entered the major leagues in 1965. He became the team’s number two starter, behind the fierce right-hander Bob Gibson, and helped the Cardinals to two pennants and the 1967 World Series. Yet Carlton never seemed to get respect; even the 1969 game when he struck out a then record nineteen New York Mets came during a defeat. After a salary dispute with Cardinals management in late 1971, he was traded to the woebegone Philadelphia Phillies for

Steve Carlton

pitcher Rick Wise. Wise was the only star on the perennial also-rans, as well as the Phillies’ most popular player. Carlton responded to his uncomfortable new surroundings with one of the most dominant seasons in baseball history. While the 1972 Phillies won only 59 games, Carlton won 27, or nearly half his team’s total, all by himself. During one stretch he won 15 games in a row. Combined with a 1.97 earned run average and 310 strikeouts, Carlton won his first National League Cy Young Award.

As Carlton developed, gradually so did the Phillies, as Carlton was joined by third baseman Mike Schmidt and, eventually, Tug McGraw, and Pete Rose. Carlton led the team to six division titles and two pennants between 1976 and 1983. And in 1980 his two victories in the World Series gave the Phillies their first world championship.

Carlton was an efficient left-hander who routinely led the major leagues by pitching nine-inning games in less than two hours and twenty minutes. Hitting him, slugger Willie Stargell once lamented, was like drinking coffee with a fork. Under the tutelage of Phillies trainer Gus Hoefling, Carlton embarked on a rigorous physical regimen, including karate, meditation, and stretching his left arm in a bag of rice. He also stopped talking to the media in 1979, following a feud with a Philadelphia columnist. While Carlton was loquacious

with teammates on many subjects (in particular his hobby, wine collecting), he was mute to the press.

In 1983 and 1984, Carlton competed with the ageless Nolan Ryan for bragging rights to the all-time career strikeout record. Carlton held the top spot intermittently before Ryan pulled away in 1984. Carlton's total of 4,136 strikeouts is still the second highest of all time, and over 600 more than Walter Johnson's previous record.

In 1982, the 37-year-old Carlton won 23 games and a record fourth Cy Young Award. The next season, he won his 300th career game and again led the league in strikeouts. With his sophisticated training and focus, Carlton seemed capable of pitching in the major leagues until he was 50. Unfortunately, his pitching ability faded with age. He won only 16 games after his 40th birthday, and poignantly moved from team to team in the last two seasons of his career before retiring in 1988 with a won-loss record of 329-244.

Carlton's election to the Baseball Hall of Fame in 1994 (in his first year of eligibility) was marred by an incident weeks later. Ending his silence with the press, Carlton gave a rambling interview in *Philadelphia Magazine* from his mountainside compound in Colorado, where he claimed that AIDS was concocted by government scientists, that teacher's unions were part of an organized conspiracy to indoctrinate students, and that world affairs were controlled by twelve Jewish bankers in Switzerland. Most Phillies fans ignored his idiosyncratic political commentary, however, and attended his Cooperstown induction that summer.

Carmichael, Hoagy (1899-1981)

Children who play the perennial "Heart and Soul" duet on the family piano might not realize that the tune was written in 1938 by one of America's most prolific popular song composers, Hoagy Carmichael. Carmichael also became one of the century's most iconic pianists, as his distinctive appearance—gaunt and glum, hunched over the upright piano in a smoky nightclub—endures through numerous Hollywood films from the 1940s and 1950s, including classics such as *To Have and Have Not* and *The Best Years of Our Lives* (in *Night Song* he even shares billing with classical concert pianist Arthur Rubinstein). Carmichael's music lives on, too, having thoroughly entered the American musical canon. Of his 250 published songs, "Stardust" (1927) is probably one of the most frequently recorded of all popular songs (with renditions by artists ranging from Bing Crosby and Nat King Cole to Willie Nelson and Carly Simon); "The Lamplighter's Serenade" (1942) proved to be Frank Sinatra's solo recording debut; and "Georgia on My Mind" (1931) has become that state's official song.

Hoagy Carmichael

Carmichael's roots were in the 1920s Midwest, where traditional Americana intersected with the exciting developments of jazz. Hoagland Howard Carmichael was born on November 22, 1899, in Bloomington, Indiana. His father was an itinerant laborer; his mother, an amateur pianist, played accompaniment for silent films. In 1916, his family moved to Indianapolis, where Carmichael met ragtime pianist Reggie DuValle, who taught him piano and stimulated his interest in jazz. In 1919 Carmichael heard Louis Jordan's band in Indianapolis; as Carmichael relates in his autobiography *Sometimes I Wonder*, the experience turned him into a "jazz maniac." While studying law at Indiana University, Carmichael formed his own small jazz band, and also met 19-year-old legendary cornetist Leon "Bix" Beiderbecke, who became a close friend as well as a strong musical inspiration. Carmichael's earliest surviving composition, the honky-tonk "Riverboat Shuffle," was written in 1924 and recorded by the Wolverines, Beiderbecke's jazz band (Carmichael, incidentally, wrote the soundtrack music and played a supporting role in Hollywood's 1950 fictionalized version of Beiderbecke's life, *Young Man with a Horn*, starring Kirk Douglas, Lauren Bacall, and Doris Day).

After receiving his degree, Carmichael practiced law in Palm Beach, Florida, hoping to capture part of the real estate boom market there. Soon deciding to devote his efforts to music, Carmichael moved to New York, but met with little success on Tin Pan Alley. It was not until Isham Jones's orchestra made a recording of "Stardust" in 1930 that Carmichael had his big break. Within a year Louis Armstrong, Duke Ellington, and the Dorsey brothers had recorded their own versions of other Carmichael songs (including "Georgia

On My Mind,” “Rockin’ Chair,” and “Lazy River”) for the burgeoning radio audience.

During the next decade, Carmichael worked with lyricists Johnny Mercer, Frank Loesser, and Mitchell Parish, among others. In the late 1930s he joined Paramount Pictures as staff songwriter (his first film song was “Moonburn,” introduced in the 1936 Bing Crosby film *Anything Goes*), and also began appearing in films himself (the first film he sang in was *Topper*, performing his own “Old Man Moon”). In 1944, “Hong Kong Blues” and “How Little We Know” were featured in the Warner Brothers film *To Have and Have Not*, starring Humphrey Bogart and Lauren Bacall, which also marked Carmichael’s debut as an actor. In one year (1946) Carmichael had three of the top four songs on the Hit Parade, and in 1947 his rendition of his own song “Old Buttermilk Sky” (featured in the film *Canyon Passage*, and nominated for an Academy Award) held first place on the Hit Parade for six consecutive weeks. Carmichael described his own singing as a “native wood-note and flatsy-through-the-nose voice.” It was not until 1952, however, that Carmichael and lyricist Mercer won an Academy Award for Best Song with “In the Cool, Cool, Cool of the Evening,” performed by Bing Crosby in Paramount’s *Here Comes the Groom*). Carmichael also made appearances on television during the 1950s, hosting his own variety program, *The Saturday Night Revue* (a summer replacement for Sid Caesar’s *Your Show of Shows*), in 1953. In 1959 he took on a straight dramatic role as hired ranch hand Jonesy on the television Western series *Laramie*.

Carmichael continued composing into the 1960s, but his two orchestral works—“Brown County in Autumn”—and his 20-minute tribute to the Midwest—“Johnny Appleseed”—were not as successful as his song compositions. In 1971, Carmichael’s contributions to American popular music were recognized by his election to the Songwriters Hall of Fame as one of the ten initial inductees. He retired to Palm Springs, California, where he died of a heart attack on December 27, 1981.

Carnegie, Dale (1888-1955)

Aphorisms, home-spun wisdom, and an unflagging belief in the public and private benefits of positive thinking turned Dale Carnegie’s name into a household phrase that, since the 1930s, has been uttered with both gratitude and derision. Applying the lessons that he learned from what he perceived to be his failures early in life, Carnegie began to teach a course in 1912. Ostensibly a nonacademic, public-speaking course, Carnegie’s class was really about coming to terms with fears and other problems that prevented people from reaching their full potential. Through word of mouth the course became hugely popular, yet Carnegie never stopped tinkering with the curriculum, excising portions that no longer worked and adding new material based on his own ongoing life experience. In 1936, he increased his profile exponentially by publishing *How to Win Friends and Influence People*, which ranks as one of the most purchased

books of the twentieth century. Although Carnegie died in 1955, his course has continued to be taught worldwide, in virtually unchanged form, into the late 1990s.

Carnegie (the family surname was Carnagey, with an accent on the second syllable; Carnegie changed it when he moved to New York, partly because of his father’s claim that they were distant relatives of Andrew Carnegie and partly because the name had a cachet of wealth and prestige) grew up on a farm in Missouri; his family was, according to his own accounts, poverty-stricken. His mother, a strict and devout Methodist, harbored not-so-secret hopes that her son might become a missionary; some missionary zeal can be seen in Carnegie’s marketing of his course. At the age of eighteen, Carnegie left home to attend Warrensburg State Teacher’s College. There, he made a name for himself as a riveting and effective public speaker. Just short of graduating, he decided to quit and start a career as a salesman in the Midwest. Despite his knack for expressing himself, his heart was never in sales, and he was less than successful. In 1910, Carnegie headed for New York City and successfully auditioned for admission into the prestigious American Academy of Dramatic Arts. The new style of acting taught at the school, radical for its time, stressed sincerity in words and gestures. Students were encouraged to emulate the speech and movement of “real people” and to move away from posturing and artificiality. Carnegie spent even less time as a professional actor than he did as a salesman, but this new method of acting would become a vital part of his course.

In 1912 Carnegie was back in sales, working for the Packard car and truck company, after a disillusioning tour with a road company that was staging performances of Molly Mayo’s *Polly of the Circus*. Living in squalor and unable to make ends meet, Carnegie nonetheless walked away from his Packard sales job and began doing the one thing he felt qualified to do: teach public speaking to businessmen. The director of a YMCA on 125th Street in Harlem agreed to let Carnegie teach classes on commission. (At that time most continuing adult education took place at the YMCA or YWCA.) Carnegie’s breakthrough came when he ran out of things to say and got the class members to talk about their own experiences. No class like this had ever been offered, and businessmen, salesmen, and, to a lesser extent, other professionals praised the course that gave them the opportunity to voice their hopes and fears, and the means to articulate them. Both academic and vocational business courses were in short supply during this time, and most professionals had little understanding of communications or human relations principles. Carnegie anticipated this need and geared his course toward the needs of the business professional.

From 1912 until his death in 1955, Carnegie’s chief concern was the fine-tuning and execution of his course, formally titled The Dale Carnegie Course in Public Speaking and Human Relations, but fondly known to millions of graduates as the “Dale Course.” Carnegie also attempted to publish a novel, *The Blizzard*, which was ill-received by publishers. His publishing luck changed in 1936, when Leon Shimkin of Simon & Schuster persuaded him to write a book based on lectures he gave in various sessions of the course. *How to Win Friends and Influence People* was published in November of that year and became an instant best-seller. Following this accomplishment, Carnegie published a few similar works that also became bestsellers, most notably *How to Stop Worrying and Start Living*. None of his subsequent literary endeavors, however, matched the success of *How to Win Friends*, although they are all used, to some extent, in his course.

With the huge sales of the book, Carnegie faced a new challenge: meeting the growing public demand for the course. In 1939, he agreed to begin licensing the course to other instructors throughout the

Dale Carnegie

country. By now divorced from his first wife (the marriage ended unhappily in 1931—Carnegie’s *Lincoln the Unknown*, with its unflattering portrayal of Mary Todd Lincoln, was later revealed by the author to be “largely autobiographical”), he met Dorothy Vanderpool, whom he would marry in 1941. Dorothy, a graduate of the Dale Carnegie Course, became an ardent supporter of her husband’s work and was responsible for making the business a successful enterprise long after her husband’s death. When she died, on August 6, 1998, the Dale Carnegie Course, mostly unchanged in form and content, was still going strong.

The Great Depression transformed Carnegie’s program from a relatively successful endeavor into a cultural monument. His low-key optimism and no-nonsense approach to human relations proved irresistible to the massive number of Americans who were unemployed. The publication of his book meant that his message, and his appeal, could spread much further and faster than it had through the auspices of the course. A year after its publication, the book’s title was a permanent part of the language; the phrase “How to Win Friends and Influence People” quickly overshadowed Dale Carnegie and his course, and became a catch-phrase for enthusiasm borne of naiveté, as well as a euphemism for manipulative styles of dealing with others.

Carnegie’s appeal was always complex and convoluted. His book spoke to the hopes and fears of an entire nation beset by serious economic difficulties, and yet many people thought his ideas were too simplistic and out of tune with the times to take without a heavy dose of irony. He had his share of famous critics as well, such as James Thurber and Sinclair Lewis, who reviled *How to Win Friends* in their writings. Apart from the high-minded criticism of these and other intellectuals, the main obstacle that kept people from signing up for Carnegie’s course was the same thing that won over many other graduates: enthusiasm. The unbridled enthusiasm that was such a part of the course, and that students demonstrated during open-house sessions, could be off-putting as well as inspiring; people were unsure whether it was contrived or real. There was a surge of renewed public interest in the late 1980s, when Lee Iacocca revealed in his autobiography the extent to which Carnegie’s course had influenced him and his willingness to pay for his employees to take the course. In the end, Carnegie’s sustained popularity was due as much to the controversy caused by the public’s inability to take him completely seriously as to the man’s teachings and writings.

—Dan Coffey

Carnegie Hall

The world's most famous concert hall, New York City's Carnegie Hall, opened in 1891, proved important as an institution and, by

setting a critical precedent for financing in the 1950s, for the future of the performing arts in America.

Designed by William Burnet Tuthill, an architect with a musical ear, the hall was praised for both its architecture and its acoustics following the opening performances by Tchaikovsky. Carnegie Hall's prestigious reputation was established by the quality of the performers who appeared there, and the way to get there was to "practice, practice, practice," the success or failure of a Carnegie Hall debut often determining whether or not a performer established a successful career.

Olin Downes, a music critic at the *New York Times*, wrote, "In the first quarter of this century [the city] became the musical center of the world. Nowhere else was to be met in the course of a season so many commanding personalities, interpretive and creative, of the period. New York was transformed from a cultural colony into a cultural capital." During that Golden Age and particularly between 1910-30, every one of the world's greatest instrumentalists appeared at least once every season in Carnegie Hall. Among conductors and orchestras, Arturo Toscanini conducted the New York Philharmonic there and Leopold Stokowski brought the Philadelphia Orchestra for regular annual series, as did the various conductors of the Boston

Carnegie Hall

Symphony. Jascha Heifetz, Fritz Kreisler, Joseph Szigeti, Vladimir Horowitz, Sergey Rachmaninoff, and Artur Rubinstein appeared for annual recitals or with the orchestras.

Although he provided two million dollars to build it, linking steel magnate Andrew Carnegie's name to the hall is among the great ironies of American cultural life. Carnegie's musical interests centered on bagpipe melodies and Scottish folk tunes and hymns played on an organ that awakened him each morning. The best statement of purpose he could offer the public when the cornerstone was laid in 1890 was the hope that the structure would "intertwine itself with the history of our country." On opening night, May 5, 1891, Morris Reno, president of the stock company that Carnegie had set up to manage the enterprise (for a profit), would advise that the hall had been "founded with the loftiest purposes, free from all disturbing private interests, devoted solely to the highest ideals of art. . . ."

In fact, Carnegie had no such ideals. Nor was he motivated by needs for publicity or acclaim common to tycoons of the Gilded Age. Finally, his unspeakable treatment of workers at his Homestead, Pennsylvania, plant does not suggest sympathy for the common man who, hopefully, would attend performances. The best that can be said about Carnegie's plan for the hall was that, like his plan for the libraries he later founded, it was not an end in itself. For the libraries, he would make a grant for construction, and then it was up to the local community to raise operating funds. But it immediately became clear that such a pattern would not fit the Music (later, Carnegie) Hall. There simply was not enough rental business, and Carnegie had to underwrite operating deficits, which he did with frequent complaints.

New York's highly competitive social and musical establishments were unenthused by his generosity to begin with. In advance of opening night, the *New York Times* hoped that Music Hall presentations would educate rather than "merely entertain." William Steinway, a piano manufacturer who had a concert hall of his own, scoffed that "Mr. Carnegie's hall will never pay. Take our present Philharmonic concerts, for instance . . . increase the number of these high-class concerts to twelve, and financial disaster would be certain. The public can only stand a certain amount of this sort of music. . . ."

A constant pressing need for cash inspired Carnegie's company to encourage not only musical but other types of renters. In December 1915, a large audience witnessed the launching of the first mass fundraising campaign in American Jewish history for the relief of overseas brethren. Fresh from the Versailles Peace Conference in July 1919, President Woodrow Wilson disembarked in Hoboken, New Jersey, and proceeded immediately to the hall, where he made the first speech in his unsuccessful campaign for congressional approval of United States membership in the League of Nations. Tenants such as the American Academy of Dramatic Arts, whose graduates included Cecil B. De Mille, Agnes Moorehead, Rosalind Russell, and Spencer Tracy, contributed to the hall's international fame.

Carnegie Hall opened its 1925-26 season under new management. Carnegie had died in 1919, and although his board of directors continued to run the hall together with the Carnegie estate, it had remained unprofitable. Robert E. Simon, a prosperous realtor, then bought the building and kept his promise not to tear it down, although there were hints that he and his son wavered during the years of Simon family ownership.

Finally, when plans for Lincoln Center for the Performing Arts were announced in 1959, Robert Simon Jr. announced that the hall would be razed in favor of a skyscraper. Music lovers were outraged, but New York was constantly tearing itself down and rebuilding, and there was no march by the masses to the hall in protest.

A volunteer Citizens' Committee for Carnegie Hall decided on behalf of all city residents (without any referendum) that the hall should be saved—and not with private funds. The committee favored the idea that the city should issue bonds to pay for the hall's purchase and renovation, with the bonded indebtedness to be paid off by a Carnegie Hall Corporation. Once the bonds were retired, the hall would become the property of the corporation, which could, if it wished, apply to the city for additional operating funds.

Thus was realized the concept that although cultural interests could not be legislated into existence, the financing for them could be, a precedent critical for future financing of the performing arts.

—Milton Goldin

The Carpenters

Between 1970 and 1975, The Carpenters, a brother-sister musical act, were one of the most popular and recognized pop groups.

Karen and Richard Carpenter

Because they emerged following a decade (the 1960s) in which the most influential performers were those who pushed the bounds of pop music, they were often criticized for their wholesome, straightforward style. However, Karen Carpenter, with her extraordinary voice and girl-next-door good looks, and Richard Carpenter, with his world-class composing abilities, overcame the criticism to produce 19 top-10 singles during the 1970s.

Karen (1950-1983), who was both a singer and a drummer, and Richard (1946—), who was the group's arranger, producer, and keyboardist, were born in New Haven, Connecticut, to Harold Bertram Carpenter and Agnes Tatum. While children, they developed an enthusiasm for popular music. While Richard pursued music avidly, Karen played the flute briefly, but was more interested in sports. The family moved to Downey, California, in 1963. In 1966, Karen and Richard teamed up with bassist Wes Jacobs to form the Richard Carpenter Trio, an instrumental band. Karen also signed a solo singing contract with the Magic Lamp record label, and recorded "Looking for Love" and "I'll Be Yours," released as singles. Shortly after, the Richard Carpenter Trio won "The Battle of the Bands" at the Hollywood Bowl.

It wasn't until 1969, however, that the band, refashioned as the Carpenters and with Karen singing as well as playing drums, was "discovered" by world-famous trumpeter Herb Alpert, leader of the Tijuana Brass, and co-founder of the A&M record label. Upon hearing a demo tape of the Carpenters, he immediately recognized the extraordinary quality of Karen Carpenter's voice. "It was full and round, and it was . . . amazing. This voice was buzzing into my body, and it was the way they presented it." Their first album, *Offering*, was released on the A&M record label in 1969. It did not sell well, although their cover of the Beatles' "Ticket to Ride" reached number 54 on the U.S. singles charts. In 1970, their album *Close to You*, included their first number one single of the same name (which sold more than 300,000 copies), and the duo began international tours that would include up to 200 concerts in a year. That year they also released the hit singles "We've Only Just Begun," and "For All We Know." They won Grammy Awards in 1970 for best contemporary vocal performance by a group for "Close to You," and also for best new artist. In 1970, "For All We Know," featured in the film "Lovers and Other Strangers," captured an Academy Award.

Between 1970 and 1975, the Carpenters were one of the hardest working bands in pop music. Richard was the guiding force behind the duo's production and arrangements, and also wrote songs with Richard Bettis. But material supplied by songwriters Burt Bacharach, Paul Williams, and Roger Nichols helped the Carpenters gain astounding success with 17 million-selling albums between 1970 and 1981. Other well-known standards released by the duo during this period were "Rainy Days and Mondays," "Superstar," "Sing," "Yesterday Once More," and "Top of the World." Their compilation album, *The Singles 1969-1973*, was on the U.S. album charts for 115 weeks. By the late 1990s, the Carpenters had demonstrated that their success was more than fleeting, with worldwide sales topping 100 million units.

The Carpenters bucked 1970s pop music trends by conveying a wholesome, middle-class image, and were even mocked by the pop music establishment, who viewed their songs as insipid and their popularity as fleeting. Music critic Rob Hoerberger (*New York Times*, Nov. 3, 1991) wrote "They always dressed as if they were going to

church, and they sang sticky songs about love (but never sex). Worst of all, parents loved their music." During their heyday, rock critics described their music as "treacle," "drippy easy listening," "schlock music," and their personalities as "squeaky," "smiley," and "saccharine." Fortunately for their record company, A&M, and their in-house mentor, Herb Alpert, the listening public purchased their records by the millions and their concerts sold out consistently. Their popularity was not confined to the United States. They also had strong fan bases in Great Britain and Japan, and they were also popular in many other European and Asian countries. In 1973, they were honored by then-President Richard Nixon by being asked to perform at a state visit by West German Chancellor Willy Brandt.

The Carpenters enjoyed their greatest success between 1970 and 1975. After that time, the duo was beset by serious health problems. Richard spent several years addicted to the sedative Quaalude, and recovery took another several years. Karen, meanwhile, battled anorexia nervosa, a psychophysiological disorder whose cluster of symptoms begins usually with a fear of being overweight and continues with severe weight loss due to self-starvation. She fought this disease for years, with her "normal" weight of 120 pounds (she was 5'4" tall) dropping to 79 pounds several times between 1975 (when she collapsed onstage in Las Vegas while singing "Top of the World"), and her death in 1983. Though few were aware of anorexia nervosa as a disease during the 1970s, Carpenter's death from the disorder drew a great deal of attention to the disease. Indeed, she may be as important a figure in American popular culture because of the way she died as because of the way she achieved fame. After her death anorexia nervosa became well-known to the American public, and many sought help for themselves or their (often) teenage daughters after reading or hearing media accounts of her symptoms and the cause of her death.

The Carpenters experienced a new surge of popularity in the late 1980s and 1990s as their catalog was re-released on compact disk, most notably the four-disk set *From the Top*. In 1994, a compilation of their songs entitled *If I Were a Carpenter*, performed by some of the most popular "alternative" music groups, became a top-selling record. Many of these rock stars, including Sonic Youth, Cracker, and the Cranberries, said that they had been strongly influenced by the Carpenters' sound. Jeff McDonald of Redd Kross, one of the bands featured on the CD, echoed the beliefs of many musicians and critics who had reassessed their music almost twenty years after their peak popularity. "I'd always been a huge fan of the Carpenters, and an admirer of their songs. The quality of their songs was so wonderful, they were lyrically very sophisticated, not this teenybop fare . . . Most bands just want to write perfect pop songs. And these are perfect pop songs."

Richard Carpenter's music career continued on a considerably reduced basis after his sister's death, although he continues to tour and produce. Most notably, he produced his sister's last solo album, *Karen Carpenter*, released in 1996, and his own album, *Pianist—Arranger—Composer—Conductor*, came out in 1998.

Carr, John Dickson (1906-1977)

Considered one of the twentieth century's grand masters of the detective story for his innovative use of subtlety, ingenuity, and atmosphere, John Dickson Carr, alias Carter Dickson and Carr Dickson, produced numerous short stories, non-fiction works, and over 70 neo-gothic and historical mystery novels during his lifetime. His best known tales, commonly referred to as locked room mysteries, feature horrific crimes committed seemingly without human agents; subsequently, his sleuths must exercise pure reason to solve them. Amidst an atmosphere of suspense, a small dose of the supernatural, and sometimes high comedy, Carr cleverly presents clues, suspects, and motives such that few readers are able to predict the solutions. His characters Henri Bencolin, Dr. Gideon Fell, Sir Henry Merrivale, and Colonel March rank high among the most memorable detectives within the genre, and Carr's skill in detailing their exploits continues to influence contemporary mystery novelists in the 1990s.

Born in Uniontown, Pennsylvania, on November 30, 1906, Carr first gained his lifelong interest in crime and detection from his father, Wooda Nicholas Carr, a politician and lawyer. From an early age, he enjoyed reading authors L. Frank Baum, Alexandre Dumas, and Robert Louis Stevenson, though he later preferred the works of Sir Arthur Conan Doyle and G. K. Chesterton. In his early teens, he began writing for a local newspaper and developed a keen interest in detective stories that featured solutions to impossible crimes. He attended the Hill, a preparatory school, and entered Haverford College in 1925. At Haverford, Carr's writing career blossomed. After becoming editor of *The Haverfordian*, a monthly literary magazine, he began to write not only short historical romances, but also a series of detective stories about impossible crimes solved by Paris policeman Henri Bercolin.

Circa 1928, Carr's parents sent him to Paris to study at the Sorbonne; however, Carr never attended the school and seriously pursued writing instead. Determined to hone his craft in Paris, he wrote but later destroyed an historical novel, then wrote another Henri Bencolin story entitled "Grand Guignol." Upon his return to America, he submitted this manuscript to *The Haverfordian*, which published it as a short novel in early 1929. Carr later revised the story, expanded its length, and submitted the manuscript to Harper & Bros. Published in 1930, *It Walks by Night* marked the beginning of Carr's successful career as a detective novelist. In 1932, he married Clarice Cleaves, an Englishwoman, and the following year, moved to England. During the remainder of the 1930s, he produced three to five novels a year, adding Dr. Gideon Fell and Sir Henry Merrivale to his repertoire of impossible crime solvers. He also began to write short stories for popular magazines. In 1935, he published "Terror's Dark Tower," one of his best short stories about murder in a sealed room, and by the end of the decade, his works were regularly featured in major magazines such as *The Illustrated London News* and *The Strand*.

During the 1940s, Carr produced fewer mystery novels; his talents were needed elsewhere. Supporting the war effort, he wrote and narrated propaganda broadcasts for the British Broadcasting Corporation. Concurrently, he also wrote mystery dramas for the BBC and CBS network in America and was instrumental in creating the style of the great radio plays. At the end of World War II, he began

a definitive biography of Sir Arthur Conan Doyle that was eventually published in 1949.

Dissatisfied with the rise of socialism in England, Carr returned to America with his family in 1948 and was elected President of the Mystery Writers of America in 1949. During this period, he embarked on a new phase in his writing career. A lifelong admirer of the past, he decided to write mysteries situated in specific historical time frames and that sometimes involved time travel. This innovative decision proved fortuitous; his meticulously researched historical novels received both critical and popular acclaim. In 1950, he published *The Bride of Newgate*, a high adventure set in 1815 England. The following year, he published *The Devil in Velvet*, in which a modern professor bargains with Satan for a transfer back to eighth-century England. Considered by Carr to be his best work, *The Devil in Velvet* was the most successful of his novels.

Between 1951 and 1965, Carr moved back and forth between England and America before finally settling in Greenville, South Carolina. Due to increasing ill health, he wrote no more fiction after 1972, but contributed to a review column in *Ellery Queen's Mystery Magazine* and began a series about seventeenth- and eighteenth-century criminals which was never completed. He died March 1, 1977, at age 70.

During his lifetime, Carr was the recipient of the Mystery Writers of America's highest honor, the Grand Master Award, and was the first American ever admitted into the almost exclusively British Detection Club. Indeed, his stories reflect the qualities that he felt should always be present in the detective novel at its best: fair play, sound plot construction, and ingenuity.

The Cars

With their campy groundbreaking videos and catchy songs, The Cars emerged from the late-1970s/early-1980s New Wave movement to become one of America's best selling musical acts. This Boston band led by Ric Ocasek scored thirteen *Billboard* Top 40 hits from 1978 to 1987 with thinly-veiled sexual innuendo songs like "Shake It Up," "You Might Think," "Drive," and "Tonight She Comes."

Formed in 1976 out of the ashes of various local Boston bands, including the Jonathan Richman-fronted Modern Lovers, The Cars landed a major label deal with Elektra after a demo of "Just What I Needed" became a hit on local Boston radio stations. The group consisted of Ric Ocasek on vocals and guitar, Ben Orr handling vocals and bass duties, Elliot Easton on guitar, Greg Hawkes playing

The Cars

keyboards and former Modern Lovers drummer David Robinson behind the drum kit. The Cars' aesthetic jumping-off point fell somewhere between AM radio bubblegum pop, new wave quirkiness, Brian Ferry-esque art-pop, and the bombast of Album Oriented Radio: a combination that appealed to a wide variety of consumers.

Early on, The Cars established themselves as one of the best-selling new wave bands in America. Their self-titled debut album was released in 1978, spawning a number of hit singles, going platinum, and staying in the album charts for two and a half years. They released a string of hit albums, including *Candy-O*, *Panorama*, *Shake It Up*, and *Heartbeat City*, before they took a two year break starting in 1985 so that Ocasek, Orr, and Easton could record solo albums and pursue other projects (such as Ocasek's appearance in the John Waters film, *Hairspray*). By the time The Cars regrouped to release 1987's *Door to Door*, the band had run its course, creatively and commercially. After a tour supporting *Door to Door*, The Cars broke up in 1988.

Although their pop radio-friendly songs were a major reason for their popularity, The Cars also gained attention with their music videos—something that distinguished the post-MTV era from other periods of popular music. Their most acclaimed video was the Andy Warhol directed "You Might Think," which sported groundbreaking (for the time) computer animation. The success The Cars had with their videos, along with a few other artists that were regularly played

on MTV, demonstrated the burgeoning music channel's power as a marketing device.

In addition to his work as the frontman of The Cars, Ric Ocasek produced a number of important underground, avant-garde, and punk bands that didn't sell a lot of records, but which proved extremely influential. Among the most significant Ocasek-produced bands were the Washington D.C. hardcore punk group Bad Brains and the New York City duo, Suicide. Ocasek also produced albums by the commercially successful Romeo Void in the early 1980s and, in 1994, he produced the platinum debut by Weezer. Because of his role as a major contributor to American underground and commercial music, Ric Ocasek had a large number of high-profile fans like Billy Corgan, the leader of 1990s alternative rock icons, Smashing Pumpkins. Corgan paid homage to Ocasek by producing Ocasek's 1997 solo album, *Troublizing*.

Carson, Johnny (1925—)

In January 1965, Johnny Carson appeared at Lyndon Baines Johnson's presidential inauguration gala. Carson took the stage directly opposite the president and bragged "I've done more for birth control than Enovid." The claim is questionable, but it is vintage Johnny Carson. Like most Carson jokes, it looks neither particularly funny nor particularly racy on paper. In its delivery, however, Carson won much of the audience over, created a flurry of scandal, and effectively situated himself in American cultural history. Carson made one of television's greatest careers by playing his impish wit off his Midwestern charm, bringing the sexual revolution to middle America, middle America to the world, and establishing the form for television variety and humor that continues to dominate.

Carson was born on October 23, 1925 in Corning, Iowa, and spent the first eight years of his life moving throughout Iowa as his father established a management career in the Iowa-Nebraska Electric Light and Power Company. In 1933, the Carson family settled in Norfolk, Nebraska, population 10,000. Carson came of age in Norfolk, premiering his magic act, "The Great Carsoni," there. Carson, along with his magician alter-ego, enlisted in the Navy in 1943, hoping to be a fighter pilot in the Second World War. His military career, however, was more notable for its hilarity than its heroics.

In the fall of 1946, Carson left the Navy and enrolled in the University of Nebraska. As a student he initiated his broadcast career, appearing in a western comedy on KFAB, a Lincoln, Nebraska, radio station. Also at the University of Nebraska, Carson met the first of his

Johnny Carson

many loves—Jodi Wolcott, "The Great Carsoni's" magician's assistant and a native of Western Nebraska.

Wolcott and Carson married in 1949, just after they moved to Omaha where Johnny had taken a broadcasting position at NBC's Nebraska affiliate, WOW. It was the dawn of television, and WOW had just branched out of the radio market to broadcast the region's first television signals. Carson got in early, with an afternoon program called *Squirrel's Nest*. The Carsons had their first child in 1950, but Carson was unwilling to settle down. In 1951, he set out, alone, in the family Oldsmobile, determined to make it big in California.

The journey was a success, and soon the whole clan made the trek, Jodi pregnant for the second time. In Los Angeles, Carson rose rapidly from late night announcer to host of the prime-time *Johnny Carson Show*. That first show was a flop, but it led to another, and by 1962, when Carson took over *The Tonight Show* from Jack Paar, he had already hosted three incarnations of *The Johnny Carson Show*, two game shows, and several short-run broadcasts.

Even as Carson's corn-fed persona gained prominence in national television, his family was disintegrating. He divorced Jodi Wolcott in 1965, endured hostile publication over his reluctance to pay child support for his three boys, and read his mother's dismissive comments about his show business career in *Time* magazine. In the years to come, Carson would have two more divorces and three more wives, but somehow, the image of Johnny Carson, the good Midwestern boy with a mean streak survived, and *The Tonight Show* was a hit.

In 1968, Carson discovered Tiny Tim, a Greenwich Village performer with a ukulele, a falsetto voice, and an odd blend of hippie-left appearance and Barry Goldwater conservatism. Tim and Carson spoke about premarital sex and birth control (Carson was an advocate and Tim an opponent). Tim plugged his album, *God Bless Tiny Tim*, a collection of obscure American pop tunes, and it became one of the year's best sellers. Before long, Tim was a regular on the show. On December 17, 1969, Tiny Tim married Miss Vicky live on *The Tonight Show*. Carson biographer Laurence Leamer called the wedding "the most-watched even in late-night television history."

Meanwhile, Carson perfected his trademark animal skits, bantered in his calculated casual manner with such luminaries as Muhammed Ali, Richard Nixon, Luciano Pavarotti, and Ronald Reagan, and became a fixture in American popular culture. In 1972, *The Tonight Show* moved to beautiful downtown Burbank, California where it was to play for another 20 years; its spartan set of office furniture and indoor plants becoming instantly recognizable to millions of American television viewers. *The Tonight Show* routine, from Ed McMahon's "Here's Johnny!" through Carson's free-wheeling monologue and its selection of short skits and guests became the model for late-night television. *Tonight Show* producers Rudy Tellez described the program's formula as "the bland leading the bland." But, combined with Carson's mildly risqué sense of humor, it consistently worked, facing and defeating competing shows from Dick Cavett, Joey Bishop, Merv Griffin, Alan Thicke, David Brenner, and Joan Rivers.

Johnny Carson became famous as the man who lulled America to sleep at night. When he left the air in May 1992, his reign was undiminished, his persona was untarnished, and as the *Washington Post* put it, "he was late night TV."

The Carter Family

One of the founding acts of modern country music, the Carter Family began recording in the late 1920s and developed a national following that lasted throughout the 1930s and into the 1940s. Among the first stars of hillbilly music, as country was labeled during that era, they created popular versions of traditional folk songs, influencing countless future country and folk artists. Their material included classic songs such as "Wabash Cannonball," and the melodies of their songs were borrowed by other composers—among them Woody Guthrie, who used one of their tunes as the musical basis for "This Land Is Your Land." The group was known for their vocal harmonies, in addition to Maybelle Carter's (1909-1978) innovative guitar technique, in which she used her thumb to pluck out a melody on the bass strings while using her fingers to strum a rhythm accompaniment on the treble strings. Referred to as the "Carter scratch," this unique style of playing transformed the role of the guitar in traditional music ensembles by making it the lead instrument. While the original Carter

The Carter Family, from left: Maybelle, A.P., and Sara.

Family ceased performing and recording in 1943, Maybelle continued her career for several decades, first in a group with her daughters, and later as a solo artist.

Alvin Pleasant (A.P.) Delaney Carter (1891-1960) was a carpenter in his early twenties when he married sixteen-year-old Sara Dougherty (1899-1979) in 1915. The couple lived near Clinch Mountain, in the tiny community of Maces Spring, Virginia, where they provided musical entertainment at a variety of local social gatherings. Sara led the singing with her resonant alto and strummed an autoharp or guitar, while A.P. sang bass. They were occasionally joined in these performances by some of their relatives, including Sara's cousin Maybelle Addington, a talented teenage guitarist and singer who married A.P.'s brother Ezra in 1926. The following year, this trio traveled to Bristol, Tennessee, where a New York talent scout for the RCA Victor label named Ralph Peer was auditioning and recording new artists. On August 1 and 2, the Carters recorded six songs, and a few days later an unknown singer named Jimmie Rodgers also made his first recordings. The Bristol sessions were later recognized as the beginning of the modern country music industry, which grew as the result of the commercial success of these two hillbilly acts and the tremendous effect they had on the artists who followed them.

As sales of the Carters' first recordings increased, Peer made arrangements for a second session that took place in Camden, New Jersey, in the spring of 1928. There the group recorded several songs that became country music standards, such as "Keep on the Sunny Side," which later became their theme, and "Wildwood Flower." As their popularity increased, the Carter Family began touring regularly and continued recording. To sustain their popularity, A.P. sought to supplement their repertoire of rural folk songs with material he gathered on song-hunting trips. On some of these journeys, he was joined by Lesley Riddle, an African-American blues guitarist who may have also influenced Maybelle's innovative guitar style. When the Carter Family recorded songs discovered by A.P., he usually received credit for the arrangement, a common practice that allowed performers to receive publishing royalties for songs they did not actually write. By the time they disbanded in 1943, the Carters had recorded over 300 songs. While some were original compositions, many recordings were derived from the songbooks and sheet music A.P. collected, or traditional oral sources, or in some instances a combination of both. Since many of these folk songs had never been recorded, the versions popularized by the Carter Family served as invaluable documents for music historians and hillbilly enthusiasts alike.

Sara and A.P. were separated in 1933 and divorced six years later, although they maintained a professional relationship for ten years after the separation. Toward the end of the 1930s, she married A.P.'s first cousin, Coy Bayes, and they moved to California. While performing on Texas border radio stations during this period, the Carter Family sometimes included Maybelle's three daughters, Helen, June, and Anita, as well as Sara and A.P.'s children, Gladys, Jeanette, and Joe. After the breakup of the original Carter Family, Sara and A.P. retired from music, while Maybelle started a new group with her daughters. Calling themselves the Carter Sisters and Mother Maybelle, they performed during the 1940s and joined the *Grand Ole Opry* in 1950. Within a few years, the sisters parted ways to pursue different interests. June married country artist Carl Smith in 1952, and a few years later gave birth to Rebecca Carlene Smith (who began performing in the late 1970s as Carlene Carter and was married to British rocker Nick Lowe). In 1961, the year after A.P. Carter's death,

June began singing with Johnny Cash, and the two were married in 1968, after she helped him overcome his drug addiction.

Anita Carter also achieved success as a performer in the 1960s, as did Mother Maybelle, who developed a new following as the result of the folk music revival that began on college campuses toward the end of the 1950s. The autoharp became her primary instrument, and she impressed audiences with her ability to pick out melodies on the strings rather than simply strumming chords. Maybelle performed at the 1963 Newport Folk Festival, and she and Sara reunited a few years later to record an album. In the late 1960s, Maybelle toured with Johnny and June Carter Cash, and she was one of several influential older country and bluegrass artists featured on the Nitty Gritty Dirt Band's 1972 double album *Will the Circle Be Unbroken*. Two years after failing health caused her to stop performing, Maybelle died in October of 1978, three months before Sara's death. The original Carter Family was inducted into the Country Music Hall of Fame in 1970, and they are often called "The First Family of Country Music." In the mid-1990s, Rounder Records released eight compact discs containing all of their RCA Victor recordings. Seventy years after the Carter Family first began recording, their timeless music continued to interest and influence listeners.

Caruso, Enrico (1873-1921)

Enrico Caruso, the quintessential Italian tenor, was the most beloved singer of his day. Critics agreed that he was also probably the best. Known throughout the Western world for his interpretations of operatic roles, he also captured the popular imagination with Neapolitan songs, sentimental period ballads, and that patriotic favorite of World War I, *Over There*, rendered in his unique variant of the English language. The emergence of the phonograph made Caruso an entertainer as well as an artist, and he, perhaps more than anyone else, demonstrated its potential as a creative medium.

Born in Naples near the end of Europe's most placid century, Caruso was one of 18 children of working class parents. At considerable financial sacrifice, he studied voice with Vergine, a noted Neapolitan teacher, who, nevertheless, envisioned for him only a modest future. Singing first in provincial theaters and later with touring companies, Caruso gradually made his way to important opera houses in Monte Carlo, Milan, and London. Though his initial reviews were not always good, audiences responded to him. Despite his increasing girth and a slightly comical stage appearance, his exuberance and dramatic sense well complemented a voice that was

Enrico Caruso

soon being described as "golden." With little formal education, Caruso was a dedicated artist, who continued to refine his theatrical skills and musicianship throughout his life.

By the beginning of the twentieth century, Caruso had developed from a lyric into a dramatic tenor. Brazil, Argentina, Mexico, and Russia, along with Western Europe, clamored for his appearances, but it was the United States that made him a true national hero. First engaged by New York's Metropolitan Opera in 1903, he made this house his home base for the rest of his life. Together with his fellow countryman Arturo Toscanini, he established "the Met" as America's premier company and one of the great opera houses of the world. He performed the full Italian repertoire, distinguishing himself as Canio in *Pagliacci*, the Duke in *Rigoletto*, Radames in *Aida*, and Samson in *Samson et Delila*. He visited synagogues and studied Jewish life in preparation for his role as Eleazar in *La Juive*. But his special love for things American was evident in his odd interpretation of Dick Johnson in Puccini's *La Fanciulla del West*. The composer himself attended the Met opening. With his broad Mediterranean gestures and throaty sobs, Caruso was not entirely convincing as a Wild West outlaw hanged for his crimes, but audiences applauded nevertheless.

Like other Italians successful in the New World, Caruso suffered brushes with New York's Black Hand, which attempted to extort money from him. Rather than comply with their demands, Caruso cooperated with authorities and two gangsters were apprehended. A more embarrassing episode occurred in 1906 when the singer was visiting the Central Park Zoo. A mysterious woman, who later disappeared, accused him of molesting her in the monkey house.

Caruso denied the charge; at the most he was probably demonstrating a Southern Italian mode of admiration for an attractive woman. Despite extensive newspaper coverage, the public soon chose to forget the incident.

Two sons were born from Caruso's long liaison with Ada Giacchetti, an Italian soprano whose earlier marriage prevented a regularization of their union. After deserting him in favor of her chauffeur, Ada caused Caruso further suffering by publicly announcing that she had never loved him. Near the end of his life, the singer finally found domestic happiness in his marriage to Dorothy Park Benjamin, a shy woman 20 years his junior. Formerly relegated to the role of housekeeper and recluse by her wealthy and overbearing father, Dorothy Caruso blossomed as the cherished wife of this demonstrative man. The birth of a daughter, the only thing Dorothy said she could give her husband that he had never had or could not buy, brought further happiness to the last two years of his life.

Caruso's generosity was legendary; he once hired a valet for his own valet. Even rival singers invariably warmed to his personality. They treasured the friendly caricatures he drew of them during rehearsals. John McCormick, the Irish tenor of almost equal acclaim, said: "I never loved any other man so much as Caruso." America and the world richly rewarded its favorite Italian with wealth and affection. But his obsession with honoring his commitments and fear of disappointing his fans probably led to his premature death. Worn out by exhaustion and lung ailments, he died at the age of 48, still in his vocal glory. Headlines in American newspapers sadly announced "The Golden Voice Is Stilled."

When asked what makes a superb singer, Caruso liked to answer: "A big chest, a big mouth, ninety percent memory, ten percent intelligence, lots of hard work and something in the heart." Clearly, he had these requisites in the proper amounts. Henry Pleasants observed that in this singer a beautiful voice and a beautiful nature seemed perfectly united, that his radiance did not originate merely in his throat but in the man himself. Decades after his death, the highest compliment that could be given a tenor was to suggest he might be "the New Caruso." His Victor recordings, available in remastered compact disk format, endure. Finally, the mega-concerts of leading tenors of the 1990s, which blended classical and popular songs, continued to perpetuate the legacy of Caruso in bringing the highest musical artistry to the masses.

—Allene Phy-Olsen

Carver, Raymond (1938-1988)

Raymond Carver's success derived as much from the renewed interest in the short story brought about by the publication of *The Stories of John Cheever* in 1978 and the backlash against 1960s

metafiction as it did from Carver's own genius. Although considered one of the most recognizable and imitated stylists of his time, Carver was in fact one of a growing number of minimalists whose "dirty realism" came to be associated with (and for some demonstrated the shortcomings of) university writing workshops. What chiefly distinguished Carver's stories from the similarly laconic, uninflected, disquietingly detached, and paratactic work of others was his focusing on the marginal lives of generally working-class characters trying, and often failing, to make do. Carver's semi-autobiographical fiction offered an alternative not only to earlier reports of the deaths of author and character alike but to the pursuit of affluence and the extolling of the entrepreneurial spirit during the Reagan years. The triumph achieved in a number of Carver's later stories was more spiritual than material and even then carefully qualified.

Casablanca

The script for *Casablanca* (1942), one of the most successful films of all time, arrived at the Warner Brothers Studio the day after the Japanese attack on Pearl Harbor, December 8, 1941. Timing is just one of the many reasons why this legendary film about patriotism, love, exile, and sabotage is often referred to as the happy result of a series of accidents. If the studio had carried out its original plans to cast Ronald Reagan as Rick Blaine or Ella Fitzgerald as Sam, now

Ingrid Bergman and Humphrey Bogart in a scene from the film *Casablanca*.

infamous lines and lyrics like “Here’s lookin’ at you, kid” and “As Time Goes By” may never have attained the same powerful significance they have had for generations of movie fans. Set in French Morocco during WWII, *Casablanca* was directed by Michael Curtiz and starred Humphrey Bogart, Ingrid Bergman, Paul Henreid, Peter Lorre, Claude Rains, Sydney Greenstreet, and Conrad Veidt. Based loosely on a play entitled *Everybody Comes to Rick’s*, *Casablanca* profiles the life of Rick Blaine (Bogart), an embittered nightclub owner with a broken heart and a checkered past. Blaine is exiled in Casablanca as a result of the Nazi invasion in Europe. His elegant casino/bar, Café Americain, is the unofficial meeting point for war refugees attempting to purchase exit visas on the black market to reach the United States. Rick’s life comes to a halt when his long lost love, Ilsa (Bergman) comes into town in search of exit papers for herself and her husband, famed resistance fighter Victor Laszlo (Henreid).

This comparatively low-budget, romance/adventure film was recognized as a masterpiece from the beginning. *Casablanca* won several Oscars at the 1943 Academy Awards, including Best Picture, Best Director, and Best Writing. The film also received nominations for Best Actor, Best Cinematography, Best Editing, and Best Music of a Dramatic or Comedy Picture. Some critics attribute the timeless freshness of the movie’s dialogue to the fact that nobody working on the film, including the scriptwriters, knew how the film would turn out until the last minute. In spite of the relatively low-budget of the film, playwrights Murray Burnett and Joan Alison were offered the highest fee ever paid for an unproduced play—\$20,000—for *Everybody Comes to Rick’s*.

Filmed almost entirely in the Warner Brothers soundstage in Burbank, *Casablanca* is one of the most popular films of all time. In 1973, a *Los Angeles Times* headline announced that *Casablanca* was ranked as Warner Brothers’ most popular film in fifty years. The runners-up in this public poll were *The Maltese Falcon* (1941), *Who’s Afraid of Virginia Woolf* (1966), *A Streetcar Named Desire* (1951) and *The Treasure of Sierra Madre* (1948). In 1977, the American Film Institute disclosed its list of the best American films of all time before President Carter and a television audience at the John F. Kennedy Center for the Performing Arts. *Casablanca* came in third place, behind *Gone With the Wind* (1939) and *Citizen Kane* (1941).

The film’s director, Michael Curtiz, was born Mihaly Kertesz in Hungary. Curtiz came to Warner Brothers from Austria in 1926, having already made 62 silent pictures, and went on to become one of the studio’s top money-earners. Between the period of 1930 and 1940 alone, he directed 45 talking films ranging in genre from horror to westerns to gangster films. Curtiz’s *Mission to Moscow* (1943) was listed in the FBI’s “Communist Infiltration of the Motion Picture Industry” file as a source of Communistic propaganda. Though Jack Warner defended the film while it was in production in a letter to Ambassador Davies, his later humiliation and fear as a result of making the movie have been attributed to his readiness to turn dozens of employees over to the House Committee on Un-American Activities (HUAC) in 1947.

Given the fact that most Americans resisted the idea of U.S. involvement in the war in Europe at the time during which *Casablanca* was set, Jack Warner has been viewed as having declared war on Germany early, not only with *Casablanca*, but with earlier films like *Confessions of a Nazi Spy* (1939) and *Underground* (1941). Of all the Hollywood moguls at the beginning of the war, Harry and Jack Warner were anti-Nazi at a time when opposition to Hitler was far from common. In July 1934, Warner Brothers became the first studio

to close down operations and leave Germany. MGM, Fox, and Paramount, by contrast, continued to operate in Germany up to 1939. Between the period of 1942 and 1945, Hollywood produced 500 feature films which dealt with war subjects directly and were designed to foster the nation’s support for the Allied war effort.

One of the more popular interpretations of *Casablanca*’s success posits that it is a political movie centered around resistance to fascism. A 1942 *Motion Picture Herald* article portrayed the film as a tribute to the occupied people of France. Its opening night performance in New York was sponsored by the organizations “France Forever” and “Free French War Relief.” A French delegation of Foreign Legionnaires, recently returned from battle, as well as leaders from the DeGaulle movement, marched in a parade from Fifth Avenue to the opening of the film at the Hollywood Theater. The political film interpretation focuses on the anti-fascist aspects of *Casablanca* and places importance on Ingrid Bergman’s character and her relationship to fascism.

According to critic Umberto Eco, writing in “*Casablanca*: Cult Movies and Intertextual Collage,” *Casablanca* can also be seen as a cult object. As such, it possesses the following qualities: it provides its audience with a completed vision of the world which fans can incorporate into their own world; using quotes and trivia from the film as a form of shared expertise, the narrative can be dislocated so that one need only remember a part of it, regardless of its original relationship to the whole film; and the film displays a variety of ideas and does not contain a central philosophy of composition. The cult paradigm revolves around near worship of Bogart’s masculinity and patriarchal discourse and the repetition of key moments in the film’s narrative. *Casablanca* diehards, for example, have elevated the status of the song “As Time Goes By,” a song which references the romantic relationship between Rick and Ilsa, at the expense of other important songs, like “La Marseillais.” What *Casablanca* possesses, Eco argues, is a heavy amount of archetypal appeal which creates a feeling of déjà vu, drawing audiences to the film again and again.

Regardless of how the movie is interpreted, stories of the movie’s making continue to enthrall fans. According to Ingrid Bergman, for example, the movie’s narrative was invented at the same time the movie was shot. Not even Curtiz knew whether Ilsa would end up with Rick or with Victor until far into the shoot. Because of this continual state of improvisation on the set, the scriptwriters conjured up any number of archetypal tropes and threw them into the plot. Some claim that this almost baroque overabundance of stock formulas is the secret to *Casablanca*’s timeless success. Ingrid Bergman, known for her cleanly appearance and objection to wearing makeup, was universally liked on the set of *Casablanca*, by hairdressers and wardrobe people alike. She was patient, easy to work with, and did not demand privileges, though she was not given to forming lasting friendships with any of the people on the set. By contrast, Humphrey Bogart is said to have been obsessive about everything from his love scenes, to the script, to his own personal life. He has been called every name in the book, from “troublemaker” to a “real guy”; Warner Brothers publicist Ezra Goodman once called him “sadistic.” Bogart is said to have been good friends with Claude Rains and Peter Lorre. Lorre and Bogart lived a few blocks from each other in the Hollywood Hills and worked together on two other Bogart movies, *The Maltese Falcon* (1941) and *All Through the Night* (1942).

Popular for nearly six decades, *Casablanca* has reverberated throughout American culture. Aside from numerous songs, book titles, comedy routines, commercials, and magazine advertisements that have made reference to the film over the years, in 1972, Woody

Allen made his own tribute to *Casablanca*, entitled *Play It Again Sam*, in which he wore a trenchcoat like Rick Blaine and repeated the famous “Here’s looking at you, kid” speech in the context of a narrative about sexual difficulties and masculinity. In this scenario, *Casablanca* was recreated as a cult object which references Bogart and his style of masculinity. Bogart’s character is said to have sparked an onslaught on trench coat sales, and the image of him in the coat in the original Warner Brothers poster purportedly launched the movie poster business. In the late 1940s and 1950s, *Casablanca* was an important film on college campuses as cinema began to be viewed as a serious art form. In the 1970s, a string of Rick Blaine-styled bars and cafes began to appear in a variety of cities in the United States with names like Play It Again Sam (Las Vegas), Rick’s Café Americain (Chicago), and Rick’s Place (Cambridge, Massachusetts).

Cash, Johnny (1932—)

Significantly, country music star Johnny Cash’s career coincided with the birth of rock ’n’ roll. Cash’s music reflected the rebellious outlaw spirit of early rock, despite the fact that it did not sound much like the new genre or, for that matter, even like traditional country music. Something that perhaps best sums up his image is a famous picture of Cash, with a guitar slung around his neck and an indignant look on his face giving the middle finger to the camera. As the self-dubbed “Man in Black,” Johnny Cash has evolved from a Nashville outsider into an American icon who did not have to trade his mass popularity for a more mainstream, non-country sound. Despite a number of setbacks, the most prominent of which was a debilitating addiction to pills and numerous visits to jail, Cash has maintained his popularity since releasing his first single in 1955.

Cash was born in Kingsland, Arkansas on February 26, 1932. He grew up in the small Arkansas town of Dyess, a bible-belt town that published Sunday school attendance figures in the weekly newspaper. Cash hated working on the family farm, preferring instead to escape into his own world listening to the Grand ’Ol Opry or its smaller

Johnny Cash

cousin, The Louisiana Hayride. By the age of 12 he was writing his own songs and he also experienced what many claim to be his first setback, perhaps fueling much of his reckless behavior—his brother Jack was killed in a farming accident. In 1950, Cash enlisted in the Air Force during the Korean War. It was during this time that he bought his first guitar, taught himself how to play, and started writing prolifically—one of the songs written during this period was the Johnny Cash standard, “Folsom Prison Blues.” After his time in the Air Force he married Vivian Leberto, moved to Memphis in 1954, and began playing in a trio with guitarist Luther Perkins and bassist Marshall Grant.

Johnny Cash’s first singles were released on Sam Phillips’ legendary Sun Records, the Memphis-based 1950s independent label that also launched the careers of Roy Orbison, Jerry Lee Lewis, Carl Perkins, and Elvis Presley. It was this maverick environment that fostered Cash’s original sound, which was characterized by his primitive rhythm guitar playing and the simple guitar picking of Cash’s early lead guitarist, Luther Perkins. His lyrics overwhelmingly dealt with the darker side of life and were delivered by Cash’s trademark deep baritone voice that sounded like the aural equivalent of the parched, devastated ground of the depression-era mid-west dust bowl. “Folsom Prison Blues” was sung from the perspective of an unrepentant killer and contained the infamous line, “I shot a man in

Reno just to watch him die.” Another prison song, “Give My Love to Rose,” was a heartbreaking love letter to a wife that was left behind when the song’s character was sent to jail. Other early songs like “Rock Island Line,” “Hey Porter,” “Get Rhythm,” and “Luther Played the Boogie” could certainly be characterized as raucous and upbeat, but Cash also had a tendency to write or cover weepers like Jack Clement’s “I Guess Things Happen That Way,” the tragic classic country ballad “Long Black Veil,” or his own “I Still Miss Someone.”

It was not long before Cash cultivated an outsider, outlaw image that was exacerbated by his relatively frequent visits to jail—if only for a day or two—for fighting, drinking, or possessing illegal amphetamines. The frequent concerts he played for prisoners inside jails created an empathy between Cash and those at the margins of society. The fact that he never shed his rural, working-class roots also created a connection with everyday folks. His simple, dark songs influenced a generation of country singer-songwriters that emerged in the early 1960s. They include Willie Nelson, Waylon Jennings, and Merle Haggard. In fact, Haggard became inspired to continue playing music after Cash gave a prison concert where Haggard was serving a two year sentence for armed robbery.

Cash is a heap of contradictions: a devout Christian who is given to serious bouts with drugs and alcohol; a family man who, well into his sixties, spends the majority of the year on the road; and a loving, kindhearted man who has been known to engage in violent and mean-spirited behavior. His life has combined the tragic with the comic as illustrated by a bizarre incident in 1983. During one of his violent spells, he swung a large piece of wood at his eight-foot-tall pet ostrich, which promptly kicked Cash in the chest, breaking three ribs. To ease the pain he had to take painkillers. Cash had already spent time at the Betty Ford clinic to end addiction to painkillers.

Cash’s career has gone through ups and downs. After an initial burst of popularity during the Sun years, which fueled his rise to country music superstardom on Columbia Records, his sales began to decline in the mid-1960s, due partially to the debilitating effects of drugs. During this period, Cash experienced a creative slump he has not quite recovered from. For the most part he stopped writing his own songs and instead began to cover the songs of others. After his Sun period and the early Columbia years, original compositions became more and more infrequent as he focused more on being a performer and an interpreter rather than an originator. Although the stellar music became increasingly infrequent, he still created great music in songs like “Ring of Fire,” “Jackson,” and “Highway Patrolman.” Despite countless albums of filler and trivial theme albums—“Americana,” “Train,” “Gunfighter,” “Indian,” and “True West”—there are still enough nuggets to justify his continued recording career. This is true even in consideration of his lackluster mid-1980s to the early 1990s Mercury Records years. In 1994, however, Cash’s career was reignited again with the release of his critically praised all-acoustic *American Recordings*, produced by Rick Rubin. Rubin’s experience with Tom Petty, RUN-DMC, Red Hot Chili Peppers, The Beastie Boys, and The Cult certainly prepared him for a hit with Cash.

Meaning many things to many people, Cash has been able to maintain a curiously eclectic audience throughout his career. For instance, Johnny Cash was a hero to the southern white working class—what some might call “rednecks”—and college educated northerners alike. He has cultivated an audience of criminals and fundamentalist Christians—working closely, at times, with conservatives like Billy Graham—and has campaigned for the civil rights of

Native Americans. During the late 1960s, he was embraced by the counterculture and played with Bob Dylan on his *Nashville Skyline* album, while at the same time performing for Richard Nixon at the White House—Nixon was not the only president who admired him . . . Cash even received fan mail from then president Jimmy Carter. He has also been celebrated by the middle-American mainstream as a great entertainer, and had a popular network television variety show during the late 1960s and early 1970s called *The Johnny Cash Show*.

During the 1990s, Cash has played both “oldies” concerts for baby boomers and down home family revue-type acts, cracking Southern flavored jokes between songs. During this time, Cash was dismissed as a relic of a long-forgotten age by Nashville insiders who profited from the likes of country music superstars Garth Brooks and Shania Twain. After the release in 1994 of his *American Recordings* album, however, he has been celebrated by a young hip audience as an alternative rock icon and an original punk rocker.

Caspar Milquetoast

Caspar Milquetoast was a comic strip character created by the cartoonist Harold Tucker Webster (1885-1952) for the New York *Herald Tribune* and other newspapers in the late 1920s. The central figure in many of Webster’s witty, urbane, and mildly satirical cartoons during the interwar years was frequently a middle-class professional man who was rather mild-mannered and retiring. The most notable and best known of these was Caspar Milquetoast, self-effacing, obedient to a fault, and, quite literally, scared of his own shadow—the personification of timidity. This character’s manner and richly imagistic surname yielded the epithet “a milquetoast,” still part of the American vernacular although it is unlikely that very many of those who currently use the epithet have any knowledge of its origin.

Cassette Tape

Compact, convenient, and easy to operate, the audio cassette became the most widely used format for magnetic tape and dominated the field for prerecorded and home-recorded music during the 1970s and 1980s. Although superseded by digital players and recorders in the 1990s, the cassette tape remains the dominant form of sound recording worldwide.

Introduced in the 1940s, magnetic tape recording offered important advantages over revolving discs—longer playback time and more durable materials—but its commercial appeal suffered from the difficulties that users experienced in threading the tape through reel-to-reel tape recorders. One solution to this problem was the tape cartridge, which came in either the continuous loop format or the two-spooled cassette, which made it possible to rewind and fast forward with ease. By the 1960s there were several tape cartridge systems under development, including the four-track, continuous-loop cartridge devised by the Lear Company, the Fidelipac system used by radio broadcasters, and the “Casino” cartridge introduced by the RCA company for use in its home audio units. Tape cartridges also were developed for the dictating machines used in business.

In 1962 the Philips Company developed a cassette using tape half as wide as the standard 1/4-inch tape which ran between two reels in a small plastic case. The tape moved half the speed of eight-track tapes, getting a longer playing time but paying the price in terms of its limited fidelity. The Philips compact cassette was introduced in 1963. During the first year on the market, only nine thousand units were sold. Philips did not protect its cassette as a proprietary technology but encouraged other companies to license its use. The company did require all of its users to adhere to its standards, which guaranteed that all cassettes would be compatible. An alliance with several Japanese

manufacturers ensured that there were several cassette players available when the format was introduced for home use in the mid-1960s. The first sold in the United States were made by Panasonic and Norelco. The Norelco Carry-Corder of 1964 was powered by flashlight batteries and weighed in at three pounds. It could record and play back, and came complete with built-in microphone and speaker.

Public response to the compact cassette was very favorable, encouraging more companies to make cassette players. By 1968 about eighty-five different manufacturers had sold more than 2.4 million cassette players worldwide. In that year the cassette business was worth about \$150 million. Because of worldwide adherence to the standards established by the Philips company, the compact cassette was the most widely used format for tape recording by the end of the decade.

The fidelity of the cassette’s playback was inferior compared to phonograph discs and the slower-moving reel-to-reel tape, consequently the serious audiophile could not be persuaded to accept it. The cassette had been conceived as a means of bringing portable sound to the less discriminating user—a tape version of the transistor radio. It was in this role that the cassette made possible two of the most important postwar innovations in talking machines: the portable cassette player or “boombox” and the personal stereo system with headphones, introduced by Sony as the Walkman.

These highly influential machines were based on technological advances in three fields: magnetic tape, batteries, and transistorized circuits. For the first time, high-fidelity stereo sound and high levels of transistorized amplification—capable of pouring out sound at ear-deafening levels, hence the “boombox” name—could be purchased in a compact unit and at a reasonable price. The portable cassette player became one of the great consumer products of the 1970s and 1980s, establishing itself in all corners of the globe. Players were incorporated into radios, alarm clocks, automobile stereos, and even

A cassette tape.

shower units. The ubiquitous cassette made it possible to hear music anywhere.

The personal stereo was developed around the cassette and was intended to be the ultimate in portable sound—so small it could fit into a pocket. The stereo's headphones surrounded the listener in a cocoon of sound, eliminating much of the annoying noise found in urban life but often at the price of damaging the hearing of the listener. Since its introduction in 1979, Sony's Walkman has been copied by countless other manufacturers and can now be found in cassette and digital formats, including compact disc and digital tape.

In the 1990s several digital tape formats were introduced to compete with the audio cassette tape, and the manufacturers and record companies did their best to phase out the elderly technology by ceasing to manufacture both players and prerecorded tapes. Cassette tape was "hisstory" said one advertisement for noise-free digital recording, but consumers were unwilling to desert it. Although no longer a viable format for prerecorded popular music (with the exception of rap and hip-hop), cassette tapes live on in home recording and in automobile use.

Cassidy, David (1950—)

David Cassidy may not have been the first teenage idol, but he was the first to demand control of his life, walking away from the entertainment industry's star-machinery even as it went into overdrive. And when that industry discarded him, Cassidy's resolve to return was more self-fulfilling than the first time around.

Cassidy was born on April 12, 1950, the son of actors Jack Cassidy and Evelyn Ward. His parents divorced when he was three, and David lived with his mother in West Orange, New Jersey. At 11, Cassidy and his mother moved to Los Angeles, and David spent his teen years hanging out in San Francisco's Haight-Ashbury scene, graduating from a private school and pursuing small acting jobs. He moved to New York City in his late teens, working in a textile factory by day and taking acting classes by night, before starring in the 1969 Broadway play, *Fig Leaves Are Falling*. With a stint on Broadway to his name, Cassidy returned to Los Angeles and landed bit parts on popular television shows.

The turning point came in 1969, when the ABC network was casting for the musical comedy series, *The Partridge Family*, which was based loosely upon the late 1960s folk-music family, the Cowsills. David's stepmother, actress Shirley Jones, was cast as the lead. Unbeknownst to Jones, the producers had 19-year-old David read for the part of the good-looking pop-music prodigy Keith Partridge.

Cassidy once claimed that when he was a child, his life was changed forever upon seeing the Beatles on the Ed Sullivan show. But

David Cassidy

that could never have prepared him for the tsunami of publicity generated by the success of *The Partridge Family*. The show was a runaway hit, and Cassidy's visage was pinned up on teenage girls' bedroom walls all over the country. The merchandising of Cassidy remains a blueprint for the careers of all of the teen heartthrobs who followed him. Posters, pins, t-shirts, lunchboxes, and magazine covers proclaimed Cassidy-mania. He used the success of the show to further his rock and roll career, playing to overflowing arena crowds of teenage girls that were so hungry for a piece of their idol that Cassidy had to be smuggled in and out of venues by hiding in laundry trucks or the trunks of sedans.

After years of seven-day weeks running from television tapings to recording studios to tour buses, the 23-year-old singer was starting to feel the burn-out inevitably linked with fame. In a May, 1972, cover story in *Rolling Stone*, Cassidy spoke candidly about his success, bragging about taking drugs and having sex with groupies and—in a moment of career suicide—railing against the pressures of his chosen field.

During a 1974 concert in London, England, a 14-year-old girl died of a heart attack. The rude awakening forced Cassidy to take a long hard look at himself. His response was to retire from live

performances and the television show in order to make a conscious break from teeny-bopper fantasy to serious actor. Not long afterward, *The Partridge Family* slipped in its ratings and was canceled; record contracts were no longer forthcoming, and the window of opportunities available to Cassidy was closing quickly. He was free of the rigors of show business, but industry professionals looked askance at his quick rise-and-fall career.

The actor's personal life was chaotic as well; his father, from whom he had been estranged for nine months, died in a fire in his penthouse apartment. Cassidy was drinking heavily at the time, and found out that he was bankrupt. A 1977 marriage to actress Kay Lenz lasted for four years; a second marriage to horse-breeder Meryl Tanz in 1984 lasted just a year. He entered psychoanalysis soon after his second divorce.

In 1978, Cassidy appeared in a made-for-TV movie, *A Chance to Live*. The success of the movie prompted producers to create a spin-off series titled *David Cassidy: Man Undercover*, which was poorly received. In the late 1970s, he took the lead in a Broadway production of *Joseph and the Amazing Technicolor Dreamcoat* (ironically replacing drug-damaged teen idol Andy Gibb), and later ended up in London's West End theater district as the star of Dave Clarke's play, *Time*. While living in London, Cassidy recorded an album for the Ariola label.

In the 1990s Cassidy devoted his time entirely to acting. In 1993, he appeared with his half-brother Shaun Cassidy (himself a former teen idol turned actor and producer) and British singer Petula Clark in the stage drama *Blood Brothers*. In 1994, he wrote a tell-all memoir about his television exploits entitled *C'mon Get Happy: Fear and Loathing on the Partridge Family Bus*. In 1996, he helped relaunch the MGM Grand Hotel in Las Vegas, appearing in the science-fiction musical variety show *FX*. While most teen idols stay forever trapped in the history books, David Cassidy worked hard to make sure he wasn't trapped by a "sell-by" date like most entertainment commodities.

Castaneda, Carlos (1925-1998)

Little consensus has been reached about Carlos Castaneda, whose books detailing his apprenticeship to the Yaqui Indian shaman Don Juan Matus have sold over eight million copies in 17 languages

and contributed to defining the psychedelic counterculture of the 1960s as well as the New Age movement. Castaneda's anthropological and ethnographic credibility together with his intellectual biography and personal life have been a constant source of puzzlement for critics and colleagues. Castaneda himself contributed to complicate the mystery surrounding his identity by supplying false data about his birth and childhood and by refusing to be photographed, tape recorded, and, until a few years before his death (which was kept secret for more than two months), even interviewed. In spite of (or perhaps thanks to) Castaneda's obsession with anonymity and several blunt critical attacks on his works by anthropologists his international fame has been long-lasting.

Born in Cajamarca, Perú (not in São Paulo, Brazil, as he maintained), Castaneda became a celebrity almost overnight thanks to the publication of *The Teachings of Don Juan: A Yaqui Way of Knowledge* in 1968, when he was still a graduate student at the University of California. In *The Teachings of Don Juan* as well as in nine other books, Castaneda described the spiritual and drug-induced adventures he had with the Yaqui Indian Don Juan, whom he maintained to have met in 1960 while doing research on medicinal plants used by Indians. During the course of the books, the author himself becomes an apprentice shaman, sees giant insects, and learns to fly as part of a spiritual practice that tends to break the hold of ordinary Western perception. Castaneda defined his method of research as "emic," a term that was used in the 1960s to distinguish ethnography that attempted to adopt the native conception of reality from ethnography that relied on the ethnographer's conception of reality ("etic"). Because of several chronological and factual inconsistencies among the books and because Don Juan himself was never found, many scholars agreed that Castaneda's books were not based on ethnographic research and fieldwork, but are works of fiction—products of Castaneda's imagination.

Jay Courtney Fikes pointed out that Castaneda's books "are best interpreted as a manifestation of the American popular culture of the 1960s." The works of Aldous Huxley, Timothy Leary, and Gordon Wasson stirred interest in chemical psychedelics such as LSD and some of the psychedelic plants that Don Juan gave his apprentice Castaneda, such as peyote and psilocybin mushrooms. These psychedelics played an important part of the counterculture of the 1960s as a political symbol of defection from the Establishment. Castaneda's books contained exactly the message that the members of the counterculture wanted to hear: taking drugs was a non-Western form of spirituality. Several episodes in *The Teachings of Don Juan* link taking psychedelic plants to reaching a higher spiritual realm: Don Juan teaches Castaneda to fly under the influence of jimsonweed and to attain magical powers by smoking a blend of psilocybin mushrooms and other plants. Castaneda's books met the demands of a vast audience that was equally disappointed by anthropology as well as by traditional religion.

In the early 1990s, Castaneda decided to become more visible to the public in order to "disseminate Don Juan's ideas." He organized New Age seminars to promote the teaching of Tensegrity, which he described as "the modernized version of some movements called magical passes developed by Indian shamans who lived in Mexico in times prior to the Spanish conquest." Castaneda, who at the time of the seminars was dying of cancer, claimed that "practicing Tensegrity . . . promotes health, vitality, youth and general sense of well-being, [it] helps accumulate the energy necessary to increase awareness and to expand the parameters of perception," in order to go beyond the limitations of ordinary consciousness.

Carlos Castaneda's death was just as mysterious as his life. His adopted son claimed that he died while a virtual prisoner of the cult-like followers of Cleargreen Inc., the group that marketed his works in his late years. Castaneda was described by George Marcus and Michael Fisher in *Anthropology as Cultural Critique: An Experimental Moment in the Human Sciences* as an innovative anthropologist whose books "have served as one of several stimuli for thinking about alternative textual strategies within the tradition of ethnography." However, Jay Courtney Fikes, in *Carlos Castaneda: Academic Opportunism and the Psychedelic Sixties*, called him a careless ethnographer who "didn't try diligently enough to distinguish between what was true and what was false." Others condemned him as a fraud and religious mythmaker for our post-modern era. Definitions are difficult to apply to such an elusive personality. Paradoxically, the best representation of Castaneda can be viewed in the portrait that Richard Oden drew in 1972 and that Castaneda himself half-erased.

Castle, Vernon (1887-1918), and Irene (1893-1969)

Widely admired for their graceful dance routines and smart fashion sensibilities, ballroom dancers Vernon and Irene Castle spurred the national craze for new, jazz-oriented dance styles in the years before World War I. In an age of widespread racism, the Castles helped popularize African-American and Latin-American dances, including the foxtrot and tango, previously considered too sensual for white audiences. With the opening of their own dance school and rooftop night club, the Castles became the darlings of New York City café society. National dancing tours, movie appearances, and a steady stream of magazine and newspaper articles swelled the couple's celebrity status to include increasing numbers of middle class men and women. Often depicted as the most modern of married couples, it was the Castles' successful use of shared leisure activities to strengthen their marriage, as much as their superior dance talents, that made them the most popular dancers of their time.

The Castro

Though the Castro district has been a distinctly defined neighborhood of San Francisco since the 1880s, the district did not gain worldwide fame until the 1970s when it became a mecca for a newly liberated gay community—in effect a west coast equivalent to New York's Christopher Street. It has been said that if San Francisco is America's gay capital, Castro Street is its gay Main Street.

The Castro district had a rebellious reputation from its beginnings: the street was named in 1840 for General Juan Castro, who led the Mexican resistance to white incursions into Northern California. By the 1880s, Eureka Valley, as it was then called, was a bustling working-class neighborhood, populated largely by Irish, German, and Scandinavian immigrants. After World War II, many of the area's residents joined the widespread exodus to the suburbs, leaving empty houses behind them. Coincidentally, post-World War II anti-gay witch hunts resulted in the discharge of hundreds of gay military personnel. Many were discharged in the port of San Francisco, and others were drawn there by the comparatively open and tolerant attitudes to be found there. Low housing prices in the unassuming district around Castro Street attracted many of these migrants, and gay bars began opening quietly in the 1950s. In 1960, the "gayola" scandal erupted in San Francisco when it was discovered that a state alcohol-board official had taken bribes from a gay bar. The scandal resulted in increased police harassment of gay bars but also sparked pleas for tolerance from religious and city officials. It was this reputation for tolerance that drew counterculture youth to San Francisco, culminating in the "Summer of Love" in 1967. Soon, thousands of gay men and lesbians were finding the Castro district an attractive place to live and open businesses, and during the 1970s the Castro thrived as a gay civic center.

The 1970s were heady years for the gay and lesbian community. Tired of the oppressive days of secrecy and silence, gay men created the disco scene where they could gather to the beat of loud music, with bright lights flashing. The new bars in the Castro, with names like Toad Hall and the Elephant Walk, had big glass windows facing the street, a reaction against the shuttered back-street bars of the 1950s. Since the 1960s, more than seventy gay bars have opened in the Castro. Many lesbians disavow the male-dominated Castro, however, with its 70:30 male-to-female population ratio; they claim nearby Valencia Street as the heart of the lesbian community.

Harvey Milk, a grassroots politician who would become the first openly gay man elected to public office in a major city, played a large part in creating the Castro phenomenon. Known as the "Mayor of Castro Street," Milk ran for the San Francisco Board of Supervisors (city council) until he finally won in 1977. With an exceptional gift for coalition politics, Milk forged alliances between gay residents and the local Chinese community as well as with unions such as the Teamsters, building bridges where divisions had existed, and mobilizing the political influence of the thousands of gay men and lesbians in the city. In November of 1978, Milk and San Francisco mayor Dave Moscone were assassinated by a former city employee, Dan White. When the gay community heard the news, a spontaneous outpouring of Milk's supporters took to the streets of the Castro, and thousands

marched there in a silent candlelight procession. Some weeks later, when Dan White was sentenced to only seven years in prison, it was not grief but anger that sent protesters into the streets for the “White Night Riots.” Cars were torched and windows were smashed by rioters; when they dispersed, the police followed them back to the Castro in a rampage of violence that left sixty-one police and 100 protesters hospitalized.

Though the energetic early days of gay liberation are over, and notwithstanding the heavy toll taken by the AIDS epidemic of the 1980s, the Castro is still a center of gay life in San Francisco, and famous the world over. The district is renowned for its street festivals, such as Gay Pride and the Castro Street Fair. The best-known party, the Halloween bash, was moved in 1996 to the civic center at the request of Castro merchants, who complained of rowdiness and vandalism. The district has only half as many people of color as the city at large, and the median age of residents is around thirty.

A walk down Castro Street in the 1990s still shows it to be very gay identified, with gay symbols, such as the pink triangle and the rainbow flag, adorning many stores and houses. Shops containing everything from men’s haute couture fashions to leather-fetish dog collars and leashes attract both residents and tourists. Whether it is called a gay ghetto or a gay capitol, the Castro is clearly a political entity to the city of San Francisco and a symbol of liberation for the world.

Casual Friday

Casual Friday, also called Dress Down Day, Casual Dress Day, and Business Casual Day, is a loosening of the business world’s unwritten dress codes on designated days. Employees trade suits, ties, high heels, silk shirts, scarves, and other formal business attire for slacks, sports coats, polo shirts, pressed jeans, loafers, knit tunics, and flat-heeled shoes. Casual days arose in the mid-1980s influenced by the jeans-T-shirt-sneakers uniform of the computer industry, as well as increased numbers of women in the workplace and work-at-home employees. The concept caught on in the early 1990s and, fueled partly by Levi Strauss’s marketing, by the mid-1990s had become a corporate institution. By the late 1990s, employees below middle management in one third of U.S. companies had gone casual five days a week, according to an Evans Research Associates survey.

Catalog Houses

Beginning with the first mail order catalog in the 1890s, people have turned pages to weave together images of the perfect home or the ideal wardrobe. From about 1900 through 1940, hundreds of thousands of customers also selected their most important purchase, a house, from a catalog. Catalog houses were essentially do-it-yourself homebuilding kits. When a customer ordered a house through a catalog, he or she received all of the parts, usually cut to length and numbered for proper assembly, to build the selected home. In the first half of the twentieth century, catalog houses helped meet a demand for well-built, reasonably priced houses in America’s expanding cities and suburbs.

Although pattern books and house plans had been widely available throughout the mid-nineteenth century, catalog housing did not begin in earnest until the early twentieth century with the founding of the Aladdin Company in 1907. One of the longest-lived catalog housing companies, Aladdin remained in business through 1983. Robert Schweitzer and Michael W. R. Davis in *America’s Favorite Houses*, a survey of catalog house companies, estimated that the Aladdin Company sold 50,000 houses during its 76-year history.

Aladdin was soon joined by a number of national and regional companies, including Gordon Van-Tine, Lewis Manufacturing Company, Sterling Homes, and Montgomery Ward. Probably the best known producer of mail order and catalog homes was Sears, Roebuck & Company, which sold homes through its Modern Homes catalog from 1908 until 1940. In addition to these national companies, a variety of regional and local companies also sold catalog houses.

A variety of factors contributed to the success of the companies that sold houses through the mail. In the early decades of the twentieth century, American cities were growing rapidly, due both to increased foreign immigration and to migration from rural areas. According to Schweitzer and Davis, the population of the United States increased by 50 percent from 1890 to 1910. Much of this growth was in American cities. As a result, there was a great demand for affordable, well built houses. Catalog housing helped to meet this need.

In addition to the growth of urban areas, technological advances made catalog houses possible. Steam-powered lumber mills made

lumber available year round, and the national railroad system enabled building parts to be readily transported. This allowed the catalog house companies both to create a nationwide system of suppliers and made it possible to easily ship house components and other goods. Sears owned lumber mills in Illinois and Louisiana, and a millwork plant in Norwood, Ohio.

The catalog house companies did their utmost to insure that their houses were ready to assemble. One of the innovations introduced by Aladdin in 1911 and quickly adopted by other manufacturers were parts that were "Readi-cut." More than an advertising slogan, the concept of lumber that was, as Sears called it, "already cut and fitted," meant that the structural components were precut to exact lengths and ready for assembly. The benefits of this were many: The do-it-yourselfer or contractor building the house did not have to spend time on the job cutting the lumber to fit; it reduced wasted materials and construction mistakes; and, in an age before power tools, it simplified house building.

Part of the fascination with catalog houses in the late twentieth century is how inexpensive they seem. In 1926 it was possible to buy a six-room house from Sears for as little as \$2,232. This price included all of the lumber needed to construct the house, together with the shingles, millwork, flooring, plaster, windows, doors, hardware (including nails), the siding and enough paint for three coats. It did not include the cost of the lot nor the labor required to build the house, nor did it include any masonry such as concrete for the foundation. If the house came from Sears, plumbing, heating, wiring, and storm and screen doors and windows were not part of the original package, but could, of course, be purchased from Sears at extra cost. The buyer of a catalog house also received a full set of blue prints and a complete construction manual.

One of the common elements of catalog houses was their design. Catalogs from Sears, Roebuck & Co., Ray H. Bennett Lumber Company, the Radford Architectural Company, and Gordon Van-Tine show houses that seem nearly interchangeable. Bungalows, American Four-Squares, and Colonial Revival designs dominate. Sears regularly reviewed the design of its houses and introduced new models and updated the more popular designs. A small four-room cottage, the Rodessa, was available in 11 catalogs, between 1919 and 1933. The floor plan remained basically the same over the years although details changed.

Sears had several sources for its house designs. The company often bought designs for houses that had already been built and were well received by the public. Sears also purchased designs from popular magazines and reproduced those houses exactly. Beginning in 1919, the company created its own in-house architectural division that developed original house designs and adapted other contemporary designs for sale by Sears. The Architects' Council, as it was called, became a selling point for Sears, which promoted the "free" architectural service provided to buyers of Sears' houses.

Apart from reflecting the growth of city and suburb and the growth of a mass market for housing, catalog houses were designed to meet changing concepts of house and home. New materials, such as linoleum, and laborsaving devices such as vacuum cleaners and electric irons, made houses easier to manage. This reduced the need for servants, which meant that houses could be smaller. At the same time, lifestyles became less formal. The catalog house plans reflected these changes, often eliminating entry vestibules and formal parlors. The catalogs helped to reinforce and promote the interest in smaller houses and less formal living spaces through their pages. Similar ideas were promoted by popular magazines, such as *Ladies' Home*

Journal, which sold house plans designed by Frank Lloyd Wright and others, and organizations such as the American Institute of Architects, which created the Small House Service Bureau, known as the ASHB in 1919.

Advertising played an important role in the success of mail order housing companies. The most effective tool used was annual catalogs. The catalogs not only advertised the range of models available but promoted the value of home ownership over paying rent, and provided the potential customer with testimonials and guarantees promoting the quality of houses offered by each manufacturer.

The guarantees provided by the catalog firms were one of the most effective tools used to promote their products. Sears provided a written "Certificate of Guarantee" with each house; the guarantee promised that sufficient materials of good quality would be received to complete the house. Other companies offered similar guarantees of quality and satisfaction; Aladdin, for example, promoted its lumber to be "knot-free" by offering consumers a "Dollar-a-knot" guarantee. Liberty offered its customers an "iron-clad guarantee," while Lewis had a seven-point protection plan.

In addition to their catalogs, the mail-order house companies advertised in popular magazines, including the *Saturday Evening Post*, *Collier's*, and *House Beautiful*. Early in their history, the ads were small and placed in the back pages of magazines; the emphasis was to promote confidence in the products in order to develop a market. The ads emphasized the cost savings, sound quality, and fast delivery. Later ads were much larger and often consisted of a one- or two-page spread emphasizing that the homes sold were both stylish and well built.

Each of the catalog housing companies had their own philosophy about providing financing. Sears first provided financing for its houses in 1911. At first loans were for the house only; by 1918, however, Sears began advancing capital for the labor required to build the house. Eventually, Sears also loaned buyers the money to pay for the lot and additional material. Other companies selling houses through the mail were more conservative. Aladdin never provided financing and required a 25 percent deposit at the time the order was placed, with the balance due upon delivery. Sterling offered a 2 percent discount for customers paying in cash, as did Gordon-Van Tine.

Sears vigorously promoted its easy payment plan throughout its catalogs. The 1926 catalog includes an advertisement that assures the reader that "a home of your own does not cost you any more than your present mode of living. Instead of paying monthly rental, by our Easy Payment Plan you may have . . . a beautiful home instead of worthless rent receipts." And, in the event that the reader missed the two-page layout promoting Sears' financing plan, each catalog page illustrating a house plan included a reminder of the availability of the "easy payment plan."

Just as a combination of conditions led to the initial success of catalog houses, a number of factors contributed to their demise. The company's liberal financing policies are often cited as a contributing factor in the death of Sears' Modern Homes program. During the depression of the 1930s, the company was forced to foreclose on thousands of mortgages worth more than \$11 million, and lost additional money by reselling the houses below cost.

After World War II, social policy and technology passed by catalog housing. There was no longer a niche for people who wanted to build their own houses. The returning veterans and their brides were anxious to return to normal lives, and they no longer had the time or inclination to build their own houses. However, they did have the

wherewithal to buy houses built by others. Subdivisions of builder-constructed housing, beginning with Levittown, sprang up across the country to meet this need. The builders of postwar housing capitalized on the great demand by adapting Henry Ford's assembly line principles to home construction. The desire for houses that were well built disappeared in the need for houses that were quickly built.

Catch-22

Hailed as “a classic of our era,” “an apocalyptic masterpiece,” and the best war story ever told, Joseph Heller’s blockbuster first novel, *Catch-22* (1961), not only exposed the hypocrisy of the military, but it also introduced a catchphrase to describe the illogic inherent in all bureaucracies, from education to religion, into the popular lexicon. The “Catch-22” of the novel’s title is a perverse, protean principle that covers any absurd situation; it is the unwritten loophole in every written law, a frustratingly elliptical paradox that defies solution. As Heller demonstrates in his novel, *Catch-22* has many clauses, the most memorable of which allows only crazy men to be excused from flying the life-threatening missions ordered by their military superiors. To be excused from flying, a man needs only to ask for release; but by asking, he proves that he is sane and therefore he must continue flying. “That’s some catch,” observes one of the flyers. “It’s the best there is,” concurs Doc Daneeka.

Heller drew deeply on his personal experiences in the writing of his novel, especially in his depiction of the central character, Yossarian, a flyer who refuses any longer to be part of a system so utterly hostile to his own values. Like Yossarian, Heller served in the Mediterranean during the later years of World War II, was part of a squadron that lost a plane over Ferrara, enjoyed the varied pleasures that Rome had to offer, and was decorated for his wartime service. And like Yossarian, Heller passionately strove to become an *ex-flyer*. (After one of his missions, in fact, Heller’s fear of flight became so intense that, when the war ended, he took a ship home and refused to fly again for 15 years afterward.)

Although critics usually refer to *Catch-22* as a war novel, the war itself—apart from creating the community within which Yossarian operates—plays a relatively small part in the book. While the military establishment comprises an entire society, self-contained and absolute, against which Yossarian rebels, it is merely a microcosm of the

Martin Balsam in a scene from the film *Catch-22*.

larger American society and a symbol for all other repressive organizations. In the novel, there is little ideological debate about the conflict between Germany and the United States or about definitions of patriotism. Heller, in fact, deliberately sets *Catch-22* in the final months of the war, during which Hitler is no longer a significant threat and the action is winding down. The missions required of the flyers have no military or strategic importance except among the administrators, each of whom wants to come out of the war ahead. Inversely, however, the danger to Yossarian from his superiors intensifies as the war draws to a close. Yossarian wisely realizes that the enemy is “anybody who’s going to get you killed, no matter *which* side he’s on.” And Heller surrounds Yossarian with many such enemies—from generals Dreedle and Peckem, who wage war on each other and neglect the men under their command; to Colonel Scheisskopf—literally the Shithead in charge—who is so fanatic about military precision that he considers implanting metal alloys in his men’s thighbones to force them to march straighter; to Colonel Cathcart, obsessed with getting good aerial photos and with making the cover of the *Saturday Evening Post*, who keeps raising the number of requisite flights; and Colonel Korn, who is so concerned that men might actually learn something at their educational sessions that he implements a new rule: only those who never ask questions will be allowed to do so. Entrepreneur extraordinaire and legendary double-dealer Milo Minderbinder is a new age prophet of profit: he steals and resells the morphine from flight packs and leaves instead notes for the wounded soldiers that what is good for business is actually good for them as well. (To prove his point, he notes that even the dead men

have a share in his “syndicate.”) Captain Black insists that everyone “voluntarily” sign his Glorious Loyalty Oath, except his nemesis, who will not be allowed to sign “even if he wants to.” And Nately’s whore, out to avenge her lover’s death, persists in trying to kill the innocent Yossarian. (In Heller’s logically illogical world, the whore is symbolic of the universal principle that Yossarian will always be unjustly beset upon—and will probably always deserve it.)

Yossarian’s increasingly dramatic acts of insubordination against such an irrational system begin with his self-hospitalizations, where he meets the ultimate symbol of the bureaucracy’s indifference to the individual: the soldier in white, a faceless, nameless symbol of imminent death. After his friend Snowden’s death, Yossarian’s insubordination escalates to his refusal to fly or wear a uniform again, and it ends with his decision not to compromise but instead to emulate his comrade Orr’s impossible achievement and to affirm life by rowing a small boat to Sweden.

In the film adaptation of *Catch-22* (1970), by focusing incrementally—as Heller did—on the Avignon incident during which Snowden literally loses his guts and Yossarian metaphorically loses his, director Mike Nichols succeeds in recreating the novel’s circularity and its deliberately repetitive structure. By downplaying much of the novel’s truculent satire of American capitalism, however, Nichols is able to concentrate on the traumatizing fear of death, a reality Yossarian (Alan Arkin) cannot face until he re-imagines it through the death of Snowden (Jon Korkes). Nichols also reformulates the well-intentioned capitalistic Milo Minderbinder; played by baby-faced Jon Voight, the film’s Milo is a callous and sinister destroyer of youth, every bit as corrupt as his superior officers, the colonels Korn (Buck Henry) and Cathcart (Martin Balsam). Balancing the cynicism of the selfish officers is the affecting naïveté of their victims, including the earnest Chaplain Tappman (Anthony Perkins), the innocent Nately (Art Garfunkel), and the perpetually bewildered Major Major (Bob Newhart).

An even more effective balance is the one Nichols strikes between noise and silence: in sharp contrast to the busy confusion of some of the film’s episodes, which aptly reflect the noisy chatter of the novel and the jumble of word games Heller plays, there are subtle moments of silence. The opening scene, for instance, begins in blackness, without words or music; then there appears a tranquil image of approaching dawn, replaced suddenly with the loud roar of plane engines being engaged. It is as if the viewer is seeing the scene through Yossarian’s eyes, moving with him from a dream state to the waking nightmare (one of the film’s recurring motifs) of his reality. Replete with inside jokes linking it to the Vietnam War (Cathcart’s defecating in front of Chaplain Tappman, for instance, recalls LBJ’s habit of talking to his aides while sitting on the toilet), Nichols’ film adaptation of *Catch-22* is thus an interesting and original work as well as a noteworthy reinterpretation of Heller’s classic novel.

The Catcher in the Rye

The Catcher in the Rye, the only novel of the reclusive J. D. Salinger, is the story of Holden Caulfield, a sixteen-year-old boy who has been dismissed from Pencey Prep, the third time he has failed to meet the standards of a private school. He delays the inevitable confrontation with his parents by running away for a forty-eight hour “vacation” in New York City. A series of encounters with places and people in the city serves to further disillusion Holden and reinforce his conviction that the world is full of phonies. He plans to escape by going West and living alone, but even his little sister Phoebe, the only person with whom Holden can communicate, realizes that her brother is incapable of taking care of himself. When Phoebe reveals her plan to go with him, Holden accepts the futility of his escape plan and goes home.

A focus of controversy since its publication in 1951, *The Catcher in the Rye* has consistently appeared on lists of banned books. The American Library Association’s survey of books censored from 1986 to 1995 found that Salinger’s novel frequently topped the list. Just as consistently, however, the novel has appeared on required reading lists for high school and college students. Critical views of *The Catcher in the Rye* show the same polarization. Some critics have praised its honesty and idiomatic language; others have faulted its self-absorbed hero and unbalanced view of society. Holden Caulfield has been called a twentieth-century Huck Finn, an autobiographical neurotic, an American classic, and a self-destructive nut.

Through the decades, as the controversy has ebbed and flowed, *The Catcher in the Rye* has remained a favorite with adolescent readers who see their own experience reflected in Holden Caulfield’s contempt for the “phoniness” of adult life. The very qualities that lead some parents and other authorities to condemn Salinger’s novel—the profanity, the cynicism, the preoccupation with sex—predispose youthful readers to champion it. In Holden, adolescents see the eternal outsider, sickened by the world around him, unable to communicate the emotions that consume him, and aware that his innocence has been irretrievably lost. It is a familiar image to many adolescents. Arthur Heiserman and James E. Miller, Jr., in an early essay on *The Catcher in the Rye* observed that Holden Caulfield is unique among American literary heroes because he both needs to return home and needs to leave home. But these conflicting needs, while they may be unique in an American hero, are typical of adolescents struggling to achieve a separate identity. Holden may be faulted for his self-absorption, but in his consciousness of self, as in his angst, the character is true to adolescent experience.

Even the obscenities and profanities that Holden speaks, a major cause of official objections to the novel, affirm his status as quintessential adolescent. He sees obscene speech as the only valid

response to the obscene hypocrisies of the profane adult world. The irony, of course, is that Holden himself has already been contaminated by the world he despises. The child of affluent parents, he clearly enjoys the benefits their “phony” world affords him. He spends money on taxi rides and nightclub visits, and even as he condemns lies and fakery, he himself lies and participates in the fakery. He is acquiring the survival skills that will allow him to operate in the fallen adult world, a fact he himself acknowledges: “If you want to stay alive, you have to say that stuff.”

Critics often classify *The Catcher in the Rye* as a quest story, but Holden’s quest, if such it be, is aimless and incomplete. Holden’s New York misadventures occur during the Christmas season, a time when Christendom celebrates the birth of a child who became a savior. But the Holy Child has no place in this world where the cross that symbolizes his sacrifice has become merely a prop carried by actors on a Radio City stage. A self-proclaimed atheist, Holden inhabits a world where true transcendence can never be achieved. Yet longing for a heroic role, he dreams of being the “catcher in the rye,” of saving “thousands of little kids” from plunging over the cliff into the abyss of adulthood. Ultimately, however, as he comes to realize while watching his little sister Phoebe circling on the carousel in Central Park, children cannot be saved from adulthood. Only the dead like his younger brother Allie are safe. Heroes belong in coherent worlds of shared values and meaningful connections; Holden’s world is the waste land, all fragments and dead ends. Would-be heroes like Holden are “crazy mixed-up kids” who end up in California institutions.

The Catcher in the Rye is most frequently compared to Mark Twain’s *The Adventures of Huckleberry Finn*, another account of an adolescent male’s escape from the confinement of education and civilization. The similarities between the two novels are obvious. The narrator/protagonist in each is a teenage boy who repudiates adult hypocrisies and runs away in search of a less flawed world; both youthful protagonists speak in richly idiomatic language, and both are comic figures whose humor sometimes offers grim truths. But Huck’s longing for freedom is undiluted by dreams of saving others, and Huck’s world has a duality that Holden’s slick society lacks. For Huck, the corruptions on land are balanced by the “free and easy” life on the raft. Huck has the Mississippi; Holden has a duck pond. Huck’s abusive father is balanced by the tenderness and concern of Jim; Holden’s father is irrelevant, a disembodied payer of bills. Other adult figures who have the potential to nurture Holden through his crisis are mere passing images like the nuns to whom he gives money or phony betrayers like Mr. Antolini who seems to offer Holden compassion and understanding only to make sexual advances to him later. His peers offer Holden no more than do the adults. They too are phonies, like the pseudo-sophisticated Carl Luce and Sally Hayes, or absent, idealized objects like Jane Gallagher.

Nowhere is Holden more clearly a creature of his time than in his inability to connect, to communicate. *The Catcher in the Rye* is filled with aborted acts of communication—truncated conversations, failed telephone calls, an unconsummated sexual encounter. Most of the things which awaken a sense of connection in Holden are no longer part of the actual world. The precocious Allie who copies Emily Dickinson poems on his baseball glove, the museum mummy, even Ring Lardner and Thomas Hardy, the writers Holden admires and imagines that he would like to call up and talk to—all are dead. In a particularly revealing moment Holden fantasizes life as a deaf-mute,

a life that would free him from “useless conversation with any body” and force everyone to leave him alone. Yet this fantasy indicates Holden’s lack of self-knowledge, for his isolation would be an act, his deaf-muteness a pretense. He defines alienation as a job in a service station and a beautiful, deaf-mute wife to share his life. Therein lies the pathos of Holden Caulfield. He can neither commit to the inner world and its truths nor celebrate the genuine that exists amid the phoniness of the public world. *The Catcher in the Rye*, for all its strength, fails as a coming of age story precisely because its protagonist, who is terrified of change, never changes. Mark Twain’s Huck Finn sets out for the territory and freedom, James Joyce’s Stephen Dedalus experiences his epiphany, T. S. Eliot’s Fisher King hears the message of the thunder. J. D. Salinger’s Holden Caulfield can only, as he himself says at the novel’s end, “miss everybody.”

Cather, Willa (1873-1947)

Willa Cather, variously perceived by critics as realistic, regionalist, or sentimental, as well as an unusual literary stylist of unhurried elegance, memorably exploited themes long regarded as part of the American mythos. She wrote 12 novels and over 60 short stories, contrasting nature’s wilderness with the social veneer of her characters, and achieved critical and popular acclaim for works such as *O Pioneers!* (1913) and *My Antonia* (1918), which depict the Nebraska frontier, and, most famously and enduringly perhaps, her “Santa Fe” novel, *Death Comes for the Archbishop* (1927), which treats the history of the Southwest after the Mexican War. According to Susan Rosowski, Cather “saw herself as the first of a new literary tradition, yet one which evolved out of the past and from native traditions rather than in revolt against them.” Novels like *O Pioneers!*, *The Song of the Lark* (1915), and *My Antonia* favor cultural diversity as embodied in the experiences of immigrant settlers, and showcase the strength of their heroic female characters Alexandra Bergson, Antonia Shimerda,

and Thea Kronborg, respectively. Cather's work also affirms appreciation for a simpler era when America espoused spiritual ideals. In the 1920s, in novels such as *One of Ours* (1922), *A Lost Lady* (1923), and *The Professor's House* (1925), she indicted a society that had rejected revered traditional values to embrace materialism. Her last novels—*Shadows on the Rock* (1931) and *Sapphira and the Slave Girl* (1940)—reflect the writer's retreat to a past further removed from her own time, when order, stability, and noble principles governed human life. Born in Virginia and educated at the University of Nebraska, Cather wrote poetry, and spent six years as a journalist with *McClure's* magazine before devoting her life full-time to fiction. She spent 40 years until her death living in New York with her devoted companion Edith Lewis.

Cathy

The comic strip *Cathy*, by American artist and writer Cathy Guisewite, addresses the insecurities and desires of a new generation of women trying to balance traditional pressures with the responsibility of careers and other personal freedoms. Premiering in November of 1976, *Cathy* introduced a character struggling with a mother urging marriage and children, a demanding boss, a noncommittal boyfriend, and a loathing for her figure. Although Guisewite was instrumental in bringing women's issues to the daily comics, *Cathy* also has its detractors who long for a less scattered, more self-confident female character. Nevertheless, *Cathy* has grown to syndication in more than 1,400 newspapers and has spawned books, television specials, and a line of merchandise.

Cats

By the end of the twentieth century, *Cats* had lived up to its billing of "Now and Forever," as it became the longest-running

Andrew Lloyd Webber musical in both London and New York. The tuneful score, inspired by T.S. Eliot's *Old Possum's Book of Practical Cats*, includes songs in a wide variety of styles. John Napier's elaborate set transforms the entire theater into a garbage dump upon which the feline cast learn which one of them will gain an extra life at the Jellicle Ball. Various cats tell their tales through song, but the winner is Grizabella, the glamour cat who became an outcast. Grizabella's number, "Memory," is one of Lloyd Webber's most famous songs; by 1992, it had been recorded in no fewer than 150 different versions. *Cats* opened in London in 1981 and in New York the following year. The innovative costumes and choreography coupled with the eclectic musical score which culminates in "Memory" account for its continued popularity. A video version of *Cats*, filmed during a London performance, was released in 1998.

Cavett, Dick (1936—)

"Sophisticated," "witty," "urbane," "intelligent," and "literate" are among the adjectives commonly used to describe Dick Cavett, the Nebraska-born talk show host who experienced fame during a relatively brief period of his early career and professional struggle thereafter. *The Dick Cavett Show* was seen five nights a week for seven years on ABC-TV from 1968 until 1975 and then once weekly on Public Television until 1982. Cavett won three Emmy awards during these years. His interviews with such individuals as Lawrence Olivier, Katharine Hepburn, Noel Coward, Orson Welles, Groucho Marx, and Alfred Hitchcock are classics in the field, as Cavett's lively mind allowed a degree of candor and spontaneity generally lacking in the attempts of less gifted colleagues. For many viewers, his show was the saving grace of commercial television and a good reason to stay up late.

A Yale graduate, Cavett began his career as an actor and standup comic without great success. While working as a copy boy for *Time* magazine in 1960, he decided to try his hand at comedy writing. Since Jack Paar was one of his early idols as a performer, he wrote a series of jokes designed for Paar's opening monologue on the *Tonight Show* and finagled a plan to deliver the jokes directly to Paar. The plan succeeded, Paar liked the jokes, and Cavett landed a job writing for the show. From the Paar show, he got his first chance as a talk-show host on morning television and soon moved on to his spot opposite Johnny Carson (Paar's successor) on ABC.

After the Cavett show's demise, its host found various other venues but never again reached the same level of visibility. An attempted variety show series predictably fell flat, as scripted sketches were not Cavett's metier. Through the years since 1982, he has

The cast of *Cats*.

hosted numerous talk shows on cable stations including Showtime and CNBC, taken cameo roles in the theater, and narrated a PBS series on Japan. His gift for conversation keeps him popular on the lecture circuit, and his clear, uninflected Midwestern diction makes him an ideal candidate for commercial voice-overs. In short, Cavett has kept relatively busy, but his varied activities go mostly unnoticed by the general public.

Cavett's name came into the news in 1997 when he was sued for breach of contract over a syndicated radio talk show he was scheduled to host. He left the show after two weeks, and word went out through his lawyer that Cavett's premature departure was due to a manic-depressive episode. The civil suit was eventually dismissed.

Prior to this turn of events, Cavett had been relatively open about his chronic suffering with depression, even going on record about his successful treatment with controversial electroconvulsive (otherwise known as "shock") therapy. As a spokesperson on psychiatric illness, Cavett, like William Styron, Art Buchwald, and others, has put his verbal skills to use in articulating his experiences with the disease that has plagued him intermittently throughout his career. He recalls, for

instance, in an interview for *People* magazine, a time before his "big break" when he was living alone in New York City, and "I did nothing but watch Jack Paar on *The Tonight Show*. I lived for the Paar show. I watched it from my bed on my little black-and-white set on my dresser, and I'd think, 'I'll brush my teeth in a minute,' and then I'd go to sleep and wake up at three the following afternoon." It is ironic that this brilliant conversationalist, the life of a sophisticated nightly party, would once again enter the public eye by virtue of his melancholia.

CB Radio

The Citizens Band Radio, familiarly known as the CB, was a device that enabled free mobile communication up to a ten mile radius for those who owned the requisite microphone, speaker, and control box. Although the Federal Communications Commission (FCC) first introduced it in 1947, the CB did not experience its heyday until 30 years later, when hundreds of thousands of automobile and tractor trailer drivers installed them in their vehicles.

In order to popularize the device among individuals for their personal use, the FCC, in 1958, opened up part of the broadcasting spectrum originally reserved for ham radio operators. This Class D band enabled the manufacture of higher quality, less expensive CB sets that were useful and affordable to ordinary people. By 1959 the average set cost between \$150 and \$200, but there were only 49,000 users licensed with the FCC. From 1967 to 1973, the FCC registered about 800,000 licensees. Although one did not need to obtain a license to operate a CB radio, the number of licensees shot up dramatically from 1973 to the end of the decade, when more than 500,000 people were applying for licenses each month in direct response to cultural shifts at the time. The Vietnam War had ended with America less than victorious; the Watergate scandal rocked the Nixon White House; and

the oil crisis from 1973 to 1974 led to a capping of national speed limits at 55 miles per hour. The CB afforded people—many of whom were distressed by recent governmental decisions—an opportunity to create their own communities over the airwaves.

The CB, as a “voice of the people” and the fastest growing communications medium since the telephone, rekindled a sense of camaraderie during an era when people felt oppressed by a seemingly monolithic federal government and looming corporate control. Although manufacturers encouraged people to use CBs for emergency purposes (broadcasting on channel 9) or to relieve the stress and boredom of long automobile trips, the CB transcended these practical functions and became a tool of empowerment, enabling each person to be his or her own broadcaster on the 40 channels of airwaves.

Like all small communities, CB culture developed its own language and sensibility. People liked these devices because they could use them to evade the law by communicating with drivers up ahead to find out the location of speed traps and police. They also liked the CB because it allowed for mobility, anonymity, and a chance to invent oneself. For example, instead of using proper names, CBers (or “ratchet-jaws,” as users called themselves) had “handles”—nicknames they would use while on air. They also utilized a very colorful vocabulary, which included words like “Smokey” for police (so named because of their Smokey Bear-type hats), “Kodiaks with

Kodaks” for police using radar, “negatory” for “no,” “10-4” for message received, and “let the hammer down” for speeding. Broadcast sign-offs were equally baroque: people would not just say good-bye, but rather phrases such as, “Keep your nose between the ditches and the Smokeys off your britches.”

An essential component of the growing CB popularity was the acknowledgment and celebration of a “trucker culture,” summed up by the ubiquitous phrase of the time, “Keep on Truckin’.” Tractor trailer drivers had been using these radios to communicate among themselves over the long haul for decades, and in 1973, the CB was an integral device that enabled truckers to organize strike activities. Soon after, ordinary people began to identify with the trucker, who represented a freedom, heroism, and rugged individualism on the open road. But this trucker culture was not just confined to the roadways and airwaves. It also appeared as a recurring theme in the popular media. “Convoy,” by C.W. McCall, was a novelty song about a trucker named “Rubber Duck” who leads a speeding pack of trucks across the country, avoiding police along the way; it hit number one on the Billboard chart in 1976. “Six Days on the Road” was another trucker-inspired song. The film industry also became enamored of truckers and their CBs: *Smokey and the Bandit*, a film directed by Hal Needham and starring Burt Reynolds and Sally Field, came out in 1977, and in that same year Jonathan Demme directed *Handle with Care*, another trucker film. In 1978 the song “Convoy” was made into a film with the same title, directed by Sam Peckinpah and starring Kris Kristofferson and Ali McGraw. And television enjoyed *BJ and the Bear* during this same period.

While the American public’s love affair with the CB radio and truckers did not last long—the glamour and glitz of the 1980s made truckers seem backward and unhip—it did have lasting repercussions that made people more accepting of new communications technology. Cellular phones and the Internet were just two examples of the continuation of the CB sensibility. Cellular phones offered a portable means of communication that people could use in their cars for ordinary needs and for emergencies. Internet chatrooms, while not offering mobility, did offer a sense of anonymity and group camaraderie and membership. The CB was the first technology that truly offered Americans their contradictory wishes of being part of a solidified group while their personae remained wholly anonymous if not entirely fabricated.

The CBS Radio Mystery Theater

Premiering on January 6, 1974, the *CBS Radio Mystery Theater* was a notable attempt to revive the tradition of radio thrillers like *Suspense* (1942-1962) and *Inner Sanctum Mysteries* (1941-52). Created by *Inner Sanctum* producer Himan Brown, the *CBS Radio*

Mystery Theater featured many voices from the golden age of radio, including Agnes Moorehead, Les Tremayne, Santos Ortega, Bret Morrison, and Mercedes McCambridge. E. G. Marshall was its first host. The series ended on December 31, 1982.

—Christian L. Pyle

Celebrity

Celebrity is the defining issue of late twentieth-century America. In recent years, much has been made and written of the rise of contemporary celebrity culture in the United States. Writers, thinkers, and pundits alike warn us of the danger of our societal obsession with celebrity, even as more and more Americans tune into *Hard Copy* and buy *People* magazine. Andy Warhol’s cynical prediction that everyone will be famous for fifteen minutes has virtually become a national rallying cry as television airwaves overflow with venues for everyone’s opportunity to appear in the spotlight. The more that is written about fame, the less shocked we become. That’s the way things are, we seem to say, so why not grab our moment in the sun?

Fame, of course, is nothing new. In his comprehensive volume *The Frenzy of Renown: Fame and Its History*, Leo Braudy has traced man’s desire for recognition and need for immortality back to Alexander the Great, noting: “In great part the history of fame is the history of the changing ways by which individuals have sought to bring themselves to the attention of others and, not incidentally, have thereby gained power over them.” The desire to achieve recognition is both timeless and universal. What is particular to late twentieth-century America, however, is the democratization of fame and the resultant ubiquity of the celebrity—a person, as Daniel Boorstin so famously noted, “who is known for his well-knownness.”

The origin of the unique phenomenon of twentieth-century celebrity may be found in the words of one of America’s Founding Fathers, John Adams, who wrote, “The rewards . . . in this life are esteem and admiration of others—the punishments are neglect and contempt. . . . The desire of the esteem of others is as real a want of nature as hunger—and the neglect and contempt of the world as severe as a pain. . . . It is the principal end of the government to regulate this passion, which in its turn becomes the principal means of order and subordination in society, and alone commands effectual obedience to laws, since without it neither human reason, nor standing armies, would ever produce that great effect.” Indeed, the evolution of celebrity as the *Zeitgeist* of the twentieth century is a direct result of democracy.

As Alexis De Tocqueville noted in the early 1830s, the equality implied by a democracy creates the need for new kinds of distinction. But there are problems inherent in this new social order, as Tocqueville wrote: “I confess that I believe democratic society to have much less to fear from boldness than from paltriness of aim. What frightens me most is the danger that . . . ambition may lose both its force and its greatness, that human passions may grow gentler and at the same time baser, with the result that the progress of the body social may become daily quieter and less aspiring.” A prescription, it would seem, for twentieth-century celebrity. Indeed, some 150 years later, Daniel Boorstin would describe a celebrity thus: “His qualities—or rather his lack of qualities—illustrate our peculiar problems. He is neither good nor bad, great nor petty. . . . He has been fabricated on purpose to satisfy our exaggerated expectations of human greatness. He is

morally neutral. The product of no conspiracy, of no group promoting vice or emptiness, he is made by honest, industrious men of high professional ethics doing their job, 'informing' us and educating us. He is made by all of us who willingly read about him, who like to see him on television, who buy recordings of his voice, and talk about him to our friends. His relation to morality and even to reality is highly ambiguous."

What Tocqueville foresaw and Boorstin confirmed in his empty definition of celebrity seems, however, to belie the fact that, as a nation, we have come to define success by celebrity. It is the singular goal to which our country aspires. But how and why has this hollow incarnation of fame become our benchmark of achievement?

The great experiment inaugurated by the signing of the Declaration of Independence proposed a classless society in which the only prerequisite for success was the desire and the will to succeed. In fact, however, though founded on a noble premise, America was and is a stratified society. Yet the myth of classlessness, of limitless opportunity open to anyone with ambition and desire, has been so pervasive that it has remained the unifying philosophy that drives society as a whole. In a world where dream and reality do not always mesh, a third entity must necessarily evolve, one which somehow links the two. That link—the nexus between a deeply stratified society and the myth of classlessness—is celebrity.

According to Braudy: "From the beginning, fame has required publicity." The evolution (or perhaps devolution) of fame into celebrity in the twentieth century was the direct result of inventions such as photography and telegraphy, which made it possible for words and images to be conveyed across a vast nation. Abraham Lincoln went so far as to credit his election to a photograph taken by Matthew Brady and widely dispersed throughout his campaign. Before the invention of photography, most Americans could have passed a president on the street and not known it. A mania for photography ensued and, during the nineteenth century, photograph galleries sprang up throughout the country to satisfy the public's increasing hunger for and fascination with these images. The ideal vehicle for the promulgation of democracy, photography was accessible to anyone, and thus it soon contributed to the erosion of visible boundaries of class, even as it proclaimed a new ideal for success—visual fame.

The late nineteenth and early twentieth centuries witnessed an avalanche of inventions that would transform America from a rural country of provincial enclaves to a more unified nation of urban centers. The rapid growth of mass media technologies spawned increasing numbers of national publications eager to make news. And make it they did—searching out stories that might not have been recognized as newsworthy a decade before. As Richard Schickel writes in *Intimate Strangers: The Culture of Celebrity*: "The pace of life was quickening, the flow of information beginning to speed up while mobility both geographic and social was stepping up as well. People began to need familiar figures they could carry about as they moved out and moved up, a sort of portable community as it were, containing representations of good values, interesting traits, a certain amount of within-bounds attractiveness, glamour, even devilry." Thus the stage was set for the invention of the motion picture.

The birth of celebrity is, of course, most closely tied to the motion picture industry, and its embrace by a public eager to be entertained. Paying a penny, or later a nickel, audiences from cities to small towns could gather in a darkened movie theatre, an intimate setting in which they could escape the reality of their daily lives and become part of a fantasy. But how was this different from live theatre?

In part, movie houses existed all over America, and so hundreds of thousands of people had the opportunity to see the same actor or actress perform. Furthermore, films were churned out at a phenomenal rate, thus moviegoers could enjoy a particular performer in a dozen or more pictures a year. This engendered a new kind of identification with performers—a sense of knowing them. Additionally, Schickel cites the influence of a cinematic innovation by director D. W. Griffith: the close-up, which had "the effect of isolating the actor in the sequence, separating him or her from the rest of the ensemble for close individual scrutiny by the audience. To some immeasurable degree, attention is directed away from the role being played, the overall story being told. It is focused instead on the reality of the individual playing the part." The intimacy, immediacy, and constancy of movies all fostered an environment ripe for celebrity.

Audiences clamored to know more about their favorite actors and actresses, and a new kind of public personality was born—one whose success was not measured by birth, wealth, heroism, intelligence, or achievement. The fledgling movie studios quickly grasped the power of these audiences to make or break them, and they responded by putting together a publicity machine that would keep the public inundated with information about their favorite performers. From studio publicists to gossip columnists, the movie industry was unafraid to promote itself and its product, even if it meant making private lives totally public. But the effect was electrifying. Almost overnight, fame had ceased to be sole property of the moneyed elite. Movie stars, America believed, might be young, beautiful, even rich, but otherwise they were no different from you or me. In Hollywood, where most of the movie studios were run by Jewish immigrants, where new stars were discovered at soda fountains, where it didn't matter where you came from or what your father did, anyone could become rich or famous. This new fame carried with it the most basic American promise of life, liberty, and the pursuit of happiness. It proved the system worked. Whatever the reality might be of the daily lives of Americans, Hollywood celebrities proved that, with a little luck, good timing, and a modicum of talent, anyone could become somebody.

The Hollywood celebrity factory churned out stars from the very beginning. In silent pictures, Gloria Swanson, Rudolph Valentino, and Greta Garbo captured America's imagination. But when sound came to pictures, many silent stars faded into obscurity, betrayed by squeaky voices, stutters, or Brooklyn accents. In their place were new stars, and more of them, now that they could talk. During the Golden Age of Hollywood, the most famous were the handsome leading men such as Robert Taylor, Gary Cooper, and Cary Grant, and beautiful leading ladies such as Vivien Leigh, Ava Gardner, and Elizabeth Taylor. But Hollywood had room for more than beauty—there were dancers such as Fred Astaire and Gene Kelly, singers such as Judy Garland and Bing Crosby, funny men such as Bob Hope and Danny Kaye, villains such as Edward G. Robinson, horror stars such as Boris Karloff, starlets such as Betty Grable, cowboys such as Gene Autry. The beauty of celebrity was that it seemed to have no boundaries. You could create your own niche. As Braudy wrote: "Fame had ceased to be the possession of particular individuals or classes and had become instead a potential attribute of every human being that needed only to be brought out in the open for all to applaud its presence."

With the invention of television, the pervasiveness and power of celebrity grew. By bringing billions of images into America's homes, thousands of new faces to be "known," celebrity achieved a new intimacy. And with the decline of the studio system, movie stars began to seem more and more like "regular people." If the stars of the

Golden Age of Hollywood had been America's "royalty," now no such pretensions existed. From the mumbling Marlon Brando to the toothy Tom Cruise, the stars of the new Hollywood seemed to expand the promise of celebrity to include everyone.

Celebrity, of course, did not remain the sole property of Hollywood. During the Roaring Twenties, Americans experienced a period of prosperity unlike any that had existed in the nation's 150-year history. With new wealth and new leisure time, Americans not only flocked to the movies, they went to baseball games and boxing matches, and there they found new heroes. Babe Ruth became an icon whose extraordinary popularity would pave the way for such future superstars as Joe DiMaggio and Michael Jordan. During the 1920s, however, Ruth's popularity would be rivaled by only one other man, a hero from a new field—aviation. When Charles Lindbergh became the first person to fly solo across the Atlantic Ocean, he was hailed as a national savior. America's hunger for celebrity seemed unquenchable as each new star seemed a new fulfillment of a country's promise, of the American Dream.

The history of the twentieth century is the history of the growing influence of celebrity. No area of American society has remained untouched. The entertainment industry is no longer confined to Hollywood. Sports, music, art, literature, and even politics have embraced the celebrity ethos in order to succeed. It has been said that if Franklin Delano Roosevelt—a man in a wheelchair—were to run for president today, he would not be elected. We live in a society bounded and defined by the power of images, by the rules of celebrity. Dwight D. Eisenhower hired former matinee idol Robert Montgomery to be his consultant on television and media presentations. John F. Kennedy, an Irish Catholic, won the presidency because he looked like a movie star and he knew how to use the media, unlike Richard Nixon, who dripped with sweat and seemed uncomfortable on camera. Ronald Reagan, a former actor with little political ability, used his extensive media savvy to become a two-term president. Today, a politician cannot even be considered a presidential hopeful unless he has what it takes to be a celebrity. Visual appearance and the ability to manipulate the press are essential to becoming our chief of state, political knowledge and leadership come second.

Yet the more pervasive celebrity has become, the more it is decried, particularly by celebrities themselves, who claim that they have been stripped of their privacy. As Braudy describes this paradox: "Fame is desired because it is the ultimate justification, yet it is hated because it brings with it unwanted focus as well, depersonalizing as much as individualizing." The greater the need for audience approval, the more powerful the audience—and thus the media—has become. With the death of Princess Diana, an outcry for privacy was heard from the celebrity community and blame was cast on the media, even as hundreds of thousands of people poured into London to pay tribute to the "People's Princess" and millions mourned her death on television around the globe. Celebrity's snare is subtle—even as the public itself vilifies the press, it craves more. And even as celebrities seek to put limits on their responsibilities to their audience, they are, in fact, public servants.

By the late twentieth century, celebrity has become so ubiquitous that visibility has become a goal in itself. Tocqueville's prediction has come true. Americans no longer seem to aspire to greatness. They aspire to be seen. John Lahr wrote: "The famous, who make a myth of accomplishment, become pseudo-events, turning the public gaze from the real to the ideal. . . . Fame is America's Faustian bargain: a passport to the good life which trivializes human endeavor." But despite the deleterious effects of celebrity, it continues to

define the American social order. After all, as Mae West once said, "It is better to be looked over than overlooked."

Celebrity Caricature

Celebrity caricature in America has become a popular twentieth-century permutation of the longstanding art of caricature—the distortion of the face or figure for satiric purposes—which claims an extensive tradition in Western art. For centuries, comically exaggerated portrayals have served the purpose of ridicule and protest, probing beneath outward appearances to expose hidden, disreputable character traits. In the early twentieth century, however, American caricaturists based in New York City deployed a fresh approach, inventing a new form of popular portraiture. They chose for their subjects the colorful rather than the corrupt personalities of the day, reflecting the preoccupation with mass media-generated fame. During the height of its vogue between the two World Wars, celebrity caricature permeated the press, leaving the confines of the editorial cartoon to flourish on the newspaper's entertainment pages, at the head of a syndicated column, on a magazine cover, or color frontispiece. Distorted faces appeared on café walls, silk dresses, and cigarette cases; Ralph Barton's caricature theater curtain depicting a first-night audience caused a sensation in 1922. Caricaturists did not attempt to editorialize or criticize in such images. "It is not the caricaturist's business to be penetrating," Barton insisted, "it is his job to put down the figure a man cuts before his fellows in his attempt to conceal the writhings of his soul." These artists highlighted the public persona rather than probing beneath it, reconstructing its exaggerated components with a heightened sense of style and wit. Mocking the celebrity system, caricature provided a counterbalance to unrestrained publicity.

American caricaturists sought a modern look, derived from European art, to express a contemporary urbanity. They departed from comic conventions, selectively borrowing from the radical art movements of the day. Like advertisers, they began to simplify, elongate, geometricize, and fragment their figural forms. Eventually,

Alfred Hitchcock in profile.

their stylish mockery would be fueled by the abstractions, collage techniques, color dissonances, and unexpected conflations of Cubism, Fauvism, and Surrealism. Humor and a recognizable face made modernist stylization palatable. Artist and critic Carlo de Fornaro, arriving in New York around 1898, was the first to advocate a Parisian style of caricature that was closely related to French poster art. His india ink newspaper caricatures combined an art nouveau elongation of the figure with a bold simplification of form. Caricaturist Al Frueh abbreviated images of theatrical figures into quintessential summaries of their characteristics. Critics marveled at Frueh's ability to evoke a personality with a minimum of lines, and Alfred Stieglitz, the acknowledged ringleader of the New York avant-garde before World War I, exhibited his drawings in 1912.

Mexican-born artist Marius de Zayas's approach to caricature especially intrigued Stieglitz, who mounted three exhibitions of his work. De Zayas drew dark, atmospheric charcoal portraits suggestive of pictorialist photographs and enigmatic symbolist drawings. Influenced by Picasso, he even experimented with "abstract caricature," a radical departure from visual realism. Many critics admired the aesthetic sophistication of this updated art form. "Between modern caricature and modern 'straight' portraiture," the *New York*

A caricature of Alfred Hitchcock in profile.

World's Henry Tyrrell wrote, "there is only a thin and vague line of demarcation."

Ties to the avant-garde raised the prestige of caricature and encouraged its use in such "smart" magazines of the post war era as *Life*, *Judge*, *Vanity Fair*, and the *New Yorker*. Caricature reflected a new strain of light, irreverent parody that pervaded the Broadway stage, the vaudeville circuit, Tin Pan Alley, magazine verses, newspaper columns, and the writings of the Algonquin Round Table wits. In the early 1920s, *Vanity Fair*, a leading proponent of this art, recruited the young Mexican artist Miguel Covarrubias to draw portraits of café society luminaries. His powerful ink line lent an iconic, monumental quality to his figures. "They are bald and crude and devoid of nonsense," Ralph Barton wrote, "like a mountain or a baby." Advances in color printing gave caricature an additional appeal in the 1930s. Will Cotton provided portraits in bright pastels, employing color as a comic weapon. Artist Paolo Garretto used collage, airbrushed gouache, and a crisp Art Deco stylization to create vivid visual effects.

The best artists in the increasingly crowded field honed their clever deformations with a distinctive style. William Auerbach-Levy eliminated details and distilled shapes into logo-like faces that were printed on stationery and book jackets. Covarrubias, working in

watercolor, lampooned the leveling nature of celebrity. Visual contrasts of such opposite personalities as Martha Graham and fan dancer Sally Rand, in his famous “Impossible Interviews” series, were undermined by the commonality of fame. Few could evoke the dynamic movement of performance as well as Al Hirschfeld, whose swooping curves and sharp angles captured in mid-step the familiar look of a dancer or actor.

Caricature exploited the appetite for modern celebrity whetted by the developing mass media. The nature of fame had changed, and notability was no longer tied to traditional areas of accomplishment. As *Vanity Fair* explained, caricature subjects were selected “because of their great interest as personalities.” Information about the famous became increasingly standardized: publicity photographs, syndicated stories, records, films, and news clips consolidated the celebrity image. Caricature consistently reflected the narrow, shallow exaggerations that the mass media dispensed. The famous learned to appreciate the compliment. H.L. Mencken wrote to one artist that he liked his caricature: “It is grotesque and yet it does justice to my underlying beauty.” Emily Post, unflatteringly portrayed in a magazine, thanked the editor for the “delicious publicity.”

The celebrity caricature fad peaked in the 1920s and 1930s. The trend even inspired star-studded animated cartoons, and collectible dolls, masks, and puppets of film idols. By mid-century, it was on the wane. The Depression years and advent of World War II demanded sharper satiric voices. And, although magazines of the 1940s still published caricature, editors turned increasingly to photography. Influenced by changes in art, humor, literature, and fame in an age of television, caricature evolved into new forms and specialized niches. In its heyday, caricature helped people adapt to change, alleviating the shock of modern art, leveling high and low cultural disparities, and mocking the new celebrity industry. Furthermore, in the celebrity-crazed press of the late twentieth century, witty, personality-based celebrity caricature seemed to be making a come-back.

Cemeteries

Cemeteries reflect society’s interpretation of the continuing personhood of the dead. Colonial America’s small rural family graveyards and churchyard burial grounds were an integral part of the community of the living, crowded with tombstones bearing the picturesque iconography of winged skulls, hourglasses, and soul-effigies, and inscriptions ranging from the taciturn to the talkative—some with scant facts of name, age, and date of death, others offering thumbnail biographies, unusual circumstances of decease (“They froze to death returning from a visit”), homilies in verse (“As I am now, so you shall be, / Remember death and follow me”), and even the occasional dry one-liner (“I expected this, but not so soon”).

In the nineteenth century, alarmed by public health problems associated with increasing industrial urbanization, the rising medical profession pressed for new cemeteries on the outskirts of towns, where the buried bodies could not pollute nearby wells and where any “noxious exhalations” thought to cause disease would be dissipated in the fresh suburban air. These new “garden cemeteries” would also function as places to which the inhabitants of the teeming cities could go for recreation and the inspiration of the beauty of nature.

First of the new genre was Mount Auburn Cemetery, picturesquely sited on a bend in the Charles River between the cities of Boston and Cambridge. Three years in the making, with carriage paths and artful landscaping (thanks to the collaboration of the Massachusetts Horticultural Society), it opened in 1831 to enthusiastic reviews and was soon followed by Mount Hope in Bangor, Maine; Laurel Hill in Philadelphia; Spring Grove in Cincinnati; Graceland in Chicago; Allegheny County Cemetery in Pittsburgh; and the battlefield burial ground at Gettysburg. By the end of the 1800s there were nearly two hundred garden cemeteries in America.

The boom in street-railway construction in the 1870s made the outlying cemeteries readily accessible to the public for day-trips and picnics. In several cities the departed could ride the rails to the cemetery, too. (The United Railways and Electric Company of Baltimore owned the “Dolores,” a funeral car with seats for thirty-two plus a compartment for the casket. Philadelphia had a streetcar hearse as well, the “Hillside.”) But the streetcar revolution also fueled suburban development of the open spaces surrounding the cities of the dead, even as parks for the living began to compete for the shrinking acreage of undeveloped land. (Frederick Law Olmsted, while designing New York’s Central Park, completed just after the Civil War, is reported to have said: “They’re not going to bury anyone in this one.”)

With the passing of the Victorian age and the splitting off of parks from cemeteries, cemetery management began to stress efficiency and profitability. A pioneer of this new approach was Dr. Hubert Eaton, a former mine owner who bought a down-at-heels graveyard called Forest Lawn in Glendale, California, in 1917, and over the next four decades metamorphosed it into a flagship of twentieth-century cemetery design and culture with hundreds of miles of underground piping for sprinklers and flat bronze markers in place of headstones (allowing the trimming of vast areas by rotary-blade

machines and of maintenance costs by as much as 75 percent). Area themes included “Babyland” and “Wee Kirk o’ the Heather,” accented by sculptures such as *Duck Frog* and the occasional classical reproduction.

While not every memorial park could aspire to be a Forest Lawn, by the end of World War II, private cemetery management had become a thriving industry with its own trade journals—such as *American Cemetery*, *Cemeterian*, and *Concept: The Journal of Creative Ideas for Cemeteries*—and a ready target for both the biting satire of Evelyn Waugh’s 1948 novel *The Loved One* and the merciless investigative reporting of Jessica Mitford’s 1963 exposé, *The American Way of Death*.

Attitudes toward death itself were changing as well. The medicalization of dying, with its removal from home to hospital, helped to transform the awe-inspiring last event of the human life cycle into a brutal, even trivial fact. Whether from denial or mere pragmatism, two-thirds of the students polled at three universities said they would favor cremation, while a rise in the number of anatomical donors prompted medical schools in the greater Boston area to begin sharing excess cadavers with one another whenever one school had a surplus.

Public policy also took an increasingly utilitarian tack. In 1972, ninety years after the U.S. Supreme Court upheld the nonprofit status of cemeteries owing to their “pious and public purpose,” the Department of Housing and Urban Development declared that burial was a marginal land use and proposed establishing cemeteries under elevated highways, in former city-dump landfills, or on acreage subject to airport runway noise.

“After thirty years a grave gets cold,” one mausoleum builder ruefully told cemetery historian Kenneth T. Jackson, who noted the high mobility of Americans near the end of the twentieth century and the fact that older cemeteries “run out of space, and few people still alive remember anyone buried there.” As individual markers and statuary fell into disrepair or were vandalized, indifferently maintained graveyards became less and less attractive places—ironically turning again into recreational areas, but now for persons and activities unwelcome in the public parks.

Notable exceptions to this trend are sites where the famous are buried, such as the Tomb of the Unknown Soldier and of President Kennedy in Arlington National Cemetery, or Elvis Presley’s grave site at his Graceland mansion in Memphis, which continue to draw thousands of pilgrims every year.

Central Park

The first major public example of landscape architecture, Manhattan’s Central Park remains the greatest illustration of the American park, a tradition that would become part of nearly every community following the 1860s. This grand park offers a facility for recreation and peaceful contemplation, a solution to the enduring American search for a “happy medium” between the natural environment and human civilization.

Initially, the construction of parks responded to utilitarian impulses: feelings began to develop in the early 1800s that some urban areas were becoming difficult places in which to reside. Disease and grime were common attributes attached to large towns and cities. Of particular concern, many population centers possessed insufficient interment facilities within churchyards. The first drive for parks began with this need for new cemeteries. The “rural cemetery” movement began in 1831 with the construction of Mount Auburn outside of Boston. Soon, many communities possessed their own sprawling, green burial areas on the outskirts of town.

From this point, a new breed of American landscape architect beat the path toward Central Park. Andrew Jackson Downing designed many rural cemeteries, but more importantly, he popularized and disseminated a new American “taste” that placed manicured landscapes around the finest homes. Based out of the Hudson River region and operating among its affluent landowners, Downing designed landscapes that brought the aesthetic of the rural cemetery to the wealthy home. His designs inspired the suburban revolution in American living. Downing became a public figure prior to his untimely death in 1852 through the publication of *Horticulturalist* magazine as well as various books, the initial designs for the Mall in Washington, D.C., and, finally, his call for a central area of repose in the growing city on Manhattan Island.

Wealthy New Yorkers soon seized Downing’s call for a “central park.” This landscaped, public park would offer their own families an attractive setting for carriage rides and provide working-class New Yorkers with a healthy alternative to the saloon. After three years of debate over the park site and cost, the state legislature authorized the city to acquire land for a park in 1853. Swamps and bluffs punctuated by rocky outcroppings made the land between 5th and 8th avenues and 59th and 106th streets undesirable for private development. The extension of the boundaries to 110th Street in 1863 brought the park to its current 843 acres. However, the selected area was not empty: 1,600 poor residents, including Irish pig farmers and German gardeners, lived in shanties on the site; Seneca Village, at 8th Avenue and 82nd

A view of New York's Central Park.

Street, was one of the city's most stable African-American settlements, with three churches and a school.

In 1857, the Central Park Commission held the country's first landscape design contest and selected the "Greensward Plan," submitted by Frederick Law Olmsted, the park's superintendent at the time, and Calvert Vaux, an English-born architect and former partner of Downing. The designers sought to create a pastoral landscape in the English romantic style. In order to maintain a feeling of uninterrupted expanse, Olmsted and Vaux sank four transverse roads eight feet below the park's surface to carry cross-town traffic. From its inception, the site was intended as a middle ground that would allow the city's life to continue uninterrupted without infringing on the experience of park goers.

The park quickly became a national phenomenon. First opened for public use in the winter of 1859 when thousands of New Yorkers skated on lakes constructed on the site of former swamps, Central Park opened officially in 1863. By 1865, the park received more than seven million visitors a year. The city's wealthiest citizens turned out daily for elaborate late-afternoon carriage parades. Indeed, in the park's first decade more than half of its visitors arrived in carriages, costly vehicles that fewer than five percent of the city's residents could afford. Olmsted had stated his intention as "democratic recreation," a park accessible to everyone. There would be no gates or

physical barriers; however, there would be other methods of enforcing class selectivity. Stringent rules governed early use of the "democratic" park, including a ban on group picnics—which discouraged many German and Irish New Yorkers; a ban on small tradesmen using their commercial wagons for family drives in the park; and restricting ball playing in the meadows to school boys with a note from their principal. New Yorkers repeatedly contested these rules, however, and in the last third of the nineteenth century the park opened up to more democratic use.

Central Park's success fueled other communities to action. Olmsted became the park movement's leader as he tied such facilities to Americans' "psychological and physical health." Through Olmsted's influence and published writing, parks such as Central Park were seen to possess more than aesthetic value. The idea of determining the "health" of the community through its physical design was an early example of modernist impulses. However, the park movement's attachment to traditions such as romanticism gave parks a classical ornamentation. Olmsted's park planning would lead to the "City Beautiful" movement in the early 1900s and to the establishment of the National Park system.

As the uses of Central Park have varied, its popularity has only increased. In the 1960s, Mayor John Lindsay's commissioners welcomed "happenings," rock concerts, and be-ins to the park, making it

a symbol of both urban revival and the counterculture. A decline in the park's upkeep during the 1970s stimulated the establishment of the Central Park Conservancy in 1980. This private fund-raising body took charge of restoring features of the Greensward Plan. By 1990, the Central Park Conservancy had contributed more than half the public park's budget and exercised substantial influence on decisions about its future. Central Park, however, continues to be shaped by the public that uses it: joggers, disco roller skaters, softball leagues, bird watchers, nature lovers, middle-class professionals pushing a baby's stroller, impoverished individuals searching for an open place to sleep.

Century 21 Exposition (Seattle, 1962)

The world's fair that opened in Seattle on April 21, 1962, better known as the Century 21 Exposition, was one of the most successful world's fairs in history. Originally intended to commemorate the 50th

The dramatic symbol of the Century 21 Exposition, a 600 foot Space Needle in Seattle, Washington.

anniversary of the Alaska-Yukon-Pacific Exposition held in Seattle in 1909, Century 21, although opening three years late, was still a boon to the city itself and to the entire Northwest region of the United States.

Joseph Gandy and Ewen Dingwall started organizing the fair in 1955, but their efforts were thwarted by both potential investors and citizens of Seattle, who worried about the profitability of a fair held in such a far-away location and the effects it would have on the local area. Compared to other fairs, the Century 21 project seemed dubious at best. The 1958 Brussels Fair covered 550 acres, while the Century 21 was only 74 acres: boosters called it the "jewel box fair," while critics dubbed it the "postage stamp fair." Others worried that Seattle would not draw masses of tourists to its relatively remote region, especially since New York was hosting its own world's fair only a year later.

Ultimately, however, Century 21 proved to be financially and culturally successful. While the New York World's Fair of 1963-1964 lost \$18 million, Century 21 actually turned a profit of \$1 million after all expenses were paid—an almost unheard of feat when it came to such endeavors. During its six month run, the fair hosted over 10 million visitors from the United States and overseas. News of the fair appeared in the popular press, including newspapers like the *New York Times* and magazines like *Newsweek*, *Time*, *Popular Mechanics*, and *Architectural Review*. This mass of publicity and the increase in tourism transformed Seattle from a minor, provincial city into an energetic metropolis that garnered respect even among its east coast rivals.

In addition to improving its reputation, Century 21 also changed the physical space of Seattle. The fair was held just north of the center of the city, creating an entirely new complex, Seattle Center, that remained long after the fair had closed. The physical structures of the fair also changed Seattle's skyline with the addition of the Monorail and the Space Needle.

The theme of Century 21 was "life in the twenty-first century," which meant that the fair itself, at which 49 countries participated, celebrated scientific developments, technology, and visions of projected life in the next century. For example, the United States Science Pavilion, designed by Seattle-born architect Minoru Yamasaki, covered seven acres, consisted of six buildings which incorporated courtyards and pools, and featured five tall white slender aluminum gothic arches that signified the future more than recalling the past. This building became the Pacific Science Center after the fair.

The Monorail was an even more successful representation of the future, and was an important component of the fair both in presence and function. An elevated version of a subway employed to alleviate parking problems, the Monorail demonstrated a futuristic mode of urban transportation at work that took people from downtown Seattle into the middle of the fair. Designed by the Swedish firm Alweg and built in West Germany, the Monorail was capable of going 70 miles per hour, although it never reached this speed while in use at the fair.

The most visible symbol of the fair and of the future, however, was the Space Needle—a 600 feet high spire of steel topped with what resembled a flying saucer; during the fair, the Space Needle netted \$15,000 a day from visitors who paid to ride its elevators up to the top to view the greater Seattle area and to eat in its revolving restaurant. Influenced by the design of a television tower in Stuttgart, but also incorporating the decade's aesthetic of the future—flattened disks juxtaposed with pointed shapes—the Space Needle became the Exposition's main icon, signifying "soaring and aspiration and progress" according to one of its proponents. It remained an integral part of Seattle's identity, permanently affixed to its skyline, and

represented both the city itself and the subsequently outdated 1960s vision and version of the future.

Century of Progress (Chicago, 1933)

Taking place during a "golden age" of world's fairs, Chicago's 1933-34 Century of Progress International Exposition marked the prevalence of modern architecture and was notable for its colorful nighttime lighting. Century of Progress commemorated the one

The Hall of Science at the 1933 Chicago World's Fair.

hundredth anniversary of the incorporation of the City of Chicago with exhibits highlighting scientific discoveries and the changes these discoveries made in industry and everyday life.

The fair opened on May 27, 1933, when the lights were turned on with energy from the rays of the star Arcturus. The rays were focused on photoelectric cells in a series of astronomical observatories and then transformed into electrical energy which was transmitted to Chicago. Under the direction of general manager Lenox R. Lohr and president of the Board of Trustees Rufus C. Dawes, the fair covered 427 acres (much of it landfill) on Lake Michigan immediately south of Chicago's downtown area, from 12th Street to 39th Street (now Pershing Road). Today, Meigs Field and McCormick Place occupy this site. Originally planned to close in November 1933, the fair was extended through 1934 because of its popularity and to earn enough money to cover its debts. Century of Progress was the first international fair in American history to pay for itself. The grand total of attendance was 48,769,227.

The fair's most recognizable buildings, the Hall of Science and the Transportation Building typified the linear, geometric Art Deco style which was the trademark of this world's fair. The outstanding feature of the Transportation Building was its domed roof, suspended on cables attached to twelve steel towers around the exterior. Also notable were the pavilions of General Motors, Chrysler, and, added in 1934, the Ford Motor Company. The House of Tomorrow was designed using technologically advanced concepts like electrically controlled doors and air that recirculated every ten minutes. The controversial "Rainbow City" color scheme of Century of Progress dictated that buildings be painted in four hues from a total of twenty-three colors. Although the colors were restricted to ten in 1934, this still was quite a contrast from the World's Columbian Exposition held in Chicago in 1893 when all the buildings were white. At night, the Century of Progress buildings were illuminated with white and colored lights which made the effect even more vibrant. In 1934, the coordination of color schemes throughout the fairground helped people make their way through the grounds.

The Midway, with its rides and attractions, was one of the most popular places at the fair, as was Enchanted Island, an area set aside for children. Youngsters could slide down Magic Mountain, view a fairy castle, or see a play staged by the Junior League of Chicago. The Belgian Village, which many exhibiting countries imitated during the second year of the fair, was a copy of a sixteenth-century village complete with homes, shops, church, and town hall. The Paris exhibition included French restaurants, strolling artists, and an "English Village." The Sky Ride, a major landmark of Century of Progress, transported visitors 218 feet above the North Lagoon in enclosed cars supported between two 628-foot steel towers. Recreations of the cabin of Jean Baptiste Point du Sable, the first permanent settler of Chicago, and Fort Dearborn, built in 1803, depicted Chicago-area history where Michigan Avenue crosses the Chicago River in present-day downtown Chicago.

Although three buildings (the Administration Building, the Fort Dearborn replica, and the golden Temple of Jehol) were temporarily left intact after the fair's demolition, today only Balbo's Column remains on its original site east of Lake Shore Drive at 1600 South (opposite Soldier Field). A gift of the Italian government, this column was removed from the ruins of a Roman temple in Ostia. It commemorates General Balbo's trans-Atlantic flight to Chicago in 1933.

Challenger Disaster

The explosion of NASA space shuttle *Challenger* shortly after liftoff on January 28, 1986, shocked the nation. The twenty-fifth shuttle flight had been dubbed the "Teacher in Space" mission; the plan was to excite children about the possibility of space travel by having a teacher deliver televised lectures from the orbiting shuttle. Christa McAuliffe, a high-school social studies teacher, was chosen for the expedition after a highly publicized nationwide search. Other crew members included Michael Smith (pilot), Dick Scobee (commander), Judith Resnik (mission specialist), Ronald McNair (mission specialist), Ellison Onizuka (mission specialist), and Gregory Jarvis (payload specialist). None survived the disaster. The cause of the explosion was eventually traced to faulty gaskets known as O-rings. Coming at a time when the United States space program had seemingly regained its footing after two decades of decline, it forced many to grapple with the risks associated with pioneering technologies. Nowhere was the need for explanation more pressing than in the nation's classrooms, where children had gathered to witness the wonders of space travel.

Chamberlain, Wilt (1936—)

On the basketball court, Wilt Chamberlain was one of the most dominating players of his day. His intimidating stature (7' 1" and 265 pounds) and his ability to score at will made him one of professional basketball's most popular players. In his third season he led the league with a remarkable 50.4 scoring average, a record that still stands after nearly forty years. By dominating both ends of the court Chamberlain single-handedly revolutionized professional basketball.

Born on August 21, 1936, in Philadelphia, Pennsylvania, Chamberlain attended Overbrook high school, where he led his team to a

Los Angeles Laker center Wilt Chamberlain is defended by Bill Russell of the Boston Celtics.

58-3 record and three All-Public school titles. His dominating athleticism at Overbrook drew the attention of nearly every college basketball program in the country, and after a hectic recruiting period Chamberlain decided to attend Kansas University. Upon hearing the news, legendary KU basketball coach Phog Allen remarked: "Wilt Chamberlain's the greatest basketball player I ever saw. With him, we'll never lose a game; we could win the national championship with Wilt, two sorority girls and two Phi Beta Kappas." In spite of Allen's predictions, Kansas failed to win a NCAA championship during Chamberlain's two-year stint. But nonetheless, as a college player he was as a man among boys. During his short stay at Kansas the *Saturday Evening Post* ran a story titled, "Can Basketball Survive Chamberlain," leading the NCAA to make several rule changes to curtail his dominance, and later *Look* magazine published an article titled, "Why I Am Quitting College," which was an exclusive piece on his decision to leave Kansas. This media coverage was virtually unprecedented for an African-American college athlete.

After leaving Kansas, Chamberlain had a brief one-year tour with the Harlem Globetrotters before joining the Philadelphia Warriors in 1959. In his first game with the Warriors, Chamberlain had 43 points and 28 rebounds. This was just a glimpse of what was to come. Throughout his rookie year he scored fifty points or more five times, en route to earning league Rookie of the Year and MVP honors,

marking the first time that anyone had ever won both awards the same year. Throughout the next couple of years Chamberlain continued to pick up individual honors. In his third year with the Warriors Chamberlain continued his dominance and did the unthinkable, scoring 100 points in a single game, after which the minuscule 4,124 fans in attendance “came pouring out of the stands and mobbed me.” As a result of his prowess on the court the NBA followed the NCAA’s lead and made several rule changes of their own, simply because of Chamberlain’s dominance.

Although Chamberlain continued to be a leader in scoring and rebounding throughout his career (which included stints in San Francisco and then later in Los Angeles), he was often maligned in the national media. He was frequently labeled a “loser” because of his team’s inability to beat Bill Russell and the Boston Celtics (although he did win championships in 1967 and 1972), and he was often viewed as a troublemaker because of his candid personality. In the mid-1960s he was roundly criticized in the media for a story *Sports Illustrated* published concerning his attitude with the NBA. Under the headline: “My life in a Bush League,” Chamberlain criticized the administrators, coaches, and players of the NBA. “For a sports superstar who was supposed to be bubbling over with gratitude for every second he got to play, those were some pretty harsh words. I could understand why some people got upset,” Chamberlain remarked in his biography. But Chamberlain was never one to champion black causes. In the late 1960s he drew the ire of the black community when he denounced the Black Power movement while supporting Richard Nixon’s presidential campaign, and he likewise drew criticism from both blacks and whites alike when he expressed a preference for white women. He was truly a colorful figure.

In 1978 Chamberlain was inducted into the NBA Hall of Fame in his first year of eligibility and in 1996-1997 he was selected to the NBA 50th Anniversary All-Star Team.

As the NBA’s first \$100,000 man, Chamberlain had an enormous impact on the rise of the NBA. His dominating play sparked the interest of the country into a league that was forced to compete with the more popular pastimes of baseball and football. He was personally responsible for filling up arenas throughout the country as Americans paid top dollar to see “Wilt the Stilt.” He was without question a one-man show.

Chandler, Raymond (1888-1959)

Raymond Thornton Chandler started writing fiction in middle-age, out of economic necessity, after being fired from his job. Despite his late start and relatively brief career, Chandler’s influence on detective fiction was seminal. He and fellow writer Dashiell Hammett generally are seen as the Romulus and Remus of the hard-boiled detective subgenre. Hammett’s experience as a Pinkerton detective provided him with material very different from that of the genteel murder mystery imported from England. Chandler, who cut his teeth on the *Black Mask* school of “tough-guy” fiction, from the outset shunned the classical mystery for a type of story truer to the violent realities of twentieth-century American life. As he said, his interest was in getting “murder away from the upper classes, the weekend house party and the vicar’s rose garden, and back to the people who are really good at it.”

Chandler’s education and upbringing both hindered and spurred his writing, for he came to the American language and culture as a stranger. Although born in Chicago in 1888, at the age of seven he was taken to London by his Anglo-Irish mother and raised there. After a classical education in a public school, Chandler worked as a civil servant and as a literary journalist, finding no real success in either field. In 1912, on money borrowed from an uncle, he returned to the United States, eventually reaching California with no prospects but, in his words, “with a beautiful wardrobe and a public school accent.”

Robert Mitchum as Philip Marlowe on the cover of *The Big Sleep*.

For several years he worked at menial jobs, then became a bookkeeper. In 1917, he joined the Canadian Army and served as a platoon commander in France. After the war, he began to work in the oil business and rapidly rose to top-level management positions. In the 1920s, his drinking and womanizing grew steadily worse, until his immoderation, along with the Great Depression, finally cost him his job in 1932.

As a young man in London, Chandler had spent three years working as a literary journalist and publishing romantic, Victorian-style poetry on the side. Now, with only enough savings to last a year or two, he turned back to writing in an attempt to provide a living for his wife and himself. Initially, his literary sophistication inhibited his attempts to write pulp fiction; however, he persevered through an arduous apprenticeship and ultimately succeeded not only in writing critically acclaimed commercial fiction but also in transcending the genre. By the time of his death, Chandler had become a prominent American novelist.

Chandler published his first story, "Blackmailers Don't Shoot," in the December 1933 issue of *Black Mask*. Under the editorship of Joseph Shaw, it had emerged as the predominant pulp magazine. Shaw promoted "hard-boiled" fiction in the Hammett mode, and Chandler quickly became one of Shaw's favorite contributors, publishing nearly two dozen stories in *Black Mask* between 1933 and 1941. Chandler's first novel, *The Big Sleep*, was immediately compared to the work of Dashiell Hammett and James Cain by critics, who hailed Chandler as an exciting new presence in detective fiction. His second novel, *Farewell, My Lovely*, appeared in 1940, followed by novels *The High Window* (1942), *The Lady in the Lake* (1943), *The Little Sister* (1949), *The Long Good-bye* (1954), and *Playback* (1958). Chandler's collection of short stories, *The Simple Art of Murder*, contains, in addition to twelve pulp stories, an important and oft-quoted essay on detective fiction.

Like his contemporary, Ernest Hemingway, Chandler's impact on American literature was fueled by his interest in style. His English upbringing caused him to experience American English as a half-foreign, fascinating language; and few American writers, with the possible exceptions of Gertrude Stein and Hemingway, ever thought more carefully about or cared more for the American language. Chandler originated a terse, objective, colloquial style which has had a vital influence on succeeding mystery writers, as well as on mainstream literary writers, and even on Latin American authors such as Hiber Conteris and Manuel Puig. Chandler skillfully cultivated a subtle prose style that is actually literary while appearing to be plain and colloquial. The hallmark of this style is the witty, exaggerated simile. These similes often appear in the wise-cracks of Chandler's hero, Philip Marlowe; the effect being to add color to the dialogue and to emphasize Marlowe's rugged individualism. Chandler's irreverent, wise-cracking private detective set the tone for many of the hard-boiled heroes who followed, such as Jim Rockford of television's *The Rockford Files* and Spenser, the protagonist of Robert B. Parker's novels.

Just as Chandler's style is only superficially objective, becoming subjective in its impressionistic realization of Marlowe's mind and emotions, Chandler's fiction is hard-boiled only on the surface. Marlowe never becomes as violent or as tough-minded as did some of his predecessors, such as Hammett's Continental Op. In fact, Marlowe is sometimes, in the words of James Sandoe, "soft-boiled." Lonely, disillusioned, depressive, Marlowe is yet somehow optimistic and willing to fight injustice at substantial personal cost. Chandler

saw his hero as a crusading, but rather cynical, working-class knight who struggles against overwhelming odds to help the powerless and downtrodden. Marlowe maintains his chivalrous code in the face of constant temptation and intimidation; his integrity is absolute, his honesty paramount. Thus he manages to achieve some justice in a corrupt, unjust world.

This archetypal theme places Chandler in the mainstream of American fiction. The courageous man of action, the rugged individualist who performs heroic deeds out of a sense of duty, has been a staple of American literature since the early days of the nation. This quintessential American hero originated in regional fiction, such as James Fennimore Cooper's *Leather-Stocking Tales*, and moved westward with the frontier, appearing in many guises. The tough hero was further developed by the dime novelists of the nineteenth century and by early-twentieth-century progenitors of the Western genre. American detective story writers found a distinctly American hero waiting for them to adapt to the hard-boiled sub-genre.

Another theme prevalent in Chandler's work is the failure of the American Dream. For Chandler, the crime and violence rampant in newspaper headlines was rooted in the materialism of American life. In their desperate grasping, Americans often stooped to extreme and even unlawful measures. Chandler himself was not immune to the lure of the greenback. He became an established Hollywood screenwriter, though temperamentally unsuited to the collaborative work. Notable among his film work is his and Billy Wilder's 1943 adaptation for the screen of James M. Cain's novel *Double Indemnity*. Filmed by Paramount, the movie received an Academy Award nomination for best script. The voice-over narration Chandler devised for *Double Indemnity* became a convention of *film noir*. For Chandler, the voice-over narration, so like the cynical, ironical voice of his Marlowe, must have seemed natural.

After the death of Chandler's beloved wife Cissy in 1954, he entered a period of alcoholic and professional decline that continued until his death in 1959. Like his hero, Philip Marlowe, Raymond Chandler lived and died a lonely and sad man. But his contribution to literature is significant, and his work continues to give pleasure to his many readers.

Chandu the Magician

This atmospheric radio adventure series first sounded its trademark opening gong in 1932, appearing at the forefront of a popular interest in magic and the occult which also produced Chandu's more famous fellow heroic students of the black arts, *The Shadow* and *Mandrake the Magician*. Like any talented prestidigitator, Chandu was able to appear in several different places simultaneously, and thus managed to frustrate the world-dominating ambitions of his arch-enemy Roxor in a feature film (1932) and a movie serial (1934) while also holding down his day job in radio. Chandu disappeared in 1935 when the initial series of 15-minute adventures came to a close, but the master magician had one more trick up his dapper sleeves, reappearing out of the ether to a delighted public in 1948 in a new production of the original scripts before vanishing for good in 1950. Thus, in the words of radio historian John Dunning, *Chandu The Magician* "... became one of the last, as well as one of the first, juvenile adventure shows of its kind."

Chanel, Coco (1883-1971)

Modern fashion has no legend greater than Gabrielle "Coco" Chanel. A strong woman, her life has inspired biographies, aphorisms, and even a Broadway musical entitled "Coco." She was one of the most powerful designers of the 1920s, using knit, wool jersey, and fabrics and styles associated with menswear to remake the modern woman's wardrobe with soft, practical clothing. She invented the little black dress in the 1920s, and in the 1920s and 1930s, she made the Chanel suit—a soft, cardigan-like jacket often in robust materials with a skirt sufficiently slack to imply concavity between the legs—a modern staple. Indomitable in life, Chanel enjoyed many affairs with important men. One affair with a German officer prompted Chanel's eight year exile in Switzerland before reopening in 1954. She died in 1971 before one of her new collections was completed. The fragrance Chanel No. 5, created in 1922, has driven the company with its reputation and profit. As the chief designer since 1983, Karl Lagerfeld has combined a loyalty to Chanel's style signatures with an unmistakably modern taste.

Chaplin, Charlie (1889-1977)

Comedian, actor, writer, producer, and director Charlie Chaplin, through the universal language of silent comedy, imprinted one of the twentieth century's most distinctive and lasting cultural images on the collective consciousness of the entire civilized world. In his self-created guise the Tramp, an accident-prone do-gooder, at once innocent and devious, he sported a toothbrush mustache, baggy pants, and tattered tails, tilting his trademark bowler hat and jauntily swinging his trademark cane as he defied the auguries of a hostile world. The Little Tramp made his first brief appearance in *Kid Auto Races at Venice* for Mack Sennett's Keystone company in 1914, and bowed out 22 years later in the feature-length *Modern Times* (United Artists, 1936). In between the Tramp films, Chaplin made countless other short-reel silent comedies, which combined a mixture of Victorian melodrama, sentiment, and slapstick, enchanted audiences worldwide, and made him an international celebrity and the world's highest

Charlie Chaplin

paid performer. At the dawn of the twenty-first century, 86 years after he first appeared on the flickering silent screen, Chaplin was still regarded as one of the most important entertainers of the twentieth century. He was (and arguably still is) certainly the most universally famous. On screen, he was a beloved figure of fun; off-screen, however, his liberal political views brought accusations of Communism and close official scrutiny, while his notorious private life heaped opprobrium on his head. Despite his personal failings, however, Chaplin's Tramp and astonishing achievements made him, in the words of actor Charles Laughton, "not only the greatest theatrical genius of our time, but one of the greatest in history."

Born Charles Spencer Chaplin in London on April 16, 1889, the man who would become one of the world's wealthiest and most instantly recognizable individuals was raised in circumstances of appalling deprivation, best described as "Dickensian." The son of music hall entertainers who separated shortly after his birth, Chaplin first took the stage spontaneously at age five when his mentally unstable mother, Hannah Chaplin, lost her voice in the midst of a performance. He sang a song and was showered with pennies by the appreciative audience. Hannah's health and career spiraled into decline soon after, and she was committed to a state mental institution. She was in and out of various such places until 1921, when Charlie brought her to live in California until her death in 1928. Meanwhile, the boy and his elder half-brother, Sydney, found themselves in and out of state orphanages or living on the streets, where they danced for pennies. Forced to leave school at age ten, Charlie found work with various touring theatrical companies and on the British vaudeville circuit as a mime and roustabout. In 1908 he was hired as a company member by the famous vaudeville producer Fred Karno, and it was with Karno's company that he learned the craft of physical comedy, developed his unique imagination and honed his skills while touring throughout Britain. He became a leading Karno star, and twice toured the United States with the troupe. While performing in Boston during the second of these tours in 1912, he was seen on stage by the great pioneering filmmaker of the early silent period Mack Sennett, who specialized in comedy. Sennett offered the diminutive English cockney a film contract, Chaplin accepted, and joined Sennett's Keystone outfit in Hollywood in January 1914.

Chaplin, soon known to the world simply as "Charlie" (and to the French as "Charlot"), made his film debut as a villain in the 1914 comedy *Making a Living*. In a very short time, he was writing and directing, as well as acting, and made numerous movies with Sennett's famous female star, Mabel Normand. His career thrived, and he was lured away by the Essanay company, who offered him a contract at \$1,250 a week to make 14 films during 1915. They billed Chaplin as "the world's greatest comedian" and allowed him to control all aspects of his work including production, direction, writing, casting, and editing. At Essanay Chaplin made a film actually called *The Tramp*, and, in the course of the year, refined and perfected the character into, as film historian Ephraim Katz wrote, "the invincible vagabond, the resilient little fellow with an eye for beauty and a pretense of elegance who stood up heroically and pathetically against overwhelming odds and somehow triumphed."

In February 1916, however, Chaplin left Essanay for Mutual and a stratospheric weekly salary of \$10,000 plus a \$150,000 bonus, sums that were an eloquent testimony to his immense popularity and commercial worth. Among his best films of the Mutual period are *The Rink* (1916), *Easy Street*, and *The Immigrant* (both 1917) and during this period he consolidated his friendship and frequent co-starring partnership with Edna Purviance. By mid-1917, he had moved on to a

million-dollar contract with First National, for whom his films included *Shoulder Arms* (1918) and, famously, *The Kid* (1921). This last, in which comedy was overlaid with sentiment and pathos, unfolded the tale of the Tramp caring for an abandoned child, unveiled a sensational and irresistible performance from child actor Jackie Coogan, and marked Chaplin's first feature-length film. Meanwhile, in 1919, by which time he had built his own film studio, Chaplin had joined Mary Pickford, Douglas Fairbanks, and D. W. Griffith to form the original United Artists, designed to allow artistic freedom free of the conventional restraints of studio executives, a venture of which it was famously said that it was a case of "the lunatics taking over the asylum." As he moved from shorts to longer features, Chaplin increasingly injected his comedy with pathos.

In 1918, Chaplin had a liaison with an unsuitable 16-year-old named Mildred Harris. He married her when she claimed pregnancy, and she did, in fact, bear him a malformed son in 1919, who lived only a couple of days. The ill-starred marriage was over months later, and divorce proceedings were complete by November of 1920. In 1924, shortly before location shooting began in the snowy wastes of the Sierra Nevada for one of Chaplin's great feature-length masterpieces, *The Gold Rush* (1925), he found a new leading lady named Lillita Murray, who had appeared in *The Kid*. She was now aged 15 years and 10 months. He changed her name to Lita Grey, became involved with her and, once again called to account for causing pregnancy, married her in November of 1924. By the beginning of 1927, Lita had left Charlie, taking their two sons, Charles Spencer Jr. and Sidney, with her. Their divorce was one of the most public displays of acrimony that Hollywood had witnessed. Lita had been replaced by Georgia Hale in *The Gold Rush*, a film whose meticulous preparation had taken a couple of years, and whose finished version was bursting with inspirational and now classic set pieces, such as the starving Tramp making a dinner of his boots.

In 1923, Chaplin had departed from his natural *oeuvre* to direct a "serious" film, in which he did not appear himself. Starring Edna Purviance and Adolphe Menjou, *A Woman of Paris* was, in fact, a melodrama, ill received at the time, but rediscovered and appreciated many decades later. By the end of the 1920s, the sound revolution had come to the cinema and the silents were a thing of the past. Chaplin, however, stood alone in famously resisting the innovation, maintaining that pantomime was essential to his craft, until 1936 when he produced his final silent masterpiece *Modern Times*. Encompassing all his comic genius, the film, about a demoralized factory worker, is also a piece of stringent social criticism. It co-starred Paulette Goddard, whom he had secretly married in the Far East (they divorced in 1942), and ends happily with an eloquent and archetypal image of the Tramp waddling, hand-in-hand, with his girl, down a long road and disappearing into the distance. With World War II under way, Chaplin made his entry into sound cinema with *The Great Dictator* (1940). Again co-starring with Goddard, he essayed the dual role of a humble barber and a lookalike dictator named Adenoid Hynkel. A scathing satire on Adolf Hitler, the film is an undisputed masterpiece that, however, caused much controversy at the time and brought Chaplin into disfavor in several quarters—not least in Germany. It garnered five Oscar nominations and grossed a massive five million dollars, the most of any Chaplin film, for United Artists.

The Great Dictator marked the last Chaplin masterpiece. *Monsieur Verdoux* (1947) featured Chaplin as a Bluebeard-type murderer, fastidiously disposing of wealthy women, but it manifested a dark political message, ran foul of the censors, and was generally badly received. He himself regarded it as "the cleverest and most brilliant

film I have yet made,” and certain students of his work have come to regard it as the most fascinating of the Chaplin films, redolent with his underlying misogyny and rich in savage satire. By 1947 he had been the victim of a damaging paternity suit brought by starlet Joan Barry. In a bizarre judgment, based on forensic evidence, the court found in his favor but nonetheless ordered him to pay child support, and that year he received a subpoena from the HUAC, beginning the political victimization that finally drove him from America. He had, however, finally found what would be lifelong personal happiness with Oona O’Neill, daughter of playwright Eugene. The couple married in 1943, when she was 18 and he 54 and had eight children, one of whom became actress Geraldine Chaplin, who played Charlie’s mother Hannah in Richard Attenborough’s film, *Chaplin* (1992).

October 1952 saw the premiere of what is perhaps Charlie Chaplin’s most personal film, *Limelight*. It is a collector’s piece insofar as it features Chaplin and Buster Keaton together for the first and only time. It also marked the debut of the then teenaged British actress Claire Bloom but, most significantly, this tale of a broken-down comedian is redolent of his own childhood background in its return to the long gone era of music hall, and the slum streets of Victorian London. Remarkable for its atmosphere, it is, however, mawkish and clumsily shot. After this, there were only two more features to come, neither of which were, or are, considered successful. *A King in New York* (1957) is an attack on McCarthyism; *A Countess from Hong Kong* (1967), starring Marlon Brando and Sophia Loren, is a lightweight comedy that misfired disastrously to become the great filmmaker’s biggest single disaster and an unworthy swan song.

By the time *Limelight* was released, Chaplin had been accused of Communist affiliations. It was the culmination of many years of resentment that he had not adopted American citizenship, and had further outraged the host country where he found fame by his outspoken criticisms and his unsuitable string of liaisons with teenage girls. He did not return from his trip to London, but settled with his family at Corsier sur Vevey in Switzerland, where, by then Sir Charles Chaplin, he died in his sleep on December 25, 1977. On March 1, 1978, his body was stolen from its grave, but was recovered within a couple of weeks, and the perpetrators were found and tried for the theft.

By the time of his death, America had “forgiven” Chaplin his sins. On April 16, 1972, in what writer Robin Cross called “a triumph of Tinseltown’s limited capacity for cosmic humbug” Chaplin, old, overweight, frail, and visibly overcome with emotion, returned to Hollywood to receive a special Oscar in recognition of his genius. That year, too, his name was added to the “Walk of Fame” in Los Angeles, and a string of further awards and honors followed, culminating in his knighthood from Queen Elizabeth in London in March, 1975. Charlie Chaplin, who published *My Autobiography* in 1964, and *My Life in Pictures* in 1974, once said, “All I need to make a comedy is a park, a policeman, and a pretty girl.” His simple, silent comedies have grown more profound as the world has grown increasingly chaotic, noisy, and troubled.

Charles, Ray (1930—)

Musician Ray Charles is generally considered a musical genius, and is so in many fields. He has had enormous success in jazz, blues, soul music, country and western, and crossover pop. Acknowledged as an expert vocalist, pianist, saxophonist, and all-around entertainer, Charles first burst into popular attention in the 1950s as the virtual inventor of soul music.

Charles was born Ray Charles Robinson in Albany, Georgia, on September 23, 1930, and raised in Greenville, Florida. A neighbor gave Charles piano lessons after Charles had taught himself how to play at the age of three. This neighbor owned a small store that served as a juke joint as well. Charles not only took piano lessons in the juke joint, he also absorbed the blues, jazz, and gospel music on the jukebox.

When he was six, Charles lost his sight to glaucoma. He continued his music studies at the St. Augustine School for the Deaf and Blind, where he studied for nine years, learning composition and a number of instruments. Upon leaving the school, he worked in a

Ray Charles

number of settings with many different groups in the Florida area. Eventually, he moved to California and recorded with a trio very much in the style of Nat King Cole.

In 1952, Charles signed with Atlantic Records in a move that greatly aided both parties: Atlantic gave him free artistic reign, and Charles responded with a string of hits. These included songs that have become classic rhythm and blues features: "I Got a Woman," "Hallelujah I Love Her So," "Drown in My Own Tears," and "What'd I Say." Charles described his music at the time as "a crossover between gospel music and the rhythm patterns of the blues." This combination violated a long-standing taboo separating sacred and secular music, but the general public did not mind, and soul music, a new musical genre, was born. Many of his fans consider this Atlantic period as his greatest.

Charles once stated that he became actively involved in the Civil Rights movement when a promoter wanted to segregate his audience. Charles, an African American, said that it was all right with him if all the blacks sat downstairs and all the whites in the balcony. The promoter said that Charles had it backwards; his refusal to perform the concert eventually cost him a lawsuit, but he was determined to support Martin Luther King openly and donated large sums of money to his cause.

Charles later moved to ABC/Paramount and branched out into country and western music. In 1962, his country and western album was number one on the Billboard list for fourteen weeks.

Charles's mastery of a number of musical genres and ranking among the very best of America's vocalists (such as Frank Sinatra, Billie Holiday, Ella Fitzgerald, and Nat King Cole) is amply demonstrated by the fiftieth-anniversary collection. Although containing songs even his strongest fans will not like, there are great moments on every tune no matter what the genre. Ray Charles became more than just another singer; he became a representative of his times.

Charlie Chan

The Chinese detective Charlie Chan remains author Earl Derr Biggers' (1884-1933) greatest legacy. Biggers based his fictional Asian sleuth on Chang Apana, a Chinese American police detective who lived in Honolulu. Biggers' introduced Chan in *The House without a Key* in 1925, the first of six Chan novels. Beginning in 1926, the Chan character hit the silver screen and was eventually featured in more than thirty films. Three different actors portrayed Chan in films:

Warner Oland, Sidney Toler, and Roland Winters. While Chan's character was based on an Asian person, his resemblance to Chinese Americans was remote. White actors played Chan as a rotund, slow-moving detective who spoke pithy sentences made to sound like Confucian proverbs. In contrast to the evil Fu Manchu (another film character), Chan was a hero. But ultimately, his depiction created a new stereotype of Asian Americans as smart, yet inscrutable and inassimilable.

Charlie McCarthy

The wooden puppet known as Charlie McCarthy was a precocious adolescent sporting a monocle and top hat, loved by the public for being a flirt and a wise-guy, and a raffish brat who continually got the better of his "guardian," mild-mannered ventriloquist Edgar Bergen (1903-1978). The comedy duo got their start in vaudeville and gave their last performance on television, but—amazingly—they found their greatest fame and success in the most unlikely venue for any ventriloquist: radio. Since the need for illusion was completely obviated by radio, whose audiences wouldn't be able to tell whether or not Bergen's lips were moving, the strength of Bergen and McCarthy as a comedy team was the same as it was for Laurel and Hardy or Abbott and Costello: they were funny. Bergen created and maintained in Charlie a comic persona so strong that audiences almost came to think of him as a real person. Eventually, "the woodpecker's pin-up boy" was joined by two other Bergen creations, hayseed Mortimer Snerd and spinster Effie Klinker, but neither surpassed Charlie in popularity. A broadcast sensation, Bergen and McCarthy also guest-starred in several films, including a couple that gave Charlie the chance to continue his radio rivalry with W. C. Fields. Not until the advent of television would such puppets as Howdy Doody and Kukla and Ollie gain such universal renown. But unlike these latter-day characters, Charlie was designed to appeal equally to adults as to children.

As a child growing up in Chicago, Edgar Bergen discovered that he had the talent to "throw his voice," and he put this gift to mischievous purposes, playing such pranks on his parents as making them think that an old man was at the door. When he reached high school age, young Edgar studied ventriloquism seriously and then commissioned the carving of his first puppet to his exacting specifications: thus was Charlie McCarthy born, full-grown from the head—and larynx—of Bergen. Although he began pre-med studies, Bergen quickly abandoned education for vaudeville. Before long, Bergen and McCarthy were a success, touring internationally. When vaudeville began to fade in the 1930s, Edgar and Charlie switched to posh nightclubs, which eventually led to a star-making appearance on Rudy Vallee's radio show. By 1937, Bergen and McCarthy had their own show, and its phenomenal success lasted for two decades.

Charlie's Angels: (from left) Farrah Fawcett-Majors, Kate Jackson, and Jaclyn Smith.

As Jim Harmon has pointed out in *The Great Radio Comedians*, “The humor (of Bergen and McCarthy) sprang from (an) inevitable misunderstanding between a rather scholarly man and a high-school near-dropout with native wit and precocious romantic interests. What resulted was wildly comic verbal fencing, perfect for the sound-oriented medium. . . . Exasperating to some adults, but we who were children at the time loved it.” Not unlike Groucho Marx, Charlie appealed to listeners of all ages because he could get away with saying something naughty or insulting to parental and authority figures. With such catch phrases as “Blow me down!,” Charlie endeared himself to generations of listeners and viewers, and paved the way for many successful ventriloquism acts that followed. Bergen’s skill as a comedy writer was such that he purposefully let Charlie have all the laughs. When asked once whether he ever felt any hostility toward Charlie, Bergen replied, “Only when he says something I don’t expect him to say.”

In 1978, ten days after announcing his retirement, Edgar Bergen died. In his will, the ventriloquist had donated Charlie to the Smithsonian. In addition to the memory of decades of laughter, Bergen also bequeathed to the world of show business his daughter, actress/writer/photographer Candice Bergen.

Charlie's Angels

Despite its pretensions as a prime-time detective show featuring three women as “private eyes,” *Charlie's Angels* was primarily about glamour and bare skin. This proved to be a winning combination for the ABC network from 1976 to 1981 when the show broke into the top ten of the Nielson ratings in its first week and improved its position with each subsequent airing. While this success was due, in no small part, to the machinations of ABC’s programming genius Fred Silverman, who put it up against two short-lived, male dominated adventure shows—*Blue Knight* and *Quest*—one cannot discount the appeal of three pretty women to viewers of both sexes.

Yet, the program's concessions to its female audience were slim. Beyond the symbolic breakthrough of having three women performing in roles normally reserved for men, while paying attention to fashions and hairstyles, most of the show was dedicated to keeping male viewers in a state of titillation and expectation. While likening Charlie to little more than a glorified "pimp," feminist journalist Judith Coburn commented in a 1976 article that Charlie's Angels was one of the most "misogynist" shows that the networks had ever produced. "Supposedly about strong women, it perpetuates the myth most damaging to women's struggle to gain professional equality: that women always use sex to get what they want, even on the job."

Generally, the plots revolved around the three sexy female detectives who have left the police department to work for an unseen boss named Charlie (John Forsythe) who conveyed his assignments by telephone and through an assistant named John Bosley (David Doyle). Each weekly episode usually called for one of the three women to appear in a bikini or shorts within the first few minutes of the show to hook the male viewers. After that, most of the stories would be set in exotic locations such as Las Vegas, Palm Springs, or other areas within easy reach of Los Angeles to provide ample opportunities for the "Angels" to strip down to bare essentials while ostensibly staying within the confines of the shows' minimal plots.

Yet, ironically, all of the sex was in the dialogue. While viewers reveled in the sight of three gorgeous women in a variety of scanty attire, they never saw them in bed. This might detract from their status as consummate professionals in the detective business. According to the show's publicity, the angels were more than simply pretty faces, sexy tummies, and cascading hair, they were martial arts experts, race car drivers, and shrewd poker players. Of the initial cast, Sabrina (Kate Jackson), was the multilingual, intellectual type; Jill Munroe (Farrah Fawcett-Majors) the physical, action-oriented member, and Kelly Garrett (Jaclyn Smith), the former showgirl, was the cool experienced "been around" member of the team who provided calm leadership under pressure.

The idea for the show originated with producers Aaron Spelling and Leonard Goldberg, who had previously specialized in action adventure shows normally dominated by the gritty realism of the inner city. But these were dominated by male policemen and private detectives. In an effort to compete with an upsurge of female dominated action series such as *Police Woman*, *The Bionic Woman*, and *Wonder Woman*, Spelling and Goldberg decided to inject the traditional private detective genre with a dose of feminine pulchritude with three gorgeous women who not only solved crimes but looked great doing it.

Although the show was initially intended to feature Kate Jackson, then the best known actress of the three, it was Farrah Fawcett-Majors who became the most recognizable icon. Due to some "cheesecake" publicity photos, including a swimsuit poster that quickly appeared on the bedroom walls of every thirteen-year-old boy in America, and a mane of cascading blonde hair, Farrah quickly became a fad, appearing on T-shirts and on toy shelves as Farrah dolls swept the nation. She became caught up in the publicity and left the show after the first season in hopes of capitalizing on her fame and becoming a movie star. Spelling and Goldberg replaced her in 1977 with Cheryl Ladd as her younger sister Kris Munroe and the show continued unimpeded.

Charm Bracelets

While charms and amulets, trinkets and tokens to ward off evil, were worn on the body in ancient Egyptian civilization and virtually every other early culture, the twentieth-century charm is far removed from such apotropaic forms. Rather, modern charms are often signs of travel, place, and popular culture, suggesting sentiment and affinity more than prophylaxis. Their peak came in the 1930s when silver or base-metal charms could be accumulated over time and in hard times constituted affordable jewelry. Bakelite and other new materials could also make charms even less expensively. By the 1950s, charm bracelets were chiefly associated with high-school girls and the prospect of being able in high-school's four years to fill all the links of a bracelet with personal mementos. A 1985 fad for the plastic charm bracelets of babies—letter blocks and toys—worn by adults for infantilizing effect lasted less than a year.

Chase, Chevy (1943—)

Comedian, writer, and actor Chevy Chase met instant critical success and stardom on *Saturday Night Live* (SNL), first coming to public attention as the anchor of the show's "Weekend Update" news spoof with his resounding "Good evening, I'm Chevy Chase, and you're not!" His mastery of the pratfall, deadpan outrage, and upper-class demeanor made him a standout from the rest of the SNL cast, and only a year later, Chase was Hollywood-bound and starring in movies that capitalized on his SNL persona. Chase appeared as a guest host of SNL in February 1978, and the show received the highest ratings in its history.

Born Cornelius Crane Chase (his paternal grandmother gave him the nickname Chevy) on October 8, 1943, in New York City, Chase earned a bachelor's degree from Bard College in 1967. He worked on a series of low-level projects, developing his talents as a comedy performer and writer. In 1973 he appeared in the off-Broadway *National Lampoon's Lemmings*, a satire of the Woodstock festival, in which he portrayed a rabid motorcycle gang member and a John Denver type singing about a family freezing to death in the Rockies. In 1974 he wrote and performed for *National Lampoon's White House Tapes* and the *National Lampoon Radio Hour*. Chase went to Hollywood in 1975, where he wrote for Alan King (receiving the Writers Guild of America Award for a network special) and *The Smothers Brothers* television series.

Chevy Chase on *Saturday Night Live*.

While in a line for movie tickets, Chase met future SNL producer Lorne Michaels, who was so entertained by Chase's humor that he offered him a job writing for the new show, which debuted October 18, 1975. In addition to writing, however, Chase moved in front of the camera, sometimes with material he had written for "Weekend Update" just minutes before. Besides this role, he most famously appeared as President Gerald Ford. His impersonation focused on pratfalls, and served to create an image of a clumsy Ford, which the president himself enjoyed: Ford appeared in taped segments of one episode of SNL declaring "I'm Gerald Ford, and you're not." Chase won two Emmys—one for writing and one for performing—for his SNL work, but his standout success on a show that was supposed to rely on a repertory of actors led to strained relations with the equally popular John Belushi, Michaels, and other colleagues, especially since Chase was not being paid as a performer but as a writer. Chase left SNL in October 1976 and, tempted by movie offers, moved back to California.

In 1978, Chase's first major movie, *Foul Play*, received mixed reviews, but his name was enough to ensure that it was profitable. The movies that followed, including *Caddyshack* and *Oh Heavenly Dog* (both in 1980) also made some money, but Chase himself made

negative comments about their artistic quality. In 1983, returning to his comedy roots, Chase starred as Clark Griswold, a role perfectly suited to his deadpan humor, in *National Lampoon's Vacation*. The movie was a great success and has since been followed by three sequels.

About this time, the actor also was coping with substance-abuse problems. Like many other early alumni of SNL, he was exposed to drugs early in his career, but he also had become addicted to painkillers for a degenerative-disk disease that had been triggered by his comic falls. He was able to wean himself from drugs through the Betty Ford clinic in the late 1980s. In the meantime, he continued to star in movies such as *Fletch* (1985).

His career began to flag at the start of the 1990s. Chase was heard to remark that he missed the danger of live television, so it came as no surprise to those that knew him that he took a major risk in launching *The Chevy Chase Show*, a late-night talk show which was one of several efforts by comedians in 1993 to fill the void left by the retirement of Johnny Carson. Like many of the others, it was soon canceled. Since then, Chase has made a number of attempts to revive his movie career. He made the fourth *Vacation* movie (*Vegas Vacation*) in 1997 and began work on a new *Fletch* movie in 1999. Many critics, however, see him as just going through the motions, cashing in on his name and characters before it is too late. The public, however, still thinks of him as Chevy Chase, man of many falls and few competitors.

—John J. Doherty

The Chautauqua Institution

During its first eighty years, more famous men and women, including American presidents, appeared under the auspices of the Chautauqua Institution, located on the shore of Lake Chautauqua in an obscure part of northwestern New York, than at any other place in the country. Built in 1874, Chautauqua was headquarters for a phenomenally successful late nineteenth-century religious and mass education movement that satisfied a deep hunger throughout America for culture and "innocent entertainment" at reduced prices.

Philosopher William James visited the site in 1899 and was astonished by the degree to which its small-town values informed nationwide programs. The institution reflected the inexhaustible energies and interests of two founders, Lewis Miller, a wealthy Akron, Ohio, manufacturer of farm machinery (and Thomas A. Edison's future father-in-law), and John Heyl Vincent, who at eighteen had been licensed in Pennsylvania as a Methodist "exhorter and preacher." Both had grown up in rural America, and both were especially knowledgeable about the tastes and yearnings of their fellow citizens.

Long before James's visit, Miller had helped finance revival meetings in a hamlet near Lake Chautauqua, but attendance had

declined. While searching for a way to continue his vision of the Lord's work, Miller read some of Vincent's writings, came to the belief that financial salvation was attainable if some new purpose for the site could be found, and contacted Vincent. Vincent disliked razzle-dazzle evangelism but agreed that training young men and women as Sunday school teachers could be the worthy purpose that Miller sought.

A Sunday School Assembly was formed and enjoyed immediate success. However, a looming problem was that as the school's enrollment steadily increased, so did concerns about chaperoning students. Miller and Vincent feared possible scandals in sylvan glades, unless idle time could be filled with regular and wholesome educational and entertainment programs. To direct such activities, they engaged William Rainey Harper, an Ohio-born educator, who would later be John D. Rockefeller's choice to serve as president of the University of Chicago.

Like Miller and Vincent, Harper never opposed an idea because it was new or unproven. Four years after the Sunday School Assembly began operations the Chautauqua Literary Scientific Circle came into being. One measure of its success was that within twenty years, ten thousand reading circles, all of which took their lead from the institution's example, were operating throughout America. One fourth were in villages of fewer than five hundred people, and Chautauqua served them diligently, providing reading lists and other materials.

But innovations at Chautauqua did not stop with the training of Sunday school teachers and reading circles. As early as 1883, it chartered itself as a university and would remain one for twelve years, until established universities began to offer summer courses. Some three hundred "independent" or loosely affiliated similar institutions used Chautauqua as a model without charge by the institution. As early as 1885, a Chautauqua Assembly was held in Long Beach, California, where rollers breaking on wide stretches of white sand and bracing sea air further encouraged those who sought spiritual and intellectual enlightenment during summer months.

For the benefit of those who could not afford travel to New York, California, or independent Chautauquas, "tent chautauquas" came into being. A tent would be pitched in a meadow and lecturers engaged to inform locals on history, politics, and other subjects of general as well as religious interest. Among the speakers, William Jennings Bryan is said to have given fifty lectures in twenty-eight days. The average price for admission was fifty cents, and no drinking or smoking was allowed. A Methodist Dining Tent or Christian Endeavor Ice Cream Tent supplied all refreshments.

Just after the turn of the century, Chautauqua was a "cultural phenomenon with some of the sweep and force of a tidal wave," wrote historian Russell Lynes. Women, who heretofore had little chance to attend college, for the first time had an organization aware of their educational needs that sought to begin opening up opportunities for them. By 1918, more than a million Americans would take correspondence courses sponsored by the institution. A symphony orchestra was created there, and in 1925 George Gershwin composed his *Concerto in F* in a cabin near the Lake.

In the late 1920s, however, the advent of the automobile and the mobility it offered the masses seemed to signal Chautauqua's end. Not only were untold millions abandoning stultifying small towns for the temptations of metropolises, but those who stayed put had easy access to cities for year-round education and entertainment.

In 1933 the institution went into receivership. Somehow it refused to die. By the early 1970s, with buildings in disrepair and attendance lagging, it appeared finally to be in its death throes—at

which point it renewed its existence. Richard Miller, a Milwaukee resident and great-grandson of founder Lewis Miller, became chairman of the Chautauqua board. He began an aggressive fund-raising campaign and built up financial resources until at the end of the twentieth century the institution had \$40 million and held pledges of another \$50 million from wealthy members.

More importantly, the Chautauqua Institution reached out for new publics even as it preserved its willingness to continue a tradition of serving people with insatiable curiosity about the world in which they lived and a never-ending need for information. Although the tone of its evangelical heritage remained, Catholics were welcome, about 20 percent of Chautauquans were Jews, and members of the rapidly expanding black middle class were encouraged to join.

"This is a time of growth," declared eighty-five-year-old Alfreda L. Irwin, the institution's official historian, whose family had been members for six generations, in 1998. "Chautauqua is very open and would like to have all sorts of people come here and participate. I think it will happen, just naturally."

—Milton Goldin

Chavez, Cesar (1927-1993)

Rising from the status of a migrant worker toiling in the agricultural fields of Yuma, Arizona, to the leader of America's first successful farm worker's union, Cesar Chavez was once described by Robert F. Kennedy as "one of the heroic figures of our time." Although by nature a meek and humble man known more for his leadership abilities than his public speaking talents, Chavez appealed to the conscience of America in the 1970s by convincing seventeen million people to boycott the sale of table grapes for five consecutive years. Chavez's United Farm Workers Organizing Committee (UFWOC) spearheaded the drive for economic and social justice for Mexican and Mexican American farm workers. Lending their support for this cause was a wide cross section of Americans, including college students, politicians, priests, nuns, rabbis, protestant ministers, unionists, and writers. By forming one of the first unions to fight for the rights of Mexican Americans, Chavez became an important symbol of the Chicano movement.

It would be a vast understatement to say that Chavez rose from humble beginnings. Born in 1927, Chavez spent his early years on his family's small farm near Yuma. When his parents lost their land during the Great Depression, they moved to California to work in the fields as migrant workers. Young Chavez joined his parents to help harvest carrots, cotton, and grapes under the searing California sun. The Chavez family led a nomadic life, moving so often in search of migrant work that Cesar attended more than thirty elementary schools, many of which were segregated. By seventh grade, Cesar dropped out of school to work in the fields full time.

Following service in the U.S. Navy during World War II, Chavez moved to Delano, California, with his wife Helen Fabela. It was in Delano that Chavez made the decision to take an active role in improving the dire working conditions of migrant workers. In 1952, Chavez became a member of the Community Service Organization, which at the time was organizing Mexican Americans into a coalition designed to confront discrimination in American society. Chavez's job was to register Mexican Americans in San Jose to vote, as well as serve as their liaison to immigration officials, welfare boards, and the police.

It was in the early 1960s, however, that Chavez began working exclusively to ameliorate the economic and labor exploitation of Mexican American farm workers. He formed the Farm Workers Association in 1962, which later became the National Farm Workers Association (NFWA). By 1965, 1,700 families had joined the NFWA, and during that same year the organization had convinced two major California growers to raise the wages of migrant workers. After the NFWA merged with an organization of Filipino workers to form the United Farm Workers Organizing Committee (UFWOC), the UFWOC in 1966 launched a campaign picketing grape growers in Delano who paid low wages. This campaign, which nationally became known as *La Huelga* (The Strike), proved to be the defining moment in Chavez's work as a labor activist. The highly publicized five-year strike against grape growers in the San Joaquin, Imperial, and Coachella valleys raised America's consciousness about the conditions of migrant workers and transformed Chavez into a national symbol of civil disobedience. By holding hunger strikes, marches, and sit-ins, as well as having himself arrested in order to gain attention to his cause, Chavez led a boycott that cost California grape growers millions of dollars. In 1970, the growers agreed to grant rights to migrant workers and raised their minimum wage.

La Huelga was the first of many successful boycotts that Chavez organized on behalf of grape and lettuce pickers, and he also fought for the civil rights of African Americans, women, gays, and lesbians. Although membership in the UFWOC eventually waned, Chavez remained a beloved figure in the Mexican American community and nationally represented the quest for fairness and equality for all people. When Chavez died on April 23, 1993, at the age of sixty-six, expressions of bereavement were received from a host of national and international leaders, and a front-page obituary was published in the *New York Times*.

Chavis, Boozoo (1930—)

As the leading exponent of a unique musical tradition known as zydeco, Boozoo Chavis is a genuine artist who is inextricably enveloped within the regional landscapes of his culture. Lake Charles, Louisiana, sits at the western apex of a roughly triangular area of south Louisiana that is home to the black French-speaking population known as Creoles. Here, among the horse pastures and the patchwork fields of rice and sweet potatoes, Boozoo Chavis learned to play "la-la music" on the accordion for the rural house dances that formed the centerpiece of Creole social life. When the urbanized sounds of rhythm and blues caught on among local blacks, it was Chavis who first successfully blended traditional la-la songs with a more contemporary bluesy sound and with lyrics sung in English. In 1954 he recorded the now classic "Paper in My Shoe," which told of poverty but with a beat that let you deal with it. Along with Clifton Chenier who recorded "Ay Tete Fee" the following year, Boozoo Chavis is a true pioneer of zydeco music.

In an unfortunate turn of events, Chavis felt he did not receive what was his due from making that early record, and left off pursuing music as an avocation, turning instead to raising race horses at "Dog Hill," his farm just outside Lake Charles. Though he continued to play for local parties and traditional Creole gatherings such as Trail Rides, he did not begin playing commercially again until 1984. Since coming out of semi-retirement he has not wasted any time, however, and has recorded some seven albums loaded with pure gems. *Hey Do Right!* is titled after the nickname for his daughter Margaret.

Wilson Anthony Chavis was born October 23, 1930 some 60 miles east of the Lake Charles area where he would grow up. He does not recall where his peculiar nickname came from, but it is a moniker widely recognized among legions of zydeco fans today—caps and t-shirts in south Louisiana proclaim in bright letters: "Boozoo, that's who!" Even as he approaches his seventieth birthday, Chavis still knows how to work a crowd. Whether it is in the cavernous recesses of a legendary local club like Richard's in Lawtell or Slim's Y-Ki-Ki in Opelousas, or commanding an outdoor stage at the congested New Orleans Jazz and Heritage Festival, Boozoo performs like the seasoned professional he has become, with great vigor and *joie de vivre*. He characteristically runs through a long sequence of tunes one after another, without even taking a break. His trademark clear plastic apron keeps the sweat from damaging the bellows of his diatonic button accordion, which he still prefers over the piano key instrument that is more common among zydeco artists of his generation. Every Labor Day, Boozoo hosts a picnic at Dog Hill which is open to the public, thereby continuing the tradition of rural house dances where zydeco began. Numerous bands contribute to the day's entertainment, and Boozoo always plays last, making the final definitive statement of what this music is all about.

Afraid of flying, he mainly limits touring to places within easy driving distance of Lake Charles, to all points between New Orleans and Houston, the extremities of zydeco's heartland. But with increasing recognition of his talent and position as leading exponent of zydeco, Chavis has begun to travel more widely, heading for locations like New York, Washington, D.C., San Francisco, or Seattle. No

matter where he plays, Boozoo has never strayed from the recognition that zydeco is first and foremost dance music. His songs include many of the old French waltzes and two-steps from earlier times, but are always spiced up a bit in his inimitable fashion. In a recently published book, zydeco observer Michael Tisserand characterized Boozoo's playing as a "punchier, more percussive style." Thematically, Chavis stays close to home, writing songs about his family, friends, farm, and beloved race horses that sport names such as "Camel" and "Motor Dude."

In the face of ever more urban and homogenizing influences on zydeco, Boozoo Chavis remains rooted in the music's rural traditions. He is just as likely to be fixing up the barn or working with his horses as playing at a dance or a concert. While a half-serious, half in jest controversy has simmered over the years regarding who should follow the reign of Clifton Chenier as the King of Zydeco, most cognoscenti agree that of all the leading contenders for the crown, Boozoo Chavis is most deserving of the accolade. He is the perennial favorite at the Zydeco Festival in Plaisance, Louisiana, where he often waits in the shade of the towering live oaks to greet his many fans and sign autographs. His music, like the person that he is, is the real article.

Chayefsky, Paddy (1923-1981)

Distinguished playwright, novelist, and screenwriter Paddy (born Sidney) Chayefsky was a major force in the flowering of post-World War II television drama, sympathetically chronicling the lives and problems of ordinary people. His most famous piece of this period is *Marty*, about the love affair between two homely people, which became an Oscar-winning film in 1955. Bronx-born and college educated, he attempted a career as a stand-up comic before military service, and began writing when wounded out of the army. The most acclaimed of his Broadway plays is *The Tenth Man* (1959), drawing on Jewish mythology, but he found his wider audience through Hollywood, notably with original screenplays for *The Hospital* (1971) and *Network* (1976), both of which won him Academy Awards and revealed that he had broadened his scope into angry satire. He controversially withdrew his name from the 1980 film of his novel *Altered States* (1978), which he had adapted himself, and died a year later.

Checker, Chubby (1941—)

One of several popular male vocalists to emerge from the Philadelphia rock 'n' roll scene in the late 1950s and early 1960s, Chubby Checker was the chief beneficiary of the fervor created by the dance known as the Twist.

Checker was born Ernest Evans on October 3, 1941 in Spring Gully, South Carolina, the child of poor tobacco farmers. At the age of nine he moved to Philadelphia and eventually began working at a neighborhood produce market where he acquired his famous nickname "Chubby" from his employer. Evans' big break, however, came at age 16 while working at a local poultry market. Proprietor Henry Colt overheard Evans singing a familiar tune as he went about his work. Colt was impressed with Evans' talent and referred him to a songwriter friend named Cal Mann who was, at that time, working with Dick Clark.

Dick Clark and his *American Bandstand* had a lot to do with the popularity of many Philadelphia singers who frequently appeared on the program. Frankie Avalon, Bobby Rydell, Fabian, and Checker were among the teen idols whose careers took off after they gained exposure to millions of American teenagers via television. Checker was one of very few black teen idols of that period, however. In his case, even his stage name derived from contact with Dick Clark. Clark and his wife were looking for someone to impersonate Fats Domino for an upcoming album. Hoping to give Evans' career a boost, Clark's wife is said to have dubbed the young performer "Chubby Checker" because the name sounded like Fats Domino.

Chubby Checker

The song entitled “The Twist” was originally released as the flip side of a 45 rpm single by Hank Ballard and the Midnighters, a popular R&B singing group. Checker released “The Twist” as an A-side on the Parkway label in August 1960, aggressively promoting the record and the dance in personal appearances and on television. Numerous Chubby Checker performances on programs like the Philadelphia-based *American Bandstand* helped fuel both the Twist Craze and Checker’s career.

Chubby Checker’s recording of “The Twist” went to #1 on the *Billboard* Top 40 charts in mid-September, 1960. Eager to capitalize on the success of that record, Checker released several other Twist-related singles such as “Let’s Twist Again,” “Twist It Up,” and “Slow Twistin’.” In fact, almost all of his records were dance tunes, such as the #1 hit “Pony Time,” “The Hucklebuck,” “The Fly,” and the #2 hit “Limbo Rock.”

Several films were produced in an attempt to cash in on the popularity of the Twist, and Chubby Checker was the star of two of them. Alan Freed’s *Rock around the Clock* and *Don’t Knock the Rock* were the first rock ‘n’ roll exploitation films ever made, back in 1956; in 1961 Chubby Checker starred in *Twist around the Clock* and *Don’t Knock the Twist*, remakes of the Freed films made after only five years had passed. Checker also went on to appear in other movies such as *Teenage Millionaire*.

Perhaps as a result of the Twist movies being released in the second half of 1961, the Twist craze resurfaced and Checker’s version of “The Twist” was re-released by Parkway. The record was even more successful the second time around, and “The Twist” was the first #1 record of 1962. This is the only case during the rock ‘n’ roll era of the same record earning #1 on the Top 40 on two different occasions.

Four months later, in May 1962, Chubby Checker was awarded a Grammy for best rock and roll recording of 1961, ostensibly for “Let’s Twist Again.” The latter was a moderate (#8) hit in 1961, but in no sense the best rock ‘n’ roll song of the year. Checker’s triumphant re-release of “The Twist” did set a new record, but that achievement took place in 1962, and technically the song was not eligible for a 1961 Grammy.

Chubby Checker continued to release singles and albums of rock and roll, primarily dance music. Although he had a few more hits, such as “Limbo Rock” in 1962, no subsequent dances were ever as good to Checker as the Twist had been. By the end of 1965 he had placed 22 songs on the Top 40, including seven Top Ten hits, but his best period was over by the end of 1962.

Since the mid-1970s Checker has benefitted from another trend, oldies nostalgia. Along with many other former teen idols, Checker has seen a resurgence of his career at state fairs and on oldies tours, playing the old songs again for a multi-generational audience.

Cheech and Chong

Cheech and Chong were a comedy team of the early 1970s that opened for rock bands, recorded a series of popular comedy albums, performed on the college circuit, and appeared in their own movies. Their comedy routines consisted largely of “doper jokes,” reflecting the drug culture and scatological humor of the 1960s. Richard “Cheech” Marin (1946—) and Tommy Chong (1938—) met in 1968 in Vancouver, British Columbia, where Cheech had fled to avoid the U.S. draft during the Vietnam War. Together they co-founded an improv group called City Works, and performed in a nightclub owned by Chong’s brother. By 1970 they were known as Cheech and Chong, and were performing in nightclubs in Toronto and Los Angeles.

Canadian-born Tommy Chong, half Chinese and half Scottish-Irish, was playing the guitar in a band called Bobby Taylor and the Vancovers when he met Cheech, who started out singing with the band. Cheech, born of Mexican parents in South Central Los Angeles, grew up in Granada Hills, near the San Fernando Valley. The duo recorded several successful comedy albums in the early 1970s. In 1971, *Cheech and Chong* was nominated for a Grammy for Best Comedy Recording, and their 1972 album *Big Bambu* retained the record of being the largest-selling comedy recording for many years. *Los Cochinos* won the Grammy for Best Comedy Recording in 1973.

Cheech Marin (left) and Tommy Chong

Their humor, although very vulgar at times, was entertaining, with Cheech playing a jaunty marijuana smoking dopehead, and Chong playing a burned out, laid back musician.

Their successful movies of the late 1970s and early 1980s became doper cult classics. *Up in Smoke* was released in 1978, *Cheech & Chong's Next Movie* in 1980, and *Cheech & Chong's Nice Dreams* in 1981. In these three movies they play simple-minded pot heads, or left over hippies, but their comic teamwork has been compared to Laurel and Hardy. The screenplays were written by both Cheech and Chong, with the directing done primarily by Chong. Their last films together were *Things Are Tough All Over* (1982), in which they both play dual roles; *Still Smokin'* (1983); *The Corsican Brothers* (1984), in which they go "straight"; and *Cheech and Chong Get Out of My Room*, directed by Cheech in 1985 for the cable channel Showtime.

The pair split up in 1985, and from there Tommy Chong's career fizzled. He starred in the 1990 film *Far Out Man*, which bombed, and he tried stand-up comedy in 1991 without much success. Cheech Marin, on the other hand, went on to a successful career as a director and actor in several films and television shows. His film *Born in East L.A.* (1987) has become a classic among Mexican Americans and is often included in academic classes of Chicano Studies. In the 1990s he received small supporting roles in several films, including a well-received part in the hit *Tin Cup*, starring Kevin Costner, and played the television role of Joe Dominquez in *Nash Bridges*.

Cheerleading

Few archetypes so exemplify every stereotype of women in modern culture as that of the cheerleader. An uneasy juxtaposition of clean-cut athlete, ultra-feminine bubble-headed socialite, skilled dancer, and buxom slut, the cheerleader is at the same time admired and ridiculed, lusted after and legitimized by everyone from junior high school girls to male sports fans. Though cheerleading began as an all-male domain, and there are still male cheerleaders, it is for girls that the role of cheerleader is a rite of passage, whether to be coveted or scorned. Public figures as widely diverse as Gloria Steinem, John Connally, and Paula Abdul spent part of their early years urging the crowd to cheer for their athletic team.

Cheerleading as we know it began in November 1898 at a University of Minnesota football game, when an enthusiastic student named Johnny Campbell jumped up to yell:

Rah, Rah, Rah

Sku-u-mah
Hoorah, hoorah
Varsity, varsity
Minn-e-so-ta!

The idea caught on, and in the early 1900s at Texas A&M, freshmen, who were not allowed to bring dates to athletic events, styled themselves as yell leaders, with special sweaters and megaphones. They became so popular, especially with women, that soon the juniors and seniors took the role away from the freshmen.

Only men took on the highly visible role of cheerleading until after World War II, when women began to form cheerleading squads, wearing demure uniforms with skirts that fell well below the knee. In the late 1940s, the president of Kilgore College in Texas had the idea of creating an attractive female dancing and cheering squad as a tactic to keep students from going to the parking lot to drink during half time. He hired a choreographer, commissioned flashy costumes, and the idea of cheerleading as a sort of sexy show-biz entertainment took off. By the 1990s, there were over three million cheerleaders nationwide, almost all of them female.

Cheerleading means different things on the different levels it is practiced. In junior high, high school, and college, cheerleading is very much a social construct. Cheerleading tryouts appeal to girls for many reasons. Some seek the prestige and social status afforded those who make the cut. These chosen few are admired by the boys and envied by the girls as they represent their school at games and hobnob with the boys' elite—the athletic teams. Those who are rejected after tryouts often experience deep humiliation. Of course there are many who reject the school status hierarchies and who view the cheerleaders as shallow snobs rather than social successes. Another way to view cheerleaders is as strong athletes who seek recognition in one of the only areas acceptable for females. In fact, in many schools, prior to the Title IX laws of the 1970s, there were no athletic teams for girls, and cheerleading was the only outlet where girls could demonstrate athletic skill.

Many supporters of cheerleading stress the athletic side of cheerleading and the strength required to perform the jumps and gymnastic feats that accompany cheers. There are local and national cheerleading competitions, where squads compete and are judged on creativity, execution, degree of difficulty, and overall performance. Over the years, cheerleading has developed from simple gestures and jumps to difficult gymnastic stunts and complex dance routines. As the athletic skill required to become a cheerleader has increased, so has the number of cheerleading-related injuries. In 1986, the reputation of cheerleading suffered when two cheerleaders in different schools were involved in major accidents within a week. A young woman was killed and a young man paralyzed while practicing their cheerleading stunts. A Consumer Product Safety Commission study in 1990 found 12,405 emergency room injuries that year were related to cheerleading, prompting parental demands for greater safety precautions.

Another sort of cheerleading is found in professional sports. While fitting a standard mold of attractiveness is one of the primary requisites of any sort of cheerleading, the professional squads have taken it to extremes. Tryouts for squads like the Dallas Cowboy Cheerleaders, the New Orleans Saints' Saintsations, and the Buffalo Bills' Buffalo Jills, seem almost like auditions for a Broadway play, with hundreds of flamboyantly made-up dancers and performers competing for a few openings. The cheerleaders perform for exposure and love of their team rather than money. In an industry where the

A group of cheerleaders from Mississippi State University.

athletes might earn millions, most cheerleaders are paid only ten to twenty-five dollars a game. Some are able to acquire contracts for local advertising to supplement their income, and some hope to go on to show business careers, but for many, just as in high school, it is the admiration of the crowd and the identification with the team that is the payoff.

It is in the professional arena that the risqué side of cheerleading has received the most publicity. Because cheerleaders are almost always chosen for standard good looks and shapely bodies in addition to whatever skills may be required, even in high schools, rumors of immorality circulate. In the professional squads, where outfits are often skimpy and the routines flirtatious, the rumors are even more graphic. Though most squads advertise a high moral standard, the stereotype of the sextop cheerleader has been hard to defeat. Movies such as the XXX rated *Debbie Does Dallas* contribute to this, as did the 1979 *Playboy Magazine* spread featuring nude photos of a fictional cheerleading squad called the Texas Cowgirls.

Cheerleading has also grown into a big business. In the 1950s, a former Texas high school cheerleader named James Herkimer (he developed a cheerleading jump called the ‘herkie’) founded the National Cheerleader Association. The NCA is a for-profit enterprise based in Dallas that runs hundreds of cheerleading camps nationwide, teaching young aspiring cheerleaders jumping and cheering skills at a reasonable rate. The cost of the camps is kept low, but the cheerleading squads who attend the camps usually purchase their uniforms and other accoutrements from the NCA-affiliated National Spirit group. Since it costs about \$200 to outfit the average cheerleader, 3 million cheerleaders represent a sizable market, and by the 1990s, the NCA was grossing over 60 million dollars a year.

The huge profits have attracted competition. In the 1970s, Jeff Webb, a former protégé of James Herkimer, began his own company in Memphis, the Universal Cheerleading Association, and its parent

company, the Varsity Spirit Corporation. While Herkimer has clung to the classic cheerleading style, with athletic jumps and rhythmic arm motions, Webb opted for a more modern approach; his camps teach elaborate gymnastic stunts and dance routines, and his supply company markets flashier uniforms and specialty items. Varsity Spirit Corp. has even expanded abroad, signing a deal in Japan, where cheerleading is very popular. Though NCA and UCA are the largest, the expanding ‘school spirit industry’ has prompted the creation of many other cheerleading camp/supplier companies.

Because cheerleaders play such an important role in many schools, cheerleading has become a battleground for social issues. In 1969 over half of the public school students in Crystal City, Texas, staged a walkout for twenty-eight days in protest of their school’s racist policies concerning cheerleader selection. In a district where 85 percent of the students were Chicano, it was not unusual for only one Chicana cheerleader to be selected. The students’ action was successful and it was the root of the Chicano movement organization, Raza Unida. In 1993, four cheerleaders on a high school squad in Hempstead, Texas, found they were pregnant. Only one was allowed to return to cheering; she had an abortion, and she was white. The other students, who were African American, fought the decision with the support of the National Organization for Women and the American Civil Liberties Union. They were finally reinstated. In 1991, another student charged the University of Connecticut with discrimination when they dropped her from the cheering squad for being, at 130 pounds, over the weight limit. Her suit resulted not only in her reinstatement but in the abolition of the weight requirement.

The fierce competition surrounding cheerleading has been documented in a cable-TV movie starring Holly Hunter in the title role of *The Positively True Adventures of the Alleged Texas Cheerleader-Murdering Mom*. The movie takes playful liberties with the true story of Wanda Holloway, who plotted to have the mother of her daughter’s

cheerleading rival killed. Journalists in Texas, where cheerleading is taken seriously, were surprised only by the fact that Holloway presumed that the murder would prevent the rival from trying out for the squad. The media is full of other such stories: the New Jersey cheerleaders who in 1998 fed the opposing squad cupcakes filled with laxatives, and the South Carolina cheerleaders who spiced up a 1995 Florida competition by holding their own private contest—in shoplifting.

Cheerleaders are easy targets for satire, their *raison d'être* construed as boosterism, and they are often stereotyped as being stupid and superficial. In 1990, the University of Illinois was prompted to take the soft-core sexual image of cheerleaders seriously. Noting the high rate of sexual assault on campus, a university task force recommended banning the cheerleaders, the Illinettes, because the all-female squad maintained a high-profile image as sexual objects. In this light, it is easy to see that male cheerleading is a distinctly different phenomenon; men in letter sweaters with megaphones yelling and doing acrobatics clearly fill a different role than scantily-clad women doing the same yells and acrobatics.

Debate continues over whether cheerleaders are athletes or bimbos; whether cheerleading is, in itself, a sport, or an adjunct to the *real* (mostly male) sports. Some women devote their lives to cheerleading, for themselves or their daughters; some women condemn it because it turns women into boosters at best and sex objects at worst. Some men delight in watching the dances of the flamboyant squads at half-time; some men see them as a distraction to the game and believe they should be abolished. And in junior high and high schools across the country, girls, even many who profess not to care, still train to perform difficult routines for tryouts and anxiously watch bulletin boards to see if they made the squad.

Cheers

Cheers was the longest-running and most critically acclaimed situation comedy on 1980s television. Combining physical and verbal gags with equal dexterity, *Cheers* turned the denizens of a small Boston bar into full-fledged American archetypes. By the end of the show's run, author Kurt Vonnegut, Jr., was moved to call *Cheers* the "one comic masterpiece" in TV history. The author of many comic fiction classics added, "I wish I'd written [*Cheers*] instead of everything I *had* written. Every time anybody opens his or her mouth on that show, it's significant. It's *funny*."

Cheers was set at a Boston bar of the same name owned by Sam Malone (Ted Danson), a good-looking former relief pitcher for the woebegone Boston Red Sox whose career was cut short by a drinking

problem. His alcoholism under control, he reveled in his semi-celebrity and status as a ladies' man. Tending bar was Sam's old Red Sox coach, the befuddled Ernie Pantuso (Nicholas Colasanto), a character obviously modeled on baseball great Yogi Berra. In early 1985, Colasanto suddenly died. He was replaced behind the bar by an ignorant Indiana farm boy, Woody Boyd (Woody Harrelson). Carla Tortelli (Rhea Perlman) was the foul-mouthed waitress; a single mother, she bore several children out of wedlock during the show's eleven-year run. To one woman she threatened, "You sound like a lady who's getting tired of her teeth." The bar's regulars were the pathetic Norm Peterson (George Wendt), a perpetually unemployed accountant trapped in a loveless marriage to the unseen Vera; and the equally pathetic Cliff Clavin (John Ratzenberger), the resident trivia expert and career postal worker, who still lived with his domineering mother.

In the series' first episode Diane Chambers (Shelley Long), a pretentious, well-to-do graduate student, was abandoned at the bar by her fiancé en route to their wedding. Sam offered her a job waitressing, thus beginning one of the most complex romances in prime time TV history. Sam and Diane swapped insults for most of the first season, and a volley of insults on the season's last episode culminated in their first kiss. They consummated their relationship in the first episode of the second season:

SAM: You've made my life a living hell.

DIANE: I didn't want you to think I was easy.

Yet Sam and Diane never tied the knot. Diane left Sam and received psychiatric help from Dr. Frasier Crane (Kelsey Grammer), with whom she promptly fell in love. Diane and Frasier planned a European wedding, but she left him at the altar. By the 1986-87 season Sam and Diane were engaged when, on the eve of their wedding, Diane won a sizable deal to write her first novel. Sam allowed her to leave for six months to write, knowing it would be forever.

Sam sold the bar to go on a round-the-world trip. He humbly returned to become the bartender for the bar's new manager, Rebecca Howe (Kirstie Alley), a cold corporate type. The bar was now owned by a slick British yuppie, Robin Colcord, who had designs on Rebecca. When Robin was arrested for insider trading, Sam was able to buy back the bar for a dollar.

Life went on for the *Cheers* regulars. Dumped by Diane, the cerebral Frasier grew darker and more sarcastic, barely surviving a marriage to an anal-retentive, humorless colleague, Lilith (Bebe Neuwirth). Sam and Rebecca enjoyed a whirlwind romance and contemplated having a baby together out of wedlock. Carla married a professional hockey player, who was killed when a Zamboni ran over him. Woody fell in love with a naive heiress, and by the final season won a seat on the Boston City Council. Norm and Cliff remained loyal customers, serving as Greek chorus to the increasingly bizarre happenings.

Despite the wistful theme song ("Sometimes you want to go / Where everybody knows your name"), the characters were frequently cruel to one another. Norm once stood up for the unpopular Cliff this way: "In his defense, he'll probably never reproduce." During one exchange Carla asked Diane, "Did your Living Bra die of boredom?" They also engaged in elaborate practical jokes; Sam

Ted Danson (second from right) and Shelley Long (right) with the rest of the cast in a scene from the sitcom *Cheers*.

devised one prank which ended with Cliff, Carla, Norm, and Woody on an endless cross-country bus trek. The sadism reached its zenith during a petty rivalry throughout the run of the series with a competing bar, Gary's Olde Time Tavern. The feud culminated during the final season, when the Cheers gang convinced the smug Gary that an investor would pay him \$1 million for his land. Gary gleefully took a wrecking ball to his establishment.

Cheers ended in 1993 after 11 seasons and 269 episodes. Series co-creators Glen and Les Charles had once confessed their ideal *Cheers* ending: Sam and Diane admit they can't live with or without each other and take each other's life in a murder-suicide. In the actual finale, Diane did return to the bar, contemplating a reconciliation with Sam, but the two finally realized they were no longer suitable for each other. In other developments, upwardly mobile Rebecca impulsively married a plumber, Cliff won a promotion at the post office, and—miracle of miracles—Norm finally got a steady job. In the last moments of the series, the regulars sat around the bar to discuss the important things in life. As the show faded out one final time, Sam walked through the empty bar, obviously the most important thing to him, at closing time.

There has been no consensus as to the best single episode of *Cheers*. Some prefer the Thanksgiving episode at Carla's apartment, ending in a massive food fight with turkey and all the trimmings in

play. Others recall Cliff's embarrassing appearance on the *Jeopardy!* game show, with a cameo from host Alex Trebek. There was also the penultimate episode, where the vain Sam revealed to Carla that his prized hair was, in fact, a toupee. Perhaps the finest *Cheers* was the 1992 hour-long episode devoted to Woody's wedding day, a classic, one-set farce complete with a Miles Gloriosus-like soldier, horny young lovers, and a corpse that wouldn't stay put.

Cheers was inspired by the BBC situation comedy *Fawlty Towers* (1975, 1979), set at a British seaside hotel run by an incompetent staff. That show's creator/star, John Cleese, appeared on *Cheers* in an Emmy-winning 1987 cameo as a marriage therapist who went to great lengths to convince Sam and Diane that they were thoroughly incompatible. Co-creator James Burrows was the son of comedy writing great Abe Burrows, responsible for the long-running 1940s radio comedy *Duffy's Tavern* ("where the elite meet to eat"), a program set in a bar which was also noted for its eccentric characters and top-notch writing.

Grammer reprised his role of Frasier Crane in the spin-off series *Frasier*, which debuted in the fall of 1993 to high ratings and critical acclaim. The series won Best Comedy Emmy awards during each of its first five seasons.

Chemise

Fashion designer Cristobal Balenciaga's "chemise" dramatically altered womenswear in 1957. Since Christian Dior's New Look in 1947, women wore extremely narrow waists, full wide skirts, and fortified busts. The supple shaping of Balenciaga's chemise, which draped in a long unbroken line from shoulder to hem, replaced the hard armature of the New Look. The chemise was a hit not only in couture fashion, where Yves Saint Laurent showed an A-line silhouette in his first collection for Dior, but also in Middle America, where Americans copied the simple shape which required far less construction and was therefore cheaper to make. Uncomfortable in the body conformity of the New Look, women rejoiced in a forgiving shape and the chemise, or sack dress, became a craze. The craze was parodied in an *I Love Lucy* episode in which Lucy and Ethel pine for sack dresses but end up wearing feed sacks.

Chenier, Clifton (1925-1987)

Although he passed away in the late 1980s, Clifton Chenier remains the undisputed King of Zydeco. It was Clifton Chenier who took the old dance music of the rural Louisiana Creoles and added blues, soul, and country and stirred it all up until it became what we now call zydeco. His name was virtually synonymous with this type of music, and he became the most respected and influential zydeco artist in the world. Chenier popularized the use of the big piano key accordion, which allowed him to play a diversity of styles within the expanding zydeco genre. He pushed the envelope with energetic renditions of French dance standards or newer tunes transformed through zydeco's characteristic syncopated rhythms and breathy accordion pulses. Chenier assembled a band of musicians who were not just good but were the best in the business; they were a close-knit group that became legendary for high intensity concerts lasting four hours straight without a break. And there at the helm was Chenier, gold tooth flashing like the chrome of his accordion, having the time of his life.

Clifton Chenier was born on June 25, 1925 into a sharecropping family near Opelousas, Louisiana. He became dissatisfied early on with the farming life, and headed west with his brother Cleveland to work in the oil refineries around Port Arthur, Texas. Having learned from his father how to play the accordion, Chenier decided to attempt a transition toward performing as a professional. Driving a truck during the day and playing music at night, Chenier, along with his

Clifton Chenier

brother on rubboard, soon became a popular attraction in local roadhouses. Often the pair comprised the entire band, and this was zydeco in its purest form, an extension of the earlier French "la-la" music played at Creole gatherings throughout southwest Louisiana, now taken to new heights and amplitude for a wider audience. Chenier credits Rhythm and Blues (R & B) artist Lowell Fulson with showing him how to be a good performer, always mixing it up and pleasing the crowd—these lessons stayed with him for the rest of his career. One of his earliest recordings, "Ay-Tete-Fee" became a hit record in 1955.

During the early 1960s, Chenier began recording albums for Chris Strachwitz's west coast Arhoolie Records, where he eventually became that label's biggest seller. His first Arhoolie album, *Louisiana Blues and Zydeco*, was a hard-fought compromise between the producer's desire for traditional zydeco, and Chenier's wish to cross over into soul and the potentially even more lucrative R & B. The final version of the album represented a mixture of these two directions and included for the first time on record a blues number sung in French. Following that release, Chenier's popularity soared, and a frenetic schedule of touring ensued. Over the next few years, Clifton Chenier would realize the wisdom of Strachwitz's insistence on sticking close to unadulterated zydeco, which was already a musical gumbo of various ingredients, and he became more of a traditionalist himself,

championing Creole culture and the French language wherever he played.

All through the 1970s Chenier and his Red Hot Louisiana Band traveled the “crawfish circuit” between New Orleans and Houston, playing in parking lots, in clubs and bars, and in Catholic church halls where zydeco dances were sponsored with increasing frequency. This kept the music rooted in its place of origin, and served to accentuate the rising awareness of Creole ethnic identity. When touring further afield, he became a regular attraction at blues festivals around the country and even made a successful sweep through Europe. It was about this time that he began wearing a crown on stage, dubbing himself the “King of Zydeco.” His musical performances were featured in several documentary films, including *Hot Pepper* and *J'ai Ete au Bal*. In 1984, Chenier won a Grammy Award for the album *I'm Here*, and was now a nationally, and even internationally recognized musician. But his health had gone downhill. Plagued by poor circulation, he was diagnosed with diabetes and had portions of both legs amputated. After a final, tearful performance at the 1987 Zydeco Festival in Plaisance, Louisiana, he canceled a scheduled tour due to illness, and on December 12, 1987, at the age of 62, Clifton died in a Lafayette hospital. His legacy lives on, as does his fabled Red Hot Louisiana Band, now led by son C.J. Chenier, an emerging zydeco artist in his own right.

There has never been anyone, before or since, who could play the accordion like Clifton Chenier. While his vocal renditions of songs were truly inspired, his voice always served as accompaniment to the accordion, rather than the other way around. Besides having talent and the gift of making music, he was able to establish a warm and unaffected rapport with his audience. He knew who he was, he loved what he was doing, and he genuinely enjoyed people. Fans and critics alike are unreserved in their emphatic assessment of Clifton Chenier's artistry and his place in the annals of popular music. And musicians in the Red Hot Louisiana Band fondly recall the feeling of playing with this soulful master who had so much energy and who injected such pure feeling into his music. As former member Buckwheat Zydeco put it, “Clifton Chenier was the man who put this music on the map.”

Cher

See Sonny and Cher

Cherry Ames

Packed with wholesome values and cheerfulness, the Cherry Ames nursing mystery series was popular with girls in the mid-twentieth century. Cherry, a dark-haired, rosy-cheeked midwestern

girl, was always perky and helpful, ready to lend a hand in a medical emergency and solve any mysteries that might spring up along the way. The books never claimed to have literary quality. Their creator, Helen Wells, admitted they were formulaic—not great literature, but great entertainment.

The series consisted of 27 books published by Grosset and Dunlap between 1943 and 1968, authored by Helen Wells and Julie Tatham. Aggressively marketed to girls, the books contained all sorts of consumer perks: the second book in the series was offered free with the first, and each book showed a banner on the last page advertising the next exciting adventure. The first 21 volumes were issued in colorful dust jackets showing Cherry in her uniform, proclaiming “It is every girl's ambition at one time or another to wear the crisp uniform of a nurse.” (Indeed, this uniform was described over and over, along with Cherry's off-duty snappy outfits.) Early copies in the series had yellow spines, but the format was quickly changed to green spines, probably to avoid confusion with the ubiquitous Nancy Drew books. There was also a companion volume written by Wells in 1959, entitled *Cherry Ames' Book of First Aid and Home Nursing*.

In the early years, the novels were patriotic, pro-nursing tales in which Cherry called for other girls to join her and help win World War II. The later books were mysteries, with Cherry as a girl sleuth. Titles followed the format of *Cherry Ames, Student Nurse* and included *Cherry Ames, Cruise Nurse, Cherry Ames, Chief Nurse, Cherry Ames, Mountaineer Nurse*, among many others. Cherry's nursing duties brought her to such exotic locales as a boarding school, a department store, and even a dude ranch.

Wells (1910-1986), the creator of the series and author of most of the books, was no stranger to girls' series—she was also the author of the Vicki Barr flight attendant series and other books for girls. Tatham (1908—), wrote a few books in the middle of the series. Under the pseudonym Julie Campbell she also authored both the Trixie Belden and Ginny Gordon series.

The Cherry Ames series became internationally popular, with editions published in England, France, Italy, the Netherlands, and Japan. In England, books spawned a set of Cherry Ames Girls' Annuals. There was a Parker Brothers board game produced in 1959, “Cherry Ames' Nursing Game,” in which players vie to be the first to complete nursing school.

By the 1970s, the Cherry Ames books were out of print and were being phased out of libraries. The character had a rebirth in the 1990s, however, when author and artist Mabel Maney created a series of wickedly funny gay parodies of the girl-sleuth series books, bringing out their (almost certainly unintentional) lesbian subtext. In her first book, *The Case of the Not-So-Nice Nurse*, the “gosh-golly” 1950s meet the “oh-so-queer” 1990s when lesbian detectives “Cherry Aimless” and “Nancy Clue” discover more than just the answer to the mystery.

Chessman, Caryl (1921-1960)

In 1948, a career criminal named Caryl Chessman was charged with being a “red light bandit” who raped and robbed couples in lovers’ lanes near Los Angeles. Chessman was sentenced to death for kidnapping two of the victims. His 12-year effort to save himself from California’s gas chamber intensified the debate over capital punishment. Chessman was successful in persuading various judges to postpone his execution. This gave him time to make legal arguments against his conviction and death sentence and to write *Cell 2455 Death Row*, an eloquent, bestselling book which purportedly described the author’s life and criminal career.

The courts ultimately ruled against Chessman’s legal claims. Many celebrities opposed his execution, including the Pope and Eleanor Roosevelt. In February 1960, Chessman was granted a stay of execution while the state legislature considered California Governor Edmund Brown’s plea to abolish the death penalty. The Governor’s effort, however, failed and Chessman was executed on May 2, 1960.

The Chicago Bears

Like their home city, the Chicago Bears are a legendary team of “broad shoulders” and boundless stamina. One of the original members of the National Football League (NFL), the Bears have captured the attention of football fans since the heyday of radio. An organization built on innovation and achievement both on and off the field, the Bears’ remarkable victories earned them the nickname “Monsters of the Midway.” Bears players from Red Grange to Walter Payton swell the ranks of the famous in football. By the 1990s the Bears had achieved more victories than any other team in the NFL, and have 26 members in the Pro Football Hall of Fame.

In 1920, A.E. Staley, owner of the Staley Starch Works in Decatur, Illinois, hired 25-year-old George Halas to organize a professional football team. It was a daunting task. Halas approached his former boss, Ralph Hay of the Canton Bulldogs, with the idea of forming a professional football league. On September 17, 1920, Halas met with 12 other team officials in Ralph Hay’s Humpmobile dealership in Canton, Ohio, where they created the American Professional Football Association, the predecessor of the modern National Football League. Of the 13 teams in the original league, only the Bears and Cardinals remain in existence.

The Decatur Staleys—as the Bears were first called—played their first game on October 3, 1920 at Staley Field. The Decatur team was one of only a few to show a profit in the first year of operation. Due to a recession in 1921, Staley was forced to withdraw support for the team; but Halas assumed ownership and transferred the franchise to Chicago. The team selected Wrigley Field as its home. Halas compared the rough and tumble stature of his players to the baseball stars of the Chicago Cubs, and renamed the team the Chicago Bears in January 1922. The team colors, blue and orange, were derived from Halas’s alma mater, the University of Illinois.

The first major signing for the team occurred in 1925, when University of Illinois star Red Grange was hired by Halas. Grange proved to be a strong gate attraction for the early NFL organization. Although he only played in several games due to injury, he nonetheless managed to draw a game crowd of 75,000 in Los Angeles. During the 1920s the team was a success on the field and at the gate, posting a winning season every year except one.

The Bears quickly established a reputation as a tough, brawling team capturing many hard-fought victories. New and exciting players typified the team over succeeding seasons. Bronko Nagurski, a tenacious runner requiring several players to take him down, joined the illustrious 1930 lineup. An opposing coach was rumored to have said the only way to stop Nagurski was to shoot him before he went on the field. Nagurski’s two-yard touchdown pass to Red Grange beat Portsmouth in the 1932 championship game, the first football game played indoors at Chicago Stadium. Sidney Luckman was recruited as the premiere T-formation quarterback in 1939. With Luckman at passer, the reinvigorated T-formation decimated the Washington Redskins in a 73-0 title game rout. The Bears became the “Monsters of the Midway,” and Luckman the most famous Jewish sports legend. The fighting power of the Bears was strengthened by the addition of unstoppable George “One Play” McAfee at halfback. He could score running, passing, kicking, or receiving. Clyde “Bulldog” Turner was selected as center and linebacker to assist McAfee. Turner proved to be one of the fastest centers in NFL history.

Following up-and-down seasons during the 1950s, the Bears regained notoriety by capturing another NFL title in 1963. This was the first game broadcast on closed circuit television. The recruitment of running back Gale Sayers in 1965 revitalized the Bears’ fighting spirit. Sayers was an immediate sensation, setting an NFL scoring record in his rookie year, and rushing records in subsequent years. Sportswriters honored Sayers as the greatest running back in pro football’s first half century. Standing in the shadow of Gale Sayers was halfback Brian Piccolo. The two men were the first interracial roommates in the NFL. Piccolo seldom played until Sayers’s knee injury in 1968. When Sayers was awarded the George Halas Award for pro football’s most courageous player in 1970, he dedicated the award to Piccolo, who was dying of cancer. The bond between Piccolo and Sayers was the subject of the television movie, *Brian’s Song*, as well as several books. The Bears were bolstered by the daunting presence of premiere middle linebacker Dick Butkus, who became the heart and soul of the crushing Bears defense. George Halas announced his retirement in 1968, after 40 seasons, with 324 wins, 15 losses, and 31 one ties. Halas remained influential in the operation of the Chicago Bears and the NFL until his death in 1983.

The Bears played their final season game at Wrigley Field in 1970, and then moved to Soldier Field. Successive coaches Abe Gibrón, Jack Pardee, and Neil Armstrong produced mediocre seasons with the Bears during the 1970s. The one bright spot during this period was the recruitment of Walter Payton. Called “Sweetness”

because of his gentle manner, Payton led the NFL in rushing for five successive years (1976-1980). After four coaching seasons Armstrong was replaced by former Bears tight end Mike Ditka. Under Ditka's command the Bears began winning again. In 1984, Walter Payton broke Jim Brown's career rushing record, and at the end of 1985 the team posted a 15-1 regular season mark, tying an NFL record. On January 26, 1986, in their first Super Bowl appearance, the Bears trounced New England 46-10, setting seven Super Bowl records, including the largest victory margin and most points scored.

The 1990s were a milestone decade for the NFL Chicago franchise: The team played its 1,000th game in 1993, and was the first team to accumulate 600 victories. Mike Ditka was replaced as head coach by Dave Wannstedt in 1993. Following the 1998 season Wannstedt's contract was terminated, and Jacksonville Jaguars defensive coordinator Dick Jauron was named head coach. For almost 80 years, the Chicago Bears have been one of the powerhouse teams in American football. Through all their ups and downs, they have remained true to the city that has been their home—as a tough, proud, all-American sports franchise, whose influence continues to be felt throughout popular culture.

The Chicago Bulls

One of professional basketball's dynasty teams, the Chicago Bulls were led by perhaps the best basketball player ever, Michael Jordan, from 1984-1993 and 1995-1998. When they began their first season in 1966, the Bulls were a second-rate team, and continued to be so, even posting a dismal 27-win record in 1984. That finish gave them the opportunity to draft the North Carolina shooting guard, and from then on, with his presence, the Bulls never failed to make the playoffs. Jordan led the Chicago team to six National Basketball Association championships, from 1991 to 1993 and again from 1996 to 1998. In the process, the team's bull emblem and distinctive red and black colors became as recognizable on the streets of Peking as they were in the gang neighborhoods of Chicago's South Side. Jordan became a worldwide celebrity, better known than President Bill

Clinton. When he retired from basketball on January 13, 1999, his Chicago news conference was broadcast and netcast live worldwide. Fellow players Dennis Rodman and Scottie Pippen and team coach Phil Jackson never became as well known as the legendary Jordan, but were nonetheless important contributors during the Bulls' championship years.

The Chicago Cubs

Secure in their roles as major-league baseball's "lovable losers," the National League's Chicago Cubs have not appeared in a World Series since 1945 and have not won a World Series title since 1907. Despite a legacy of superstar players including 1990s home-run hero Sammy Sosa, 1980s MVP Ryne Sandberg, and the legendary Ernie "Mr. Cub" Banks engaged in the most dramatic home-run race in the history of baseball. He and St. Louis Cardinals slugger Mark McGwire battled each other shot for shot throughout the season, with the Cardinal first-baseman finally slamming 70 home runs to Sosa's 66. Both players shattered Roger Maris's long-standing single-season home run record of 61 while helping to revive the popularity of baseball, whose status had suffered following the 1994 strike.

Chicago Jazz

Although New Orleans is the acknowledged birthplace of jazz, Chicago is regarded as the first place outside of the South where jazz

Chicago Bulls' captain Michael Jordan holding his series MVP trophy and head coach Phil Jackson holding the Bulls' sixth NBA Championship Trophy.

was heard, and New Orleans-style jazz was first recorded in Chicago. Popular in the 1920s, "Chicago Jazz" refers to a white style of music, closely related to New Orleans Jazz, in which soloists were more prominent than the ensemble. The music is also tighter or less rhythmically realized than the New Orleans style.

When World War I increased employment opportunities for African Americans outside the South, Chicago became a center of the black community. Jazz moved to Chicago to fill the need for familiar entertainment. From the black neighborhoods, jazz moved into the white areas of Chicago, where young Chicago kids were fascinated with the new sounds.

The Original Dixieland Jazz Band, a group of white New Orleans musicians who were the first band to record jazz, included Chicago musicians for their famous appearance at the Friar's Inn. That appearance and their 1917 jazz recording increased its visibility and attracted a large following for the new music. The New Orleans Rhythm Kings, an influence on the great Bix Beiderbecke, followed in 1922 but were no match for King Oliver's Creole Jazz Band, which Oliver had formed in New Orleans and taken to Chicago in 1918, where Louis Armstrong joined in 1922. The Creole Jazz Band recorded the most significant examples of New Orleans-style jazz.

King Oliver's band brought African-American jazz to Chicago and soon attracted a following comparable to that of rock stars today.

Armstrong often played at more than one club in a night. Other New Orleans greats who came to Chicago in the 1920s included Sidney Bechet, both Johnny and Baby Dodds, Jimmy Noone, and Freddie Keppard.

Banjoist Eddie Condon (1905-1973) is considered the leader of the Chicago School, carrying on battles against the boppers, whom he considered to have spoiled jazz. His musicians included cornetist Jimmy McPartland (1907-1991), Bud Freeman, Frankie Teschemacher, and Red McKenzie. This was the core of the Austin High Gang, the core of the Chicago Jazz movement. The first recording of the Chicago style was on December 10, 1927. But Condon says that they were just a bunch of guys who happened to be from Chicago. Condon pioneered multi-racial recordings, getting many of the New Orleans musicians together with white musicians.

Jimmy McPartland (1907-1991), the other link in the Chicago Jazz School, was the center of the Austin High Gang. He learned the solos note for note of the New Orleans Rhythm Kings and then copied Bix Beiderbecke's work. He even replaced Bix in the Wolverines. McPartland carried the message of classic Dixieland cornet around the world and remained associated with the Chicago Jazz style until his death.

The Chicago Seven

It was violent clashes between anti-war protesters and police during the Chicago Democratic Convention of 1968 that created the Chicago Seven's place in political and cultural history. The seven political radicals were indicted for the so-called "Rap Brown" law, which made it illegal to cross state lines and make speeches with the intent to "incite, organize, promote, and encourage" riots, conspiracy, and the like. There were originally eight defendants: David Dellinger, a pacifist and chairman of the National Mobilization against the Vietnam War; Tom Hayden and Rennie Davis, leaders of the Students for a Democratic Society (SDS); Abbie Hoffman and Jerry Rubin, leaders of the Youth International Party—or "Yippies;" John Froines and Lee Weiner, protest organizers; and Bobby Seale, co-founder of the Black Panther Party. The riots and subsequent trial triggered more massive and violent anti-war demonstrations around the country. The conflict in Chicago, however, was not simply about America's involvement in Vietnam. The conflict was also about the political system, and to those millions who watched the confrontations between police and demonstrators on television, it marked a crisis in the nation's social and cultural order.

The demonstrators, many of whom had been involved with civil rights battles in the South, saw their protests at the convention as an opportunity to draw media attention to their cause. Following the murders of Martin Luther King Jr. and Robert Kennedy, many protesters were anxious to become more confrontational and militant

with political and police forces. The Yippies, led by Hoffman and Rubin, looked to harness the energy of America's rebellious youth culture, with its rock music and drugs, to bring about social and political change. The Yippies were formed solely for the purpose of confronting those involved with the Democratic Convention. They believed that the mass media and music could lead young people to resist injustices in the political system. Hoffman and Rubin, the most flamboyant and disruptive participants in the court trial—after Seale was removed—did not believe that the "New Left" would be able to bring about change through rational discourse with existing powers. Hence, they led a movement which relied upon guerrilla theater, rock music, drug experiences, and the mass media to broadcast their agenda of social revolution to a generation of alienated young people brought up on television and advertising. Influencing policies or candidates was not the aim behind the radicalism of the Chicago Seven. Rather, they worked to reveal the ugliness of a country full of poverty, racism, violence, and war through a confrontation with the armed State. The fact that their actions took place in America's second largest city, during a nationally televised political convention, only intensified their message of resistance and rejection.

Chicago mayor Richard Daley and his police force characterized the demonstrations as attacks upon their city and the law. They viewed the Chicago Seven and the national media as outside agitators who trampled on their turf. The Walker Report, however, which was later commissioned to investigate the events of the convention week, concluded that the police were responsible for much of the violence during the confrontations. Perhaps the most memorable statement about the events surrounding the rebellion were uttered by Mayor Daley at a press conference during the convention: "The policeman isn't there to create disorder. The policeman is there to preserve disorder."

Members of the Chicago Seven: (back row from left) Lee Weiner, Bob Lamb, Tom Hayden, (front row from left) Rennie Davis, Jerry Rubin, and Abbie Hoffman.

The trial of the eight defendants began in September of 1969 and lasted for five months. Judge Julius Hoffman inflexibility and obvious bias against the defendants provoked righteous anger, revolutionary posturing, guerrilla theater, and other forms of defiant behavior from the defendants. Bobby Seale's defiant manner of conducting his own defense—his attorney was in California recuperating from surgery—resulted in his spending three days in court bound and gagged. Judge Hoffman then declared his case a mistrial and sentenced him to four years in prison for contempt of court. Hence, the Chicago Eight became the Chicago Seven. William Kunstler and Leonard Weinglass were the defense attorneys. Judge Hoffman and prosecutor Thomas Foran constantly clashed with the defendants who used the court as a setting to continue to express their disdain for the political and judicial system. In February, all of the defendants were acquitted of conspiracy but five were found guilty of crossing state lines to riot. Froines and Weiner were found innocent of teaching and demonstrating the use of incendiary devices. An appeals court overturned the convictions in 1972, citing procedural errors and Judge Hoffman's obvious hostility to the defendants.

Child, Julia (1912—)

Julia Child made cooking entertainment. A well-bred, tall, ebullient woman who came to cooking in the middle of her life, Julia Child appeared on television for the first time in the early 1960s and inaugurated a new culinary age in America. Blessed with an ever-present sense of humor, a magnetic presence in front of the camera, and the ability to convey information in a thoroughly engaging manner, Julia Child spirited Americans away from their frozen foods and TV dinners and back into the kitchen, by showing them that cooking could be fun.

For someone who would become one of the most recognizable and influential women in the world, it took Julia Child a long time to find her true calling. She spent the first 40 years of her life in search of her passion—cooking—and when she found it, she was unrelenting in promoting it. But like so many privileged women of her generation, Julia Child was not brought up to have a career. Born on August 15, 1912 into the conservative affluence of Pasadena, California, Julia McWilliams was the daughter of an aristocratic, fun-loving mother and a well-off, community-minded businessman father. Raised in a close family, who provided for her every need, Julia was a tree-climbing tomboy who roamed the streets of Pasadena with her passel of friends. Her childhood was full of mischievous fun, and food formed only the most basic part of her youth. Her family enjoyed hearty, traditional fare supplemented by fresh fruits and vegetables from nearby farms.

Julia Child

By her early teenage years, Julia was head and shoulders taller than her friends, on her way to becoming a gigantic, rail thin 6 feet 2 inches. Lithe and limber, the athletic teenager enjoyed tennis, skiing, and other sports, and was the most active girl in her junior high school. When she graduated from ninth grade, however, her parents decided it was time for Julia to get a solid education, and so they sent her to boarding school in Northern California. At the Katherine Branson School for Girls, Julia quickly became a school leader, known, as her biographer Noël Riley Fitch has written, for “her commanding physical presence, her verbal openness, and her physical pranks and adventure.” As “head girl,” Julia stood out among her classmates socially, if not intellectually. She was an average student, whose interests chiefly lay in dramatics and sports and whose greatest culinary delight was jelly doughnuts. But her education was solid enough to earn her, as the daughter of an alumna, a place at prestigious Smith College in Massachusetts.

In her four years at Smith, Julia continued in much the same vein as in high school. She was noted for her leadership abilities, her sense of adventure, and, as always, her height. At 6 feet 2 inches, she was once again the tallest girl in her class. At Smith, she received a solid education. But, as Julia would later remark, “Middle-class women did not have careers. You were to marry and have children and be a nice mother. You didn’t go out and do anything.” And so after graduation, Julia returned home to Pasadena. After a year, however, she grew restless and returned to the East Coast, hoping to find a job in New York City. Sharing an apartment with friends from Smith and supported mostly by her parents, Julia found a job at Sloane’s, a

prestigious home-furnishing company. She worked for the advertising manager, learning how to write press releases, work with photographers, and handle public relations. She loved having something to do and reveled in the job. Having always been interested in writing, Julia also began submitting short pieces to magazines such as the *Saturday Review of Literature*. Her life now had some larger purpose.

But Julia's stay in New York would only last a few years. Unhappy over the breakup of a relationship and worried about her mother's health, Julia returned home to Pasadena, where her mother died two months later. As the oldest child, Julia decided to stay in California to take care of her father and soon found work writing for a new fashion magazine and later heading up the advertising department for the West Coast branch of Sloane's. But by the early 1940s, with America at war, Julia had grown impatient with her leisurely California life. A staunch Rooseveltian Democrat, Julia wanted to be a part of the war effort and so applied to the WAVES and the WACS. But when her height disqualified her from active service, Julia moved to Washington, D.C., where she began work in the Office of Strategic Services, the American branch of secret intelligence.

With her gift for leadership, Julia quickly rose in the ranks, working six days a week, supervising an office of 40 people. She still dreamed of active service, and when the opportunity arose to serve overseas, she jumped at the chance. In early 1944, 31-year-old Julia McWilliams sailed for India. In April, she arrived in Ceylon, where she went to work at the OSS headquarters for South East Asia. Although she considered the work drudgery, she loved being in a foreign country, as well as the urgency of the work at hand. She met many interesting people, men and women, not the least of whom was a man ten years older than she, an urbane officer named Paul Child.

Stationed in Ceylon and later in China, Julia and Paul became good friends long before they fell in love. She was fascinated by his background—a multilingual artist, he had lived in Paris during the 1920s and was a true man of the world. One of his great passions was food, and he gradually introduced Julia to the joys of cuisine. In China, the two friends would eat out at local restaurants every chance they could. She would later write: “The Chinese food was wonderful and we ate out as often as we could. That is when I became interested in food. There were sophisticated people there who knew a lot about food . . . I just loved Chinese food.”

Julia recognized it first—she had fallen in love. It took Paul a little longer to realize that he was head-over-heels for this tall, energetic, enthusiastic Californian. In fact, after the war, the two went their separate ways, only coming together later in California. In their time apart, Julia had begun perfunctory cooking lessons, hoping to show off her newfound skills to Paul. By the time they decided to drive across country together, they knew they would be married. Julia and Paul Child set up house together in Washington, D.C., awaiting Paul's next assignment. When they were sent to Paris, both were ecstatic.

Julia's first meal upon landing in France was an epiphany. She later reflected, “The whole experience was an opening up of the soul and spirit for me . . . I was hooked, and for life, as it turned out.” While settling in Paris, Julia and Paul ate out at every meal, and Julia was overwhelmed by the many flavors, textures, and sheer scope of French cuisine. She loved everything about it and wanted to learn more. In late October 1949, Julia took advantage of the GI Bill and enrolled at the Cordon Bleu cooking school. It was the first step in a long journey that would transform both her life and American culinary culture.

The only woman in her class, Julia threw herself into cooking, spending every morning and afternoon at the school and coming

home to cook lunch and dinner for Paul. On the side, she supplemented her schooling with private lessons from well-known French chefs, and she attended the Cercle des Gourmettes, a club for French women dedicated to gastronomy. There she met Simone Beck and Louisette Bertholle. The three soon became fast friends and, after Julia graduated from Cordon Bleu, they decided to form their own cooking school geared at teaching Americans in Paris. L'Ecole des Trois Gourmands was formed in 1952 and was an instant success. Out of this triumvirate came the idea for a cookbook that would introduce Americans to French cuisine.

With the help of an American friend, the idea was sold to Houghton Mifflin. The most popular American cookbooks, *The Joy of Cooking* and *Fanny Farmer*, were old classics geared toward traditional American fare. Julia envisioned a cookbook that would capture the American feel of *The Joy of Cooking* in teaching Americans about French cuisine. For the next ten years, Julia and her companions labored tirelessly over their cookbook. Even when Paul and Julia were transferred, first to Marseille then to Bonn, Washington, and Oslo, the Trois Gourmands remained hard at work. Julia was meticulous and scientific, testing and re-testing each recipe, comparing French food products to American, keeping up with American food trends, and polishing her writing and presentation style. Less than a year from the finish, however, Houghton Mifflin suddenly pulled out and it seemed that the project would never come to fruition.

Then Knopf stepped in and in 1961, shortly after Julia and Paul returned to the United States for good, *Mastering the Art of French Cooking* was released. An immediate success, the cookbook, with its superb quality, clear and precise recipes, and unique pedagogical approach to cooking, became the standard against which all other cookbooks would come to be judged. At 49 years old, Julia Child was hailed as a great new American culinary voice. In a country where most people's meals consisted of canned items, frozen foods, and TV dinners, the food community hailed her classical training. As Karen Lehrman wrote in “What Julia Started,” “In the 1950s, America was a meat-and-potatoes kind of country. Women did all of the cooking and got their recipes from ladies' magazine articles with titles like ‘The 10-Minute Meal and How to Make It.’ Meatloaf, liver and onions, corned beef hash—all were considered hearty and therefore healthy and therefore delicious. For many women, preparing meals was not a joy but a requirement.” Julia Child would change all that.

Julia and Paul settled in Cambridge, Massachusetts, a decision that would ultimately make Julia Child a household name. As the home of many of the country's finest institutions of higher learning, Cambridge boasted the best-funded educational television station, WGBH. Early in 1962, WGBH approached Julia about putting together a cooking show. Filmed in black and white in rudimentary surroundings, the show was a success from the very start. Julia Child was a natural for television. Although each show was carefully planned and the meals meticulously prepared, on-air Julia's easy going manner, sense of humor, and joie de vivre shone through, making her an instant hit.

Within a year, Julia Child's *The French Chef* was carried on public television stations around the country and Julia Child was a household name with a huge following. As Karen Lehrman describes, “Julia may or may not have been a natural cook, but she certainly was a natural teacher and comedian. Part of the entertainment came from her voice alone, which can start a sentence on a bass note and end of falsetto, and elongate in different keys several seemingly random words in between. But she also had an exceptional presence, a keen

sense of timing and drama, and a superb instinct for what's funny. Most important, she completely lacked pretension: She played herself. She made noises (errgh, oomph, pong), called things weird or silly, clashed pot lids like cymbals, knocked things over, and in general made quite a mess. 'When, at the end of the program, she at last brings the finished dish to the table,' Lewis Lapham wrote in 1964, 'she does so with an air of delighted surprise, pleased to announce that once again the forces of art and reason have triumphed over primeval chaos.'"

For the next 30 years, Julia Child would appear on television, but because she viewed herself as a teacher, only on public television. Supported by Paul every step of the way, Julia would transform cooking from a housewife's drudgery to a joyous event for both men and women. In doing so, she changed the culinary face of America. She became a universally recognizable and much loved pop culture icon. Her shows became the object of kindhearted spoof and satire—the best of which was done by Dan Ackroyd on *Saturday Night Live*—and her image appeared in cartoons. But mostly it was Julia herself who continued to attract devoted viewers of both sexes, all ages, and many classes. As Noël Riley Fitch wrote, "The great American fear of being outré and gauche was diminished by this patrician lady who was not afraid of mistakes and did not talk down to her audience." Julia-isms were repeated with glee around the country, such as the time she flipped an omelet all over the stove and said, "Well, that didn't go very well," and then proceeded to scrape up the eggs and put them back in the pan, remarking, "But you can always pick it up if you're alone. Who's going to see?" Her ability to improvise and to have fun in the kitchen made her someone with whom the average American could identify. As Julia herself said, "People look at me and say, 'Well, if she can do it, I can do it.'"

As America got turned on to food, be it quiche in the 1970s, nouvelle cuisine in the 1980s, or organic food in the 1990s, Julia stayed on top of every trend, producing many more exceptional cookbooks. The Grande Dame of American cuisine, Julia Child remains the last word on food in America. Founder of the American Institute of Wine and Food, Julia Child continues to bring together American chefs and vintners in an effort to promote continued awareness of culinary issues and ideas both within the profession—which, thanks to Julia, is now among the fastest growing in America—and among the public. Popular women chefs, such as Too Hot Tamales, Susan Feniger and Mary Sue Miliken, abound on television, thanks to Julia who, though she did not think of herself as a feminist, certainly liberated many women through her independence and passionate commitment to her career. Karen Lehrman has written, "Julia Child made America mad for food and changed its notions of class and gender." A uniquely American icon, Julia Child not only transformed the culinary landscape of this country, but she became a role model for men and women of all ages and classes.

Child Stars

In Hollywood, it has been said that beauty is more important than talent, but youth is most important of all. The image of America conveyed by the motion picture industry is one of beautiful, young people in the prime of life. The most youthful of all are the children—fresh-faced innocents in the bloom of youth transformed into Hollywood stars who represent the dreams of a nation. Certainly this was the case during the Depression, when child stars such as Shirley Temple, Freddie Bartholomew, and Deanna Durbin were the motion picture industry's top box office draws, inspiring a global mania for child actors. In what has come to be known as the Child Star Era, these juvenile audience favorites often single-handedly supported their studios, becoming more famous than their adult counterparts. When the Golden Age of Hollywood came to an end after World War II, so did the Child Star Era. But the appeal of child stars remains strong in

Shirley Temple and Bill "Bojangles" Robinson.

film, television, and music. Popular culture will ever worship at the Fountain of Youth.

From the early days of vaudeville in the nineteenth century, child actors have held their own against adult stars. Adored by fans, many became household names across America. In the first decade of the twentieth century, during the infancy of motion pictures, film directors hoped to lure the top tykes from the stage onto the screen, but most stage parents refused, feeling that movies were beneath them and their talented children. Everything changed when a curly haired, sweet-faced sixteen-year-old, who had been a big Broadway star as Baby Gladys, fell on hard times and reluctantly auditioned for movie director D. W. Griffith. Griffith hired the former Baby Gladys on the spot, renamed her Mary Pickford, and made her into “America’s Sweetheart.” She became America’s first movie star. As noted in *Baseline’s Encyclopedia of Film*, Mary Pickford was, “if popularity were all, the greatest star there has ever been. . . . Little Mary became the industry’s chief focus and biggest asset, as well as the draw of draws—bigger, even, than Chaplin.”

The success of Mary Pickford in many ways paralleled the ascendancy of movies themselves. As audiences embraced the young star, they embraced the medium, and movies grew into a national obsession. Along with Pickford, Charlie Chaplin, himself a former child star in British vaudeville, became one of the motion picture industry’s success stories. A huge star by the late teens, Chaplin made the films that America wanted to see. When he discovered a young boy performing in vaudeville who reminded him of himself as a child, Chaplin created a film for them both to star in. Little Jackie Coogan’s endearing performance in *The Kid* made the six-year-old a household name and launched Hollywood’s Child Star Era.

During the 1920s, studios churned out silent films at an amazing rate. Westerns, action pictures, murder mysteries, and romances all drew audiences to the theatres. After *The Kid*, so did movies starring children, including the immensely popular *Our Gang* series. Movie studios sent out continual casting calls in search of clever and cute kids, and parents from all over America began to flock to Hollywood in search of fame and fortune for their offspring. When Jackie Coogan was awarded a million-dollar movie contract in 1923, the race to find the next child star was on. As Diana Serra Carey, a former child star who became very famous during the 1920s and 1930s as Baby Peggy, has written: “Although the child star business was a very new line to be in, it opened up a wide choice of jobs for many otherwise unskilled workers, and it grew with remarkable speed. Speed was, in fact, the name of the game. Parents, agents, producers, business managers, and a host of lesser hangers-on were all engaged in a desperate race to keep ahead of their meal ticket’s inexorable march from cuddly infant to graceless adolescent.” Soon Hollywood was filled with a plethora of people pushing their youthful products.

In 1929, when the stock market crashed and America fell into the Great Depression, the movie industry faced a crisis: in a time of severe economic hardship, would Americans part with their hard-earned money to go to the movies? But sound had just come in, and America was hooked. For a nickel, audiences could escape the harsh reality of their daily lives and enter a Hollywood fantasy. Movies boomed during the Depression, and child stars were a big part of that boom.

By the early 1930s, children had come to mean big business for Hollywood. The precocious and versatile Mickey Rooney had been a

consistent money earner since the mid-1920s, as were new stars such as *The Champ*’s Jackie Cooper. But nothing would prepare Hollywood, or the world, for the success of a curly haired six-year-old sensation named Shirley Temple.

The daughter of a Santa Monica banker and his star-struck wife, Shirley Temple was a born performer. At three, the blond-haired, dimpled cherub was dancing and singing in two-reelers. By six, when she starred in *Stand Up and Cheer*, she had become a bona fide movie star. *Baseline’s Encyclopedia of Film* notes: “Her bouncing blond curls, effervescence and impeccable charm were the basis for a Depression-era phenomenon. Portraying a doll-like model daughter, she helped ease the pain of audiences the world over.” In 1934, she received a special Academy Award. A year later, she was earning one hundred thousand dollars a year. For most of the 1930s, Shirley Temple was the number one box office star. Twentieth-Century Fox earned six million dollars a year on her pictures alone.

During the height of the Child Star Era, the major studios all boasted stables of child actors and schoolrooms in which to teach them. Among the top stars of the decade were the British Freddie Bartholomew, number two to Shirley Temple for many years; Deanna Durbin, the singing star who single-handedly kept Universal Studios afloat; and the incredibly gifted Judy Garland. But for every juvenile star, there were hundreds of children playing supporting and extra roles, hoping to become the next Shirley Temple.

As America emerged from the Depression and faced another World War, the child stars of the 1930s faced adolescence. Shirley Temple, Freddie Bartholomew, and Jackie Cooper had become teenagers, and Hollywood didn’t seem to know what to do with them. Audiences were not interested in watching their idols grow up on screen, and most child stars were not re-signed by their studios. Shirley Temple was literally thrown off the lot that she had grown up on. But there were always new kids to take the place of the old, and in the 1940s, Hollywood’s top stars included Roddy McDowall, Margaret O’Brien, Natalie Wood, and Elizabeth Taylor. As their predecessors had done, these child stars buoyed American audiences through difficult times. And again, when their own difficult times came with adolescence, American audiences abandoned them. Fortunately, for many of the child stars of the 1940s, times were changing, and so was Hollywood. As the studio system and Child Star Era began to crumble in the late 1940s, these youthful actors and actresses found work in independent films and in television.

By the early 1950s, audiences were calling for a different kind of film, and Hollywood was complying. Television became the new breeding ground for child stars, as youthful actors were called upon to appear in such popular sitcoms as *Leave It to Beaver* in the 1950s, *My Three Sons* in the 1960s, *The Brady Bunch* in the 1970s, *Diff’rent Strokes* in the 1980s, and *Home Improvement* in the 1990s. Although TV audiences were interested in watching the children on their favorite shows grow up on the air, making the transition from child to teenager more easily accomplished, because the life of a series was generally short, youthful TV stars faced the same trouble as their child movie star predecessors once the show went off the air. They found it difficult to be taken seriously as adult actors. They also found it difficult to adjust to a life out of the limelight. As Jackie Cooper once said: “One thing I was never prepared for was to be lonely and frightened in my twenties.”

The music industry, too, has always had its fair share of child prodigies. From Mozart to Michael Jackson, audiences have always

been drawn to youthful genius. But while some young stars such as Little Stevie Wonder managed to make the transition to adult stardom, there are equally as many children who have not made it. And when the music industry began creating child acts to promote, it soon found itself facing the same problems as had movies and television. Would audiences who found child singers cute still buy their records when they were less-than-talented adults? In too many cases, the answer was no.

When little Ronnie Howard of *The Andy Griffith Show* was cast as a teenager on *Happy Days*, it was a big step for a child star. When he became a successful movie director, he was lauded as having dodged the stigma of child stardom. Others have followed in his footsteps, most notably Jodie Foster, a two-time Academy Award winner who is one of Hollywood's most respected actresses and directors. And, of course, Shirley Temple went on to have a distinguished political career, serving as a United States ambassador. But for every Ron Howard, Jodie Foster, Roddy McDowall, or Shirley Temple, there are hundreds of former child stars who have had to face falling out of the spotlight. For all the former child stars who have managed to create for themselves a normal adult life, there are far too many who have fallen into a life of dysfunction or drug use. For others, such as Rusty Hamer, a child star for nine years on *Make Room for Daddy*, or Trent Lehman, who played Butch on *Nanny and the Professor*, the transition from child star to adulthood ended in suicide.

In 1938, twenty-four-year-old Jackie Coogan went to court to sue his mother for his childhood earnings, which were between two and four million dollars. Married to a rising young starlet named Betty Grable, Coogan was broke and sought to get what was legally his. By the end of the trial, his millions were found to be almost all gone, and the strain of the trial destroyed his marriage. But out of Coogan's tragedy came the Coogan Act, a bill which forced the parents of child actors to put aside at least half of their earnings. That still hasn't prevented child stars such as Gary Coleman from having to go to court to fight for their hard-earned millions, however.

During the 1980s and 1990s, the motion picture industry has witnessed a resurgence of interest in child stars. River Phoenix and Ethan Hawke, both teenage actors, managed to make the difficult transition to adult roles. But Phoenix, although a seemingly mature young man praised for his formidable talents, found the pressures of a Hollywood lifestyle too much and died of an accidental drug overdose in 1993. In the early 1990s, Macaulay Culkin was perhaps the biggest child star since Shirley Temple. But when audiences lost interest in the teenager, he stopped working altogether. Soon his parents were engaged in a battle over custody and money, while the tabloids ran articles about Culkin's troubled life.

Despite the object lessons drawn from the lives of so many child stars, audiences will continue to pay to see juvenile performers even as the television, movie, and music industries will continue to promote them. Child stars represent the dual-edged sword that is American popular culture. Epitomizing the youthful glamour by which Americans are taught to be seduced, children have entranced audiences throughout the twentieth century. But on the other side of glamour and fame are the bitter emptiness of rejection and the harsh reality of life out of the spotlight. Perhaps former child star Paul Petersen said it best: "Fame is a dangerous drug and should be kept out of the reach of children—and their parents as well."

The China Syndrome

Possibly more than any other film, *The China Syndrome's* popularity benefited from a chance occurrence. *The China Syndrome* showed many Americans their worst vision of technology gone wrong, but it proved entirely too close to reality when its release coincided with a near meltdown at Three Mile Island, Pennsylvania. In the film, Jane Fonda and Michael Douglas play the television news team who, while researching the newly perfected nuclear technology, capture on film an accident resulting in a near meltdown of the power plant. Fonda and Douglas's characters find themselves trapped between the public's right to know and the industry's desire to bury the incident. The nuclear accident depicted by the film became the platform for "NIMBY" culture, in which expectations of comfort and a high standard of safety compelled middle-class Americans to proclaim "Not in my backyard!" Together, these incidents—one fictional and another all too real—aroused enough concern among Americans to prohibit nuclear energy from ever becoming a considerable source of power for the nation.

—Brian Black

Chinatown

Roman Polanski directed this 1974 classic film portraying the mystery and intrigue of Raymond Chandler's fascinating novel. Jack Nicholson played Jake Gittes, a private detective trapped in the odd Asian-immigrant culture of the desert West. Hired to investigate the murder of the chief engineer for the Los Angeles Power and Water Authority in 1930s California, Gittes finds himself pulled into the unique political and economic power structure of the arid region: water politics with all its deceptions and double dealings dominates planning and development.

The film acquired a cult following because of its dark, intriguing story—seemingly based in another world and era—and the enduring popularity of Jack Nicholson. *Chinatown's* film noir setting places it in a long line of fine films deriving from the 1940s mysteries of Alfred Hitchcock. The defining characteristic of such films is uncertainty—of character and plot. Gittes repeatedly appears as the trapped character searching in vain for truth; indeed, the viewer searches with him. In the end, the evil is nearly always exposed. However, typical to film noir, *Chinatown's* conclusion leaves the viewer strangely unsure if truth actually has emerged victorious.

Jack Nicholson in a scene from the film *Chinatown*.

In 1990, Nicholson starred in and directed *Chinatown*'s sequel, *The Two Jakes*, set in 1948 California. Oil has replaced water as the power source for regional wealth, creating a fine backdrop for another dark mystery based on adultery and intrigue.

The Chipmunks

The Chipmunks—Alvin, Simon, and Theodore—were the only cartoon rodents to sell millions of records and star in their own television series. The voices of all three chipmunks, as well as the part of David Seville, were performed by actor/musician Ross Bagdasarian (1919-1972). As Seville, Bagdasarian had enjoyed a #1 hit with “Witch Doctor” in early 1958; later that year he released “The Chipmunk Song” (“Christmas Don’t Be Late”) in time for the

Christmas season, and sold over four million singles in two months. The Chipmunks, with their high warbling harmonies, churned out a half dozen records in the late 1950s and early 1960s. All of Bagdasarian’s records were on the Liberty label, and the chipmunks were named for three of Liberty’s production executives.

The Chipmunks’ popularity led to a primetime cartoon series (*The Alvin Show*) on CBS television during the 1961-62 season. In 1983, Ross Bagdasarian, Jr., revived the act with a second successful cartoon series, *Alvin and the Chipmunks*, which aired on NBC from 1983 to 1990, and a new album, *Chipmunk Punk*.

Choose-Your-Own-Ending Books

Thanks to the interactive capabilities of the computer, traditional styles of linear narrative in storytelling can be altered by means of hypertext links that allow readers the ability to alter the direction of a story by making certain decisions at various points, in effect choosing their own endings. This interactive style was presaged in the 1970s when several children's publishers began offering books that invited readers to custom-design the flow of a story by offering a choice of different pages to which they could turn. Strictly speaking, "Choose-Your-Own-Ending Books" refer to several series of children's books published by Bantam Books since 1979. Originated by author Edward Packard, Bantam's "Choose-Your-Own-Adventure" series numbered about 200 titles in the first 20 years of publication, with spinoffs such as "Choose Your Own Star Wars Adventure" and "Choose Your Own Nightmare."

The "Choose Your Own Adventure" series has proven to be immensely popular among its young readers, who unwittingly gave their blessing to the concept of interactive fiction even before it became commonplace on computer terminals or CD-ROMs. A 1997 profile of Packard in *Contemporary Authors* quoted an article he wrote for *School Library Journal* in which he stated that "multiple plots afford the author the opportunity to depict alternative consequences and realities. Complexity may inhere in breadth rather than in length." The technique appealed to young readers for whom active participation in the direction of a narrative was a sign of maturity and ownership of the text.

The first book Packard wrote in this style, *Sugarcane Island*, a story about a trip to the Galapagos Islands, did not excite interest among publishers so he put it aside for five years. It finally found a home with Vermont Crossroads Press, an innovative children's book publisher, which brought out the book in 1976. The fledgling series gained national attention when the *New York Times Book Review* (April 30, 1978) devoted half a page to a Pocket Books/Archway edition of *Sugarcane Island* and to a Lippincott edition of Packard's *Deadwood City*. Reviewer Rex Benedict wrote: "Dead or alive, you keep turning pages. You become addicted."

Other reviewers, especially in the school library press, felt that the books were gimmicky and that they prevented children from developing an appreciation for plot and character development. An article in the journal *Voice for Youth Advocates* endorsed the books for their participatory format, however, noting that "readers' choices and the resulting consequences are fertile ground for developing students' ability to predict outcomes or for group work on values clarification."

Writers who have contributed to the series and its various spinoffs have included Richard Brightfield, Christopher Golden, Laban Carrick Hill, Robert Hirschfeld, Janet Hubbard-Brown, Vince

Lahey, Jay Leibold, Anson Montgomery, R. A. Montgomery, and Andrea Packard.

Christie, Agatha (1890-1979)

Deemed the creator of the modern detective fiction novel and nicknamed the Duchess of Death, Agatha Christie continues to be one of the most popularly read authors since the publication of her first book, *The Mysterious Affair at Styles*, in 1920. Since then, more than 100 million copies of her books and stories have been sold.

Born Agatha Miller on September 15, 1890, in Torquay, located in Devonshire, England, Christie enjoyed a Victorian childhood where her parents' dinner parties introduced her to Henry James and Rudyard Kipling. Formally educated in France and debuting in Cairo,

Agatha Christie

Agatha began writing seriously after she married Archibald Christie in 1914. She wrote her first novel in 1916 in just two weeks. Several publishers rejected the manuscript. Almost two years later, John Lane accepted the book and offered her a contract for five more.

While her creative interests increased, Christie's relationship with her husband steadily declined until he left her in 1926 for his mistress, Nancy Neele. On December 6 of the same year, Christie disappeared for eleven days. Her car was found abandoned at Newlands Corner in Yorkshire. Later, employees at the Hydro Hotel in Harrogate recognized Christie as a guest at the spa resort, where Christie had identified herself to hotel employees and guests as Teresa Neele from South Africa. Christie later claimed to have been suffering from selective amnesia; she never wrote about her disappearance.

Divorcing her first husband in 1928, Christie married Max Mallowan in 1930 after meeting him during an excursion to Baghdad in 1929. Accompanying him on archeological excavations, Christie traveled extensively in the Middle East and also to the United States in 1966 for his lecture series at the Smithsonian Institute. While stateside, Christie began to write a three-part script based on Dickens's *Bleak House*. She only completed two parts of the project before withdrawing herself from the script. While she enjoyed novel and short story writing, Christie cared little for scriptwriting and even less for the film adaptations made from her novels, even though critics praised Charles Laughton's and Marlene Dietrich's performances in *Witness for the Prosecution* (1955).

Several national honors arose in accordance with Christie's popular fame as a novelist. In 1956, she was named Dame Commander of the Order of the British Empire, and in 1971, Christie was appointed Dame of the British Empire. Despite these accolades, Christie continued to lead a quiet private life, writing steadily until her death in 1979.

Though mystery novels as a genre became fashionable in the nineteenth century, Christie popularized the format so successfully that mystery writers continue to follow her example. Christie built on an early modern theme of comedies: a misunderstanding, crime, or murder occurs in the first act, an investigation follows with an interpolation of clue detection and character analysis, and the story concludes with a revelation, usually of mistaken identities, leading to the capture of the murderer.

During her life, Christie wrote sixty-six novels, more than one hundred short stories, twenty plays, an autobiography, and other various books of poetry and nonfiction. Though her play *The Mousetrap* (1952) is the longest running play in London's West End, Christie's most enduring work incorporates the two now-famous fictional detectives Hercule Poirot and Jane Marple.

A Belgian immigrant living in London, Hercule Poirot embodies the ideal elements of a modern detective, though Christie clearly fashioned him after Sir Arthur Conan Doyle's Sherlock Holmes. Like Holmes, Poirot studies not only the clues of the crime but also the characters of the suspects. What distinguishes him from Holmes is Poirot's attention to personal appearance. Even while traveling by train in *Murder on the Orient Express*, Poirot finds time to set and style his moustache. Because of his attention to detail, Poirot, in a time before fingerprint matches and DNA testing, solves mysteries by using what he terms "the little gray cells."

Miss Marple, an elderly spinster, acts as Poirot's antithesis except for her ability to solve mysteries. Marple is a successful detective because of her unobtrusive and innocuous presence. Few suspects assume an older woman with a knitting bag can deduce a motive behind murder. Marple, like Poirot, however, does embody a

particularly memorable trait: she doesn't trust anyone. In Christie's autobiography, the author describes Miss Marple: "Though a cheerful person she always expected the worst of everyone and everything and was, with almost frightening accuracy, usually proved right."

Both detectives have been made famous in the United States by the critically acclaimed television series *Poirot* and *Agatha Christie's Miss Marple*, produced by and aired on the Arts and Entertainment network, and beginning in 1989, and on the PBS weekly program *Mystery!* Although more than sixty-five film and made-for-television adaptations have been produced from Christie's novels, none claims the following these series command. Immortalizing the roles of Hercule Poirot and Miss Marple, David Suchet and Joan Hickson have indelibly imprinted images of the detectives in the minds of fans. Though Agatha Christie died long before the creation of the series, her legacy of detective fiction will be remembered in the United States not only in print but on the small screen as well.

Christmas

For Americans, the celebration of Christmas is often considered one of the most important holidays of the year. Because of the diverse heritages and customs, in addition to Kwanzaa, a tradition begun in the later part of the twentieth century, the American Christmas consists of traditions from not only the German, but English, Dutch, and other Eastern European countries as well. Having religious significance, Christmas also celebrates the child found in each individual and the desire for peace. Falling during the same month as the Jewish observance of Chanukah or Hanukkah (the Feast of Lights) and the African-American celebration of Kwanzaa, the season of Christmas serves as a time of celebration, feasting, and a search for miracles.

While Christmas generally is considered the celebration of Jesus's birth, the early Puritans, who settled the New England region, refused to celebrate the occasion. Disagreeing with the early church fathers who established the holiday around a pagan celebration for easy remembrance by the poor, the Puritans considered the observance secular in nature. Set during the winter solstice when days grow dark early, Christmas coincides with the Roman holiday of Saturnalia; the date, December 25, marks the celebration of Dies Natalis Invicti Solis, or the birth day of the Unconquered Sun by the Romans.

An early Coca-Cola advertising poster featuring the company's famed Santa Claus.

Puritans believed that these pagan customs, which included no work, feasting, and gift giving, were inappropriate for the celebration of the Lord's birth. While the northern colonists did not observe the day, the southern colonists celebrated in much the same style as their British counterparts—with banquets and family visits. Firecrackers or guns were used to welcome the Christ Child at midnight on Christmas. The residents of New York (New Amsterdam) celebrated the season in a similar fashion as their Dutch ancestors had with St. Nicholas Day (December 6), established to honor the patron saint of children. Gradually, all observances became centered around the date December 25, with traditions becoming mixed and accepted between different ethnic backgrounds.

With these strong ties to religion, Christmas serves an important role for the Christian faith. The four Sundays before Christmas, or the season of Advent, prepares the congregation for the arrival of the Messiah. With wreaths consisting of greenery, four small purple candles, and one large white candle, church members are reminded of the four elements of Christianity: peace, hope, joy, and love. This season of the church year ends with the lighting of the Christ candle on Christmas morning, signalling the two week period of Christmastide.

Nativity scenes, or creches, adorn altars as a visual reminder of the true meaning of Christmas.

While attendance at church services and midnight masses seems commonplace, the first visible sign of the Christmas season appears in the decoration of the home. Some families decorate the outside of their home with multi-strings of colored lights, while others focus their decorations around an evergreen tree of spruce, fir, or cedar. In the 1960s, a new type of Christmas tree appeared on the market which allows families to prepare for the season early and leave their decorations up well into the New Year. Artificial trees have ranged in style from the silver aluminum trees (1960s) to the imitation spruce and snow-covered fir. A custom attributed to Martin Luther, the Christmas tree often appears decorated with lights and ornaments consisting of family heirlooms—a central theme which had meaning to the family—or religious symbols. Christmas trees became widely used after 1841 when Prince Albert placed one for his family's use at Windsor Castle. Originally, the Christmas tree was decorated with candles. With the introduction of electricity, however, strings of small and large bulbs ranging in color from white to multi-color illumine the tree. The lighting of the tree dates back to the days when light was used to dispel the evil found in darkness. Around the base of the tree, gifts, creches, or large scale displays of Christmas villages represent some important memory or tradition in the family's heritage or life.

The Christmas tree is not the only greenery used during the holiday season. Wreaths of holly, fir, and pine appear on doors and in windows of homes. Each represents a part of the mystical past or ancestors' beliefs. The holly, which the ancients used to protect their home from witches, also represents the crown of thorns worn by Jesus at His crucifixion. The evergreen fir and pine represent everlasting life. Mistletoe, a Druid tradition and hung in sprigs or as a Kissing Ball, brings the hope of a kiss to the one standing beneath the spray. The red and white flowering poinsettia, native to Central American countries and brought to the United States by Dr. Joel Poinsett, represents the gift of a young Mexican peasant girl to the Christ Child.

Christmas serves as a time when gifts are exchanged between family and friends. This custom, while attributed to the gifts brought by the Magi to the Christ Child, can be traced to the earlier celebration of Saturnalia by the Romans. While the name varies with the country of origin, the bearer of gifts to children holds a special place in people's hearts and comes during the month of December. The most recognized gift-giver is based on Saint Nicholas, a bishop of Myra in 300 to 400 A. D., and the tradition was brought to America by the Dutch of New York. Saint Nicholas' appearance went undefined until the early 1800s when he appeared in the stories of Washington Irving.

While Irving's stories would include general references to Saint Nicholas, Clement Clark Moore would give Americans the image most commonly accepted. A professor of Divinity, in 1822 Moore wrote "A Visit from Saint Nicholas," also known as "The Night Before Christmas," as a special gift for his children. A friend, hearing the poem, had it published anonymously the following year in a local newspaper. Telling the story of the visit of Saint Nicholas, the poem centers around a father's experience on Christmas Eve; the poem reveals and establishes a new vision of St. Nicholas. St. Nicholas drives a miniature sleigh pulled by eight reindeer named Dasher, Dancer, Prancer, Vixen, Comet, Cupid, Donner, and Blitzen. Moore's description of Saint Nicholas describes the clothing worn by the man. "He was dressed all in fur, from his head to his foot, / And his clothes were all tarnished with ashes and soot; / A bundle of toys he had flung

on his back, / And he looked like a peddler just opening his sack.” For the nineteenth century reader, the image of someone dressed like a peddler with a bag of toys on his back could be easily visualized.

Moore did not end his description here, but gave a physical description of the man as well. With twinkling eyes and dimples, Saint Nicholas has a white beard which gives him a grandfatherly appearance. In addition, Moore added: “He had a broad face and a little round belly, / That shook, when he laughed, like a bowlful of jelly.” The jolly gentleman of childhood Christmas fantasy has become a reality. The description is so vivid that artists began to feature this portrait of Saint Nicholas in their seasonal drawings. In 1881 Thomas Nast, a cartoonist in New York, would define the gentleman and give him the characteristics for which he has become known. Saint Nicholas’s name has changed to the simplified Santa Claus and has become a lasting part of the Christmas tradition.

Santa Claus and his miraculous gifts have played such a part of the Christmas celebration that many articles, movies, and songs have been written about the character. The most famous editorial “Yes, Virginia, There Is a Santa Claus,” appeared in *The Sun* in 1897 after a child wrote asking about Santa’s existence. The response to the child’s letter is considered a Christmas classic, with many newspapers repeating the editorial on Christmas Day. This same questioning regarding Santa Claus’ existence is portrayed in the film *Miracle on 34th Street* (1947), where a young girl learns not only to believe in what can be seen but also in the unseen. Johnny Marks adds to the legend of Santa Claus and his reindeer with the song “Rudolph the Red-nosed Reindeer” (1949), which is performed most notably by Gene Autry. This song, while using Moore’s names for the reindeer, adds a new one, Rudolph, to the lexicon of Santa Claus.

The spirit of Santa Claus has not only given the season a defining symbol, but has also created a season with an emphasis on commercialization. Santa’s bag of toys means money for the merchants. Christmas items and the mention of shopping for Christmas may begin as early as the summer, with Christmas tree displays appearing in retail stores in September and October. Christmas has become so important to the business world that some specialty stores dedicate their merchandise to promoting the business of Christmas year-round. Shopping days are counted, reminders are flashed across the evening news, and advertisements are placed in newspapers. The images of Christmas not only bring joy, but also anxiety as people are urged to shop for the perfect gift and to spend more money.

While the season of Christmas symbolizes various things to different people, the Christ Child and Santa Claus represent two differing views of the celebration. The traditions and customs of the immigrant background have merged and provide the season with something for everyone. Adding to the celebration the Jewish festival Chanukah, and the African-American celebration Kwanzaa, the season of Christmas seems to run throughout the month of December. With the merging of the sacred and the pagan, magic is revisited and dreams are fulfilled while money is spent in the never-ending cycle of giving.

Christo (1935—)

The most well-known environmental artist of this half century, Christo first captured the public’s attention in the 1960s by wrapping large-scale structures such as bridges and buildings. In the following three decades his artworks became lavish spectacles involving millions of dollars, acres of materials, and hundreds of square miles of land. His projects are so vast and require so much sophisticated administration, bureaucracy, and construction, that he is best thought of as an artist whose true medium is the real world.

Christo Vladimirov Javacheff was born in Gabrovo, Bulgaria, into an intellectually enlightened family. After study in the art academy in Bulgaria, his work for the avant-garde Burian Theatre in 1956 proved decisive. Christo began wrapping and packaging objects—a technique called “empaquetage”—a year after his move to Paris in 1957. Empaquetage was a reaction to the dominance of tachiste painting, the European version of American abstract expressionism. Conceptual in nature, wrapping isolates commonplace objects and imbues them with a sense of mystery. Christo often used transparent plastic and rope to wrap cars, furniture, bicycles, signs and, for brief periods, female models.

In Paris, Christo became acquainted with the Nouveau Réalistes group, which was interested in using junk materials and with the incorporation of life into art. Soon his artworks utilized tin cans, oil drums, boxes, and bottles. He married Jeanne-Claude de Guillebon, who became his inseparable companion, secretary, treasurer, and collaborator. So close is their partnership that Christo’s works often bear Jeanne-Claude’s name as well as his own.

The early sixties witnessed Christo’s first large-scale projects. Several of these involved barrels, the most famous of which was *Iron Curtain—Wall of Oil Drums* (1962). A response to the then-new Berlin wall, it consisted of more than two hundred barrels stacked twelve feet high. It effectively shut down traffic for a night on a Paris street. As the sixties wore on, and particularly after Christo moved to New York, his works became larger and even more conceptual. He created *Air Packages* (large sacs of air that sometimes hovered over museums), wrapped trees, and even packaged a medieval tower. In 1968 Christo wrapped two museum buildings, the Künsthalle Museum in Bern, Switzerland, and the Museum of Contemporary Art in Chicago. The latter required sixty-two pieces of brown tarpaulin and two miles of brown rope.

About this time, Christo’s attention turned to the vast spaces of landscape. For *Wrapped Coast—One Million Square Feet, Little Bay, Australia* (1969) he covered a rocky, mile-long stretch of coastline with a million square feet of polythene sheeting and thirty-six miles of

The “Wrapped Trees” project by Christo and his wife Jeanne-Claude in the park of the Foundation Beyeler in Riehen, Switzerland, 1998.

rope. The work was the first of his projects in which Christo had to solve problems connected to government agencies and public institutions. Controversy erupted when nurses on the privately owned land protested because they thought that hospital money was being diverted and that a recreational beach would be shut down. Actually, Christo paid for the project himself and allowed for the beach to remain open.

While teaching in Colorado, Christo became intrigued by the Rocky Mountain landscape. *Valley Curtain* (1971-72, Rifle Gap, Colorado) was composed of two hundred thousand square feet of nylon hung from a cable between two cliffs. The bright orange nylon curtain weighed four tons. Organizational, economic, and public relations problems delayed construction for a time, but these were exactly the challenges Christo and Jeanne-Claude had become so adept in solving. To raise the \$850,000 needed, the couple created the Valley Curtain Corporation. As would become customary, Christo’s drawings, plans, models, and photographs of *Valley Curtain* were sold as art objects to raise money for building the massive artwork. The first curtain was almost instantly ripped to pieces by high winds; a union boss had told his workers to quit for the day before it was properly secured. The second curtain was ruined by a sandstorm the day after it was hung, but not before it was unfurled to the cheers of media, news crews, and onlookers. A half-hour documentary was

made to register the course of the work’s construction. In all of Christo’s projects, photography and documentary film are used extensively to record the activities surrounding what are essentially temporary structures.

For his next project, *Running Fence* (1976), Christo raised two million dollars through the sale of book and film rights and from works of art associated with the project. Christo obtained the permission of fifty-nine private ranchers and fifteen government organizations. Ironically, the strongest opposition came from local artists who regarded the project as a mere publicity stunt. Christo then became a passionate lobbyist for his project, appearing at local meetings and agency hearings. Winding through Marin and Sonoma counties, the eighteen-foot-high fence traversed twenty-four miles over private ranches, roads, small towns, and subdivisions on its way to a gentle descent into the Pacific Ocean. Open-minded viewers found it lyrically beautiful; indeed, beauty is one of Christo’s unabashed aims.

Surrounded Islands, Biscayne Bay, Greater Miami, Florida, 1980-83 was Christo’s major work of the eighties and involved floating rafts of shocking pink polypropylene entirely enclosing eleven small islands. It required more than four hundred assistants and \$3.5 million to complete. Sensitive to the environment, Christo decided not to surround three islands because they were home to endangered manatees, birds, and plants. Even so, Christo and Jeanne-Claude still

had to contend with lawsuits, lawyers, and public groups. Though *Surrounded Islands* extended for eleven miles and traversed a major city, it was strikingly lovely. Like *Running Fence*, *Surrounding Islands* existed for only two weeks.

Christo staged *The Umbrellas, Japan—U.S.A. 1984-91* simultaneously in the landscapes north of Tokyo and of Los Angeles. Roughly fifteen hundred specially designed umbrellas (yellow ones in California, blue ones in Japan) dotted the respective countrysides over areas of several miles. Only twenty-six landowners had to be won over in California; in Japan, where land is even more precious, the number was 459. The umbrellas were nearly twenty feet high and weighed over five hundred pounds each. Having cost the artist \$26 million to produce, the umbrellas stood for only three weeks beginning on October 9, 1991. Christo ended the project after a woman in California was killed when high winds uprooted an umbrella. During the dismantling of the umbrellas in Japan, a crane operator was electrocuted.

Altogether, Christo's art involves manipulating public social systems. As the artist has said, "We live in an essentially economic, social, and political world. . . . I think that any art that is less political, less economical, less social today, is simply less contemporary."

—Mark B. Pohlard

Chrysler Building

A monument to the glitzy Jazz Age of the 1920s, the Chrysler Building in New York City is America's most prominent example of Art Deco architecture and the epitome of the urban corporate headquarters. This unabashedly theatrical building, which was briefly the world's tallest after its completion in 1930, makes an entirely different statement than its nearby competitor, the Empire State Building. The Chrysler Building's appeal was summarized by architectural critic Paul Goldberger, who wrote, "There, in one building, is all of New York's height and fantasy in a single gesture."

The Chrysler Building was originally designed for real estate speculator William H. Reynolds by architect William Van Alen. In 1928, Walter Percy Chrysler, head of the Chrysler Motor Corporation, purchased the site on the corner of Lexington Avenue and 42nd Street in midtown Manhattan, as well as Van Alen's plans. But those plans were changed as the design began to reflect Chrysler's dynamic personality. The project soon became caught up in the obsessive quest for height that swept through the city's commercial architecture in the 1920s and 1930s. Buildings rose taller and taller as owners sought both to maximize office space as well as to increase consumer visibility. Van Alen's initial design projected a 925-foot building with

The Chrysler Building (foreground)

a rounded, Byzantine or Moorish top. At the same time, however, Van Alen's former partner, H. Craig Severance, was building the 927-foot Bank of the Manhattan Company on Wall Street. Not to be outdone, Van Alen revised his plans, with Chrysler's blessing, to include a new tapering top that culminated in a spire, bringing the total height to 1,046 feet and establishing the Chrysler Building as the world's tallest. The plans were kept secret, and near the end of construction the spire was clandestinely assembled inside the building, then hoisted to the top. The entire episode defined the extent to which the competition for height dominated architectural design at the time. The Chrysler Building's reign was brief, however; even before it was finished, construction had begun on the Empire State Building, which would surpass the Chrysler by just over two-hundred feet.

The finished building is a dazzling display of panache and corporate power. The most famous and notable aspect of the Chrysler Building is its Art Deco decoration. With its polychromy, zigzag ornamentation, shining curvilinear surfaces, and evocation of machines and movement, the Art Deco style—named after the 1925 Exposition Internationale des Arts Decoratifs et Industriels Modernes in Paris—provided Van Alen with a means to express the exuberance and vitality of 1920s New York, as well as the unique personality of

the building's benefactor. The interior of the Chrysler Building reflects the company's wealth. In the unique triangular lobby, reminiscent of a 1930s movie set, the lavish decorative scheme combines natural materials like various marbles, onyx, and imported woods with appropriate machine-age materials like nickel, chrome, and steel. Outside, a white brick skin accentuated by gray brick trim was laid over the building's steel frame in a pattern that emphasized the building's verticality. Steel gargoyles in the form of glaring eagles—representing both America and hood ornaments from Chrysler Company automobiles—were placed at the corners of the building's highest setback. (These gargoyles became famous after a photo of photographer Margaret Bourke-White standing atop one of them was widely circulated). The crowning achievement of the building, both literally and figuratively, is the spire. A series of tapering radial arches, punctuated by triangular windows, rise to a single point at the top. The spire's stainless steel gleams in the sun. The arches at the spire's base were based on automobile hubcaps. In fact, the entire building was planned with an elaborate iconographic program, including radiator cap gargoyles at the fourth setback, brick designs taken from Chrysler automobile hubcaps, and a band of abstracted autos wrapping around the building. The use of such company-specific imagery incorporated into the building's design anticipated the postmodern architecture of the 1980s.

The Chrysler Building was not the first corporate headquarters specifically designed to convey a company's image, but it may have been the most successful. The unique building was a more effective advertising tool for the Chrysler Company than any billboard, newspaper, or magazine ad. The Chrysler Building, with its shining telescoped top, stood out from the rather sedate Manhattan skyscrapers. While some observers see the building as kitsch or, in the words of critic Lewis Mumford, "inane romanticism," most appreciate its vitality. Now one of the world's favorite buildings, the Chrysler Building has become an American icon, symbolizing the pre-Depression glamour and the exuberant optimism of the Jazz Age.

Chuck D (1960—)

The primary rapper in one of the most significant hip-hop groups in the genre's history, Chuck D founded the New York City-based Public Enemy in order to use hip-hop music as an outlet to disseminate his pro-Black revolutionary messages. Because of the millions of albums Public Enemy sold and the way the group changed the landscape of hip-hop and popular music during the late-1980s, Public

Enemy's influence on popular music specifically, and American culture in general, is incalculable.

Chuck D (born Carlton Ridenhour August 1, 1960) formed Public Enemy in 1982 with fellow Long Island friends Hank Shocklee and Bill Stepheny, both of whom shared Chuck D's love of politics and hip-hop music. In 1985, a Public Enemy demo caught the attention Def Jam label co-founder Rick Rubin, and by 1986 Chuck D had revamped Public Enemy to include Bill Stepheny as their publicist, Hank Shocklee as a producer, Flavor Flav as a second MC, Terminator X as the group's DJ and Professor Griff as the head of Public Enemy's crew of onstage dancers. Public Enemy burst upon the scene in 1987 with their debut album *Yo! Bum Rush the Show*, and soon turned the hip-hop world on its head at a time when hip-hop music was radically changing American popular music. Chuck D's early vision to make Public Enemy a hotbed of extreme dissonant musical productions and revolutionary politics came into fruition with the release of 1988's *It Takes a Nation of Millions to Hold Us Back*. Recognized by critics at *Rolling Stone*, *SPIN*, *The Source* and the *Village Voice* as one of most significant works of popular music of the twentieth century, *It Takes a Nation...* took music to new extremes. That album combined furiously fast rhythms, cacophonous collages of shrieks and sirens, and Chuck D's booming baritone delivery that took White America to task for the sins of racism and imperialism.

Chuck D once remarked that hip-hop music was Black America's CNN, in that hip-hop was the only forum in which a Black point of view could be heard without being filtered or censored. As the leader of Public Enemy, a group that sold millions of albums (many to White suburban teens) Chuck D was one of the only oppositional voices heard on a widespread scale during the politically conservative 1980s.

Public Enemy's commercial and creative high point came during the late 1980s and early 1990s. The group recorded their song "Fight the Power" for Spike Lee's widely acclaimed and successful 1989 film *Do the Right Thing*, increasing Public Enemy's visibility even more. After the much-publicized inner group turmoil that resulted from anti-Semitic remarks publicly made by a group member, Chuck D kicked that member out, reorganized the group and went to work on the biggest selling album of Public Enemy's career, *Fear of a Black Planet*.

By then, Chuck D had perfected the "Public Enemy concept" to a finely-tuned art. He used Public Enemy's pro-Black messages to rally and organize African Americans, the group's aggressive and propulsive sonic attack to capture the attention of young White America, and their high visibility to edge Chuck D's viewpoints into mainstream discourse. Throughout the 1990s, Chuck D appeared on numerous talk shows and other widely broadcast events.

Taking advantage of his notoriety, Chuck D often lectured at college campuses during the late 1980s and throughout the 1990s. He became a political election correspondent for music video network MTV and, in 1997, he published a book on race and politics in America titled *Fight the Power*.

In a musical genre driven by novelty and innovation, Public Enemy's—and Chuck D's—influence and commercial success began to wane by the mid-1990s. In 1996 he released the commercially unsuccessful solo album, *Autobiography of Mista Chuck*. But unlike many artists who change their formula when sales decline, Chuck D

Chuck D speaks to Columbia University students in 1998.

never changed Public Enemy's course, and in 1998 the group released a highly political and sonically dense soundtrack album for Spike Lee's film *He Got Game*.

Chun King

Chun King was one of the earliest brands of mass-marketed Chinese food in the United States, offering convenient "exotic" dinners in a can. Beginning with chicken chow mein in 1947, Chun King later expanded its menu to include eggrolls and chop suey. Although chow mein was Chinese-American, the maker of Chun King foods was not. The founder and president of Chun King was

Jeno F. Paulucci, the son of Italian immigrants. Paulucci began his career in the food industry working in a grocery, and later sold fruits and vegetables from a car. Paulucci saw an opportunity in Chinese food and began canning and selling chow mein. The business grew into a multi-million dollar industry, and in the late 1960s Paulucci sold the company for \$63 million. In the 1990s ConAgra and Hunt-Wesson marketed Chun King chow mein, beansprouts, eggrolls, and sauces.

Church Socials

A gathering of church members for celebratory, social, or charitable purposes, church socials in America have remained popular—while becoming more varied and elaborate—throughout the past two centuries.

Church socials in America are rooted in ancient Jewish festivals. Jews traveled to Jerusalem to participate in public worship activities that commemorated important events or celebrated the harvest. Because the tribes of Israel were separated geographically, these festivals served the additional purpose of providing the cement needed for national unity. Old prejudices and misunderstandings were often swept away by these major events.

With the birth of the church, Christians shared common meals designed to enhance relationships within the church. The Bible says in Acts 2:46, “. . . They broke bread in their homes and ate together with glad and sincere hearts.” Eventually, the Agape meal or “love feast” became popular. It provided fellowship and opportunity to help the poor and widows. It was later practiced in the Moravian and Methodist churches.

Socials enhance church celebrations of Easter, Christmas, and other holidays. Because the Bible says that Jesus’ resurrection took place at dawn, Christians often meet together early on Easter morning for a “Sunrise Service” followed by a breakfast. An Easter egg hunt is often included, though some frown on this as a secular activity. Churches plan various Christmas socials such as caroling, exchanging gifts, and serving special dinners. Opinions vary on whether to include Christmas trees and Santa Claus. Some avoid them as secular symbols while others include them because they believe these traditions have Christian origins. As American society embraced other holidays such as Mother’s Day, Father’s Day, Valentine’s Day, the Fourth of July, and Thanksgiving, churches discovered fresh opportunities for social activities including mother-daughter, father-son, sweetheart, and Thanksgiving banquets. Churches in communities sometimes join together for patriotic celebrations on the Fourth of July.

Socials get people together in informal settings so that they will become better acquainted and work together more effectively in the church. Congregations in rural and small town America enjoy popular social activities involving food and games. Ham, bean, and cornbread dinners, chili suppers, “pot luck” meals, homemade ice cream socials, wiener roasts, picnics, hayrides, softball games, watermelon eating contests, and all-day singing events are only a few examples. In fact, for these rural congregations, church socials have often been the only source of social activities in a community. In some cases, homes were so far apart, separated by acres of farmland, that churches were the only places where people could go to meet others. Many people went to church socials on dates, and was a place where they often met their future spouses. Some churches included dancing and alcoholic beverages, but others believed those activities were inappropriate for churches to sponsor. Churches in both rural and urban areas often have family nights designed especially for busy families. A family comes to church on a weeknight and shares a meal with other families before Bible study or other small group activities.

In the latter half of the twentieth century, churches began planning more elaborate socials. Churches in or near urban areas attend professional sports. This is so widespread that most professional stadiums offer discount rates for church groups. Churches join together to sponsor basketball, softball, and volleyball leagues. While most churches rent community facilities, some have built their own gymnasiums and recreation halls. Other social activities involve trips to major recreation areas such as amusement parks. Swimming, picnicking, camping, and enjoying amusement rides are a few of the activities that round out these outings that last whole days or even entire weekends. Some church groups in recent years have provided cruises, trips to major recreational sites such as Branson, Missouri, and even vacations to other countries. While more elaborate, a cruise

for Christian singles, for example, serves the same purpose as the traditional hayride and wiener roast.

As the early church was concerned for widows, orphans, the sick and the poor, and gave generously to meet those needs, so modern church socials may be founded on the desire to assist the needy or fund church programs. As a result, activities such as homemade-ice-cream socials, sausage-and-pancake suppers, and craft bazaars are opened to the public. Some Catholic churches sponsor festivals that take on the flavor of county fairs. Amusement rides, carnival games, and food booths draw thousands of people. Money is used to pay for parochial schools or some other church project. (Some Catholic and many non-Catholic churches believe that these activities are too secular. Card playing, gambling, and the drinking of alcoholic beverages included in some of these events have also been quite controversial.) Some churches use their profits to support Christian retirement homes and hospitals. Some believe churches should not sell food or merchandise, but they give free meals away to the poor in the community. Other groups such as the Amish still have barn raising and quilting socials to help others in their community.

Cigarettes

It is highly unlikely that in 1881, when James A. Bonsack invented a cigarette-making machine, that he or anybody else could have predicted the mélange of future symbolism contained in each conveniently packaged stick of tobacco. The cigarette has come to stand for more than just the unhealthy habit of millions in American popular culture. It represents politics, money, image, sex, and freedom.

The tobacco plant held residence in the New World long before Columbus even set sail. American Indians offered Columbus dried tobacco leaves as a gift and, it is rumored, he threw them away because of the fowl smell. Later on, however, sailors brought tobacco back to Europe where it gained a reputation as a medical cure-all. Tobacco was believed to be so valuable that during the 1600s, it was frequently used as money. In 1619, Jamestown colonists paid for their future wives’ passage from England with 120 pounds of tobacco. In 1621, the price went up to 150 pounds per mate. Tobacco later helped finance the American Revolution, also known as “The Tobacco War,” by serving as collateral for loans from France.

Tobacco consumption took many forms before reaching the cigarette of the modern day. Spanish colonists in the New World smoked tobacco as a *cigarito*: shredded cigar remnants rolled in plant husks, then later in crude paper. In France, the *cigarito* form was also

James Thurber enjoying a cigarette.

popular, especially during the French Revolution. As aristocrats commonly consumed the snuff version of tobacco, the masses chose an opposing form. A moderate improvement to the Spanish cigarito, the French *cigarette* was rolled in rice straw. In 1832, an Egyptian artilleryman in the Turkish/Egyptian War created the paperbound version of today whose popularity spread to the British through veterans of the Crimean War. In England, a tobacconist named Philip Morris greatly improved the quality of the Turkish cigarette but still maintained only a cottage industry, despite the cigarette's growing popularity.

By the 1900s cigarettes rose to the highest selling form of tobacco on the market. Mass urbanization picked up the pace of daily life and popularized factory-made products such as soap, canned goods, gum, and the cigarette. James A. Bonsack's newly invented cigarette machine could turn out approximately 200 cigarettes per minute, output equal to that of forty or fifty workers. Cigarettes were now a more convenient form of tobacco consumption—cleaner than snuff or chew, more portable than cigars or pipes—and also were increasingly more available. England's Philip Morris set up shop in America as did several other tobacco manufacturers: R.J. Reynolds (1875), J.E. Liggett (1849), Duke (1881, later, the American Tobacco Company), and the oldest tobacco company in the United States, P. Lorillard (1760). The cigarette quickly became enmeshed in American popular culture. In 1913, R.J. Reynolds launched its Camel brand whose instant appeal, notes Richard Kluger in *Ashes to Ashes*, helped inspire this famous poem from a Penn State publication: "Tobacco is a dirty weed. I like it. / It satisfies no moral need. I like it. / It makes you thin, it makes you lean / It takes the hair right off your bean / It's

the worst darn stuff I've ever seen. / I like it." Since their introduction, cigarettes have maintained a status as one of the best-selling consumer products in the country. In 1990, 4.4 billion cigarettes were sold in America. That same year, several states restricted their sale.

The greatest propagator of what King James I of England referred to as "the stinking weed," has been war: the American Revolution, the French Revolution, the Mexican and Crimean Wars, the U.S. Civil War, and the greatest boost to U.S. cigarette consumption—World War I. During the first World War, cigarettes were included in soldiers' rations and as Kluger suggests, "quickly became the universal emblem of the camaraderie of mortal combat, that consummate male activity." Providing the troops with their daily intake of cigarettes, a very convenient method of consumption during combat, was viewed as morale enhancing if not downright patriotic. Regardless of intention, the tobacco manufacturers ensured themselves of a future market for their product.

At the same time, women became more involved in public life, earning the right to vote in 1920, and entering the work force during the absence of the fighting men. Eager to display their new sense of worth and fortitude, women smoked cigarettes, some even publicly. The tobacco industry responded with brands and advertisements aimed especially at women. While war may have brought the cigarette to America, marketing has kept it here. Since the introduction of the cigarette to America, the tobacco industry has spent untold billions of dollars on insuring its complete assimilation into U.S. popular culture. Despite the 1971 ban of radio and television advertisements for cigarettes, the industry has successfully inducted characters such as Old Joe Camel, The Marlboro Man, and the Kool Penguin into the popular iconography. A 1991 study published by the *Journal of the American Medical Association* revealed that 91 percent of six year olds could identify Joe Camel as the character representing Camel cigarettes and that Joe Camel is recognized by preschoolers as often as Mickey Mouse. Aside from advertising, cigarettes have been marketed, most notably to the youth market, through a myriad of other promotional activities from industry-sponsored sporting and entertainment events to product placement in movies. In 1993 alone, the tobacco industry spent \$6 billion keeping their cigarettes fresh in the minds of Americans.

While Hollywood has inadvertently, and sometimes quite intentionally, made the cigarette a symbol of glamour and sexuality—the smoke gingerly billowing as an afterglow of, or substitute for, the act itself—anti-tobacco activists have equally pursued an agenda of disclosure, regulation, and often, prohibition. A war has been waged on the cigarette in America and everyone, smoker or not, was engaged by the end of the 1990s. The health hazards of smoking have been debated since at least the 1600s, but litigation in the twentieth century revealed what the tobacco industry had known but denied for years: that nicotine, the active substance in cigarettes, is an addictive drug, and that cigarette smoking is the cause of numerous diseases and conditions which claim the lives of nearly half a million Americans each year. The cigarette has thus become for many an emblem of deception and death for the sake of profit, or even, with the discovery of second-hand smoke as a carcinogen, a catalyst for social review. For others, it remains a symbol of money and power and politics or the Constitutional First Amendment invoked by so many smokers in their time of need. The cigarette is indeed a dynamic symbol in American society—habit, hazard, inalienable right.

Circus

Long before the advent of film, television, or the Internet, the circus delivered the world to people's doorsteps across America. Arriving in the United States shortly after the birth of the American republic, the growth of the circus chronicled the expansion of the new nation, from an agrarian backwater to an industrial and overseas empire. The number of circuses in America peaked at the turn of the twentieth century, but the circus has cast a long shadow on twentieth century American popular culture. The circus served as subject matter for other popular forms like motion pictures and television, and its celebration of American military might and racial hierarchy percolated into these new forms. From its zenith around 1900, to its decline and subsequent rebirth during the late twentieth century, the circus has been inextricably tied to larger social issues in American culture concerning race, physical disability, and animal rights.

In 1793, English horseman John Bill Ricketts established the first circus in the United States. He brought together a host of familiar European circus elements into a circular arena in Philadelphia: acrobats, clowns, jugglers, trick riders, rope walkers, and horses. By the turn of the twentieth century, the circus had become a huge, tented amusement that traveled across the country by railroad. In an age of monopoly capitalism, American circuses merged together to form giant shows; for example, the Ringling Brothers circus bought Barnum and Bailey's Greatest Show on Earth in 1907. The biggest shows employed over 1,000 people and animals from around the world. These circuses contained a free morning parade, a menagerie and a sideshow. Their canvas big tops could seat 10,000 spectators and treated audiences to three rings and two stages of constant entertainment. Contemporary critics claimed that the circus was "too big to see all at once." In the early 1900s, nearly 100 circuses, the biggest number in American history, rambled across the country.

In 1900, "circus day" was a community celebration. Before dawn, hundreds of spectators from throughout a county gathered to watch the circus train rumble into town. The early morning crowd witnessed scores of disciplined muscular men, horses, and elephants transform an empty field into a temporary tented city. In mid-morning, thousands more lined the streets to experience, up close, the circus parade of marching bands, calliopes, gilded wagons, exotic animals, and people winding noisily through the center of town. In the

United States, the circus reached its apex during the rise of American expansion overseas. Circus proprietors successfully marketed their exotic performances (even those featuring seminude women) as "respectable" and "educational," because they showcased people and animals from countries where the United States was consolidating its political and economic authority. With its displays of exotic animals, pageants of racial hierarchy (from least to most "evolved"), and dramatizations of American combat overseas, the circus gave its isolated, small-town audiences an immediate look at faraway cultures. This vision of the world celebrated American military might and white racial supremacy. The tightly-knit community of circus employees, however, also provided a safe haven for people ostracized from society on the basis of race, gender, or physical disability.

In the early twentieth century, the circus overlapped considerably with other popular amusements. Many circus performers worked in vaudeville or at amusement parks during the winter once the circus finished its show season. Vaudeville companies also incorporated circus acts such as juggling, wire-walking, and animal stunts into their programs. In addition, the Wild West Show was closely tied to the circus. Many circuses contained Wild West acts, and several Wild West Shows had circus sideshows. Both also shared the same investors. Circuses occasionally borrowed their subject matter from other contemporary amusements. At the dawning of the American empire, international expositions like the Columbia Exposition in Chicago (1893) profitably displayed ethnological villages; thus, circuses were quick to hire "strange and savage tribes" for sprawling new ethnological congresses of their own. The new film industry also used circus subjects. Thomas Edison's Manufacturing Company produced many circus motion pictures of human acrobatics, trick elephants, and dancing horses, among others. Circuses such as the Ringling Brothers Circus featured early film as part of their novel displays. During the early twentieth century, the circus remained a popular film subject in movies like Charlie Chaplin's *Circus* (1928) and Tod Browning's *Freaks* (1932). Several film stars, such as Burt Lancaster, began their show business careers with the circus. Cecil B. DeMille's *The Greatest Show on Earth* won an Oscar for Best Picture in 1952. These popular forms capitalized on the circus' celebration of bodily feats and exotic racial differences.

The American circus began to scale back its sprawling features in the 1920s, owing to the rise of the automobile and the movies. Most circuses stopped holding a parade because streets became too congested with cars. As motion pictures became increasingly sophisticated—and thus a more realistic mirror of the world than the circus—circuses also stopped producing enormous spectacles of contemporary foreign relations. Yet, despite its diminishing physical presence, the circus was still popular. On September 13, 1924, 16,702 people, the largest tented audience in American history, gathered at Concordia, Kansas, for the Ringling Brothers Barnum and Bailey circus. In the milieu of the rising movie star culture of the 1920s, the circus had its share of "stars," from bareback rider May Wirth to aerialist Lillian Leitzel and her dashing trapeze artist husband, Alfredo Codona. Like their movie star counterparts in the burgeoning consumer culture, circus stars began to advertise a wealth of products in the 1920s—from soap to sheet music. Leitzel became so famous that newspapers around the world mourned her death in 1931, after she fell when a piece of faulty equipment snapped during a performance in Copenhagen, Denmark.

During the Great Depression, the colorful traveling circus provided a respite from bleak times. When nearly a quarter of the United

States workforce was periodically unemployed, clown Emmett Kelly became a national star as “Willie,” a tramp character dressed in rags, a disheveled wig, hat, and smudged face, who pined for lost love and better circumstances. The circus continued to profit during World War II, when railroad shows traveled under the auspices of the Office of the Defense Transportation. Circuses exhorted Americans to support the war effort. Yet Ringling Brothers and Barnum and Bailey’s “Greatest Show On Earth” nearly disintegrated after 168 audience members died in a big top fire (sparked by a spectator who dropped a lit cigarette) during a performance in Hartford, Connecticut, on July 6, 1944.

By the early 1950s, circus audience numbers were in decline, in part because the circus no longer had a monopoly on novelty or current events. Television, like movies and radio, provided audiences with compelling and immediate images that displaced the circus as an important source of information about the world. Yet, as a way to link itself to familiar, well-established popular forms, early television often featured live circus and vaudeville acts; circus performers were also featured on *Howdy Doody* as well as game shows like *What’s My Line?* Ultimately, however, television offered Americans complete entertainment in the privacy of the home—which dovetailed nicely with the sheltered, domestic ethos of suburban America during the early Cold War. In this milieu, public amusements like movies and the circus attracted fewer customers. In 1956, just 13 circuses existed in America. As audiences shrank, showmen scaled back even further on their labor-intensive operations. Moreover, the rise of a unionized workforce (during the industrial union movement during the 1930s) meant that circus owners could no longer depend on a vast, cheap labor pool. Thus, John Ringling North cut his workforce drastically in 1956 when he abandoned the canvas tent for indoor arenas and stadiums. Circus employees and fans alike mourned the “death” of the familiar tented circus—a fixture of the circus business since 1825.

American social movements also transformed the circus. Circus performances of racial difference became increasingly controversial during the 1950s. Civil rights leaders had long objected to racist performances in American popular entertainment, but in the context of the Cold War between the United States and the Soviet Union, officials in the United States also protested because they feared that racist performances would legitimize Soviet claims that American racism was a product of American capitalism. Consequently, officials no longer aided circus agents’ efforts to hire foreign performers slated to work as “missing links,” “savages,” or “vanishing tribes,” and performances of “exotic” racial difference, particularly at the sideshow, slowly disappeared from the 1950s onward. In addition, disabled rights activists effectively shut down the circus sideshow and its spectacles of human abnormality by the early 1980s.

Lastly, the spread of the animal rights movement in the 1970s transformed the circus. Fearful of picketers and ensuing bad publicity, several circuses in the 1990s arrive silently at each destination and stop at night to avoid protesters. Cirque du Soleil, an extraordinarily successful French Canadian circus from Montreal (with a permanent show in Las Vegas), uses no animals in its performances. Instead, troupe members wear tight lycra body suits, wigs, and face paint to imitate animals as they perform incredible aerial acrobatics to the beat of a slick, synthesized pop musical score and pulsating laser lights. Yet, arguably, Cirque du Soleil (among others) is actually not a circus because of its absence of animals: throughout its long history, the circus has been defined by its interplay of humans and animals in a circular arena.

Despite the transformation of its content, the American circus endures at the turn of the twenty first century. Certainly, towns no longer shut down on “circus day,” yet a growing number of small one-ring circuses have proliferated across America. Shows like the Big Apple Circus, Circus Flora, and Ringling Brothers Barnum and Bailey’s show, “Barnum’s Kaleidoscope,” have successfully recreated the intimate, community atmosphere of the nineteenth century one-ring circus, without the exploitation of physical and racial difference that characterized the older shows. Ultimately, in the 1990s, a decade of increasingly distant, fragmented, mass-mediated, “virtual” entertainment, the circus thrives because it represents one of the few intimate, live (and hence unpredictable) community experiences left in American popular culture.

Cisneros, Sandra (1954—)

Born and raised in Chicago, Chicana writer and poet Sandra Cisneros is best known for *The House on Mango Street* (1983), a series of interconnected prose poems. She is one of a handful of Latina writers to make it big in the American literary scene and the first Chicana to sign with a large publishing firm. Cisneros graduated from Loyola University in Chicago and went on to the prestigious Iowa Writers Workshop at the University of Iowa where she earned an MFA. Her poetry collections include *My Wicked, Wicked Ways* (1987) and *Loose Woman* (1994). She also has authored a collection of essays and short stories, *Woman Hollering Creek* (1991). Her poems and stories offer a conversational style, chatty and rambling. Her writing is lean and crisp, peppered with Spanish words.

Citizen Kane

Orson Welles' film *Citizen Kane* has been consistently ranked as one of the best films ever made. A masterpiece of technique and storytelling, the film helped to change Hollywood film-making and still exerts considerable influence today. However, at the time of its premiere in 1941, it was a commercial failure that spelled disaster for Welles' Hollywood career.

Citizen Kane tells the story of millionaire press magnate Charles Foster Kane (played by Welles). The film opens with Kane on his death bed in his magnificent Florida castle, Xanadu, murmuring the word "Rosebud." A newsreel reporter (William Alland) searches for clues to the meaning of the word and to the meaning of Kane himself. Interviewing many people intimately connected with Kane, the reporter learns that the millionaire was not so much a public-minded statesman as he was a tyrannical, lonely man. The reporter never learns the secret of Kane's last word. In the film's final moments, we see many of Kane's possessions being thrown into a blazing furnace. Among them is his beloved childhood sled, the name "Rosebud" emblazoned across it.

Citizen Kane encountered difficulties early on. Welles fought constantly with RKO over his budget and against limits on his control of the production. Furthermore, because the film was based in part on

the life of publisher William Randolph Hearst, Hearst's papers actively campaigned against it, demanding that *Citizen Kane* be banned and then later refusing to mention or advertise it altogether. Although the scheme backfired, generating enormous publicity for the movie, a frightened RKO released the film only after Welles threatened the studio with a lawsuit.

Critics reacted positively, but were also puzzled. They enthusiastically applauded *Citizen Kane's* many technical innovations. Throughout the film, Welles and his crew employed depth of field (a method in which action in both the foreground and background clearly are in focus, and used to great effect by cinematographer Gregg Toland), inventive editing, sets with ceilings, chiaroscuro lighting, and multilayered sound. Although sometimes used in foreign film, many of these techniques were new to Hollywood. They have since, however, become standard for the industry.

Critics also were impressed by *Citizen Kane's* many virtuoso sequences: a "March of Time"-type newsreel recounting the bare facts of Kane's life; the breakfast table scene, where in a few minutes his first marriage deteriorates to the strains of a waltz and variations (by noted screen composer Bernard Herrmann, in his first film assignment); a tracking shot through the roof of a nightclub; and a faux Franco-Oriental opera. None of these sequences, however, are showstoppers; each propels the narrative forward.

Orson Welles (center) in a scene from the film *Citizen Kane*.

That narrative proved puzzling both to critics and to audiences at large. Written by Herman J. Mankiewicz and Welles (although there is considerable controversy over how much Welles contributed), the narrative employs a series of flashbacks that tell different pieces of Kane's life story and reveal the witnesses' various perceptions of him. By arranging these pieces out of order, the script opened the door for later screenwriters to avoid the demands of strict chronology. At the time, however, this innovation confused most audiences.

While *Citizen Kane* did well in New York, the film did poor business in small-town America. The film was a commercial failure, allowing RKO's officials to eventually let go of Welles. Thereafter, he found it increasingly difficult to make movies in Hollywood. Shunned by the studio system, he was forced to spend much of his time simply trying to raise money for his various projects.

For a while, *Citizen Kane* itself seemed to suffer a similar fate. Although the film was nominated for a host of Oscars, Academy members took RKO's side in the studio's battle with Welles, awarding the movie only one Oscar for best original screenplay. The film lost to *How Green Was My Valley* for best picture. *Citizen Kane* soon sank into obscurity, rarely discussed, except when described as the beginning of the end of Welles' film career.

After World War II, RKO, seeking to recoup its losses, released *Citizen Kane* in European theaters hungry for American films and also made it available for American television. Exposed to a new generation of moviegoers, the film received new critical and popular acclaim. Riding the wave of *Citizen Kane*'s new-found popularity, Welles was able to return to Hollywood, directing *Touch of Evil* in 1958.

Consistently ranked number one on *Sight and Sound*'s top ten films list since the mid-1950s, *Citizen Kane* continues to attract, inspire, and entertain new audiences. In 1998, it was voted the best American film of the twentieth century by the American Film Institute.

City Lights

A silent film at the dawn of the talking picture technological revolution, *City Lights* appeared to popular acclaim and remains, for many, Charlie Chaplin's finest achievement. When Chaplin, known the world over for his "Little Tramp" character, began filming *City Lights* in 1928, talking pictures had become the rage in the movie industry, and most filmmakers who had originally conceived of their works as silent films were now adapting them into partial talkies or junking them altogether. Chaplin halted production on *City Lights* to weigh his options, and, when he resumed work several months later, he stunned his Hollywood peers by deciding to keep the film in a

Charlie Chaplin in a scene from the film *City Lights*.

silent form. "My screen character remains speechless from choice," he declared in a *New York Times* essay. "*City Lights* is synchronized [to a musical score] and certain sound effects are part of the comedy, but it is a non-dialogue picture because I preferred that it be that." For many, the film that resulted is a finely wrought balance of pathos and comedy, the very quintessence of Chaplin. The movie debuted in 1931.

Chaplin, who not only produced, directed, and starred in *City Lights* but also wrote and edited it and composed its musical score, centered his film on the Little Tramp and his relationship with a young, blind flower vendor who has mistaken him for a rich man. The smitten Tramp, not about to shatter her fantasy, undergoes a series of comic misadventures while trying to raise money for an operation that would restore her vision. He interrupts the suicide attempt of a drunken man who turns out to be a millionaire. The two become friends, but unfortunately the millionaire only recognizes the Tramp when drunk. Determined to help the young woman, the Tramp takes on such unlikely occupations as street sweeping and prize fighting (both of which go comically awry) before the millionaire finally offers him one thousand dollars for the operation. Robbers attack at just that moment, knocking the millionaire in the head. Police arrive and assume the Tramp is the thief (the millionaire, sobered by the blow, does not recognize him), but the Tramp manages to give the money to the woman before they catch him and haul him off to jail. After his release, he discovers that the young woman, now sighted, runs her own florist shop. She doesn't recognize the shabbily dressed Tramp at first and playfully offers him a flower. When she at last realizes who he is, the film concludes with the most poignant exchange of glances in the history of world cinema.

Chaplin found the casting of the nameless young blind woman to be particularly difficult. According to his autobiography, one of his biggest challenges “was to find a girl who could look blind without detracting from her beauty. So many applicants looked upward, showing the whites of their eyes, which was too distressing.” The filmmaker eventually settled on Virginia Cherrill, a twenty-year-old Chicagoan with little acting experience. “To my surprise she had the faculty of looking blind,” Chaplin wrote. “I instructed her to look at me but to look inwardly and not to see me, and she could do it.” He later found the neophyte troublesome to work with, however, and fired her about a year into production. He recruited Georgia Hale, who had co-starred with him in *The Gold Rush* in 1925, to replace her but eventually re-hired Cherrill after realizing how much of the film he would have to re-shoot.

Chaplin’s problems extended to other aspects of the movie. He filmed countless retakes and occasionally stopped shooting for days on end to mull things over. Most famously, he struggled for eighty-three days (sixty-two of which involved no filming whatsoever) on the initial encounter of the Tramp and the young woman, unable to find a way of having the woman conclude that the Tramp is wealthy. Inspiration finally struck, and Chaplin filmed a brief scene in which a limousine door slammed shut a moment before the Tramp met her.

Chaplin’s difficulties on the set mattered little to audiences. They loved his melancholy yet comic tale of two hard-luck people and made it an unqualified hit (the movie earned a profit of five million dollars during its initial release alone). A few reviewers criticized the film’s old-fashioned, heavily sentimental quality, but the majority praised Chaplin’s work. Its regressive form and content notwithstanding, *City Lights* appealed strongly to audiences and critics alike.

The City of Angels

The official slogan for the city of Los Angeles (L.A.) is “Los Angeles brings it all together.” Its unofficial name is “The City of Angels.” In the first instance, reality belies the motto in that Los Angeles’ most salient feature is its diffuse layout. In the second, it is difficult to think of someone saying “The City of Angels” without a Raymond Chandler-esque sneer. But that, too, is L.A.; duplicitous, narcissistic, and paradoxical. Perhaps no city has been loved or abhorred with such equal vigor, or typified by so many contradictions. For postmodern philosophers (especially Europeans) who study the city as they would a text, the city fascinates with its sheer modernity—a tabula rasa over which the thick impasto of America’s aspirations and proclivities has been smeared. Viewed from the air, the city

terrifies with its enormity, but one can discern a map of sorts, a guidepost pointing towards the future.

From its very beginning Los Angeles has existed more as a sales pitch than a city; a marketing campaign selling fresh air, citrus fruits, and the picturesque to the elderly and tubercular. In the 1880s, when Los Angeles was little more than a dusty border town of Spanish Colonial vintage, attractively packaged paeans to sun-kissed good-living were flooding the Midwest. Pasadena was already a well-known summer destination for East Coast millionaires, and the campaign sought to capitalize on a keeping-up-with-the-Jones sentiment calculated to attract prosperous and status conscious farmers. Behind the well-heeled came the inevitable array of servants, lackeys, and opportunists. The farm boom dried-up, and the transplanted, oftentimes marooned mid-westerners sat on their dusty front porches wondering where they went wrong—a dominant leit motif of L.A. literature along with conflagrations, earthquakes, floods, crowd violence, and abject chicanery.

Until the film industry invaded in the early 1910s, Los Angeles could offer few incentives to attract industry, lacking a port or even ready access to coal. The only way civic leaders could entice businessmen was by offering the most fervently anti-labor municipal government in the country, and Los Angeles developed a reputation for quelling its labor unrest with great dispatch. L.A.’s leading lights were as canny at pitching their real estate holdings as they were ruthless in ensuring the city’s future prosperity. To insure adequate water to nourish the growing metropolis, founding father William Mulholland bamboozled the residents of Owens Valley, some 250 miles to the northeast, into selling their water rights under false pretenses and building an enormous aqueduct into the San Fernando Valley. In 1927 the embittered farmers, having witnessed their fertile land return to desert, purchased an advertisement in the *Los Angeles Times* which read: “We, the farming communities of the Owens Valley, being about to die, salute you.” The publisher of the newspaper, General Harrison Gray Otis, was a major investor in Mulholland’s scheme. Even back then, irony was a way of life in Southern California.

Fate was kind to Los Angeles. With the film industry came prosperity, and a spur to real estate growth. But beneath the outward prosperity, signs of the frivolity and moral disintegration L.A. was famous for provoking were apparent to those with an eye for details. Thus, Nathaniel West, author of the quintessential Los Angeles novel, *Day of the Locust*, could write of a woman in man’s clothing preaching the “crusade against salt” or the Temple Moderne, where the acolytes taught “brain-breathing, secret of the Aztecs,” while up on Bunker Hill, a young John Fante would chronicle the lives of the hopelessly displaced Midwest pensioners and the sullen ghetto underclass from his cheap hotel room overlooking downtown. Across town, European luminaries such as Arnold Schoenberg, Thomas Mann, and Bertolt Brecht found the leap from Hitler’s Germany to palm trees and pristine beaches a difficult transition to make. The contrast between the European exiles and their American counterparts was as plain as day, and illustrates the contradictory schools of thought about the City of Angels. The Europeans regarded the city as a curiosity to be tolerated, or wondered at, while West, Fante, and their better known brethren were almost uniform in their strident denunciations of what they perceived as overt Philistinism. British novelist Aldous Huxley oscillated between condemnation and approval. These foreigners perceived the myriad contradictions of Los Angeles: The beauty of its locale and the crassness of its people; the film industries’ pollyanna-like flights of fancy and the bitter labor

struggles that accompanied their creation; the beauty of the art deco style that Los Angeles adopted as its own, and the eyesores (building shaped like hot-dogs, space ships, ginger-bread houses) constructed alongside them.

For obvious reasons, L.A. became a center for the defense industry during World War II, and the factories springing up like mushrooms on the table-flat farmland attracted the rootless detritus of the Depression, who only a few years back were regularly turned back at the Nevada border by the California Highway Patrol. The great influx of transplants flourished in their well-paid aerospace assembly line jobs, enjoying a semblance of middle class living. It became the clarion call of a new sales pitch—the suburban myth. The suburbs marketed a dream, that of single family homes, nuclear families, and healthful environment. Within a few years, pollution from the legions of commuters who clogged L.A.'s roadways dispelled the illusion of country living. Another recent innovation, the shopping mall, while invented in Seattle, was quickly adopted as a native institution, to the further degradation of downtown Los Angeles.

The veterans had children, who, nourished on their parent's prosperity, became a sizeable marketing demographic. The children took to such esoteric sports as surfing, hot rodding, and skateboarding, fostering a nationwide craze for surf music and the stylistic excesses of hot-rod artists such as Big Daddy Roth. For a time, Los Angeles persevered under this placid illusion, abruptly collapsed by the 1965 Watts riots and the Vietnam war. In a city without discernible boundaries, the idea of a city center is an oxymoron. Downtown Los Angeles, the nexus of old money Los Angeles, slowly withered, crippled further by urban renewal projects that made the downtown ghost town something of a self-fulfilling prophecy.

This, then, is L.A., a heady mixture of status and sleaze, weirdness and conformity, natural beauty and choking pollution. Los Angeles is indeed the most postmodern of cities, a city with more of a reflection than an image, and where the only safe stance is the ironic one. In the early 1990s, L.A. was hit by earthquakes, fires, and another riot of its black populace, this time provoked by the acquittal of policeman accused of beating a black motorist more briskly than usual. Los Angeles once again managed to recover, refusing once again to be crippled by its inner contradictions. With its limited array of tropes, the city trots out its endgame against any natural limitations to its growth. As the city evolves, postmodern theoreticians stand by rubbing their palms together, predicting the city's inevitable denouement while the sun shines mercilessly overhead.

Civil Disobedience

Civil disobedience is a nonviolent, deliberate, and conspicuous violation of a law or social norm, or a violation of the orders of civil authorities, in order to generate publicity and public awareness of an issue. Protesters directly confront the rule and confront authorities who would enforce it, and demand a change in the rule. Civil disobedience communicates the protesters' unity and strength of interest in an issue and provides evidence of their commitment and willingness to sacrifice for the cause. It also presents a latent threat of more overt action if the regime fails to act on the issue.

Civil disobedience is a form of political participation available to citizens without the money, media support, lobbying resources, voting strength, political skills, or political access necessary to influence decision-makers through more traditional means. The tactic was used by Mahatma Gandhi in the 1940s to secure the end of British colonial rule in India; by Martin Luther King, Jr. and other American civil rights leaders in the 1960s to end legal racial segregation and to secure voting rights for African Americans; and by non-voting age college students during the 1960s to protest America's war in Vietnam. Civil disobedience brings people into the political system who were previously outside the system and is one of the few tactics available to empower concerned citizens who lack any other means to press their demands for change. Social minorities and deviant subcultures use civil disobedience to challenge and change the norms of society or to demand their independence from the rules of society.

Civil disobedience usually takes one of three forms. First, civil disobedience may take the form of deliberate and purposeful violation of a specific targeted statute or social norm in order to focus popular and media attention on the rule, to encourage others to resist the rule, and to encourage authorities to change the rule. Examples include 1960s American civil rights sit-ins and demands for service at segregated lunch counters, anti-war protesters refusing to submit to selective service calls, and feminists publicly removing restrictive brassieres in protest of clothing norms. In the 1970s, trucker convoys deliberately exceeded the 55-mile-per-hour federal highway speed limit to protest the limit. According to Saul Alinsky in *Rules for Radicals*, this tactic is effective only in non-authoritarian and non-totalitarian regimes with a free press to publicize the violation of the law and basic civil rights to prevent civil authorities and social majorities from overreacting to the violation.

Second, civil disobedience may take the form of passive resistance in which protesters refuse to respond to the orders of authorities but are otherwise in full compliance with the law. Examples have included civil rights protesters and anti-war activists who ignore police orders to disperse and force police to physically carry them from a public protest site. Feminists have resisted social norms by refusing to shave their legs. The organization Civilian Based Defense promoted passive resistance as a national defense strategy and suggested that the threat of withholding cooperation and engaging in active non-cooperation with the enemy may be as effective a deterrent to an invader's aggression as the use of military force.

Third, civil disobedience may take the form of non-violent illegal activity in which protesters disrupt activities they oppose and seek to be arrested, punished, and even martyred to gain publicity and to influence public opinion. Examples have included anti-war protesters who trespass on military installations and illegally seize military property by chaining themselves to it, radical environmentalists who

Student protesters at Woolworth's lunch counter, Atlanta, Georgia, 1960.

“spike” trees with nails to disrupt logging activities, and animal rights activists who throw blood on persons wearing animal fur coats.

Civil disobedience is distinctly different from nonconformity, social pathology, eccentricity, or social disorganization. Nonconformity is willful violation of a rule because the values established in the rule are contrary to the social, cultural, or moral values and norms of a subgroup of the civil society—but the violation is not intended to encourage a change in the rule. For example, a fundamentalist Mormon practices polygamy because he believes religious proscriptions require him to do so, not because he seeks to change or protest the marriage laws of the state. Social pathology is the failure to conform to civil law because failures in the individual's socialization and education processes leave the individual normless and, therefore, free to pursue his personal self-interest and selfish desires without concern for law. Eccentricity is socially encouraged nonconformance in which a cultural hero, genius, intellectual, or artist is granted cultural license to violate the law based on the person's unique status or contributions to society. Finally, social disorganization is the failure of the political or social system to enforce its rules because authority has become ineffective or has been destroyed in war or revolution, leaving individuals in a state of anarchy and licensed to make their own rules.

Civil disobedience as a political tactic and social process increases in popularity and use as society decreases its reliance on violence and force to achieve political goals or to gain the advantage in social conflict or competition. It also increases in popularity when political outsiders seek to assert themselves in the political process and find all other avenues of political participation beyond their abilities and resources or find all other avenues prohibited to them by political insiders or by civil authorities.

Civil Rights Movement

The African-American struggle for civil rights marks a turning point in American history because it represents the period when African Americans made their entry into the American mainstream. Although the focus of the long persistent drive for civil rights was centered around political issues such as voting, integration, educational opportunities, better housing, increased employment opportunities, and fair police protection, other facets of American life and culture were affected as well. Most noticeably, African Americans came out of the civil rights movement determined to define their own distinct culture. New styles of politics, music, clothing, folktales,

hairstyles, cuisine, literature, theology, and the arts were all evident at the end of the civil rights movement.

Although African Americans have a long tradition of protest dating back to the seventeenth century, the mid-1950s represented a turning point in the black struggle for equal rights. With the historic *Brown v. Board of Education* Supreme Court decision that outlawed the 1896 *Plessy v. Ferguson* doctrine of "Separate But Equal," African Americans realized that the time was right to end all vestiges of Jim Crow and discrimination. On the heels of *Brown*, black Southerners undertook battles to achieve voting rights and integration, under the broad leadership of Martin Luther King, Jr. Through marches, rallies, sit-ins, and boycotts, they were able to accomplish their goals by the late 1960s. With voting rights and integration won in the South, African Americans next shifted their attention to the structural problems of northern urban blacks. However, non-violent direct-action was not the preferred tool of protest in the North where the self-defense message of Malcolm X was popular. Rather, the method of protest was urban unrest, which produced very few meaningful gains for African Americans other than the symbolic election of black mayors to large urban centers.

Immediately, the civil rights movement ushered in a new black political culture. With the right to vote won in 1965 with the passage of the Voting Rights Act, African Americans now began to place a

A protest for Civil Rights.

tremendous emphasis on political participation. Throughout the South African Americans went to the polls in large numbers seeking to elect representatives that would best represent their interests. In the North where the right to vote had been in existence since the mid-nineteenth century, a different type of political culture emerged. As a result of the civil rights movement black voters in the North began to move away from the idea of coalition building with white liberals, preferring instead to establish all-black political organizations. These clubs would not only attack the conservativeness of the Republican Party but they would also begin to reassess their commitment to the democratic party at the local, state, and national level. In essence, the race was moving toward political maturity; no longer would their votes be taken for granted.

Another aspect of the nascent black political culture was a re-emergence of black nationalism which was re-introduced into American society by Malcolm X. While a spokesman for the Nation of Islam, Malcolm X made African Americans feel good about themselves. He told them to embrace their culture and their heritage, and he also spoke out openly against white America. Via his autobiography and lectures, Malcolm X quickly emerged as the instrumental figure in this renewed black consciousness. Shortly after his assassination in 1965, the proprietors of black culture immediately gave Malcolm deity status. His name and portrait began to appear everywhere: bumper stickers, flags, T-shirts, hats, and posters. Although Malcolm popularized this new revolutionary frame of mind, by no means did he have a monopoly on it. Throughout the 1960s African Americans spoke of black nationalism in three main forms: territorial, revolutionary, and cultural. Territorial nationalists such as the Republic of New Afrika and the Nation of Islam, called for a portion of the United States to be partitioned off for African Americans as payment for years of slavery, Jim Crow, and discrimination. But they insisted that by no means would this settle the issue. Instead, this would just be partial compensation for years of mistreatment. Revolutionary nationalists such as the Black Panther Party sought to overthrow the capitalist American government and replace it with a socialist utopia. They argued that the problems faced by African Americans were rooted in the capitalist control of international economic affairs. Thus, the Black Panthers viewed the black nationalist struggle as one of both race and class. Lastly, the cultural nationalism espoused by groups such as Ron Karenga's US organization sought to spark a revolution through a black cultural renaissance. In the eyes of his supporters, the key to black self-empowerment lay in a distinct black culture. They replaced European cultural forms with a distinct Afrocentric culture. One of Karenga's chief achievements was the development of the African-American holiday "Kwanzaa." Kwanzaa was part of a broader theory of black cultural nationalism which suggested that African Americans needed to carry out a cultural revolution before they could achieve power.

One of the most visible effects of the civil rights movement on American popular culture was the introduction of the concept of "Soul." For African Americans of the 1960s, Soul was the common denominator of all black folks. It was simply the collective thread of black identity. All blacks had it. In essence, soul was black culture, something separate and distinct from white America. No longer would they attempt to deny nor be ashamed of their cultural heritage; rather they would express it freely, irrespective of how whites perceived it. Soul manifested itself in a number of ways: through greetings, "what's up brother," through handshakes, "give me some skin," and even through the style of walk. It was no longer acceptable to just walk, one who had soul had to "strut" or "bop." This was all a

part of the attitude that illustrated they would no longer look for white acceptance.

One of the most fascinating cultural changes ushered in by the civil rights movement was the popularity of freedom songs, which at times were organized or started spontaneously during the midst of demonstrations, marches, and church meetings. These songs were unique in that although they were in the same tradition as other protest music, this was something different. These were either new songs for a new situation, or old songs adapted to the times. Songs such as "I'm Gonna Sit at the Welcome Table," "Everybody Says Freedom," "Which Side Are You On," "If You Miss Me at the Back of the Bus," "Keep Your Eyes on the Prize," and "Ain't Scared of Your Jails," all express the feelings of those fighting for black civil rights. While these songs were popularized in the South, other tunes such as "Burn, Baby, Burn," and the "Movement's Moving On," signaled the movements shift from non-violence to Black Power. Along with freedom songs blacks also expressed themselves through "Soul music," which they said "served as a repository of racial consciousness." Hits such as "I'm Black and I'm Proud," by James Brown, "Message from a Black Man," by the Temptations, Edwin Starr's "Ain't It Hell Up in Harlem," and "Is It Because I'm Black" by Syl Johnson, all testified to the black community's move toward a cultural self-definition.

African Americans also redefined themselves in the area of literary expression. Black artists of the civil rights period attempted to counter the racist and stereotyped images of black folk by expressing the collective voice of the black community, as opposed to centering their work to gain white acceptance. Instrumental in this new "black arts movement," were works such as Amiri Baraka's *Blues People*, *Preface to a Twenty-Volume Suicide Note*, and *Dutchman*. These works illustrate the distinctiveness of black culture, while simultaneously promoting race pride and unity.

The black revolution was principally the catalyst for a new appreciation of black history as well. Prior to the civil rights movement, the importance of Africa in the world and the role of African Americans in the development of America was virtually ignored at all levels of education, particularly at the college and university level. Whenever people of African descent were mentioned in an educational setting they were generally introduced as objects and not subjects. However, the civil rights movement encouraged black students to demand that their history and culture receive equal billing in academia. Students demanded black studies courses taught by black professors. White university administrators reluctantly established these courses, which instantly became popular. Predominantly white universities and colleges now offered classes in Swahili, Yoruba, black history, and black psychology to satisfy the demand. Due to the heightened awareness, all black students were expected to enroll in black studies courses, and when they didn't, they generally had to provide an explanation to the more militant factions on campus. Students not only demanded black studies courses but they also expressed a desire for colleges and universities that would be held accountable to the black community. Traditional black colleges and universities such as Howard, Spelman, and Fisk, were now viewed with suspicion since they served the racial status quo. Instead, schools such as Malcolm X College of Chicago and Medgar Evers College of CUNY became the schools of choice since they were completely dedicated to the black community.

The 1960s generation of African Americans also redefined themselves in the area of clothing. Again, they were seeking to create something unique and distinct from the white mainstream. The new

attire consisted of wide-brimmed hats, long full-cut jackets, platform shoes, bell-bottoms, leather vests, and wide-collar shirts. These outfits were complimented by African-like beads, earrings, belts, medallions, and bracelets. However, the more culturally conscious rejected all types of western culture in favor of dashikis, robes, and sandals. In response to these new cultural tastes clothing companies began specifically targeting the black consumer by stating that their items were designed to meet the body style of blacks. To complement the new clothing look African Americans also began to reject the European standard of beauty. Whereas African Americans were once ashamed of their full lips, broad nose, high cheekbones, and coarse hair, they now embraced them. Black women took hair straighteners and hot combs out of their bathrooms and began to wear “naturals,” cornrows, and beads, which many considered to be the most visible sign of black self-expression.

Interestingly enough, black Americans also experienced a slight shift in eating tastes. Although collard greens, “chitlins,” catfish, pigs feet, and fried-chicken had been a staple in the black diet for years, it was now labeled “soul food,” because it provided a cultural link to the African ancestral homeland.

African-American folktales took on a whole new importance during the civil rights movement as the famed “trickster tales” became more contemporary. Folklorists made the black hero superior to that of other culture’s, by stressing its mental agility, brute physical strength, and sexual prowess. These heroes also reversed the traditional socio-economic arrangements of America as well. Characters such as Long-Shoe Sam, Hophead Willie, Shine, and Dolemite, all used wit and deceit to get what they wanted from white America. In the eyes of black America, traditional heroes such as Paul Bunyan and Davy Crockett were no match for this new generation of black adventurers.

The civil rights movement also encouraged blacks to see God, Jesus, and Mary as black. As their African ancestors, these deities would assist African Americans in their quest for physical, mental, and spiritual liberation. By stressing that a belief in a white God or Jesus fostered self-hatred, clergyman such as Rev. Albert Cleague of Detroit sought to replace the traditional depiction of God and Jesus with a black image. Throughout the country black churches followed Cleague’s lead as they removed all vestiges of a white Christ in favor of a savior they could identify with. Followers of this new Black Christian Nationalism also formulated a distinct theology, in which Jesus was viewed as a black revolutionary who would deliver African American people from their white oppressors.

As with other facets of black popular culture, television also witnessed a change as a result of the black revolution. With the renewed black consciousness clearly evident, the entertainment industry sought to capitalize by increasing the visibility of black actors and actresses. Whereas in 1962 blacks on TV were only seen in the traditional stereotyped roles as singers, dancers, and musicians, by 1968 black actors were being cast in more positive roles, such as Greg Morris in *Mission Impossible*, Diahann Carroll in *Julia*, Clarence Williams III in the *Mod Squad*, and Nichelle Nichols, who starred as Uhura in *Star Trek*. While these shows did illustrate progress, other shows such as *Sanford and Son* and *Flip Wilson’s Show* all reinforced the traditional black stereotype. In the film industry, Hollywood would not capitalize on the renewed black consciousness until the early 1970s with blaxploitation films. In the mid-1960s however, African Americans were continually portrayed as uncivilized, barbaric, and savage, in movies such as *The Naked Prey*, *Dark of the Sun*, and *Mandingo*.

The principal effect of the civil rights movement on American popular culture was a renewed racial consciousness not witnessed since the Harlem Renaissance. This cultural revolution inspired African Americans to reject the white aesthetic in favor of their own. Although they had fought and struggled for full inclusion into American society, the civil rights drive also instilled into African Americans a strong appreciation of their unique cultural heritage. Through new styles of music, clothing, literature, theology, cuisine, and entertainment, African Americans introduced a completely new cultural form that is still evident today.

Civil War Reenactors

Reenactors are those people whose hobby involves dressing in the manner of soldiers from a particular period of time in order to recreate battles from a famous war. Those individuals who choose to restage Civil War battles form the largest contingent of reenactors. They are part of a larger group of Civil War buffs who actively participate in genealogy research, discussion groups, and roundtables. The American Civil War divided the country in bitter warfare from 1861 to 1865 but its legacy has endured long since the fighting ceased. The war wrought extensive changes which shaped United States society and its inhabitants. Historian Shelby Foote, renowned for his participation in Ken Burns’ popular PBS series *The Civil War*, observes that “any understanding of this nation has to be based, and I mean really based, on an understanding of the Civil War. I believe that firmly. It defined us.” The importance of the Civil War in American culture and memory makes it significant in popular culture. The Civil War has a long history of serving “as a vehicle for embodying sentiments and politics in our day.” The Civil War has therefore been entwined with popular culture before, during, and since its actual battles occurred as popular cultural producers fought to determine how its meaning would apply to postwar society.

Civil War reenactments range in size from small one-day skirmishes to large encampments like the 125th Anniversary of Gettysburg that attracted 12,000 soldiers and 100,000 audience members. The larger events are great tourist attractions that feature concerts, lectures, exhibitions, encampments, and demonstrations of camp life, hospitals, Civil War fashions, and other topics. These large reenactments are often cosponsored by the National Park Service and local museums as they involve numerous volunteers and intensive

A reenactment of the battle at Andersonville, Georgia.

preparations. The battles themselves are choreographed events where the soldiers shoot blanks and show a great concern for the safety of all involved. The reenactors who stage these events are part of the amateur and living history movement that encourages direct audience interaction and has enjoyed increasing popularity in the late twentieth century. Living history museums rose in popularity in the United States in the 1920s with the founding of automobile giant Henry Ford's Greenfield Village in Michigan and John D. Rockefeller's Colonial Williamsburg village in Virginia. The majority of the people in the United States learn their history from popular culture rather than academic books and classes. Popular cultural forms of history provide their audiences with forms, images, and interpretations of people and events from America's past. Their popularity makes their views on history widely influential. Civil War reenactors understand that popular history is a valuable form of communication. They view living history as a valuable education tool, viewing their participation as a learning experience both for them and for their audience.

The first group to reenact the Civil War consisted of actual veterans belonging to a society known as the Grand Army of the Republic. These late-nineteenth-century encampments were places where these ex-soldiers could affirm the passion and the sense of community to fellow soldiers that their wartime experiences engendered. Veterans also showed their respect for the former enemies who

had endured the same indescribable battle-time conditions. Community sponsored historical pageants replaced the early reenactments as the veterans largely died off, until the fragmentation of society after World War II broke apart any strong sense of community. Reenacting emerged in its late-twentieth-century form during the 1960s Civil War centennial commemorations. The battles staged during this period found a receptive audience. Public enthusiasm for reenactments faded in the late 1960s and 1970s as the result of a national mood of questioning blind patriotism and American values. The phenomenal popularity of the living history movement in the 1980s, however, quickly led to a resurgence of Civil War reenacting.

Twentieth-century Civil War reenactors have found themselves involved in the controversies between amateur and professional historians. Academics have accused the reenactors of engaging in cheap theatrics to capture their audience's interest and questioned the morality of the use of actual battlefields as reenactment sites. They have also been criticized for their sentimentalized historical portraits.

Civil War reenactors have a highly developed sense of culture among themselves. Most are generally white males in their thirties and are very passionate about the endeavor. There are a few women and African-Americans who participate, but they often meet with hostility. Reenactors are mostly not academic historians but are usually quite knowledgeable, conducting considerable research to

create their historical characters and outfit themselves in meticulous detail. They categorize their fellow reenactors by a tiered system that demonstrates their amount of dedication to the activity and to the goal of complete authenticity. “Farbs” are those reenactors who lack seriousness and attention to detail and are usually more interested in the social and alcoholic aspects of the encampments. “Authentic” reenactors concern themselves with detail but are willing to allow some twentieth-century comforts whereas “hard core” reenactors share a precise and uncompromising commitment to accuracy. “Hard core” reenactors are also those who wish to ban women from participation despite the fact that many women disguised as men actually fought in the Civil War. Reenacting involves a great deal of preparation time as participants must obtain proper clothing and hardware and memorize complicated drills for public exhibition. Magazines such as the *North-South Trader’s Civil War*, *Civil War Book Exchange and Collector’s Newspaper*, *Blue and Gray*, *America’s Civil War*, *Civil War News*, *Civil War Times*, and the *Camp Chase Gazette* cater to the large market of Civil War buffs and reenactors looking for necessary clothing and equipment. The reenactor must also make every effort to stay in character at all times, especially when members of the public are present.

The reenactors are largely unpaid amateur history fans who often travel great distances to participate in what can prove to be a very expensive hobby. Many participants welcome the chance to escape everyday life and its worries through complete absorption in the action of staged battles, the quiet of camp life, and the portrayal of their chosen historical character. Many also seek a vivid personal experience of what the Civil War must have been like for its actual participants. They are quite intense in their attempt to capture some sense of the fear and awe that must have overwhelmed their counterparts in reality. They find that experiential learning provides a much better understanding of the past than that provided by reading dry academic works. Jim Cullen observes in that by “sleeping on the ground, eating bad food, and feeling something of the crushing fatigue that Civil War soldiers did, they hope to recapture, in the most direct sensory way, an experience that fascinates yet eludes them.” The immediacy of the battles and surrounding camp life is part of the hobby’s appeal. Cullen also suggests one of reenacting’s more negative aspects in observing that certain participants seek a ritual reaffirmation of their own past which may hide a thinly veiled racism in the face of a growing emphasis on new multicultural pasts.

Claiborne, Liz (1929—)

After spending 25 years in the fashion business, Liz Claiborne became an overnight success when she opened her own dress company in 1976. By the time she and husband Arthur Ortenberg retired in 1989, their dress company had grown into a fashion colossus that included clothing for men and children as well as accessories, shoes, fragrances, and retail stores. Claiborne successfully combined an emphasis on sensible dresses with a keen intuition for the professional woman’s desire to appear sophisticated and dressed up at the office. Her sensibility to what people want in fashion carried over into a successful sportswear line. Her genius as a fashion designer was highlighted by the fact that Claiborne was one of most stable fashion companies on the New York Stock Exchange, serving as a model for publicly-owned fashion companies until it faltered in the 1990s.

Clairol Hair Coloring

In 1931, Lawrence M. Gelb, a chemical broker, discovered and bought “Clairol” hair color in Europe to market in the United States. From the start, he promoted Clairol with the idea that beautiful hair was every woman’s right, and that hair color, then considered risqué, was no different from other cosmetics. With the 1956 introduction of “Miss Clairol,” the first at-home hair coloring formula, Clairol hair color and care products revolutionized the world of hair color. The do-it-yourself hair color “was to the world of hair color what computers were to the world of adding machines,” Bruce Gelb, who worked with his father and brother at Clairol, told *New Yorker* contributor Malcolm Gladwell.

The firm’s 1956 marketing campaign for a new, Miss Clairol product ended the social stigma against hair coloring and contributed to America’s lexicon. Shirley Polykoff’s ad copy—which read “Does she or doesn’t she? Hair color so natural only her hairdresser knows for sure!”—accompanied television shots and print photos of wholesome-looking young women, not glamorous beauties associated with professional hair color but attractive homemakers with children. With ads that showed mothers and children with matching hair color, Miss Clairol successfully divorced hair coloring from its sexy image. Moreover, women could use the evasive “only my hairdresser knows for sure” to avoid divulging the tricks they used to craft an appealing public self. For women in the 1950s, hair color was a “useful fiction—a way of bridging the contradiction between the kind of woman you were and the woman you were supposed to be,” wrote Gladwell.

Hair color soon became an acceptable image-enhancing cosmetic. In 1959 Gelb’s company was purchased by Bristol Meyers, which has continued to expand the line into the 1990s. From the decade Miss Clairol was introduced to the 1970s, the number of American women coloring their hair increased dramatically, from 7 to 40 percent. By the 1990s, store shelves were crowded with many brands of at-home

hair colorings and the image of hair coloring had changed as the brands proliferated. Hair color was no longer something women hid. Instead women celebrated their ability to change their look on a whim. Supermodel Linda Evangelista would appear as a platinum blonde one day, a redhead the next, and a brunette the next. The brand Féria advertised hair color that didn't pretend to be natural. Clairol's ads accommodated this change as well. While keeping with the image of the-girl-next-door, Clairol's shampoo-in color Nice 'n Easy ads featured Julia Louis-Dreyfus, well-known as Elaine on the popular sitcom *Seinfeld*, spotting women on the street and giving them public hair colorings. Clairol had initiated an appealing formula that gave women new freedom to shape their image as they pleased.

Clancy, Tom (1947—)

Known for his potboiling thrillers with political, military, and espionage themes, author Tom Clancy's influence on American popular culture has been incalculable. Within the high-tech action adventure that has proved so beguiling to the movie industry and its audiences, as well as to a vast number of people who buy books of escapist fiction, Clancy evokes a disturbing picture of the world we live in, and has come to be regarded as the spokesman for the American nation's growing mistrust of those who govern them. If his name is instantly identified with the best-selling *The Hunt for Red October* (1984) and the creation of his Cold Warrior hero Jack Ryan (incarnated on screen by Harrison Ford) in a series beginning with *Patriot Games* (1992), his work is considered to have a serious significance that transcends the merely entertaining.

On February 28, 1983, the Naval Institute Press (NIP) received a manuscript from a Maryland insurance broker, whose only previous writings consisted of a letter to the editor and a three-page article on MX missiles in the NIP's monthly magazine, *Proceedings of the U.S. Naval Institute*. The arrival of the manuscript confounded the recipients. As the publishing arm of the U.S. Naval Institute, NIP is an academic institution responsible for *The Bluejackets' Manual* which, according to them, has served as "a primer for newly enlisted sailors and as a basic reference for all naval personnel from seaman to admiral" for almost a century. NIP created an astonishing precedent by publishing the manuscript, and the obscure insurance broker became a world-famous best-selling author of popular genre fiction.

Clancy's manuscript was based on the fruitless attempt of the Soviet missile frigate *Storozhedoy* to defect from Latvia to the Swedish island of Gotland on November 8, 1975. The mutiny had been led by the ship's political officer Valeri Sablin, who was captured, court-martialed, and executed. In Clancy's tale, Captain First Rank Marko Ramius successfully defects to the United States, not in a frigate, but in a submarine, the *Red October*. The Naval Institute Press published *The Hunt for Red October* in October 1984, its first venture into fiction in its long academic history. It skyrocketed onto *The New York Times* best-seller list when President Reagan

pronounced it "the perfect yarn." In March 1985, author and president met in the Oval office, where the former told the latter about his new book on World War II. According to Peter Masley in *The Washington Post*, Reagan asked, "Who wins?" to which Clancy replied, "The good guys."

Born on April 12, 1947 in Baltimore, Thomas L. Clancy, Jr. grew up with a fondness for military history in general and naval history in particular. In June 1969, he graduated from Baltimore's Loyola College, majoring in English, and married Wanda Thomas in August. A severe eye weakness kept him from serving in the Vietnam War, and he worked in insurance for 15 years until the colossal success of his first novel. The book was a bestseller in both hard cover and paperback, and was successfully filmed—although not until 1990—with an all-star cast headed by Sean Connery. Meanwhile, he was free to continue writing, building an impressive *oeuvre* of both fiction and non-fiction. In a 1988 *Playboy* interview, Marc Cooper claimed that Clancy had become "a popular authority on what the U.S. and the Soviets really have in their military arsenals and on how war may be fought today." Indeed, his novels have been brought into use as case studies in military colleges.

In April 1989, Clancy was invited to serve as an unpaid consultant to the National Space Council, and has lectured for the CIA, DIA, and NSA. A 1989 *Time* magazine review added a moral dimension to his growing public authority: "Clancy has performed a national service of some sorts: he has sought to explain the military and its moral code to civilians. Such a voice was needed, for Vietnam had created a barrier of estrangement between America's warrior class and the nation it serves. Tom Clancy's novels have helped bring down this wall." It is the dawning of the idea that the novel as a textual form is slowly attempting to replace that which we conventionally labeled "history" that has been an important factor in the growing critical interest in Clancy's thrillers, dealing as they do with the politics of our times. Whereas the "literary" aspect of a text is traditionally located in its ability to deal with the ontological and existential problems of man and being, we now find "literary" values in those texts that deal with pragmatic problems: man and being in the here and now. Read from this standpoint, Clancy's thrillers can be seen not as an escape from reality, but as presenting real, and relevant, issues and experiences, drawing on society's loss of trust in the great myths of existence: truth, and the questionable value of official and governmental assurances.

Although Clancy claims, in *The Clancy Companion*, that he writes fiction "pure and simple . . . projecting ideas generally into the future, rather than the past," critics have labeled him the father of the techno-thriller. In his novels *Red Storm Rising* (a Soviet attack on NATO; 1986), *Cardinal of the Kremlin* (spies and Star Wars missile defense; 1988), *Clear and Present Danger* (the highest selling book of the 1980s, dealing with a real war on drugs; 1989), *Debt of Honor* (Japanese-American economic competition and the frailty of America's financial system; 1994) and *Executive Orders*, (rebuilding a destroyed U.S. government; 1996), the machine is hero and technology is as dominant as the human characters. In both his fiction and non-fiction the scenarios predominantly reflect the quality of war games. "Who the hell cleared it?" the former Secretary of the Navy, John Lehman, remarked after reading *The Hunt for Red October*. Clancy, whose work includes his "Guided Tour" series (*Marine*, *Fighter Wing*) and the "Op-Center" series (created by Clancy and Steve Pieczenik, but written by other authors), has always insisted that he finds his information in the public domain, basing his Naval technology and Naval tactics mostly on the \$9.95 war game *Harpoon*.

In November 1996 Tom Clancy and Virtus Corporation founded Red Storm Entertainment to create and market multiple-media entertainment products. It released its first game, *Politika*, in November 1997, the first online game ever packaged with a mass-market paperback, introducing “conversational gaming” in a net based environment. Clancy has called it “interactive history.” The huge success of his books, multimedia products, and movies that are based on his novels allowed him to make a successful \$200 million bid for the Minnesota Vikings football team in March 1998.

Greenberg, Martin H. *The Tom Clancy Companion*. New York, Berkley Pub Group, 1992.

Clapton, Eric (1945—)

Eric Clapton, a lifelong student of the blues, has been in more bands that he himself formed than any other guitarist in rock music. He first distinguished himself with the group, the Yardbirds, where he earned the ironic nickname, “Slowhand,” for his nimble leads. When the Yardbirds went commercial, Clapton left them to pursue pure blues with John Mayall, a singer, guitarist, and keyboard player who was regarded as the Father of British Blues for his discovery and promotion of luminary musicians in the field. Clapton proved to be Mayall’s greatest discovery. On *John Mayall’s Blues Breakers, Featuring Eric Clapton* (1966) Clapton displayed an unprecedented fusion of technical virtuosity and emotional expressiveness, giving rise to graffiti scribbled on walls in London saying, “Clapton is God.”

When jazz-trained bassist Jack Bruce joined the Blues Breakers, Clapton grew intrigued by his improvisational style. He recruited Bruce and drummer Ginger Baker to form the psychedelic blues-rock power-trio Cream. They became famous for long, bombastic solos in concert, and established the “power trio” (guitarist-bassist-drummer) as the definitive lineup of the late 1960s, a form also assumed by Blue Cheer, the Jimi Hendrix Experience, and Rory Gallagher’s band, Taste. Cream disbanded after four excellent studio albums, having set a new standard for rock musicianship and Clapton, bored with the improvisational style, became interested in composing songs.

Blind Faith, a band comprised of established musicians from other famous bands and often called the first “supergroup,” was formed by Clapton in 1969. He retained Ginger Baker, and recruited guitarist/pianist Steve Winwood (from the recently disbanded Traffic) and bassist Rick Grech. They produced only one album (*Blind Faith*, 1969), for Clapton soon transferred his interest to the laid-back, good-vibes style of Delaney and Bonnie, who had opened for Blind Faith on tour. Delaney and Bonnie encouraged him to develop his singing and composing skills, and joined him in the studio to record *Eric Clapton* (1970). Clapton then formed Derek and the Dominos with slide guitarist Duane Allman in 1970 and released *Layla and Other Assorted Love Songs*, one of the finest blues-rock albums ever made. Unfortunately, the band, beset with intense personal conflicts and drug problems, was dissolved and Clapton, increasingly reliant on heroin, became a recluse.

In 1973 Pete Townsend organized the Rainbow Concert with Steve Winwood and other stars to bring Clapton back to his music.

Clapton kicked the heroin habit, and in 1974 resumed his solo career with the classic *461 Ocean Boulevard*. Although *Layla* could never be surpassed on its own terms, *461* was a worthy follow-up, mature and mellow, and set the tone for the remainder of Clapton’s career. He had become attracted to minimalism, in search of the simplest way to convey the greatest amount of emotion. Developments in the 1980s included work on film soundtracks and a regrettable tilt toward pop under producer Phil Collins, but the 1990s found him once again drawn to the blues, while still recording some beautiful compositions in the soft-rock vein.

The subtleties of the mature Clapton are not as readily appreciated as the confetti-like maestro guitar work of Cream or Derek and the Dominos. Once regarded as rock’s most restlessly exploring musician, too complex to be contained by any one band, by the 1990s Clapton had become the “Steady Rollin’ Man,” the self-assured journeyman of soft rock. A younger generation, unaware of his earlier work, was often puzzled by the awards and adulation heaped upon this singer of mainstream hits like “Tulsa Time,” but a concert or live album showed Clapton displaying the legendary flash of old. Except for a few low points (*No Reason to Cry*, 1976), and the Phil Collins-produced albums *Behind the Sun* (1985) and *August* (1986), Eric Clapton aged better than many of his contemporaries, finding a comfortable niche without pandering to every new trend.

Clark, Dick (1929—)

As host of *American Bandstand* for more than 30 years, Dick Clark introduced rock ‘n’ roll music via television to a whole generation of teenaged Americans while reassuring their parents that the music would not lead their children to perdition. With his eternally youthful countenance, collegiate boy-next-door personality, and trademark “salute” at the close of each telecast, Clark is one of the few veterans of the early days of television who remains active after nearly half a century in broadcasting.

Richard Wagstaff Clark was born in 1929 in Mount Vernon, New York. His father owned radio stations across upstate New York, and his only sibling, older brother Bradley, was killed in World War II. Clark grew up enamored of such radio personalities as Arthur Godfrey and Garry Moore, and instantly understood the effectiveness and appeal of their informal on-air approach. Clark studied speech at

Dick Clark

Syracuse University, supplementing his studies with work at campus radio station WAER. After graduating in 1951, he worked for several radio and television stations in central New York radio and television, and even briefly adopted the on-air name “Dick Clay,” to his later embarrassment.

In 1953 Clark moved to Philadelphia to host an afternoon radio show, playing popular vocalists for local teenagers. Three years later, he was chosen as the new host of a local-TV dance show, *Bandstand*, which featured the then-new sounds of rock ‘n’ roll music. The show’s previous host, Bob Horn, had been arrested on a morals charge.

Clark was an instant hit with his viewers. By the fall of 1957, *Bandstand* was picked up nationally by the ABC network. *American Bandstand* quickly became a national phenomenon, the first popular television series to prominently feature teenagers. Clark demanded that the teens who appeared on the program observe strict disciplinary and dress-code regulations. Boys were expected to wear jackets and ties, and girls, modest skirts and not-too-tight sweaters. Many of the teens who danced on the show, from Italian-American neighborhoods in south and west Philadelphia, became national celebrities themselves. One of the most popular segments of *American Bandstand* was one in which members of the studio audience were asked to rate

new songs, a poll whose results were taken seriously by record executives. New styles of rock music rose or fell on the whims of the teenagers, who would explain their decisions by such statements as “I’d give it an 87. . . it’s got a good beat, and you can dance to it.” Interestingly, Clark’s audience panned “She Loves You,” the Beatles’ first hit. The *Bandstand* audiences introduced a national audience to such dance moves as the Pony, the Stroll and, most famously, the Twist, by Philadelphia native Chubby Checker.

As Clark was becoming a millionaire, his career was threatened by the payola scandals of the 1950s, when it was learned that record companies illegally paid disc jockeys to play their rock and roll records. Clark admitted that he partially owned several music publishers and record labels that provided some of the music on *American Bandstand*, and he immediately sold his interests in these companies as the scandal broke, while insisting, however, that songs from these companies did not get preferential treatment on his show. Clark made such a convincing case before a House committee studying payola in 1959 that Representative Owen Harris called him “a fine young man” and exonerated him. Clark thus provided rock music with a clean-cut image when it needed it the most.

Clark produced and hosted a series of *Bandstand*-related concert acts that toured the United States in the 1950s and 1960s. During their tours in the South, these were among the first venues where blacks and whites performed on the same stage. Eventually, even the seating in these arenas became desegregated. In 1964, *Bandstand* moved from Philadelphia to Los Angeles, coinciding with the popularity of Southern California “surf” music by The Beach Boys and Jan and Dean. From that point, the show began relying less on playing records and more on live performers. Many of the top acts of the rock era made their national television debut on *Bandstand*, such as Buddy Holly and the Crickets, Ike and Tina Turner, Smokey Robinson and the Miracles, Stevie Wonder and the Talking Heads, and the teenaged Simon and Garfunkel, known then as Tom and Jerry.

During the 1970s and 1980s, Clark expanded his television presence beyond *Bandstand* with Dick Clark Productions, which generated between 150 and 170 hours of programming annually at its peak. During these years, Clark hosted the long-running *\$10,000 Pyramid* game show from 1973 through the late 1980s; in subsequent versions, the word association-based *Pyramid* expanded with inflation, eventually offering \$100,000, and featured numerous celebrity guests. In 1974 ABC lost the broadcast rights to the Grammy Awards, and asked Clark to create an alternative music awards show. The American Music Awards quickly became a significant rival to the Grammys, popular among artists and audiences alike. In the 1980s, Clark also produced and hosted a long-running NBC series of highly-rated “blooper” scenes composed of outtake reels from popular TV series. His co-host was Ed McMahon of the *Tonight Show*, who had been friends with Clark since they were next-door neighbors in Philadelphia during the 1950s. Clark also replaced Guy Lombardo as America’s New Year’s Eve host, emceeing the televised descent of the giant ball in New York’s Times Square on ABC beginning in 1972.

The seemingly ageless Clark, dubbed “America’s oldest living teenager” by *TV Guide*, ushered his series with aplomb through the turbulent 1970s. It was on *Bandstand* where an audience first body-spelled “Y.M.C.A.” to The Village People’s number-one hit. With changes in musical tastes and practices, the popularity of *Bandstand* began to wane. What had begun as a local two-and-a-half hour daily show in the mid-1950s had gradually been whittled down to a weekly, hour-long show by the 1980s. There were several culprits: competing network music programs, including *The Midnight Special*, *Solid*

Gold, and even *Saturday Night Live* were competing with *Bandstand* to get the hottest acts of the day. The advent of MTV in 1981, with round-the-clock music videos, further cut into the series' influence. As the years passed, new rock groups devoted more time to video production and promotion, and less to appearing live on shows. Clark retired from *Bandstand* in the spring of 1989; with a new host, a syndicated version of the long-running show called it quits later that year, only weeks shy of making it into the 1990s.

Ironically enough, however, MTV's sister station had a hand in reviving interest in *American Bandstand*. In 1997, VH-1 ran a weekly retrospective, hosted by Clark, of highlights from the 1970s and 1980s version of *Bandstand*. The success of the reruns coincided with the fortieth anniversary of the show's national debut, and Clark returned to Philadelphia to unveil a plaque on the site of the original *American Bandstand* television studio. That same year, Clark published a comprehensive anniversary volume, and he also announced the founding of an American Bandstand Diner restaurant chain. Modeled after the Hard Rock Café and Planet Hollywood chains, each diner was designed in 1950s style, with photos and music of the greats Clark helped make famous.

Clarke, Arthur C. (1917—)

British writer Arthur Charles Clarke's long and successful career has made him perhaps the best-known science fiction writer in the world and arguably the most popular foreign-born science fiction writer in the United States. Clarke is best known for *2001: A Space Odyssey* (1968), the film script he wrote with noted director Stanley Kubrick.

Clarke's writings are in genre of "hard" science fiction—stories in which science is the backbone and where technical and scientific discovery are emphasized. He is considered one of the main forces for placing "real" science in science fiction; science fiction scholar Eric Rabkin has described Clarke as perhaps the most important science-oriented science fiction writer since H. G. Wells. His love and understanding of science coupled with his popularity made him a central figure in the development of post-World War II science fiction. Clarke's success did much to increase the popularity of science and create support for NASA and the U.S. space program.

For Clarke, technological advancement and scientific discovery have been generally positive developments. While he was cognizant of the dangers that technology can bring, his liberal and optimistic view of the possible benefits of technology made him one of the small number of voices introducing mass culture to the possibilities of the future. His notoriety was further enhanced domestically and globally

when he served as commentator for CBS television during the Apollo 11, 12, and 15 Moon missions.

A second theme found in Clarke's work which resonates in popular culture suggests that no matter how technologically advanced humans become, they will always be infants in comparison to the ancient, mysterious wisdom of alien races. Humanity is depicted as the ever-curious child reaching out into the universe trying to learn and grow, only to discover that the universe may not even be concerned with our existence. Such a theme is evident in the short story "The Sentinel" (1951), which describes the discovery of an alien artifact created by an advanced race, millions of years earlier, sitting atop a mountain on the moon. This short story provided the foundation for *2001* (1968). One of Clarke's most famous books, *Childhood's End* (1950), envisions a world where a portion of earth's children are reaching transcendence under the watchful eyes of alien tutors who resemble satanic creatures. The satanic looking aliens have come to earth to assist in a process where select children change into a new species and leave earth to fuse with a cosmic overmind—a transformation not possible for those humans left behind or for their satanic alien tutors.

Clarke's achieved his greatest influence with *2001*, which was nominated for four Academy Awards, including best picture, and ranked by the American Film Institute as the 22nd most influential American movie in the last 100 years. Clarke's novelization of the movie script, published under the same title in 1968, had sold more than 3 million copies by 1998 and was followed by *2010: Odyssey Two* (1982). The sequel was made into a film directed by Peter Hyams, *2010: The Year We Make Contact* (1984, starring Roy Scheider). Clarke has followed up the first two books in the *Odyssey* series with *2061: Odyssey Three* (1988) and *3001: The Final Odyssey* (1997).

The impact of *2001* is seen throughout American popular culture. The movie itself took audiences on a cinematic and cerebral voyage like never before. As Clarke said early in 1965, "MGM doesn't know it yet, but they've footed the bill for the first six-million-dollar religious film." The film gave the public an idea of the wonder, beauty, and promise open to humanity at the dawn of the new age of space exploration, while simultaneously showing the darker side of man's evolution: tools for progress are also tools for killing. Nowhere is this more apparent than in HAL, the ship's onboard computer. Although Clarke possesses a liberal optimism for the possibilities found in the future, HAL poignantly demonstrates the potential dangers of advanced technology. The name HAL, the computer's voice, and the vision of HAL's eye-like optical sensors have since become synonymous with the danger of over reliance on computers. This is a theme seen in other films ranging from *Wargames* (1983) to the *Terminator* (1984, 1991) series. The killings initiated by HAL and HAL's subsequent death allow the surviving astronaut to pilot the ship to the end of its voyage. Here the next step of man takes place as the sole survivor of this odyssey devolves into an infant. The Star Child is born; Man evolves into an entity of pure thought. The evolution/devolution of the astronaut completes the metaphor that humanity does not need tools to achieve its journey's end, our final fulfillment, but only ourselves.

The message of *2001* is powerfully reinforced by the music of Richard Strauss. Strauss' dramatic "Also Sprach Zarathustra," composed in 1896, was used several times during the movie but never with more impact than in the "Dawn of Man" segment. As the movie progressed, this music (as well as music composed by Johan Strauss) came to carry the narrative nearly as effectively as the dialogue.

Some have even suggested that the film influenced the language of the astronauts aboard the Apollo 13 mission. When HAL reports the “failure” of the AE 35 Unit, he says “Sorry to interrupt the festivities, but we have a problem.” On the Apollo 13 command module, named *Odyssey*, the crew had just concluded a TV broadcast which utilized the famous “Zarathustra” theme when an oxygen tank exploded. The first words sent to Earth were “Houston, we’ve had a problem.”

Clemente, Roberto (1934-1972)

Longtime Pittsburgh Pirates rightfielder Roberto Clemente is much more than one of the premier major leaguers of his generation. While his statistics and on-field accomplishments earned him election

Roberto Clemente

to the Baseball Hall of Fame, equally awe-inspiring are his sense of professionalism and pride in his athleticism, his self-respecting view of his ethnicity, and his humanism. Clemente, who first came to the Pirates in 1955, died at age 38, on New Year’s Eve 1972, while attempting to airlift relief supplies from his native Puerto Rico to Nicaraguan earthquake victims. He insisted on making the effort despite bad weather and admonitions that the ancient DC-7 in which he was flying was perilously overloaded. This act of self-sacrifice, which came scant months after Clemente smacked major-league hit number 3,000, attests to his caliber as a human being and transformed him into an instant legend.

Roberto Walker Clemente was born in Barrio San Anton in Carolina, Puerto Rico. While excelling in track and field as a youngster, his real passion was baseball—and he was just 20 years old when he came to the major leagues to stay. On the ballfield, the muscular yet sleek and compact Clemente dazzled as he bashed extra-base hits, made nifty running catches, and fired perfect strikes from deep in the outfield to throw out runners. He was particularly noted for his rifle arm. As Brooklyn/Los Angeles Dodgers announcer Vin Scully once observed, “Clemente could field a ball in New York and throw out a guy in Pennsylvania.”

Clemente’s on-field record is exemplary. In his 18 seasons with the Pirates, he posted a .317 batting average. He won four National League batting crowns, and earned 12 consecutive Gold Gloves for his fielding. On five occasions, he led National League outfielders in assists. He played in 12 all-star games. He was his league’s Most Valuable Player (MVP) in 1966, and was the World Series MVP in 1971. When he doubled against Jon Matlack of the New York Mets on September 30, 1972, in what was to be his final major league game, he became just the eleventh ballplayer to belt 3,000 hits.

Yet despite these statistics and the consistency he exhibited throughout his career, true fame came to Clemente late in life. In the 1960 World Series, the first of two fall classics in which he appeared, he hit safely in all seven games. He was overshadowed, however, by his imposing opponents, the Mickey Mantle-led New York Yankees, and by teammate Bill Mazeroski’s dramatic series-winning home run in game 7. Clemente really did not earn national acclaim until 1971, when he awed the baseball world while starring in the World Series, hitting .414, and leading his team to a come-from-behind championship over the favored Baltimore Orioles. According to sportswriter Roger Angell, it was in this series that Clemente’s play was “something close to the level of absolute perfection.”

Clemente was fiercely proud of his physical skills. Upon completing his first season with the Pirates, his athletic ability was likened to that of Willie Mays, one of his star contemporaries. The ballplayer’s response: “Nonetheless, I play like Roberto Clemente.” During the filming of the 1968 Neil Simon comedy *The Odd Couple*, a sequence, shot on location at Shea Stadium, called for a Pittsburgh Pirate to hit into a triple play. In the film, Bill Mazeroski is the hitter. Supposedly, Clemente was set to be at bat during the gag, but pulled out because of the indignity.

In the decade-and-a-half before his 1971 World Series heroics, Clemente yearned for the kind of acknowledgment won by a Mays or a Mantle. Certainly, he was deserving of such acclaim. Had he been playing in New York, Los Angeles, or Chicago, rather than in a city far removed from the national spotlight, he might have been a high profile player earlier in his career. Compounding the problem was Clemente’s ethnic background. Furthermore, Clemente was keenly aware of his roots, and his ethnicity; he even insisted that his three

sons (who were two, five, and six when he died) be born in Puerto Rico. Unfortunately, this pride often was misconstrued—and arguably, one reason why he was not beloved earlier on was racism. The expectation that he blend in rather than exude ethnicity is epitomized by the fact that on all of Clemente's Topps baseball cards issued between 1958 and 1969, his name is Americanized as "Bob" Clemente.

Adding to the affront was that whenever Clemente would comment that other ballplayers of equal accomplishment were luxuriating in the limelight, he would be labeled a complainer and hypochondriac. "As a teammate," fellow Pittsburgh Pirate Willie Stargell observed, "we had a chance to marvel at talents a lot of people didn't understand." So it was no surprise that after the 1971 World Series, upon being handed the MVP trophy, Clemente pointedly declared, "I want everybody in the world to know that this is the way I play all the time. All season. Every season." Then, ever so typically, he spoke in Spanish, asking for his father's blessing.

The rule requiring a ballplayer to be retired for five years prior to earning Hall of Fame eligibility was waived for Clemente. He was inducted a year after his death, becoming the first Hispanic to be so honored. Since then, he has inspired thousands of Latino ballplayers. "Growing up in Puerto Rico, we got to learn a lot about his character," observed Bernie Williams, one of the major league stars of the 1990s. "Clemente is a great hero for all Latin players," added Juan Gonzalez, a Williams peer and fellow Puerto Rican. "Not only was he one of the best baseball players ever, but he was a great human being as well." Clemente also has been cherished by his teammates. After pinch-hitting a game-winning ninth inning single in Game 2 of 1979 World Series, Pirate catcher Manny Sanguillen declared that he wished his feat to be dedicated to the memory of Clemente. "He helped us in a lot of ways," summed up Willie Stargell, "to be the players we were."

Clemente was the second ballplayer (after Jackie Robinson) to be featured on a United States postage stamp. In 1973, the government of the Commonwealth of Puerto Rico granted acreage for the development of Roberto Clemente Sports City, which allows Puerto Ricans to participate in a wide range of athletic pastimes. In 1993, his eldest son, Roberto, Jr., established the Roberto Clemente Foundation, which offers recreational and educational activities for Pittsburgh-area children while stressing the relevance of community involvement. In 1994, the Pirates unveiled a statue of Clemente outside Three Rivers Stadium. Throughout 1998—the twenty-fifth anniversary of his death—the Baseball Hall of Fame issued a special Roberto Clemente commemorative admission ticket. Each year, one major leaguer receives the True Value/Roberto Clemente Man of the Year Award for combining on-field heroics with community responsibility.

Roberto Clemente merits every honor he has received. In an era of pampered, egocentric athletes who charge big bucks to little kids for autographs, the manner in which Clemente lived and died is all the more poignant and praiseworthy. As he once observed, "Any time you have an opportunity to make things better and you don't, then you are wasting your time on this earth."

Cleopatra

The story of Cleopatra has been a perennial favorite for the Hollywood cinema. The most notorious version remains the 1963 epic starring Elizabeth Taylor and Richard Burton—a film whose box office failure is credited with helping to destroy the Hollywood studio system. Made for a then staggering 44 million dollars, the production was fraught with setbacks and scandals, and film historian David Cook noted that the "disastrous" four-hour film had not broken even, some thirty-six years later. Received badly by both audiences and critics, *Cleopatra* paled in comparison to the off-screen antics of its stars. The cast's real-life adultery, life-threatening illness, and the grand passion between Taylor and Burton provoked the first major paparazzi feeding frenzy of the 1960s.

Clift, Montgomery (1920-1966)

Four years older than Brando, eleven years senior to James Dean, but finding stardom only just ahead of both, Montgomery Clift is invariably bracketed with them—the leader of the great trio of the beautiful and doomed who emerged from the Actors Studio in New York City to transform the postwar face of screen acting with their individual and collective intensity. He died too soon to recover from his failures and too late to become a mythic icon like Dean or Marilyn Monroe, but to examine his all-too-short filmography is to be reminded of his achievements that have been all too often buried beneath the rubble of his ruined life.

Only cast in serious dramas, the fragile and gifted Clift, frequently quivering with painful introspection, was the screen's great outsider, misfit, or victim during the 1950s—the ultimately rejected fortune hunter of *The Heiress* (1949); driven by despair to murder and by murder to guilt in *A Place in the Sun* (1951), his first film with Elizabeth Taylor; beaten and humiliated for his refusal to fight in the boxing ring as Prewitt in *From Here to Eternity* (1953); a priest tormented by the secrets of the confessional in Hitchcock's *I Confess* (1953); the columnist unable to cope with the pain of the lovelorn in *Lonelyhearts* (1959); a victim of the Nazi concentration camps in *Judgment at Nuremberg* (1961); and last, but far from least, one of John Huston's *Misfits* (1961), corralling wild horses with Clark Gable and Marilyn Monroe.

Montgomery Clift

Born Edward Montgomery Clift in Omaha, Nebraska, the twin brother of a sister and the son of a neurotic, social-climbing and dangerously possessive mother, Clift was taken traveling in Europe from an early age. He acquired polish, manners, and the right acquaintance with art and literature. Precocious and sophisticated, he began acting at age fourteen and was on Broadway a year later. His rise was rapid, his connections influential, and by the time he appeared in two Thornton Wilder plays, *The Skin of Our Teeth* and *Our Town*, he was destined for theater stardom. Encouraged by Elia Kazan, he became a founding student of the Actors Studio in 1947 but soon succumbed to Hollywood, which had been courting him for some time.

Clift's first film was Howard Hawks's *Red River* (1948), which cast him as a cowboy, pitting his almost girlish persona against John Wayne, whose adopted son he played. The film was, however, not released until after Clift's next, *The Search* (1948) for Fred Zinnemann, which gained him the first of his four Oscar nominations for his sensitive performance as a soldier helping a stateless orphan in war-torn Germany find his missing mother. When *Red River* came out Clift became a star, the darling of the fan magazines and the adoring young girls of America.

But Clift, anguished by his homosexuality and increasingly addicted to drugs and alcohol, was an unhappy man with a disastrous private life that he strove to keep secret. In 1956, after a party given by his most devoted friend, Elizabeth Taylor, the actor was involved in a car crash. His severe injuries included the severing of nerves that rendered the left side of his face immobile, effectively destroying the perfection of his fine beauty. He was filming *Raintree County* (1957)

with Taylor at the time and, despite director Edward Dmytryk's efforts to photograph him in such a way as to avoid exposing the extent of the damage, both Clift and the film remained inert.

Driven ever further into self-destruction and loss of control, the actor did well to emerge with credit from *Judgment at Nuremberg* and *The Misfits*, but he was disastrously cast as *Freud* (1962), John Huston's altogether misguided biopic about the analyst, during the making of which Clift, whose staring eyes had become a too-prominent feature of his on-screen face, underwent a double cataract operation. After *Freud*, Clift's mainstream career was over. He had been overshadowed by his nemesis, Brando, in *The Young Lions* (1958) and was of little account in the overwrought *Suddenly Last Summer* (1959) with Taylor and Katharine Hepburn. He dragged himself out of the murky private world into which he had descended to play one last loner in a French film, *L'Espion (The Defector)* in 1966, before dying of a heart attack at the age of forty-five.

Cline, Patsy (1932-1963)

Known for her smooth, powerful delivery, Patsy Cline became the first successful crossover female country vocalist with hits in the pop market during the early 1960s. Cline was an aggressive artist who fought against efforts to mold her into a pop sensation. She initially disliked many of the songs that became her biggest hits, preferring up-tempo country tunes to the more accessible ballads that made her famous. As her relatively brief career came to an end in 1963 when she died in a plane crash, the slick recording style known as the "Nashville sound" was taking over the industry. In *Country Music, U.S.A.*, historian Bill C. Malone notes that Cline "moved female country singing closer to the pop mainstream and light years away from the sound" of artists with a more traditional, rural style such as Kitty Wells. Despite her resistance to being typecast as a pop artist, Cline played a major role in Nashville's transformation from hillbilly to "countryopolitan."

Born Virginia Patterson Hensley on September 8, 1932, in Gore, Virginia, Cline began performing at an early age. She won a dancing contest at the age of four, and a few years later she was playing the piano by ear. By the time her family moved to the larger town of Winchester, the teenage Cline was interested in singing professionally. She began appearing regularly on a local radio show after approaching the announcer, who recalls being impressed by her nerve and her voice. In 1948, she traveled to Nashville to audition for the Grand Ol' Opry, and appeared on Roy Acuff's radio program on WSM. Without an immediate offer, however, she could not afford to stay in town for long and returned home after a few days. Winchester

Patsy Cline

band leader Bill Peer hired Cline to be the lead singer of his act, the Melody Boys and Girls, in 1952. Peer became her manager, and proposed that she use the stage name Patsy; shortly thereafter, she met and married Gerald Cline.

In 1954, Cline signed a recording contract with Four Star Records that would prove to be a major stumbling block in her career. The contract paid her only small royalties and included a stipulation that her material had to be approved by the label. As a result, almost all of Cline's pre-1960 recordings were songs chosen by the label's owner, Bill McCall, and published by Four Star, enabling the label to profit from the publishing royalties. Four Star made a deal that allowed major label Decca Records to lease Cline's music, giving her the opportunity to work with top Nashville session musicians and a gifted producer, Owen Bradley. Although Cline's talent was apparent to those who heard her sing, the recordings she made in the mid-1950s were largely ignored. A fan of pop singer Kay Starr, she was capable of styles other than country, and Bradley quickly recognized this. Though Cline preferred country material, the songs from her early recordings ran the gamut.

At the end of 1956, at McCall's insistence, Cline recorded "Walkin' After Midnight," a tune she reportedly described as

"nothin' but a little ol' pop song," according to biographer Ellis Nassour. Before the record's release she made her national television debut on *Arthur Godfrey's Talent Scouts* in January of 1957. Cline favored the western outfits commonly worn by country singers of that era, but for this performance she was told to wear a cocktail dress. Godfrey's staff also encouraged her to abandon country music and move to New York. She was not persuaded, however, and continued to promote the record with appearances on the Opry and a rock 'n' roll show in New York hosted by Alan Freed. The song became a Top Ten hit on the country charts and went to number 17 on the pop charts.

That same year, Patsy and Gerald Cline were divorced, and in the fall she married Charlie Dick. Over the next two years, she released several singles and gave birth to her first child. During the summer of 1959, she hired Ramsey "Randy" Hughes as her manager. As the result of Cline's failure to record any major hits after "Walkin' After Midnight," McCall chose not to renew her Four Star contract. At the beginning of 1960, she began performing regularly on the Opry, fulfilling a childhood dream. Decca signed her later that year, and Bradley found the perfect song for her first session. In 1961, "I Fall to Pieces," featuring the background vocals of the Jordanaires, became her first number one country hit, reaching number 12 on the pop charts. The success of this record confirmed Bradley's belief that Cline could capture a much larger audience by focusing her efforts on pop ballads. Later hits such as "Crazy" and "She's Got You" established her as a torch singer, and Bradley began using string accompaniments on a semi-regular basis. These lush arrangements typified the Nashville sound, and Bradley became a proponent for this new style. By late 1962, she was headlining a month long engagement in Las Vegas, wearing evening gowns. On March 5, 1963, a plane crash outside Camden, Tennessee, killed Cline, along with Cowboy Copas, Hawkshaw Hawkins, and Randy Hughes.

Throughout her career, Cline had a reputation for being outspoken and opinionated. Those who knew her described her as a "brassy" woman who drank and cursed along with her male counterparts. She was also noted for being kindhearted and generous, particularly toward other female country artists struggling for success. The male-dominated recording industry of the 1950s was unaccustomed to self-confident women, and Cline's headstrong temperament led to arguments with Bradley over her material. The contradictions between her professional image and her personal background reflect the conflicting forces that were shaping country music in the early 1960s. Despite changes in country and pop styles, the legendary voice of Patsy Cline remains timeless. She gained a new following in 1985, when Jessica Lange starred in the film biography *Sweet Dreams*. Over three decades after her death her recordings continued to appear on the charts.

Clinton, George (1940—)

George Clinton was a doo-wop singer until he discovered acid rock and protest music in the late 1960s, a combination to which he added cosmological rants and booming bass lines to create a new style of socially conscious, Afrocentric funk. His bands Parliament and Funkadelic reached black and white audiences alike in the 1970s with their psychedelic live shows and infectious, tongue-in-cheek concept albums (*Mothership Connection*, 1976; *One Nation Under a Groove*, 1978). Clinton disappeared amid drug and financial entanglements, but reemerged in 1983 as rappers and hip-hop artists began sampling his music and borrowing his aesthetics. In response, he formed the P-Funk All-Stars (a permutation of his many splinter groups) to support new albums and reissues of classic works, reinforcing the vitality of his universal—yet pointedly black—music.

A Clockwork Orange

A Clockwork Orange is one of the finest sociological and science fiction films ever made. With its highly stylized and often comic violence, its over-the-top set decoration, and its unlikeable protagonist, the film has exerted a wide-ranging influence on popular culture. Opening in New York on December 20, 1971, to mostly ecstatic praise, *A Clockwork Orange* immediately revolutionized the science fiction film by opening the way for more elaborate dystopian narratives and intelligent cinematic analyses of social dilemmas.

Based on Anthony Burgess's 1966 novel of the same name, *A Clockwork Orange* tells the story of Alex (Malcolm McDowell), a brilliant young thug whose thirst for violence, rape, and aggression lands him in prison. To free himself from prison, he must submit to a perverse behavior modification technique that strips him of his free will. Director Stanley Kubrick's portrayal of conditioned-reflex therapy, behavioral psychology, and systematized and bureaucratic cruelty placed audiences in the uncomfortable position of feeling sympathy for a brutal and seemingly immoral character.

Kubrick counters Alex's brutality with that of the State police. Alex's earlier crimes pale in comparison to his torture by his old gang buddies-cum-cops. His medical rehabilitation by the Ludovico technique, which includes viewing endless scenes of rape, murder,

lynching, and violence while listening to the music of Alex's beloved "Ludwig Van" (Beethoven), seems more egregious than any injury Alex inflicted. These juxtapositions force the audience to make an uncomfortable moral choice between the virtue of free will with all its perversions and the appeal of legislative/social control with its tendency toward totalitarianism. Though Kubrick had touched on these themes in his earlier films—including *Paths of Glory* (1957), *Dr. Strangelove, Or, How I Stopped Worrying and Learned to Love the Bomb* (1964), and even *Spartacus* (1960) and *2001: A Space Odyssey* (1968)—none illustrated his message as well as *A Clockwork Orange*.

Kubrick accentuates the moral choices in the film with brilliant cinematic couplings. He sets a murder/rape scene to "Sing in the Rain," a song celebrating the optimism and bliss of life. He pairs Alex's desire for pain and violence with his love and devotion to Beethoven, which is highlighted by Kubrick's use of both classical and electronic music throughout the film. His elaborate set designs contrast the blue- and white-collar worlds with the State. The Cat Lady's enormous penis sculpture and the submissive, objectified naked female sculptures at the Korova Milkbar are strikingly different from the "flatblock" State architecture of the prison and Alex's parents' home, which is an eerie twin of the Housing Authority projects littering the inner cities of the world. Kubrick also highlights the differences between the flatness of the "official" language and the vitality of the teenage argot, Nasdat: a home is called "HOME," but in Nasdat "horrorshow" means awe and pleasure and "in-out-in-out" is a evocative term for sex.

These cinematic exercises are reflected by innovations in technique specific to Kubrick's filmmaking. His hallmarks include chilling natural lighting, extreme close-ups, interminable tracking or panning shots, jump-cut sequencing, extreme wide-angle lenses, and low-angle and slow motion shots. Kubrick's technical precision is matched only by his deeply intellectual consideration of timeless issues of freedom, pleasure, law, and punishment. Though *New York Times* film critic Pauline Kael criticized the lack of "motivating emotion" in the protagonist and comic violence, many film directors found much worth borrowing from it. Films using similar techniques include *THX-1138*, *Westworld*, and *A Boy and His Dog*. Reflections of the movie's highly complex and ambiguous antihero can be seen in films by Martin Scorsese, David Lynch, and Quentin Tarantino. In addition, the midnight movie crowd adopted the film's unique language called Nasdat and would shout along with the movie on college campuses across the country. Kubrick's daring vision for *A Clockwork Orange* was rewarded with the New York Film Critics Award for Best Picture as well as four Academy Award nominations. The film placed its director in the company of the most influential and creative artists of the twentieth century.

Clooney, Rosemary (1928—)

No one more epitomized female vocalists of the 1950s, a time when America was hooked on novelty songs, than Rosemary Clooney. With her strong, belting, melodious style and novelty hits “Come on a My House,” “Mambo Italiano,” and “This Old House,” Rosemary Clooney swiftly achieved stardom in the early 1950s. She also joined the ranks of the era’s top female vocalists, including such stars as Jo Stafford, Peggy Lee, and Patty Page. Her career transcended the concert circuit, including television and film appearances; she proved a perfect match for the rapidly developing television industry. During the later years of Clooney’s career, with a more smoky, rich voice, critics compared her with top performers such as Ella Fitzgerald, Mel Torme, and Frank Sinatra.

Born in Maysville, Kentucky, on May 28, 1928, Rosemary and her sister Betty often performed at political rallies for their paternal grandfather. When Rosemary was 13, the family moved to Cincinnati, Ohio. During her high-school years Rosemary and sister Betty performed with a local band until, at the age of 16, the two were hired by Cincinnati radio station WLW to perform on a nightly music program. Performing under the name “The Clooney Sisters,” the duo continued to work at the station for two years. By 1945, however, the

Clooney Sisters had joined the Tony Pastor band and were performing one-night stands across the country in theaters, hotel ballrooms, and at high school proms. Due to her better mid-range voice, Rosemary sang solos for the sister team. The Clooney Sisters performed with Tony Pastor for two years until, suddenly, during a performance in Elkhart, Indiana in 1949, Betty quit during the intermission. Soon after, Rosemary embarked on a solo career.

Following her departure from the Tony Pastor Band, Clooney signed a modest recording contract with Columbia Records. She had a modicum of success at Columbia with the children’s songs “Me and My Teddy Bear” and “Little Johnny Chickadee.” Mixed in with recording dates were appearances at night clubs, on radio stations, and on television. It was, however, her performance on *Arthur Godfrey’s Talent Scouts* in 1950 that led to her run on *Songs for Sale*, premiering July 7, 1950. Simulcast on radio and television, the program showcased the talents of aspiring songwriters, with Rosemary Clooney and Tony Bennett as vocalists for the program. It was also during this period in her life that, under the influence of Columbia’s artist and repertoire man Mitch Miller, Rosemary Clooney produced her first big hit “Come on a My House,” which sold over a million copies. This was followed by pop hits “Botcha Me” and “Suzy Snowflake.” Countless other chart busters followed including her ballad “Tenderly,” “This Old House,” and “Hey There.”

Rosemary Clooney

Bing Crosby, a big fan of Clooney's music, recommended her for a screen test at Paramount Studios. Cast as a New York vaudevillian who attempts to hide an illegal alien, she made her premiere in the 1953 film *The Stars Are Singing*. Later that year she appeared with Bob Hope in the comedy *Here Come the Girls*, but her most notable achievement in motion pictures occurred in 1954 when she appeared with Bing Crosby in the hit film *White Christmas*. During this period she also began a CBS radio program called *The Rosemary Clooney Show*, which lasted for one season, and made the television variety show circuit as a guest on the *Ed Sullivan Show*, *Perry Como Show*, and *Steve Allen Show*.

In 1957, the Music Corporation of America (MCA) contracted Clooney to produce the syndicated half-hour television program *The Rosemary Clooney Show*. The program was well received by the general public and critics alike, and included notable musical talents the Nelson Riddle Orchestra and the Hi-Los. Seemingly never without energy or creativity, she then began a NBC variety series titled *The Lux Show Starring Rosemary Clooney* in the fall of 1957. Because of personal conflicts between her husband, Jose Ferrer, and Mitch Miller, her career was at an end with Columbia Records and she joined the RCA label.

During the 1960s Clooney's life was in turmoil. Her marriage to Jose Ferrer was on-again-off-again, finally ending in divorce. Clooney was left with five children to rear. She appeared on a number of variety shows and specials on network television, and also performed on the cabaret circuit. By 1968, Clooney was heavily dependent on drugs and had just ended a two-year relationship with a drummer. After working with the Robert Kennedy presidential campaign in

1968, she was devastated by his assassination and suffered a severe nervous breakdown during a performance at Harold's Club in Reno Nevada. She underwent extensive psychotherapy for eight years following the breakdown. She chronicled her psychiatric problems in her autobiography *This for Remembrance*, which was dramatized on television as *Escape From Madness*.

During the 1980s, a much happier and heavier Rosemary Clooney emerged with an assured straightforward belting style all her own. She performed on the Las Vegas nightclub circuit, toured with theatrical revues, appeared on network television programs, and assisted in the television production of her life story *Rosie: The Rosemary Clooney Story*, providing the soundtrack singing voices.

An emblematic figure, at the close of the twentieth century she finds herself revisiting many of her classics from the 1940s and 1950s at concerts and on recordings. Like the changing times in which she lived, Clooney proved that a woman could have a successful career, a family, and survive many setbacks. Her work in the music industry, like many post-World War II female singers, helped pave the way for future generations of women artists.

Close Encounters of the Third Kind

With its elaborate, unprecedented use of special effects and novel portrayal of extraterrestrials, *Close Encounters of the Third Kind* opened to popular acclaim in November 1977, eventually earning \$240 million in worldwide release and significantly contributing to director Steven Spielberg's status as the most commercially profitable filmmaker in the new Hollywood. *Close Encounters* depicts an escalation in the number of UFO sightings worldwide and climaxes in the first "diplomatic" contact between mankind and extraterrestrials at a remote military/scientific base in the Wyoming wilderness. In stark contrast to numerous earlier cinematic portrayals of alien visitors as hostile fiends intent on world domination, Spielberg's utopian film presented the extraterrestrials as childishly mischievous but benign: wondrous new friends from the stars. Spielberg would return to some of *Close Encounters's* themes again in 1982's *E.T.: The Extra-Terrestrial*, another worldwide blockbuster and for a time the most lucrative motion picture ever.

Two parallel stories are developed in *Close Encounters*. The first focuses on a scientific team, led by a Frenchman named Lacombe (famous French film director Francois Truffaut), that tracks global UFO activity. The second centers around a midwestern everyman named Roy Neary (Richard Dreyfuss), who is destined to be humanity's emissary to the stars. The film opens in the windswept Mexican desert, where the airplanes (minus their pilots) of a long-lost military training flight have mysteriously appeared. Lacombe's team discovers that the antique airplanes are in perfect working order. Meanwhile, the skies over the American Midwest are abuzz with strange objects and lights. A power company lineman, Neary sees a group of UFOs flying down lonely back roads near Muncie, Indiana, and becomes

A UFO makes contact, in a scene from the film *Close Encounters of the Third Kind*.

obsessed with encountering the aliens again. Unhappy with the demands of adult married life, Neary shares his obsession with a local woman named Jillian (Melinda Dillon), who is in search of her young son, Barry, following his abduction by a UFO.

As the international scientific team moves closer to setting up a secret landing site at the base of Devil's Tower in Wyoming to beckon the visitors, Neary becomes more fixated on a mental image—that of an oddly shaped mountain—implanted in his head during his UFO encounter. Eventually, his tortured attempts to re-create the image in reality lead him to build a mountain of mud and garbage in his living room and thus drive his family away for good. When he sees Devil's Tower on television during coverage of a supposed nerve-gas spill in the area (actually a hoax concocted by the military to give the UFO team the required secrecy for first contact), Neary finally knows where he has to go and takes Jillian with him. After a hazardous cross-country trek, Neary and Jillian reach the secret landing site and witness mankind's first attempts to communicate with the swarms of beautifully illuminated extraterrestrial craft through a five-note musical tone keyed to a light board. A gigantic mothership—a literal city of light in the night sky—arrives to release numerous abductees, including Jillian's son. Different types of aliens also disembark and mingle with the delighted scientists. Meanwhile, Neary, with Lacombe's blessing, suits up for a long journey aboard the mothership. As soon as

the ecstatic Neary and his alien escort disappear inside it, the mothership soars majestically back into the night.

The film originated in Spielberg's memories of his formative years in Arizona, where as a teenager he had made an 8mm sound film on the subject of UFOs entitled *Firelight*. Throughout the beginning of his career as a professional filmmaker, Spielberg intended to remake his amateur film and call it *Watch the Skies*. During production of *Jaws* (1975), Spielberg often entertained his crew with tales about UFOs and his plans to make a film about them; with the critical and financial success of *Jaws*, Spielberg had the clout to do so. He and other writers, including Paul Schrader, worked on various screenplay drafts, although it was Spielberg who received sole credit. He also retitled the film *Close Encounters of the Third Kind*—a puzzling title to all except UFO buffs, who would recognize the phrase as UFO expert and Northwestern University professor Dr. J. Allen Hynek's terminology for physical contact with extraterrestrials.

Columbia Studios agreed to finance the project at an initial cost of \$16 million. Pre-production scouting settled on the Devil's Tower location as a suitably mysterious backdrop for the film's climax. The film quickly went over budget, finally costing approximately \$20 million because of a host of factors, including the logistical demands of location shooting in Wyoming and India (for a brief sequence involving thousands of extras pointing to the sky); the lengthy

climactic scene, which required an enormous and problem-plagued set in a hangar in Alabama; and the special effects, supervised by Douglas Trumbull, which involved months of planning and consumed millions of extra dollars. Spielberg's fanatic attention to detail and demands for secrecy on the set added to the studio headaches and delayed the film's release date. Producer Julia Phillips did not approve of some key figures associated with the production, including Truffaut, and was eventually fired by the studio head, David Begelman. Columbia itself was suffering from major financial problems and scandals, and a negative early review of the film did nothing to improve frazzled nerves in the production offices. However, once the film opened, the reviews were much more positive, and the film began to make enough money to be considered another huge success for Spielberg.

There are several different versions of the film in existence. A few years after its initial run, Spielberg returned to the film, re-titling it *Close Encounters of the Third Kind: The Special Edition*. At a cost of \$2 million and a seven-week shoot, he filmed new scenes, the most notable of which is a rather disappointing look inside the mothership, and removed some of the lengthy middle portion of the film detailing Neary's breakdown. He also added a brief rendition of "When You Wish upon a Star" to the musical score accompanying the mothership's ascent to the heavens. The new version, actually a few minutes shorter than the original, was released in 1980. A later television version combined elements of both films. The special edition was the version most widely available on videostore shelves until a 1998 video release, subtitled *The Collector's Edition*, a re-edited mix of the original version plus five short sequences from the 1980 special edition.

The Closet

Since the 1950s, "coming out of the closet" has been the commonly accepted expression for a gay or lesbian person revealing their sexual orientation since the 1950s. Though many advances in gay rights and gay pride have been realized since then, coming out of the closet remained a major milestone in any gay person's life into the late 1990s.

The expression "coming out" originated in the early twentieth century when stylish drag "debutante" balls were popular society events. Especially in African American communities, the drag queen in-the-know aspired to be presented at these balls, just as young heterosexual women "came out" to society at their debutante balls. It was only later, in the 1950s atmosphere of hiding the abnormal, that

the connotation came to be that of coming out of a dark closet. Perhaps playing on the expression "skeleton in the closet," meaning a guilty secret, homosexuals themselves were the sinister skeletons lurking behind the closet door. In the decades since gay liberation began, the expression has slipped into popular usage, and "coming out of the closet" is used in a lighthearted way for any admission of a slightly guilty secret.

The closet remains a metaphor for the shame and oppression that forces many gays to hide their identities. "Closeted" or "closet-y" are also used as adjectives, sometimes derisively, to describe gays who pretend to be heterosexual. "Closet case" refers to someone suspected of being gay but unaware of it or hiding it. "Coming out" is used among gays to signify the first time they acted on their sexuality (as in, "I came out when I was fifteen with my best friend") as well as the traditional means of announcing their sexuality "to the world." "Outing" has gained usage as a verb meaning the exposure of someone else's gayness, particularly someone who is well-known and closeted.

Because of the widespread assumption of heterosexuality in American society, coming out of the closet is a lifelong endeavor for gays. Gay men and lesbians must decide whether to come out to friends, to immediate family, to extended family, at work, and so on, and each decision involves a new set of worries and consequences. Even relatively well-known gays must continually assert their identity in new situations or remain in the closet by default.

Gay activists have long touted the importance of coming out of the closet, insisting that much of the oppression gays experience would be diffused if their true numbers were known. In this spirit, the first National Coming Out Day was declared on October 11, 1988, the first anniversary of the second gay and lesbian March on Washington, D.C. The idea behind National Coming Out Day is to encourage gays to come out of the closet to at least one person on that day. Some organizations have even distributed printed cards for gays to give to bank tellers and store clerks announcing that they have just served a gay client.

Though in the days of gay sitcom characters, noted gays on magazine covers, and many openly gay organizations, the closet may seem like a quaint remnant of a former time. Yet gays who do not live in urban areas, do not have protected jobs, or do not have understanding families still fear the repercussions of coming out. It may be true that tolerance will come only when the public realizes how many gay people there are, even among their friends, family, and most respected public figures. However, to gays who have been harassed or beaten, or gays who have lost or had to fight court battles to keep their children, gays who have lost their jobs, coming out of the closet may seem a luxury they can ill afford.

CNN

CNN (Cable News Network) was rated “the most believable” of television news sources in a 1990 *Times Mirror* poll. By the end of the twentieth century it had established itself as the leading news-gathering organization, not only in the United States, but in the world. Although in its early days CNN was a little-respected, self-described “rough around the edges” long-shot, by the 1990s other television news departments feared its domination so much that NBC and Fox decided to compete directly, on cable. Early CNN critics doubted that television could host a 24 hour news channel, but executives soon agreed that there was enough of a market for a number of them. By the end of the twentieth century, CNN’s growth into a family of networks—CNN Headline News, CNN International, CNN en Español, CNNfn (financial news), CNN-SI (sports), CNN Airport Network, CNN Radio, and CNN Interactive (Internet)—has positioned it as the first in a now long line of network news shows which feed America’s hunger for critical analysis of daily events.

When Peter Arnett appeared live on CNN from Bagdad while the city was under attack by American bombers, the network’s reputation as the source of first resort for major international news was cemented. Founder Ted Turner had called it “the world’s most important network” from the beginning, but now many others commented on

The CNN newsroom.

the “CNN effect”; how all participants in the war monitored the network for primary information and often seemed to design military movements and press briefings with particular concern for how they would appear on CNN. World leaders now routinely mention the Cable News Network and its programming. Its influence is such that it is referred to as “the sixteenth member of the U.N. Security Council.” At the end of 1980, after half a year of broadcasting, CNN reached 4.3 million subscribers; by 1998 it claimed 184 million households worldwide.

Ted Turner’s 1979 announcement about forming a 24 hour cable news network elicited scoffs and scorn from the mainstream media. The idea that such an enterprise could be profitable, let alone become a dominant world-wide news source, seemed ridiculous. Several major news organizations had looked into forming just such a service, but had determined that it would be far too expensive. The three networks each spent over one hundred million dollars a year on their news divisions, the result of which was the material for a half-hour broadcast each evening. Turner proposed running 24-hour-a-day programming on a budget of less than half that amount.

The America’s cup, WTCCG, and the Braves had already made Ted Turner well-known. He had won the Cup in 1977 and was featured on the cover of *Sports Illustrated*. After inheriting a modest billboard business in 1963, Turner built a media company by buying struggling UHF stations in Atlanta and Charlotte, North Carolina. He surprised the established media in 1972 when his channel 17, WTCCG (later WTBS), beat out WSB, the largest television station in the south, for the rights to broadcast Atlanta Braves baseball games. In 1976 Turner bought the Braves, the Hawks of the NBA (National Basketball Association), and the Chiefs of professional soccer, largely to assure that they would remain in Atlanta where he could continue to broadcast their games. WTCCG’s signal was made available via satellite in December 1976. During the 1970s, cable television was still in its infancy—Home Box Office, one of the first cable channels, was launched in 1975—with only about 14 percent of American households subscribed to cable.

Turner recruited a team of committed news people and for the most part left the planning of the new network to them. They were excited by his vision of a channel dedicated entirely to reporting the news and decided that the emphasis should be on live coverage. Operating out of a former country club, CNN went on the air on June 1, 1980. It started out with a staff of 300 and seven bureaus: Atlanta, New York, Chicago, Los Angeles, Detroit, London, and Rome. Disparagingly referred to as the “Chicken Noodle Network,” the disparity between its budget and those of the broadcast network news programs sometimes showed in production quality in its first few years. Gaffes and mixed signals seemed endemic at times. More often, CNN claimed, the “raggedness” was unavoidable with uncompromising, unfiltered breaking news coverage to which the network was dedicated. Ignoring the naysayers, producers pushed for close monitoring of potentially developing situations so that when something happened, they could cut to it immediately. Producer Ted Kavanau became known for calling out, “take it!” when he wanted a switch made at once.

It was not until 1985, as it worked to increase viewership and fend off rivals, that Cable News Network was profitable. In 1981, Westinghouse, which owned major cable-provider Group W, announced a partnership with ABC News to take on CNN; they named the venture SNC (Satellite NewsChannel). In direct response, CNN launched Headline News on December 31, 1981, almost six months before SNC was introduced on June 21, 1982. Still, the direct

competition proved to be the greatest challenge to CNN's survival. Ted Turner spent millions of dollars competing with SNC, and finally defeated the network by buying it for 25 million dollars. It ceased programming on October 27, 1983.

For the 1980 major-party political conventions, CNN did not even have floor credentials, but by the 1992 conventions the traditional broadcast networks cited CNN's in-depth, gavel-to-gavel coverage as a primary reason for their limited coverage. Originally CNN had to fight for equal access to the White House, but by October 1987 the White House invited anchors from "all four networks" for a "chat." Respect was acquired gradually. CNN gave the first American report of the Pope's shooting in May 1981 and extensive coverage to the Falkland War in April 1982. The network was providing the only live coverage of the Space Shuttle Challenger launch on January 28, 1986, when it tragically exploded 96 seconds after take-off.

Despite great logistical problems and restrictions by governments, 1989 provided CNN with many riveting images: the Tiananmen Square massacre in May, the failed Russian coup in August (with Boris Yeltsin rallying the throngs from atop a tank), the November fall of the Berlin Wall, and the invasion of Panama in December. These milestones bolstered the network's reputation little by little, but it was the Gulf War that elevated CNN's status to that of undisputed authority for major, breaking news. President George Bush told diplomats, "I learn more from CNN than I do from the CIA."

Time-Warner bought CNN from Ted Turner in 1996 for three billion dollars. Turner also stayed on as an executive vice president. CNN's credibility, however, was damaged in 1998 after an investigative report on the new program *Newsstand*, alleging that American forces used nerve gas in Laos in 1970. Attacks on the credibility of the story led the network to retract the story and fire the producers of the piece.

Despite CNN's undeniable influence, all of the networks again considered starting their own cable news channels in the early 1990s; NBC and Fox went ahead with theirs. Rupert Murdoch, media magnate owner of Fox, said that he wanted to counter what he called CNN's "liberal bias." Ted Turner cast CNN as an agent of global understanding and peace. From the dedicatory ceremony in front of the original CNN headquarters, where a United Nations flag flew alongside those of the United States and the State of Georgia, he has insisted that CNN is a world network, not American. The word "international" is preferred to "foreign," correspondents from all over the world are employed, and CNN's tolerant reporting on many totalitarian governments has provoked withering attacks from some American conservatives. Turner also saw the network as a key element in the "Third Wave" of futurist Alvin Toffler. Toffler predicts that the information age will lead to a global age. Marshal McLuhan also influenced Turner; writer Joshua Hammer writes, "If Marshal McLuhan's global village exists, its capital is the CNN headquarters in Atlanta." CNN International was launched in 1985 and in 1987 CNN introduced a new show called *World Report*, a two hour program featuring unedited three minute segments from local television journalists world-wide.

CNN claims to be different from older network television news because it is an all-news network and it is on cable. Its cable home means that CNN receives approximately half of its income from fees, making it is less dependent on ratings than free broadcast channels are. Therefore, CNN officials argue, the network can cover news more objectively, with less concern for what may titillate viewers. Its news-only format means that it feels no influence from larger entertainment division. In the 1990s CNN was watched by an average half

million households in prime time, while the big three broadcast evening news programs were seen by around 25 million viewers. CNN executives routinely refer to the large broadcast networks as "the entertainment networks." Largely due to its commitment to world-wide, unfiltered coverage, as *Time* magazine wrote on January 6, 1992, "It has become the common frame of reference for the world's power elite." A 1992 poll found CNN the fourth most respected brand name in the United States, surpassed only by Mercedes-Benz, Kodak, and Disney. Despite its relatively low ratings (except during moments of crisis), CNN can legitimately call itself the world's premier television news service, essentially the network of record, equivalent to the *New York Times* in print journalism.

Cobb, Ty (1886-1961)

The most fear-inspiring presence in baseball history, Ty Cobb was unmatched as a performer during his 24-year career in the major leagues. Cobb set statistical marks that, on the eve of the twenty first century, no major-leaguer has equaled. His .367 lifetime batting average is 23 points higher than Ted Williams' second best mark. Cobb's 2,244 runs scored put him well ahead of Babe Ruth. His feat of leading his league in batting average 12 times easily tops Honus Wagner's eight, and his 37 steals of home plate may never be broken. But Cobb is equally well known for his violent style of play and his ferocious temper. Lou Gehrig, angered one day when Cobb brutally spiked a Yankee pitcher on a play at first base, complained that "Cobb is about as welcome to American League parks as a rattlesnake." He was so hated by his teammates that for much of his career he carried a gun in a shoulder strap just in case a group of them jumped him. Cobb's career began at a time when baseball's rules were still in flux, and spanned the "dead-ball" and "rabbit-ball" eras of the first two decades of the twentieth century.

Tyrus Raymond Cobb was born on December 18, 1886 in an area of Georgia known as the Narrows, near Banks County. His mother, Amanda Chitwood, had been a child bride of only 12 years of age in 1883 when she married William Herschel Cobb, then a 20-year-old schoolteacher. Despite these modest beginnings in poor rural Georgia, Ty Cobb was the latest in a long roster of prominent ancestors. The Cobb tribe dated back to Joseph Cobb, who emigrated from England in 1611 and who eventually became a Virginia tobacco tycoon. Thomas Willis Cobb was a colonel in the Revolutionary War and an aide to General Washington. Thomas Reade Rootes Cobb died as a Confederate brigadier general at Fredericksburg and Howell

Ty Cobb

Cobb, who served as Georgia's Governor in 1851, was captured by the Federals at Macon in 1865.

Cobb's father impressed upon him the need to uphold the family tradition by either entering a profession, such as medicine or the law, or by attending West Point. Cobb, however, showed little interest in these potential futures. In 1901, at the age of 15, Cobb became aware of major league baseball. He learned, to his astonishment, that in the game he and his friends played with a flat board and a homemade twine ball major league celebrities could earn up to \$8,000 per season.

In 1902, against his father's wishes, Cobb joined the Royston Reds, a semi-pro team that toured Northeastern Georgia. Semi-pro "town-ball" was tough stuff. At this time one of the rules held over from the game's pioneer forms was "soaking," in which base runners could be put out not only by throws to a bag and by hand, but by throwing to hit them anywhere on the body. Hitting the runner in the skull was preferable, because it might take a star opponent out of the lineup. On more than one occasion Cobb was put out by a "soaker" to the ear, which did little to endear baseball to his father.

In 1904 Cobb succeeded in making the roster of the class "C" Augusta Tourists, a league that drew scouts from the major leagues. At Augusta Cobb began to develop his distinctive playing style.

Rather than pull pitches to his natural direction of right field, the left-handed Cobb stood deep in the batter's box, choked up on his 38 ounce bat with a split hands grip, and opened his stance as the pitcher fired the ball. His trademark was to chop grounders and slice line-drives through third-base gaps and into an often unguarded left-field. The Cobb-style bunt, destined to become one of the most deadly weapons since Willie Keeler's "Baltimore Chop," took shape when Cobb retracted his bat and punched the ball to a selected spot between the third baseman and the pitcher, just out of reach. He also began to pull bunts for base hits and once on base he ran with wild abandon, stealing when he wished and running through the stop signs of base coaches, always using his great speed to wreak havoc with opposing defenses. Included in his techniques was a kick slide, in which he would kick his lead leg at the last minute in an effort to dislodge the ball, the glove, and perhaps even the hand of a middle infielder waiting to tag him out. This would, at the major league level, develop into the dreaded "Cobb Kiss," in which Cobb would slide, or often leap, feet first into infielders and catchers with sharpened spikes slashing and cutting. Unique among players of his era, Cobb kept notebooks filled with intelligence on opposing pitchers and defenses. He studied the geometry and angles of the baseball field, and through his hitting and base running strategies engaged in what he called "scientific baseball," a style that would revolutionize the game in the so-called "dead-ball" era before Babe Ruth.

But although he could outrun everybody, had a rifle arm in center field, and hit sizzling singles and doubles to all fields, already at Augusta Cobb was hated by his teammates. He was a loner who early in his career did not drink or chase women, and preferred to read histories and biographies in his room. He constantly fought with his manager, whose signs he regularly ignored. Eventually, none of his teammates would room with him, especially after he severely beat pitcher George Napoleon "Nap" Rucker, a roommate of Cobb's for a short time. Rucker's "crime" had been taking the first hot bath in their room after a game. Cobb's explanation to a bloodied Rucker was "I've got to be first at everything—all the time!" Rucker and the other Tourists considered Cobb mentally unbalanced and dangerous if provoked.

On August 8, 1905 William Cobb was killed by a shotgun blast, fired by his young wife Amanda. Although eventually cleared of charges of voluntary manslaughter, rumors of marital infidelity and premeditated murder continued to swirl around Cobb's mother. The violent death of his father, who had never seen Cobb play but who had softened toward his son's career choice shortly before his death, made Cobb's volatile nature even worse. As Cobb later observed of himself during this period, "I was like a steel spring with a growing and dangerous flaw in it. If it is wound too tight or has the slightest weak point, the spring will fly apart and then is done for."

Late in the 1905 season, a Detroit Tiger team weakened by injuries needed cheap replacements and purchased Cobb's contract. Cobb joined major league baseball during a period in which the game was reshaping itself. In 1901 the foul-strike rule had been adopted, whereby the first and second foul balls off the bat counted as strikes. But of greater importance were the actions of Byron "Ban" Johnson, who changed the name of his minor Western League to the American League and began signing major league players in direct competition with the National League. By 1903 bifurcated baseball and the modern World Series were born, leading to a boom in baseball's popularity as Cobb joined the Tigers.

Cobb impressed from his first at bat, when he clubbed a double off of "Happy" Jack Chesbro, a 41 game winner in 1904. His

aggressive style won over the fans immediately, but from the beginning his Tiger teammates despised Cobb. Most of the Tigers were northerners and mid-westerners, and Cobb, with his pronounced southern drawl and stiff, formal way of addressing people stood out. But more importantly, his sometimes spectacular play as a rookie indicated that he might be a threat to the established outfield corps, and in the hardscrabble game of the turn of the twentieth century such rookies faced intense hazing. Cobb fought back against the veterans and took to carrying a snub-nosed Frontier Colt pistol on his person for protection. The tension led to a mental breakdown for Cobb in mid-summer 1906, leading to a 44 day stay in a sanatorium. Upon his release, Cobb returned to the Tigers with an even greater determination to succeed. "When I got back I was going to show them some ballplaying like the fans hadn't seen in some time," Cobb later recalled.

Cobb fulfilled his promise. He led Detroit to the World Series in 1907, 1908, and 1909, hitting a combined .361 in those seasons with a remarkable 164 stolen bases. Although Detroit faded as a contender after that, Cobb's star status continued to rise. In 1911 he hit .420 with 83 stolen bases and 144 RBIs (runs batted in). In 1912 he hit .410 with 61 steals and 90 RBIs. He batted over .300, the traditional benchmark for batting excellence, in 23 consecutive seasons, including a .323 mark in 1928, his final season, at the age of 42. But while Cobb remained remarkably consistent, the game of baseball changed around him. In 1919 the Boston Red Sox sold their star player, Babe Ruth, to the New York Yankees. In 1920 Ruth hit 54 Home Runs, and in 1921 he hit 59. The "dead-ball" era and scientific baseball was replaced by the "rabbit-ball" era and big bang baseball. Cobb felt that Ruth was "unfinished" and that major league pitchers would soon adjust to his style; they did not. Cobb never adjusted or changed his style. "The home run could wreck baseball," he warned. "It throws out a lot of strategy and makes it fence-ball." As player-manager late in his career, Cobb tried to match the Yankee's "fence-ball" with his own "scientific ball"—and he failed miserably.

Along the way, Cobb initiated a move toward player emancipation by agitating in Congress for an investigation of baseball's reserve clause that tied a player to one team for life. He took the lead in forming the Ball Players Fraternity, a nascent player's union. In retirement he spent some of his estimated \$12 million fortune, compiled mainly through shrewd stock market investments, in supporting destitute ex-ballplayers and their families. But he also burned all fan mail that reached him and ended long-term relationships with friends such as Ted Williams over minor disputes. When he died in 1961, just three men from major league baseball attended his funeral, one of which was old "Nap" Rucker from his Augusta days. Not a single official representative of major league baseball attended the funeral of the most inventive, detested, and talented player in baseball history.

Coca, Imogene (1908—)

Imogene Coca is best remembered as one of the driving forces behind the popular variety show *Your Show of Shows* (1950-54), in which she starred with Sid Caesar. Her physical, non-verbal comedy perfectly offset Caesar's bizarre characterizations and antics. Coca won an Emmy for Best Actress in 1951 for her work on the series. After *Your Show of Shows* was canceled, however, neither Coca nor Caesar were ever able to attain a similar level of popularity and all of Coca's sitcom attempts were soon canceled. Even a series that reunited the two in 1958 was unsuccessful, proving that television popularity is more a function of viewer mood than an actor's talent.

Coca-Cola

Coca-Cola, also known as Coke, began in the chaos of the post-Reconstruction South. In May 1886, Georgia pharmacist John Styth Pemberton succeeded in creating what he intended, a temperance drink. With cries against alcohol reaching a fever pitch in the region Pemberton worked to create a drink that could satisfy the anti-alcohol crowd as well as his need to turn a profit. In the ensuing mixing and re-mixing he came up with the syrup base for Coca-Cola. The reddish brown color and "spicy" flavor of the drink helped mask the illegal alcohol that some of his early customers added to the beverage. Little did he know that this new drink, made largely of sugar and water, would quickly become the most popular soft drink in the United States and, eventually, the entire world.

Although John Pemberton created the formula for Coca-Cola it fell to others to turn the product into a profitable enterprise. Fellow pharmacist Asa Candler bought the rights to Coke in 1888, and he would begin to push the drink to successful heights. Through a variety of marketing tools Candler put Coca-Cola onto the long road to prosperity. Calendars, pens, metal trays, posters, and a variety of other items were emblazoned with the Coke image and helped breed familiarity with the drink. Additionally, although the beverage included negligible amounts of cocaine, Candler gave in to the sentiment of the Progressive Era and removed all traces of cocaine from Coca-Cola in 1903. Candler followed the slight formula switch with an advertising campaign emphasizing the purity of the drink. The ad

Assorted bottle styles of Coke.

campaign was enhanced by the development of the unique Coca-Cola bottle in 1913. The new Coke bottle, with its wide middle and ribbed sides, made the Coca-Cola bottle, and by relation its contents, instantly identifiable.

For all of the success that he had engineered at Coca-Cola, Asa Candler lost interest in the soft drink business. Candler turned the company over to his sons who would in turn eventually sell it to Ernest Woodruff. It was Woodruff, and eventually his son, Robert, who guided the company to its position of leadership in the soda-pop industry. As one company employee remarked "Asa Candler gave us feet, but Woodruff gave us wings." The Woodruffs expanded company operations, initiated the vending-machine process, changed fountain distribution to ensure product uniformity and quality, and presided over the emergence of the six-pack. It was also the Woodruffs who recognized that Coke's greatest asset was not what it did, but what it could potentially represent; accordingly, they expanded upon company advertising in order to have Coke identified as the pre-eminent soft drink and, ultimately, a part of Americana.

Coca-Cola advertising was some of the most memorable in the history of American business. Through the work of artists such as Norman Rockwell and Haddon Sundblom, images of Coca-Cola were united with other aspects of American life. In fact, it was not until Sundblom, through a Coke advertisement, provided the nation with a depiction of the red-suited, rotund Santa Claus, that such an image (and by relation Coca-Cola) was identified with the American version of Christmas. Coke's strategic marketing efforts, through magazines, billboards, calendars, and various other product giveaways emblazoned with the name Coca-Cola, made the product a part of American culture. The success of Coke advertising gave the product an appeal that stretched far beyond its simple function as a beverage to quench the thirst. Coke became identified with things that were American, as much an icon as the Statue of Liberty or Mount Rushmore. This shift

to icon status was catalyzed by the company's actions during World War II.

At the outset of the war Coke found its business potentially limited by wartime production statutes. Sugar, a major ingredient in the drink, was to be rationed in order to ensure its availability to the nation's military forces. The company, though not necessarily facing a loss of market share, faced the serious possibility of zero growth during the conflict. Therefore, Robert Woodruff announced that the company would work to ensure that Coke was available to every American serviceman overseas. Through this bold maneuver Coca-Cola was eventually placed on the list of military necessities and allowed to circumvent limits on its sugar supply. Also, thanks in part to Chief of Staff George C. Marshall, the company was able to avoid the massive expense of ensuring Coke's delivery. Marshall believed that troop morale would be improved by the availability of Coca-Cola, and that it was a good alternative to alcohol. Therefore, he allowed for entire bottling plants to be transported overseas at government expense. Thanks to Marshall and others Coca-Cola was able to expand its presence overseas at a faster rate and at less expense than other beverages.

Thousands of American servicemen, from Dwight Eisenhower to the common soldier, preferred Coke to any other soft drink. The availability of the beverage in every theater of the war helped Coke to be elevated in the minds of GI's as a slice of America. In many of their letters home, soldiers identified the drink as one of the things they were fighting for, in addition to families and sweethearts. Bottles of Coke were auctioned off when supplies became limited, were flown along with bombing sorties, and found their way onto submarines. One GI went so far as to call the liquid "nectar of the Gods." Thanks to its presence in the war effort, the affinity which GI's held for the beverage, and the establishment of a presence overseas, Coke became identified by Americans and citizens of foreign countries with the

American Way. After World War II, Coca-Cola was on its way to becoming one of a handful of brands recognized around the world.

However, the presence of Coca-Cola was not always welcomed overseas. During the political and ideological battles of the Cold War, Coke was targeted by European communists as a symbol of the creeping hegemony of the United States. The drink found itself under attack in many European countries and in some quarters its existence was denounced as "Coca-Colonialism." In addition, the drink often found its presence opposed by local soft drink and beverage manufacturers. A variety of beverage manufacturers in Germany, Italy, and France actively opposed the spread of Coca-Cola in their countries. Despite the opposition, however, the spread of Coca-Cola continued throughout the Cold War. In some cases the sale of the soft drink preceded or immediately followed the establishment of relations between the United States and another country. By the 1970s, the worldwide presence of Coke was such that company officials could (and did) claim that, "When you don't see a Coca-Cola sign, you have passed the borders of civilization."

Beginning in the 1970s, Coca-Cola found its greatest challenges in the domestic rather than international arena. Facing the growth of its rival, Pepsi-Cola, Coke found itself increasingly losing its market share. Coke executives were even more worried when the Pepsi Challenge convincingly argued that even among Coke loyalists the taste of Pepsi was preferred to that of Coke. The results of the challenge led Coke officials to conclude that the taste of the drink was inferior to that of Pepsi and that a change in the formula was necessary. The result of this line of thinking was the marketing debacle surrounding New Coke.

In the history of corporate marketing blunders the 1983 introduction of New Coke quickly took its place alongside the Edsel. After New Coke was introduced company telephone operators found themselves besieged by irate consumers disgusted with the product change. Coke's error was that blind taste tests like the Pepsi Challenge prevented the consumer from associating the thoughts and traditions with a particular soda. Caught up in ideas of product inferiority the company seemingly forgot its greatest asset—the association that it had with the life experiences of millions of consumers. Many Americans associated memories of first dates, battlefield success, sporting events, and other occasions with the consumption of Coca-Cola. Those associations were something that could not be ignored or rejected simply because when blindfolded customers preferred the taste of one beverage over another. In many cases the choice of a particular soft drink was something passed down from parents to children. Consequently, the taste tests would not make lifelong Coke drinkers switch to a new beverage; the tradition and association with Coca-Cola were too powerful for such a thing to occur.

After introducing New Coke the company found itself assaulted not for changing the formula of a simple soft drink, but for tampering with a piece of Americana. Columnists editorialized that the next step would be changing the flag or tearing down the Statue of Liberty. Many Americans rejected New Coke not for its taste but for its mere existence. Tradition, as the Coca-Cola company was forced to admit, took precedence over taste. Four months after it was taken off of the shelves, the traditionally formulated Coke was returned to the marketplace under the name Coca-Cola Classic. Company president Don Keough summed up the episode by saying "Some critics will say Coca-Cola made a marketing mistake. Some critics will say that we planned the whole thing. The truth is we are not that dumb and not that

smart." What the company was smart enough to do was to recognize that they were more than a soft drink to those who consumed the beverage as well as to those who did not. What they were to seemingly the entire nation, regardless of individual beverage preference, was a piece of America as genuine and identifiable with the country as the game of baseball.

As a beverage the consumption of Coca-Cola has a rather limited physical impact. The drink was able to quench the thirst and to provide a small lift due to its caffeine and sugar content. Beyond its use, however, Coca-Cola was, as Pulitzer Prize-winning newspaper editor William Allen White once remarked, the "sublimated essence of all that America stands for. . . ." Though the formula underwent changes and the company developed diet, caffeine free, and cherry-flavored versions, what Coca-Cola represents has not changed. Coca-Cola, a beverage consumed by presidents, monarchs, and consumers the world over has remained above all else a symbol of America and its way of life.

Cocaine/Crack

Erythroxylon coca, a shrub indigenous to the upper jungles of the Andes mountains in South America, has been consumed for millennia by the various Indian tribes that have inhabited the region. The primary alkaloid of this plant, cocaine (first called erythroxyline), earned a reputation throughout the twentieth century as the quintessential American drug. Psychologist Ronald Siegel noted that "its stimulating and pleasure-causing properties reinforce the American character with its initiative, its energy, its restless activity and its boundless optimism." Cocaine—which one scholar called "probably the least understood and most consistently misrepresented drug in the pharmacopoeia"—symbolizes more than any other illicit drug the twin extremes of decadent indulgence and dire poverty that characterize the excesses of American capitalism. The drug has provoked both wondrous praise and intense moral condemnation for centuries.

For the Yunga and Aymara Indians of South America, the practice of chewing coca was most likely a matter of survival. The coca leaf, rich in vitamins and proteins as well as in its popular mood-altering alkaloid, was an essential source of nourishment and strength in the Andes, where food and oxygen were scarce. The word “coca” probably simply meant “plant,” suggesting the pervasiveness of the shrub in ancient life. The leaf also had both medical and religious applications throughout the pre-Inca period, and the Inca empire made coca central to religious cosmology.

Almost immediately upon its entrance into the Western frame of reference, the coca leaf was inextricable from the drama and violence of imperial expansion. In the sixteenth century the Spaniards first discounted Indian claims that coca made them more energetic, and outlawed the leaf, believing it to be the work of the Devil. After seeing that the Indians were indeed more productive laborers under the leaf’s influence, they legalized and taxed the custom. These taxes became the chief support for the Catholic church in the region. An awareness of the political significance of coca quickly developed among the Indians of the Andean region, and for centuries the leaf has been a powerful symbol of the strength and resilience of Andean culture in the face of genocidal European domination.

In the mid-nineteenth century, when the cocaine alkaloid was isolated and extracted, cocaine began its rise to popularity in Europe and North America. The drug is widely praised during this period for its stimulating effects on the central nervous system, with many physicians and scientists, including Sigmund Freud, extolling its virtues as a cure for alcohol and morphine addiction. Others praised its appetite-reduction properties, while still others hailed it as an aphrodisiac. In 1859 Dr. Paolo Mantegazza, a prominent Italian neurologist, wrote, “I prefer a life of ten years with coca to one of a hundred thousand without it.” Americans beamed with pride at the wonder drug that had been discovered on their continent; one American company advertised at least 15 different cocaine products and promised that the drug would “supply the place of food, make the coward brave, the silent eloquent and render the sufferer indifferent to pain.”

Angelo Mariana manufactured coca-based wine products, boasting having collected 13 volumes of praise from satisfied customers, who included well-known political leaders, artists, and an alarming number of doctors, “including physicians to all the royal households of Europe.” Ulysses S. Grant, according to Mariana, took the cocaine elixir daily while composing his memoirs. In 1885 John S. Pemberton, an Atlanta pharmacist, also started selling cocaine-based wine, but removed the alcohol in response to prohibitionist sentiment and began marketing a soft drink with cocaine and gotu kola as an “intellectual beverage and temperance drink” which he called Coca-Cola.

It was not until the late 1880s and 1890s that cocaine’s addictive properties begin to capture public attention in the United States. While cocaine has no physically addictive properties, the psychological dependence associated with its frequent use can be just as debilitating as any physical addiction. By the turn of the twentieth century the potential dangers of such dependence had become clear to many, and reports of abuse began to spread.

By 1900 the drug was at the center of a full-scale moral panic. Scholars have noted the race and class overtones of this early cocaine panic. In spite of little actual evidence to substantiate such claims, the *American Journal of Pharmacy* reported in 1903 that most cocaine users were “bohemians, gamblers, high- and low-class prostitutes,

night porters, bell boys, burglars, racketeers, pimps, and casual laborers.” The moral panic directly targeted blacks, and the fear of cocaine fit perfectly into the dominant racial discourses of the day. In 1914 Dr. Christopher Koch of Pennsylvania’s State Pharmacy Board declared that “Most of the attacks upon the white women of the South are the direct result of a cocaine-crazed Negro brain.” David Musto characterized the period in this way: “So far, evidence does not suggest that cocaine caused a crime wave but rather that anticipation of black rebellion inspired white alarm. Anecdotes often told of superhuman strength, cunning, and efficiency resulting from cocaine. These fantasies characterized white fear, not the reality of cocaine’s effects, and gave one more reason for the repression of blacks.”

Cocaine was heavily restricted by the Harrison Narcotics Act in 1914 and was officially identified as a “narcotic” and outlawed by the United States government in 1922, after which time its use went largely underground until the late 1960s and early 1970s, when it spread first in the rock ‘n’ roll subculture and then through the more affluent sectors of American society. It became identified again with American wealth and power, and its dangers were downplayed or ignored. As late as 1980 the use of powder cocaine was recognized even by some medical authorities as “very safe.”

During the early 1970s, however, a coca epidemic began quietly spreading throughout South America. While the centuries-old practice of chewing fresh coca leaves by coqueros had never been observed to cause abuse or mania, in the 1970s a new practice developed of smoking a paste, called basuco or basé, that was a byproduct of the cocaine manufacturing process. Peruvian physicians began publicly warning of a paste-smoking epidemic. The reports, largely ignored at the time in the United States, told of basuco-smoking pastaleros being driven crazy by the drug, smoking enormous quantities chronically, in many cases until death.

In early 1974, a misinterpretation of the term basé led some San Francisco chemists to reverse engineer cocaine “base” from pure powder cocaine, creating a smokable mixture of cocaine alkaloid. The first “freebasers” thought they were smoking basuco like the pastaleros, but in reality they were smoking “something that nobody else on the planet had ever smoked before.” The costly and inefficient procedure of manufacturing freebase from powder cocaine ensured that the drug remained a celebrity thrill. This was dramatized in comedian Richard Pryor’s near-death experience with freebase in 1980.

Crack cocaine was most likely developed in the Bahamas in the late 1970s or early 1980s when it was recognized that the expensive and dangerous procedures required to manufacture freebase were unnecessary. A smokable cocaine paste, it was discovered, could be cheaply and easily manufactured by mixing even low quality cocaine with common substances such as baking soda. This moment coincided with a massive glut of cheap Colombian cocaine in the international market. The supply of cocaine coming into the United States more than doubled between 1976 and 1980. The price of cocaine again dropped after 1980, thanks at least partly to a CIA (Central Intelligence Agency)-supported coup in Bolivia.

Throughout the 1980s, cocaine again became the subject of an intense moral panic in the United States. In October of 1982, only seven months after retracting his endorsement for stronger warnings on cigarette packs, President Reagan declared his “unshakable” commitment “to do whatever is necessary to end the drug menace.” The Department of Defense and the CIA were officially enlisted in support of the drug war, and military activity was aimed both at Latin American smugglers and at American citizens. While the United

States Administration frequently raised the specter of “narcoterrorism” associated with Latin American rebels, most analysts agree that United States economic and military policy has consistently benefitted the powerful aristocracies who manage the cocaine trade.

In the mid-1980s, in the heat of the Iran-Contra scandal, evidence that members of the CIA’s contra army in Nicaragua were heavily involved in the cocaine trade began to surface in the American press. This evidence was downplayed and denied by government officials, and generally ignored by the public until 1996, when an explosive newspaper series by Gary Webb brought the issue to public attention. While Webb’s award-winning series was widely discredited by the major media, most of his claims have been confirmed by other researchers, and in some cases even admitted by the CIA in its self-review. The Webb series contributed to perceptions in African-American communities that cocaine was part of a government plot to destroy them.

As was the case at the turn of the twentieth century, the moral outrage at cocaine turned on race and class themes. Cocaine was suddenly seen as threatening when it became widely and inexpensively available to the nation’s black and inner-city poor; its widespread use by the urban upper class was never viewed as an epidemic. The unequal racial lines drawn in the drug war were recognized by the United States Sentencing Commission, which in 1995 recommended a reduction in the sentencing disparities between crack and powder cocaine. Powder cocaine, the preferred drug of white upper class users, carries about 1/100th the legal penalties of equivalent amounts of crack.

The vilified figure of the inner-city crack dealer, however, may represent the ironic underbelly to the American character and spirit that has been associated with cocaine’s stimulant effects. Phillippe Bourgois noted that “ambitious, energetic, inner-city youths are attracted to the underground economy precisely because they believe in Horatio Alger’s version of the American dream. They are the ultimate rugged individualists.”

Cocktail Parties

Noted essayist and tippler H. L. Mencken once wrote that the cocktail was “the greatest of all the contributions of the American way of life to the salvation of humanity.” While Mencken’s effusive evaluation of the cocktail might be challenged today, the cocktail and the cocktail party remain a distinctively American contribution to the social landscape of the twentieth century.

Although the cocktail party is most closely associated with the Cold War era, Americans were toasting with mixed drinks well before the 1950s. The origin of the word cocktail remains the subject of some debate, with a few bold scholars giving the honors to the troops of George Washington, who raised a toast to the “cock tail” that adorned the General’s hat. Whatever its origins, by the 1880s the cocktail had become an American institution, and by the turn of the century women’s magazines included recipes for cocktails to be made by hostesses, to insure the success of their parties.

The enactment of the 18th Amendment in 1920 made Prohibition a reality, and cocktails went underground to speakeasies. These illegal night clubs caused a small social revolution in the United States, as they allowed men and women to drink together in public for the first time. But it was not until after World War II that the cocktail-party culture became completely mainstream. As young people flocked to the new suburbs in the 1950s, they bought homes that were far removed from the bars and lounges of the city. Cocktail parties became a key form of socializing, and the market for lounge music records, cocktail glasses, and shakers exploded. By 1955 even the U.S. government had realized the importance of these alcohol-oriented gatherings, as the National Institute of Mental Health of the U.S. Public Health Service launched a four-year sociological study of cocktail parties, with six lucky agents pressed into duty attending and reporting back on high-ball-induced behavior. The testing of atomic bombs during the early 1950s in the deserts of Nevada sparked a short-lived fad for atomic-themed cocktails.

The most emblematic drink of cocktail culture remains the martini. The outline of the distinctively shaped glass has become a universal symbol for bars and lounges. As with many aspects of cocktail culture, the origins of the martini remain hazy. One history suggests that the first martini was mixed by noted bartender “Professor” Jerry Thomas at the bar of the Occidental Hotel in San Francisco in the early 1860s for a miner on his way to the town of Martinez. The martini was insured lasting fame by being the favored libation of the popular movie spy James Bond, whose strict allegiance to a martini that was “shaken, not stirred” so that the gin not be “bruised,” encouraged a generation of movie-goers to abandon their swizzle sticks in favor of a cocktail shaker.

In the mid-1990s, cocktail culture experienced a revival through the efforts of a few well-publicized bands interested in reviving the cocktail party lounge sound. The press dubbed the movement, sparked by the 1994 release of Combustible Edison’s album *I, Swinger*, “Cocktail Nation,” and young people appropriated the sleek suits,

snazzy shakers and swinging sounds made popular by their parents' generation. Cocktail nostalgia reached its peak with the 1996 release of Jon Favreau's *Swingers*, a movie about cocktail culture in contemporary Los Angeles.

Cody, Buffalo Bill, and his Wild West Show

Buffalo Bill was not the originator of the Wild West Show or, indeed, the only person to stage one. Frontier extravaganzas had

William Cody

existed in one form or another from as early as 1843. Yet Buffalo Bill Cody is largely responsible for creating our romantic view of the Old West that continues largely unabated to this day. This is due to a combination of factors, not the least of which was Cody's own flair for dramatizing his own real life experiences as a scout, buffalo hunter, and Indian fighter.

The legend of William F. Cody began in 1867 when, as a 21-year-old young man who had already lived a full life as a Pony Express rider, gold miner, and ox team driver, he contracted to supply buffalo meat for construction workers on the Union Pacific railroad. Although he did not kill the number of huge beasts attributed to him (that was accomplished by the "hide hunters" who followed and nearly decimated the breed), he was dubbed Buffalo Bill. He followed this experience with a four-year stint as Chief of Scouts for the Fifth United States Cavalry under the leadership of former Civil War hero Lieutenant General Philip Sheridan. During this service, Cody participated in 16 Indian skirmishes including the defeat of the Cheyenne at Summit Springs in 1869. After this, Cody earned a living as a hunting guide for parties of celebrities, who included politicians and European royalty. On one of these, he encountered the author Ned Buntline who made him the hero of a best-selling series of stories in *The New York Weekly*, flamboyantly titled "The Greatest Romance of the Age." These stories spread the buffalo hunter's fame around the world.

After witnessing a Nebraska Independence Day celebration in 1883, Cody seized upon the idea of a celebration of the West, and played upon his newfound fame to create Buffalo Bill's Wild West, an outdoor extravaganza that depicted life on the frontier from his unique perspective. The show (although he steadfastly avoided the use of the word) was composed of a demonstration of Pony Express riding, an attack on the Deadwood Stage (which was the actual Cheyenne and Black Hills Stage line coach used on the Deadwood run), and a number of rodeo events including riding wild steers, bucking broncos, calf roping, horse races, and shooting. Whenever he could, Cody also employed authentic Western personages such as scout John Nelson; Chief Gall, who participated in the defeat of Custer at Little Big Horn; and later Sitting Bull, to make personal appearances in the show. The grand finale usually consisted of a spectacle incorporating buffalo, elk, deer, wild horses, and steers stampeding with cowboys and Indians.

In 1884, the show played the Cotton Exposition in New Orleans, where Cody acquired his greatest drawing card—sharpshooter Annie Oakley, who was billed as "Little Sure Shot." The following year, Sitting Bull, the most famous chief of the Indian Wars, joined the show. Ironically, Cody's use of Sitting Bull and other Indians as entertainers remains controversial to this day. To his critics, the depictions of Indians attacking stagecoaches and settlers in a vast arena served to perpetuate the image of the Indian as a dangerous savage. On the other hand, he was one of the few whites willing to employ Native Americans at the time, and he did play a role in taking many of them off the reservation and providing them with a view of the wider world beyond the American frontier.

Yet even as many Indians were touring the country with Buffalo Bill's Wild West Show, the Indian Wars were still continuing on the frontier. Some of Cody's Indians returned to help in the Army's peacemaking efforts, and Cody himself volunteered his services in the last major Sioux uprising of 1890-91 as an ambassador to Sitting Bull, who had returned from Canada to lend his presence as a spiritual leader to his countrymen. This effort was personally called off by President Benjamin Harrison, and Sitting Bull was shot by Indian

police the next day while astride a show horse given to him by Cody. According to historian Kevin Brownlow, the horse, trained to kneel at the sound of gunfire while appearing in the Wild West Show, proceeded to bow down while its famous rider was being shot. When the Indians were ultimately defeated, Cody was able to free a number of the prisoners to appear in his show the following season—a dubious achievement, perhaps, but one that allowed them a measure of freedom in comparison to confinement on a reservation.

Buffalo Bill's Wild West Show reached the peak of its popularity in 1887 when Cody took his extravaganza to London to celebrate Queen Victoria's Golden Jubilee. According to sources, one performance featured an attack on a Deadwood Stage driven by Buffalo Bill himself with the Prince of Wales and other royal personages on board. This performance was followed in 1889 with a full European tour, beginning with a gala opening in Paris. It is perhaps this tour, along with Ned Buntline's Wild West novels, that have formed the basis for European idealization of the romance of the Old West.

Returning to the United States in 1893, Buffalo Bill's Wild West Show logged the most successful season in the history of outdoor stadium shows. After that high water mark, however, the show began to decline. Other competitors had entered the field as early as 1887 and Wild West shows began to proliferate by the 1890s. In 1902, Cody's partner, Ante Salisbury, died and the management of the show was temporarily turned over to James Bailey of the Barnum and Bailey Circus, who booked it for a European tour that lasted from 1902 to 1906. After Bailey's death, the show was merged with rival Pawnee Bill's Far East and went on the road from 1909 to 1913, before failing due to financial difficulties. Buffalo Bill kept the show going with several other partners until his death in 1917, and the show ended a year later.

Buffalo Bill's Wild West Show remains important today because it was perhaps the single most significant historical factor in the creation of the romantic notion of the West that has formed the basis for the countless books, dramatizations, and motion pictures that have become part of the American fabric. Though the authenticity of Cody's depictions was somewhat debatable, they were nonetheless based on his personal experiences on the frontier and were staged in dramatic enough fashion to create an impact upon his audiences. The show was additionally responsible for bringing Native Americans, frontier animals, and Western cultural traditions to a world that had never seen them close-up. Whether his show was truly responsible for creating an awareness of the endangered frontier among its spectators cannot be measured with accuracy, but it undoubtedly had some impact. And certainly the romantic West that we still glorify today remains the West of Buffalo Bill.

Coffee

A strong, stimulating beverage with a distinctive aroma and complex flavor, coffee has been a popular drink for centuries. Brewed by the infusion of hot water and ground, roast coffee beans, coffee is enjoyed at any time of the day and night, though it is most associated with a morning pick-me-up. Coffee's primary active ingredient, the stimulant caffeine, is mildly addictive but to date no serious medical complications have been associated with its use. Local establishments such as cafés, coffee houses, coffee bars, and diners attract millions of customers worldwide. Specialty coffee shops serve dozens of varieties, each identified by the geographic growing region and degree of roast. Methods of preparation also vary widely, but in general coffee is served hot, with or without the addition of milk or cream, and sugar or other sweetener. Though coffee has always been popular, it wasn't until the 1980s that a number of specialty coffee retailers enhanced the cachet of coffee by raising its price, differentiating varieties, and associating the drink with a connoisseur's lifestyle.

Coffee houses have been regarded as cultural meeting places since the 17th century in western civilization, when artists, writers, and political activists first started to meet and discuss topics of social interest over a cup of this stimulating drink. The poet Baudelaire, in

A coffee shop sign in Seattle, Washington.

Paris in the 1840s, described coffee as best served “black as night, hot as hell, and sweet as love.” Coffee seems always to have been part of the American landscape, as it was a common feature on the chuckwagons of the prairie pioneers and cattle ranchers, and in the break-rooms of companies and board rooms. Coffee is so popular in diners and roadside eateries that it is served almost as often as water. But for most of its history, coffee was just coffee, a commodity that was not associated with brand name or image. All that changed beginning in the 1980s, as the result of a convergence of two trends. Americans looking for a socially-acceptable alternative to drug and alcohol intake were well-served by a proliferation of retailers eager to provide high-priced “gourmet” coffee to discriminating drinkers. Specialty shops such as Starbucks in Seattle and Peet’s Coffee in Berkeley have expanded to national chains whose popularity has eclipsed that of national brands such as Maxwell House and Folgers, which spread across America in the fifties. In addition, hundreds of independent cafés and coffee houses were founded in every major American city throughout the 1990s. In the Pacific Northwest—the capital of coffee consumption in America—drive-up espresso shacks line the roadsides, providing a variety of coffee drinks to commuters willing to pay \$3.50 for a 20-ounce Café Mocha with a double shot of espresso. Even a small town like Snohomish, Washington, with a population of only 8,000, boasts a dozen espresso shacks.

Percolated coffee, made by a process where coffee is boiled and spilled over coffee grounds repeatedly, was very popular in the 1950s but made coffee which tasted sour, bitter, and washed-out. It has virtually been replaced by filtered or automatic drip coffee and the more exotic “café espresso,” an Italian invention whereby hot water is forced through densely packed coffee grounds resulting in very dark, highly-concentrated coffee. Espresso is a popular favorite in specialty coffee shops and in European cafés. These coffee houses offer a more healthful daytime solution to social interaction than the local bar, which centered around the drinking of alcoholic beverages. The stimulating effects of coffee quite naturally encourage conversation and social discourse. Many coffee houses show artwork and host local musicians; some feature newsstands or shelves of books encouraging patrons to browse at their leisure. Coffee shops are also found around most college and university campuses.

The earliest recorded instances of coffee drinking and cultivation date back at least to the sixth century in Yemen, and coffee houses were popular establishments throughout Arabia for centuries before Europeans caught on, since it was forbidden to transport the fertile seed of the coffee plant. There is botanical evidence that the coffee plant actually originated in Africa, most likely in Kenya. Centuries later, coffee plants were imported by French colonists to the Caribbean and eventually to Latin America, and by the Dutch to Java in Indonesia. Today coffee production is centered in tropical regions throughout the world, with each region boasting distinctive kinds of coffee.

There are two distinct varieties of the coffee plant: *caffea arabica*, which comprises the majority of global production and grows best at high elevations in equatorial regions; and *caffea robusta*, discovered comparatively recently in Africa, which grows at somewhat lower elevations. The robusta bean is grown and harvested more cheaply than arabica. It is used as a base for many commercial blends even though the taste is reported to be poorer by connoisseurs. The coffee bean, which is the seed of the coffee plant, varies widely in flavor dependent on the region, soil and climactic conditions in which it is grown. These flavors are locked inside, for the most part, and must be developed by a roasting process during which the woody

structure of the bean is broken down and the aromatic oils are released. The degree of roasting produces a large degree of variation in how the final coffee beverage looks and tastes.

The principal active ingredient in coffee is caffeine, an alkaloid compound which produces mildly addictive stimulation to the central nervous system, and stimulation to a lesser degree of the digestive system. The medical effects of drinking coffee vary depending on the amount of caffeine in each serving, the tolerance which has been built up from repeated use, and the form in which it is being ingested. Coffee is often served in restaurants as a digestive stimulant, either enhancing the appetite when served before a meal, such as at breakfast, or as an aid to digestion when served, for example, as a “demi-tasse” (French for “half-a-cup”) in restaurants after a fine meal. Although American medical literature reports that up to three cups of coffee may be drunk daily without any serious medical effects, individual limits of consumption vary widely. Many people drink five or six cups or more per day, while coffee consumption has been restricted in cases where gastrointestinal complications and other diagnoses may be aggravated by overstimulation. Though not medically significant, many coffee users experience rapid heartbeat, jumpiness, and irritation of the stomach due to excessive coffee consumption. All of these side effects may seem worth it to a coffee drinker who relies on the certain stimulating effects of multiple cups of coffee. Withdrawal symptoms such as headaches occur when coffee is taken out of the diet due to caffeine deprivation, but these effects usually subside after a few days.

With all the concern about caffeine in coffee, it was a matter of time before scientists found ways to remove caffeine while maintaining coffee’s other more pleasurable characteristics such as taste and aroma. The first successful attempt to remove the kick out of coffee came at the end of the nineteenth century. Distillation and dehydration/reconstitution resulted in a coffee beverage with less than two percent caffeine content. The caffeine-free powder was marketed successfully as Sanka (from the French “sans caffeine” meaning “without caffeine”). Since then, other processes of refinement have succeeded in removing caffeine from coffee while preserving greater and greater integrity of the coffee flavor complex. Most of these decaffeination processes involve rinsing and treating coffee while still in the bean stage. One process, which uses the chemical solvent methylene chloride, has been judged by coffee experts to produce the best tasting decaffeinated coffee since the chemical specifically adheres to and dissolves the caffeine molecule while reacting with little else. Popular outcry arose concerning the use of methylene chloride in the late 1980s when a report was released indicating that it could cause cancer in laboratory animals, but the claim was soundly refuted when it was explained that virtually no trace of the element ever remained in coffee after having been roasted and brewed. Use of methylene chloride was curtailed in the mid-1990s nonetheless, due to a discovery that its production could have an adverse impact on the earth’s ozone layer. Several other methods of decaffeination are currently used, such as the Swiss water method and the supercritical carbon dioxide process, to meet the growing consumer demand. The vast majority of coffee drinkers, however, still prefer their coffee to deliver a caffeine kick.

Cohan, George M. (1878-1942)

The musical comedy stage of New York was home to George M. Cohan, vaudeville song-and-dance man, playwright, manager, director, producer, comic actor, and popular songwriter. During the first two decades of the twentieth century, Cohan's style of light comedic drama dominated American theatre, and the lyrics he composed are still remembered at the end of the twentieth century for their flag-waving patriotism and exuberance. His hit song "Over There" embodied the wartime spirit of World War I, and "I'm a Yankee Doodle Dandy" and "Grand Old Flag," have been passed from generation to generation as popular tunes celebrating the American spirit.

Born on July 3 in Providence, Rhode Island, Cohan spent his childhood as part of a vaudevillian family. Living the typical vaudeville life, Cohan and his sister traveled a circuit of stages, slept in boarding houses and backstage while their parents performed, and only occasionally attended school. At nine years old, Cohan became a member of his parents' act, reciting sentimental verse and performing a "buck and wing dance." By the age of eleven, he was writing comedy material, and by thirteen he was writing songs and lyrics for the act, which was now billed as The Four Cohans. In 1894, at the age of sixteen, Cohan sold his first song, "Why Did Nellie Leave Home?" to a sheet music publisher for twenty-five dollars.

In his late teens, Cohan began directing The Four Cohans, which became a major attraction, earning up to a thousand dollars for a week's booking. Cohan wrote the songs and sketches that his family performed, and had the starring roles. At twenty years of age, managing the family's business affairs, he was becoming a brazen, young man, proud of his achievements. When he was twenty-one, he married his first wife, Ethel Levey, a popular singing comedienne, who then became the fifth Cohan in the act.

Within two years, seeking the fame, high salaries, and excitement that life in New York theatre offered, Cohan centered his career on the Broadway stage. His first Broadway production, *The Governor's Son*, was a musical comedy that he wrote and in which he performed in 1901. It was not the hit he hoped for, but after two more

attempts, Cohan enjoyed his first Broadway success with *Little Johnny Jones* in 1904. In this musical, Cohan played the role of a jockey and sang the lyrics that would live through the century: "I'm a Yankee Doodle Dandy, / A Yankee Doodle, do or die; / A real live nephew of my Uncle Sam's / Born on the Fourth of July." Among the other hit songs from the play was "Give My Regards to Broadway." In Cohan's 1906 hit *George Washington, Jr.*, he acted in a scene with which he would be identified for life: he marched up and down the stage carrying the American flag and singing "You're a Grand Old Flag," the song that would become one of the most popular American marching-band pieces of all time. Other of Cohan's most famous plays are *Forty-Five Minutes from Broadway* (1906), *The Talk of New York* (1907), *The Little Millionaire* (1911), *The Song and Dance Man* (1923), and *Little Nelly Kelly* (1923).

In 1917, when America entered World War I, Cohan was inspired to compose "Over There," the song that would become his greatest hit. Americans coast to coast listened to the recording made by popular singer Nora Bayes. Twenty-five years later, President Franklin Delano Roosevelt awarded Cohan the Congressional Medal of Honor for the patriotic spirit expressed in this war song.

Cohan achieved immortality through his songs and performances, and the 1942 film *Yankee Doodle Dandy* perpetuated his image. In it, James Cagney portrayed Cohan with all of Cohan's own enthusiasm and brilliance. The film told the story of Cohan's life and included the hit songs that made him an American legend. The film was playing in American theatres when Cohan died in 1942. President Roosevelt wired his family that "a beloved figure is lost to our national life."

Colbert, Claudette (1903-1996)

The vivacious, Parisian-born Claudette Colbert was one of America's highest-paid and most popular actresses during her sixty-year career on stage, films, and television. Her popular "screwball comedies" enchanted movie audiences, and her classic performance as the fleeing heiress in *It Happened One Night* (1934) earned her an Academy Award. Although she continued to star in comedies, she was also an Oscar-nominee for the dramatic film *Since You Went Away* (1944). Her most talked-about scene was the milk bath in *The Sign of the Cross*. In the 1950s she returned to Broadway, and, still active in her eighties, starred in a television miniseries in 1987. She

was honored with an award for lifetime achievement at Kennedy Center in 1989.

Cold War

Struggle between the Western democracies and the Eastern Communist nations was probably inevitable from the first shot fired in the Russian Revolution of 1917. Guided by one of the essential tenets of Karl Marx and Friedrich Engels' Communist doctrine—"Capitalism contains within itself the seeds of its own destruction"—Eastern nations believed in the eventual worldwide triumph of Communism and were motivated to help speed the day. The nations of the West, on the other hand, long regarded Communism (and those governments espousing it) as a threat striking at the very heart of the capitalist economies that formed the basis of many Western democracies. The differences between these two ideological standpoints produced a state of disharmony that broke into open, if limited, warfare twice (in Korea and Vietnam), but remained for the most part a muted conflict—a "cold" war.

Historians disagree about the exact point at which the Cold War began. Some date it from Winston Churchill's 1946 speech, given in Fulton, Missouri, in which he declared that an "iron curtain" had come down in Europe, dividing the Soviet-occupied countries from those allied with the West. Others argue that the "long twilight struggle," as President Kennedy described it, began in 1947 with the Truman Doctrine—a declaration that the United States would act decisively to prevent the further spread of Communism in Europe. There are even those scholars who believe that the Cold War began when the ink dried on the documents containing the Japanese surrender to the Allies in 1945.

If there is a lack of consensus regarding the cold war's beginning, virtual unanimity exists about its end. In 1991, the Soviet Communist Party was dissolved, and the Union of Soviet Socialist Republics reverted to what it had once been—a collection of separate slavic nations, the largest being Russia. Although China, the world's most populous country, remained a Communist state, as did North Korea, Cuba, and Vietnam, it is generally believed that when Soviet Communism died, so did the Cold War.

During the approximately 45 year struggle, the opposing nations battled on many levels: economic, political, scientific, diplomatic—and through popular culture. Indeed, there is not an aspect of

American popular culture that was unaffected by the Cold War. The principal media involved included film, both commercial and governmental, television, fiction, and to a lesser extent, theater.

While the government eventually found more subtle ways to communicate anti-Communist messages to the American public, in the early years of the Cold War the U.S. government contributed directly to popular culture by producing a number of "documentaries." These documentaries, produced mostly during the 1950s, alerted citizens to the dangers of Communism. Some, like *The Bell* (1950), took a positive, pro-American outlook, using the Liberty Bell as a symbol behind which people from all walks of American life could rally. Most of these films—such as *Communist Blueprint for Conquest* (1955), *The Communist Weapon of Allure* (1956), and *Communist Target: Youth* (1962), which included an introduction by then-Attorney General Robert Kennedy—were strongly negative in tone and made Communism the object of their censure. The most memorable of these propaganda films, however, was not made in the traditional documentary mode, but rather like an episode of *The Twilight Zone*, a television program that would not appear for another four years. In *Red Nightmare* (1955), narrator Jack Webb (of *Dragnet* fame) presents a typical small-town American family, then shows what their lives would be like if the Communists took over America. Religion is forbidden, education becomes indoctrination, and love of family is made subordinate to party loyalty. When the head of the household (played by Jack Kelly) protests, he is sentenced to be shot. Just as the firing squad is taking aim, he wakes up, back in his beloved America, free from his horrible "red nightmare." As the movie ends, the narrator reminds us that it could happen in America, if citizens ever relaxed their vigilance. Distributed free of charge to civic groups, Scout troops, churches, and schools, the films were even broadcast by local television stations.

The government also distributed films on a related subject: civil defense. Although the United States had never experienced aerial attack, serious discussions of the possibility started early in the Cold War, especially in 1949 when the Soviet Union exploded its first atomic bomb. In response to the perceived military threat, America's leaders greatly increased military budgets, and designed a civil defense program to reassure average citizens that nuclear war could be survived. While most government experts privately shared the view that no man-made structure could withstand a nuclear blast, and that an all-out nuclear exchange with the Soviet Union would produce American casualties numbering in the tens of millions, they also agreed that if the public knew the actual dangers, a panic, or worse, an outbreak of "Better Red than dead" defeatism would threaten the country. Thus, to preserve public morale, the underlying theme of the civil defense program became the illusion of safety. The program conveyed its messages of optimism through pamphlets, posters, and films with titles like *Survival under Atomic Attack*, *Operation Cue*, *The Atom Strikes*, and *You Can Beat the A-Bomb*. At least one civil defense film was intended primarily for schools. Entitled *Duck and Cover*, it featured an animated character named Bert the Turtle. Bert taught children that, in case of atomic attack, all they had to do to protect themselves was crouch down and cover their heads. The patent absurdity of this "defense" against a nuclear blast would be illustrated decades later, in the 1982 satirical documentary *The Atomic Cafe*, and in a 1997 episode of the "adult" television cartoon show *South Park*.

Hollywood films also reflected, and helped to create, the culture of the Cold War. Studios eagerly produced anti-Communist films in the 1950s—partly as a reflection of the temper of the times, but also

A typical bomb shelter built during the Cold War.

because filmmakers themselves had come under investigation by Washington's Red-raiders. During World War II, several Hollywood studios had made pro-Soviet films, such as *Mission to Moscow* (1943) and *Song of Russia* (1944), and these films had been made with both the permission and encouragement of the U.S. government, which wanted to maintain good relations with its Soviet ally. By the 1950s however, the House Un-American Activities Committee (known as the HUAC) came to regard the studios with suspicion. Mindful of the influence that motion pictures can have upon the citizenry, and fearful that the persuasive powers of film might be used to advance the cause of Communism, the HUAC and Senator Joseph McCarthy put the film industry in the thick of the anti-Communist investigations. The atmosphere produced in the industry by these investigations may explain the production of such blatantly anti-Red films as *I Married a Communist* (1950), *I Was a Communist for the FBI* (1951), *My Son John* (1952), *Big Jim McLain* (1952), and *Invasion U.S.A.* (1952).

But by the 1960s, Hollywood's way of dealing with the "Red Menace" changed. Because the heat from Washington had largely abated, and because the propaganda films had not been profitable ventures, Hollywood's depictions of the Cold War began to diversify. Some of the 1960s films dealt with nuclear brinkmanship between the

United States and the Soviet Union. *Fail-Safe* (1964), based on a popular novel, posits a technical glitch that accidentally sends a flight of American nuclear bombers on its way to a pre-assigned target: Moscow. The computer has sent its "war" message to the bombers, and they cannot be recalled. The basic premise of *Fail-Safe* was brilliantly but viciously satirized by Stanley Kubrick in his 1964 film *Dr. Strangelove: Or How I Learned To Stop Worrying and Love the Bomb*. It is a thoroughly "black" comedy, as any film that attempts to find humor in nuclear war must be. Another "cold war" film released the same year was *Seven Days in May*, which involves a plot by the U.S. military to take over the government after the President negotiates an unpopular arms-reduction treaty with the Soviets.

A separate course for cold war cinema was charted in 1962, with the release of the first James Bond movie, *Dr. No*. The success of the film, along with the even larger grosses earned by its successors *From Russia with Love* (1963) and *Goldfinger* (1964)—with many others to follow—created a "spy craze" in American popular culture that lasted into the next decade. The "Bond" influence was seen in other films, both serious (*The Spy Who Came in from the Cold*; *The Quiller Memorandum*; *The Ipcress File*) and satirical (*Our Man Flint*; *The Silencers*; *Murderer's Row*), as well as television programs (*I Spy*;

Secret Agent; The Man from U.N.C.L.E.) and even men's toiletries ("007" brand cologne; "Hai Karate" aftershave).

As U.S.-Soviet relations improved, the Cold War gradually thawed during the 1970s. The temperature dropped again in 1980, however, with the election of conservative Ronald Reagan to the White House. In his first term, at least, Reagan was frequently given to tough talk about the Communists. In one speech, he referred to the Soviet Union as an "evil empire." On another occasion, just prior to a radio address, Reagan obliged a request for a sound check by saying, "This is the President speaking. I have just outlawed Russia. Bombing begins in five minutes."

In accordance with the Reagan Administration's bellicose attitude toward the Communist world, a new wave of anti-Communist cinema came in the 1980s. *Red Dawn* (1984) portrayed a Soviet occupation of the United States and focused on the activities of a band of American teenagers waging guerrilla warfare against the invaders. *Rocky IV* (1985) pitted Sylvester Stallone's gutsy pugilist against the seemingly unbeatable Drago, the best fighting machine that the Soviet state could produce. *Rambo: First Blood Part II* (1985) sent another popular Stallone character to rescue American POWs still held in Vietnam (and also to kill Communists by the score). The 1984 film *Missing in Action* (along with two sequels) returned Chuck Norris to Vietnam on a series of missions similar to Rambo's. *Invasion U.S.A.* (1985) featured Norris against a small army of Soviet infiltrators sent to disrupt American society. *Rambo III* (1988) saw Stallone's character battling the evil Russians in Afghanistan. *Top Gun* (1986) starred Tom Cruise and extolled the skill and bravery of the Navy's fighter pilots (who even got to shoot down a few Russians in a skirmish near the film's end).

Throughout the Cold War, other forms of entertainment also showed an awareness of some of the issues involved in the East-West struggle. Theater was not one of the hotbeds of social activism during the Cold War, at least until the Vietnam War became a burning issue. But one notable exception to this observation is Arthur Miller's 1953 play *The Crucible*. Nominally concerned with the Salem witch trials of 1692, the play is based on events and characters from the actual trials, but few watching the performance at the time could have any doubt that the play was a commentary on the anti-Communist hysteria gripping the nation. Miller has since been very clear that he intended *The Crucible* as a condemnation of the McCarthy "witch hunts" in which so many reputations, careers, and even lives were destroyed, often without any evidence to support the accusations made.

Miller did face some hostility from the Right over this play, as he had for some of his earlier dramas. Political tensions in the United States affected many Left-wing writers in the 1950s. Once a writer had been branded "subversive" by the HUAC, Senator McCarthy, or some other "authority," many bookstores would not put his or her books on the shelves. Blacklisting limited the works of writers like Dalton Trumbo, Ring Lardner, Jr., Howard Fast, and Dashiell Hammett to a few bookstores dedicated to the writings of the Left.

This did not mean that the Cold War could not be portrayed in novels. Many books were written about the era while it happened, and they were often very successful—as long as they had the "right" viewpoint. *The Ugly American* (1958) by William Lederer and Eugene Burdick critiqued American diplomacy in Asia, and is believed to have given John F. Kennedy the idea for what would become the Peace Corps. Richard Condon's novel *The Manchurian Candidate* (1958) posited that U.S. soldiers captured during the Korean War could be so thoroughly "brainwashed" by the Chinese as to become human robots upon their return home, awaiting only the

right signal to carry out the nefarious missions for which they had been programmed. This novel of political paranoia was later made into a successful film by director John Frankenheimer.

As with film, cold war fiction changed as America entered the 1960s. The early part of the decade featured a number of novels about nuclear brinkmanship. *Fail-Safe* (1962) and *Seven Days in May* (1962) were both written in this period and were soon made into films. Other novels dealing with the possibilities of nuclear war included Pat Frank's *Alas, Babylon* (1959) and William Miller's *A Canticle for Liebowitz* (1959). The novels *The 480* by Eugene Burdick (1964), *Advise and Consent* by Allen Drury (1959), *Night of Camp David* by Fletcher Knebel (1965), and *The Man* by Irving Wallace (1964) explored similar kinds of domestic cold war political tensions found at the heart of *Seven Days in May*.

Although these kinds of political novels continued to appear in the second half of the 1960s, they were far outnumbered by the same genre that had come to dominate the movie screens by that time: the spy story. Although Ian Fleming, the creator of James Bond, died in 1964, the literary trend he started continued long after his passing. Several of Fleming's countrymen wrote spy fiction that was popular in the United States, including John Le Carré, who wrote the bestseller, *The Spy Who Came in From the Cold* (1963). Another British writer, Elleston Trevor, used the pen name Adam Hall to write a series of suspenseful cold war novels featuring a secret agent known only as Quiller, including *The Ninth Directive* (1966) and *The Striker Portfolio* (1969). Many American authors also used the Cold War as a background for tales of suspense and adventure, including Donald Hamilton, who wrote a series of paperback novels featuring "the American James Bond," a U.S. government assassin named Matt Helm. Some of the many titles in this well-written series include *The Ambushers* (1963) and *The Menacers* (1968). Former CIA man David Atlee Phillips wrote a number of novels under the pseudonym Philip Atlee, all of them featuring secret agent Joe Gall, who saved the nation from the Reds in such titles as *The Green Wound Contract* (1963) and *The Trembling Earth Contract* (1969). Even Mickey Spillane, best known for his "tough guy" private eye novels featuring Mike Hammer, began to write spy novels with *Day of the Guns* (1964), which introduced secret agent Tiger Mann.

Television also played its role in the Cold War, through both entertainment programming and news specials. In the 1950s, a number of suspense shows with anti-Communist themes debuted, including *Foreign Intrigue*, *Passport to Danger*, *I Led Three Lives*, *The Man Called X*, *Soldiers of Fortune*, and *Behind Closed Doors*, but few of these shows captured audience interest. In the 1960s, television also participated in the "spy craze." In addition to "serious" espionage shows, 1960s television offered spoofs of the genre, including *Get Smart* (with Don Adams as an inept secret agent) and *The Wild, Wild West* (a Bondian satire set in the Old West).

While local television stations made good use of government-produced short films, both those with anti-Communist themes and those concerned with civil defense, national television stations produced their own documentaries about the dangers posed by world Communism. *Call to Freedom* focused on the history of Austria, to show how that country was able to free itself from partial Soviet occupation following World War II. *Nightmare in Red* was a history of the Soviet Union that suggested that Czarist rule was better than the oppression, tyranny, and drudgery of life in the modern Soviet state. Television also showed the cartoon series *The Adventures of Rocky and Bullwinkle*, with its "villains" the bumbling spies Boris Badinov and Natasha Fatale.

Television provided the American public with one of the clearest views into the HUAC's investigations. Many of Senator Joseph McCarthy's committee's hearings were televised live. At first, the coverage proved to be excellent publicity for McCarthy and his Red-baiting activities. But eventually McCarthy's bullying, demagoguery, and carelessness with facts caught up with him. When attorney Joseph Welch asked McCarthy, live on camera, "Have you no decency, sir? Have you no decency at all?" millions of Americans found themselves pondering the same question about the Senator from Wisconsin—and television made it possible.

Cole, Nat "King" (1916?-1965)

Nat "King" Cole, pianist, songwriter, vocalist, and actor was one of the most influential African American performers from the early 1940s until his untimely death in 1965. Cole's warm, open, liquid, smooth voice was blessed with perfect intonation and diction, and appealed to a crossover audience, garnering not only acceptance in America but also worldwide. As a personality, Cole epitomized the suave sophistication that urban blacks were beginning to aspire to in the 1940s.

Cole's date of birth is in question. For his two marriages in 1937 and in 1948, Cole gave birthdates of 1915 and 1919, respectively. For the selective service he gave the year 1916. James Haskins and Leslie Gourse, two Cole biographers, accepted 1916 since it was his draft registration. Born Nathaniel Adams Coles in Montgomery, Alabama on March 17, Cole was exposed to many types of black music. At the age of four, the family moved to Chicago where jazz and gospel were evolving. Cole's father, Edward James Coles, Sr., was a Baptist minister. His mother, Perlina Adames Coles, a pianist and choir director, taught him to play the piano by ear. At 12, Cole played organ, sang in his father's church, and studied classical piano. In high school, his mentors were N. Clark Smith, bandmaster, and Walter Dyett. His family was indeed musical. His three brothers Eddie, Fred, and Isaac were jazz musicians.

In Chicago, Cole led the Rogues of Rhythm and the Twelve Royal Dukes that often played Earl Hines arrangements. In 1936, Cole left Chicago to lead a band in a revival of the 1921 all black musical comedy *Shuffle Along*, with music by Eubie Blake and lyrics by Noble Sissle. When the show folded in Los Angeles, Cole landed a job as a pianist at the Century Club in Santa Monica. Cole's playing was impressive and thereafter, he began a stint at the Swanee Inn in

Nat "King" Cole

Hollywood. Bob Lewis, the booking agent is said to have mused "Old King Cole" and billed Cole as "King" Cole. The name stuck with him throughout his career.

While Cole was best known as a vocalist and occasional pianist, his most musically enduring work can be heard in the trio format. Cole's piano stylings and compositions draw from be-bop, among other influences. The trio won the coveted Downbeat small combo award from 1944-1947, and the Metronome Apollo award in 1945-1948. Initially called King Cole and His Swingsters and later known as the King Cole Trio, the group was the first African American jazz combo to have its own sponsored radio series, from 1948-1949.

In the trio format, Cole dipped into the wellsprings of black music. The element of play and rhythmic vocal nuances can be heard in "Gone with the Draft." The influence of jive, folk narratives appear in the lyric "cool papa, don't you blow your top," from "Straighten Up and Fly Right." In "Are You Fer It," and "This Side Up," Cole delves into the early California blues tradition with riffs (repetitive phrases) in harmony with Moore's guitar. The new emerging style of be-bop is shown to good advantage in "Babs," while scatting (the interpolation of non-sense syllables) can be heard in "I Like to Riff."

Fats Waller, Count Basie, and principally Earl Hines influenced Cole's piano playing and, in turn, Cole's trio format and piano and vocal stylings influenced a number of subsequent musicians. Notable jazz trios that adopted Cole's instrumental format were the Oscar Peterson Trio, Art Tatum's Trio, and Johnny Moore's Three Blazers, among others. Cole also recorded with Lester Young in a session in Los Angeles in 1942.

The Nat King Cole Trio captured the attention of the popular market and paved the way for Cole to crossover from the rhythm and blues market to the pop charts, and to launch his successful solo career. From 1943 on, many of Cole's songs appealed to popular taste, beginning with "All For You" (1943), "Straighten Up and Fly Right" (1944), "Gee Baby, Ain't I Good to You?" (1944), and "Get Your Kicks on Route 66" (1946). It was "The Christmas Song" (1946), however, that squarely validated his crossover appeal. These standards, with string accompaniment led by arrangers such as Nelson Riddle, would help to build Capital records, Cole's principal recording label. From 1946, Cole became hugely successful as a popular vocalist and by 1951 had abandoned the trio format. Selected songs in this format include "I Love You for Sentimental Reasons" (1946), "Nature Boy" (1948), another recording of "The Christmas Song" (1949), "Mona Lisa" (1950), "Too Young" (1951), "Pretend" (1953), the rhythm and blues flavored "Send for Me" (1957), "Looking Back" (1958), and the country and western tinged "Ramblin' Rose" (1962). Throughout the 1950s, Cole continued to perform in clubs while putting on concerts abroad in Cuba, Australia, and Latin America. Cole also took singing and acting roles in a number of movies such as *Small Town Girl*, *The Blue Gardenia*, and *Haija Baba*, with his most effective role in *St Louis Blues*, where he played W. C. Handy.

Despite Cole's enormous appeal he could not escape the racism rampant in America. When he purchased a house in Los Angeles's fashionable Hancock Park, some white neighbors protested. He had to abandon his series on network television because of the lack of a national sponsor. Cole compromised by playing to segregated audiences, which drew impassioned criticism from the National Association for the Advancement of Colored People (NAACP). Thurgood Marshall, chief counsel for the NAACP, commented that all Cole needed to complete his role as Uncle Tom was a banjo. In the 1960s, with the emergence of the civil rights movement, neither Cole's image as a popular vocalist nor his actions adopted the cause of black pride and consciousness. In spite of these setbacks, Cole's music penetrated many boundaries. In his time, Cole was a seminal figure in jazz and popular music, and leaves a legacy of enduring music—both as a vocalist and pianist—that continues to enrich us. Cole, a heavy chain smoker, succumbed to lung cancer and died on February 15, 1965.

College Fads

Over the course of the twentieth century, each generation of college students seems to have been identified in the public mind with

mindless, often madcap fads, perhaps adopted as a silly counterpoint to the demands of intellectual life. Some of these phenomena have become iconic markers of their decades: the raccoon-coat craze of the 1920s, goldfish swallowing in the 1930s, panty raids and telephone-booth stuffing in the 1950s, piano smashing in the 1960s, and streaking in the 1970s.

The goldfish-swallowing era of campus lunacy peaked in the spring of 1939. Although there were political events unfolding in Europe that would lead to World War II, newspapers devoted much space to this college fad. It all began when Harvard freshman Lothrop Withington, Jr. told friends that he had observed goldfish being swallowed on a Honolulu beach, and that he had done it himself. Someone challenged Lothrop, and a \$10 bet was made, leading to a demonstration in the freshman dining hall on March 3, 1939. While cameras recorded a bit of history, Lothrop picked up a three-inch goldfish by the tail, dropped the little wiggler into his mouth, chewed, and swallowed. Whipping out a toothbrush, he ceremoniously cleaned his teeth. Before sitting down to a dinner of fried sole, he remarked that the "scales caught a bit in my throat."

During the economic depression of the 1930s, there was no large annual college-student migration to Florida, and the less expensive fad of fish-swallowing sufficed for springtime excitement, becoming at once a kind of intercollegiate sport. Frank Hope of Franklin and Marshall College topped Withington by salting and peppering three goldfish and putting them away without chewing. The following day, a classmate named George Raab swallowed six fish. Harvard's Irving Clark vaulted far ahead by force-feeding himself two dozen of the little creatures, also announcing his willingness to eat beetles, spiders, and worms. Subsequent records were soon posted and quickly bested on campuses nationwide: University of Michigan (28), Boston College (29), Albright College (33), and MIT (42). When a student at Kutztown State in Pennsylvania broke the record by swallowing 43, he was suspended for "conduct unbecoming to a student."

After a professor of anatomy at UCLA concluded that an average-size male could safely down 150 live goldfish, the all-time record is reported to have zoomed to 210 fish at one sitting, swallowed by an anonymous BMOC (big man on campus) at St. Mary's University. Within a month, students were looking for variations on the theme, but the munching of 78-rpm phonograph records at the University of Chicago or the masticating of magazines at Lafayette College never captured the public imagination as did the swallowing of little live fish. In the late 1960s goldfish swallows reappeared briefly on college campuses, but during that hectic era of student protests, such meaningless pranks were generally ignored by the press.

In the spring of 1952, an outbreak of panty raids began at the University of Michigan. When 600 students gathered outside a dorm to listen to music on the first evening of spring, someone shouted, "To the women's dorms!" Suddenly the mob of male students forced their way into a dormitory and began dashing into rooms to steal lingerie. Copycat raids quickly followed at colleges and universities from coast to coast. To a writer in *U.S. News & World Report* the fad seemed inappropriate for a nation at war in Korea, and he asked why the panty-raiders were not "in the army if they have so much energy and so little to do?" Some university officials tried to resist, but at the University of Miami panty-obsessed males tore down a heavy wire fence to get to the girls' dorms. A wily director of women's residences at the University of Indiana took the opposite approach and left a barrel of women's underwear in plain view, ready to be confiscated by the fistful. That same spring at Ann Arbor, where the madness had begun, 500 coeds broke into the men's dorm in search of Jockey

An example of the college fad of car stuffing.

shorts and other male underwear. Panty raids have not been revived later, as many fads have been, and one writer suggested a reason: "Probably because the age of sexual permissiveness has rendered such symbolic action as this meaningless."

Telephone-booth stuffing began on American campuses in the spring of 1959, spreading out from California. At UCLA seventeen men squeezed like sardines into a conventional seven-foot high booth, followed quickly by an eighteen-man stuffing at California's St. Mary's University. With all their planning and knowledge of physics, students at MIT could only break that record by one. When students at Modesto Junior College in California reported thirty-four men in one booth, the record was investigated and then thrown out because the booth had been laid on its side, permitting considerably more horizontal stuffers to be accommodated. The most aesthetic booth-stuffing occurred in Fresno, where coeds in one-piece bathing suits gracefully wedged themselves into a booth submerged in a swimming pool. The fad began and ended in the spring of 1959, and was copied several years later by a brief fad involving students stuffing themselves into Volkswagens.

In 1963 a jangling, cacophonous din rose on college campuses as students used sledgehammers and axes to shatter full-size pianos. Students at California Tech did the job in 10 minutes, 44 seconds, but a Wayne State crew set the ultimate record: 4 minutes, 51 seconds. A *Life* Magazine writer called the piano hacking "Andante on a Choppin' Theme," noting that the grand finale was "Chopsticks." Since it was a time of student protest, one of the Caltech choppers called the act a comment on the "obsolescence of society." One group of dismemberers called its members by the academic-sounding name, The Piano Reduction Society.

From late January to mid-March, 1974, when the nation was suffering through a grim economic recession as well as the pains of the Nixon impeachment inquiry, there suddenly appeared the most merrily scandalous of all the college fads: streaking. Beginning in the warmer climates of California and Florida, nude students began to leap from behind bushes and dash across campus, parachute to earth in their birthday suits, and bike through the town *en masse* and unclad. Soon the fad spread throughout the country, even to the University of Alaska, where streakers dashed out in sub-zero weather. The new

craze was difficult for student governments and town fathers to combat. The mayor of Dover Township, New Jersey, threatened to fine streakers one dollar for every pound of flesh they exposed. In Honolulu a male student streaked through an official governmental assembly, declaring himself loudly, “the Streaker of the House.” Spring graduations at many colleges and universities were marked by the shedding of caps and gowns for a short streak. *Newsweek* magazine called the fad “the sort of totally absurd phenomenon the nation needed after a winter of lousy news.”

For the most part it was a male phenomena, but Laura Barton, a freshman at Carleton College, was widely recognized as the first female streaker when she appeared *au naturel* for a curtain call following the college production of *Measure for Measure*. The record for the largest crowd of streakers is claimed by the University of Georgia, which mustered 1,543 nude students for a race through campus. They had been preceded in fame by students at the universities of South Carolina, Maryland, and Colorado.

The commercial value of the fad soon became recognized, and a Connecticut jewelry company sold medallions plated with silver and gold, inscribed for the “free spirit shedding his inhibitions.” Psychological theorists explained the phenomenon as “the peaking of the sexual revolution, which made public nudity, long a taboo, an annoyance for some and an amusement for others.”

College Football

Until the advent of television, college football was far more popular than its professional counterpart. From the late nineteenth century onward, many of the games greatest moments occurred on the collegiate gridiron. Well before the epochal feats of Jim Brown, Gale Sayers, Joe Willie Namath, and Joe Montana were being relayed by television transmission, sport-writers and radio broadcasters had immortalized Jim Thorpe, Knute Rockne, Red Grange.

Employed as initiation rites beginning in the early nineteenth century, the first college games proved disorderly and were outlawed by university officialdom. After the Civil War, two versions of football appeared at northeastern schools, one resembling soccer, with the picking up of the ball prohibited. On November 6, 1869, approximately 200 spectators watched Princeton and Rutgers battle in New Brunswick, New Jersey. With 25 players on each side, kicking prevailed as Rutgers triumphed 6-4. Another brand of football, similar to rugby, which allowed for the touching of the ball, cropped up at Harvard. In 1876, the Intercollegiate Football Association was formed, with representatives from Princeton, Columbia, Yale, and

Harvard. A touchdown counted for only one point, while a kicked goal was worth four.

Not surprisingly, Ivy League schools dominated college football's early days. Yale's Walter Camp, deemed “the Father of Football,” devised many of the initial rules, thereby ensuring its unique American quality. By 1880, thanks to Camp's input, “American football began,” according to football historian Tom Perrin. As befitting broader changes in American life, it also acquired a more professional cast. The game now featured 11-man lineups, scrimmage lines separating offensive and defensive teams, and the quarterback at the center of the offensive action. Soon, Camp had a hand in reducing the playing field in half, allowing the offense to obtain a first down after amassing five yards in three attempts, devising yard lines, and initiating a modern scoring schema. The offensive line and backs lined up apart from one another, and rules prohibited passes beyond the line of scrimmage. Soon, offensive players were allowed to block for ball carriers. In 1888, Camp called for tackling below the waist. In this same period, graduate coaches—who were generally former players—were often hired; at Yale, Camp served as the adviser to Yale captains and graduate coaches.

Yale was the greatest team of the era, compiling a 324-17-18 record from 1872-1909 and winning 11 national championships, three coached by Camp. At the outset, college football's big games pitted Yale against Princeton or Harvard. In 1889, Camp began announcing his All-American teams, which were dominated by college football's Big Three for the next decade; Yale's greatest star was 5'9", 150 pound Frank Hinkey, a four-time All American end who was proclaimed the top player of his generation. Camp also wrote a series of sports books, advised other coaches, and watched Yale alumni teach his methods across the land.

Football served as a unifying force for the increasingly larger and more diverse pool of college students who almost religiously identified with their teams. Pleased university administrators viewed football as a means to acquire a still larger student body. The Big Game, greater pageantry, mascots, nicknames, songs, and contests attracting 40,000 fans to the Polo Grounds or Manhattan Field, all demonstrated football's increased popularity. So too write-ups in newspapers, which increasingly devoted a full-page or more to sports coverage. Piquing public controversy, however, were injuries and fatalities that led President Theodore Roosevelt to invite representatives from Harvard, Yale, and Princeton “to come to a gentlemen's agreement not to have mucker play.” Led by Camp, promises were made to avoid excessive “roughness, holding, and foul play.” In late 1905, delegates from 62 universities established the Intercollegiate Athletic Association, which in 1910 became the National Collegiate Athletic Association. Rule changes allowing for the forward pass and requiring ten yards to be gained within a four down set eventually resulted in a more wide-open game. In 1912, the value of touchdowns was increased to six points.

Equally important for the sports's increased popularity were mythical tales spun about legendary teams, coaches, and players. The 1901 Michigan Wolverines, spearheaded by newly arrived head coach Fielding H. “Hurry Up” Yost, began a five-year run marred only by one tie in fifty-seven games. Scoring 2821 points, Michigan allowed a mere 40 and shut-out Stanford 49-0 in the first Rose Bowl. In 1905, Michigan's winning streak was ended by Amos Alonzo Stagg's University of Chicago squad, which featured its 5'7", 145 pound quarterback, Walter Eckersall. Following his arrival at Harvard in 1908, Percy Haughton turned the Fighting Crimson into

college football's premier team, winning three national championships in a four-year span, beginning in 1910. Glenn "Pop" Warner's 1912 Carlisle Indians employed the single-wing formation to display the versatility of tailback Jim Thorpe, whose 25 touchdowns and 198 points established a new collegiate scoring record. In 1913, Notre Dame stunned heavily favored Army, 35-13, relying on the passing combination of quarterback Gus Dorias and end Knute Rockne; the previous year's reduction of the ball's circumference helped the aerial game.

In 1918, Rockne became head coach at Notre Dame, which he guided to five perfect seasons and a 105-12-5 record over the next thirteen years. Competing against teams from throughout the land, Rockne helped to popularize college football nationwide. Notre Dame's victory march became the best known, while Rockne ushered in a wide-open brand of football. Attendance at college games soared, and universities built great concrete and steel stadiums that could seat 70,000 or more fans. Notre Dame under Rockne featured stars like All-American fullback George Gipp and the so-called Four Horsemen, the famed 1924 backfield. On his deathbed in 1920, Gipp reportedly told his coach, "Sometime, Rock, when the team is up against it, when things are wrong and the breaks are beating the boys, ask them to win one for the Gipper." After watching the 1924 Notre Dame-Army contest, Grantland Rice waxed eloquently: "Outlined against the blue-gray October sky, the Four Horsemen rode again. In dramatic lore they were known as famine, pestilence, destruction, and death. These are only aliases. Their real names are Stuhldreher, Miller, Crowley, and Layden." Playing in its lone bowl game until 1970, national champion Notre Dame defeated Pop Warner's Stanford team, headed by its great fullback Ernie Nevers, 27-10. The 1929 and 1930 seasons also concluded with Notre Dame as the best team in the nation, but a plane crash near Bazaar, Kansas, in March 1931 took Rockne's life. Rockne left an unsurpassed winning percentage of .881, the use of shock troops that set the stage for platooning, the positioning of an end apart from other offensive linemen, and a more exciting brand of football. Under Rockne, moreover, Notre Dame acquired a national following, particularly among Catholics and ethnics in a period that witnessed the resurgence of the Ku Klux Klan.

The greatest individual player during college football's so-called golden era was halfback Harold "Red" Grange of Bob Zuppke's Fighting Illini. From 1923-1925, the Galloping Ghost used his blinding speed to top the nation's rushing charts, lead Illinois to a national championship, and perform epochal feats on the gridiron. In the initial twelve minutes of the 1924 contest against Michigan, Grange scored four out of the first eight times he touched the ball, on a 95 yard kickoff return, and on runs from scrimmage of 67, 56, and 44 yards. He later added a 15 yard touchdown and tossed an 18 yard touchdown pass, leading Illinois to a 39-14 victory. Playing against Penn in Philadelphia in 1925, Grange, disregarding a sloppy field, scored three times, while gaining 363 yards on 36 carries.

By the mid-1930s, the balance of power in the league was shifting, and new football powerhouses were emerging. From 1934-1936, Bernie Bierman's Minnesota Gophers were considered as fine as any team in the country; 1936 witnessed the introduction of the weekly press poll by Alan Gould, Associated Press sports editor. Overland attacks were prominently featured during the depression decade, with Alabama, featuring its ends, Don Hutson and Paul Bryant, beating Stanford 29-13 in the 1935 Rose Bowl. That year, Chicago's halfback Jay Berwanger was named recipient of the first Heisman Award handed out by New York's Downtown Athletic

Club. Jimmy Crowley of Four Horsemen fame constructed a potent unit at Fordham, relying on the "Seven Blocks of Granite," a line that included guard Vince Lombardi, who would later go on to become the legendary coach of professional football's Green Bay Packers. In 1938, 5'7", 150 pound quarterback and Heisman trophy winner Davey O'Brien took TCU to a national title. In 1939—the year USC's Howard Jones won his fifth national championship—Michigan's Tom Harmon led the nation in rushing; the following year, he scored 16 touchdowns and won the Heisman.

While Bierman once again won national championships with Minnesota in 1940 and 1941, followed by Paul Brown's 1942 Ohio State Buckeyes, college football, not surprisingly, was soon dominated by Notre Dame and Army. Frank Leahy, while compiling a record just short of Rockne's—107-13-9—won national crowns with quarterbacks like Angelo Bertelli and John Lujack, and battled Army in a series of monumental games. By 1944, Army coach Earl "Red" Blaik boasted an incredibly deep roster, which included halfback Glenn Davis and fullback Felix "Doc" Blanchard. Eventually, both Mr. Outside and Mr. Inside won Heismans, while Davis twice finished second in the balloting. In 1944, Army, which scored 504 points in nine games, crushed defending national champion Notre Dame 59-0. In 1945, Army won 48-0, while again leading the nation in scoring with a 45.8 point average. Blanchard scored 18 touchdowns, Davis tallied 19 and chalked up an 11.74 yards per carry rushing average. Leahy's team, loaded with All-Americans like guard Bill Fischer, end Leon Hart, and tackle George Connor, rebounded in 1946, battling Army to a 0-0 tie. The Southwest Conference again offered an exciting brand of football, and terrific performers like SMU's Doak Walker, the 1948 Heisman recipient, and Kyle Rote and Texas's Bobby Layne. SMU finished unbeaten in 1947, its record marred only by ties with TCU—a 19-19 game in which Walker was responsible for 471 yards in total offense—and Penn State, in the Cotton Bowl.

In the American heartland, Bud Wilkinson, a guard-turned quarterback on Bernie Bierman's 1935 and 1936 championship teams, continued crafting a stellar record at Oklahoma, which eventually left him with a 145-29-4 record. He also won three national championships and compiled an unbeaten streak of 47 games. Back-to-back undefeated regular seasons in 1949 and 1950 led to Wilkinson's first national title team, as determined by both the AP and the new United Press International polls, although that squad, which had won 31 straight games, lost in the Sugar Bowl to Paul "Bear" Bryant's Kentucky Wildcats, 13-7. Wilkinson's stars included stellar halfbacks Billie Vessels (the 1952 Heisman Award winner), Tommie McDonald, and Joe Don Looney. Oklahoma took the 1955 and 1956 national titles, before finally losing to Notre Dame 7-0 in 1957, ending college football's longest winning streak. While remaining a Big 8 Conference heavyweight, Wilkinson's Sooners increasingly had a tough time defeating Darrell Royal's Texas Longhorns at their annual game in Dallas.

The Wilkinson era ushered in a period of top-notch coaches at many universities. The University of Texas, during Royal's 19 year reign, repeatedly vied for national supremacy, ending up with three national crowns and victories over Roger Staubach and the Naval Academy in the 1964 Cotton Bowl; Joe Namath and Bryant's Alabama Crimson Tide in the 1965 Orange Bowl, and Ara Parseghian's Notre Dame squad in the 1970 Cotton Bowl. UT's triple-option led to 30 consecutive wins before Notre Dame and quarterback Joe Theisman defeated the Longhorns 24-11 in the 1971 Cotton Bowl. That enabled

Nebraska's Bob Devaney to claim share of the first of two successive national titles. Out west, John McKay grabbed four national championships, featuring Heisman trophy tailbacks Mike Garrett and O. J. Simpson. Ohio State's Woody Hayes, relying on a ground game, took hold of three national titles, while Bryant guided Alabama to an unprecedented six national championships. Beginning in 1964, Parseghian revitalized the then dormant program at college football's most historic campus, Notre Dame. After the 1966 and 1973 seasons, his Fighting Irish ended up at the top of the polls, as they would following the 1977 and 1988 campaigns, under coaches Dan Devine and Lou Holtz, respectively. In 1968, Penn State's Joe Paterno had his first of five undefeated seasons, although only one concluded with a national title; on another occasion, his once-beaten Nittany Lions were ranked number one. During the 1980s, Miami won four national titles, twice under coach Dennis Erickson. Devaney's successor at Nebraska, Tom Osborne, did him one better, ending his career with three national championships in his last four years. With crowns in 1974, 1975, and 1985, Oklahoma's Barry Switzer equalled Wilkinson's championship record. Florida State's Bobby Bowden took one lone national title, but his Seminoles were ranked in the top four at the close of twelve consecutive seasons. Following the 1996 season, Grambling's Eddie Robinson retired with a record 402 victories; Bryant's 323 wins topped the charts for Division I-A coaches.

From the 1960s onward, college football's appeal was heightened by the impact of television. Two-platoon systems and clock-stopping rule changes that ushered in many more plays made for an open-ended game, featuring passes and wishbone offenses. Seeking improved television packages, schools withdrew from traditional conferences and joined reconfigured ones. Penn State, for example, entered the Big Ten, while Miami joined the Big East. The historic Southwest Conference collapsed, with Texas, Texas A & M, Baylor, and Texas Tech linking up with the former Big Eight schools to establish the Big Twelve. Professionalization of the sport continued, with elaborate athletic facilities created, nationwide recruiting undertaken, and large bureaucratic apparatuses appearing. Unfortunately, scandals also brewed, with SMU's highly-ranked football program receiving the so-called "death penalty" in February 1987.

Collins, Albert (1932-1993)

Guitarist Albert Collins helped modernize blues and bring it to a new audience, blending classic traditions with rock and funk into his high-energy delivery. Born in Leona, Texas, Collins's early influences included T-Bone Walker, John Lee Hooker, and family friend Lightnin' Hopkins. He was also influenced by jazz organists Jimmy Smith and Jimmy McGriff, and saxophone players Arnett Cobb and Illinois Jacquet. Collins's first recording success was the instrumental single "Frosty" recorded in 1962. He signed with Imperial Records in 1968 and moved to the West Coast, where he inspired Robert Cray, Johnny Winter, and Janis Joplin. Collins reached the height of his powers with Chicago's Alligator Records in the 1980s, recording the Grammy Award-winning *Showdown* album with Cray and fellow Texan Johnny Copeland in 1985. He signed with Virgin Records in 1990 and recorded three more albums before his death from lung cancer.

Coltrane, John (1926-1967)

Saxophonist John Coltrane exerted a huge influence on the generation of jazz musicians that followed him. In fact, many view Trane, as he was known, as a kind of sacred leader. It is certain that he fostered trends in jazz, while developing those already present. While taking bop trends in harmonization to their ultimate logical conclusion with his stream-of-sound style in the 1950s, Coltrane also explored the simpler modal style as well as Free Jazz, which emphasized melodic development free from the confines of chordal progression. In common with other innovators, he never entirely abandoned the use of one style while moving toward another.

Coltrane was born in Hamlet, North Carolina, in 1926 and grew up in High Point, North Carolina, where his maternal grandfather was a preacher. His father was an established tailor and, thus, in common

John Coltrane

with many jazz musicians, Coltrane came from the black middle class. Both his parents were musical and he grew up in a musical environment. He was only 12 when his father died, but his mother kept the family together and provided him with economic and emotional stability. She moved to Philadelphia where jobs were more plentiful in the World War II economy but sent money home for his support. After graduating from high school in 1943, Coltrane joined his mother in Philadelphia, where he studied alto saxophone at the Orenstein School and made an impression with his seriousness, discipline, and eagerness. Drafted into the navy, he spent his service time playing in the navy band in Hawaii, and after his discharge he resumed his saxophone studies. Soon after, he played in a number of rhythm and blues bands, most notably that of Eddie “Cleanhead” Vinson. The spectacle of the serious Coltrane tossing horns to Vinson in a vaudeville setting is hard to imagine but that is what he did, and did well, according to contemporary accounts. Certainly, that rhythm and blues influence was always discernible in his playing and added depth to his ballad performances.

By the mid-1940s Trane was playing tenor saxophone, a switch originally made so as not to compete with Vinson. He listed Dexter Gordon as a major influence but also absorbed the work of many other musicians. Indeed, Coltrane listened to everyone and adapted elements from many that accorded with his own developing style. Unfortunately, Coltrane’s various addictions began to catch up with him at this time. He was an alcoholic, a heroin user, a heavy smoker, and was addicted to sweets—habits that caused the disruption of his personal and professional relationships and damaged his reputation. Eventually, he managed to kick all his habits except his sugar

addiction, which cost him his teeth. Having refused dental care, all his teeth ultimately decayed and had to be removed.

From 1949 to 1951 Coltrane played with Dizzy Gillespie’s band, and it is with them that he recorded his first solo. In 1951, he moved back to Philadelphia with his mother and resumed formal musical studies at the Graniff School of Music. In addition to studying saxophone, he studied theory with Dennis Sandole. Some critics have traced Coltrane’s fascination with bi-tonality and the use of scalar composition to this period in his career. In 1952 he resumed work with a rhythm and blues band, that of Earl Bostic who, interestingly, like Vinson, was primarily noted for his work on alto saxophone. Bostic’s R&B style was enormously popular in the early 1950s and Coltrane was once again exposed to large dance audiences and their emotional reactions to the music. Coltrane soon left Bostic to work with his early idol, Johnny Hodges. Hodges had left Duke Ellington’s band for a brief time to head his own band, one that has been underrated or forgotten over the years. In 1954 Hodges fired Trane because his heroin addiction had made him erratic and undependable.

Once more he returned to Philadelphia where he suffered from physical and emotional problems. In this period, he met Juanita Grubbs, known as Naima, and married her in 1955. He sorted out his problems to the extent that he was able to resume playing, and joined Miles Davis’s classic 1955 quintet. By this time, his style had incorporated elements of Charlie Parker and Coleman Hawkins. While Trane could play gorgeous melodic lines like Parker, in the 1950s he generally preferred to construct arpeggio-like vertical runs at breakneck speed. Alcohol and drug abuse, however, cost him his job with Miles Davis in 1957. Again, he returned to Philadelphia and his mother, but this time he determined to conquer his multiple addictions, locked himself in his room, and subsisted on water for some days. When he emerged he was ready to resume his life and work.

From this time on, he became fascinated by Eastern religions. Although he never practiced an Eastern faith, he studied the teachings and incorporated elements into his music as well as his personal philosophy. Open use of these elements, however, awaited the 1960s and its ethos. Meanwhile, later in 1957, Trane picked up his career with a stunning engagement with Thelonius Monk at the Five Spot in Manhattan. Working with Monk was worth more than all the theory courses combined. Coltrane perfected his sheets-of-sound style with Monk, while absorbing Monk’s unique approach to harmonic conception. Unfortunately, only one record of this fertile period has emerged, but it demonstrates just how vital the partnership was in Coltrane’s development.

When Sonny Rollins left Miles Davis, Coltrane returned. Davis showed some courage in bringing him back against the advice of many friends who considered Trane as too erratic and a man who should have left much of his performance in the practice room. His tone and style were not yet the models they soon became, but Coltrane played well on what is now regarded as one of the classic jazz albums of all time, 1959’s *Kind of Blue*. Record contracts soon followed, and Trane became the darling of the Hard Boppers, his sheets-of-sound period seeming a logical extension of the bop movement.

In 1960 Coltrane struck out on his own and explored different styles of playing. In his 1959 *Giant Steps* album he showed his ability to develop an older style while moving into a newer one. He developed his hard-bop soloing on some cuts while moving into poly-tonality and modal areas on others. His album *My Favorite Things* (1960) marked the return of the soprano saxophone to jazz. Although

many, notably Johnny Hodges, had used it over the years since Sidney Bechet had mastered it, no other major jazz exponent had really turned it into a popular jazz instrument on a regular basis. Trane openly acknowledged Bechet's influence on his soprano work. The instrument, he said, allowed him to play in the higher registers in which he heard music in his head. It also made his modal playing accessible to a larger audience. *My Favorite Things* made the top 40 charts and began Coltrane's career as a show business figure, commanding healthy fees and continuing to release soprano hits such as "Greensleeves."

Meanwhile he grew interested in Ornette Coleman's Free Jazz movement and released "The Invisible" with Don Cherry and Billy Higgins and "India" in 1961. This movement into free jazz, predictably, did not entail an abandonment of earlier styles. *A Love Supreme* (1964) is a modal album and sold 250,000 copies. Such sales resulted from the popular upsurge of interest in Eastern religions and mysticism during the 1960s, and the album was bought by many who had no idea of jazz but were attracted by the music's connections with mysticism. Even in the midst of his freest experiments, "Ascension" and "Expressions," when he recorded with Freddie Hubbard, Archie Shepp, Eric Dolphy, Pharoah Sanders, and Rashid Ali, Coltrane never totally abandoned his love of harmony and melody. He once performed with Thelonious Monk near the end of his life. When it was over, Monk asked Trane when he was going to come back to playing real music such as he had performed that day. Reputedly, Trane responded that he had gone about as far as he could with experimental music and missed harmonic jazz. He promised Monk that he would return to the mainstream.

Whether he was comforting an old friend or speaking his heart, nobody knows, but *Expressions* (1967) was his last recording and included elements from all his periods. Coltrane died at the top of his form when he passed away in 1967 at the age of 40. Though doctors said he died of liver cancer, his friends claimed that he had simply worn himself out. His creative flow had not dried up and it is reasonable to assume that, had he lived, he would have continued to explore new styles and techniques. As it was, he left a body of music that defined and shaped the shifting jazz styles of the period, as well as a reputation for difficult music and a dissipated lifestyle that confirmed the non-jazz lover's worst—and inaccurate—fears about the music and its decadent influence on American culture.

Columbo

Lieutenant Columbo, played by Peter Falk, remains the most original, best-written detective in television history. Other shows featuring private detectives (*The Rockford Files*) or policemen (*Hill Street Blues*) may contain more tongue-in-cheek humor or exciting action sequences, but when it comes to pure detection, brilliant plotting, and intricate clues, *Columbo* remains unsurpassed. Its uniqueness stems from the fact that it is one of the few "inverted" mysteries in television history. While other mysteries like *Murder, She Wrote* were whodunits, *Columbo* was a "how's-he-gonna-get-caught?" Whodunit was obvious because the audience witnessed the murder firsthand at the start of each episode—also making the show unique in that the star, Falk, was completely missing for the first quarter hour of most episodes. This inversion produced a more morally balanced universe; while the murderer in another show might spend 90 percent of its running time enjoying his freedom, only to be nabbed in the last few scenes, in *Columbo* the murderer's carefree lifestyle was short-lived, being replaced by a sick, sweaty angst as the rumpled detective moved closer and closer to the truth. The climatic twist at the end was merely the final nail in the coffin. The show was consistently riveting with no gunplay, no chase sequences, and virtually all dialogue. The inverted mystery is not new, having been devised by R. Austin Freeman for such books as *The Singing Bone*, but never has the form been better utilized.

Columbo sprang from the fertile minds of Richard Levinson and William Link, who met in junior high school and began writing mysteries together. They finally sold some to magazines, then to television, adapting one story they'd sold to *Alfred Hitchcock's Mystery Magazine* for television's *The Chevy Mystery Show*. When Bert Freed was selected to play the part of the detective in this mystery, called "Enough Rope," he became the first actor to play Lieutenant Columbo. Levinson later said the detective's fawning manner came from Petrovich in Dostoyevsky's *Crime and Punishment*, and his humbleness came from G. K. Chesterton's Father Brown. Deciding to dabble in theater, Levinson and Link adapted this story into the play *Prescription: Murder*, which opened in San Francisco starring Joseph Cotton, Agnes Moorehead, and Thomas Mitchell as Columbo. When made-for-TV movies became a popular form, the writers opened up their stagebound story to make it more cinematic, but they needed to cast a new actor as the detective because Mitchell had died since the play's closing. The authors wanted an older actor, suggesting Lee J. Cobb and Bing Crosby, but they were happy with Falk as the final choice once they saw his performance. The film aired in 1968 with Gene Barry as the murderer, and the show received excellent ratings and reviews. Three years later, when NBC was developing the *NBC Mystery Movie*, which was designed to have such series as *McCloud* and *McMillan and Wife* in rotation, the network asked Levinson and Link for a *Columbo* pilot. The writers thought that *Prescription: Murder* made a fine pilot, but the network wanted another—perhaps to make sure this "inverted" form was repeatable and sustainable—so "Ransom for a Dead Man" with Lee Grant as the murderer became the official pilot for the series. These two made-for-TV movies do not appear in syndication with the

series' other forty-three episodes, though they frequently appear on local stations.

NBC Mystery Movie premiered in September 1971, and the talent the show attracted was phenomenal. That very first episode, "Murder by the Book," was written by Steven Bochco (*Hill Street Blues*, *NYPD Blue*) and was directed by Steven Spielberg. The series also employed the directorial talents of Jonathan Demme, Ben Gazzara, Norman Lloyd, Hy Averback, Boris Sagal, and Falk himself, among others. Acting talents such as Ray Milland, Patrick McGoohan, John Cassavetes, Roddy McDowell, Laurence Harvey, Martin Landau, Ida Lupino, Martin Sheen, and Janet Leigh contributed greatly to the series, though what made it a true classic was Falk's Emmy-winning portrayal of the rumpled detective. The raincoat, the unseen wife, the dog named Dog, the ragtop Peugeot, the forgetfulness—much of this was in the writing, but Falk added a great deal and made it all distinctly his own. Levinson said, "We put in a servile quality, but Peter added the enormous politeness. He stuck in sirs and ma'ams all over the place." He said another of the lieutenant's quirks evolved from laziness on the writers' part. When writing the play *Prescription: Murder*, there was a scene that was too short, and Columbo had already made his exit. "We were too lazy to retype the scene, so we had him come back and say, "Oh, just one more thing." On the show, the disheveled, disorganized quality invariably put the murderers off their guard, and once their defenses were lowered, Columbo moved in for the kill. Much of the fun came from the show's subtle subversive attack on the American class system, with a working-class hero, totally out of his element, triumphing over the conceited, effete, wealthy murderer finally done in by his or her own hubris.

The final NBC episode aired in May 1978, when Falk tired of the series. Ten years later, Falk returned to the role when ABC revived *Columbo*, first in rotation and then as a series of specials, with at least twenty new episodes airing throughout the 1990s. Levinson and Link wrote other projects, and Falk played other roles, but as Levinson once said, referring to himself and Link, "If we're remembered for anything, it may say *Columbo* on our gravestones."

—Bob Sullivan

Columbo, Russ (1908-1934)

Russ Columbo was a popular romantic crooner of the 1920s and early 1930s. Often referred to as "Radio's Valentino," Columbo was so popular he was immortalized in a song of the day, "Crosby, Columbo, and Vallee." Born Ruggerio de Rudolpho Columbo, he

became a concert violinist, vocalist, songwriter, and bandleader. He wrote many popular songs, mainly with partner Con Conrad. One of his biggest hits also became his theme song, "You Call It Madness (But I Call it Love)."

Columbo appeared in a few films and had just signed with Universal Pictures for a series of musicals when he was tragically killed. While looking at the gun collection of friend Lansing Brown, one of the guns discharged, hitting Columbo in the eye. He died a short time later.

Comic Books

Comic books are an essential representation of twentieth-century American popular culture. They have entertained readers since the time of the Great Depression, indulging their audience in imaginary worlds born of childhood fantasies. Their function within American culture has been therapeutic, explanatory, and commercial. By appealing to the tastes of adolescents and incorporating real-world concerns into fantasy narratives, comic books have offered their impressionable readers a means for developing self-identification within the context of American popular culture. In the process, they have worked ultimately to integrate young people into an expanding consumer society, wherein fantasy and reality seem increasingly linked.

With their consistent presence on the fringes of the immense American entertainment industry, comic books have historically been a filter and repository for values communicated to and from below. Fashioned for a mostly adolescent audience by individuals often little older than their readers, comic books have not been obliged to meet the critical and aesthetic criteria of respectability reserved for works aimed at older consumers (including newspaper comic strips). Neither have comic books generally been subject to the sort of intrinsic censorship affecting the production of expensive advertising and investment-driven entertainment projects. Consequently, comic books have often indulged in outrageous situations and images more fantastic, grotesque, and absurd than those found elsewhere in American mass culture. These delightfully twisted qualities have always been central to the comic book's appeal.

Comic books first emerged as a discrete entertainment medium in 1933, when two sales employees at the Eastern Color Printing Company, Max C. Gaines and Harry I. Wildenberg, launched an entrepreneurial venture whereby they packaged, reduced and reprinted newspaper comic strips into tabloid-sized magazines to be sold to manufacturers who could use them as advertising premiums and giveaways. These proved so successful that Gaines decided to put a ten-cent price tag on the comic magazines and distribute them directly to newsstands. The first of these was *Famous Funnies*, printed by Eastern Color and distributed by Dell Publications. Other publishers soon entered the emerging comic-book field with similar products. In 1935 a pulp-magazine writer named Malcolm Wheeler-Nicholson began publishing the first comic books to feature original material. A

few years later, his company was bought out by executives of the Independent News Company who expanded the operation's line and circulation. In 1937 they launched *Detective Comics*, the first comic book to feature adventure stories derived more from pulp magazines and "B" movies than from newspaper "funnies." The company later became known by the logo DC—the initials of its flagship title.

By 1938 an embryonic comic-book industry existed, comprising a half-dozen or so publishers supplied by several comic-art studios all based in the New York City area. That same year, the industry found its first original comic-book "star" in Superman. The creation of two teenagers named Jerry Siegel and Joe Shuster, Superman's adventures pointed to the fantastic potential of comic books. Because their content was limited only by the imagination and skill of the writers and artists who crafted them, comic books could deal in flights of fantasy unworkable in other visual entertainment media. As an instant commercial success, Superman prompted a succession of costumed superhero competitors who vied for the nickels and dimes of not-too-discerning young consumers. Comic-book characters like DC's Batman, Wonder Woman, and Green Lantern; Marvel Comics' Captain America, and Fawcett Publications' Captain Marvel all defined what comic-book historians and collectors term the "Golden Age" of comic books. Although comic books would later embrace a variety of genres, including war, western, romance, crime, horror, and humor, they have always been most closely identified with the costumed superheroes who made the medium a viable entertainment industry.

Creating most of these early comic books was a coterie that was overwhelmingly urban, under-thirty, lower middle class, and male. They initially conceived Depression-era stories that aligned superheroes on the side of the poor and the powerless against a conspiracy of corrupt political bosses, greedy stockbrokers, and foreign tyrants. As the nation drifted towards World War II, comic books became increasingly preoccupied with the threat posed by the Axis powers. Some pointed to the danger as early as 1939—well ahead of the rest of the nation. Throughout the war, comic books generally urged a united national front and endorsed patriotic slogans derived from official U.S. war objectives. Many eviscerated the enemy in malicious and often, in the case of the Japanese, racist stereotypes that played to the emotions and fears of their wartime audience, which included servicemen as well as children. At least a few publishers, most notably DC Comics, also used the occasion of the war against fascism to call for racial and ethnic tolerance on the American home front.

The war years were a boom time for the comic-book industry. It was not uncommon for a single monthly issue to sell in excess of 500,000 copies. The most popular comic books featuring Superman, Batman, Captain Marvel, and the Walt Disney cartoon characters often sold over one million copies per issue. When the war ended, however, sales of most superhero comic books plummeted and the industry lost its unity of purpose. Some publishers, like Archie Comics, carved out a niche for themselves with innocuous humor titles that enjoyed a certain timeless appeal for young children. But as other publishers scrambled for new ways to recapture the interest of adolescent and adult readers, some turned to formulas of an increasingly controversial nature. Many began to indulge their audience in a seedy underworld of sex, crime, and violence of a sort rarely seen in other visual entertainment. These comic books earned the industry legions of new readers and critics alike. Young consumers seemed to have a disturbing taste for comic books like *Crime Does Not Pay* that dramatized—or, as many would charge, glorified—in graphic detail the violent lives of criminals and the degradation of the American dream. Parents, educators, professionals, and politicians reacted to

these comic books with remarkable outrage. Police organizations, civic groups, and women's clubs launched a grassroots campaign at the local and state levels to curb or ban the sale and distribution of objectionable comic books. Only a few years after the end of its participation in a world war, the comic-book industry found itself engaged in a new conflict—a cultural war for the hearts and minds of the postwar generation.

As the Cold War intensified, comic-book makers responded by addressing national concerns at home and abroad, while hoping to improve their public image in the process. Romance comic books instructed young females on the vital qualities of domesticity and became, for a time in the late 1940s and early 1950s, the industry's top-selling genre. War comic books produced during the Korean War underscored the domestic and global threat of Communism. But, as part of the industry's trend toward more realistic stories, many of these also illustrated the ambivalence and frustration of confronting an elusive enemy in a war waged for lofty ideals with limited means.

Neither the subject matter of romance nor war could, in any case, deflect the mounting public criticism directed at comic books. Throughout the postwar decade comic-book makers found themselves confronted by a curious alliance of liberals and conservatives who feared that forms of mass culture were undermining—even replacing—parents, teachers, and religious leaders as the source of moral authority in children's lives. As young people acquired an unprecedented degree of purchasing power in the booming economy, they had more money to spend on comic books. This in turn led to more comic book publishers trying to attract young consumers with increasingly sensational material. Thus, in an irony of postwar culture, the national affluence so celebrated by the defenders of American ideals became perhaps the most important factor accounting for the existence and character of the most controversial comic books.

The most outrageous consequence of the keen competition among publishers was the proliferation of horror comic books. Popular and widely imitated titles like EC Comics' *Tales From the Crypt* celebrated murder, gore, and the disintegration of the American family with a willful abandon that raised serious questions about the increasing freedom and power of mass culture. At the vanguard of the rejuvenated forces aligned against comic books was a psychiatrist and self-proclaimed expert on child behavior named Dr. Fredric Wertham. His 1954 book *Seduction of the Innocent* set forth a litany of charges against comic books, the most shocking and controversial being that they contributed to juvenile delinquency. Such allegations led to a 1954 U.S. Senate investigation into the comic-book industry. Comic-book publishers surrendered to the criticism by publicly adopting an extremely restrictive self-censoring code of standards enforced by an office called the Comics Code Authority. By forbidding much of what had made comic books appealing to adolescents and young adults, the Comics Code effectively placed comic books on a childlike level. At a time when publishers faced stiff competition from television, and rock'n'roll emerged as the new preeminent expression of rebellious youth culture, the Code-approved comic books lost readers by the score.

By the start of the 1960s the industry showed signs of recovery. DC Comics led the resurgence by reviving and revamping some of its popular superheroes from the 1940s including the Flash, the Green Lantern, and the Justice League of America. These characters marked the industry's return to the superhero characters that had made it so successful in the beginning. But the pristine, controlled, and rather stiff DC superheroes proved vulnerable to the challenge posed by Marvel Comics. Under the editorial direction of Stan Lee, in collaboration with artists Jack Kirby and Steve Ditko, Marvel launched a

series of new titles featuring superheroes “flawed” with undesirable but endearing human foibles like confusion, insecurity, and alienation. Marvel superheroes like the Fantastic Four, the Incredible Hulk, Spider-Man, the Silver Surfer, and the X-Men found a large and loyal audience among children, adolescents, and even adults drawn to the anti-establishment and clever mythical qualities of the Marvel comic books.

During the late 1960s a new wave of “underground” comic books, sometimes called “comix,” emerged as an alternative to the mainstream epitomized by DC and Marvel. These underground comics flourished despite severely limited exposure, and were usually confined to counterculture audiences. With unrestrained subject matter that celebrated drugs, violence, and especially sex, these publications shared more in common with the avant-garde movement and adult magazines than they did with most people’s conception of comic books. Artists like Robert Crumb, Rick Griffin, and Art Spiegelman later found some mainstream success and fame (with *Fritz the Cat*, *Zippy the Pinhead*, and *Maus*, respectively) after getting their start in underground comix. And independent comic books inspired by the underground comix movement continue to enjoy some popularity and sales through comic-book stores throughout the 1980s and 1990s.

Since the 1960s, however, the comic-book industry has been dominated by the superheroes of publishing giants Marvel and DC. Successive generations of comic-book creators have come to the industry as fans, evincing a genuine affection and respect for comic books that was uncommon among their predecessors, most of whom aspired to write or illustrate for other media. During the late 1960s and early 1970s these creators used comic books to comment upon the most pressing concerns of their generation. Consequently, a number of comic books like *The Amazing Spider-Man*, *The Green Lantern*, and *Captain America* posed a moderate challenge to the “Establishment” and took up such liberal political causes as the civil rights movement, feminism, and opposition to the Vietnam War.

Aware of the country’s changing political mood, publishers in 1971 liberalized the Comics Code, making it easier for comic books to reflect contemporary society. Comic-book makers initially took advantage of this new creative latitude to launch a number of ambitious and often self-indulgent efforts to advance mainstream comic books as a literary art form. While many of these new 1970s comic books were quite innovative, nearly all of them failed commercially. Nevertheless, they indicated the increasing willingness of the major publishers to encourage writers and artists to experiment with new ideas and concepts.

As the 1970s drew to a close, the comic-book industry faced some serious distribution problems. Traditional retail outlets like newsstands and “mom-and-pop” stores either disappeared or refused to stock comic books because of their low profit potential. Since the early 1980s, however, comic books have been distributed and sold increasingly through specialty comic-book stores. Publishers earned greater profits than ever before by raising the cost of their comic books, distributing them to these outlets on a non-returnable basis, and targeting the loyal fan audience over casual mainstream readers.

The most popular comic books of the past few decades indicate the extent to which alienation has become the preeminent theme in this medium of youth culture. In the early 1980s, a young writer-artist named Frank Miller brought his highly individualistic style to Marvel’s *Daredevil*, *the Man without Fear* and converted it from a second-tier title to one of the most innovative and popular in the field. Miller’s explorations of the darker qualities that make a superhero

inspired others to delve into the disturbing psychological motivations of the costumed vigilantes who had populated comic books since the beginning. Miller’s most celebrated revisionism in this vein came in the 1986 “graphic novel” *Batman: The Dark Knight Returns*. Such revisionism in fact became the most common formula of recent comic books. Besides such stalwarts as Spider-Man and Batman, the best-selling superheroes of the 1980s and 1990s included the X-Men, the Punisher, the Ghost Rider, and Spawn. All featured brooding, obsessive, alienated antiheroes prone to outbursts of terrifying violence. This blurring of the lines between what makes a hero and a villain in comic books testifies to the cynicism about heroes generally in contemporary popular culture and to the eagerness of comic-book publishers to tap into the adolescent disorientation and anxieties that have, to some degree, always determined the appeal of comic-book fantasies.

Although comic books remained popular and profitable throughout the 1990s, the major publishers faced some formidable crises. The most obvious of these was the shrinking audience for their product. Comic-book sales peaked in the early 1990s before falling sharply in the middle years of the decade. Declining fan interest was, in part, a backlash against the major publishers’ increasing tendency to issue drawn-out “cross-over” series that compelled readers to buy multiple issues of different titles in order to make sense of convoluted plots. Many other jaded buyers were undoubtedly priced out of the comic-book market by cover prices commonly over \$2.50. Special “collector’s editions” and graphic novels frequently sold at prices over \$5.00. Most troubling for comic-book makers, however, is the threat that their product may become irrelevant in an increasingly crowded entertainment industry encompassing cable TV, video games, and internet pastimes aimed directly at the youth market. Retaining and building their audience in this context is a serious challenge that will preoccupy creators and publishers as the comic-book industry enters the twenty-first century.

Comics

Comic strips and comic books have been two mainstays of American culture during the entire twentieth century. Comic strips

rapidly became a defining feature of modern American culture after their introduction to newspapers across the nation in the first ten years of the twentieth century. Likewise comic books captured the imagination of many Americans in the late 1930s and early 1940s, particularly after the appearance of costumed heroes such as Superman, Batman, and Captain Marvel. From the beginning, comics produced distinct, easily recognized characters whose images could be licensed for other uses. Comic characters united entertainment and commerce in ways that became ubiquitous in American culture.

Although the origin of comic strips is generally traced to the first appearance of the Yellow Kid—so named because the printers chose his nightshirt to experiment with yellow ink—in the *New York World* in 1895, the antecedents of comics are somewhat more complex. When the *World* began a Sunday humor supplement in 1889, it did so to attract the audience of American illustrated humor magazines such as *Puck*, *Judge*, and *Life*. These magazines had drawn on European traditions of broadsheets, satirical prints, comic albums, and journals such as *Fliegende Blätter*, *Charivari*, and *Punch* to create a sharp-edged American style of satirical visual humor. The appearance of the Yellow Kid—in the *Hogan's Alley* series—was not a particularly startling moment but rather grew out of an international and local tradition of illustrated humor. What set the Yellow Kid apart from previous versions of the city urchin genre of illustrated humor were his distinct features and regular appearance in large-scale comic panels.

In October 1896 William Randolph Hearst launched a humor supplement to the Sunday edition of his *New York Journal* and contracted the services of Richard Outcault, the Yellow Kid's creator. In addition, the *Journal* employed Rudolph Dirks and Frederick Opper. Although the Yellow Kid established the importance in comic art of a regularly appearing, distinctive character, Outcault did not use with any regularity two other important features of modern comics—sequential panels and word balloons, both of which had been used for centuries in European and American graphic art. Dirks and Opper introduced and developed these features in the pages of the *Journal*. Between December 1897 and March 1901 Dirks's *Katzenjammer Kids* and Opper's *Happy Hooligan* brought together the essential features of modern comics: a regular, distinctive character or cast of characters appearing in a mass medium, the use of sequential panels to establish narrative, and the use of word balloons to convey dialogue. More often than not Dirks's and Opper's strips used twelve panels on a broadsheet page to deliver a gag.

Between 1900-03 newspaper owners and syndicates licensed comic strips and supplements to newspapers across the country. This expansion was tied to broader developments in American culture including the establishment of national markets and ongoing developments in communication and transportation. Comic supplements were circulation builders for newspapers, and by 1908 some 75 percent of newspapers with Sunday editions had a comics supplement. For most newspapers the introduction of a comic supplement saw a rise in sales. The development of daily comic strips, which started with Bud Fischer's *Mutt and Jeff*, first published in November 1907 in the *San Francisco Chronicle*, added another dimension to the medium. In 1908 only five papers ran daily comic strips; five years later at least ninety-four papers across the country ran daily strips. By 1913 newspapers had also begun to group their daily strips on a single page. In a relatively short space of time comic strips moved from being something new to being a cultural artifact. *Comic Strips and Consumer Culture, 1890-1945* quotes surveys showing that by 1924 at least 55 percent and as high as 82 percent of all children regularly read comic strips. Likewise it showed that surveys by George Gallup

and others in the 1930s revealed that the mean average adult readership of comic strips was 75 percent.

The daily comic strip's four or five panels and black-and-white format as opposed to the Sunday comics' twelve color panels was the first of many thematic and aesthetic innovations that fed the popularity of strips. An important development in this process was the blossoming of the continuity strip. Comics historian Robert Harvey has argued that Joseph Patterson, the proprietor of the *Chicago Tribune* and the *New York Daily News*, was instrumental in establishing continuing story lines in comic strips through his development and promotion of Sidney Smith's *The Gumps*, a comic strip equivalent of a soap opera with more than a hint of satire. The continuity strip gave rise to adventure strips such as *Wash Tubbs* and *Little Orphan Annie*, which in turn led to the emergence of science fiction strips like *Buck Rogers* and *Flash Gordon*. Even gag strips such as the working girl strip *Winnie Winkle* adopted continuous story lines for extended periods. The continuity strips led to comic art styles less caricatured in appearance, which for want of a better expression might be dubbed realistic strips, although the story content remained fanciful. No one style of strip ever came to dominate the comics pages, where gags strips, adventure strips, and realistic strips still appear side by side.

From the start, the existence of distinctive characters in comics had offered commercial possibilities beyond the pages of newspapers. The image of the Yellow Kid was used to sell cigars, crackers, and ladies' fans, to name but a few of his appearances. Theater producer Gus Hill staged a musical around the Kid in 1898 and continued to produce comic-strip-themed musicals into the 1920s. Doll manufacturers likewise produced comic strip character dolls. Buster Brown gave his name to shoes, clothing, and a host of other products including pianos and bread. The Yellow Kid's adventures had been reprinted in book form as early as 1897, and throughout the first two decades of the twentieth century publishers such as Cupples and Leon, and F. A. Stokes issued book compilations of popular comic strips. In the early 1930s the commercial dimensions of comic strips were expanded further when advertising executives realized that the mass readership of strips meant that the art form could be used in advertising to draw consumers to a product through entertainment. In 1933, following this strategy, the Eastern Color Printing Company sold a number of companies on the idea of reprinting comic strips in "books" and giving them away as advertising premiums.

After producing several of these advertising premium comic books, Eastern published *Famous Funnies* in 1934, a sixty-four-page comic book of reprinted strips priced at ten cents. Although the company lost money on the first issue, it soon showed a profit by selling advertising space in the comic book. Pulp writer Major Malcolm Wheeler-Nicholson saw an opportunity and joined the fledgling industry with his all-original *New Fun* comic book in February 1935. Wheeler-Nicholson's limited financial resources necessitated a partnership with his distributor, the Independent News Company, run by Harry Donenfeld and Jack Liebowitz, and the three formed a partnership to launch *Detective Comics* in 1937. By 1938 Donenfeld and Liebowitz had eased Wheeler-Nicholson out of the company. Shortly thereafter the two decided to publish a new title, *Action Comics*, and obtained a strip for the first issue that M. C. Gaines at the McClure Syndicate had rejected. Superman by Jerry Siegel and Joe Shuster appeared on the cover of the first issue dated June 1938. The initial print run was two hundred thousand copies. By 1941, *Action Comics* sold on average nine hundred thousand copies.

The company followed this success with the first appearance of Batman in *Detective Comics* in May 1939.

The success of Superman and DC Comics, as the company was now known, led other comic book companies to introduce costumed heroes in the late 1930s and early 1940s including All American's (DC's sister company) Wonder Woman and The Flash; Timely's (later Marvel) Captain America, the Human Torch, and the Submariner; and Fawcett's Captain Marvel. Comic book sales increased dramatically and, according to Coulton Waugh, by 1942 12.5 million were sold monthly. Historians such as Ron Goulart have attributed the boom in superhero comic books to Depression-era searches for strong leadership and quick solutions, and the cultural and social disruption brought on by World War II. Moreover, comic books often served as a symbol of America for servicemen overseas who read and amassed them in large numbers.

America's entry into the war also derailed a campaign against comics begun by Sterling North, the literary editor of the *Chicago Daily News*. In 1947 the sales of comic books reached sixty million a month, and they seemed beyond attempts at censorship and curtailing their spread. But in 1948 a New York psychiatrist, Fredric Wertham, began a campaign that led eventually to a Senate investigation on the nature of comic books and the industry's establishing a Comics Code in a successful attempt to avoid formal regulation through self-censorship. Wertham's 1954 book *Seduction of the Innocent* was the culmination of his attempts to mobilize public sentiment against the danger that he believed comic books posed to children's mental health. Wertham's ideas were picked up by the Senate Subcommittee on Juvenile Delinquency and its prime mover Senator Estes Kefauver. A prime target of the subcommittee's hearings was William M. Gaines, the publisher of EC Comics, which had begun a line of horror comics in 1950. Wertham's attack and the introduction of the Comics Code are often blamed for the demise of a "Golden Age" of comics, but historian Amy Nyberg argues that only EC suffered directly, and other factors such as changes in distribution and the impact of television account for the downturn in comic book publishing.

Whatever the impact of Wertham, the comic book industry shrugged it off relatively quickly. In 1956 DC relaunched its character The Flash, which began a resurrection of superhero comic books. In 1960 DC published the *Justice League of America*, featuring a team of superheroes. According to Les Daniels, the good sales of this book prompted DC's competitor to develop its own team of heroes, and in 1961 Stan Lee and Jack Kirby's *Fantastic Four* appeared under the Marvel imprint. The resulting boom in superhero comics, which saw the debut of Spiderman and the Uncanny X-Men, is referred to by fans as the Silver Age of comics. In the late 1950s and 1960s these fans were particularly important in shaping the direction of comic books and comics history. These fans were interested in comic art and story construction rather than simply the entertainment value of the comic books. That many of these fans were young adults had important ramifications for the future direction of comic books. Likewise, their focus on superheroes meant that these comic books have been accorded the most attention, and books from publishers such as Harvey, Dell, and Archie Comics figure little in many discussions of comic book history because their content is held to be insignificant, at least to young adults.

Perhaps the first publisher to recognize that comic books directed specifically at an older audience would sell was William M. Gaines. When Wertham's campaign put an end to his horror line of comics, Gaines focused his attention on converting the satirical comic book *Mad* into a magazine. *Mad's* parodies of American culture

influenced many young would-be artists. In the late 1960s a number of these artists, including Robert Crumb, S. Clay Wilson, and Gilbert Shelton, began publishing underground comics, or comix, which, as the x designated, transgressed every notion of social normality. Nonetheless, the artists demonstrated a close familiarity with the graphic and narrative conventions of comic art. Discussing these comix, Joseph Witek has suggested that they should be seen as part of the mainstream of American comic history not least of all because comix helped transform comic book content and the structure of the industry.

A major shift in the industry occurred in the late 1970s and early 1980s when entrepreneurs following the example of the undergrounds set up specialist comic shops, comic book distribution companies, and their own comic book publishing companies in which artists retained ownership of their characters. These changes led to more adult-oriented comics at the smaller companies and at the two industry giants, DC and Marvel, which between them accounted for about 75 percent of the market in 1993. DC and Marvel also responded to changes in the industry by giving their artists more leeway on certain projects and a share in profits from characters they created. These changes took place during a boom time for the industry with the trade paper Comic Buyer's Guide estimating increases in comic book sales from approximately \$125 million in 1986 to \$400 million in 1992.

This comic book boom was related to the synergies created by the media corporations that owned the major comic book companies. DC had been acquired by Warner in the 1960s for its licensing potential. In 1989 Warner's Batman movie heated up the market for comic books and comic-book-related merchandise. DC, Marvel, the comic book stores, and distributors promoted comics as collectibles, and many people bought comics as an investment. When the collectibility bubble burst in the mid 1990s the industry encountered a downturn in which Marvel wound up bankrupt. Marvel's difficulties point to the necessity of large comic book companies diversifying their characters appearances along the lines of the DC-Warner endeavor. On August 29, 1998, the *Los Angeles Times* reported in some detail the frustrations Marvel had experienced over thirteen years in trying to bring Spiderman to the screen.

As the century draws to a close the art form remains strong in both its comic strip and comic book incarnations. The development of the Internet-based World Wide Web has seen the art delivered in a new fashion where strips can be read and related merchandise ordered on-line. At the close of the twentieth century, then, the essential feature of comics remains its distinctive characters who unite entertainment and commerce.

Comics Code Authority

When the Comics Code was drafted in 1954, it was touted by its creators as "the most stringent code in existence for any communications media." It certainly created a fervor, and sparked heated debate about the role of comic books and what they could and should do. The Comics Code Authority, however, was quick to diminish as a censoring body, challenge after challenge reducing it to relative powerlessness. Still, the Code, along with the events leading up to it, had made its impact, not only changing the direction and aesthetics of American comic books, but also affecting this artistic form internationally. Conventions were shaped, as artists endeavored to tell their stories within the Code's restrictions. Meanwhile, working outside of the Code, some artists took special care to flout such circumscription.

Although many factors may be considered in the establishment of the Code, the most widely discussed has been psychiatrist Frederic Wertham's book, *Seduction of the Innocent*, which, in a scathing attack on comic books, claimed that reading comics could lead to juvenile delinquency. The book reproduced isolated panels from several comics and argued that such scenes had a negative impact on the psychology of children. Although some psychologists argued against Wertham's claims, the book was generally well received, becoming a best-seller and creating a furor over the supposed insidiousness of the comic book industry. The release of the book was followed by hearings—commonly referred to as the Kefauver Hearings after presiding senator Estes Kefauver—before the Senate subcommittee on delinquency. Called to testify, Wertham continued his attack on comic books, concluding "I think Hitler was a beginner

compared to the comic book industry." William Gaines, publisher of the much-maligned EC line of comics, argued that these comics were not intended for young children and should not be subjected to protective censorship. Still he found himself forced into a defense not of comics as an expressive art form, but of what constituted "good taste" in a horror comic.

After all was said and done, however, it was not from the outside that the code was imposed, but rather from within the industry itself. The Comic Magazine Association of America (CMAA) was formed on October 26, 1954 by a majority of publishers, in an effort to head off more controversy and to resuscitate declining sales figures. The CMAA served as a self-censoring body, creating a restrictive code forbidding much violence and sexual content as well as anti-authoritarian sentiment, and even limiting the use of specific words like "crime," "terror," or "horror" on comic book covers. Publishers were now obliged to submit their comics for review by the Comics Code Authority (CCA). Approved magazines were granted the cover seal stating, "Approved by the Comics Code Authority." Publishers that failed to meet Code restrictions or that declined to have their books reviewed by the CCA found their distribution cut off as retailers declined to carry unapproved books. Such publishers eventually either submitted to the Code or went out of business. Notably, Wertham had been in favor of restrictions that would keep certain comics out of the hands of children, but he was troubled by what he saw in Code-approved books, which he often found no less harmful than the pre-Code comics.

Two companies, Dell and Gilberton, already regarded as publishers of wholesome comics such as the Disney and Classics Illustrated titles, remained exempt from the Code. Other publishers worked around the Code. Some resorted to publishing comics in magazine format to avoid restrictions. Given the virtual elimination of crime and horror comics, several publishers began to place more emphasis on their superhero books, in which the violence was bigger than life and far from the graphically realistic portrayals in crime and horror comics. It was during these ensuing years that superheroes came to dominate the form and that DC and Marvel Comics came to command the marketplace.

In the 1960s a very different response to the Code manifested itself in the form of underground comics. These independently-produced comic books included graphic depictions of sex, violence, drug use—in short, anything that the code prohibited. Moreover, these comics often paid tribute to pre-Code books and raged against the very censoring agents that had led to their demise.

The first overt challenge to the Code came from Marvel Comics in 1971. Although the Code explicitly prohibited mention of drugs, writer/editor-in-chief Stan Lee, at the request of the Department of Health Education and Welfare, produced a three-issue anti-drug story line in *Amazing Spider-Man*. Despite being released without the code, these comics were distributed and sold wonderfully, aided by national press. It was with this publication that the Code finally changed, loosening up slightly on its restrictions regarding drugs and clothing to reflect a change in times. Still, most of the restrictions remained largely intact.

The power of the CCA was still further reduced with the rise of direct distribution. Shops devoted to selling only comic books, which received their comics directly from publishers or, later, comic distributors, rather than general news distributors began to spring up during the 1970s. With this new system, the vigilance against non-Code books was bypassed. The new marketplace allowed major publishers to experiment with comics geared towards an adult

readership, and allowed more adventurous small publishers to distribute their wares. The way was paved for major “independent” publishers, like Image and Dark Horse, who refused to submit to the CCA’s restrictions.

Although the CCA has but a shadow of its former power over the industry, and although the Code itself has been criticized—even from within the CMAA—as an ineffectual dinosaur, there can be no question of its impact. The comics industry, both economically and aesthetically, owes a great deal to the Comics Code Authority, having been shaped variously by accommodation and antagonism.

Coming Out

Since the 1960s, the expression “coming out”—once reserved for young debutantes making their entrée into society—has been subverted to mean “coming out of the closet,” announcing publicly that one is gay or lesbian. The phrase is ordinarily used in proclaiming one’s identity to a broader public, though it can also mean acknowledging one’s sexual orientation to oneself, or even refer to the first time one acts on that knowledge.

Coming out as a subverted assertion originated in the early twentieth century among the drag “debutante” balls, which were popular social events in the American Southeast, especially among African Americans. Drag queens were presented at these balls, just as young heterosexual women came out at their own events. It was only later, in the 1950s ambiance that placed a premium on hiding the abnormal and atypical, that the connotation of coming out of a dark closet was added, perhaps because of the expression “skeleton in the closet,” i.e., a guilty secret.

In the post-Stonewall days of gay liberation, many younger gay men and lesbians believed that repressing their sexual identities was unhealthy, a stance supported by a growing body of psychological evidence and that reflected the loosening of strict gender demarcations in American society. From the 1970s, aspects of gay culture that had once been secret became widely known for the first time: Straight culture picked up the term “coming out” and began to broaden its meaning. In the tell-all society that emerged in the U.S. after the 1970s, people came out on talk shows and in tabloid confessions as manic-depressives, as neatniks, as witches, and other unexpected forms of identification, some lighthearted, some deeply serious. Even within the gay and lesbian community, the usage has expanded as people came out as everything from bisexuals and transgendered folk to sado-masochists and born-again Christians.

Another related term, “outing,” emerged in the late 1980s as the opposite of the voluntary confession that had by then achieved generally favorable connotations. Some gay activists, angered when some public and successful gay person insisted on remaining in the closet, deemed it a political necessity to reveal that closeted figure’s

identity, especially when his or her public pronouncements were at odds with private behavior. The practice divided the gay and lesbian community, with more radical voices arguing that outing was mere justice, while others holding it to be the ultimate violation of privacy. Outing has also been practiced by vindictive or well-meaning straight people, or by the media, as was the case with lesbian activist Chastity Bono.

Activists have long insisted that much of the oppression gays experience would be diffused if all homosexual people came out publicly. The first National Coming Out Day was declared on October 11, 1988, the first anniversary of the second gay and lesbian March on Washington, D.C. Hoping to maintain some of the spirit of hope and power engendered by the march, organizers encouraged gays to come out of the closet to at least one person on that day. Some organizations have even distributed printed cards for gays to give to bank tellers and store clerks announcing that they have just served a gay client.

Perhaps it is because American society has grown so fond of intimate revelation that the term “coming out” has gained such popularity. Once it was an “in-crowd” phrase among lesbians and gays, who chortled knowingly when the good witch in *The Wizard of Oz* sang, “Come out, come out, wherever you are.” With book titles like Lynn Robinson’s *Coming Out of the Psychic Closet*, and Martin Liberman’s *Coming Out Conservative*, coming out has gone beyond sexual identity to include any form of self-revelation.

The Commodores

The Lionel Richie-led soul band the Commodores, whose career peaked in the late 1970s before Richie left for solo fame, is a prime example of an R & B crossover success. Beginning as an opening act during the early 1970s for The Jackson Five, the southern-based Commodores released a handful of gritty funk albums before slowly phasing into ballad-oriented material, which gained them the most commercial success. As their audience transformed from being largely black to largely white, the Commodores’ sound changed as well, moving toward the smooth lightness of songs like “Still,” “Three Times a Lady,” and “Easy.”

Formed in 1968 in Tuskegee, Alabama, the group—Lionel Richie on vocals and piano, Walter “Clyde” Orange on drums, Milan Williams on keyboards and guitar, Ronald LaPread on bass and trumpet, Thomas McClary on guitar, and William King Jr. playing a variety of brass instruments—was signed to Motown in the early 1970s. Avoiding Motown’s assembly-line mode of music production—which included in-house songwriters, musicians, and producers to help create “the Motown sound”—this self-contained group of

The Commodores

talented musicians and songwriters remained relatively autonomous. They maintained their gritty southern-fried funk sound over the course of three albums: their 1974 debut, *Machine Gun*; 1975's *Caught in the Act*; and 1975's *Movin' On*. These three albums built the group a strong base of R & B fans with their consistently good up-tempo funk jams such as "Machine Gun" and "The Zoo (Human Zoo)," but they had not yet made the crossover move. *Hot on the Tracks* (1976) showed signs of this move with its slower cuts ("Just to Be Close to You" and "Sweet Love" are notable examples). Their big crossover move came with 1977's self-titled breakthrough album, which contained such party favorites as "Brick House" and "Slippery When Wet," as well as the adult- and urban-contemporary radio staple "Easy."

It was the massive success of "Easy" that signaled a new direction for the group and prompted a solo attempt by Richie (who, nonetheless, remained in the band for another four years). Next came the Top 40 hit "Three Times a Lady" from the 1978 album *Natural High* and the Billboard number one single, "Still," from 1979's *Midnight Magic* album—both of which continued the Commodores' transformation from a chitlin' circuit southern funk party band to background music for board meetings, housecleaning, and candle-lit dinners. *In the Pocket*, from 1981, was Richie's last album with the Commodores, and within a year he left to pursue a solo career.

Without Richie's songwriting (his songs would always be the Commodores' strength) and charisma, the group floundered through most of the 1980s, with the sole exception of their 1985 Top 40 hit single "Nightshift," for which album J. D. Nicholas assumed lead singing duties. The Commodores suffered another blow when producer/arranger James Anthony Carmichael, the man responsible for shaping the majority of the group's hits, followed Richie's departure in the early 1980s.

Richie went on to have a hugely successful solo career before virtually disappearing from the commercial landscape in the 1990s. Between 1981-87, he had thirteen Top Ten hits, which included a staggering five number one singles—"Endless Love," "Truly," "All Night Long," "Hello," and "Say You, Say Me."

Communes

Close, interdependent communities not based on family relationships, communes have a long history in the United States and continue to represent a strand of American culture and ideology that sanctions the search for a utopia of peace, love, and equality. Researcher Benjamin Zablocki defines a commune as a group of unrelated people who voluntarily elect to live together for an indefinite time period in order to achieve a sense of community that they feel is missing from mainstream American society. Most commonly associated with the hippie and flower child members of the 1960s and 1970s counterculture, communes have professed a variety of reasons for existence and can be politically, religiously, or socially based and exist in both rural and urban environments. Keith Melville has observed that commune members are linked by “a refusal to share the dominant assumptions that are the ideological underpinnings of Western society.” They are extremely critical of the status quo of the American consumer society in which they live, and they promote a new value system centered on peace and love, personal and sexual freedom, tolerance, and honesty. Members wish to begin living their

vision of a better society away from mainstream society and enjoy the support of their fellow believers.

Communes have existed throughout world history and in the United States since its founding in the seventeenth century. Famous nineteenth-century communes such as the Oneida and Shaker settlements consisted of mostly older, middle-class idealists who strongly believed in the possibility of creating their vision of the ideal society. They shared strong religious or political convictions and were more structured than their twentieth-century counterparts. Many of the later communes would carry on their utopian mission.

The immediate predecessors of the twentieth-century communal movement were the beatniks and African-American activists who fought for social changes that the communalists would later adopt in their created society in a desire to create a new ethics for a new age. While communes promoted rural, community, and natural values in an urban, individualistic, and artificial society, popular cultural images of communes depict isolated, run-down rural farms where barely clothed hippies enjoyed economic sharing and free love while spending most of their days in a drug-induced haze. The high visibility of the countercultural movement with which communes were associated made them a large component in the national debate

A commune in Lawrence, Kansas in 1972.

over the societal effects of the growth of “sex, drugs, and rock ’n’ roll. Commune members were predominantly young, white, middle-class males; and the communes tended to be smaller, unstructured, anarchistic, and more democratically governed than their predecessors. Most twentieth-century communes were not political in nature even though they were generally sympathetic to the left and politically oriented groups such as Students for a Democratic Society and the militant poor.

Famous twentieth-century communes ranged in location from the Farm in Tennessee to Drop City in Colorado and ranged in ideology from the secular Morning Star Ranch to the religious Hare Krishna communal farm. There were also a number of short-lived communal arrangements at the many rock festivals of the period, including the famous Hog Farm at Woodstock. Communes required a strong commitment to the group and a willingness to sacrifice some individual freedom for the group’s welfare. Twentieth-century communes proved to be very fragile, and most existed for only a year or two before internal disputes attributed to male chauvinism, lack of direction, and weak structure broke them apart. The communal movement has continued in relative obscurity since the 1960s and 1970s, and will thus continue to be associated with that time period and the countercultural movement.

Communes have had both positive and negative images in United States society and in popular culture. On the positive side, the nation has always professed to value the new and different, and in the late twentieth century has placed increasing emphasis on the toleration of dissent and diversity exemplified by the multicultural movement. The twentieth-century mass media favored communes as they sought the new and eccentric, good drama, and escapist entertainment. The popular media thus focused on the colorful and controversial aspects of the communal movement including its association with widespread drug use, free love, wild clothing and hair styles, and rock ’n’ roll music. Communes have also met with the strong negative attitudes of many members of mainstream society who favor the status quo and disagree with the communalists’ values or lifestyles. These people comprise the so-called “Establishment” from which the hippies wished to break away. Communal members have been harassed with zoning suits, refused admittance to businesses, spat at, threatened with violence, and attacked. The communal movement also experienced a backlash in the late twentieth century as many people lamented the disrespect and defiance of youth to their elders. The reactionary right wing of American politics used hippies and communalists as conveniently visible scapegoats for all the evils of modern American society. There are also communal links to certain late twentieth-century cults that have generated extremely negative publicity. These included Jim Jones’s followers, who committed mass suicide at Jonestown in the 1970s; Charles Manson’s murderous followers of the 1960s; the Branch Davidians led by David Koresh, who battled the FBI at Waco in the 1990s; and the Heaven’s Gate cult, whose mass suicide also received widespread coverage in the 1990s. Negative associations portray commune members as social deviants who threaten established society.

While communes face the problems of decreasing population and visibility in the late twentieth-century United States, they have not disappeared from the American scene. Communes remain prevalent in the smaller cities and college towns where a hip subculture flourishes. The value system of the hippie communes that slowly faded away in the late 1970s has had a large impact on twentieth-century society. Their legacy is evident in such American cultural phenomena as an increasing awareness of environmental issues, an

emphasis on the importance of health and nutrition, a rise in New Age spiritualism, and a rise in socially conscious businesses such as Ben and Jerry’s Ice Cream.

Communism

Originally outlined by Karl Marx and Friedrich Engels in *The Communist Manifesto* (1848), Communism is a social and political system in which all property is owned communally and all wealth distributed among citizens according to need. Although it was a product of large-scale industrialization in the nineteenth century, Communism has had a profound influence on the global politics and economics of the twentieth century. In the United States, Communism became popular among American industrial workers during the Depression, and played a more public role in politics during the 1930s. In the 1940s and during the Cold War, the treatment of Communist groups and individuals within the United States sometimes raised questions about the fairness not only of the American justice system, but of the Constitution itself.

Communism is most often associated with the revolution which took place in Russia in November 1917, and the establishment of the federalist Soviet Union (USSR) in 1922. Its first leader was Vladimir Ilich Lenin, whose version of Marxism, known as Marxism-Leninism, became the dominant political and economic theory for communist groups the world over. Under Joseph Stalin after World War II, the USSR succeeded in gaining military and political control over much of Eastern Europe, placing it in direct opposition to the capitalist economies of the United States and Western Europe. When Stalin died in 1953, many of his more brutal policies were renounced by the new regime; but Communism had become a byword for threats to personal freedom and for imperialist aggression. A climate of distrust between the USSR and Western governments, backed by the threat of global nuclear war, prevailed until the late 1980s.

The history of Communism in the United States begins long before the Cold War, however. Left-wing activists and socialist parties had been at work from before the beginning of the century, but communist parties first appeared in the United States in 1919, partly in response to the political developments in Russia. Communism has

unsettled American governments from the beginning, and after a series of raids sanctioned by the Attorney General in 1919, left-wing organizations were forced to become more secretive. It was another ten years before the parties merged to form the Communist Party of the United States of America (CPUSA). The CPUSA's goal of regaining support from union members was certainly helped by the onset of the Depression, and Communism was popular among those who suffered most, such as African American workers and Eastern European immigrants.

Despite dire warnings from the political right, and although large crowds turned out for rallies against unemployment, communists remained a small faction within the trade union movement, and thus were isolated in politics. Only in the 1930s, bravely fielding a black vice-presidential candidate in 1932, opposing fascism in Europe, and openly supporting Roosevelt in some of his New Deal policies, did the CPUSA gain credibility with significant numbers of American voters. Besides industrial workers and the unemployed, communist or socialist principles also proved attractive to America's intelligentsia. Writers such as Theodore Dreiser, Sherwood Anderson, and John Dos Passos all declared themselves as Communist Party voters in 1932, while the radical playwrights Clifford Odets and Lillian Hellman were among many left-wing intellectuals to emerge from 1920s literary New York to work in Hollywood.

In 1940, the Smith Act made membership in revolutionary parties and organizations whose aim was to overthrow the U.S. government illegal, and in 1950, under the McCarran Act, communists had to register with the U.S. Department of Justice. In the same period, Senator Joseph McCarthy began Senate investigations into communists in government, and the House Un-American Activities Committee (HUAC) challenged the political views of individuals in other areas. Many prominent people in government, the arts, and science were denounced to HUAC as dangerous revolutionaries. Because of the moral tone of the investigations and the presentation of Communism as "Un-American," many promising careers ended through mere association with individuals called to explain themselves to the committee. One widely held myth was that the CPUSA was spying for the Soviet government, a fear that, among other things, resulted in the execution of Ethel and Julius Rosenberg in 1953. In most cases there was no evidence for McCarthy's accusations of "un-American activity," and his own career was to end abruptly when he was censured by the Senate in 1954.

Perhaps because of the USSR's imperialist ambitions after World War II, Communism has frequently been presented to the American people since then as a moral threat to "American" values such as individualism and enterprise. U.S. involvement in wars in Korea (1950-53) and Vietnam (1964-72), and military and political actions elsewhere, such as South America and Cuba, have been justified as attempts to prevent the spread of Communism, with anti-war protesters often being branded as "Reds." The Cold War continued until the late 1980s, when Ronald Reagan, who had previously referred to the Soviet Union as the "Evil Empire," began talks with Mikhail Gorbachev over arms reduction and greater political cooperation. In the late 1990s, following the collapse of the USSR in 1991, few communist regimes remained in place, and although Communism remains popular in Eastern Europe, communists in the West form a tiny minority of voters. Their continuing optimism is fuelled by Lenin's claim that true Communism will only become possible after the collapse of a global form of Capitalism.

Community Media

Between 1906 and 1922 radio amateurs—who referred to themselves as "distance fiends"—ruled the airwaves. In their enthusiasm to share common concerns, forge friendships with distant strangers, and explore the expressive potential of the new medium, the radio enthusiasts championed democratic communication through electronic media. By the mid-1920s, however, commercial sponsorship of radio programming and corporate control of the newly developed broadcasting industry stifled the participatory potential of the "wireless." At the end of the twentieth century, the rapid commercialization of the internet poses yet another threat to the democratic possibilities of a new communication medium. Although the distance fiends are largely forgotten, their passionate embrace of the communitarian potential of electronic communication lives on through the work of community media organizations around the world.

Community media play a significant, but largely unacknowledged, role in popular culture. Unlike their commercial and public service counterparts, community media give "everyday people" access to the instruments of radio, television, and computer-mediated communication. Through outreach, training, and production support services, community media enhance the democratic potential of electronic communication. Community media also encourage and promote the expression of different social, political, and cultural beliefs and practices. In this way, community media celebrate diversity amid the homogeneity of commercial media and the elitism of public service broadcasting. Most important, perhaps, worldwide interest in community media suggests an implicit, cross-cultural, and timeless understanding of the profound relationship between community cohesion, social integration, and the forms and practices of communication. Despite their growing numbers, however, community media organizations remain relatively unknown in most societies. This obscurity is less a measure of community media's cultural significance, than an indication of its marginalized status in the communications landscape.

In the United States, the origins of the community radio movement can be traced to efforts of Lew Hill, founder of KPFA: the flagship station of the Pacifica radio network. A journalist and conscientious objector during World War II, Hill was disillusioned with the state of American broadcasting. At the heart of Hill's disdain for commercial radio was an astute recognition of the economic realities of radio broadcasting. Hill understood the pressures associated with commercial broadcasting and the constraints commercial

sponsorship places on a station's resources, and, ultimately, its programming. Hill and his colleagues reasoned that noncommercial, listener supported radio could provide a level of insulation from commercial interests that would ensure challenging, innovative, and engaging radio. Overcoming a number of legal, technical, and economic obstacles, KPFA-Berkeley signed on the air in 1949. At a time of anti-Communist hysteria and other threats to the democratic ideal of freedom of speech, KPFA and the Pacifica stations represented an indispensable alternative to mainstream news, public affairs, and cultural programming.

Although listener-supported radio went a long way toward securing local enthusiasm and financial support for creative and provocative programming, this model presented some problems. During the early 1970s demands for popular participation in and access to the Pacifica network created enormous rifts between local community members, Pacifica staff, and station management. Conflicts over Pacifica's direction and struggles over the network's resources continue to contribute to the divisiveness that remains somewhat synonymous with Pacifica at the end of the twentieth century. Still, KPFA and its sister stations consistently broadcast programs dealing with issues considered taboo by commercial and public service broadcasters alike.

Equally important, the Pacifica experience generated remarkable enthusiasm for alternative radio across the country. For instance, in 1962 one of Lew Hill's protégés, Lorenzo Milam, founded KRAB, a listener-supported community radio station in Seattle, Washington. Throughout the 1960s, Milam traveled the country, providing technical and logistical support to a number of community radio outlets: a loose consortium of community stations that came to be known as the KRAB Nebula. By 1975, the National Alternative Radio Conference (NARK) brought together artists, musicians, journalists, and political activists with an interest in participatory, locally-oriented radio. Within a few months the National Federation of Community Broadcasters (NFCB) was established to represent the interests of the nascent community radio movement. Committed to providing "nonprofessional" individuals and marginalized groups with access to the airwaves, the NFCB played a pivotal role in the rise of community radio in the United States. Still active, the NFCB continues to promote noncommercial, community-based radio. Organizations such as the World Association for Community Broadcasters (AMARC) provide similar support services for the community radio movement worldwide.

While Americans were exploring the possibilities of participatory radio, Canadians turned their attention to television. In 1967, the Canadian National Film Board undertook one of the earliest and best known attempts to democratize television production. As part of the experimental broadcast television series *Challenge for Change*, The Fogo Island project brought the subjects of a television documentary into a new, collaborative relationship with filmmakers. Embracing and elaborating upon the tradition of the social documentary championed by Robert Flaherty and John Grierson, *Challenge for Change* undertook the ambitious and iconoclastic task of systematically involving the subjects of their films in the production process. Senior producer Colin Low and his crew invited island residents to contribute story ideas, screen and comment on rushes, and collaborate on editorial decisions. By involving island residents throughout the filmmaking process, producers sought to "open up" television production to groups and individuals with no formal training in program production. Initially conceived as a traditional, broadcast

documentary, the Fogo Island project evolved into the production of 28 short films that focused on discrete events, specific issues, and particular members of the Fogo Island community. The Fogo Island experience stands as a precursor to the community television movement. Not only did the project influence a generation of independent filmmakers and community television producers, the use of participatory media practices to enhance community communication, to spur and support local economic initiatives, and to promote a sense of common purpose and identity has become the hallmark of community media organizations around the world.

The dominance of commercial media in the United States made democratizing television production in this country far more challenging. In response to criticisms that American television was a "vast wasteland" the US Congress passed the Public Broadcasting Act of 1967 which sought to bring the high quality entertainment and educational programming associated with public service broadcasting in Canada and the United Kingdom to American audiences. Throughout its troubled history—marked by incessant political pressure and chronic funding problems—the Public Broadcasting Service (PBS) has provided American television audiences with engaging, informative, and provocative programming unlike anything found on commercial television. However, rather than decentralize television production and make television public in any substantive fashion, PBS quickly evolved into a fourth national television network. Although PBS remains an important outlet for independent film and video producers, the level of local community access and participation in public television production is minimal at best.

Significantly, the early days of public television in the United States provided the early community television movement with some important precedents and helped set the stage for public access television as we know it today. Throughout the mid-1960s, the development of portable video equipment coupled with an urgent need for programming prompted a unique, if sporadic, community-based use of public television. Media historian Ralph Engelman notes, "Early experimentation in the use of new equipment and in outreach to citizens took place on the margins of public television in the TV laboratories housed at WGBH-TV in Boston, KQED-TV in San Francisco, and WNET-TV in New York." These innovations, most notably, WGBH's *Catch 44* gave local individuals and groups an opportunity to reach a sizable, prime time, broadcast audience with whatever message they desired. These unprecedented efforts were short-lived, however, as public television quickly adopted programming strategies and practices associated with the commercial networks.

Recognizing public television's deficiencies, an assortment of media activists turned their attention away from broadcasting to the new technology of cable television. These media access advocates hoped to leverage the democratizing potential of portable video recording equipment with cable's "channels of abundance" to make television production available to the general public. In the late 1960s, New York City was the site of intense, often contentious, efforts to ensure local participation in cable television production and distribution. George Stoney—often described as the father of public access television in the United States—was a leading spokesperson for participatory, community oriented television in Manhattan.

Stoney began his career in the mid-1930s working in the rural South as part of the New Deal. Through his training as a journalist and educational filmmaker, Stoney understood the value of letting people speak for themselves through the media. The use of media to address local issues and concerns and to promote the exchange of perspectives

and ideas pervades Stoney's work as filmmaker and access television advocate. Following a successful term as executive producer for *Challenge for Change*, Stoney returned to the United States in 1970 and, with the his colleague, Canadian documentary filmmaker Red Burns, established the Alternative Media Center (AMC).

The AMC's legacy rests on its successful adaptation of the *Challenge for Change* model of participatory media production. Like the Canadian project, the AMC gave people the equipment and the skills to produce their own videotapes. Through the AMC, individual citizens and local nonprofit groups became active participants in the production of television programming by, for, and about their local communities. In addition, the Center provided the technical resources and logistical support for producing and distributing community oriented programming on local, regional, and national levels. One of the AMC's primary strategies was to train facilitators who would then fan out across the country and help organize community access centers. Over the next five years, the Alternative Media Center played a crucial role in shaping a new means of public communication: community television. Organizations such as the U.S.-based Alliance for Community Media and international groups like Open Channel, were created to promote community television through local outreach programs, regulatory reform measures, and media literacy efforts.

Like previous technological developments, computers and related technologies have been hailed as a great democratizing force. Much has been made of computer-mediated communication's (CMC) ability to enhance social interaction, bolster economic redevelopment, and improve civic participation in local communities. However, for those without access to computers—or the skills to make efficient and productive use of these tools—the Information Age may intensify social and political inequities. Community networking, like community radio and television, provides disenfranchised individuals and groups with access to communication technologies.

Early experiments in community networking date back to the mid-1970s. In Berkeley, California, the Community Memory project was established specifically to promote community cohesion and encourage community-wide dialogue on important issues of the day. Project administrators installed and maintained terminals in public spaces, such as libraries and laundromats, to encourage widespread use of these new technologies. Somewhat akin to public telephones, these computer terminals were coin operated. Although users could read messages free of charge, if users wanted to post a message, they were charged a nominal fee.

By the mid-1980s computer bulletin boards of this sort were becoming more common place. In 1984, Tom Grundner of Case Western University in Cleveland, Ohio created St. Silicon's Hospital: a bulletin board devoted to medical issues. Using the system, patients could ask for and receive advice from doctors and other health professionals. The bulletin board was an unprecedented success and quickly evolved into a city-wide information resource. After securing financial and technical support from AT&T, Grundner and his associates provided public access terminals throughout the city of Cleveland and dial up access for users with personal computers. The first of its kind, the Cleveland Free-Net uses a city metaphor to represent various types of information. For example, government information is available at the Courthouse & Government Center, cultural information is found in the Arts Building, and area economic resources are located in the Business and Industrial Park section. In addition to database access, the Cleveland Free-Net supports electronic mail and newsgroups. By the mid-1990s, most community

networks typically offered a variety of services including computer training, free or inexpensive e-mail accounts, and internet access.

Through the work of the now-defunct National Public Telecomputing Network (NPTN) Grundner's Free-Net model has been adopted by big cities and rural communities throughout the world. In countries with a strong public service broadcasting tradition like Australia and Canada, federal, state, and local governments have played a significant role in promoting community networking initiatives. In other instances, community networks develop through public-private partnerships. For instance, the Blacksburg Electronic Village (BEV) was established through the efforts of Virginia Tech, the city of Blacksburg, Virginia, and Bell Atlantic. A number of organizations such as the U.S.-based Association for Community Networking (AFCN), Telecommunities Canada, the European Alliance for Community Networking (EACN), and the Australian Public Access Network Association (APANA) promote community networking initiatives on local, regional, and national levels.

Like other forms of community media, community networks develop through strategic alliances between individuals, non-profit groups, businesses, government, social service agencies, and educational institutions; it is the spirit of collaboration between these parties that is central to efficacy of these systems. The relationships forged through these community-wide efforts and the social interaction these systems facilitate help create what community networking advocate Steve Cisler refers to as "electronic greenbelts": localities and regions whose economic, civic, social, and cultural environment is enhanced by communication and information technologies (CIT).

Due in part to their adversarial relationship, mainstream media tend to overshadow, and more often than not denigrate, the efforts of community media initiatives. The majority of popular press accounts depict community media organizations as repositories for depraved, alienated, racist, or anarchist slackers with too much time on their hands, and precious little on their minds. Writing in *Time Out New York*, a weekly entertainment guide in New York City, one critic likens community access television to Theater of the Absurd and feigns praise for access's ability to bring "Nose whistlers, dancing monkeys and hairy biker-chefs—right in your own living room!" Likewise, entertainment programs routinely dismiss community television out of hand. For example in their enormously popular *Saturday Night Live* skit—and subsequent blockbuster feature films—*Wayne's World's* Dana Carvey and Mike Meyers ridicule the crass content, technical inferiority, and self-indulgent style of community access television.

Although few community media advocates would deny the validity of such criticisms, the truly engaging, enlightening, and provocative output of community media organizations goes largely ignored. Yet, the sheer volume of community radio, television, and computer-generated material attests to the efficacy of grassroots efforts in promoting public access and participation in media production and distribution. Furthermore, this considerable output highlights the unwillingness, if not the inability, of commercial and public service media to serve the distinct and diverse needs of local populations. Most important, however, the wealth of innovative, locally-produced programming indicates that "non-professionals" can make creative, substantive, and productive use of electronic media.

Community media serve and reflect the interests of local communities in a number of unique and important ways. First, community media play a vital role in sustaining and preserving indigenous cultures. For instance, in Porcupine, South Dakota community radio

KILI produces programming for local Native Americans in the Lakota language. Similarly, in the Australian outback, Aboriginal peoples use community television to preserve their ancient cultural traditions and maintain their linguistic autonomy. Second, community media reflect the rich cultural diversity of local communities. For example, some of the most interesting sites on Victoria Australia's community network (VICNET) are the pages celebrating Victoria's multicultural heritage (www.vicnet.net.au). These sites contain information of interest to Victorian's Irish, Polish, Hungarian, Vietnamese, and Filipino populations. Likewise, Manhattan Neighborhood Network (MNN) features a variety of programs that showcase Manhattan's eclecticism. On any given day, audiences can tune in to a serial titled *Glennnda and Friends* about "two socially-conscious drag queens," unpublished poetry and fiction by an expatriate Russian writer, a municipal affairs report, or *Each One Teach One* a program dedicated to African-American culture. Finally, community media play a decisive role in diversifying local cultures. Aside from celebrating the region's rich musical heritage, WFHB, community radio in Bloomington, Indiana, exposes local audiences to world music with programs like *Hora Latina* (Latin music), *The Old Changing Way* (Celtic music), and *Scenes from the Northern Lights* (music from Finland, Norway, and Sweden). What's more, WFHB brings local radio from America's heartland to the world via the internet (www.wfhb.org). As corporate controlled media consolidate their domination of the communication industries and public service broadcasters succumb to mounting economic and political pressures, the prospects for more democratic forms of communication diminish. Community media give local populations a modest, but vitally important, degree of social, cultural, and political autonomy in an increasingly privatized, global communication environment.

Community Theatre

Community theatre represents the majority of theatres in the United States, including community playhouses and university and college programs. Although the term "community theatre" has

disparate meanings the term can be applied generally to theatres—whether professional or not—that draw from their communities. The history of community theatre offers a unique perspective on the struggles between artistic endeavors and commercial profit in theatrical productions. While once a product of a movement to improve the artistic quality of theatrical productions, by the end of the twentieth century community theatre had become a venue more for community participation in the arts than a fertile source of avant-garde theatrical productions.

The roots of community theatre can be traced to the "Little Theatre" movement that started in the 1910s. The movement came as a reaction to the monopolistic "Syndicate" theatre system as well as an attempt to join the growing discourse about non-commercial theatre. According to Mary C. Henderson in her book, *Theater in America*, "The 'little-theater' movement, launched so spectacularly in Europe in the 1880s, finally reached America and stimulated the formation of groups whose posture was anti-Broadway and noisily experimental."

By 1895, touring companies became the primary source for theatrical entertainment in the United States. Theatrical producers Sam Nixon, Fred Zimmerman, Charles Frohman, Al Hayman, Marc Klaw, and Abraham Erlanger saw the opportunity to gain control of the American theatre and formed what came to be called "The Syndicate." The Syndicate purchased theatres across the country and blacklisted ones that refused to cooperate with its business practices. By 1900, the Syndicate monopolized the American theatre scene, and between 1900 and 1915, theatre became a mainly conservative and commercial venture. Due to public dissatisfaction, Frohman's death, and an anti-trust suit, the Syndicate system became largely ineffective by 1916.

During this period many of Europe's finest independent theatres began touring the United States; these included the Abbey Theatre (1911), the Ballets Russes (1916), and Théâtre du Vieux Colombier (1917-1919). Robert E. Gard and Gertrude S. Burley noted in *Community Theatre* that "Their tour aroused the antagonism of American citizens against the feeble productions of the commercial theatre, and seemed to be the catalyst that caused countless dramatic groups to germinate all over America, as a protest against commercial drama." In addition, the end of World War I led to a greater awareness of the European theatrical practices of France's Andre Antoine, Switzerland's Adolphe Appia, England's Gordon Craig, and Russia's Vsevolod Meyerhold and Konstantine Stanislavsky.

The publication of Sheldon Cheney's *Theatre Arts Magazine* (1916) helped to broaden audiences for non-commercial theatre and influenced its readers' thoughts surrounding commercial theatre. In 1917 Louise Burleigh wrote *The Community Theatre in Theory and Practice* in which she coined the phrase "Community Theatre" and defined it as "any organization not primarily educational in its purpose, which regularly produces drama on a noncommercial basis and in which participation is open to the community at large." Other publications such as Percy MacKaye's *The Playhouse and the Play* (1909) extolled the merits of "a theatre wholly divorced from commercialism."

During this time several little theatres established themselves. These included the Toy Theatre in Boston (1912); the Chicago Little Theatre (1912); the Neighborhood Playhouse in New York (1915); the Provincetown Players in Massachusetts (1915); the Detroit Arts and Crafts Theatre (1916); and the Washington Square Players (1918). By 1917 there were 50 little theatres, most of which had less

than 100 seats and depended upon volunteers for labor and subscribers for financial support. By 1925 almost 2,000 community or little theatres were registered with the Drama League of America. In her essay “*Theatre Arts Monthly*” and the *Construction of the Modern American Theatre Audience*, Dorothy Chansky observed that “The common goals of all these projects were to get Americans to see American theatre as art and not as mere frivolity.”

Eventually, drama programs were introduced into colleges and universities. In 1903 George Pierce Baker taught the first course for playwrights at Radcliffe College and by 1925 he had established the Yale School of Drama, which provided professional theatre training. Graduates of Baker’s program included such noted theatre artists as playwright Eugene O’Neill and designer Robert Edmund Jones. In 1914, Thomas Wood Stevens instituted the country’s first degree-granting program in theatre at the Carnegie Institute of Technology. And by 1940, theatre education was widely accepted at many universities in the United States.

Community theatre was also aided by government support. As part of F. D. Roosevelt’s Works Progress Administration (WPA), The Federal Theatre Project was established in 1935. Headed by Hallie Flanagan Davis, the project employed 10,000 persons in 40 states. During this time 1,000 productions were staged and more than half were free to the public. Despite its mandate to provide “free, adult, uncensored theatre,” the political tone of some productions eventually alienated members of Congress and funding was discontinued in 1939. In 1965, however, the federal government established the National Endowment for the Arts (NEA) and also facilitated states in establishing individual arts councils. This, coupled with the inclusion of theatres as non-profit institutions, helped many community theatres remain operational. By 1990, the NEA’s budget was cut drastically, but community theatres continued to thrive at the end of the twentieth century despite economic hardships.

Although the artistic ideals of the “Little Theatre” movement have been assumed by larger, professional regional theaters, the drive to produce theatre as a voluntary community activity remains solely in the realm of the community theatre. Though most community theatres no longer feature daring experimental works—offering instead local productions of popular plays and musicals—community theatres remain the most common source for community involvement in the theatrical arts.

Como, Perry (1912—)

Crooner Perry Como rose to become one of the dominant American male vocalists of the 1940s and 1950s, and retained a rare degree of popularity over the decades that followed. He achieved his particular fame for the uniquely relaxed quality of his delivery that few have managed to emulate—indeed, so relaxed was he that his detractors considered the effect of his smooth, creamy baritone soporific rather than soothing, and a television comedian once parodied him as singing from his bed.

Born Pierino Como in Canonsburg, Pennsylvania, the seventh of 13 children of Italian immigrants, Como began learning the barber trade as a child, with the intention of buying his own shop as early as his teens. Forced by his mill-worker father to finish high school, he finally set up his own barber shop in 1929. In 1934 he auditioned as a vocalist with a minor orchestra, and sang throughout the Midwest for the next three years, before joining the Ted Weems Orchestra. The orchestra thrived until Weems disbanded it in 1943 when he joined the army, but by then Como had developed quite a following through the years of touring and performing on radio, and his effortless baritone was a popular feature of Ted Weems’s 78 rpm records. CBS recruited Como to radio, thus starting him on what proved to be one of the most successful and long-running solo vocal careers of the

Perry Como

century. He also became a highly popular nightclub performer, and signed a recording contract with RCA Victor. Several of his singles sold over two million copies, one over three million, and he had many Top Ten and several number one hits over the years.

By late 1944 Perry Como had his own thrice-weekly radio show, *Supper Club*, on CBS, which from 1948 on was renamed *The Perry Como Show* and broadcast simultaneously on radio and television. He became one of the most popular of TV stars, keeping that show until 1963, and then hosting *The Kraft Music Hall* every few weeks until 1967. One of his noteworthy contributions to music as a radio showman was to invite Nat “King” Cole, R&B group The Ravens, and other black entertainers to guest on his program when most shows were still segregated, or featured blacks only in subservient roles.

In 1943 Como was signed to a motion picture contract by Twentieth Century-Fox. He appeared in *Something For The Boys* (1944), *Doll Face* (1945), *If I’m Lucky* (1946), and, at MGM, one of a huge all-star musical line-up in the Rodgers and Hart biopic, *Words and Music* (1948), but did not pursue a film career further, preferring to remain entirely himself, singing and playing host to musical shows. Como’s best-selling singles included “If I Loved You,” “Till the End of Time,” “Don’t Let the Stars Get In Your Eyes,” “If,” “No Other Love,” “Wanted,” “Papa Loves Mambo,” “Hot Diggity,” “Round and Round,” and “Catch a Falling Star”—for which he won a Grammy Award in 1958 for best male vocal performance. As well as his numerous chart-topping successes, he earned many gold discs, and recorded dozens of albums over the years, which continued to sell very well when the market for his singles tailed off towards the end of the 1950s. In 1968, however, he was approached to sing the theme song from *Here Come the Brides*, a popular ABC program. The resulting “Seattle” was only a minor hit, but it got Perry Como back on the pop charts after a four-year absence, and his singles career further revived in 1970 with “It’s Impossible,” which reached number ten on the general charts and number one on the Adult Contemporary charts.

After the 1960s, Como chose to ease himself away from television to spend his later years in his Florida home. Nevertheless, he continued to tour the United States twice a year well into the 1990s, enjoying popularity with an older audience. In 1987 he was a Kennedy Center honoree, and was among the inductees into the Television Academy Hall of Fame a few years later. Few performers have enjoyed such lasting success.

Compact Discs

With the 1983 mass market introduction of CDs (compact discs), the face of the music recording and retail industry changed dramatically. As the price of compact disc players tumbled from \$1,500 to

\$500 and below, CDs were quickly adopted by music consumers and pushed the long-playing vinyl record virtually off the market.

CDs offered extremely high sound quality, free from the scratches or needle dust “noise” found on vinyl records. Compact discs were the first introduction of digital technology to the general public. Records and tapes had been recorded using analog technology. Digital recording samples sounds and represents them as a series of numbers encoded in binary form and stored on the disc’s data surface. The CD player’s laser light reads this data and when it is converted back into an electric signal, it is then amplified and played through headphones or loudspeakers. On a CD nothing except light touches the disc with no wear to the recording. In addition to the superior sound of CDs, the new technology also allowed any song, or any part of a song, to be accessed quickly. Most CD players could be programmed to play specific songs, omit songs, or reorder them, providing a “customization” previously unavailable with cassette tapes or records.

While the portability of cassette tapes—with hand-held cassette players like the Sony Walkman and the ubiquity of cassette players in automobiles—slowed the domination of CDs in the market, manufacturers quickly produced products to offer the superior sound quality, flexibility, and longevity of CDs in automobiles and for personal use. By the end of the century, CD players that could hold several CDs at a time were installed in automobiles and people could carry personal CD players to listen to their favorite music with headphones while exercising. Although manufacturers and record companies had for the most part stopped manufacturing both cassette players and prerecorded tapes, cassette tapes continued to be used in home recording and in automobiles. By the late 1990s, cassettes were no longer a viable format for prerecorded popular music in the United States although they remained the most used format for sound recording worldwide.

The physical size of CDs altered the nature of liner notes and album covers. The large size of LP covers had long offered a setting for contemporary graphic design and artwork, but the smaller size of the CD package, or “jewel box,” made CD “cover art” an oxymoron. Liner notes and song lyrics became minuscule as producers tried to fit their material into 5-by-5 inch booklets. The “boxed set,” a collection of two or more CDs in a longer cardboard box, became popular as retrospectives for musicians and groups, collecting all of a musician or groups’ output including rare and unreleased material with a booklet of extensive notes and photographs. Ironically, the average playing time of a CD was more than 70 minutes but most albums continued to hold about 40 minutes of music, the amount available on LPs.

Though the long-playing records were technologically obsolete and no longer stocked on the shelves of major music retailers, they were still found in stores specializing in older recordings and used by rap and hip-hop performers who scratched and mixed records to make their music. LPs also experienced a minor resurgence in 1998 from sales to young people interested in the “original” sound of vinyl. Nevertheless, the CD had become the dominant medium for new music by the end of the century.

Concept Album

The concept album, initially defined as an LP (long-playing record) recording wherein the songs were unified by a dramatic idea instead of being disparate entities with no common theme, became a form of expression in popular music in the mid-1960s, thanks to The Beatles. Their 1967 release of *Sergeant Pepper's Lonely Hearts Club Band* is generally recognized as the first concept album, although ex-Beatle Paul McCartney has cited *Freak Out!*, an album released in 1966 by Frank Zappa and the Mothers of Invention, as a major influence on the conceptual nature of *Sergeant Pepper*. During the rest of the decade, the concept album remained the province of British artists. The Rolling Stones made an attempt—half-hearted, according to many critics—at aping the Beatles' artistic achievement with *Their Satanic Majesties Request* (1967). Other British rock bands, notably The Kinks and The Who, were able to bring new insights into the possible roles of the concept album in popular music, and it is at this point that the hard and fast definition of the concept album came to be slightly more subjective.

The Kinks, in a series of albums released in the late 1960s, mythologized the perceived decline of British working class values. The songs on these albums told the stories of representative characters and gave the albums on which they appeared conceptual continuity. If the lyrics were conceptually driven, the music was still straightforward rock 'n' roll. The Who, however, experimented with the form of the music as well as the lyrics, creating a conceptual structure unlike anything that had come before in rock music. Songwriter Pete Townshend was largely responsible for the band's best known work, *Tommy* (1969), also popularly known as the first "rock opera." This allegorical story of the title character, a "deaf, dumb and blind kid" who finds spiritual salvation in rock music and leads others towards the same end, was communicated as much through the lyrics as by the complex and classically-derived musical themes and motifs that appeared throughout the album's four sides.

Tommy was The Who's most ambitious and successful conceptual effort, but it was not the last. *Quadrophenia*, recorded in 1973, used the same style of recurring themes and motifs, but the characterization and storytelling in the lyrics was considerably more opaque than its predecessor. Both these works were adapted into films, and *Tommy* became a musical stage production in the early 1990s. Largely due to *Tommy*'s popularity, the concept album became synonymous with rock operas and rock and roll musical productions. The recordings of late 1960s and early 1970s works such as *Hair*, *Godspell*, and *Jesus Christ Superstar* are commonly referred to as concept albums, further broadening the scope of their definition.

The burgeoning faction of popular music known as progressive rock, which gained momentum in the late 1960s and early 1970s, embraced the form of the concept album and used it as a means to explore ever more high-flown and ambitious topics. Although the classical portion of the album did not necessarily tie into the concept, The Moody Blues nevertheless used the London Symphony Orchestra to aid in the recording of *Days of Future Passed* (1967), an album consisting entirely of songs that dealt with the philosophical nature of time. This work marked the concept album's transition from simply telling a story to actually being able to examine topics that were heretofore considered too lofty to be approached through the medium of rock music. The excesses to which critics accused progressive rock groups of going also tainted the image of the concept album, making it synonymous with pretentiousness in the minds of most contemporary

music fans. With such records as Jethro Tull's send-up of organized religion in *Aqualung* (1971) and *A Passion Play* (1973), Genesis' *The Lamb Lies Down on Broadway* (1974), an allegory of existential alienation, and Yes' *Tales from Topographic Oceans* (1974), a sprawling, overblown musical rendering of *Autobiography of a Yogi*, the concept album reached an absurd level of pomposity. When progressive rock became déclassé in the punk era of the late 1970s, the concept album was recognized as the symbol of its cultural and artistic excesses.

The concept album did not die out completely with the demise of progressive rock, just as it never was solely the province of that genre despite common misconceptions. Ambitious and brave, singer-songwriters periodically returned to this form throughout the late 1970s and the following decades. Notable among post-progressive rock concept albums were Dan Fogelberg's *The Innocent Age* (1981), Kate Bush's *Hounds of Love* (1985), Elvis Costello's *The Juliet Letters* (1993), and Liz Phair's *Exile in Guyville* (1993), a song-by-song response to the Rolling Stones' *Exile on Main Street*. A curious attribute of these latter day concept albums were their ability to produce popular songs that could be enjoyed on their own terms, apart from the overall conceptual nature of the albums to which they belonged.

Concept albums can be seen to embody two similar but separate camps: the epic, grandiose albums conceived by progressive rock groups, and the more subtle conceptually-based albums created by singer-songwriters who tended to veer away from what was considered to be the mainstream. These singer-songwriters took the baton proffered by The Beatles and The Who in a slightly different direction. Albums like Laura Nyro's *Christmas and the Beads of Sweat* (1970), Van Dyke Parks' *Song Cycle* (1968), and Lou Reed's *Berlin* (1973) directly influenced most of the post-progressive rock albums that were produced from the mid-1970s on.

Other genres of popular music were also infiltrated by the concept album phenomenon. Soul music in the 1970s was one example, evidenced by works such as Marvin Gaye's *What's Going On* (1971) and *Here, My Dear* (1978), Sly and the Family Stone's *There's a Riot Goin' On* (1971), and the outrageous science fiction storylines of several Funkadelic albums. Curtis Mayfield's soundtrack to the movie *Superfly* (1972) also deserves mention, having achieved an artistic success far beyond that of the film. Country and Western was another genre of popular music with its share of concept albums. It could be argued, according to author Robert W. Butts, that some Country and Western artists were attempting to make concept albums long before The Beatles came along; these artists displayed a desire to make their albums more meaningful than "a simple collection of tunes which would hopefully provide a hit or two." It was in the 1970s, however, with "the conscious and successful exploitation of the concept of a concept," according to Butts, that artists like Willie Nelson, Emmylou Harris, and Johnny Cash fully realized the potential of the concept album within the Country and Western genre.

While the concept album in all these genres may have served to raise the level of the respective art forms, the concept album in the cultural consciousness of the late twentieth century exists mainly as a symbol of excess and pseudo-intellectualism in popular music, forever branded by its association with progressive rock. The concept album did not cease to exist as a form of musical expression, but never again did it enjoy the hold it had on the imagination of record buyers, who viewed the phenomenon in the late 1960s and 1970s with

excitement, and who eventually became disenchanted with its further developments.

Conceptual Art

Conceptual art transformed the art world beginning in the 1960s by shifting the focus of the work from the art object itself to the ideas and concepts that went into its creation. Such works rose to prominence as a reaction to Western formalist art and to the art writings of Clement Greenberg, Roger Fry, and Clive Bell, theorists who championed the significance of form and modernism. Not far removed from the ideas of the Dadaist movement of the early twentieth century and artist Marcel Duchamp's ready-mades, conceptualism insists that ideas, and the implementations of them, become the art itself; often there is an absence of an actual object. Conceptual art worked in the spirit of postmodernism that pervaded post-1960s American culture.

Joseph Kosuth, one of the primary participants and founders of the conceptual art movement, first formulated the ideas of the movement in his writings of 1969, "Art After Philosophy, I and II". Along with Sol Lewitt's 1967 treatise "Paragraphs on Conceptual Art" (which coined the term "conceptual art"), this article defined the basic ideas of the movement. In general, conceptual art has a basis in political, social, and cultural issues; conceptual art reacts to the moment. Many conceptual art pieces have addressed the commercialization of the art world; rebelling against the commodification of art, artists employed temporary installations or ephemeral ideas that were not saleable. As a result, all art, not just conceptual pieces, has since moved outside of traditional exhibition spaces such as galleries and museums and into the public sphere, broadening the audience. The expansion of viable art venues allowed for a widening scope of consideration of worthy artworks. With the prompting of conceptual artists, photography, bookworks, performance, and installation art all were validated as important art endeavors.

Conceptual artists such as Sol LeWitt, Joseph Kosuth, John Baldassari, and the British group Art and Language created works that were self-referential; the work became less about the artist and the creative process and more about the concepts behind the work. Contemporary artists like Barbara Kruger and Jenny Holzer adapted such tenets from earlier works, and used them in a more pointed way

Condé Nast

Condé Nast is the name for both a worldwide publishing company and the man who founded it. Condé Nast (1873-1942), the man, was noted for his innovative publishing theories and flair for nurturing readers and advertisers. With the purchase and upgrading of *Vogue* in 1909, he established the concept of specialized or class publications, magazines that direct their circulation to a particular group or class of people with common interests. By 1998, Condé Nast Publications, Inc. (CNP) held 17 such titles, many of which are the largest in their respective markets. Like its founder, the magazine empire is one of the most powerful purveyors of popular culture, with an average circulation of over 13 million readers a month and an actual readership of more than five times that. The company, now owned by illustrious billionaire S.I. Newhouse, continues to be the authority for many aspects of popular culture.

After purchasing *Vogue* in 1909, Condé Nast transformed its original format as a weekly society journal for New York City elites (established in 1892) to a monthly magazine devoted to fashion and beauty. Over the century, and with a series of renowned editors, *Vogue* became a preeminent fashion authority in the United States and abroad. Its dominance and innovation spanned the course of the century, from its transition to a preeminent fashion authority (under the first appointed editor, Edna Woolman Chase); to the middle of the century when *Vogue* published innovative art and experimented with modernistic formats; and during the end of the century, when editor Anna Wintour (appointed in 1988) redirected the focus of the magazine to attract a younger audience.

Condé Nast bought an interest in *House & Garden* in 1911, and four years later took it over completely. Nast transformed the magazine from an architectural journal into an authority on interior design, thereby establishing another example of a specialized publication. Around this time, Condé Nast refined his ideas about this approach to magazine publishing. In 1913 Nast told a group of merchants: "Time and again the question of putting up fiction in *Vogue* has been brought up; those who advocated it urging with a good show of reason that the addition of stories and verse would make it easy to maintain a much

larger circulation. That it would increase the *quantity* of our circulation we granted, but we were fearful of its effect on the ‘class’ value.”

In 1914, Nast introduced *Vanity Fair*, a magazine that became an entertaining chronicle of arts, politics, sports, and society. Over a period of 22 years, *Vanity Fair* was a Jazz Age compendium of wit and style but attracted fewer than 100,000 readers a month. Perhaps because it was too eclectic for its time, the original *Vanity Fair* eventually failed altogether (and merged with *Vogue* in 1936). After a 46-year absence, however, CNP revived the magazine in 1983, with a thick, glossy, and “self-consciously literate” format. After nearly a year of stumbling through an identity crisis, Newhouse brought in the 30-year-old British editor Tina Brown (who later served as editor of *The New Yorker*), who remade *Vanity Fair* into a successful guide to high-rent popular culture, featuring celebrity worship, careerism, and a glossy peek inside the upper class.

In general, Condé Nast magazines were innovative not only for their content but also for their format. In order to have the preeminent printing available at the time, Condé Nast decided to be his own printer in 1921, through the purchase of a small interest in the now defunct Greenwich, Connecticut, Arbor Press. Despite the hard times that followed the 1929 stock market crash, Condé Nast kept his magazines going in the style to which his readers were accustomed. Innovative typography and designs were introduced, and within the pages of *Vogue*, *Vanity Fair*, and *House & Garden*, color photographs appeared. In 1932, the first color photograph appeared on the cover of *Vogue*.

Glamour was the last magazine Condé Nast personally introduced to his publishing empire (1939), but the growth did not end there. In 1959, a controlling interest in what was now Condé Nast Publications Inc. was purchased by S.I. Newhouse. Later that same year, *Brides* became wholly owned by CNP, and CNP acquired Street & Smith Publications, Inc., which included titles such as *Mademoiselle* and the *Street & Smith’s* sports annuals (*College Football*, *Pro Football*, *Baseball*, and *Basketball*). Twenty years later, *Gentleman’s Quarterly* (popularly known as *GQ*) was purchased from Esquire, Inc., and *Self* was introduced. *Gourmet* was acquired in 1983, the same year that saw the revival of *Vanity Fair*. Rounding out the collection, CNP added *Condé Nast Traveler* in 1987, *Details* in 1988, *Allure* in 1991, *Architectural Digest* and *Bon Appetit* in 1993, *Womens’ Sports and Fitness* (originally *Condé Nast Sports for Women*) in 1997, and *Wired* magazine in 1998. Advance Publications (the holding company that owns CNP) acquired sole ownership of *The New Yorker* in 1985, but it did not become a member of the CNP clan until 1999. In 1999, CNP moved into its international headquarters in the Condé Nast Building, located in the heart of Manhattan’s Times Square. Additionally, there are number of branch offices throughout the United States for the more than 2,400 employed in CNP domestic operations.

Condé Nast’s influence on American magazine publishing has been considerable, for he introduced the specialized publications that have since come to dominate the American magazine market. And CNP, with its family of popular publications claiming a total readership of over 66 million, and exposure even beyond that, has exerted a lasting influence of American culture. With such a large reach, CNP publications are a favorite of advertisers, who use the magazines pages to reach vast numbers of consumers. As a source of culture, CNP covers a variety of subjects, although none more heavily than the beauty and lifestyle industries.

Condoms

Once kept in the back of pharmacies, condoms have become common and familiar items in the 1980s and 1990s because of the AIDS crisis. Apart from sexual abstinence, condoms represent the safest method of preventing the transmission of the HIV virus through sexual intercourse, and, consequently, condoms figure prominently in safer-sex campaigns. The increase in demand has led to a diversified production to suit all tastes, so that condoms have been marketed not only as protective items but also as toys that can improve sex. Condoms are so ubiquitous that conservative writer Richard Panzer has despaired that we all live in a Condom Nation and a world of latex.

Condoms are as old as history: a type of modern-day condom may have been used by the Egyptians as far back as 1000 B.C. History blends with myth, and several legends record the use of primitive condoms: Minos, the king of Crete who defeated the Minotaur, is said to have had snakes and scorpions in his seed which killed all his lovers. He was told to put a sheep’s bladder in their vaginas, but he opted instead to wear small bandages soaked with alum on his penis. Condoms have been discussed by writers as diverse as, to name but a few, William Shakespeare (who called it “the Venus glove”), Madame de Sévigné, Flaubert, and the legendary lover Giacomo Casanova.

If it is difficult to come up with a date of birth for condoms, it is even more complicated, perhaps quite appropriately, to establish who fathered (or mothered) them. Popular belief attributes the invention of condoms and their name to a certain Dr. Condom, who served at the court of the British King Charles II. According to a more scientific etymology, the name derives from the Latin “condere” (to hide) or “condus” (receptacle).

Early condoms were expensive and made of natural elements such as lengths of sheep intestine sewn closed at one end and tied with a ribbon around the testicles. Modern rubber condoms were created immediately after the creation of vulcanized rubber by Charles Goodyear in the 1840s and have been manufactured with latex since the 1930s. Also called “sheath,” “comebag,” “scumbag,” “cap,” “capote,” “French letter,” or “Port Said garter,” a condom is a tube of thin latex rubber with one end closed or extended into a reservoir tip. In the 1980s and 1990s condoms have appeared on the market in

Workers of the Gay Men's Health Crisis hand out free Valentine's condoms and AIDS information.

different shapes, colors, flavors, lubrications, and sizes. Some are equipped with ribs, bumps, dots, or raised spirals to enhance stimulation. The safe-sex message originally associated with condoms is now being complemented by the marketing strategy claiming that using condoms is fun, and some are even intended to be used for entertainment only (and not for protection from disease or pregnancy).

Once seen as a great turn off, the condom has appeared with increasing frequency in (mainly) gay porno movies, especially, although not exclusively, in the educational safer-sex shorts produced by AIDS charities and groups of activists. As Jean Carlomusto and Gregg Bordowitz have summarized, the aim of these safer-sex shorts is to make people understand that "you can have hot sex without placing yourself at risk for AIDS." This has raised important questions about the possibility of using pornography as pedagogy. This new use of pornography as a vehicle for safer-sex involves, as safer-sex short director Richard Fung has pointed out, a "dialogue with the commercial porn industry, about the representation of both safer-sex, and racial and ethnic difference."

Looking at the dissemination of "condom discourse" one might be tempted to conclude that society has finally become more liberated. There are condom shops, condom ads, condom jokes, condom

gadgets such as key-rings, condom shirts, condom pouches, condom web-sites with international condom clubs from where chocolate lovers can top off their evening with the perfect no-calorie dessert: the hot fudge condom. Yet how effective really is this "commodification of prophylaxis" (to use Gregory Woods's words) in terms of prevention and saving of human lives? Is it, in the end, just another stratagem to speak about everything else but health care and human rights?

—Luca Prono

Coney Island

Coney Island, with its beach, amusement parks, and numerous other attractions, became emblematic of nineteenth- and early- twentieth-century urban condition while at the same time providing relief from the enormous risks of living in a huge metropolis. On Coney Island, both morals and taste could be transgressed. This was the place where the debate between official and popular culture was first rehearsed, a debate which would characterize the twentieth century in America.

Discovered just one day before Manhattan in 1609 by explorer Henry Hudson, Coney Island is a strip of sand at the mouth of New York’s natural harbor. The Canarsie Indians, its original inhabitants, had named it “Place without Shadows.” In 1654 the Indian Guilaouch, who claimed to be the owner of the peninsula, traded it for guns, gunpowder, and beads, similar to the more famous sale of Manhattan. The peninsula was known under many names, but none stuck until people called it Coney Island because of the presence of an extraordinary number of coney, or rabbits.

Coney Island, 1952.

In 1823 the first bridge which would connect Manhattan to the island was built, and Coney Island, with its natural attractions, immediately became the ideal beach resort for the ever-growing urban population of Manhattan. By the mid-nineteenth century large resort hotels had been built. Corrupt political boss John Y. McKane ruled the island, turning a blind eye to the gangsters, con men, gamblers, and prostitutes who congregated on the west end of the island. In 1865 the railroad finally allowed the metropolitan masses their weekend escape to Coney Island, and the number of visitors grew enormously, creating a great demand for entertainment and food. The hot dog was invented on Coney Island in the 1870s. In 1883 the Brooklyn Bridge made the island even more accessible to the Manhattan masses, who flocked to the island’s beach, making it the most densely occupied place in the world. The urban masses demanded to be entertained, however, thus the need for pleasure became paramount in the island’s development. Typical of the time, what happened on Coney Island was the attempt to conjugate the quest for pleasure and the obsession with progress.

The result was the first American “roller coaster,” the Switchback Railway, built by LaMarcus Adna Thompson in 1884. In 1888, the short-lived Flip-Flap coaster, predecessor of the 1901 Loop-the-Loop, used centrifugal force to keep riders in their seats, and an amazed public paid admission to watch. By 1890 the use of electricity made it possible to create a false daytime, thus prolonging entertainment to a full twenty-four hours a day.

The nucleus of Coney Island was Captain Billy Boyton’s Sea Lion Park, opened in 1895, and made popular by the first large Shoot-the-Chutes ride in America. In competition with Boyton, George C. Tilyou opened Steeplechase Park in 1897, where science and technology came together for pleasure and Victorian inhibitions were lifted. The park was centered around one of the most popular rides on Coney Island, the Steeplechase Race Course, in which four couples “raced” each other atop wheeled, wooden horses. Steeplechase Park burned in 1907, but Tilyou rebuilt and reopened it the following year, and it remained in operation until 1964.

When Boyton went broke, Frederic Thompson and Elmer Dundy took over Sea Lion Park, remodeled it and opened it as Luna Park in 1903. Luna was a thematic park where visitors could even board a huge airship and experience an imaginative journey to the moon from one hundred feet in the air. Coney Island was the testing ground for revolutionary architectural designs, and Luna Park was an architectural spectacle, a modern yet imaginary city built on thirty-eight acres and employing seventeen hundred people during the summer season, with its own telegraph office, cable office, wireless office, and telephone service. For Thompson, Luna Park was an architectural training ground before he moved to Manhattan to apply his talent to a real city. Luna Park eventually fell into neglect and burned in 1944. The land became a parking lot in 1949.

In the meantime, Senator William H. Reynolds was planning a third park on Coney Island, “the park to end all parks.” The new park was aptly called Dreamland. In Reynolds’s words, this was “the first time in the History of Coney Island Amusement that an effort has been made to provide a place of Amusement that appeals to all classes.” Ideology had got hold of entertainment. Opening in 1904, Dreamland was located by the sea and was noticeable for its lack of color—everything was snow white. The general metaphor was that Dreamland represented a sort of underwater Atlantis. There were detailed reconstructions of various natural disasters—the eruption of Vesuvius at Pompeii, the San Francisco earthquake, the burning of

Rome—as well as a simulated ride in a submarine, two Shoot-the-Chute rides, and, interestingly, the Incubator Hospital, where premature babies were nursed. Other Dreamland attractions were the Blue Dome of Creation, the “Largest Dome in the World,” representing the universe; the “End of the World according to the Dream of Dante”; three theaters; a simulated flight over Manhattan—before the first airplane had flown; a huge model of Venice; a complete replica of Switzerland; and the Japanese Teahouse. One of the most important structures of Dreamland was the Beacon Tower, 375 feet high and illuminated by one hundred thousand electric lights, visible from a distance of more than thirty miles. Dreamland was a success insofar as it reproduced almost any kind of experience and human sensation. In May 1911, just before a more efficient fire-fighting apparatus was due to be installed, a huge fire broke out fanned by a strong sea wind. In only three hours Dreamland was completely destroyed. It was Coney’s last spectacle. Manhattan took over as the place of architectural invention.

In 1919, Coney Island seemed to regain a sparkle of its old glory when the idea circulated of building a gigantic Palace of Joy—a sort of American Versailles for the people—which would be a pier containing five hundred private rooms, two thousand private bath houses, an enclosed swimming pool, a dance hall, and a skating rink. Sadly, the Palace of Joy was never built. Soon, the main attraction of Coney Island became again its beach, an overcrowded strip of land. In the hand of Commissioner Robert Moses, the island fell under the jurisdiction of the Parks Department. In 1957, the New York Aquarium was established on the island, a modernist building which had nothing of the revolutionary, dreamlike structure of the buildings of Reynolds’s era. By now 50 percent of Coney Island’s surface had become parks again. Nature’s sweet revenge.

Confession Magazines

During their first 175 years of existence, American magazines preached long and occasionally in loud tone on personal morality, but rare was the published foray into the real lives of lower-class Americans. That oversight ended in 1919 with the introduction of *True Stories*, the first of what came to be known as confession magazines. Founded by health and physical fitness zealot Bernarr

Macfadden, *True Stories* “had the conscious ring of public confession, such as is heard in a Salvation Army gathering, or in an old-fashioned testimony meeting of Southern camp religionists,” according to Macfadden’s first biographer Fulton Oursler.

It and other confession magazines were “a medium for publishing the autobiographies of the unknown,” as one editor explained, a substitute among the poor for lawyers, doctors, and educators. Although *True Stories* eventually reached a circulation of 2.5 million during the 1930s, it cost less to produce than most other magazines, and therefore earned as much as \$10,000 a day for its founder. *True Stories* and other confession magazines also provided a valuable outlet for otherwise disconnected people to learn appropriate private and public social behavior. During times of rapid change, these magazines helped women to re-establish their identities through the experiences of other women like themselves. Most importantly, in an era when sex was rarely mentioned in public, the confession magazines taught both women and men that sex was natural, healthy, and enjoyable under appropriate circumstances.

The first American magazines were written for upper-class men. Beginning in the 1820s, sections and eventually titles were aimed at upper-class women, but they were written in a highly moralistic tone because women were considered to be the cultural custodians and moral regulators of society. Belles lettres, popular moralistic fiction, became the staple of mid-nineteenth century women’s magazines such as *Godey’s Ladies Book* and *Peterson’s*. Writers sentimentalized about courtship and marriage but offered little practical information on sex to readers. Another generation of women’s magazines appeared after the Civil War, including *McCall’s*, *Ladies Home Journal*, and *Good Housekeeping*. These magazines attracted massive circulations, but were focused on the rapidly changing domestic duties of women, still carried a highly moralistic tone, and had little to say about sex. Even into the twentieth century, the advertising and editorial content of women’s magazines reflected prosperity, social status, and consumerism; hardly the core problems of everyday existence for the lower classes.

The first confession magazine publisher was born August 16, 1868, in Mill Springs, Missouri. Before Bernarr Macfadden was ten, his father had died of an alcohol-related disease and his mother from tuberculosis. Relatives predicted the sickly, weak boy would die young as well. Shifted from relative to relative, the young Macfadden dropped out of school and worked at an assortment of laborer jobs, learning how to set newspaper type in 1885. But he was drawn into the world of physical culture as a teen. He studied gymnastics and physical fitness in St. Louis and developed his body and health as he coached and taught others. To raise money to promote his ideas on exercise and diet, he wrestled professionally and promoted touring wrestling matches. In 1899 he founded *Physical Culture*, a magazine that was devoted to “health, strength, vitality, muscular development, and the general care of the body.” It was the forerunner of contemporary health and fitness publications. Macfadden argued that “weakness is a crime” and offered instruction on physical development. Macfadden’s diets were opposed by medical authorities and the nude or nearly nude photographs in his magazine and advertising circulars came under the scrutiny of obscenity crusader Anthony Comstock and his followers. Macfadden was fined \$2,000 for a *Physical Culture* article in 1907 and the magazine is considered to be the start of the nude magazine industry.

Physical Culture was immensely popular, climbing to a circulation of 340,000 by the early 1930s. Macfadden made large profits with it and other publishing ventures including books such as *What a*

Young Husband Ought to Know and *What a Young Woman Ought to Know*. His wife Mary later claimed that she suggested he expand his publishing horizons beyond physical fitness around the time of World War I. She had read the thousands of letters to the editor that poured into *Physical Culture* detailing why punching bags, lifting dumbbells, and doing deep knee bends did not always change an individual's love life. Other letters revealed how so-called fallen women who had discovered physical culture had found new lives for themselves as wives and mothers. "The folly of transgression, the terrible effects of ignorance, the girls who had not been warned by wise parents—a whole series of tragedies out of the American soil were falling, day after day, on the desk of [*Physical Culture*'s] editor," Macfadden's biographer Fulton Oursler explained.

In May 1919, the first issue of *True Story* appeared with the motto "Truth is stranger than fiction." For 20 cents a copy, twice the price of most other magazines, readers received 12 stories with titles such as "A Wife Who Awoke in Time" and "My Battle with John Barleycorn." Most of the protagonists were sympathetic characters, innocent, lower-class women who appealed to a feminine readership. Instead of drawings, live models were photographed in a clinch of love or clad in pajamas while a man brandished a pistol, adding more realism to the confessions. The first cover featured a man and woman looking longingly at each other with the caption, "And their love turned to hated!" The magazine also offered "\$1,000.00 for your life romance," a cheap price compared to what many magazines paid for professional contributions. The result was an immediate success, selling 60,000 issues, and the circulation quickly climbed into the millions.

Between 1922 and 1926, Macfadden capitalized on *True Stories* by producing a host of related titles, including *True Romances*, *True Love and Romances*, and *True Experiences*. Young Hollywood hopefuls such as Norma Shearer, Jean Arthur, and Frederic March were used in *True Story* photographs. Movie shorts featuring dramatizations of the magazine's stories were shown in theaters simultaneously with publication. A weekly "True Story Hour" started on network radio in 1928, and editions were published in England, Holland, France, Germany, and the Scandinavian countries. Imitators quickly appeared, each using some combination of the words true, story, romance, confessions, and love. The most successful was *True Confessions*, founded by Wilford H. Fawcett in 1922, who was a one-time police reporter for the *Minneapolis Journal*. Fawcett's first publication, *Captain Billy's Whiz Bang*, started as a mimeographed naughty joke and pun sheet in 1919, and went on to become the male magazine metaphor for the 1920s decline of morality and flaunting of sexual immodesty. *Captain Billy's Whiz Bang* was memorialized in fellow Minnesotan Meredith Willson's 1962 Broadway musical *Music Man* in a recitation attached to the song "Trouble." *True Confessions* attracted a circulation in the millions and became the cornerstone of Fawcett Publications, which eventually included titles such as *Mechanix Illustrated* and comic books like *Captain America*.

By its own 1941 account, *True Story* and its imitators were magazines for the lower classes, readers too unsophisticated, uneducated, and poor to be of interest to other magazines or advertisers. They "made readers of the semi-literate" as the wife of one editor said. Still, a rise in the standard of living during the 1920s meant that lower-class readers finally had enough income to buy magazines. The confession magazines gave them a forum to air their concerns and share solutions in ways not possible in any other publications. Magazine historian Theodore Peterson maintained that confession

magazines were not a new innovation, just another spin on the old rule that sex and crime sell. Before confession magazines there was sob sister journalism, the sentimentalized reporting of crimes of passion and other moral tales in newspapers. Before newspapers, there were fictionalized first-person narratives detailing the temptations of young women such as *Moll Flanders*. And before novels there were seventeenth-century broadsides, written in the first person with a strong moralizing tone, describing the seductions and murders of scullery maids and mistresses. Bernarr Macfadden and his wife Mary simply rediscovered an old formula and applied it the magazine industry.

The mainstream press was predictably critical of confession magazines. At their best, they were considered mindless entertainment for the masses. At their worst, confession magazines parlayed to the worst common denominator of the lower classes; sex and reproduction. *Time* maintained that *True Story* set "the fashion in sex yarns." A writer in *Harper's* complained that "to pound into empty heads month after month the doctrine of comparative immunity cannot be particularly healthy" and that "it is impossible to believe that the chronic reader of 'confessions' has much traffic with good books." Interestingly, a 1936 survey of *True Story* readers showed that a majority believed in birth control, thought wives shouldn't work, opposed divorce, and were religious yet tolerant of other faiths. A study of *True Story* between 1920 and 1985 revealed that the magazine reinforced traditional notions of motherhood and femininity, and challenged rather than supported patriarchal class relations.

Macfadden continued to champion genuine reader confessionals in his publications during the 1920s and ordered that manuscripts should be edited for grammatical mistakes only. Subsequent editors established more control over their productions, beginning with *True Stories'* William Jordan Rapp in 1926. Professionals were hired to rewrite and create stories, especially after Macfadden was successfully sued for libel in 1927. Still, a survey of 41 *True Story* contributors in 1983 revealed that 16 had written of personal experiences, had never published a story before, and did not consider themselves to be professional writers. Macfadden lost interest in his confession magazines, becoming involved in the founding of the *New York Daily Graphic* newspaper in 1924, "the *True Confessions* of the newspaper world." The newspaper failed in 1932, losing millions of dollars but it created a sensation among lower-class newspaper readers.

By 1935, the combined circulation of Macfadden's magazines was 7.3 million, more than any other magazine publisher, but he was forced to sell his holdings in 1941 following accusations that he had used company funds to finance unsuccessful political campaigns, including a bid for the Republican presidential nomination in 1936. Macfadden died a pauper in 1955, succumbing to jaundice aggravated by fasting, failing to live 150 years as he had predicted. *True Stories* took a more service-oriented path after World War II, offering food, fashion, beauty, and even children's features. The major confession magazines had an aggregate circulation of more than 8.5 million in 1963. The successors of Macfadden Publications acquired the major contenders to *True Stories*; *True Confessions* in 1963 and *Modern Romances* in 1978, and continue to publish confessional magazines, but circulation and advertising revenues have dropped. Soap operas, made-for-television movies, and cable channels such as Lifetime and the Romance Channel compete for potential readers along with supermarket tabloids such as the *National Enquirer*. As well, lower-class readers are better educated and have more options for guidance or help in their personal lives. In the end, the ultimate legacy of the confession magazines, beyond giving readers information on sex and

appropriate social behavior, will be that they truly put the word mass in mass media.

Coniff, Ray (1916—)

Through a unique combination of genuine musical talent fused with a keen sense of both commercial trends and evolving recording technologies of the 1950s, arranger/conductor/instrumentalist Ray Coniff emerged as one of the most popular and commercially successful musicians during the dawn of the stereo age in the late 1950s. Coniff carried on the big band sound long beyond the music's original heyday in the 1940s, and charted 53 albums between 1957 and 1974, including two million-sellers, and 13 other LPs that reached the Top Ten and/or went gold.

Coniff was born into a musical family in Attleboro, Massachusetts, on November 6, 1916, and followed in his father's musical footsteps when he became the lead trombonist of the Attleboro High School dance band (in which he also gained his first arranging

experience). After graduating in 1934 he pursued a musical career in Boston, and in 1936 moved to New York where he became involved with the emerging swing movement of the late 1930s and early 1940s, playing, arranging, and recording for such top names as Bunny Berigan, Bob Crosby, Glen Gray, and Artie Shaw. With the advent of World War II, Coniff spent two years in the army arranging for the Armed Forces Radio Service, and upon his discharge in 1946 continued arranging for Shaw, Harry James, and Frank DeVol.

But by the late 1940s the Big Band swing era in which Coniff had made his first mark was coming to an end, and, as one source put it, "Unable to accept the innovations of bop, he left music briefly around 1950." While freelancing at various nonmusical jobs to support his wife and three children, Coniff also made a personal study of the most popular and commercially successful recordings of the day in an effort to develop what he hoped might prove a new and viable pop sound. His efforts paid off in 1955 when Coniff was hired by Columbia Records. At Columbia he was soon providing instrumental backup for chart-toppers by the label's best artists, among them Don Cherry's "Band of Gold," which hit the Top Ten in January 1956, Guy Mitchell's "Singing the Blues," Marty Robbins's "A White Sport Coat," and two million-sellers by Johnny Mathis.

His singles arrangements led to Coniff's first album under his own name: *S'Wonderful!* (1956) sold half a million copies, stayed in the Top 20 for nine months, and garnered Coniff the Cash Box vote for "Most promising up-and-coming band leader of 1957." Coniff's unique yet highly commercial sound proved irresistible to both listeners and dancers (and stereophiles) and *S'Wonderful!* launched a long series of LPs, the appeal of which has endured into the digital age.

The classic sound of the Ray Coniff Orchestra and Singers was a simple, but unique, and instantly recognizable blend of instrumentals and choral voices doubling the various orchestral choirs with "ooooo," "ahs," and Coniff's patented "da-da-das." His imaginative arrangements were grounded in the solid 1940s big band sound of his early years, while now placing a greater emphasis on recognizable melody lines only slightly embellished by improvisation. Touches of exotic instrumentation such as harp and clavinet sometimes also found their way into the orchestrations. This jazz-tinged but accessibly commercial sound was backed up by danceable, sometimes electrified modern beats derived in equal parts from the classic shuffle rhythms which Coniff made his own, and more contemporary Latin and rock-derived rhythms. Coniff's initially wordless backup chorus soon graduated to actual song lyrics and, as the Ray Coniff Singers, recorded many successful albums on their own.

The emergence of commercial stereo in the late 1950s emphatically influenced the new Coniff sound, and his Columbia albums brilliantly utilized the new stereophonic, multitrack techniques. Even today they remain showcases of precise, highly defined, and processed stereo sound. Coniff's popularity on records during this period led to live performances, and with his popular "Concert in Stereo" tours the maestro was among the first artists to accurately duplicate the electronically enhanced studio sound of his recordings in a live concert hall setting.

Coniff's best and most enduringly listenable albums date from the period of his initial popularity on Columbia Records in the late 1950s and early 1960s: among them, *Say It with Music* (1960), probably his best and glossiest instrumental album, and *It's the Talk of the Town* (1959) and *So Much in Love* (1961), both with the Ray Coniff Singers. These albums and much of Coniff's original Columbia repertory were drawn mostly from the popular, Broadway, and movie song standards that also had been favored in the big band era.

Coniff also recorded two *Concert in Rhythm* albums showcasing rhythmic pop adaptations of melodies by Tchaikovsky, Chopin, Puccini, and other classical composers. But as his popularity and repertory grew, an increasing emphasis was placed on the contemporary Hit Parade. “*Memories Are Made of This*” (1963), with its calculated awareness of “Top 40” teen hits, was a prophetic album in this respect. By the late 1960s Coniff exclusively recorded contemporary songs, and two vocal albums, *It Must Be Him*, and *Honey*, both went gold.

Coniff’s sales fell off after 1962 but were revived in 1966 by the release of *Somewhere My Love*. The album’s title tune was a vocal adaptation of French composer Maurice Jarre’s orchestral “Lara’s Theme” from the popular 1965 film version of the Boris Pasternak novel *Doctor Zhivago*, and the LP won Coniff a Grammy, hitting No. 1 on both the pop and easy listening charts. While *Somewhere* put Coniff back on the charts, it also ensconced his sound in the “easy listening” mode which would more or less persist throughout the rest of his prolific recording career. (It also might be noted that in 1966 Coniff shared the million-seller charts with the Beatles, the Monkees, and the Mindbenders.)

Coniff continued recording and performing his popular international tours and Sahara Hotel engagements at Lake Tahoe and Las Vegas through the 1980s and 1990s. In March of 1997, at age 80 and after a 40-year collaboration with Columbia/CBS Records/Sony Music that resulted in more than 90 albums selling over 65 million copies, Coniff signed a new recording contract with Polygram Records which released his one hundredth album, *I Love Movies. My Way*, an album of songs associated with Frank Sinatra, was released in 1998.

Connors, Jimmy (1952—)

Born September 2, 1952 in East St. Louis, Illinois, James Scott (Jimmy) Connors started playing tennis at the age of two, and grew up to become one of the most recognizable and successful pros in the history of the sport. His rise to the top of the game helped spark the tennis boom that took place in America in the mid-1970s, bringing unprecedented numbers of spectators out to the stands. Like his equally competitive (and even more temperamental) compatriot John McEnroe, tennis fans either loved Connors or hated him. His determination, intensity, and will to win could be denied by no one, and his penchant for becoming embroiled in controversial disputes over tour policy was legendary.

As was the case with his one-time fiancée, American tennis legend Chris Evert, Connors was raised to play the game by a determined parent who also happened to be a teaching pro. Gloria Thompson Connors had her son swinging at tennis balls even before he could lift his racket off the ground; this early training, combined

Jimmy Connors

with Connors’ natural ability and never-say-die attitude, paved the way for his later success. At the 1970 United States Open in Forest Hills, an 18-year-old and still unknown Connors teamed with his much older mentor Pancho Gonzalez to reach the quarterfinals in doubles. A year later, while attending the University of California at Los Angeles, Connors would become the first freshman ever to win the National Intercollegiate Singles title. But neither that honor, nor his All-American status, was enough to prevent him from dropping out of school in 1972 to become a full-time participant on the men’s pro circuit.

Connors finished 1973 sharing the number one ranking in the United States with Stan Smith. The next year he reigned supreme, not just in the States but around the world. Winner of an unbelievable 99 out of 103 matches, and 14 of the 20 tournaments he entered (including the Australian Open, Wimbledon, the United States Open, and the United States Clay Court Championships), Connors totally dominated the competition in a sport that was exhibiting spectacular growth. Two surveys taken in 1974 showed an eye-popping 68 percent hike in the number of Americans claiming to play tennis recreationally, and a 26 percent jump in the number of those saying they were fans of the pro circuit. As a result, tournament prize money increased dramatically. In 1978, Connors became the first player to exceed \$2 million in career earnings.

Although many potential fans refused to jump on the Connors bandwagon—his behavior towards umpires, linesmen, and opposing players was often reprehensible, and he repeatedly refused to participate in the international Davis Cup team tournament—few tennis lovers could resist watching him perform. Bill Riordan, Connors' shrewd manager, capitalized on his client's charismatic persona by arranging a pair of made-for-television exhibition singles matches dubbed the "Heavyweight Championship of Tennis." Connors, never one to shy away from the spotlight, won them both (years later, he would defeat Martina Navratilova in a gimmicky "Battle of the Sexes" handicap match). The unprecedented media coverage of these much-hyped events landed Connors a *Time* magazine cover photo in 1975. Riordan was also behind the highly publicized \$40 million antitrust suit Connors brought against the Association of Tennis Professionals and Commercial Union Assurance (sponsor of the ILTF Grand Prix) a year earlier. It was alleged that these organizations were conspiring to monopolize professional tennis by barring any player who had signed up to play in the newly formed World Tennis League from competing in the 1974 French Open. Thus, Connors was denied his shot at the elusive Grand Slam that year. By the end of 1975, Connors split with Riordan and dropped the hotly contested lawsuit; only then did his relations with fellow tour players begin to improve.

None of Connors' off-court battles had an adverse effect on his game in the 1970s. Though he lacked overpowering strokes, Connors was a dynamic shotmaker with the mentality of a prizefighter. His trademark two-fisted backhand, along with an outstanding return of serve, surprising touch, and the ability to work a point, all contributed to his success. Number one in the world five times (1974-78), Connors won a total of eight Grand Slam singles championships, including five United States Opens. He is also the only player to have won that title on three different surfaces (grass, clay, and hard courts).

In 1979, Connors disclosed that he and former *Playboy* Playmate-of-the-Year Patti McGuire had gotten married in Japan the previous year. Around this time his game suffered something of a decline. He failed to reach the final round of the United States Open for the first time in six years, and his once-fierce rivalry with Bjorn Borg lost its drama as he got crushed by the Swede four times. But predictably for someone of his competitive spirit, Connors recommitted himself, and won two more United States Open titles in the 1980s.

For a long time, it seemed certain that Connors' biggest contribution to American culture would be the sense of mischief and passion he brought to the once aristocratic game of tennis. But his determination to postpone retirement and continue fighting on court in the latter stages of a storied 23-year career gave him a new claim to fame, as he endeared himself to older spectators and even non-tennis fans. At age 39, Connors rose from number 936 in the world at the close of the previous year to make it all the way to the semifinals of the United States Open in 1991. En route, he came from way behind to defeat a much younger Aaron Krickstein in dramatic fashion. Ironically, it is likely that the match people will remember most is the one that came in a tournament he did not win. Considering that Connors holds 109 singles titles—tops in the Open era—along with 21 doubles titles, this is nothing for him to lose any sleep over. In 1998, Connors was inducted into the International Tennis Hall of Fame.

Consciousness Raising Groups

A tactic usually associated with the U.S. Women's Liberation Movement (WLM) and other feminist-activist groupings born in the late 1960s, consciousness raising involved a range of practices that stressed the primacy of gender discrimination over issues of race and class. Grounded in practical action rather than theory, consciousness raising aimed to promote awareness of the repressed and marginal status of women. As proclaimed in one of the more enduring activist slogans of the 1960s—"The personal is political"—consciousness raising took several forms, including the formation of devolved and non-hierarchical discussion groups, in which women shared their personal (and otherwise unheard) experiences of everyday lives lived within a patriarchal society. Accordingly, the agenda of consciousness raising in the early days very often focused on issues such as abortion, housework, the family, or discrimination in the workplace, issues whose political dimension had been taken for granted or ignored by the dominant New Left groupings of the 1960s.

As a political tactic in its own right, consciousness raising received an early definition in Kathie Sarachild's "Program for Feminist Consciousness Raising," a paper given at the First National Convention of the Women's Liberation Movement in Chicago, in November 1968. Many of those involved in the early days of WLM had been politicized in the Civil Rights struggle and the protests against the Vietnam War. But they had become disenchanted with the tendency of nominally egalitarian New Left organizations, such as the Student Nonviolent Coordinating Committee (SNCC) and Students for a Democratic Society (SDS), to downplay or omit altogether the concerns of women, and had struck out on their own. When challenged on the position of women within his organization in 1964, SNCC leader Stokely Carmichael had replied that "The only position for women in SNCC is prone." As late as 1969 SDS produced a pamphlet that observed that "the system is like a woman; you've got to fuck it to make it change." The frustration of feminist activists in the 1960s produced a new women's movement, which stressed the patriarchal content of New Left dissent, almost as much as it raised awareness about gender and power in the everyday arenas of home and work.

As a political strategy, consciousness raising placed a high value on direct, practical action, and like much political activism of the 1960s and early 1970s, it produced inventive outlets for conducting and publicizing political activity. In 1968 the WLM took consciousness raising to the very heart of New Left concerns by conducting a symbolic "burial" of traditional femininity at Arlington Cemetery—the site of many protests at the ongoing conflict in Vietnam. As an exercise in consciousness raising, the mock funeral aimed to publicize the patriarchal tendency to define grieving mothers and bereaved widows in terms of their relationships with men. Similar guerilla style demonstrations marked the high point of consciousness raising as a form of direct action during the late 1960s. The New York Radical Women (NYRW) disrupted the Miss America pageant at Atlantic City in September 1968; the WITCH group protested the New York Bridal Fair at Madison Square Garden on St. Valentine's Day 1969.

Other groups who employed similar tactics during this period included the Manhattan-based Redstockings, the Feminists, and the New York Radical Feminists.

The emphasis which early WLM consciousness raising placed upon small groups of unaffiliated women shows its roots in the anti-organizational politics of the New Left against which it reacted. The WLM may have reacted sharply against what it saw to be the patriarchal politics of SDS, but it shared with the New Left an emphasis on localized political activity exercised through small devolved “cells,” which valorized the resistance of the individual to institutional oppression. In common with certain tendencies of the New Left, the premium placed upon an overtly personal politics has at times served to obscure the original commitment of consciousness raising to a more collective revolution in social definitions of gender and gender roles. One of the more visible legacies of consciousness raising can be seen in the proliferation of Women’s Studies courses and departments at universities and colleges during the closing decades of the twentieth century.

Conspiracy Theories

Once the province of the far right, conspiracy theories have gained a wider cultural currency in the last quarter of the twentieth century, and have become widely disseminated in our popular culture through diverse sources. Spanning every topic from UFOs to ancient secret societies to scientific and medical research, conspiracy theories are frequently disparaged as the hobby of “kooks” and “nuts” by the mainstream. In fact, many theories are well substantiated, but the belief in a “smoke-filled room” is a patently uncomfortable thought for most. Although the populace has generally shown a preference for dismissing conspiracy theories en masse, nevertheless it is now a common belief that a disconnect exists between the official line and reality. Crisis and scandal have left their mark on the American psyche, and popular culture—especially film and television—have readily capitalized on public suspicions, becoming an armature of the culture of paranoia.

What exactly is a conspiracy theory? Under its broadest definition, a conspiracy theory is a belief in the planned execution of an event—or events—in order to achieve a desired end. “At the center [of a conspiracy] there is always a tiny group in complete control, with one man as the undisputed leader,” writes G. Edward Griffin, author of *The Creature from Jekyll Island*, a work on the Federal Reserve Board which, in passing, touches on many conspiracy theories of this century. “Next is a circle of secondary leadership that, for the most part, is unaware of an inner core. They are led to believe

that they are the inner-most ring. In time, as these conspiracies are built from the center out, they form additional rings of organization. Those in the outer echelons usually are idealists with an honest desire to improve the world. They never suspect an inner control for other purposes.” This serves as an able definition of conspiracy, but for a conspiracy to be properly considered as conspiracy theory, there must be a level of supposition in the author’s analysis beyond the established facts. Case in point: the ne plus ultra of conspiracy theories, the assassination of John F. Kennedy. Regardless of who was responsible for his murder, what is germane is the vast labyrinthian web of suspects that writers and researchers have uncovered. It is these shadowy allegations that comprise a conspiracy theory. The validity of different arguments aside, in the case of JFK, it is the speculative nature of these allegations which has left the greatest impression on popular culture.

Conspiracy theories tend, in the words of James Ridgeway, author of *Blood in the Face*, “to provide what seems to be a simple, surefire interpretation of events by which often chaotic and perplexing change can be explained.” While it would be comforting to be so blandly dismissive, in the end, a conspiracy theory can only be as sophisticated as its proponent. Naturally, in the hands of a racist ideologue, a theory such as a belief in the omnipotence of Jewish bankers is a justification for hatred. Furthermore, as conspiracy theorists are wont to chase their quarry across the aeons in a quest for first causes, their assertions are often lost in the muddle, further exacerbated by the fact that more often than not, conspiracy theorists are far from able wordsmiths. Yet, as the saying goes, where there’s smoke there’s fire, and it would be injudicious to lump all conspiracy theories together as equally without merit.

A brief exegesis of one of the most pervasive conspiracy theories might well illustrate how conspiracy theories circulate and, like the game of telephone—in which a sentence is passed from one listener to the other until it becomes totally garbled—are embellished and elaborated upon. At the close of the eighteenth century, the pervasive unrest was adjudged to be the work of Freemasons and the Illuminati, two semi-secret orders whose eighteenth-century Enlightenment theories of individual liberty made them most unpopular to the aristocracy. These groups were widely persecuted and then driven into hiding. But waiting in the wings, was that most convenient of scapegoats, the Jews.

The Jews had long been viewed with distrust by their Christian neighbors. Already viewed as deicides, in the Middle Ages it was also commonly believed that Jews used the blood of Christian children in their Sabbath rituals. Communities of Jews were often wiped out as a result. Association, as it had so often been for the Jews, was sufficient to establish guilt. Early in the nineteenth century, a theory developed propounding an international Jewish conspiracy, a cabal of Jewish financiers intent on ensnaring the world under the dominion of a world government. The Jews were soon facing accusations of being the eminence grise behind the Illuminati, the Freemasons, and with complete disdain for the facts, the French Revolution.

Stories of an international Jewish cabal percolated until, in 1881, *Biarritz*, a novel by an official in the Prussian postal service, gave dramatic form to them. In a chapter entitled “In the Jewish Cemetery in Prague,” a centennial congregation of Jewish leaders was depicted as they gathered to review their nefarious efforts to enslave the Gentile masses. The chapter was widely circulated in pamphlet form and later expanded into a book, *The Protocols of Zion*, used as inflammatory propaganda and distributed by supporters of the Czar. Distributed widely throughout Europe and America, Hitler would

later cite *The Protocols* as a cardinal influence in his mature political beliefs.

The Jewish conspiracy made its way to America in the 1920s, where the idea was taken up by a rural, white, nativist populace already convinced the pope was an anti-Christ, Jews had horns, and all non-Anglo foreigners were agents of Communism. The industrialist Henry Ford fanned the flames by demonizing Jews in his newspaper, the *Dearborn Independent*, in which he published sections of *The Protocols*. Whether directly associated with Jews or not, the theory that American sovereignty was being slowly undermined became an enduring feature of the nativist right wing. It would be used to explain everything from the two world wars to the Bolshevik Revolution to the establishment of the IRS. Unfortunately, alongside the most rabid anti-Semitic screed there sits many an assertion, both accurate and well documented, and it is this indiscriminate combination of fact and fantasy that makes the allegations so disturbing.

For mainstream America, one could properly say that the age of the conspiracy theory began in the 1950s. More than any obscurantist's diatribe, movies gave life and breath to the conviction that civilization was governed from behind the scenes. Movies were a release valve in which the fears of that era—fears of Communist invasion, nuclear annihilation, UFOs—found release, sublimated into science fiction or crime dramas. The 1950s gave us films with a newfound predilection for ambiguity and hidden agendas—film noir. Films like *Kiss Me Deadly*, *The Shack out on 101*, *North by Northwest*, and *The Manchurian Candidate* explicate a worldview that is patently conspiratorial. They are a far cry from anything produced in the previous decades. The angst and nuances of film noir carried over to the science fiction genre. No longer content with fantasy, the frivolousness of early science fiction was replaced by a dread-laden weltanschauung, a world of purposeful or malevolent visitors from another planet: visitors with an agenda. *The Day the Earth Stood Still*, *Invasion of the Body-Snatchers*, and *Them* are standouts of the era, but for each film that became a classic, a legion of knockoffs stood arrayed behind.

By the time of Kennedy's assassination, Americans were looking at world events with a more jaundiced eye. The movement from Kennedy to Watergate, from suspicion to outright guilt, was accompanied by a corollary shift in media perception. The United States government was directly portrayed as *the enemy*—no longer intuited as it had been in the oblique, coded films of the 1950s. Robert Redford and Warren Beatty made films—*All the President's Men*, *Three Days of the Condor*, and *The Parallax View*—that capitalized on the suspicion of government that Watergate fostered in the public.

It wasn't until the release of Oliver Stone's *JFK* that conspiracy theories made a reentry into the mainstream. Shortly thereafter, the phenomenally popular TV series *The X-Files*, a compendium of all things conspiratorial—properly sanitized for middle-class sensibilities—made its auspicious debut in 1992. For a generation to whom the likelihood of UFOs outweighed their belief in the continuance of social security into their dotage; for whom the McCarthy Era was history, Watergate but a distant, childhood memory, and JFK's murder the watershed in their parents' history, conspiracy theories received a fresh airing, albeit heavy on the exotic and entirely free of racism, xenophobia, and government malfeasance. The show's success triggered a national obsession for all things conspiratorial, and a slew of books, films, and real-life TV programming made the rounds. There was even a film titled *Conspiracy Theory* starring the popular actor Mel Gibson as a paranoid cabbie whose suspicions turn out to be utterly justified.

By their very nature conspiracy theories are difficult to prove, and this fact in and of itself largely explains their popularity. They inhabit a netherworld where truth and fiction mingle together in an endless dance of fact and supposition. They tantalize, for within this symbiosis explanations are set forth. After all, it is easier to acknowledge a villain than to accept a meaningless absurdity. Therefore, as the world grows increasingly complex, it is likely that conspiracy theories will continue, like the game of telephone mentioned earlier, to mutate and multiply—serving a variety of agendas. Their presence in the cultural zeitgeist, however, is no longer assailable: paranoia is the mainstream.

Consumer Reports

Published since 1936, *Consumer Reports* has established a reputation as a leading source of unbiased reporting about products and services likely to be used by the typical American. It counts itself among the ten most widely disseminated periodicals in the United States, with a circulation in 1998 of 4.6 million. In all of its more than sixty years of production, the journal has never accepted free samples, advertisements, or grants from any industry, business, or agency. Maintaining this strict independence from interest groups has helped make *Consumer Reports* a trusted source of information.

Consumer Reports is published by Consumers Union, a not-for-profit organization based in Yonkers, New York. Along with the print monthly, Consumers Union also creates and distributes many guide books for consumers, such as the *Supermarket Buying Guide* and the *Auto Insurance Handbook*, as well as newsletters about travel and health issues, and a children's magazine called *Zillions*. There are *Consumer Reports* syndicated radio and television shows, and a popular and successful web page with millions of subscribers. Stating its mission as to "test products, inform the public and protect

consumers.” Consumers Union has more than 450 persons on its staff and operates fifty test labs in nine departments: appliances, automobiles, chemicals, electronics, foods, home environment, public service, recreation and home improvement. The Union operates three advocacy offices, in Washington, D.C., Austin, Texas, and San Francisco, that help citizens with questions, complaints, and legal action about products and services. Consumers Union was also instrumental in the formation of the Consumer Policy Institute in Yonkers, which does research in such areas as biotechnology and pollution; and Consumer International, founded in 1960, which seeks to unite worldwide consumer interests. All together, the organizations that comprise Consumers Union have been pivotal in the creation of a consumer movement and have been responsible for many defective product recalls, fines on offending industries, and much consumer-protection legislation.

The history of the founding of *Consumer Reports* gives a condensed picture of the consumer movement in the United States. In 1926, Frederick Schlink, an engineer in White Plains, New York, founded a “consumer club,” with the goal of better informing citizens about the choices of products and services facing them. With the industrial revolution not far behind them, consumers in the 1920s were faced with both the luxury and the dilemma of being able to purchase many manufactured items that had formerly had to be custom made. Schlink’s club distributed mimeographed lists of warnings and recommendations about products. By 1928, the little club had expanded into a staffed organization called Consumers’ Research, whose journal, *Consumers’ Research Bulletin*, accepted no advertising. That same year Schlink and another Consumers’ Research director, engineer Arthur Kallet, published a book about consumer concerns called *100,000,000 Guinea Pigs: Dangers in Everyday Foods, Drugs, and Cosmetics*.

In 1933, when Schlink moved his organization to the small town of Washington, New Jersey, he was confronted with his own ethical dilemmas. When some of his own employees formed a union, Schlink fired them, prompting a strike by forty other workers demanding a minimum-wage guarantee and reinstatement of their fired colleagues. Schlink responded by accusing the strikers of being communists and by hiring scabs. In 1936, the Consumers’ Research strikers formed their own organization with Arthur Kallet at its head. They called it Consumers Union. Their original charter promised to “test and give information to the public on products and services” in the hopes of “maintaining decent living standards for ultimate consumers.”

Early Consumers Union product research was limited because of lack of funds to buy expensive products to test, but they did research on items of everyday concern to Depression-era consumers, such as soaps and credit unions. Within three months of its formation, Consumers Union published the first issue of *Consumers Union Reports*, continuing the tradition of refusing commercial support. Along with information on product safety and reliability, the new journal maintained a leftist slant by reporting on social issues such as business labor practices. Its first editorial stated, “All the technical information in the world will not give enough food or enough clothes to the textile worker’s family living on \$11 a week.” Threatened by this new progressive consumer movement, business began to fight back. Red-baiting articles appeared in such mainstream journals as *Reader’s Digest* and *Good Housekeeping*. Between 1940 and 1950, the union appeared on government lists of subversive organizations.

By 1942, *Consumers Union Reports* had become simply *Consumer Reports* to broaden its public appeal. Both consumption and the purchase of consumer research had been slowed by the Depression

and World War II, but with the return of consumer spending after 1945, the demand for *Consumer Reports* subscriptions shot up. In the postwar economic boom, businesses had very consciously and successfully urged citizens to become consumers. Having learned to want more than food and shelter, people also learned to want more in less material arenas. They wanted something called “quality of life.” They wanted clean air and water, they wanted to be able to trust the goods and services they purchased, and they wanted their government to protect their safety in these areas.

In the boom economy of the 1950s and 1960s, business felt it had little to fear from organized consumers and did little to fight back. This, combined with the rise of socially conscious progressive movements, gave a boost of power and visibility to the consumer movement. In 1962, liberal president John F. Kennedy introduced the “consumer bill of rights,” delineating for the first time that citizens had a right to quality goods. The same year, Congress overcame the protests of the garment industry to pass laws requiring that children’s clothing be made from flame-resistant fabric. In 1964, the Department of Labor hired lawyer Ralph Nader to investigate automobile safety, resulting in landmark vehicle-safety legislation. A committed consumer activist, Nader joined the Consumers Union board of directors from 1967 through 1975.

In 1962, Rachael Carson sparked a new view of the environment with her ecological manifesto, *Silent Spring*, a work so clearly connected to the consumer movement that Consumers Union published a special edition. The new environmentalists did research that resulted in the passage in 1963 of the first Clean Air Act and in 1965 of the Clean Water Act.

The consumer movement and the movement to clean up the environment attracted much popular support. By 1967, the Consumer Federation of America had been formed, a coalition of 140 smaller local groups. The long-established Consumers Union opened its office in Washington, D.C. to better focus on its lobbying work. Working together, these groups and other activists were responsible for the formation of the Environmental Protection Agency, the Consumer Product Safety Commission, and countless laws instituting safety standards, setting up fair business practices, and regulating pollution.

The thriving consumer movement is one of the most significant legacies of the turbulent period of social change that spanned the period from the 1950s through the 1970s. As more and more products and services have been introduced, activists have continued to instigate legislation and create organizations and networks to help consumers cope with the flood of options. From its roots as a club for consumer advice, Consumers Union has grown into a notable force for consumer and environmental protection, offering research and advice on every imaginable topic of interest to consumers from automobiles and appliances to classical music recordings, legal services, and funerals. It has retained a high standard of ethics and value pertaining to the rights of the common citizen. For most of them, thoughts of a large purchase almost inevitably lead to the question, “Have you checked *Consumer Reports*?” The organization has clung to its progressive politics while weathering the distrust of big business about its motivations and effectiveness.

—Tina Gianoulis

Consumerism

Consumerism is central to any study of the twentieth century. In its simplest form, it characterizes the process of purchasing goods such as food, clothing, shelter, electricity, gas, water, or anything else, and then consuming or using those goods. The meaning of consumerism, however, goes well beyond that definition, and has undergone a striking shift from the way it was first used in the 1930s to describe a new consumer movement founded in opposition to the increased prevalence of advertising. It is with much irony that by the end of the twentieth century, consumerism came to mean a cultural ethos marked by a dependence on commerce and incessant shopping and buying. This shift in meaning reflects the shift in how commercial values transformed American culture over the century.

In the early decades of the twentieth century, social life became increasingly commercialized. According to the famous *Middletown* studies, automobiles conferred mobility on millions, and amusement parks, movie theaters, and department stores had become serious competitors to leisure pursuits that traditionally had been provided by church, home, and family centered activities. By 1924, commercial values had significantly changed home and leisure life as compared to 1890; even school curriculums were being altered in order to accommodate an increasingly commercialized world.

As a response to these changes, a consumer movement emerged, and in the 1920s was focused on sanitary food production and workers' conditions. But by the 1930s, the rapid commercialization taking place shifted the consumer movement's attention to advertising. This reform movement was predicated on the idea that the modern consumer often has insufficient information to choose effectively among competing products, and that in this new era of increased commercialization, advertisements should provide potential consumers with more information about the various products. They also objected to advertising which was misleading, such as the image-based advertising which often played on people's fears and insecurities (such as suggesting that bad breath or old-fashioned furnishings prevented professional and social success).

Accordingly, the consumer movement sought policies and laws which regulated methods and standards of manufacturers, sellers, and advertisers. Although the preexisting 1906 Food and Drug Act had made the misbranding of food and drugs illegal, the law only applied to labeling and not to general advertising. With the support of a New York senator and assistant Secretary of Agriculture Rexford G. Tugwell, a bill was introduced in the U.S. Senate in 1933 which would prohibit "false advertising" of any food, drug, or cosmetic, defining any advertisement false if it created a misleading impression by "ambiguity or inference." Ultimately, a significantly less strict form of the bill was passed, called the Wheeler-Lea Amendment, which is still the primary law governing advertising today.

In the 1930s, the consumer movement—which was first to use the term consumerism—sought assurances about the quality of goods

sold to the public. For most people, shopping in the early part of the century was still a novelty, and certainly wasn't central to daily life. This was due, in part, to the (relatively) modest amount of goods available, and to the nature of the shopping environment, which was typically an unembellished storefront. Often, the shopkeeper was an acquaintance of the buyer, and frequently the act of buying was dependent upon an active exchange of bargaining. This changed, however, with the expansion of fixed-priced and display-laden department stores which flourished after World War II (though they had been in existence since just after the Civil War).

The end of World War II marked a significant point in the development of consumer culture in its second meaning, which strongly contrasts with the perspective of the consumer movement. At the end of World War II, the return of soldiers, a burgeoning economy, and a boom in marriage rates and child-birth created a new and unique set of circumstances for the American economy. Unprecedented prosperity in the 1950s led people to leave the cities and move to the suburbs; the increased manufacturing capabilities meant a rapid rise in the quantity and variety of available goods; and the rise and popularity of television and television advertising profoundly altered the significance of consumerism in daily life.

The heretofore unprecedented growth in inventions and gadgets inspired an article which appeared in *The New Yorker* on May 15, 1948 claiming "Every day, there arrive new household devices, cunningly contrived to do things you don't particularly want done." The author described Snap-a-cross curtains, the Mouli grater, and the Tater-Baker as examples of the inventive mood of the era. Prepared cake mixes were introduced in 1949; Minute Rice in 1950; and Pampers disposable diapers in 1956. The variety of goods was staggering: Panty Hose debuted in 1959, along with Barbie (the most successful doll in history); and in 1960, beverages began to be stored in aluminum cans. Due to their increased prevalence and an increase in advertising, these items went from novelties to an everyday part of American life. By the end of the century, many of these items were no longer viewed as luxuries but as necessities.

During this time, the government responded by encouraging behavior which favored economic growth. For example, the American government supported ads which addressed everything from hygiene to the "proper" American meal and, ultimately, the media campaign was a crucial element in the development of consumerism, or what had become a consumer culture. In *Mad Scientist*, media critic Mark Crispin Miller argues that American corporate advertising was the most successful propaganda campaign of the twentieth century.

Because most of the consumption was geared towards the household, many television advertisements were geared towards the housewife, the primary consumer in American households. In addition to advertisements, other factors specifically attracted women to shopping, such as the development of commodities which (supposedly) reduced household chores, an activity for which women were primarily responsible. Ironically (but quite intentionally), "new" products often created chores which were previously unknown, such as replacing vacuum bag filters or using baking soda to "keep the refrigerator smelling fresh." In 1963, Betty Friedan published *The Feminine Mystique* which derided suburbia as "a bedroom and kitchen sexual ghetto," a critique partially based on what many experienced as the cultural entrapment of women into the role of homemaker, an identity that was endlessly repeated in advertising images.

The mass migration to the suburbs also resulted in the construction of new places to shop. The absence of traditional downtown areas

along with the popularity of automobiles gave rise to the suburban shopping mall, where typically, one or two large department stores anchor a variety of other stores, all under one roof. The by-now prevalent television advertising was another significant factor contributing to the spread of shopping malls, by further creating demand for material goods. Unlike older downtown centers, the new mall was a physical environment devoted solely to the act of shopping.

The abundance of goods and ease with which to buy them led to a change in the American attitude towards shopping. Visits to shopping locations became more frequent, and were no longer viewed as entirely a chore. Although it remained “work” for some, shopping also became a form of entertainment and a leisure-time activity.

Like the world’s fairs before them, suburban shopping malls displayed the wonders of modern manufacturing and reflected a transition from store as merchant to store as showroom. In what was now a crowded marketplace, imagery became increasingly critical as a way of facilitating acts of consumption. According to Margaret Crawford in her essay “The World in a Shopping Mall”: “The spread of malls around the world has accustomed large numbers of people to behavior patterns that inextricably link shopping with diversion and pleasure.” Although this phenomenon originated outside the United States and predated the twentieth century, American developers—with their “bigger is better” attitude—perfected shopping as a recreational event.

As a result, malls eventually became a central fixture of American social life, especially in the 1980s. Increasingly bigger malls were built to accommodate the rapid proliferation of chain stores and in order to provide the “consummate” shopping experience (and, conveniently, to eliminate the need to leave the mall), additional attractions and services were added. By the 1980s, food courts, movie theaters, and entertainment venues enticed shoppers. These centers became such popular gathering places that they functioned as a substitute for other community centers such as parks or the YMCA. Teenagers embraced malls as a place to “hang-out” and in response, many shops catered specifically to them, which aided advertising in cultivating consumer habits at an early age. Some chain stores, such as Barnes and Noble, offer lectures and book readings for the public. Some shopping malls offered other community activities, such as permitting their walkways to be used by walkers or joggers before business hours. The largest mall in the United States was the gigantic Mall of America, located in Bloomington, Minnesota, which covered 4.2 million square feet (390,000 square meters) or 78 acres. (The largest mall in North America is actually a million square feet larger—the West Edmonton Mall, located in Canada).

Increasingly, many elements of American social life were intermixed with commercial activity, creating what has become known as a consumer culture. Its growth was engineered in part by “Madison Avenue,” the New York City street where many advertising agencies are headquartered. As advertising critics note, early advertising at beginning of the century was information based, and described the value and appeal of the product through text. Advertisers quickly learned, however, that images were infinitely more powerful than words, and they soon altered their methods to fit. The image-based approach works by linking the product with a desirable image, often through directly juxtaposing an image with the product (women and cars, clean floors and beautiful homes, slim physiques and brand-names). Although such efforts to promote “image identity” were already sophisticated in the 1920s and 1930s, the proliferation of television significantly elevated its influence.

The marriage of image advertising and television allowed advertising to achieve some of its greatest influences. First, ads of the 1950s and early 1960s were successful in cultivating the ideal of the American housewife as shopper. Advertisements depicted well-scrubbed, shiny nuclear families who were usually pictured adjacent to a “new” appliance in an industrialized home. Second, advertising promoted the idea of obsolescence, which means that styles eventually fall out of fashion, requiring anyone who wishes to be stylish to discard the old version and make additional purchases. Planned obsolescence was essential to the success of the automotive and fashion industries, two of the heaviest advertisers.

A third accomplishment of image-based advertising was creating the belief, both unconscious and conscious, that non-tangible values, such as popularity and attractiveness, could be acquired by consumption. This produced an environment in which commodification and materialism was normalized, meaning that people view their natural role in the environment as related to the act of consumption. Accordingly, consumerism or “excess materialism,” (another definition of the term) proliferated.

Advertising, and therefore television, was essential to the growth of consumerism, and paved the way for the rampant commercialism of the 1980s and 1990s. Concurrently, there was a tremendous increase in the number of American shopping malls: to around 28,500 by the mid-1980s. The explosion of such commercialism was most evident in the sheer variety of goods created for purely entertainment purposes, such as Cabbage Patch Kids, VCR tapes, Rubik’s cubes, and pet rocks. So much “stuff” was available from so many different stores that new stores were even introduced which sold products to contain all of the stuff. By the mid-1980s, several 24-hour shopping channels were available on cable television and, according to some sources, more than three-fourths of the population visited a mall at least once a month, evidence of the extent to which shopping was part of daily life.

It is important to note that with the development of consumer culture, consumerism in its earlier sense was still being practiced. Ralph Nader (1934—) is credited with much of the movement’s momentum in the late 1960s. In 1965, Nader, a Harvard lawyer, published a book about auto-safety called *Unsafe at Any Speed: The Designed-in Dangers of the American Automobile*. This and the revelation that General Motors Corporation had been spying on him and otherwise harassing him led to passage of the National Traffic and Motor Vehicle Safety Act in 1966. Nader went on to author other books on consumer issues, and established several nonprofit research agencies, including Public Citizen, Inc. and the Center for Study of Responsive Law. Other organizations also arose to protect consumer interests such as the Federal Trade Commission (FTC), the Food and Drug Administration (FDA), and the Better Business Bureau (BBB). The Consumers Union, which was founded in 1936, continues to be the most well-known consumer organization because of its monthly magazine *Consumer Reports*, which evaluates competing products and services.

Aside from the efforts of such consumerist groups, the forces of consumer culture were unstoppable. By the late 1980s and 1990s, the proliferation of commercial space reached every imaginable venue, from the exponential creation of shopping malls and “outlet stores”; to the availability of shopping in every location (QVC; Internet; mid-flight shopping); to the use of practically all public space for advertising, (including airborne banners, subway walls, labels adhered to fruit, and restroom doors). This omnipresent visual environment

reinforced what was by now an indoctrinated part of American life: consumerism.

The ubiquitousness of consumer culture was so prevalent that a number of artists throughout the century made it their subject matter. Andy Warhol, along with Roy Lichtenstein and others, won worldwide celebrity with endlessly repeated portraits of commodities (Coke bottles, Campbell's soup cans) and of celebrities, which seemed to be wrapped and packaged along with all of the other products. Holidays were created based on buying gifts (Secretary's Day, Halloween), and malls and stores which are sometimes viewed as community space replaced other venues which used to be popular public spaces (bowling alleys, YMCAs, community centers, town halls).

Consumerism became so critical to Americans that millions of people went significantly into debt to acquire goods. Credit, which permits the purchase of goods and services with little or no cash, was essential for average people to be able to buy more and more. Credit cards functioned like cash and, in 1990, the credit card debt of Americans reached a staggering \$243 billion. By 1997, that number more than doubled, reaching \$560 billion, according to the Bureau of the Census. This dramatic increase in credit card spending was undertaken, in part, because of the seemingly constant need to acquire newer or better goods. Oprah Winfrey even held segments on her talk show about how people were dealing with debt, and how to cut up your credit cards.

The relentless consumption over the century has had the inevitable result of producing tons—actually millions of tons—of consumer waste. According to a report produced by Franklin Associates, Ltd. for the Environmental Protection Agency, approximately 88 million tons of municipal solid waste was generated in 1960. By 1995, the figure had almost tripled, to approximately 208 million tons. This means each person generated an average of 4.3 pounds of solid waste per day. For example, Americans throw away 570 diapers per second—or 49 million diapers a year. This astonishing level of waste production has had the effect of rendering the United States a world leader in the generation of waste and pollutants. In 1998, it was projected that annual generation of municipal solid waste will increase to 222 million tons by the year 2000 and 253 million tons in 2010. A full one-third of all garbage discarded by Americans is packaging—an awesome amount of mostly non-decomposable material for the planet to reckon with.

Further, as a variety of social critics such as Sut Jhally have pointed out, consumerism is popular because advertisements sell more than products: they sell human hopes and dreams, such as the need for love, the desire to be attractive, etc. It is inevitable that the hopes and dreams can never be reached through the acquisition of a product, which, in turn, has led to a profound sense of disillusionment and alienation, a problem noted by public thinkers throughout the century, from John Kenneth Galbraith to Noam Chomsky.

Sports Utility Vehicles promise security through domination, Oil of Olay promises beauty in aging, and DeBeers promises eternal love with diamonds. Since these empty solutions run counter to the inevitability of the human condition, no product can ever meet its promise. But in the meantime, people keep on consuming. . . .

Contemporary Christian Music

In the late 1990s a genre of music, unknown to most of America, began push its way onto the popular American music scene. Contemporary Christian Music or CCM traced its roots to Southern Gospel and Gospel music, but only began to be noticed by a larger audience when the music industry changed the way it tracked record sales in the mid-1990s.

In the late 1960s, Capitol Records hassled a blond hippie named Larry Norman for wanting to call his record *We Need a Whole Lot*

More of Jesus and a Lot Less Rock and Roll. In response, Norman decided to make and distribute his own records. Norman's records shocked the religious and irreligious alike. He mixed his strict adherence to orthodox Christianity with honest cultural observations in songs like "Why Don't You Look into Jesus," which included the lines "Gonorrhea on Valentines Day, You're still looking for the perfect lay, you think rock and roll will set you free but honey you'll be dead before you're 33."

Before long Norman's dreams of artistic freedom had become a nightmare when executives took over and created CCM the genre which, unlike the artists who dreamed of singing songs about Jesus for non-Christians, quickly focused on marketing the records to true believers. CCM had become a large industry, signing and promoting artists who were encouraged to make strictly religious records that were heavy on theology but lacking in real world relevance. CCM also began to cater to best-selling "secular" artists who experienced Christian conversions, helping them to craft religious records which both alienated longtime fans and couldn't be distributed through ordinary music channels. Among these were once popular performers like Mark Farner of Grand Funk Railroad, Dan Peek of America, B.J. Thomas, Richie Furay of Poco and Buffalo Springfield, Al Green, Dion, Joe English of Wings, Rick Cua of the Outlaws, and many others.

By the 1980s, other studios became receptive to Christian music, and allowed artists more flexibility with song lyrics. In 1983 a heavy metal band named Stryper comprised of born again Christians emerged from the L.A. metal scene and signed a record deal with a "secular" label Enigma which had produced many of the early metal artists. In 1985 Amy Grant signed her own direct deal with A&M that got her a top 40 single "Find A Way," and led to two number one singles "The Next Time I Fall," in 1987 and "Baby, Baby," in 1991. Leslie Phillips dropped out of CCM in 1987, changed her name to Sam, and signed with Virgin, a company with whom she recorded several critically lauded albums. Michael W. Smith signed with Geffen in 1990 and produced a number six hit "Place In This World."

With the commercial success of Grant and others, many CCM artists no longer wanted to be identified as such, preferring to be known simply as artists. In their view, being identified by their spiritual and religious beliefs limited the music industry's willingness to widely disseminate their music and alienated some consumers. Many of these artists left their CCM labels and signed with "secular" record labels or arranged for their records to be distributed in both the "Christian" and "secular" music markets. By the mid-1990s artists like dc Talk, Jars of Clay, Bob Carlisle, Kirk Franklin, Fleming and John, Julie Miller, BeBe and CeCe Winans, punk band MxPx, Jon Gibson, and others once mainstays of CCM, had signed with "secular" labels.

Christian artists' attractiveness to "secular" record labels increased with the introduction of a new mode of calculating record sales. The introduction of SoundScan, a new tracking system, brought attention to CCM in the mid-1990s. SoundScan replaced historically unreliable telephone reports from record store employees with electronic point-of-purchase sales tracking. SoundScan also began to tabulate sales in Christian bookstores. The result suddenly gave CCM increased visibility in popular culture as many artists who had heretofore been unknown outside the Christian community began to find themselves with hit records.

Jars of Clay, a rookie band which formed at college in Greenville, Illinois, was among the first of these success stories. Signed with a tiny CCM label called Essential Records, their debut record was selling briskly in the Christian world when one single, "Flood"

came to the attention of radio programmers who liked it, and unaware that it was a song from a "Christian" band, began to give it significant airplay in several different formats. Before long "Flood" was a smash hit played in heavy rotation on VH-1 and numerous other music video outlets. Mainstream label Zomba, which had recently purchased Jars' label, re-released the record into the mainstream market and the Jars Boys—as they were affectionately known—began to tour with artists like Sting, Jewel, and the Cowboy Junkies. Their second release "Much Afraid," benefitted from the SoundScan arrangement by debuting at number eight on the Billboard Album chart.

Another band which benefitted from the increased attention that the SoundScan arrangement brought to CCM was a band which formed at Jerry Falwell's Liberty University in the late 1980s and consisted of three young men, one black and two white, who hailed from the Washington D.C. area. dc Talk, as they were known, began as a rap band but evolved over the years into a grunge-pop sound which culminated in their 1995 release "Jesus Freak." Soundscan recorded the strong debut of "Jesus Freak" on the Billboard charts and had many industry executives inquiring about dc Talk. Kaz Utsunomiya, an executive at Virgin Records dispatched one of his assistants to Tower Records to fetch a copy of the album and liked what he heard. Virgin soon signed dc Talk to a unique deal that made them Virgin artists but allowed dc Talk's CCM market label Forefront to continue to distribute to the world of Bible bookstores. Virgin also released a single "Just Between You And Me," which cracked the top 40 list. And dc Talk's follow up album, *Supernatural*, showed the band's power, debuting at number four. Sandwiched between Marilyn Manson and Kiss on the music charts, the debut was rife with symbolism, for Manson was an unabashed Satanist and Kiss, had been labeled—probably unfairly—as Satanists for years by Christians who were convinced that its initials stood for something sinister like "Kings In Satan's Service."

But the greatest triumph belonged to a most unlikely artist named Bob Carlisle who would see his record *Butterfly Kisses*, displace the Spice Girls at the top of the charts. Carlisle was unlikely because he was a veteran of the CCM market who had recently been dropped by the major CCM label Sparrow and picked up by the small independent label Diadem. Carlisle had long played in CCM bands beginning in the 1970s and in the early 1990s had gone solo. Trained to write cheerful, upbeat numbers which the CCM world preferred, Carlisle prepared songs for his record with Diadem, and strongly considered not including "Butterfly Kisses," a song he had written with longtime writing partner Randy Thomas, because it was a melancholy song that was personal to Carlisle and his daughter and one which he wasn't sure the religious marketplace would appreciate. Carlisle's wife's opinion prevailed and he included it. When a radio programmer's daughter in Florida heard the track at church, she told her father who played it on the radio and received an overwhelmingly positive response. Soon word of the song reached Clive Calder, the president of Zomba Music which had recently engineered the purchase of Carlisle's label, Diadem.

In a brilliant series of moves, Calder repackaged and re-released Carlisle's album, replacing Carlisle's too sincere cover pose with an artists rendering of a butterfly and changing the serious title of the record *Shades Of Grace* to *Butterfly Kisses*. Fueled as well by a tear-inspiring performance on Oprah Winfrey's daytime talk show, a feature in the *Wall Street Journal* and airplay on Rush Limbaugh's radio show, "Butterfly Kisses" headed for the top of the album charts and became both a country and pop radio smash hit. Though success

proved elusive for Carlisle—his next record quickly dropped off of the charts—the larger point had been made that large audiences could be interested in CCM if the music was packaged in ways that would appeal to people who didn't necessarily share the artists' deep Christian convictions.

Tens of other artists who considered themselves serious Christians wanted to avoid the restrictive CCM market. But just as they had once been told to stay out of politics by their more conservative brethren, Christians had long been told to stay out of rock music. Christians feared the world associated with rock 'n' roll and many described it as a dirty place, but others couldn't deny the impact that rock music had on American culture. Some Christians wanted the impact of rock 'n' roll to carry their messages, and wanted to avoid the stigma attached to religious music. Some of these artists included King's X, The Tories, Hanson, Gary Cherone of Extreme, and Van Halen, Lenny Kravitz, Moby, Full On The Mouth, Judson Spence, Collective Soul, and Burlap To Cashmere.

Even with so many crossover artists, some artists continued to struggle with labels that kept their music from the general record buying public. Artists like dc Talk and Jars of Clay asked to be treated "normally" and not as religious artists, but they continued to receive Grammy awards in the "Gospel" category and record stores continued to stock their music in the "Inspirational" or "Christian" bins. Nevertheless, by the end of the twentieth century, CCM had evolved to the extent that Christian music could be found not only in the traditional religious categories, but also throughout the many genres of popular music.

Convertible

Glamorous automobiles with enormous emotional appeal—conjuring up romantic images of youthful couples speeding across wide-open spaces, sun shining on their tanned faces, wind rushing through their hair as rock music blasts from the radio—convertibles have survived to the end of the century as a symbol of the good life in America.

The term "convertible" refers to a standard automobile body-style designation adopted by the Society of Automotive Engineers in 1928. Short for "convertible coupe," a convertible typically describes a two-door car with four seats, a folding fabric roof (hence the convertible synonym "ragtop") that is permanently attached to the frame and may be lifted and lowered at the driver's discretion, a fixed-position windshield, and roll-up side windows. In the early days,

when automobiles were still built in backyards and small blacksmith shops, they resembled the familiar horse-drawn carriages of the day. Open body vehicles, some came with optional folding tops similar to those on wagons. By the teen years, manufacturers had begun to design automobiles that no longer resembled carriages and to offer various body styles to the driving public. By the late 1920s, practicality pushed closed cars to the forefront, and, ever since, convertibles have been manufactured in smaller numbers than closed cars.

The first true convertibles, an improvement on the earlier roadsters and touring sedans, appeared in 1927 from eight manufacturers. During the 1930s, the convertible acquired its image as a sporty, limited-market auto, surviving the Depression because of its sales appeal—it was the best, most luxurious, and most costly of a manufacturer's lineup, a sign that better days were ahead. 1957-67 was the golden age of convertibles, with the sixties the best years: convertibles held 6 percent of the market share from 1962-66. By the 1970s, however, market share had dropped to less than 1 percent.

Their decline came about because of their relative impracticality (deteriorating fabric tops, lack of luggage space and headroom, and poor fuel economy because of heavier curb weight); the introduction of air-conditioning as an option on most automobiles, which made closed cars quieter and more comfortable; the introduction of the more convenient sunroofs and moonroofs; decline in wide-open spaces; availability of cheaper, reliable imports; the impact of the Vietnam War on a generation of car buyers; and changes in safety standards—due to the efforts of Ralph Nader and insurance companies alarmed by the enormous power of many cars during the 1960s, Washington mandated higher standards of automotive safety and required manufacturers to include lap and shoulder belts, collapsible steering columns, side impact reinforcement, chassis reinforcement, energy-absorbing front ends, and five mph crash bumpers; the threat to pass Federal Motor Vehicle Safety Standard No. 216 (roof crush standard) caused manufacturers to lose their enthusiasm for convertibles. Furthermore, the adage in the automotive industry, "When the market goes down, the top goes up," may have been proven true again as the recession of the 1970s drove a stake through the convertible's heart during that decade. In fact, according to Lesley Hazelton in "Return of the Convertible," no mass-market convertibles were available from the early seventies through the early eighties, though a driver could purchase a convertible "for a price: the Rolls-Royce Corniche; the Alfa Romeo Spider; the Mercedes-Benz 450SL, 380SL, or 560SL."

In 1982, Lee Iacocca, chairman of Chrysler, brought back the convertible after a six-year absence. Buick introduced a new convertible that year, and Chevrolet, Ford, Pontiac, and Cadillac soon followed. With only seven American convertibles and a handful of European and Japanese convertibles being manufactured in the mid-1990s, some question whether the convertible will remain after the turn of the century. Others believe that convertibles will remain an automotive option so long as there are romantic drivers who wish to feel the wind in their hair.

Conway, Tim (1933—)

As the perennial comedy sidekick, Tim Conway was a television comedy mainstay for four decades. He debuted as a repertory player on Steve Allen's 1950s variety show, and co-starred as the nebbishy Ensign Parker on the popular *McHale's Navy* situation comedy during the 1960s. He then became a reliable second banana on *The Carol Burnett Show*, which ran from 1967 until 1978, where he was often paired with the lanky Harvey Korman. Conway's characters included the laconic boss to Burnett's dimwitted secretary, Mrs. Wiggins. He was also a regular performer in children's movies for Walt Disney during the 1970s. In the late 1980s, Conway created his best-known comedy persona by standing on his knees and becoming Dorf, a klutzy sportsman. As Dorf, Conway produced and starred in several popular TV specials and videos. Conway starred in a succession of short-lived TV series in his attempts to be a leading man; he good-naturedly acquired a vanity license plate reading "13 WKS," the usual duration of his starring vehicles.

Cooke, Sam (1935-1964)

During the late 1950s and early 1960s, Soul music star Sam Cooke laid the blueprint for many of the Soul and R&B artists who followed him. One of the first major Gospel stars to cross over into secular music, Cooke was also among the first Soul or R&B artists to found his own music publishing company. During a time when many black artists lost financial and artistic control of their music to greedy independent and major record labels, Cooke started his own record company, leading the way for other artists such as Curtis Mayfield to do the same. But it was Cooke's vocal delivery, which mixed a sweet smoothness and the passion of Gospel music, that proved the greatest influence on a number of major Soul stars, most significantly Curtis Mayfield, Bobby Womack, Al Green, and Marvin Gaye. Because Sam Cooke was one of Gaye's musical idols, the man born Marvin Pentz Gay, Jr. went so far as to add an "e" to the end of his name when he began singing professionally, just as Sam Cooke did.

Sam Cooke was born into a family of eight sons in Clarksdale, Mississippi, and began singing at an early age in church, where his father was a Baptist minister. He and his family later moved to Chicago, Illinois, where Cooke began singing in a Gospel trio called the Soul Children, which consisted of Cooke and two of his brothers. As a teenager, Cooke joined the Highway QCs, and by the time he was in his early twenties, Cooke became a member of one of the most important longstanding Gospel groups, the Soul Stirrers. While he

was with the Soul Stirrers, Cooke recorded a number of Gospel classics for Specialty Records, such as the Cooke-penned “Touch the Hem of His Garment,” “Just Another Day,” and “Nearer to Thee.”

In a controversial move, Cooke crossed over into the secular market with the single “Lovable” while he was still singing with the Soul Stirrers. So contentious was this move that the single was released under the pseudonym “Dale Cook.” More importantly, Specialty Records owner Art Rupe distanced the label from Cooke by releasing him from his contract for fear of losing Specialty’s Gospel fan base. Cooke’s breakthrough Pop hit was 1957’s “You Send Me,” essentially a rewrite of a well-known Gospel tune of the time, but with lyrics about the love of another person rather than God. With its Gospel influenced vocal delivery, “You Send Me” provided the foundation for Soul music for forty years to come—a foundation that never strayed very far away from Gospel, no matter how profane the subject matter became.

“You Send Me” went to number one on the *Billboard* charts, beginning a string of thirty-one Pop hits for Cooke from 1957 to 1965 that included “I’ll Come Running Back To You,” “Chain Gang,” “You Were Made for Me,” “Shake,” and “Wonderful World.” While some of his Pop material was frivolous (“Everybody Likes to Cha Cha Cha,” “Twistin’ the Night Away,” and “Another Saturday Night”), Cooke’s ardent support of the 1960s Civil Rights struggle was evident during interviews at the time. His music also reflected his commitment to the struggle in songs such as “A Change is Gonna Come,” a response to Bob Dylan’s “Blowin’ in the Wind.” Then, at the height of his career, Sam Cooke was killed on December 11,

Sam Cooke

1964—shot three times in the Los Angeles Hacienda Motel by a manager who claimed to be acting in self-defense after she asserted Cooke raped a 22-year-old woman and then turned on her. Although the shooting was ruled justifiable homicide, there were a number of details about that night that remained hazy and unanswered, and there has never been a sufficient investigation of his death. For years after his death Cooke has remained a significant presence within Soul music, and in 1986 he was inducted into the Rock & Roll Hall of Fame.

Cooper, Alice (1948—)

Rock stars come and go, but Alice Cooper’s contributions to the canon of rock ’n’ roll showmanship have been remarkably lasting. In a career spanning three decades, Cooper has elevated the live presentation of rock music with bizarre theatrics, taboo subjects, and an uncompromising hard-rock sound.

Alice Cooper was born Vincent Furnier in Detroit, Michigan, on February 4, 1948, the son of Ether (an ordained minister) and Ella Furnier. The family moved quite frequently. Living in Phoenix, Arizona, Vincent was a high-school jock who was on the track team, and reported for the school newspaper. During his time in school, he met Glen Buxton, a tough kid with an unsavory reputation as a juvenile delinquent who was a photographer for the newspaper. Buxton played guitar; the young Furnier wrote poetry. It wasn’t too long after school that the duo moved to Los Angeles in search of rock ’n’ roll dreams.

While in L.A., Furnier and Buxton enlisted Michael Bruce, Neal Smith, and Dennis Dunnway and began calling themselves the Earwigs. In 1968, the band changed their name to Alice Cooper, noting that it sounded like a country and western singer’s stage name. (Another legend about the name’s origin included a drunken session with an Ouija Board in tow.) In 1974, Furnier legally changed his name to Alice Cooper. Iconoclastic musician Frank Zappa went to one of the group’s Los Angeles club shows. Impressed with their ability to clear a room, Zappa offered the band a recording contract with his label Straight, a subsidiary of Warner Bros. The band recorded two records for Straight, *Pretties For You* and *Easy Action*, before signing with Warner Bros. in 1970.

The band’s first album for Warner Bros., 1971’s *Love It To Death*, featured the underground FM radio hit, “I’m Eighteen,” a paean to youth apathy that predated the nihilistic misanthropy of the punk scene by five years. Later that year, the band recorded *Killer*, which featured some of their most celebrated songs such as “Under My Wheels,” “Be My Lover,” and “Dead Babies.”

The tour in support of *Killer* elevated the band’s reputation in the rock world. Cooper—with his eyes circled in dark black make-up—pulled theatrical stunts such as wielding a sword with an impaled baby

Alice Cooper

doll on the end or singing with his pet boa constrictor coiled around him. For the grand finale, Alice was sentenced to “die” by hanging on a gallows set up on stage. The crowds adored him, the critics took note of the band’s energy, and soon Alice Cooper and his band were poised to bid farewell to underground obscurity.

The band followed *Killer* with their breakthrough album, 1972’s *School’s Out*. The title song was an anti-authority rant that became a hit single. The subsequent tour that followed was no less controversial, for the singer was placed in an onstage guillotine (operated by master illusionist James Randi) and decapitated. Later Cooper returned in top hat and tails singing “Elected.” With each year, the presentations became increasingly absurd—with Alice fighting off oversized dancing teeth with an enormous toothbrush during the tour supporting their 1973 album, *Billion Dollar Babies*—and both fans and critics thought the music was beginning to suffer.

The final album by the original Alice Cooper band, 1974’s *Muscle Of Love*, was a financial and artistic failure. The band split up, and Alice pursued a solo career. His 1975 album, *Welcome to My Nightmare*, spawned a hit single (the controversial ballad “Only Women Bleed”), a theatrically-released film of the same name, and

widespread mainstream fame. Cooper became one of the first rockers to perform at Lake Tahoe, play Pro-Am golf tourneys, and appear in films and mainstream shows like *Hollywood Squares* and *The Tonight Show with Johnny Carson*.

Cooper’s post-band work was informed by then-current trends in music and his personal life. He went public with his battle with alcoholism, an experience chronicled on his 1978 album, *From the Inside*. He used synthesizers and rhythm machines on such new-wave tinged records as *Flush the Fashion* (1980) and *DaDa* (1983), and enlisted the services of the late Waitresses singer Patty Donahue for his 1982 *Zipper Catches Skin* album. None of these records catapulted his name back up the charts, and Warner Bros. chose not to pick up an option on his contract.

Cooper returned to the rock marketplace in 1986 with a new album *Constrictor*, on a new label, MCA. He was aping the overproduced metal scene, and the record was a flop. Critics blasted Cooper for staying in the rock game well past his shelf life. But it wasn’t until 1990, when Cooper signed with Epic Records, and made several rock hard albums, *Trash* (1989) and *Hey Stoopid* (1991), that exposed the singer to a new generation of metalheads. In May 1994,

Cooper released *The Last Temptation*, a concept album based on the characters created by respected graphic novelist Neil Gaiman.

Alice Cooper's career is marked by dizzying highs of grandeur and influence, and miserable lows of bargain-bin indifference. The shock-rockers of the 1990s such as Marilyn Manson and Nine Inch Nails are merely driving down the same roads that were originally paved by Alice Cooper's wild imagination.

—Emily Pettigrew

Cooper, Gary (1901-1961)

In American cinema history, Gary Cooper reigned almost unchallenged as the embodiment of male beauty—“swooningly beautiful” as Robin Cross defined it in his essay in *The Movie Stars Story*—and an enduring emblem of innocent ideals and heroic virtues. Lanky and laconic, his screen persona often shy and hesitant, there was about him the aura of a solitary man, his clear compelling eyes seemingly focused on a distant and private horizon. Cooper contributed comprehensively to every genre of Hollywood film, working with an unparalleled range of directors and leading ladies. His career spanned 35 years, shorter than that of several of his contemporaries, yet he made an astonishing number of films by any standard—92 in all—which carried him through as a leading man from the silent era to the commencement of the 1960s.

Irrespective of the material, Cooper's casual, laconic delivery remained unmodified by any change of pace or nuance, yet his very simplicity lent truth to his performances. In the public mind, Cooper remains an archetypal Man of the West, most movingly defined by his Sheriff Will Kane in *High Noon* (1952). What he never played, however, was a man of villainy or deceit.

Christened Frank Cooper, he was born on May 7, 1901 to British immigrant parents in Helena, Montana, where his father was a justice of the Supreme Court. He was educated in England from 1910-17, returning to attend agricultural college in Montana, work on a ranch, and study at Grinnell College in Iowa. There, he began drawing political cartoons. He was determined to become an illustrator and eventually went to Los Angeles in 1924 to pursue this goal. Unable to find a job, he fell into work as a film extra and occasional bit player, mainly in silent Westerns, and made some 30 appearances before

Gary Cooper

being picked up by director Henry King as a last-minute substitute for the second lead in *The Winning of Barbara Worth* (1926).

The camera loved Cooper as it did Garbo, and his instant screen charisma attracted attention and a long tenure at Paramount, who built him into a star. He made a brief appearance in *It* (1927) with Clara Bow and became the superstar's leading man in *Children of Divorce* the same year, a film whose box-office was helped considerably by their famous off-screen affair. It was the first of many such liaisons between Cooper and his leading ladies who, almost without exception, found his virile magnetism and legendary sexual prowess irresistible. He finally settled into marriage with socialite Veronica Balfe, a relationship that survived a much-publicized affair with Patricia Neal, Cooper's co-star in the screen version of Ayn Rand's *The Fountainhead* (1949). These exploits did nothing to dent his image as a gentle “Mr. Nice Guy” replete with quiet manly strength or his growing popularity with men and women alike, and by the mid-1930s his star status was fully established and remained largely unshakable for the rest of his life.

Cooper made his all-talkie debut in *The Virginian* (1929), the first of his many Westerns, uttering the immortal line, “When you call me that, smile!” In 1930, for Von Sternberg, he was the Foreign Legionnaire in *Morocco* with Dietrich and emerged a fully established star. He was reunited with her in Frank Borzage's *Desire* in

1936, by which time he had successfully entered the arenas of romantic comedy and melodrama, played the soldier hero of *A Farewell to Arms* (1932), and survived a few near-misses to embark on his best period of work.

From 1936-57 Cooper featured on the Exhibitors' Top Ten List in every year but three, and ranked first in 1953. His run of hits in the 1930s, which began with *The Lives of a Bengal Lancer* (1935), brought one of his most famous roles in 1936, that of Longfellow Deeds, the simple country boy who inherits a fortune and wishes to give it away to the Depression-hit farmers of America. The film, *Mr. Deeds Goes to Town*, directed by Frank Capra, earned Cooper the first of his five Oscar nominations, while another country boy-turned-patriotic hero, Howard Hawks' *Sergeant York* (1941) marked his first Oscar win.

The 1940s brought two films with Barbara Stanwyck, the quintessentially Capra-esque drama, *Meet John Doe* (1941), then Hawks' comedy *Ball of Fire* (1942), in which he was a memorable absent-minded professor. His sober portrayal of baseball hero Lou Gehrig in *The Pride of the Yankees* (1942) won another Academy nomination, as did *For Whom the Bell Tolls* (1943) with Ingrid Bergman. The 1950s brought mixed fortunes. In 1957 Billy Wilder cast the 56 year-old Cooper opposite 28 year-old gamin Audrey Hepburn in the sophisticated comedy romance *Love in the Afternoon*. Cooper, suffering from hernias and a duodenal ulcer, precursors of the cancer that would kill him, looked drawn and older than his years, and the May-December partnership was ill received.

The decade did, however, cast him in some notable Westerns. He was a striking foil to Burt Lancaster's wild man in *Vera Cruz* (1954) and was impressive as a reformed outlaw forced into eliminating his former partners in Anthony Mann's *Man of the West* (1958), his last masterpiece in which the ravages of age and illness were now unmistakably apparent. But it was his awesomely contained, determined, and troubled sheriff, going out to face the forces of evil alone in *High Noon* that won him another Oscar and cemented the Cooper image for future generations.

At the 1960 Academy Awards ceremony in April 1961, Gary Cooper was the recipient of a special award for his many memorable performances and the distinction that he had conferred on the motion picture industry. He was too ill to attend and his close friend James Stewart accepted on his behalf. A month later, on May 13, 1961, Gary Cooper died, leaving one last film—the British-made and sadly undistinguished *The Naked Edge* (1961)—to be released posthumously. Idolized by the public, he was loved and respected by his peers who, as historian David Thomson has written, “marveled at the astonishingly uncluttered submission of himself to the camera.”

Cooperstown, New York

Home to the National Baseball Museum and Hall of Fame, Cooperstown, a restored nineteenth-century frontier town and country village of about 2,300 inhabitants at the close of the twentieth century, is visited annually by up to 400,000 tourists. Baseball has been described as America's national pastime, and it is fair to say that Cooperstown, in central New York State, draws to its village thousands of American tourists in search of their country's national identity.

When the National Baseball Hall of Fame opened in 1939, Americans from coast to coast read about it and heard radio broadcasts of the opening induction ceremonies. Cy Young, Babe Ruth, Ty Cobb, Grover Alexander, and Walter Johnson were among those inducted as the hall's first members. Every year on the day after the annual inductions, a Major League game is played at nearby Doubleday Field, seating approximately ten thousand, on the spot where many believe baseball to have originated. A legend of the origin of baseball claims that the game was developed in Cooperstown in 1839. According to a three-year investigation of the Mills Commission in the early 1900s, Abner Doubleday and his young friends played a game of “Town Ball” with a hand-stitched ball and a four-inch flat bat. Doubleday is said to have introduced bases, created the positions of pitcher and catcher, and established the rules that defined the game of baseball. Though this legend is disputed by some, even those who disagree accept the village as a symbolic home for the game's creation.

Philanthropist and Cooperstown native Stephen C. Clark founded the Baseball Hall of Fame. Clark inherited his fortune from his grandfather, Edward Clark, who earned his wealth as a partner to Isaac Merritt Singer, inventor of the Singer sewing machine. Through the generosity of the Clark family toward their birthplace, Cooperstown gained not only the baseball museum, but also a variety of other attractions. In the nineteenth century, when Cooperstown was becoming a summer retreat, Edward Clark built Kingfisher Tower, a sixty-foot-high tower that overlooks the natural beauty of Otsego Lake, which spans nine miles north from its shore at Cooperstown. Stephen Clark and his brother, Edward S. Clark, built the Bassett Hospital to honor Dr. Mary Imogene Bassett, a general practitioner of Cooperstown and one of the first female physicians in America. Stephen Clark also brought the New York State Historical Association to Cooperstown in 1939; the village has since been the annual summer site of the association's seminars on American culture and folk art. In 1942, Stephen Clark established the Farmer's Museum, a cultural attraction that displays the customs of pre-industrial America. The museum continued to grow with the 1995 addition of an American Indian Wing containing more than six hundred artifacts that reflect the cultural diversity and creativity of Native Americans.

The exhibits of Native American culture are well suited to Cooperstown since it was a traditional fishing area of the Susquehannock and the Iroquois Indians until Dutch fur traders occupied it in the seventeenth century. It was also the birthplace of James Fenimore Cooper (1789-1851), the early nineteenth-century writer whose novels romantically depict Native Americans and the frontier life of early America. *The Pioneers* (1823), the first of Cooper's Leatherstocking Tales, is a novel set in the blossoming village of Cooperstown, and one of its main characters is based on James Fenimore Cooper's father, Judge William Cooper, the founder

of the village in 1786. Another of Cooper's works, *The Chronicles of Cooperstown* (1838), provides a history of the village. The novel *The Deerslayer* (1841) takes place at Otsego Lake during the beginning of the French and Indian War.

An additional Cooperstown attraction, the Glimmerglass Opera opened in 1975 with performances in the auditorium of the Cooperstown High School. In 1987, the Alice Busch Opera Theater was completed to permanently host the Glimmerglass, which has become an internationally recognized organization, producing performances for thirty-six thousand opera fans during the summer festival seasons.

Overall, Cooperstown provides many opportunities to enjoy American culture. Appreciating the music, viewing the scenery, experiencing the American past in this historic village with its cultural museums and the National Baseball Hall of Fame appeals to many as an enjoyable diversion.

Coors

"Pure Rocky Mountain Spring Water" isn't just a marketer's phrase; it is the ingredient that fueled Adolph Coors' dream of owning his own brewery in the 1870s, and then went on to make Coors the third largest brewing company in the United States. It might seem easy to dismiss Coors as just another brewery, but Coors has achieved what many other companies—beer or otherwise—would cherish: a mystique that reaches out to more than just beer drinkers.

Adolph Coors (1847-1929) was born in Barmen, Prussia, and worked as an apprentice at the Henry Wenker Brewery in Dortmund, Germany. In 1868, he fled a war-ravaged Germany to the United States as a stowaway on a ship, and in 1872 he arrived in Denver, Colorado, anxious to pursue his dream of owning a brewery. In Golden, Colorado, along the banks of Clear Creek, he found the water that he believed would make the finest tasting beer. Establishing his brewery on the site it still inhabits today, Adolph Coors soon began supplying beer to miners. During Prohibition, which began in Colorado in 1916, Coors kept the business alive by selling malted milk, a

near-beer called Mannah, and the porcelain products that Coors still produces.

With the death of Adolph Coors in 1929, Coor's son Adolph Jr. took over operations and, after Prohibition was repealed, he expanded the market to ten Western states. In 1941, Coors introduced Coors Light, but government restrictions due to World War II forced Coors to limit product offerings. In 1959, Coors introduced the country's first all-aluminum can and got a jump on the ecologists by offering a penny for each can returned for recycling. The mid-1970s brought unrest and decline for the Coors company when Local Union #366 demanded a boycott of Coors beer. Sales dropped and, for the first time in its history, employees were laid off. Although contract negotiations revolved around wages and benefits, the company was affected by bad press about Coors' policy of making potential employees submit to polygraph testing. Workers went on strike on April 5, 1977. The strike officially lasted a little over a year; unofficially it lasted much longer as the company continued to suffer from bad press regarding its treatment of minorities and women, as well as the breakup of the union. These allegations ultimately proved untrue, and Coors was vindicated in 1982 when *60 Minutes* interviewed Coors executives and employees. Coors received a rare favorable report from *60 Minutes* and the judgment that it had been the victim of a smear campaign by the AFL-CIO. An agreement between Coors and the AFL-CIO finally was reached in 1987.

By the late 1970s, consumers were clamoring for a product with fewer calories. In 1978, Coors reintroduced Coors Light, the beer destined to become their number one product and one of the best-selling beers in the country, creating a larger demand for Coors in every state. In 1981, Coors expanded across the Mississippi and by 1991 had reached all 50 states. Operations were expanded to include two new breweries—one in Virginia's Shenandoah Valley, the other in Memphis, Tennessee—both acclaimed for the high-quality water that the Coors family would not compromise.

Coors achieved legendary, even cult, status in the 1960s and 1970s. This "mystique madness" may have started during World War II. Believing that beer would help the morale of the troops, the U.S. government subsidized breweries' materials and costs. Coors allocated half of its production to go overseas. When the war ended and soldiers returned, the Coors beer they had become accustomed to drinking was found in only the Western states, leaving soldiers to pine over what they had left behind. A visit to Colorado eventually became a way to smuggle the Rocky Mountain brew home. Former U.S. President Gerald Ford was known to return to the White House with several cases of Coors aboard Air Force One, as would his Secretary of State, Henry Kissinger. Actor Paul Newman was often seen at functions with a Coors in hand. The mystique of Coors beer was featured in the movie *Smokey and the Bandit*, starring Burt Reynolds. In the story line, Reynolds is challenged to smuggle a truckload of Coors beer from Texarkana to Atlanta in 28 hours for a reward of \$80,000.

What began as a German immigrant's dream in 1873 is now one of the largest and most ethical corporations in America. Its philanthropic endeavors include environmental activities, start-up businesses run by minorities, literacy programs, and veteran affairs. Not content to limit these endeavors to outside interests, Coors also supports better environments for its employees, such as its parental leave policy, its Wellness Center, and its health benefits to partners of

A truck carries three enormous Coors beer cans (each complete with its own tap).

gay and lesbian employees. But even though it is one of the largest corporations in the country, the employees at Coors still talk about its “family feel.” The mystique lives on.

Copland, Aaron (1900-1990)

One of the greatest American composers of the twentieth century, Aaron Copland wrote music for American audiences with genuine American themes. He changed the face of a composer's lifestyle by

being involved in activities outside of the concert hall, and he wrote music according to the popular trends of his time. This ability to tap into the pulse of American popular culture elevated Copland to the status of musical icon, although Copland was a humble man who did not have the same ambition to acquire the huge audiences and fame that other musicians sought out. Copland's range of musical styles was diverse, including jazz, opera, and American folk styles. He also taught, lectured, and wrote books on musical topics. To him, music was the ultimate symbol of passion and vigor in a personality.

Copland's family came from Poland and Lithuania to the United States in the 1870s. Aaron was born on November 14, 1900, the youngest of five children. Harris and Sarah Copland, whose department store earned the label “Macy's of Brooklyn,” gave their children a strong work ethic and a sense of orderliness and self-determination that one can see in Copland over the course of his musical career. As a youngster, he quickly realized his love for music as he studied the works of Tchaikovsky, Debussy, and Ravel, among others. He played the piano, and an older sister served as a tutor, but he soon realized that he needed a professional musician if he was going to make a career out of it.

Despite his father's disappointment with his career choice, Copland went to Paris in 1921 to study at the new music school for Americans at Fontainebleau and take in the city's rich, vibrant

culture. He studied harmony under a superb music instructor, Nadia Boulanger. He toured other European cities such as Berlin and Vienna, two world-famous musical centers, to take in as many musical influences as he could. But Copland soon longed for New York, and he returned to the United States in 1924.

During his years in Europe, Copland had formulated a better contemporary understanding of music. He discovered that there were vast differences in musical tastes between Americans and Europeans—the music scene was much more energetic and accomplished in Paris than in New York. Copland's experiences enabled him to write his first major piece, *Symphony for Organ and Orchestra*, in 1924, which premiered with the New York Symphony Orchestra at Carnegie Hall in early 1925. Copland worked with jazz styles and rhythms in his *Music for the Theater* (1925) and *Piano Concerto* (1926). He showed a more abstract style in *Short Symphony* (1933) and *Statements for Orchestra* (1933-35). He changed his style in the following decades and concentrated more on producing works with American folkloric themes, which gained him a wider audience. His most important works during these years included *Billy the Kid* (1938), *Rodeo* (1942), and *Appalachian Spring* (1944). Copland also experimented with opera: *The Second Hurricane* (a "play opera" for high school students in 1937) and *The Tender Land* (1954). His most famous orchestral scores include *El Salón México* (1936) and *A Lincoln Portrait* (1942) with spoken excerpts from Abraham Lincoln's famous speeches. Copland also composed music for films such as *Of Mice and Men* (1939), *Our Town* (1940), *The Red Pony* (1949), and *The Heiress* (1949, for which his score won an Oscar), and he became known as one of the leading composers of movie scores.

Aaron Copland

Copland was the recipient of many distinguished commissions, awards, and prizes, such as the Medal of Freedom in 1964 awarded by the United States Government. Copland's books include *What to Listen for in Music* (1939), *Copland on Music* (1960), and a two-volume autobiography with Vivian Perlis. Copland ceased composing after 1970 but continued to conduct, write, and lecture. He died in Tarrytown, New York, on December 2, 1990.

Corbett, James J. (1866-1933)

Professional prizefighting in the nineteenth century was a semi-legal, bare-fisted fight to the finish, often featuring more wrestling than punching. As the twentieth century approached, changes were made, ostensibly to legitimize "boxing" as credible athletic competition. On September 7, 1892, in New Orleans, the first Heavyweight championship match contested under the relatively new Marquess of Queensberry rules took place. These new rules stipulated three minute rounds with one minute rest periods and the use of five-ounce gloves, worn to protect the combatant's hands. A relic from the bare-knuckle age by the name of John L. Sullivan—"The Boston Strongboy"—was the reigning champion. Sullivan personified nineteenth-century America: rugged, racist individualism. He triumphed in brutal contests of stamina and strength despite his heavy drinking; he sauntered into saloons boasting "I can lick any man in the house!" and he drew the color line, refusing to fight leading black contender Peter Jackson. Sullivan's challenger, a fellow Irish-American pugilist named James J. Corbett, seemed to personify the direction in which boxing was moving, perhaps as a reflection of American society. "Gentleman Jim," as Corbett would come to be known, both for his style of dress outside the ring and his fighting style inside it, was born on September 1, 1866 in San Francisco, California. The son of a livery stable owner, he graduated high school but always found himself fighting, first in the streets and then eventually at the San Francisco Olympic Club. Where Sullivan was an east coast, blue-collar roughneck, Corbett was a west coast, white-collar scientific boxer, who was employed as a bank teller when he began his professional prizefighting career.

Corbett had earned his title shot with a win against an old bare-knuckle nemesis of Sullivan's, Jake Kilrain—with two wins against contender Joe Choynski (who would go on to defeat the great Jack Johnson); and with a 61 round draw with the same Peter Jackson whom Sullivan refused to fight. Gentleman Jim toured the country, fighting from San Francisco to Brooklyn, all the while clamoring for a

A reproduction of a fight between James J. Corbett (left) and John L. Sullivan.

match with the feared and beloved reigning champ. He got his chance in New Orleans, where after 21 rounds Jim Corbett's new-age science prevailed over John L. Sullivan's old-world machismo. In what boxing historian Bert Randolph Sugar nearly a century later called "the most important round in boxing history," the smaller, faster, fitter Corbett claimed the heavyweight throne with a shattering knockout. Modern boxing was born with this fight, as speed, conditioning, and technique triumphed over brute force. Corbett, and especially the Corbett-Sullivan fight, epitomized the evolution of the fight game from a foul-plagued virtual free-for-all to a more organized contest of fists and wit. In a Darwinian twist, after the rules were changed, Corbett-like fighters, who previously had not been as successful as their larger and more powerful Sullivan-like counterparts, were now better adapted for success in boxing.

After his title winning effort, Corbett followed a path similar to John L. Sullivan's. Cashing in on his newfound fame, Corbett toured in theater and vaudeville. By the time he defended his title against Bob Fitzsimmons, Corbett had fought only once in the five years since the Sullivan bout. Gentleman Jim lost his title to Fitzsimmons,

suffering a 14th round knockout. He made two attempts to regain the crown, both against the big and powerful James J. Jeffries. In both fights, Corbett's "science" seemed at first to be carrying the day, but the younger, fresher, Jeffries eventually caught up with the old boxing master, winning with knockouts in the twenty-third round of their first fight and the tenth round of the rematch. With all of the changes in boxing epitomized by Corbett's defeat of Sullivan, there was one aspect of the sport that no rule change could alter, one that remains constant to this day: father time beats all comers.

Corman, Roger (1926—)

The king of “B” movies, Roger Corman has produced and/or directed more than two hundred films, half of which have made a profit. After graduating from Stanford with an engineering degree, Corman went into the movie business, working his way up from messenger boy to screenwriter. After a studio tampered with his first screenplay, he decided to produce his own films. *The Monster from the Ocean Floor* (1954) established the Corman formula, as noted in *Baseline’s Encyclopedia of Film*: “Quirky characters; offbeat plots laced with social commentary, clever use of special effects, sets, and cinematography; employment of fresh talent; and above all, minuscule budgets (under \$100,000) and breakneck shooting schedules (5–10 days).” Corman’s movies, such as *The Little Shop of Horrors*, *Machine Gun Kelly*, and the six Edgar Allan Poe pictures starring Vincent Price, became instant cult classics in the 1950s and 1960s. Always quick to spot and sponsor talent, Corman formed his own production company, which became a training ground for such A-list directors and actors as Francis Ford Coppola, Martin Scorsese, Jonathan Demme, Jack Nicholson, Robert De Niro, and Dennis Hopper. With his eye for talent, knack for business, and willingness to take risks, Roger Corman made low-budget movies a staple of American popular culture.

Corvette

In 1953 General Motors introduced the Chevrolet Corvette sports car, America’s first mass-produced automobile with a fiberglass body. With its sleek design and Americanized European styling, it quickly became the “dream car” of thousands of auto enthusiasts. Though the economy was experiencing a postwar boom in automobile sales, the base price of \$3,498 was prohibitive for many, and only 300 Corvettes were produced the first year. In 1960, its popularity was enhanced by a television series called *Route 66* (1960–1964), which featured two adventurous guys—actors Martin Milner and George Maharis—tooling around the country in a Corvette.

The car was the brainchild of Harley Earl, an auto designer who had made his name turning out one-of-a-kind car bodies for movie stars. Earl’s first design after joining General Motors was the spectacular 1927 Cadillac LaSalle, which was to help convince the automobile industry of the importance of styling. He scored another design coup by putting tail fins on the 1948 Cadillacs, making him the top man in GM styling and giving him the clout to persuade the company to build an entirely new car. Earl noticed that GIs had brought back a distinctive kind of automobile from Europe, a sports car that was fun to drive and had become a kind of cult object to the owners who gathered to race them on dirt tracks. Detroit made no

vehicle to compete with the popular two-seat sports cars such as the MG and Jaguar until Earl convinced his bosses to let him build an American sports car to present at the 1953 Motorama, GM’s traveling show. GM executives agreed after insisting that standard GM parts be used under its proposed fiberglass body. Legend has it that the designers cleared away a ping-pong table and in one night “laid out the whole skin for the first Corvette.” After discarding almost three hundred suggestions for a name, they selected Corvette, the name of a swift fighting ship in the old British navy.

Despite the secrecy surrounding the new Corvette, word leaked out to sports car enthusiasts, and in January, 1953, long lines of curious car buffs waited outside the Waldorf-Astoria Hotel in New York City for the Motorama to open. The 300 original models were polo white convertibles with red interiors, and all handmade body panels. The critics pronounced them beautiful, but not very satisfactory as sports cars due to an inadequate, rough-riding suspension system. They proved, however, to be superb investments, and those still owned by collectors are said to be worth more than \$100,000 each. The number of original 1953 cars still existing is variously estimated at 120 to 290.

The engineering problems persisted, and in 1954, only half of the output of 3600 Corvettes were sold. A former racer on the European circuit, Zora Arkus-Duntov, came to GM’s rescue by writing a memo to GM executives outlining the Corvette’s shortcomings and urging the company to create a separate department within Chevrolet to oversee the Corvette’s development. After GM hired Duntov for its Corvette project, his first step was to put a V-8 engine in the 1955 model, and that year GM sold all 700 of the Corvettes that were built.

Duntov went on to become Corvette’s first chief engineer. In 1956 he replaced the automatic transmission with a three-speed manual, and the car became one of GM’s hottest sellers. Corvette owners raced and defeated Jaguars and other European cars, and a modified 240 hp 1956 Corvette—with Duntov driving—set a record-breaking average of 150.583 mph at the Daytona Beach raceway. John Fitch drove a standard Corvette to a new production-car record of 145 mph during Daytona Speed Week in 1956. Later that year, in the 12 Hours of Sebring race, a Corvette showed its durability by winning first in its class. In 1960 three white Corvettes competed in the 24 Hours of LeMans race in France, finishing eighth overall. A 1968 Corvette reached a speed of 210.762 mph in the 1979 Bonneville Speed Week at the Utah Salt Flats, becoming the fastest carbureted car in the world.

The 250,000th Corvette, a gold convertible, rolled off the assembly line in 1969. Although Harley Earl had retired in 1958, being replaced as chief stylist by Bill Mitchell, the car underwent redesigns in 1963, 1968, and 1984. It was Mitchell who got the idea for the body shape of the XP-775, the Corvette Shark, after landing such a fish in deep sea off the Bahamas. The 500,000th Corvette was built in 1977, and the following year a Corvette was used as the pace car for the 62nd Indianapolis 500. In June of 1978 a movie, *Corvette Summer*, premiered in Maumee, Ohio, attracting a parade of Corvette owners that made the *Guinness Book of World Records*, the number estimated at between five and seven thousand cars. That October, another movie, *High Rolling in a Hot Corvette*, was released.

Into the 1980s the Corvette turned a profit for GM of about \$100 million with a small production of around 25,000 cars annually. The Corvettes continued to act as a proving ground for new suspensions, new electronics, new chassis fabrication techniques, and new fiberglass or plastic materials for body parts. The Corvette sold out nearly every year, and Corvette clubs worldwide were filled with proud

The 1953 Corvette

owners who esteemed the cars and hailed the arrival of each new model, despite nagging problems such as rattles in the removable hardtop and the resistance of the fiberglass body to durable paint.

In the early months of 1989 was begun the long process of developing a new Corvette from scratch. The dream of developing the C5, the fifth-generation Corvette, coincided with a time of financial disaster at General Motors, which reported a \$2 billion loss in 1990 and predicted even worse results in 1991. Despite this fiscal situation, new competitions were launched to design a C5 Corvette. The next five years proved to be a roller-coaster ride for the prototype due to internal rivalry at GM and budget cutbacks. Problems emerged involving the lubrication of the all-new aluminum engine, the electronic throttle control, and a new fiberglass side structure that failed to pass early tests in the crash laboratory. By 1996 the problems were solved, and C5s were being tested in long-distance drives throughout the United States. In Australia the new model Corvettes were set on cruise control in 110-degree heat and run on the outback roads for 90 to 120 minutes straight, with no problems.

When the new fifth-generation, cherry-red Corvette was unveiled at the Motorama Show the following January, fans were ecstatic about the car's new silhouette and its all-new 5.7-liter V8 345-hp engine, capable of moving from zero to sixty miles per hour in five seconds and delivering a top speed of 172 mph. Though it was still unmistakably a Vette, the wheelbase was longer, and the nose had been lowered for greater aerodynamics and road visibility. The new design reflected the sleekness of the '83 Corvette and the muscle of the '68 model. Other links to past Corvette generations included the air scoop on the front quarter panel, the familiar quad taillamps, and the concealed headlamps. The new version has one-third fewer parts despite the addition of a four-channel anti-lock braking system and complex traction control. Automobile writers raved about this sports car that was "as comfortable as a limousine." GM boasted that with

all the improvements, the \$44,990 sticker price was \$635 less than the 1996 Corvette.

Corwin, Norman (1910—)

Throughout the 1940s, Norman Corwin elevated the fledgling medium of live broadcast radio theatre to its artistic zenith in America. Regarded as radio's poet laureate by fans and contemporaries, Corwin's earnest prosody adapted naturally and easily to radio broadcast, and he wielded the medium to its utmost, celebrating the American citizen during World War II, elucidating the dread of war with a journalist's precision, impugning despotism, or merely lending credence to the vox populi with his intellectual, imaginative use of words, music, and dramatic interplay. Corwin's dramatic use of radio defined an era and an art form. Though Corwin was revered and admired during radio's Golden Age, his popularity ultimately paralleled that of network radio.

Born May 3, 1910, in Boston, Massachusetts, Norman Lewis Corwin was the third of four children in a Jewish Russian-Hungarian family. He was a prankster and a storyteller, and his grades in school were uneven, though teachers discovered early his talent for writing

and appreciation for poetry. Upon graduating from high school, Norman wrote for the *Springfield Republican* covering human-interest stories. When infant station WBZA requested that the newspaper provide a radio news reader, Corwin was assigned, and soon he was producing a poetry program—*Rhymes and Cadences*—while writing newspaper articles and radio copy as well as his first (failed) attempt at a novel. But at twenty-one, Corwin was restless and traveled to Europe with his brother and a friend.

In Germany, in the shadow of World War I, Corwin reflected on the senselessness of war, the ethnic hatred growing in the Weimar Republic, and the political pessimism spreading into adjacent nations. When Corwin returned to the States, his idealism resolved into a sense of purpose, a defiance of inevitability. In 1935 he began reading news on WLW in Cincinnati, Ohio. Less than three weeks later, though, he was fired for challenging a managerial memo forbidding the announcement of a local labor strike. He returned to the *Republican*, but not for long.

Arts, education, and social service organizations were accusing commercial radio stations of polluting the airwaves with a huckstering orgy, serving their own financial interests, and neglecting the quality of their programming. Faced with losing their licenses in a proposed decentralization of frequencies, many stations began hiring writers and directors to expand the formulaic format of commercial broadcasting with “sustaining programs” for discerning audiences.

After a brief stint as a publicity writer for Twentieth Century-Fox, Corwin was hired by the Columbia Broadcast System in 1938 and immediately proved himself a considerable talent, writing (in verse) and directing a fanciful play called *The Plot to Overthrow*

Christmas on his new program *Words without Music*. Later he impressed even the venerable CBS newsman Edward R. Murrow with *They Fly through the Air with the Greatest of Ease*, a sharp response to the indifference of Italian bombardiers. Corwin went on to produce and direct the *Columbia Workshop*, showcasing some of the finest writers, actors, and musicians available.

In 1941, Corwin wrote, directed, and produced a live broadcast each week for the eponymous *26 by Corwin* series. With unprecedented autonomy—network censors literally had no time to review his scripts prior to broadcast—Corwin spun each whimsical, fantastic, or dramatic tale, often reminding listeners of the war a horizon away. Later, Corwin produced a celebration piece for the 150th anniversary of the Bill of Rights (“We Hold These Truths”) to be aired on all four networks simultaneously and starring Hollywood luminaries James Stewart, Edward G. Robinson, Marjorie Main, Orson Welles, and many others, as well as president Franklin D. Roosevelt. On December 7, 1941, however, the Japanese attack on Pearl Harbor caught the nation by surprise, and Corwin retooled the program into a galvanizing documentation of American political determination. Eight days later, more than sixty million people heard “We Hold These Truths” as America’s position on the war became clear: we would fight.

Throughout World War II, Corwin churned out poignant dramatizations of patriotism and thrilled audiences with his candor and eloquence. His series *This Is War!* (1942) was considered radio’s first all-out effort at wartime domestic propaganda, and his series *An American in England*, coproduced on location by Edward R. Murrow, brought the human faces of shell-shocked Britain into American homes. In 1944, CBS broadcast *Columbia Presents Corwin*, a collection of war-inflected plays similar to the *26* series.

When the war in Europe ended, Corwin had prepared a special broadcast for V-E Day, May 8, 1945. Refraining from wild celebration, as the war was still alive in the Pacific Theatre, “On a Note of Triumph” asked tough moral questions of both citizen and government in a relentless prose poem equally evaluating America’s losses and victories punctuated by sound effects and a powerful score by Bernard Hermann. For V-J Day, after the first atomic bombs were dropped on the cities of Hiroshima and Nagasaki, and Japan subsequently surrendered, Corwin created a solemn closure piece called simply “14 August” (1945), “a fistful of lines” delivered by Orson Welles.

After the war, Corwin received the first Wendell Wilkie One World award and traveled the war-torn globe recording his impressions, producing from these tapes the series *One World Flight* (1947). Corwin’s association with CBS ended in 1948 when the network began to compromise his artistic integrity. He joined United Nations Radio in 1949 amid a national obsession with Communism in which Corwin himself ironically was suspect and created *Pursuit of Peace* (1950), a series which espoused the unity of the world’s nations.

As radio became less lucrative and as the medium of television captured America’s imagination, Corwin faded from public view. Though he authored more than seventeen books and wrote numerous screenplays, he could never recapture the immediate glory of radio’s Golden Age. His programs have long been in circulation among old-time radio enthusiasts, however, and in the 1990s National Public Radio rebroadcast many of his works to commemorate the fiftieth anniversary of World War II and even commissioned new plays created by this bard of the airwaves.

Cosby, Bill (1937—)

As one of the most influential and gifted comics of his time, Bill Cosby dissolved racial barriers on television from the 1960s to the 1980s, created the epochal situation comedy *The Cosby Show*, produced memorable educational programs for children, and made a series of much adored advertisements. Cosby's enormously influential style as an on-stage comic influenced a generation. On the 1968 album *To Russell, My Brother, Whom I Slept With*, Cosby's comedy brings everyday experience away from any broader historical meaning to the level of the mundane and thus, the "universal." This quality of universality helps to account for his ability to traverse ordinarily sensitive racial, gender, and age divides with ease and grace.

Bill Cosby

In the style developed during his early years performing at nightclubs and recording a number of successful comedy albums, Cosby *became* his audience in their most ordinary, everyday aspects. Aware that while there were others who could tell "jokes" as well as or better than he, Cosby's inimitable signature was the domestic anecdote—a charming and instantly recognizable little tale of everyday family experience. Cosby remembers experience to such a degree that he revitalizes it.

Cosby deliberately eliminated anything in his comic presentation that might have divided his audience. According to biographer Caroline Latham, Cosby explained during an interview in the 1960s why he does not do "racially oriented material": "When I told racial jokes, the Negroes looked at the whites, the whites looked at the Negroes, and no one laughed—until I brought them together again, and then I had to tell the jokes over again. . . I try to find a common identity with an audience. I create a situation and say, 'Hey, this happened to me and you're laughing with me about it, so can we really be that different?'"

Born William Henry Cosby, Jr. on July 12, 1937, Cosby grew up in a rough part of Philadelphia essentially a fatherless child. When Cosby was eight years old his six-year-old brother died. Bill's father retreated from this unbearable reality and joined the Navy, leaving his family in dire financial straits. Whatever money he sent home was woefully inadequate to the family's needs and they slid quickly down the economic ladder, occasionally landing on the welfare rolls. Not long after what must be considered a desertion, Cosby's mother obtained a divorce.

"My father left home many times," Cosby has said. "He would leave home when the rent was due, or come home penniless on payday, swearing to my mother that he'd been robbed and leave again. Once he vanished just before Christmas and we didn't have a cent." Cosby's mother Anna assumed the role of family breadwinner and Bill, as the oldest child, was left to "mother" his younger siblings. He cooked, cleaned, and kept order among the kids. Latham quotes Cosby's brother Russell: "He kept us in line and whipped us when we got out of line." His boyhood responsibilities as a caretaker were not something he could either take or leave. It was his responsibility to keep everyday domestic life going. The small joys and pains of this life were as much his experience as they are for any "mother." The structure of Cosby's comedy is rooted in his communication of this experience.

In the routines he would later fashion for the stage, his albums, and for the 1984-1992 sit-com *The Cosby Show*, his portrayals of family life are always idyllic. Annoyance is most often involved but never despair or genuine frustration. The one word observers use to describe the experience of Cosby's comedy more than any other is "reassurance." In Cosby's comedy there is always a sort of small internal war waged between his desire to relate the feel of his actual experience and his apparent need to suppress that experience with a fantasy of patriarchal authority that clearly did not exist for him when he was a child.

Initially a high school dropout, Cosby signed up for a four year Navy hitch when he got his equivalency diploma. . . and did not stop there. While most celebrities settle for honorary degrees, Cosby later returned to college and got his bachelors, masters, and Ed.D. Education became a dragon Cosby would be forever trying to slay; during his career, he always maintained his interest in creating educational programming such as the beloved cartoon *Fat Albert and The Cosby Kids*.

After two years on a track scholarship at Temple University, Cosby started telling jokes professionally, and within a short time became television's Jackie Robinson in his role as Alexander Scott in the NBC series *I Spy* (1965-68). It was the first time an African American character had so significant a role on a television series. While appreciative of the opportunity, Cosby had some reservations about how the character was written: "If Alexander Scott doesn't get to go out with a girl once in a while," Cosby complained at one point, "people are going to wonder about me." According to Latham, Producer Sheldon Leonard (the Branch Rickey of television) responded: "I am not going to feed the concept that says a Negro only responds to the sex drive. We want him to have girls, but there has to be sweetness and dignity to it."

During the 1970s, while Cosby worked toward his doctorate at the University of Massachusetts at Amherst, he fashioned a new comedy routine apparently based on his domestic experiences as a father of four daughters and one son. He used the substance of the routine as the foundation for his enormously popular and structurally groundbreaking television series, *The Cosby Show*. The show focused almost entirely on the often-overlooked yet familiar everyday activities of an ordinary, intact upper-middle-class African American family. No such family had ever before been depicted on American television and the show became a landmark success. Cosby finally had a fitting vehicle to fully realize his comic potential and appeal to virtually all segments of American society.

After the show finished its run in the early 1990s, Cosby soon had another sitcom—named simply *Cosby*—that became a moderate success. Then, on the morning of January 15, 1997, Cosby's only son Ennis—the model for the fictional "Theo" of *The Cosby Show*—was shot to death by a man who tried to rob him. Bill Cosby took virtually no time to mourn in private; neither his on-stage nor off-stage attitude could help him confront an experience so far outside of the familiar everyday world he created in his work.

The Cosby Show

The Cosby Show, a situation comedy that ran for eight seasons on NBC Television, was one of the most intensely and immediately popular shows ever broadcast in America. The show, which began in the fall of 1984, featured comedian Bill Cosby in the role of obstetrician-father Cliff Huxtable and his family: attorney-wife Claire, daughters Sondra (18), Denise (15), Vanessa (11), Rudy (5), and son Theo (13). According to the December 5, 1985 issue of *USA Today*, the program premiered at the number one spot on the Nielson ratings,

reached that spot ten times during the first season, and was number one in every age group. An estimated 62 million people tuned in every Thursday night during the early years of the show's run. More significantly, *The Cosby Show* was the first American television show to feature the daily adventures of a prosperous, intact upper-middle class family of African descent.

The source of the show's popularity and significance in television history stemmed not from Bill Cosby's own intentional presentation of the ideology of African-American upward mobility and the restoration of traditional family values to popular culture, but in the sheer pleasure of the nearly plotless structure of the show. On *The Cosby Show*, the focus on the seemingly "insignificant" bits of business of everyday life became the show's main attraction. It was truly the first "show about nothing" that *Seinfeld* later claimed to be. The first several episodes were drawn almost without alteration from Cosby's early 1980s stand-up routines and it is primarily from his comic vision that the show emerged whole. The show created a safe, crisis-free world that viewers had a chance to enter for a half-hour every week. Regardless of their ethnicity, gender, or age, many viewers immediately recognized themselves in the show: the Huxtable characters enacted the strikingly real ordinary domestic activities of the viewing audience. In its mid-1980s heyday, Thursday night became "Cosby night," a time anticipated with relish.

Only one family comedy before *The Cosby Show* came close to this structural breakthrough. *The Adventures of Ozzie and Harriet* (1951-1966) portrayed a "real" family who "played themselves," as it were. These shows were relaxed in the extreme and the Nelsons themselves seemed to exist in a state of grace; Ozzie, the "head of the household," never seemed to have an occupation and simply sauntered around the house all day. He lived the domestic life of a retired man with a servant (Harriet). There was, more importantly, some slight shift of focus to the everyday "doings" of life rather than on a very tight plotline. We see here only a glimmer of what *The Cosby Show* would bring to fruition and *Seinfeld* would later be so widely noted for.

One early episode of *The Cosby Show*, which concerned Cliff's looking after a slumber party of five-year-olds, disposed of some five to ten minutes of Cliff playing "bucking bronco" with the children: that is, bouncing some ten of them, one at a time, upon his knee. Someone connected with the show told *T.V. Guide* in 1985 that it was "one long Jello commercial." The episode was perhaps the most loosely scripted sitcom episode ever produced: the audience simply delighted in watching Bill Cosby make real children laugh. At this point, it was clear that the show's meandering tone was no mistake, no bug that needed to be worked out (as one might have originally suspected), but in fact, the very secret of show's success. Watching *The Cosby Show*, it appeared as though the cameras were simply stuck in a window, left on, and the finished product assembled at random. Viewers of the show luxuriated in a sort of celebration of banal, ordinary existence and thus participated in a validation of their own, often-overlooked daily life.

The most fascinating aspect of this is that the show's creators seemed utterly unaware of the reasons why people were glued to their show. Bill Cosby, for his part, told Larry King in 1989 that the show was successful because now the parents always get to "win." He reported his distress at programs such as *Silver Spoons* that depicted weak, incompetent parents led around by clever children. Cosby saw himself as the avenging parental Rambo of domestic comedy. The world the show created stands however, quite apart from (and indeed, opposed to) the ideological message Cosby sought to deliver.

What distinguished the Cosby show from virtually all others in the family comedy genre was the almost total absence of struggle or conflict. There is a sense that some measure of real suffering and discord occurred in the past, in previous generations, but not anymore. The grandparents' function in the show is to give some hint of this, as is the display of various icons scattered about the Huxtable home. A picture of Martin Luther King, Jr. reposed on the wall of eldest daughter Sondra's room and in another episode all of the trivial action stopped dead in its tracks when King's 1963 "I Have A Dream" speech appeared unexpectedly on the living room TV screen. It was as if the savior himself had appeared in an apparition. The message was clear: without that struggle, the Huxtables idyllic existence would not be. Now, of course, all struggle is ended. If ever there were an ideal representation of Reagan-era complacency, this was it.

"Significant" things seem to actually go on beyond the door of the Huxtable household, but almost never within its borders. The Huxtables experienced only the banal, uninterrupted hubbub of the everyday, only those aspects of life to which real people rarely give much thought and attention. Every Thursday night during the show's run we watched the children's endless squabbles, activities useful mainly in their ability to allay boredom (playing chess, shooting baskets), recreational cooking (Cliff's Special Secret Spaghetti Sauce), and the annoyances—but never the life-altering burdens of working parents caring for a young child. In a memorable vignette, Cliff asks five-year-old Rudy if she needs to use the bathroom before he puts her into her elaborate snowsuit and, of course once she's zipped into it, she exclaims, giggling, "I have to go to the bathroom!" An exasperated Cliff sent her to her mother.

Observers eventually tried explaining the unprecedented success of the show by suggesting that its success reflected "the love in the house." In fact, a record album released during the show's heyday of theme music connected with the program is called *A House Full of Love*. The reason for this is not the adequacy of the explanation, but Cliff's use of the language of "love" to diffuse any potential conflict. We love each other; therefore we cannot *have* a problem.

In the alternative universe of the Huxtables, it is clear, problems are only apparent: they can't *really* exist. In one episode, Claire knocks 14-year-old son Theo's notebook off the kitchen table. A marijuana joint falls out of the book. The parents look at each as if the sky has fallen. This cannot be happening in our house! Our house full of love! Theo is summoned to make some explanation of the event. He tells them it is not his and they believe him. (Huxtables, like George Washington, cannot tell lies.) This does not thoroughly satisfy Theo, who fears the loss of his parents' trust, so he drags the culprit who hid the joint in his book home with him to explain the situation to his parents. Cliff tells the boy from the errand outside world to see some adult about his problem—perhaps even the good doctor himself. It was not possible for Theo to have been the affected youth. Things like that did not happen to Huxtables.

In an episode from the 1885-86 season, one of the girls tells Cliff that a friend needs a medical appointment with him and that he not contact the girl's parents. Cliff sees her and although it turns out to be a simple problem of no moral consequence, he becomes troubled (a strange state for Cliff). He is worried that his own children will not come to him if they have a problem. He gathers the children around to tell them that they must talk to him if they're ever in trouble; the kids let slip that may have already happened. When the tension increases, they indicate that they were, of course, only kidding. The episode

ends on this note with nary a suspicion that they may have been telling the truth. Cliff had no reason to worry in the first place.

What we saw on *The Cosby Show* is what happens in that part of a fairy tale *after it ends*. The Huxtables were an upwardly-mobile black American family living happily ever after. It was a life devoid of crisis and conflict, a fantasy of upward mobility with no costs: a real American dream. What viewers wanted from the show was a chance to sink into this vision of utopia, this perfect world in which to spend their half-hour. Viewers responded to a utopian vision rooted in real aspects of the lives they actually lived, not Cosby's own ideological utopia of restored traditional family values. Cosby said he wanted his show to serve as both a teaching tool and a means to counter the prevailing trend of "weak parents" in both television and popular culture in general; he made the perhaps incorrect assumption that this message was what viewers most appreciated.

Near the end of the show's run, Cosby's own overt ideological intentions came to overcome the structure of the show. Cliff's funny faces that repress all tension were now backed up by overtly intimidating displays of parental might and even instances of outright emotional cruelty directed toward even the youngest Huxtable. At that point, ratings began to dip and other shows with characteristics similar to the earlier episodes of *The Cosby Show* soon appeared.

There was a time when Cosby himself saw the response to his show perhaps clearer than most observers. "I hardly ever watch my work, but with this show it's different," he says. "I watch every week. And at the end of every segment, I find myself with a smile on my face, because I really like that family and the feeling they give me."

Cosell, Howard (1918-1995)

Identified as the foremost sports television journalist of the 1970s, Howard Cosell consistently distinguished himself from the field by his presentation and content. He was, as a *TV Guide* poll in the 1970s revealed, both the most popular and the least popular sportscaster of his day. Though Cosell proclaimed that he was "just telling it like it is," his careful manipulation of his image helped to make him a celebrity in his own right.

Born Howard William Cohen on March 25, 1918, Cosell grew up in Brooklyn, New York, attended law school, and opened his own Manhattan firm. His clientele included several actors and athletes, the most famous being Willie Mays. Cosell also represented the Little

Howard Cosell (left) with Muhammad Ali

League of New York, a connection that soon landed him his first broadcasting job. In 1953, Cosell began hosting a Saturday morning program for ABC in which kids asked sports questions of professional athletes.

Cosell cut his teeth as a boxing commentator for ABC in the 1960s. Cosell critiqued everything in sight that would provide him with fan appeal and approval, yet his career was most clearly tied to the emergence of Muhammad Ali. For many viewers, Cosell's voice provided the soundtrack as *The Greatest* "floated like a butterfly and stung like a bee." The sportscaster served as one of Ali's chief defenders when he was stripped of his title after refusing to join the military due to religious beliefs. Cosell's public support was direct: "What the government did to this man was inhuman and illegal under the Fifth and Fourteenth amendments. Nobody says a damned word about the professional football players who dodged the draft. But Muhammad was different; he was black and he was boastful." Cosell covered the sport of boxing until 1982. After a particularly brutal heavyweight bout, Cosell walked away from the sport, saying: "Boxing is the only sport in the world where the clear intention is for

one person to inflict bodily harm upon the other person. . . ." Evidently, the smooth moves of Ali had prohibited Cosell from realizing this basic reality earlier.

In the late 1960s, ABC President Rooney Arledge, who was well known for his innovative ideas in sports broadcasting, approached Cosell with what many observers considered a ridiculous idea: would he like to host an evening sporting event that competed for prime-time viewers? Cosell teamed with Don Meredith and Frank Gifford to introduce *Monday Night Football* in 1970. Led by Cosell, the program became a kind of traveling road show as fans flocked around the broadcast booth, either to praise Cosell or damn him. Cosell's witty and sometimes caustic exchanges with his fellow broadcasters often drew more attention than the games themselves. *Monday Night Football* became—improbably—one of the most talked about programs of the 1970s.

Though he had a long record of support for civil rights and had offered prominent support to the protests of black runners Tommie Smith and John Carlos at the 1968 Summer Olympics, Cosell drew the wrath of viewers when, while watching *Washington Redskin's*

receiver Alvin Garrett carry the ball during one Monday Night Football broadcast, he said “Look at that little monkey run.” Hounded by critics, Cosell eventually left the broadcast booth in 1984, claiming that pro football had become a “stagnant bore.” Cosell briefly hosted a program called *Sportsbeat* (1985), but the publication of his autobiography *I Never Played the Game*—which contained scathing criticisms of many ABC personnel—soon led to the program’s cancellation. Cosell broadcast intermittently on radio thereafter and retired in 1992, reportedly bitter about his exclusion from a profession he helped to create. He died on April 23, 1995.

No matter the sport he covered, Cosell’s trademark was a steady flow of language unmatched in the trade. He refused to simplify his terminology, often using his nasal voice to introduce polysyllabic words into the foreign area of the boxing ring. He left the game description for his ex-jock colleagues, and he blazed the trail of the commentator role that has become standard in modern broadcasting. Arledge discussed Cosell in 1995: “He became a giant by the simple act of telling the truth in an industry that was not used to hearing it and considered it revolutionary.” This knack grew directly from what others called an “over-blown ego.” When Cosell misspoke about the game, his colleagues would call him to task. The irrepressible Cosell would typically respond with his well-known “heh, heh, heh” admission.

Cosmopolitan

Cosmopolitan magazine holds a spot as one of the most successful women’s magazines of all time. In the late 1990s it boasted a circulation of 2.4 million readers in the United States, and an impressive 29 editions in other languages. Its distinctive, come-hither covers seem designed more to catch a man’s eye than any potential female newsstand browser, and inside its pages features give women very specific advice on how to lure—and keep—a man. Yet the *Cosmopolitan* ideology—revolutionary in the 1960s, fitting in perfectly with the liberated-women zeitgeist of the 1970s, and setting the big-haired tone of the 1980s—was the creation of one very female mind: Helen Gurley Brown. The author of the bestselling *Sex and the Single Girl* (1962), as *Cosmopolitan* editor, Brown deployed her array of self-improvement strategies into a monthly format that made her name synonymous with the magazine and enshrined *Cosmo*, as it came to be called, in popular print journalism’s hall of fame.

By tying the consciousness of the sexual revolution of the 1960s—brought about in part by the launch of the oral contraceptive pill on the United States market in 1960—with an accessible, affordable magazine format, *Cosmopolitan* succeeded beyond anyone’s vision. The periodical had actually been in existence since 1886 as a

An American tourist reads *Cosmopolitan* while sunbathing.

general-interest literary magazine; it was a Hearst Corporation holding after 1905, and for years found success with a high-caliber output of fiction. The “Cosmopolitan Girl” originally referred to the illustrated covers of the pre-World War II era; the term would take on an entirely different meaning a few decades later. In the 1950s *Cosmopolitan* began to focus more on attracting female readers with less fiction and more editorial features on women’s problems. Circulation, however, continued to plummet.

Helen Gurley Brown had already attained a certain level of notoriety in the United States with her 1962 book *Sex and the Single Girl*. The onetime advertising copywriter had penned a chatty but frank little how-to guide for young single women aspiring to be glamorous urban sophisticates; *Sex and the Single Girl* dovetailed perfectly with the trend of a greater number of female college graduates in the postwar boom years, a lessening of stigmas attached to unmarried women living on their own, and a delay in the average age of marriage. Brown posited that it was not only okay to be single, but a happy and emotionally healthy way to live—a revolutionary idea at the time, to say the least. The book’s tacit acknowledgment that sex occurred regularly between single, consenting adults outside of the bonds of matrimony was even more radical. Brown tried to find a backer for a magazine of her own after the runaway success of *Sex*; she planned to name it *Femme* and aim it at new young working

women. Instead Hearst hired her to revamp the moribund *Cosmopolitan*, which was near death at the time. With almost no journalism experience Brown became its first female editor.

The first revamped *Cosmo* in July of 1965 launched a new era in women's magazines. It addressed sex in frank terms and gave readers a barrage of upbeat self-improvement tips for sex, work, and the physical self. Naomi Wolf, author of *The Beauty Myth*, termed *Cosmopolitan* the first of "the new wave of post-women's movement magazines" that depicted women as sexual beings. Compared to its predecessors among women's service magazines, *Cosmopolitan*, wrote Wolf, set forth "an aspiration, individualist, can-do tone that says that you should be your best and nothing should get in your way. . . . But the formula must also include an element that contradicts and then undermines the overall prowoman fare" with anxiety-proving articles about cellulite, breast size, and wrinkles.

Brown always focused her magazine's editorial slant on the reader she termed "the mouseburger." Clearly a self-referential term, Brown defined it for Glenn Collins of the *New York Times* in 1982: "A mouseburger is a young woman who is not very prepossessing," Brown said. "She is not beautiful. She is poor, has no family connections, and she is not a razzle-dazzle ball of charm and fire. She is a kind of waif." With a heavy editorial emphasis on sex and dating features, tell-all stories, and beauty and diet tips, *Cosmopolitan* had become an American institution by the 1970s, and the term "Cosmo Girl" seemed synonymous with the ultra-liberated woman in her twenties who had several "beaus," a well-paying job, and a hedonistic lifestyle. The magazine also introduced the male centerfold with a much-publicized spread of actor Burt Reynolds in its April 1972 issue.

Yet the reality was somewhat different: *Cosmopolitan's* demographics were rooted in the lower income brackets, attracting readers with little college education who held low-paying, usually clerical jobs. The "Cosmo Girl" on the cover and the few vamped fashion pages inside reflected this—the *Cosmo* style was far different from the more restrained, elegant, or avant-garde look of its journalistic sisters like *Vogue* or even *Mademoiselle*, which focused on a more middle class readership. Though often a top model or celebrity, the women on *Cosmo's* covers were usually shown in half- or three-quarter-length body shots, often by Francesco Scavullo for several years, to show off the low-cut evening wear. The hair was far more overdone—read "big"—than usual for women's magazines, and skimpy beaded gowns alternated with lamé and halter tops, a distinctly downmarket style. The requisite "bedroom eyes" and pouty mouth completed the "Cosmo Girl" cover shot.

Framing the cover model were teasing blurbs written by Brown's husband, a film producer, such as "You've Cheated. Do You Ever Tell?" Blurbs also trumpeted the pull-out "Bedside Astrology Guide," an annual feature, and articles like "How to Close the Deal"—how to get your boyfriend to agree to marriage. "Irma Kurtz's Agony Column" placated readers with true-life write-in questions and answers from readers with often outrageous personal problems borne of their own bad decisions. "The magazine allows women the impression of a pseudo-sexual liberation and a vicarious participation in the life of an imaginary 'swinging single' woman," wrote Ellen McCracken in her book *Decoding Women's Magazines*. "Although most readers will never dress or behave as the magazine urges, *Cosmopolitan* offers them momentary opportunity to transgress the predominant sexual mores in the privacy of their homes."

By 1981 *Cosmopolitan's* circulation had quadrupled its 1965 figures. Brown never seemed surprised that her magazine had succeeded so well. As she told Roxanne Roberts in the *Washington Post*,

"Cosmo really is this basic message: Just do what's there every day, and one thing will finally lead to another and you'll get to be somebody. . . . I believe most 20-year-old women think they're not pretty enough, smart enough, they don't have enough sex appeal, they don't have the job they want, they've still got some problems with their family," Brown told Roberts. "All that raw material is there to be turned into something wonderful. I just think of my life. If I can do it, anybody can."

For 16 years the magazine, under Brown's editorship, was one of the Hearst chain's top performers. At one point in the 1980s it had the highest number of advertising pages of all women's magazines in the United States. Most of the copies—about 2.5 million—were purchased at the newsstand, an impulse buy and thus more profitable for Hearst than the discounted subscription price, and its "pass-around" rate was also much higher than its competition.

Not surprisingly, *Cosmopolitan* has always been a particular target of feminist ire. As early as 1970 it appeared in the Appendix of the classic tome *Sisterhood Is Powerful: An Anthology of Writings from the Women's Liberation Movement* on the "Drop Dead List." But Brown defended her magazine in the 1982 interview with Collins of the *New York Times*. "Cosmo predated the women's movement, and I have always said my message is for the woman who loves men but who doesn't want to live through them. . . . I sometimes think feminists don't read what I write. I am for total equality. My relevance is that I deal with reality." The reality was that sometimes women did sleep with their bosses, or date married men, or use psychological ruses to maintain a relationship or force a marriage, and *Cosmopolitan* was one of the few women's magazines to write about such issues in non-judgmental terms. It was criticized, however, for failing to address safe-sex issues after the advent of AIDS (Acquired Immune Deficiency Syndrome) in the 1980s.

Helen Gurley Brown retired in 1997 after an interim joint-editorship with the launch editor of *Marie Claire*, Bonnie Fuller. A *Cosmopolitan*-ized version of the French original, *Marie Claire* is the closest American offering on the newsstands to *Cosmopolitan*, but features a more sophisticated, *Elle*-type fashion slant. "The Hearst move was about acknowledging change," noted *Mediaweek's* Barbara Lippert, describing Brown as almost a relic from a quainter, more innocent age. "These days, however, everybody's negotiating a new, much more complicated set of questions than how to land a man . . . the whole Little Miss Secretary Achiever thing is anathema to some twentysomethings, who are more interested in cybersex and the single girl," Lippert wrote. Both the age and the income level of *Cosmopolitan's* average American reader had climbed somewhat, and a higher percentage of married women now read it. By the time of Brown's retirement, *Cosmopolitan* was an international phenomenon, with 29 editions in several different languages. The 1960s-era themes of sexual liberation seemed to catch on most successfully in the newly "de-Communized" countries of the Eastern Bloc, where equal rights for women had once been a hallmark of their legal, social, and economic systems. "Think of it," wrote the *Washington Post's* Roberts. "Cosmo girls everywhere. Like McDonald's with cleavage."

Costas, Bob (1952—)

Preeminent broadcast journalist and sportscaster Bob Costas began announcing basketball games for a St. Louis radio station at the age of twenty-two. He joined NBC in 1980, quickly becoming one of the network’s most valuable assets through his work covering major league baseball, football, basketball, and college events, and hosting various shows including *NBA Showtime*, *NFL Live*, and *Costas Coast to Coast*. In 1992, a high-profile stint as the network’s prime-time anchor at the XXV Olympics in Barcelona, Spain, earned him nationwide name recognition. A three-time Emmy winner for his sports announcing and hosting, his colleagues have also named him outstanding sportscaster of the year four times. Moving beyond sports in 1988, he launched a late-night interview television program, *Later with Bob Costas*, that won him another Emmy. When the series ended in 1994, Costas expanded his duties at NBC, contributing to *Dateline*, *Today*, *NBC News*, and anchoring MSNBC’s *Internight*.

Costello, Elvis (1955—)

Born Declan Patrick Aloysius McManus, British singer, guitarist, and composer Elvis Costello has been a mainstay of the popular music scene since his 1977 debut disc, *My Aim Is True*. The son of a jazz bandleader, Costello rode to prominence on the initial wave of British punk—and thanks in part to a stage persona that made obvious reference to Buddy Holly. A gifted lyricist with a flair for wordplay, he did his best work in collaboration with the Attractions, a virtuoso backing band anchored by Bruce Thomas (bass), Pete Thomas

(drums), and Steve Nieve (keyboards). The band’s early records, polished to a metallic sheen by producer Nick Lowe, combined Beatlesque pop smarts with an appreciation for American soul. The best of these are *This Year’s Model*, *Armed Forces*, and *Trust*. Costello escaped from Lowe’s clutches to record what is considered his masterwork, 1982’s lyrically bruising, intricately textured *Imperial Bedroom*.

Costner, Kevin (1955—)

Kevin Costner has as many fans as detractors; he is a steadfast box-office attraction but must strive for artistic respectability with each new film. Seen as the sexy embodiment of a healthy, positive image of American masculinity at the peak of his career in the early 1990s, Costner’s public persona has suffered since then from his failure to live up to the standards set by his predecessors, the male stars of Hollywood’s glamorous past. Because of his role as the dreamer who, guided by a mysterious voice, builds a baseball field in

Kevin Costner in a scene from the film *Dances with Wolves*.

the middle of his cornfield in *Field of Dreams* (1989), Costner was compared, above all, to the Jimmy Stewart of Frank Capra's films. This and other allusions to Gary Cooper, prompted by Costner's similar handsome looks, possibly traced a path for him in the audience's and the critics' imagination very unlike the one Costner actually would follow. This divergence may explain why he is not unanimously greeted as one of the greatest Hollywood stars of the 1990s.

Three main aspects contribute to shaping Costner's uneven career. First, his rather unwise choice of roles, alternating between less popular high quality products like *JFK* (1991) or *A Perfect World* (1993)—in which he plays demanding roles—with impossible blockbusters like *The Bodyguard* (1992). Second, his irregular work as director, which includes a hit like *Dances with Wolves* (1990) and a flop like *The Postman* (1997). And third, the loss of his reputation as the long-married perfect husband in favor of a less popular reputation as a womanizer developed shortly after reaching stardom, which clearly affected his star image. The man destined to represent America's most cherished virtues on the screen has turned out to be a star with little sense of his own limitations as an actor, director, or public figure and with, arguably, an excessive sense of his own value as an artist.

Costner became a rising star with *Silverado* (1985) and *The Untouchables* (1987). Stardom definitively came thanks to two baseball films, *Bull Durham* (1988) and *Field of Dreams*. Games are indeed a leit-motif in Costner's career, which includes two more sports-related films, *Tin Cup* (1996) and *For the Love of the Game* (1999). The success of his excellent performance in *Field of Dreams* prompted Costner to fulfill a long-cherished ambition: directing a film, the low-budget Western epic *Dances with Wolves* based on the novel by Michael Blake. Despite the misgivings of many who thought (even wished) that Costner's film would be an utter failure, this long film well deserves the awards (Oscars for Best Picture, Best Director and Best Adapted Screenplay) and the popular esteem it reaped, for it is a courageous attempt to instill new life into the dying western genre. Unlike typical westerns, Costner's film deals with the confrontation between the white man and the native American from a distinctly antiracist perspective, allowing the language of the native tribes to be heard as was never heard before in cinema. Nonetheless, the film still fails to shift the focus away from the white man—Costner himself plays the main role—and onto the native American.

The paradox is that instead of consolidating Costner's career, the Oscar seems rather to have disrupted it. His role in his friend Kevin Reynolds's *Robin Hood, Prince of Thieves* (1991) earned him little sympathy, while his decision to play the pathetic killer in Clint Eastwood's *A Perfect World*—possibly his best performance to date—was ill-timed, following hot on the heels of his very popular but insubstantial role as Whitney Houston's bodyguard. *The Bodyguard* has, though, the redeeming merit of depicting an interracial romantic relationship under a positive light, which might explain its popularity.

But the two films that have clearly become a sign of Costner's rising megalomania and self-indulgence—at least for his detractors—are *Waterworld* (1995) and *The Postman*. The former, which he co-directed with Kevin Reynolds, was in its time the most expensive film ever made but it failed to generate enough box-office receipts to recoup the impressive investment. Those who ridiculed Costner's wish to film *Dances with Wolves* but were silenced by the Oscars the film won seemingly came back with a vengeance to prey on *Waterworld*. The film broke records eliciting the highest number of negative comment even before actual shooting began. Although it did not

become the success Costner expected, *Waterworld* nonetheless attracted a much larger audience than the critics foretold. Yet, far from learning a lesson from this expensive experiment, Costner plunged next into depths he had not known for years. *The Postman*, Costner's second film as director, simply flopped, despite the good reputation of the novel by David Brin from which it was adapted.

Costner's case is, arguably, paradigmatic of the advantages and the disadvantages that the current system of Hollywood film production offers to today's stars. In the past, Costner's good looks and acting talent would have guaranteed for him a stable place in the sun of any of the main studios. He would have had to sacrifice personal choice to stardom, with all the loss of artistic freedom that this entails. But, in his case, the freedom of choice enjoyed by today's stars seems to be working against him. Other male stars like Arnold Schwarzenegger or Mel Gibson, clearly (and paradoxically) enjoy a steady popularity despite their occasional mistakes. Costner does not. The key to the different treatment Costner meets might well have to do with his reluctance to distance himself from his own star image—in short, to his inability to laugh at his mistakes. The integrity that he exuded in *Field of Dreams* or *The Untouchables* has been subtly transformed into self-centeredness and this is a fault on which his detractors thrive. Fortunately for him, his achievement in *Dances with Wolves* shows that this perceived shortcoming could be forgiven in an artist.

Cotten, Joseph (1905-1994)

One of Hollywood's most versatile actors, Joseph Cotten is chiefly associated with the films of Orson Welles. Cotten was a latecomer to Hollywood, arriving at age thirty-six after acting on Broadway in Welles's Mercury Theatre. In 1940, Cotten made his first film—Welles's *Citizen Kane*—a film that would come to be regarded as the greatest film ever made. For the remainder of the decade, it seemed as if the talented actor could not turn in a bad performance. Although Cotten continued to work with Welles—starring in *Journey into Fear* and *The Magnificent Ambersons*—many A-list directors clamored to work with the versatile star. Cotten appeared in such classics as George Cukor's *Gaslight*, Carol Reed's *The Third Man*, and Alfred Hitchcock's *Shadow of a Doubt*. With his offbeat good looks and exceptional acting ability, Cotten soon evolved into one of Hollywood's most sought-after leading men, appearing opposite such top stars as Ingrid Bergman, Jennifer Jones, Loretta Young, and Joan Fontaine. Although his career continued well into the 1980s, the good parts were fewer and farther between. Through

his association with Welles, however, his movie immortality remains assured.

The Cotton Club

Founded by the British-born gangster Owney Madden, the Cotton Club nightclub opened its doors on December 4, 1923, at a time when the black cultural revival known as the Harlem Renaissance was going into full swing. The club provided entertainment for white New Yorkers who wanted to go to Harlem but were afraid of its more dangerous aspects. The Cotton Club has never been surpassed

as Harlem's most outrageous club and its lavish entertainment is still a matter of awe even in this day of Las Vegas excess. The Cotton Club presented the best in black entertainment to an exclusively white audience and became famous for its use of light skinned, or "cotton colored," black women in its chorus line.

Madden opened the club to provide an outlet for his bootleg beer. The club floor was in a horseshoe shape, designed by Joseph Urban. It was decorated with palm trees and other jungle elements. There were two tiers of tables and a ring of banquettes. The menu offered not only Southern food but also elaborate European specialties. Prices were the highest in Harlem but the food was not particularly memorable. The entertainment, however, was spectacular. Black waiters provided an elegant setting with their sophisticated demeanor, a contrast to the whirling servers in neighboring clubs. These waiters also informed patrons that it was not fashionable to put their bottles of beer on the floor. Rather they were instructed to place them in their pockets. Failure to comply led to ejection.

Cotton Club entertainment, or floor shows, lasted as long as two hours. There was a featured act and the gorgeous Cotton Club chorus line. The girls were beautiful and uniformly light skinned; they were also young—under 21—and tall—five-foot six inches or more. Cab Calloway's songs "She's Tall, She's Tan and She's Terrific" and "Cotton Colored Gal of Mine" are apt reflections of the girls in the

The Cotton Club

line. The shows were fast-paced and featured the greatest black entertainment possible. Ethel Waters, Adelaide Hall, Duke Ellington, Cab Calloway, and others performed there.

The Cotton Club was part of the area of Harlem known as “Jungle Alley.” This strip, located on 133rd Street between Lenox and Seventh Avenues, was densely packed with clubs. The Cotton Club was one of eleven clubs in the area, most of which served a white trade. The Cotton Club, Connie’s Inn, and Small’s Paradise were the most renowned.

The color line was strictly enforced at the Cotton Club, and performers and audience were kept separate. White mobsters owned the club, its shows were written by whites (Dorothy Fields was a major contributor), and the audience was all white. Black performers often went next door to drink or smoke marijuana. The only African Americans officially allowed in the Cotton Club were its outstanding performers. On December 4, 1927, Duke Ellington began his run at the Cotton Club, one of the more important engagements in jazz history. The run lasted into 1932, with breaks for movies and tours allowed. In addition to playing his music regularly, writing for the shows, and providing a basic income to keep his men together, the gig provided Ellington with a large radio audience who came to know his music. At this time, Ellington developed what he termed his “jungle sound,” a use of various tonal colors that he associated with Africa, a constant theme in his ever-evolving music. He debuted “It Don’t Mean a Thing (If It Ain’t Got That Swing)” and “Mood Indigo” to Cotton Club audiences.

The Cotton Club of the late 1920s and 1930s helped to define the emergence of African-American culture in the period, coinciding as it did with the Marcus Garvey movement, W. E. B. DuBois’s Pan African Movement, and the flowering of African American literature known as the Harlem Renaissance. The Cotton Club of this era has since been memorialized in E. L. Doctorow’s historical novel *Billy Bathgate* (1989) and in the Francis Ford Coppola movie *The Cotton Club* (1984).

Coué, Emile (1857-1926)

A French provincial pharmacist, Emile Coué was responsible for a therapeutic mind-over-matter system of “autosuggestion” known as Couéism that influenced the popular culture of the United States when, as in England, it became something of a national craze during the early 1920s. By daily repetition of its still familiar mantra, “Day by day, in every way, I am getting better and better,” Couéism’s adherents hoped to achieve health and success by positive thinking and the expectation of beneficial results. The most succinct definition of Couéism was perhaps Coué’s own: “Couéism is an especial

Emile Coué

technique . . . for the teaching and application of auto- and other methodical suggestion. It is more: it is an attitude of mind directed toward progressive improvement.”

Coué was born of old noble Breton stock in Troyes, France, and attended pharmacy school in Paris before establishing an apothecary in his home town. Observing that he could effect positive results in his clients by encouragement as well as medication, he developed an informal counseling service that became the foundation of his later work. Moving to Nancy in 1896, he came across an advertisement touting hypnotism as a tool for business success. His investigations in this field led him to develop his own system, though he always insisted that positive thinking—not hypnotic trance—was the basis of Couéism, and that he was merely harnessing imagination in the service of will. In 1913 he founded the Lorraine Society of Applied Psychology and, in 1922, the Coué Institute for Psychical Education at Paris. During World War I, he lectured in Paris and Switzerland, with proceeds used for the relief of war victims.

His book *Self-Mastery Through Conscious Autosuggestion* caused a sensation when it was published in England and the United States, in 1920 and 1922, respectively. A steady stream of British pilgrims to Nancy turned Coué’s facilities into a kind of secular Lourdes, especially after such luminaries as Julian Huxley and Sir Alfred Downing Fripp, the King’s physician, endorsed the method. *Emile Coué: The Man and His Work*, a 1935 book by J. Louis Orton, a disaffected ex-associate, quotes Huxley: “He [Coué] goes further than any of the orthodox medical men in his claims for the power of mind over body; he effects remarkable cures, and finally he sums up his ideas in one or two simple generalizations.”

Coué was invited to lecture in England regularly after 1921, where his reputed cure of Lord Curzon's insomnia only added to his reputation. On January 4, 1923 he arrived in the United States for a tumultuous lecture tour that was given substantial coverage in the popular press, especially by the *New York World*. Over the next several weeks, he gave 81 "séances" in major eastern cities, where his treatment of prominent socialites such as Mrs. W. K. Vanderbilt further served to advance his cause. His appeal to American optimism and efficiency was undoubtedly the source of much of his popularity; industrialist Henry Ford was reported to have said, "I have read Coué's philosophy: *he has the right idea*." And Coué himself was described as the "Henry Ford of psychology" by Gertrude Mayo in her 1923 book, *Coué for Children*. She wrote, "Just as M. Coué had first started the engine of the subconscious mind with hypnotic hetero-suggestion and later had substituted the self-starter of conscious auto-suggestion . . . thanks to him people . . . who had never known before they possessed unconscious minds, were finding not only that they had but that they could command them to their great personal advantage and convenience."

A National Coué Institute was founded in New York to train instructors to teach the method, and the American Library Service began publishing his books from New York. Despite Coué's decidedly secular point of view, his lectures evoked comparisons with the faith-healing revivals that were popular at the time, attracting, in the words of J. Louis Orton, "paralytics, asthmatics, and stammerers" seeking respite from their ills. Couéism came under fire from orthodox religious leaders and even Christian Science—which it somewhat resembled—for its secular viewpoint and its purported Freudianism, which it resembled not at all. Coué returned to the United States in 1924 for an extensive lecture tour of the western states, but took ill in England the following year after complaining his nose had been improperly cauterized to cure his recurring nosebleeds during a British lecture tour. He died in his homeland on July 2, 1926, and a huge crowd attended his funeral at a Roman Catholic church. Although his Institutes continued his work in Europe and the United States, the movement quickly declined and was soon all but forgotten.

Thus the Coué craze, especially in America, ended almost as soon as it had begun, leaving the Freudians and fundamentalists to battle it out for the ownership of the "mind-over-matter" question. The popularity of Couéism can be seen as representing a response by mass consumer culture to the spiritual devastation of World War I, which had spawned nihilism, Dada, socialism, and fascism in other contexts. Its pseudoscientific, quasi-religious trappings appealed to a disillusioned public hungry for non-material fulfillment during the 1920s, a decade that embodied the triumph of a modernistic, mechanistic culture. And as an early example of how publicity, hype, and celebrity endorsement were enlisted on behalf of non-material fulfillment, Couéism presaged the work of other self-help gurus and systems during the twentieth century, with voices as diverse as Norman Vincent Peale, L. Ron Hubbard, Maharishi Mahesh Yogi, and Werner Erhard perpetuating their own versions of Coué's self-help message.

Coughlin, Father Charles E. (1891-1979)

Long before the emergence of present-day radio "shock-jocks," Father Charles E. Coughlin, the "radio priest" of the 1930s, realized the power of using the airwaves as a political pulpit and means to achieve celebrity status. Along with Huey Long, the controversial senator from Louisiana who advocated a massive wealth-redistribution program, Coughlin reflected the frustrations of Americans mired in a seemingly endless Great Depression. Beginning his career as a talented parish priest who used radio broadcasts as a means to raise funds for his church, he became perhaps the most popular voice of protest of his day, reaching millions of listeners each week with a populist message that pitted the common man against the forces of the "establishment." Over time his message developed from one of protest to demagoguery; his career perhaps illustrates both the potentialities and dangers of political uses of mass media.

Born in 1891 in Hamilton, Ontario, Coughlin grew up in a devout Catholic family. There was never doubt that he would enter the priesthood, and at the age of twelve Charles enrolled at St.

Father Charles E. Coughlin

Michael's College in Toronto. He matriculated to a seminary in 1911. After taking the vows of priesthood, he was assigned as parish priest in Royal Oak, Michigan, a suburban community just north of Detroit. Although the parish was tiny and operated on a shoestring budget, Coughlin had grandiose plans for the church—which seemed futile considering the modest number of Catholics in Royal Oak. Two weeks after a new church was built, local members of the Ku Klux Klan burned a cross on the church lawn. Coughlin, known for having a streak of militancy, vowed to overcome local resistance and transform the struggling church into a vibrant, flourishing parish.

His plans for bolstering the church were innovative and wildly successful. He renamed the church the Shrine of the Little Flower and became an indefatigable fund-raiser. He invited members of the Detroit Tigers baseball team to the church as a way to attract attention—Babe Ruth even attended the church once while playing the Tigers and held a basket for donations at the church door. Yet Coughlin's most lucrative idea was to turn to the airwaves. He contacted the manager at local radio station WJR about broadcasting a weekly radio sermon that would confront local issues and raise awareness of the church. The medium was perfect for Coughlin, whose warm, mellow voice attracted listeners throughout Detroit. His sermons offered a variety of religious themes, such as discussions of Christ's teachings and Biblical parables. Soon mail was pouring into the station, hundreds and sometimes thousands of letters each week, most with financial contributions from listeners. Coughlin's plans for the Shrine of the Little Flower were soon realized: a new church was built, with a seating capacity of more than twenty-six hundred, complemented by a tall, granite tower. Attendance boomed as people throughout the region came to catch a glimpse of the "radio priest."

Coughlin's radio talents soon were noticed by executives outside of Detroit. Columbia Broadcasting Service, based in New York, offered Coughlin a deal in 1930 that gave him a national audience, and soon he was reaching as many as forty million listeners each week. Yet as his popularity increased, the tone and content of his broadcasts began to change. Sermons on religious themes gave way to discourses on politics and economics. The Great Depression, he declared, demanded a fundamental restructuring of society in order to overcome the evils of greed and corruption, much of which was intrinsic to "predatory capitalism." Boldly confronting his critics on the air, Coughlin's political speeches generated controversy, so much so that CBS decided to cancel his show despite his growing listener base.

Undaunted, Father Coughlin signed contracts with independent radio stations and continued to reach millions of listeners weekly. His political messages, although impassioned, were rather vague. He supported Franklin Roosevelt in the 1932 presidential election, hailing the New Deal as "Christ's Deal." His greatest complaint was with wealthy financiers and bankers, most of them on the East Coast, who were bilking the "common man." With time, however, he moved away from Roosevelt, believing that New Deal reforms were too mild for a society that required radical change. In 1934, Coughlin founded the National Union for Social Justice, an organization designed to promote his political ideas, which included nationalization of American banks and currency inflation through the coinage of silver. Over the next two years, the organization developed into a third party, the Union Party, and offered William Lemke, a congressman from North Dakota, as a presidential candidate to oppose the reelection of Roosevelt.

After the failure of the Union Party to either capture or significantly influence the 1936 presidential election, Coughlin's popularity began to wane. His weekly radio broadcasts continued to attract a national audience, but he never recaptured his earlier fame. By the late

1930s, his speeches were increasingly shrill. Listeners detected anti-Semitism and demagoguery in his broadcasts—elements that had appeared occasionally before, yet now were becoming more vocal and more frequent. What had in the past, for example, been occasional references to "Shylocks" and international financial conspirators undermining the country became an outright assault against "Communist Jews"; Coughlin also borrowed from the speeches of German Nazi propagandist Joseph Goebbels. He opposed American entry into World War II vehemently, arguing that Jews had been responsible for bringing the nation into the conflict. Such extreme positions lost for Coughlin any significant audience that had remained with him, and he retired from public life during the war and returned to the Shrine of the Little Flower. He died in 1979, at the age of eighty-eight.

Country Gentlemen

Founded in 1957, the Country Gentlemen were the first bluegrass act to bridge the gap between the music's country origins and an urban audience. Combining singer Charlie Waller's Louisiana roots and mandolinist John Duffey's urbane tastes with inspired musicianship, the Gentlemen rode the 1960s folk revival to prominence with a repertoire ranging from ancient ballads to Bob Dylan songs, culminating in the 1971 release of "Fox On The Run." Their version of the number—originally a failed rock 'n' roll single—became one of the few bluegrass songs to achieve popular culture immortality.

—Jon Weisberger

Country Music

Country music has a history that is deeply rooted in traditional white Southern working-class values, patriotism, conservative politics, and lyrics that tell the unblinking truth about life. An old joke asks, "What do you get when you play a country record backwards?" The answer: "You get your wife back, your truck back, and your dog back." However, country music is much more than songs of hard luck in love and life. Those lyrics that face "the cold hard facts of life," in the words of a Porter Wagoner song of the 1970s, are more than a series of laments. They look at both success and failure, joy and despair with sentiment and realism. And though most country music and country music fans might advocate a straight and narrow conservative path, the lyrics of country songs deal with the dilemmas of life with a complexity not found in any other popular music.

Ricky Skaggs (middle) on stage with members of Bill Monroe's Bluegrass Boys at the Chicago Country Music Festival.

Country music's earliest roots are found in the ballads of the Appalachian Mountains, songs that stemmed from a tradition brought to America by the English, Scots, and Irish who settled that territory. Their religion was a strict Calvinism, and many of their songs were dark cautionary tales of sexuality and retribution. Playwright Tennessee Williams, who came from that Southern Gothic tradition, put these words in the mouth of Blanche Dubois, his most famous heroine: "They told me to take a streetcar named Desire, then transfer to one called Cemeteries." Williams had learned the message of those old songs: "A false-hearted lover will lead you to your grave" ("On Top of Old Smoky"). One song after another told the story of seduction followed by murder. Pretty Polly's false lover tells her, "I dug on your grave the best part of last night." The false lover on the banks of the Ohio admits that "I held my knife against her breast/As into my arms she pressed." In perhaps the most famous of these songs, Tom Dooley meets his lover on the mountain and stabs her with his knife. These dark songs were not the only part of the Southern mountain tradition, however. There were children's play-party songs, danceable tunes, and upbeat, optimistic songs. But the murder songs were so striking, coming as they did out of a tradition of sexual repression combined with stark realism, that they are the most memorable.

The music of the Southern mountains became something more in 1927, when Ralph Peer, a recording engineer for the Victor Talking Machine Co. (later RCA Victor), went to Bristol, Tennessee, to make some regional recordings of what was then called "hillbilly music." He sent out word that he would pay \$50 for every song he recorded, and came away with the first recorded country music.

Peer recorded two memorable acts. The first was the Carter Family (A. P., Sara, and Maybelle Carter), whose songs included both the anthems of optimism ("Keep on the Sunny Side") and the ballads of sex and death ("Bury Me beneath the Willow"). In those recordings, still in print and still considered classics of American

music, the Carter Family created an archetype of country music. From their harmonies to their guitar styles to their plain-spoken emotional directness, they created a template for the music that followed them.

Second, and even more important, was Jimmie Rodgers, a one-time railroad man (on his records he was known as "the Singing Brakeman") who had taken to playing music after ill health had forced him off the railroad. When Rodgers showed up for his first session with Peer, he sang popular songs of the day, which earned him no more than a rebuke. Peer was interested in recording folk singers, singing their indigenous music, and he told Rodgers to come back with some traditional folk songs. Rodgers did not know any traditional music, but he needed the few dollars that Peer was offering for the session. With the help of his sister, Elsie McWilliams, Rogers wrote his own "traditional" tunes, hoping that Peer wouldn't notice the difference. The songs they created made music history.

Rodgers' songs struck a chord with rural America. He glorified and romanticized the day-to-day issues of small-town working people—family, sweetheart, the struggles of the hoboes and the working class—and he placed these issues forever in the lexicon of country music. More importantly, Rodgers introduced the blues to country music. His first big hit, "T For Texas (The Blue Yodel)," created the Jimmie Rodgers sound—a traditional twelve bar blues, ending in a yodel. Rodgers was so steeped in the blues that Louis Armstrong played on one of his blue yodels, and his blues-based style was one of the first important melds of black and white styles in American popular music.

The blues had taken the country by storm in the 1920s, first in the urban, jazz-inflected recordings of artists like Bessie Smith, and then in the rural, country blues recordings of Charley Patton, Blind Lemon Jefferson, and others. The surprise commercial success of phonograph records aimed at a rural black audience encouraged companies like Victor to make a similar pitch to rural whites. The same success

followed. Jimmie Rodgers sold between 6 and 20 million records (by various estimates) before his death in 1933. The blues were hit hard as a commercial medium by the depression, but country music did well in the 1930s. Radio, a more viable medium for white music, kept country music in the public ear with various local “barn dance” programs, including the phenomenally successful *Grand Ole Opry*, which started in 1925.

One singer who emerged from regional radio in the 1930s to reshape country music was Gene Autry. Autry, who had scored a hit record in 1931 with “That Silver-Haired Daddy of Mine,” a sentimental song in the Jimmie Rodgers mode, was summoned to Hollywood in 1934, as the answer to a Republic Studios mogul’s brainstorm: The hottest new trend in movies was the musical talkie, like *The Jazz Singer*, and perennial cinema moneymaker was the Western. With Autry’s enormous success as a singing cowboy in films, “country” became “country and western.” Gene Autry became the first country star to gain an audience beyond the rural South and West, even drawing a million fans at a 1939 performance in Dublin, Ireland. Rather than authentic western songs, Autry sang music composed by Hollywood songwriters, calculated to appeal to audiences that listened to Cole Porter and Irving Berlin as well as Jimmie Rodgers and the Carter Family. The new songs succeeded so well that Berlin would ultimately write his own cowboy song, “Don’t Fence Me In.”

This was country’s first flirtation with the mainstream of American music. Roy Rogers followed Autry’s path to success, and soon they were imitated by a multitude of lesser singing cowboys. There was no country music industry as such in the 1930s, but this outsider/mainstream dichotomy would remain an issue throughout country’s history. The other significant innovation in the country music of the 1930s also came from the West, and was another unlikely fusion. In Texas, Bob Wills and his Texas Playboys blended jazz and country to create a new and infectious dance music.

In the 1940s, country music had its own hit parade, as *Billboard* magazine created its first country chart in 1944. First called the “folk music” chart, it became the “country and western” chart in 1949, and its first number one hit was Al Dexter’s “Pistol Packin’ Mama.” “Folk music” being loosely defined, the early charts included artists like Louis Jordan, Nat “King” Cole, and Bing Crosby. But country was starting to amass its first generation of major stars—singers like Ernest Tubbs, Hank Snow, Red Foley—and the new sound of bluegrass music, which had been popularized by Bill Monroe in the 1930s, but gained its full maturity when Lester Flatt and Earl Scruggs joined Monroe’s Bluegrass Boys in the mid-1940s.

In an important sense, country’s key figure in the 1940s was Roy Acuff. Acuff joined the *Grand Ole Opry* in 1938, and not long after became the *Opry*’s host, presiding over its period of greatest popularity. In 1942, Acuff and songwriter Fred Rose started a music publishing company, Acuff-Rose, which signed country songwriters, and created a new standard of professionalism in the field. The *Opry* and Acuff-Rose were, together, the most significant factors in solidifying the place of Nashville as the country music capital of America. World War II brought a lot of young GIs from the north down to army bases in the South, where they heard Acuff’s music and broadened country’s listening base even further.

In 1946, Acuff-Rose signed Hank Williams to a writing contract, and in 1947 Williams had his first chart hit, “Move It on Over.” He joined the *Louisiana Hayride*, the second most influential of the country radio shows (Elvis Presley also began his career on the *Hayride*), in 1948, and came to the *Opry* in 1949. With Hank Williams, country had a star who outshone all who came before, and

who set the standard for all who came after. His songs (like Rodgers’ were deeply blues-influenced) were as simple as conversation, but unforgettable. “Your Cheatin’ Heart,” “Hey, Good Lookin’,” “Cold, Cold Heart,” and “I Can’t Help It if I’m Still in Love with You” are just a few Williams’ tunes that are still classics. Williams, like his contemporaries, jazzman Charlie Parker and poet Dylan Thomas, lived out the myth of the self-destructive, tormented artist and died too young in the back seat of his limousine on the way to a concert on New Year’s Day in 1953; he was 29 years old.

As the 1950s began, mainstream American popular music was becoming moribund. The creative energy of the “Tin Pan Alley” songwriters, the New York-centered, Broadway-oriented popular song crafters, seemed to be flagging. Singers like Tony Martin, Perry Como, Teresa Brewer, and the Ames brothers were only marginally connected to the pulse of the new generation. Country music and rhythm and blues both began to make inroads into that mainstream, but at first it was only the songs, not the singers, that gained popularity. Red Foley had a number one pop hit with “Chattanooga Shoe Shine Boy” in 1950, but for the most part it was pop singers like Tony Bennett and Jo Stafford, the McGuire Sisters and Pat Boone who took their versions of country and R&B songs up the pop charts.

At the same time, country and R&B music were making an alliance of their own. Nashville was now entrenched as the capital of the country music establishment, but the new music came from Sun Records in Memphis, where Sam Phillips recorded Elvis Presley, Carl Perkins, Jerry Lee Lewis, and Johnny Cash. It was called rock ’n’ roll, and the country music establishment did not like it. Elvis began his career as “The Hillbilly Cat,” and was featured on *Louisiana Hayride*, but he never sang on the *Opry*, and rock ’n’ roll, denounced by Roy Acuff, never made an impact there. Racism certainly played a part in the country establishment’s rejection of rock ’n’ roll. The new music was widely denounced throughout the South by organizations like the White Citizen’s Council. At the same time, however, country music was beginning to outgrow its raffish, working-class roots. Eddie Arnold, the biggest star of the late 1940s and early 1950s, called himself “The Tennessee Plowboy,” a nickname he had acquired early in his career, but he was no plowboy. He wore a tuxedo on stage, and had only the barest trace of hillbilly nasality in his voice.

Perhaps the city of Nashville exerted an influence, too. Although Acuff-Rose and other music companies had made Music Row the symbol of Nashville everywhere else in the country, it was an embarrassment to Nashville society. When a Tennessee governor in the mid-1940s was quoted as saying, “hillbilly music is disgraceful,” Roy Acuff responded by announcing his candidacy for governor (he never followed through), but there was a growing feeling that country’s image should not be too raw or “low-class.” So while rhythm and blues performers responded to rock ’n’ roll by joining it, the country establishment rejected it. This was the first of a series of decisions that had the effect of marginalizing what might have become America’s dominant musical style. The country establishment has always sought status and recognition, but until the 1990s, it consistently made the wrong choices in following that ambition. As rock ’n’ roll’s hard edge took over not only the United States but the world, country music became softer and smoother. Brilliant musicians and producers, such as guitar virtuoso Chet Atkins, pooled their considerable talents and came up with The Nashville Sound, a string-sweetened Muzak that was suited to the stylings of Arnold, Jim Reeves, and Patsy Cline, but not to the grittiness of Presley, Perkins, Lewis, and Cash.

Contrary to the popular stereotype, country music has not always been associated with political conservatism. One of the *Opry's* first stars, Uncle Dave Macon, was a fiery radical leftist. Even Gene Autry, early in his career, recorded "The Death of Mother Jones," a tribute to the legendary left-wing labor organizer. But New Deal populism was replaced, over the years, by entrenched racism, Cold War patriotism, and the growing generation gap. By the 1960s, youth, rebellion, and rock 'n' roll were on one side of a great divide, and country music was on the other.

The anthems of 1960s country conservatism were Merle Haggard's anti-hippie "Okie From Muskogee" and chip-on-the-shoulder patriotic "Fightin' Side of Me." But Haggard, an ex-convict who had been in the audience when Johnny Cash recorded his historic live album at Folsom Prison, represented his own kind of rebellion. Along with Buck Owens, Haggard had turned his back on not only the Nashville Sound but Nashville itself, setting up their own production center in the dusty working-class town of Bakersfield, California, and making music that recaptured the grittier sound of an earlier era. Haggard and Owens, for all their right-wing posturing, were adopted by the rockers. The Grateful Dead recorded Haggard's "Mama Tried," and Creedence Clearwater Revival sang about "listenin' to Buck Owens."

The conservative cause stood in staunch opposition to the women's movement, but in the 1960s women gained their first major foothold in country music. There had been girl singers before, even great ones like Patsy Cline, but now Loretta Lynn, Tammy Wynette, and especially Dolly Parton established themselves as important figures. Lynn and Parton wrote their own songs, often with incisive lyrics about the female experience, and Parton handled much of her own production. Country music has been described as "the voice of the inarticulate," and these singers gave a powerful voice to a segment of the population that had never had their dreams and struggles articulated in this way.

The Nashville establishment was still hitching its wagon to a star that shone most brightly over Las Vegas. Still distrustful of rebellion and rough edges, they looked to Vegas pop stars for their salvation. In 1974 and 1975, John Denver and Olivia Newton-John swept the Country Music Association Awards (Denver was Entertainer of the Year in 1975). Country's creative edge moved away from Nashville to Bakersfield and elsewhere. Singer-songwriters Willie Nelson and Waylon Jennings grew their hair long and hung out with hippies and rockers at the Armadillo World Headquarters in Austin, Texas. They made the country establishment nervous, but it did eventually accept the so-called Outlaw Movement, and by 1979, Nelson was Entertainer of the Year. The real working-class music of the new generation of Southern whites never got that acceptance. Although the 1950s rockabilly rebels like Cash, Lewis, and the Everly Brothers now played country venues, the young rockers still scared Nashville. There was too much Jimi Hendrix in their music, too much hippie attitude in their clothes and their hair. The Allman Brothers, Lynyrd Skynyrd, and others played something called Southern Rock that could have been called country, but wasn't. Nevertheless, the kid at the gas station in North Carolina was listening to them, not to John Denver or Barbara Mandrell. By cutting them out (along with white Midwestern working-class rockers like Bob Seger), country music lost a large portion of its new generation of potential listeners.

The country establishment still sought the Vegas crossover secret, and they seemed to find it in 1980, when the movie *Urban Cowboy* created a craze for yoked shirts and fringed cowboy boots. Records by artists like Mickey Gilley, Johnny Lee, and Alabama shot

up the pop charts for a short time, but the "urban cowboy" sound was passing fad, and country music seemed to disintegrate with it. In 1985, *The New York Times* solemnly declared that country music was finished as a genre, and would never be revived.

However, it was already being revived, by going back to its roots. Inspired by the example of George Jones, a country legend since the late 1950s, who is widely considered to possess the greatest voice in the history of country music, country's new generation came to be known as the New Traditionalists. Some of its most important figures were Ricky Skaggs, a brilliant instrumentalist who brought the bluegrass tradition back into the mainstream, Randy Travis, a balladeer in the style of Jones, the Judds, who revived country harmony and the family group, and Reba McEntire, who modernized the tradition of Parton, Wynette, and Lynn, while keeping a pure country sound. The late 1980s brought a new generation of outlaws, too, singer-songwriters who respected tradition, but had a younger, quirkier approach. They included Lyle Lovett, Nanci Griffith, and Steve Earle. These musicians gained a following (Earle, who self-destructed on drugs, but gradually rebuilt a career in the 1990s, remains the most influential songwriter of the era). However, country radio, the center of the country establishment, gave them little air time, and they moved on to careers in other genres.

There had always been country performers on television, Tennessee Ernie Ford in the 1950s, Glen Campbell and Johnny Cash in the 1960s, and Barbara Mandrell in the "urban cowboy" days of the early 1980s. The 1980s also brought cable television, and in 1983, The Nashville Network went on the air with an all-country format of videos, live music, and interview shows. In 1985, TNN broadcast country music's Woodstock—Farm Aid, a massive benefit organized by Willie Nelson for America's farm families. TNN broadcast the entire 12 hours of Farm Aid live, and audiences who tuned in to see the rock stars like Neil Young and John Mellencamp who headlined the bill, also saw new country stars like Dwight Yoakam.

The creative energy that drove country music in the 1980s, had settled into a formula by the 1990s, and it was the most successful formula the genre had ever seen. In 1989, Clint Black, became the first performer to combine the traditionalism of Travis and George Strait, the innovation of Lovett and Earle, and MTV/TNN-era good looks and video presence. Close behind Black came Garth Brooks. With Brooks, the resistance to rock which had limited country's potential for growth for four decades finally crumbled completely.

Brooks modeled himself after 1970s arena rockers like Journey and Kiss, and after his idol, Billy Joel. Rock itself was floundering in divisiveness, and audiences were excited by the new face of country. In a 1991 interview, Rodney Crowell said, "I play country music because I love rock 'n' roll, and country is the only genre where you can still play it." Brooks' second album, *Ropin' The Wind*, debuted at number one on the pop charts, swamping a heavily hyped album by Guns 'n Roses, rock's biggest name at that time. Pop music observers compared the new country popularity to the "urban cowboy" craze, and many predicted it would fizzle again. However, with country finally catching up to rock 'n' roll, 40 years late. Country music had taken on a lot of the trappings that had been associated with rock—sexy young singing idols, arena tours, and major promotions. Country music's audience had also broadened; the kid at the gas station joined the country traditionalists and country's new suburban audience. Country music has as many faces as American society itself, and no doubt will keep re-inventing itself with each generation.

Cousteau, Jacques (1910-1997)

Jacques Cousteau is the world's most acclaimed producer of underwater film documentaries. His adventurous spirit and undersea explorations, documented in over forty books, four feature films, and more than one hundred television programs, popularized the study of marine environments, and made him a household name in many parts of the world. As principal developer of the world's first aqualung diving apparatus and underwater film cameras, he opened up the world's waters to millions of scuba divers, film makers, and television viewers. A pioneering environmentalist, Cousteau brought home to the public mind the importance of the world's oceans and inspired generations of young scientists to become ecologists and oceanographers.

Jacques-Yves Cousteau was born on June 11, 1910, in the market town of St.-Andre-de-Cubzac, France. Following service in the French Navy, he became commander of the research vessel *Calypso* in 1950. The *Calypso*, where most of his subsequent films were produced, served as his base of operations. His first book, *The Silent World*, sold more than five million copies in 22 languages. A film of the same name won both the Palme d'Or at the 1956 Cannes International Film Festival and an Academy Award for best documentary in 1957. Television programs bearing the Cousteau name earned 10 Emmys and numerous other awards. In the 1950s and 1960s, Cousteau established a series of corporations and nonprofit organizations through which he financed his explorations, promoted his environmental opinions, and championed his reputation as the world's foremost underwater researcher and adventurer. He died in Paris on June 25, 1997.

Covey, Stephen (1932—)

Stephen Covey, one of America's most prominent self-help gurus, owes much to Dale Carnegie, whose best-selling book, *How To Win Friends and Influence People*, and its corresponding public speaking course are models upon which Covey built his success. The first of numerous books written by Covey, *The 7 Habits of Highly Effective People*, was published in 1989 and helped his rise to the position of unofficial consultant to the leaders of corporate America, and guru to those in the lower levels of corporate management. His company, the Covey Leadership Center, founded in 1983, subsequently capitalized on the success of *7 Habits*, which became a catch phrase for any number of simplistic and appealing ideas dealing with personal happiness and efficiency in the workplace.

Covey was born into a Mormon family in Provo, Utah. During the 1950s he completed a bachelor's degree in business administration at the University of Utah and an M.B.A. at Cambridge. In between his academic studies, he served as a missionary in Nottingham, England, training the leaders of recently formed Mormon congregations, and thus became aware of what it meant to train and motivate leaders. As a result of the particular nature of his training experience, a combination of religious and family values formed the core of his programs and writings. Covey taught at Brigham Young University where, in 1976, he earned a Ph.D. in business and education, but left that institution in 1983 to start the Covey Leadership Center.

The Center had an immediate, and almost exclusive appeal to the corporate culture, partly due to its marketing strategies, but also because of the timbre of the times. Corporate America was in a state of unease and flux, and workers and managers were ripe for guidance in their search for a sense of stability in their jobs and careers. The Covey Leadership Center promised solutions to their problems, and both managers and employees were as eager to attend Covey's programs as the corporate leaders—hoping for improved efficiency and morale of their personnel—were to send them. When *The 7 Habits of Highly Effective People* was published, six years after the inception of the Center, it became hugely popular, appearing on the *New York Times* bestseller list for well over five years. The book stood out from the vast quantity of positive-thinking books available in the late 1980s, partially because of Covey's already established credibility, and partly because, as with the courses and programs, there was a real need for his particular take on self-help literature. The sales of the book increased the already sizable interest and enrollment in his leadership programs. Throughout the 1990s, according to *Current Biography*, "hundreds of corporations, government agencies, and universities invited Covey to conduct seminars with, or present talks to, their employees."

While many people attended these seminars and workshops, it is the *7 Habits* book that defines Stephen Covey's identity as a self-help guru. Initially an integral part of corporate management literature, the appeal of Covey's message, as transmitted in his book, spread to people in all walks of life. Its popularity was such that magazine and newspaper editors, in their bids to increase circulation, would play on the "Seven Habits" theme in headlines and articles in much the same way that the title of Robert Pirsig's novel *Zen and the Art of Motorcycle Maintenance* spawned countless sophomoric imitations in the print media.

Stephen Covey was the first to admit that there is nothing new in his writing; indeed the very simplicity of his philosophy has accounted both for its popular acclaim, and for the not insubstantial negative

criticism it has attracted in certain quarters. Each “habit” presented in the book (“Be proactive,” “Begin with the end in mind,” “Put first things first”) draws on time-tested truisms and age-old common-sense principles. Covey’s fans applauded him for putting these adages into print, in a useful modern context; detractors blasted him for repackaging well-worn and well-known information. Covey himself claimed that his book is based on common sense ideas, but that they needed to be restated, because, as he said in an interview in the *Orange County Register*, “. . . [W]hat is common sense isn’t common practice.” Another criticism frequently leveled at Covey is that, in his effort to show that each person is responsible for his or her own success, he trivializes the effects that flaws in the larger corporate system may have on performance. Thus, any failure is blamed only on the individual.

The 7 Habits of Highly Effective People has transcended the corporate world and entered into the American collective psyche. The Covey Leadership Center, which merged with the Franklin Quest Company in 1997 to form the Franklin Covey Co., has turned itself into a cottage industry, supplying customers with all manner of related merchandise: magazines, audiotapes, videos, and, perhaps most pervasively, “day-planners”. Once the chief product of the Franklin Quest company, these trendy signs-of-the-times began, after the merger, to include quotes from Covey’s books. In addition to the *7 Habits* book, Covey wrote a number of other books on related topics, including *First Things First*, and *Principle-Centered Leadership*. In 1997, he published a “follow-up” to his popular book, entitled *The 7 Habits of Highly Effective Families*, which promptly landed on the *New York Times* best-seller list. Redirecting the thrust of his wisdom towards problems between family members, Covey seemed to anticipate the changing mood and tone of America, which, in the wake of contradictory political messages, had become, by the late 1990s, more concerned with “family values.”

Stephen Covey is, perhaps, not quite a household name, but the “7 Habits” phrase, and the concept and book from which it originates, has become an emblem of the American people’s desire for stability and self-improvement, in their careers and in their personal lives. It represents the people’s search for an antidote to the confusing, contradictory and often disturbing events in the corporate and political worlds during the 1990s. The extent to which “7 Habits” has permeated the culture shows a desire, in the face of growing and changing technology, for simple truths, and for courses of action that can be easily understood and executed.

The Cowboy Look

The cowboy look is a fanciful construction of an ideal cowboy image. Originally, cowboy clothing provided primarily function over fashion, but through America’s century-long fascination with this romantic Great Plains laborer, image has surpassed reality in what a cowboy ought to look like. With the supposed closing of the frontier at the end of the nineteenth century, the ascendancy of the Cowboy President, Theodore Roosevelt, and the growing popularity of artists such as Frederick Remington and Charley Russell, who reveled in a nostalgia for cowboy life, wearing cowboy clothes became akin to a “wearing of history” as twentieth-century Americans tried to hold onto ideals of individualism, opportunity, and adventure supposedly tied to the clothes’ frontier heritage.

Of primary importance in the construction of cowboy fashion are the highly stylized cowboy boots. A mass-produced and mail-order footwear near the turn of the century, these boots protected against rough vegetation with their durable cowhide uppers and provided ease of movement in and out of stirrups with their flat soles and high wooden heels. As cowboys became heroes through the massive popularity of Buffalo Bill’s Wild West Show during the late nineteenth and early twentieth century and later through Hollywood films, cowboy clothing came into vogue in popular culture. Boots in particular started to assume a sense of personalized fashion as specialized bootmakers cropped up in the West, especially in Texas. These bootmakers produced boots from hides as far-ranging as ostrich, elephant, eel, or stingray. The fancy stitching, colored leather, and occasional inlaid precious stone lent these custom boots an air of fashionable individuality. Custom cowboy boots, among those wealthy enough to afford them, became a distinctive mark of an individual’s flair combined with a sense of Western spirit.

But cowboy boots were only a single part of Western fashion popular throughout most of the twentieth century. Necessary fashion accouterments included denim jeans, a Western shirt (usually with designs on the shoulders), large belt buckles, and a broad-brimmed cowboy hat. This fashion remained essentially the same, barring various preferences for shirt designs and boot styles, throughout the twentieth century. Early Western film stars like William S. Hart and Tom Mix popularized the cowboy look, perpetuating the myth of the cowboy hero (always clad in a white hat) over the image of the ranch hand laborer. From the 1930s to the mid-1950s, the cowboy look found immense popularity among children. This trend coincided with the popularity of cowboy movie stars and singers Gene Autry and Roy Rogers who, according to Lonn Taylor and Ingrid Maar in *The American Cowboy*, acted as surrogate fathers for children whose fathers were away fighting in World War II. As television Westerns became more popular in America in the 1950s, the image of a noble and righteous cowboy fighting for justice and ideological harmony on the American frontier found a resurgence once again as America turned its attention to the Cold War.

Along with the popularity of the cowboy look from 1950s television, country music’s presence in popular culture became notable; though most country music from this era sprang from the South, the fashion of the time was essentially Western and demanded cowboy boots and hats. But with the popularity of rock ’n’ roll during the late 1950s and 1960s, cowboy fashion faded from the mainstream of popular culture. By the early 1970s, however, the boots, hats, tight jeans, and plaid work shirts of cowboy fashion started to appear in more urban settings. Growing from the seemingly timeless myth of

John Travolta and Madolyn Smith in a scene from the film *Urban Cowboy* that illustrates the cowboy look.

the cowboy loner—epitomized in 1902 by Owen Wister’s *The Virginian*—, the cowboy look now hit city streets less as a costume and more as a fashion statement. This look culminated with the 1980 release of *Urban Cowboy*, starring John Travolta as an unlikely cowboy figure who finds romance and country dancing in late 1970s Texas honky tonks.

The cowboy look also benefitted from the resurgence in the popularity of country music between the mid-1980s and the mid-1990s. Without any major changes in the foundations, the cowboy look became the Western look, incorporating into the basic clothes some Hollywood glitz and rhinestones, Southwestern Hispanic and Native American styles such as silver and turquoise, and a new kind of homegrown, rural sensibility. The jeans became tighter, the shirts louder, and hats took on the personalized importance of boots. As country music became more popular, huge Western clothing super-stores opened throughout America dedicated solely to supplying the fashion needs of country music’s (and country dancing’s) new devotees.

The icon of Western fashion could no longer be found in movies. Instead, country music stars such as George Strait or Reba McEntire presented the measure for the new cowboy look. The new cowboy look did not focus on the Western hero, the knight in the white hat so popular in the early part of the century, but rather was aimed at the

American worker who gets duded-up to play on the weekend. This new cowboy look was used to sell fishing equipment and especially pick-up trucks to people aspiring toward country or Western lifestyles. Though this country look still appeared as a “wearing of history,” its devotees found in this new fashion a distillation of the American work ethic (that allowed for outlets on Friday and Saturday nights) that had supposedly grown from a country ranching and farming lifestyle. The cowboy look no longer represented the hero, but the American rural laborer, albeit in an overly sanitized fashion. Like the popular country music that spurred this fashion trend, the cowboy look now affected rural authenticity over urban pretensions, valued family and the honor of wage labor, and, like its earlier permutations, elevated American history and culture over any other traditions.

Cox, Ida (1896-1967)

Billed as the “Uncrowned Queen of the Blues,” Ida Cox (born Ida Prather) never achieved the fame of her contemporaries Bessie Smith and Gertrude “Ma” Rainey. Though she spent most of the 1920s and 1930s touring the United States with various minstrel troupes, including her own “Raisin’ Cain Revue,” she also found time to record seventy-eight sides for Paramount Records between 1923 and 1929. Among these was her best known song, “Wild Women Don’t Have the Blues,” which was identified by Angela Y. Davis as “the most famous portrait of the nonconforming, independent woman.”

Noted record producer John Hammond revitalized Cox’s career by highlighting her in the legendary “Spirituals to Swing” concert at Carnegie Hall in 1939. Cox continued her recording career until she suffered a stroke in 1944. Six years after a 1961 comeback attempt that produced the album *Blues for Rampart Street*, Ida Cox died of cancer.

See Shadow, The

Crawford, Cindy (1966—)

Beginning in the 1980s and continuing through the 1990s, Cindy Crawford was America’s most celebrated fashion model and one of the most famous in the world, embodying the rise of the “super model” as a late twentieth century cultural phenomenon. Although there had been star models in previous decades—Twiggy in the 1960s, for example, or Lauren Hutton and Cheryl Tiegs in the 1970s—they did not sustain prolonged mainstream recognition. Cindy Crawford and her contemporaries (Kate Moss and Naomi Campbell among them) no longer merely posed as nameless faces on magazine covers, calendars, and fashion runways but, rather, became celebrities whose fame rivaled that of movie stars and rock musicians. Cindy Crawford stood at the forefront of this insurgence.

Although she found fame through her physical appearance, the brown-haired, brown-eyed Crawford first distinguished herself through her intellectual attributes. A native of DeKalb, Illinois, who was born Cynthia Ann Crawford on February 20, 1966, she was a fine student and class valedictorian at her high school graduation. She enrolled in Chicago’s Northwestern University to take a degree in chemical engineering, but her academic career proved short-lived when, during her freshman year, she left college to pursue a modeling career. Her entrance into the tough, competitive world of high fashion was eased by her winning the “Look of the Year” contest held by the Elite

Cindy Crawford

Modeling Agency in 1982. Within months the statuesque (five-foot-nine-and-a-half inches), 130-lb model was featured on the cover of *Vogue*.

The widespread appeal of Cindy Crawford lay in looks that appealed to both men and women. Her superb body, with its classic 34B-24-35 measurements, attracted men, while her all-American looks and trademark facial mole stopped her short of seeming an unattainable ideal of perfect beauty, and thus she was not threatening to women. Furthermore, her athletic physique was in distinct contrast to many of the overly thin and waif-like models, such as Kate Moss, who were prevalent during the 1990s.

Cindy Crawford stepped off the remote pedestal of a celebrity mannequin or a glamorous cover girl when she began to assert her personality before the public. She gave interviews in which she discussed her middle-class childhood, her parents’ divorce, and the trauma of her brother’s death from leukemia. These confessions humanized her image and made her approachable, and she went on to host MTV’s *House of Style*, a talk show that stressed fashion and allowed her to conduct interviews that connected with a younger market. The Cindy Crawford phenomenon continued with her involvement in fitness videos, TV specials, commercial endorsements, and film (*Fair Game*, 1995, was dismissed both by audiences and critics, but did little to diminish her popularity.) Meanwhile, her already high profile increased with her brief 1991 marriage to actor Richard Gere. The couple was hounded by rumors of homosexuality, fuelled after Crawford appeared on a controversial *Vanity Fair* cover with the openly lesbian singer k.d. lang. She later wed entrepreneur Rande Gerber.

After the arrival of Cindy Crawford, it was not uncommon to see models promoting a vast array of products beyond fashion and cosmetics. Crawford herself signed a multi-million dollar deal to promote Pepsi, as well as her more conventional role with Revlon. Her status was so high that ABC invited her to host a special on teen sex issues with the provocative title of *Sex with Cindy Crawford*. The opening of the Fashion Café theme restaurant in the mid-1990s marked the height of the super model sensation sparked by Crawford. The café's association with Crawford and other high profile models revealed the extent to which the "super model" had become a major figure in American culture. By the end of the twentieth century, Cindy Crawford was still the best known of these celebrities due to the combination of her wholesomely erotic image and her professional diversification through the many available media outlets.

Crawford, Joan (1904?-1977)

From her 1930s heyday as a leading MGM box-office draw, to her 1962 performance in the horror classic and cult favorite *Whatever Happened to Baby Jane?*, Joan Crawford incarnated, in the words of Henry Fonda, "a star in every sense of the word." The MGM style of star packaging emphasized glamour, and Crawford achieved her luminous appearance through an extensive wardrobe and fastidious presentations of her gleaming, trademark lips, arched eyebrows, sculpted cheek and jaw bones, and perfectly coiffured hair. Crawford herself famously said, "I never go out unless I look like Joan Crawford the movie star. If you want to see the girl next door, go next door."

Born Lucille LeSueur in San Antonio, Texas, on March 23, 1904, Crawford embarked on a dancing career when only a teenager. She worked cabarets and travelling musical shows until her discovery in the Broadway revue *The Passing Show of 1924*. It would not be long before an MGM executive noted her exuberant energy and athletic skill. Exported to Hollywood on a \$75.00/week contract, Lucille changed her name as part of a movie magazine promotion that urged fans to "Name Her and Win \$1,000." This early link between her professional life and fan magazines presaged a union that would repeatedly shape her long movie star tenure. Throughout five decades, she appeared in magazine advertisements endorsing cosmetics, food products, and cigarettes. She dutifully answered fan letters and once fired a publicity manager who turned away admirers at her dressing room door. Her first marriage to Douglas Fairbanks, Jr., turned into a publicity spectacle. It was a reported feud between Crawford and co-star Bette Davis that was used to generate interest in *Whatever Happened to Baby Jane?* A conflation of Crawford's roles and fan magazine publicity with her personal life formed both the public view of her and her own sense of identity.

Joan Crawford

Crawford garnered her first film role in 1925 and made over 20 silent pictures before 1929, the year of her first hit *Untamed*. Her early career coincided with Hollywood's investment in the production and cultivation of stars as bankable assets. One of the industry's earliest successes, Crawford mutated her star persona over the decades to retain currency. Her first image was as a "flapper," a 1920s free-spirited woman who danced all night in speakeasies and jazz clubs. In the 1928 movie *Our Dancing Daughters*, Crawford's quintessential flapper whips off her party dress and dances the Charleston in her slip. Her date asks, "You want to take all of life, don't you?" Crawford's character replies, "Yes—all! I want to hold out my hands and catch at it." Crawford's own dance-till-dawn escapades frequently provided fodder for the gossip columns.

In the wake of the Depression Crawford transformed into a 1930s "shopgirl"—a willful, hard-working woman determined to overcome adversity, usually on the arm of a wealthy, handsome man played by the likes of Clark Gable or second husband, Franchot Tone. With this new character type, song-and-dance movies gave way to melodramatic fare, in which she uttered lines like this one from the 1930s movie *Paid*: "You're going to pay for everything I'm losing in life." To encourage fan identification with Crawford's "shopgirl" image, MGM promoted Crawford's own hard-luck background, highlighting her travails as a clerk at a department store in Kansas City, Missouri. In 1930, she was voted most popular at the box office. Inherent to this genre was a literal rags-to-riches metamorphosis. *Possessed*, produced in 1931, begins with Crawford working a factory floor in worn clothing and charts her rise in status through increasingly extravagant costume changes. This particular formula

teamed her with *haute couture* designer Adrian, and together they sparked fashion trends. In *Paid*, Crawford dons a huge, black fur-collared coat that, by virtue of her appearance in it, turned into a best-selling item in clothing stores along fifth Avenue in New York. The most famous instance occurred in 1932 with the Letty Lynton dress, reportedly the most frequently copied film-gown in American movies. Featuring enormous, ruffled sleeves and layers of white organdy, the Letty Lynton dress-craze confirmed Hollywood's place as show-case for fashion. The Letty Lynton phenomenon also marked the debut of Crawford's clothes-horse image. The importance of how Crawford looked in a movie soon eclipsed the significance of how she acted.

Crawford's popularity diminished in the 1940s as younger actresses claimed the best MGM parts. She responded by retooling herself into a matriarchal, self-sacrificing businesswoman, her strength symbolized by shoulder pads and dramatically tailored suits. To brook this transition, Crawford departed glamour-factory MGM in 1943 and signed with the crime picture studio, Warner Brothers. The role of the driven self-made restaurateur in the 1945 film noir, *Mildred Pierce*, earned her an Academy Award for Best Actress. At the end of this period, she began portraying desperate, emotionally disturbed women like the lover-turned-stalker *Possessed* (1947), and the neat-freak homemaker whose obsession turns to madness in the title role of *Harriet Craig* (1950). Movie culture in the 1950s expressed anxiety over dominant, self-sufficient female roles, popular in World War II and immediate post-War America, by straight-jacketing Crawford—literally—in *Straight Jacket*, produced by “B” horror film king William Castle in 1964. The 1960s limited her to cheap horror films—*I Saw What You Did*, *Beserk*, *Trog*—and traded on her now severe, lined face and its striking contrast with her trim, dancer's figure. Crawford's late career also ushered in the Hollywood use of product placement. As an official representative of Pepsi-Cola—her fourth and last husband, Howard Steele, was a Pepsi executive—Crawford featured displays of Pepsi-Cola signs and merchandise in several of her last films. For example, while probing a series of ghoulish murders at a circus owned by Crawford in a scene from *Beserk* (1968), investigators pause under a “Come Alive! With Pepsi” banner.

In *Mommie Dearest*, a movie based on an expose written by Crawford's adopted daughter and featuring Faye Dunaway, Crawford is depicted as a bizarrely cruel disciplinarian. The movie not only made a horrific joke of Crawford, but it also maligned Dunaway's acting ability. Portions of the movie became staple skits on late-night television shows like the satiric *Saturday Night Live*. The 1980s and 1990s, however, turned her into a favorite icon of gays and lesbians with Internet websites celebrating her masculine performances in, for example, *Johnny Guitar* (1954). In this movie she plays a gun-belted, top-booted saloon keep whose show-down is against another manish-looking woman.

Cray, Robert (1953—)

Robert Cray's fusion of blues, R & B, jazz, pop, and soul music earned him critical acclaim and widespread recognition as a critical figure in the “blues boom” of the 1980s and 1990s. Indeed, his original approach to the genre brought an entirely new audience to what had been considered a dying art form. Though blues purists dismissed him as a “tin-eared yuppie blues wannabe,” Cray nonetheless enjoyed success unmatched by any other blues artist.

Born into an army family in 1953, Cray had the opportunity to live in many different regions of the United States before his family settled in Tacoma, Washington, when Cray was fifteen years old. Already a devotee of soul and rock music, Cray became interested in blues after legendary Texas guitarist Albert Collins played at his high school graduation dance. Cray formed his first band in 1974, and this group eventually became Collins's backing band, touring the country with him before striking out on its own.

After a series of moves—to Portland, Seattle, and finally to San Francisco—the Robert Cray Band signed a record deal with Tomato Records and released its first album, *Who's Been Talking?* (later re-released as *Too Many Cooks*), in 1980. Though the album featured convincing performances of classic blues songs, it generated little excitement. Cray and his band subsequently toured with Chicago

Robert Cray

legend Muddy Waters and were featured on the Kings of the Boogie world tour with John Lee Hooker and Willie Dixon.

In 1983, Cray tried a different approach with the funky, original *Bad Influence*, released on the HighTone label. His follow-up effort, *False Accusations*, proved to be the breakthrough. The album made *Newsweek's* list of top ten LPs and shot up to number one on the Billboard pop music charts. That same year, Alligator Records released the Grammy Award-winning *Showdown!*, which featured Cray collaborating with now-deceased blues guitarists Collins and Johnny Copeland.

Success earned Cray the support of a major label, Mercury, and his debut effort for the company is widely believed to be the best work of his career. Released in 1986, *Strong Persuader* was certified platinum (sales of more than one million copies) and put Cray's picture on the cover of *Rolling Stone*. The success of the album also ensured more high-profile collaborations, such as an appearance in the concert and film tribute to Chuck Berry, "Hail! Hail! Rock 'n' Roll!" produced by Keith Richards. After covering Cray's "Bad Influence" on his *August* album, Eric Clapton invited Cray to appear on his *Journeyman* and *24 Nights* albums. Cray also appeared in the Tina Turner video "Break Every Rule," becoming a familiar face on the MTV network.

Cray continued to experiment with soul music on 1990's *Midnight Stroll*, which featured the legendary Memphis Horns, and showed a jazzier side on *I Was Warned*, released two years later. Albert Collins joined Cray and his band on the 1993 album *Shame + a Sin*, the most traditional of Cray's later works. Cray continued to be in demand as a guest performer, appearing on three John Lee Hooker albums including the Grammy-winning *The Healer*, as well as B. B. King's *Blues Summit*. Cray's 1997 release *Sweet Potato Pie* featured a return to the Memphis soul that had characterized his sound from the early 1980s. Despite being panned by the "bluenatics," as Cray labelled the blues purists, the album achieved significant sales, confirming Cray's continuing commercial viability.

Creationism

Creationism is a Christian doctrine holding that the world and the living things in it—human beings in particular—were created by God. There have been a variety of creationist viewpoints, and some of these viewpoints are in conflict with mainstream scientific theories, especially the theory of evolution.

After Charles Darwin published his *Origin of Species* (1859), which not only defended the pre-existing theory of evolution but also maintained that evolution took place through natural selection, many fundamentalist Christians reacted with horror. Then as now, anti-evolutionists maintained that evolution was contrary to the Bible, that it was atheistic pseudo-science, and that, by proposing that man descended from lower animals, it denied man's spiritual nature. Evolutionists denounced creationists for allegedly misinterpreting both the Bible and the scientific evidence.

In the 1920s, William Jennings Bryan, a former Nebraska Senator, Presidential candidate, and U.S. Secretary of State, joined the movement to prevent the teaching of evolution. In response to lobbyists like Bryan, the state of Tennessee passed a law making it a crime for a public-school teacher or state college professor to teach the allegedly un-Scriptural doctrine that man evolved from a lower order of animals. However, under the Butler Act (and similar laws in other states), it remained permissible to teach the theory of evolution as applied to species other than humans.

A test case of the Tennessee law was arranged in Dayton, Tennessee, in 1925. A teacher named John Thomas Scopes was charged with violating the law. Bryan was brought in to help the prosecution, and an all-star legal defense team, including famed attorney Clarence Darrow, was brought in to defend the young teacher. Scopes was convicted after a highly-publicized trial, but his conviction was overturned on a technicality by the Tennessee Supreme Court. A play based on the Scopes Monkey trial, *Inherit the Wind*, was turned into a movie in 1960. Spencer Tracy, Gene Kelly, and Frederic March were among the cast of this popular and anti-creationist rendering of the trial. The movie altered some of the historical details, but the movie version of the trial was probably better-known than the actual trial.

Arkansas had also passed a "monkey law" similar to Tennessee's Butler Act. In 1968, the United States Supreme Court ruled that the Arkansas law was designed to promote religious doctrine, and that therefore it was an unconstitutional establishment of religion which violated the First Amendment. The *Epperson* decision had no effect on the Tennessee Butler law, since that law had been repealed in 1967.

Since the Scopes trial, the views of some creationists have been getting closer to secular scientific position. Scientists who were evangelical Christians formed an organization called the American Scientific Affiliation (ASA) during World War II. ASA members pledged support for Biblical inerrancy and declared that the Christian scriptures were in harmony with the evidence of nature. Within this framework, however, the ASA began to lean toward the "progressive creation" viewpoint—the idea that God's creation of life was accomplished over several geological epochs, that the six "days" of creation mentioned in Genesis were epochs rather than literal days, and that much or all of mainstream science's interpretation of the origins of life could be reconciled with the Bible. These "progressive creation" tendencies were articulated in *Evolution and Christian Thought Today*, published in 1959. Some of the contributors to this volume seemed to be flirting with evolution, with two such scientists indicating that Christian doctrine could be reconciled with something resembling evolution.

Other creationists moved in another direction entirely—towards "flood geology." This is the idea that God had created the world in six 24-hour days, that all species, including man, had been specially created, and that the fossil record was a result, not of evolution over time but of a single catastrophic flood in the days of Noah. George McCready Price, a Canadian-born creationist, had outlined these ideas in a 1923 book called *The New Geology*. At the time, Price's ideas had not been widely accepted by creationists outside his own Seventh Day Adventist denomination, but in 1961 Price's ideas got a boost. Teacher John C. Whitcomb, Jr. and engineer Henry M. Morris issued *The Genesis Flood*, which, like *The New Geology*, tried to reconcile the geological evidence with a strong creationist viewpoint.

In 1963, the Creation Research Society (CRS) was formed. The founders were creationist scientists (many of them from the fundamentalist Lutheran Church-Missouri Synod), and voting membership

was limited to scientists. The CRS was committed to Biblical inerrancy and a creationist interpretation of the Bible, an interpretation which in practice coincided with the doctrine of flood geology.

The CRS and others began lobbying for the inclusion of creationist ideas in school curricula. This was a delicate task, on account of the *Epperson* decision of the Supreme Court, which prohibited the introduction of religious doctrines into the curriculum of the public schools. Creationists campaign all over the country, trying to get creationism (now often dubbed “creation science”) into textbooks on an equal basis with evolution. Some states allowed the use of creationist texts like Henry M. Morris’ *Scientific Creationism*. The Texas Board of Education required that textbooks used by the state must emphasize that evolution was merely a theory, and that other explanations of the origins of life existed. On the other hand, California—which together with Texas exerted a great influence over educational publishers due to its mass purchasing of textbooks—rejected attempts to include creationism in school texts.

Laws were passed in Arkansas and Louisiana requiring that creation science get discussed whenever evolution was discussed. However, the federal courts struck down these laws. The U.S. Supreme Court struck down the Louisiana law in 1987, on the grounds that creation science was a religious doctrine that could not constitutionally be taught in public schools.

In Tennessee, home of the Scopes trial, the legislature passed a law in 1973 which required that various ideas of life’s origin—including creationism—be included in textbooks. A federal circuit court struck down this law. An 1996 bill in the Tennessee legislature, authorizing school authorities to fire any teacher who taught evolution as fact rather than as theory, was also unsuccessful. But in Tennessee and other states, the campaign for teaching creationism continues.

Credit Cards

The small molded piece of polyvinyl chloride known as the credit card has transformed the American and the world economy and promises to be at the heart of the future economic system of the world. Social scientists have long recognized that the things people buy profoundly affect the way they live. Microwave ovens, refrigerators, air conditioners, televisions, computers, the birth control pill, antibiotics—all have affected peoples’ lives in profound ways. The credit card has changed peoples’ lives as well, for it allows unprecedented access to a world of goods. The emergence of credit cards as a dominant mode of economic transaction has changed the way people live, the way they do things, the way they think, their sense of well being, and their values. When credit cards entered American life, ordinary people could only dream of an affluent life style. Credit cards changed all that.

Credit cards were born in the embarrassment of Francis X. McNamara in 1950. Entertaining clients in a New York City restaurant, Mr. McNamara reached for his wallet only to find he had not brought money. Though his wife drove into town with the money, McNamara went home vowing never to experience such disgrace again. To guarantee it, he created the Diners Club Card, a simple plastic card that would serve in place of cash at any establishment that agreed to accept it. It was a revolutionary concept.

Of course, credit had long been extended to American consumers. Neighborhood merchants offered credit to neighborhood customers long before McNamara’s embarrassing moment. In the 1930s oil companies promoted “courtesy cards” to induce travelers to buy gas at their stations across the country; department stores extended revolving credit to their prime customers. McNamara’s innovation was to create a multipurpose (shopping, travel, and entertainment) and multi-location card that was issued by a third party independent of the merchant. He took to the road and signed up merchants across the country to save others from his fate.

McNamara’s success led to a host of imitators. Alfred Bloomingdale of Bloomingdale’s department store fame introduced Dine and Sign in California. Duncan Hines created the Signet Club. *Gourmet* and *Esquire* magazines began credit card programs for their readers. But all of McNamara’s early imitators failed. Bankers, however, saw an opportunity. Savvy as they are about giving out money for profit, bankers were more successful in offering their own versions of national cards. Success came to Bank of America and Master Charge, who came to dominate the credit card business in the 1960s. In the late 1970s Bank Americard became VISA and Master Charge became MasterCard. In 1958, American Express introduced its card. Their success the first year was so great—more than 500,000 people signed up—that American Express turned to computer giant IBM for help. Advanced technology was the only way for companies to manage the vast numbers of merchants and consumers who linked themselves via their credit cards, and in the process created a mountain of debt. Technology made managing the credit card business profitable.

To make their system work, credit card companies needed to get as many merchants to accept their cards and as many consumers to use them as they possibly could. They were aided by the sustained

economic growth of the post-World War II era, which saw the United States realize the potential for becoming a true consumption-based society. Credit card companies competed with each other to get their cards in the hands of consumers. With direct mail solicitations, television advertisements, and the ubiquitous placement of credit applications, these companies reached out to every segment of the consumer market. Affluent Americans were flooded with credit card offers at low interest rates, but poorer Americans were also offered credit, albeit with high interest rates, low credit lines, and annual fees. As the cards filled the wallets and purses of more and more consumers, the credit card became the essential tool of the consumer society. At the same time the competition for the consumer heated up at the retail end. First to differentiate themselves from and then to keep up with competitors, more and more retailers, businesses, and services began accepting the cards.

By the 1990s, just 50 years after the birth of the modern credit card, there were more than 450 million credit cards in the United States—about 1.7 cards for each woman, man, and child. Moreover, more than 3 billion offers of credit cards are made annually. VISA administered about 50 percent of the credit cards in circulation. MasterCard had 35 percent, the Discover Card 10 percent, and American Express 5 percent.

The amount of money channeled through credit cards is staggering. By the late 1990s, about 820 billion dollars were charged annually—approximately \$11,000 per family—and credit cards accounted for \$444 billion of debt. About 17 percent of disposable income was spent making installment payments on credit card balances; the average cardholder owed approximately \$150 per month. Eight billion transactions per year involve credit cards. Simply put, credit cards have a profound effect on the economy. To put the force of credit cards into some perspective, in 1998 the Federal Reserve put 20 billion dollars of new money into the economy, while U.S. banks unleashed the equivalent of 20-30 billion dollars of new money into the same economy via new credit cards and increased spending limits.

Given the strong tie between credit card spending and the economy, the fact that consumers have freely used credit cards to fuel their lifestyles has been good for the country, for the stock market, and for retirement plans. But spending is more than simply an economic issue. Spending reflects deeper and broader social and psychological processes. These processes may underlie the true meaning of credit cards in American culture.

Spending money to reflect or announce one's success is certainly not a new phenomenon. Anthropologists have long reflected upon tribal uses of possessions as symbols of prestige. In the past the winners were the elites of the social groups from which they came. But credit cards have leveled the playing field, affording the "common folk" entry into the game of conspicuous consumption. Indeed, the use of credit cards allows people with limited incomes to convince others that they are in the group of winners. Credit cards have thus broken the link that once existed between the possession of goods and success.

Money does buy wonderful things, and many derive satisfaction from knowing that they can buy many things. Credit cards allow consumption to happen more easily, more frequently, and more quickly. The satisfactions achieved through consumption are not illusory. Goods can be authentic sources of meaning for consumers. Indeed, goods are democratic. The Mercedes the rich person drives is the same Mercedes that the middle class person drives. Acquiring possessions brings enjoyment, symbolizes achievement, and creates

identity. Because credit cards make all this possible, they have become a symbolic representation of that achievement. Having a Gold card is prestigious and means you have achieved more in life than those with a regular card. (A Platinum card is, of course, even better.) Credit cards are more than modes of transaction—they are designer labels of life, and thus impart to their user a sense of status and power. People know what these symbols mean and desire them.

The ways that people pay for their goods differ in important social, economic, and psychological ways. Unlike cash, credit cards promote feelings of membership and belongingness. Having and using a credit card is a rite of passage, creating the illusion that the credit card holder has made it as an adult and a success. Unique designs, newsletters, rewards for use, and special deals for holders make owners of cards feel that they are part of a unique group. Prestige cards such as the American Express Gold Card attempt to impress others with how much the user seems to be worth. Finally, credit cards are promoted as being essential for self-actualization. You have made it, card promoters announce, you deserve it, and you shouldn't leave home without it; luckily, it's everywhere you want to be, according to VISA's advertising slogan. Self-actualized individuals with credit cards have the ability to express their individuality as fully as possible.

There are, however, costly, dangerous, and frightening problems associated with credit card use and abuse. First, credit cards act to elevate the price of goods. Merchants who accept credit cards must pay anywhere from 0.3 to 3 percent of the value of the transaction to the credit card company or bank. Such costs are not absorbed by merchants but are passed on to all other consumers (who may not own or use credit cards) in the price of products and services. Second, credit cards create trails of information in credit reports that reveal much about the lives of users, from the doctors they visit to their choice of underwear. Not only do such reports reveal to anyone reading them information that the credit card user might not want made available, but confusion between users can result in embarrassing and costly mistakes. Third, credit card fraud creates billions of dollars in costs which are paid for in high fees and interest rates and, eventually, in the price of goods. VISA estimated that these costs amount to between 43 and 100 dollars per thousand dollars charged. In 1997 credit card companies charged off 22 billion dollars in unpaid bills, 60 million a day. Finally, consumers pay in direct and indirect ways for the personal bankruptcies that credit card abuse contributes to. In 1997 the 1.6 million families who sought counseling with debt counselors claimed 35 billion in debt they could not pay, much of it credit card debt. The result of these problems is the same: consumers pay more for goods.

One of the untold stories in the history of credit cards is the manner in which the poorer credit card holders subsidize the richer. Payments on credit card balances (with interest rates that normally range from 8 to 21 percent) subsidize those who use the credit card as a convenience and pay no interest by paying their charges within the grace period. The 50 to 60 percent of consumers who pay their balances within the grace period have free use of this money, but they could not do so unless others were paying the credit card companies for their use of the money. The people who pay the highest interest rates are, of course, the people with the lowest incomes.

In an obvious way, the convenience of using credit cards increases the probability that consumers will spend more than they might have otherwise. But using credit cards is also a bit like the arms race: the more the neighbors spend, the more consumers spend to

stay even. Such competitive spending, while a source of sport for the wealthy, can be potentially devastating to those on more limited incomes.

Interestingly, credit card spending may facilitate spending in a more insidious manner. Research has shown that the facilitation effect of credit cards is both a conscious/rational and unconscious process. At the rational end credit cards allow easy access to money that may only exist in the future. People spend with credit cards as a convenience and as a means to purchase something that they do not have the money for now but will in the near future. However, as an unconscious determinant of spending, credit cards can irrationally and unconsciously urge consumers to spend more, to spend more frequently, and make spending more likely.

Credit card spending has become an essential contributor—some would argue a causal determinant—of a good economy. Spending encourages the manufacture of more goods and the commitment of capital, and creates tax revenues. By facilitating spending, credit cards are thus good for the economy. Credit cards are tools of economic expansion, even if they do bring associated costs.

In 50 years, credit cards have gone from being a mere convenience to being crucial facilitators of economic transactions. Some would have them do even more. Credit card backers promote a vision of a cashless economy in which a single credit card consolidates all of a person's financial and personal information needs. And every day consumers vote for the evolution to a cashless electronic economic and information system by using their credit cards. Americans are willing prisoners of and purveyors of credit cards, spending with credit cards because of what they get them, what they symbolize, and what they allow them to achieve, experience, and feel. In many ways credit cards are the fulfillment of the ultimate dream of this country's founders—they offer life, liberty, and the pursuit of happiness.

Creedence Clearwater Revival

By the late 1960s, when Creedence Clearwater Revival (CCR) released its first album, rock 'n' roll was transforming into rock, the more "advanced" and "sophisticated" cousin of the teenaged riot whipped up by Elvis Presley and Little Richard. While their contemporaries (Moody Blues, Pink Floyd, King Crimson, etc.) were expanding the sonic and lyrical boundaries of Rock 'n' Roll, CCR bucked the trend by returning to the music's roots. On their first album and their six subsequent releases, this Bay Area group led by John Fogerty fused primal rockabilly, swamp-boogie, country, r&b and great pop songwriting, and—in doing so—became one of the biggest selling rock bands of the late 1960s and early 1970s.

Most of the members of CCR played in what were essentially bar bands around San Francisco and its suburbs. Along with El Cerrito junior high school friends Stu Cook and Doug "Cosmo" Clifford, Tom and John Fogerty formed the Blue Velvets in the late 1950s. The group eventually transformed into the Golliwogs, recording a number of singles for the Berkeley-based label, Fantasy, and then changed its name to Creedence Clearwater Revival in 1967. If the Blue Velvets and the Golliwogs were dominated by Tom Fogerty, then Creedence Clearwater Revival was John Fogerty's vehicle, with John writing and singing the vast majority of CCR's songs. It was clear that John Fogerty's influence was what made the group popular, because under Tom's control, the Golliwogs essentially went nowhere. Further, when John let other members gain artistic control on CCR's *Pendulum*, that album became the first CCR album not to go platinum.

Like Bruce Springsteen, John Fogerty's songs tackle subjects that cut deep into America's core; and like any great artist, Fogerty was able to transcend his own experience and write realistic and believable songs (for instance, the man who wrote "Born on the Bayou" had never even been to Louisiana's bayous until decades later). Despite Fogerty's talents as a songwriter, CCR's first hits from its debut album were covers—Dale Hawkins' "Suzie Q" and Screamin' Jay Hawkins' "I Put a Spell on You." But with the release of "Proud Mary" backed with "Born on the Bayou" from CCR's second album, the group released a series of original compositions that dominated the U.S. *Billboard* charts for three years.

Despite its great Top Forty success and its legacy as the preeminent American singles band of the late 1960s, CCR was able to cultivate a counter-cultural and even anti-commercial audience with its protest songs and no-frills rock 'n' roll. Despite the fact that they were products of their time, "Run Through the Jungle," "Fortunate Son," "Who'll Stop the Rain," and CCR's other protest songs remain timeless classics because of John's penchant for evoking nearly-universal icons (for North American's, at least) rather than specific cultural references.

John's dominance proved to be the key to the band's success and the seeds of its dissolution, with Tom leaving the group in 1971 and John handing over the reins to be split equally with Stu Cook and Doug Clifford, who equally contributed to the group's last album, *Mardi Gras*, which flopped. Tom released a few solo albums, and so did John, who refused to perform his CCR songs well until the early 1990s as the result of a bitter legal dispute that left control of the CCR catalog in the hands of Fantasy Records. One of the most bizarre copyright infringement lawsuits took place when Fantasy sued Fogerty for writing a song from his 1984 *Centerfield* album that sounded too much like an old CCR song. After spending \$300,000 in legal fees and

Creedence Clearwater Revival

having to testify on the stand with his guitar to demonstrate how he wrote songs, Fogerty won the case.

Crichton, Michael (1942—)

Published in 1969, *The Andromeda Strain* established Michael Crichton as a major best-selling novelist whose popularity was due as much to the timing and significance of his subject matter as to the quality of his writing and the accuracy of his research. As Crichton had correctly judged, America was ready for a tale that treated both the rationalism and the paranoia of the Cold War scientists' response to a biological threat. From that first success onwards, Crichton continued to embrace disagreeable or disturbing topical trends as a basis for exciting, thriller-related fiction. That several have been

made into highly commercial movies, and that he himself expanded his career into film and television, has made him a cultural fixture in late twentieth-century America. If this was in doubt, his position was cemented by *ER*, the monumentally successful television series, which he devised.

Born on October 23, 1942 in Chicago, Illinois, by the time *The Andromeda Strain* appeared, Crichton had received his A.B. degree *summa cum laude* from Harvard, completed his M.D. at Harvard Medical School, and begun working as a post-doctoral fellow at the Salk Institute for Biological Studies. Most impressively, he had already published six novels (under various pseudonyms), written largely during weekends and vacations, while still at medical school. As an undergraduate, he had intended to major in English, but poor grades convinced him that no amount of creative talent would deter Harvard's faculty from altering its absurdly high expectations. Incipient scientist that he was, Crichton tested this theory by submitting an essay by George Orwell under his own name, and received a B-minus.

This tale, recounted in Crichton's spiritual autobiography, *Travels*, perhaps explains his own lack of interest in producing anything other than commercial fiction. As a result, his journey through medical school seems, in retrospect, more of a detour than a career path, for, by the end of his schooling, he had decided once and for all to become a writer. During his final rotation Crichton concentrated

Michael Crichton

more on the emotional than the physical condition of his patients, research that formed the basis of his non-fiction work, *Five Patients: A Hospital Explained*.

But it was *The Andromeda Strain* that permanently changed the trajectory of his future. His previous novels have all fallen out of print, with the exception of *A Case of Need*, published under the pseudonym Jeffrey Hudson and winner of the 1968 Edgar Award from the Mystery Writers of America. While the success of *The Andromeda Strain* lifted Crichton's career to new heights, it did not prevent him from completing other less successful works already in progress. In 1970 and 1971, using the name John Lange, he finished three more novels (*Drug of Choice*, *Grave Descend*, and *Binary*), and with his brother Douglas, co-wrote *Dealing*, under the prescient name Michael Douglas. (The actor would star in the film versions of several of Crichton novels). With three of his novels already filmed—*The Andromeda Strain* (1970), *Dealing* (1972), and *A Case of Need* (retitled *The Carey Treatment*, 1972)—Crichton, who had directed the made-for-TV film *Pursuit* (1972) made his feature film directing debut in 1973 with *Westworld*. Starring Yul Brynner, the film was adapted from his futuristic thriller *Binary* (1971). Crichton now pursued a dual career as moviemaker and writer, having published the second novel to appear under his own name, *The Terminal Man*, in 1972. *Dealing* with a Frankenstein-type experiment gone haywire, it confirmed its author's storytelling powers, sold in the millions, and was filmed in 1974.

Through the rest of the 1970s and into the 1980s Crichton the author continued to turn out such bestsellers as *The Great Train Robbery* (1975), *Congo* (1980), and *Sphere* (1987), but Crichton the

director fared less well. His successes with *Coma* (1977), a terrific nailbiter based on Robin Cook's hospital novel and starring the real Michael Douglas, and *The Great Train Robbery* (1978), were offset by such mediocrities as *Looker* (1981), *Runaway* (1984), and *Physical Evidence* (1989). A major turnaround came when he stopped directing and concentrated on fiction once again. The fruits of his labors produced *Jurassic Park* (1990), *Rising Sun* (1992), *Disclosure* (1994), and *Lost World* (1995). All were bestsellers, with *Rising Sun* and *Disclosure* leaving a fair share of controversy in their wake—the last particularly so after the film, starring Michael Douglas and Demi Moore, was released. In the meantime, Crichton shifted from director to producer, convincing NBC to launch *ER*, which he created and which had been his dream for 20 years. By the end of the 1990s, he was an established and important presence in Hollywood as well as in publishing, enjoying a professional longevity given only to a handful of popular novelists and screenwriters.

Not unlike Tom Clancy, whose success came in the 1980s, Crichton is a masterful storyteller who has been credited with the invention of the modern "techno-thriller." His prose is clear and concise; his plotting strong; his research accurate and, at times, eerily prescient. On the other hand, in common with many fiction writers who depend heavily on premises drawn largely from the science fiction genre, his character development is weak. Despite his protests to the contrary, his penchant for using speculative science as the basis for much of his fiction has landed him willy-nilly within the gothic and science fiction traditions. In *Michael Crichton: A Critical Companion*, Elizabeth Trembley details the extent to which Crichton's work revisits earlier gothic or science fiction classics, from H. Rider Haggard's *King Solomon's Mines*, for example, to *Jurassic Park*, a modern retelling of H. G. Wells' *The Island of Doctor Moreau*.

Michael Crichton's popularity is perhaps best explained by his intuition for presenting through the medium of fiction our own anxieties in consumable form. Often fiction relieves anxieties by reconfiguring them as fantasy. Crichton senses that we worry about biological weapons (*The Andromeda Strain*), mind control technology (*The Terminal Man*), human aggression (*Sphere*), genetic engineering (*Jurassic Park*), and competitive corporate greed (*Rising Sun* and *Disclosure*). His gift is the ability to turn these fears into a form that lets us deal with them from the safety of the reading experience.

Crime Does Not Pay

Crime Does Not Pay was a comic book published from 1942-1955 by the Lev Gleason company. Inspired by the MGM documentary series of the same name, *Crime* featured material based loosely on true criminal cases. The stories indulged in graphic violence, sadism, and brutality of a sort that was previously unheard of in children's entertainment. Bullet-ridden corpses, burning bodies, and

horrific gangland tortures were among the more predictable themes found in these comic books.

An unusual comic book when it first appeared amidst the superheroes of the World War II era, *Crime* found a huge audience after the war. Arguably the first “adult” comic book, *Crime* also became one of the most popular titles ever, selling in excess of one million copies monthly. When *Crime*’s formula became widely imitated throughout the industry, it attracted the wrath of critics who charged that crime comic books caused juvenile delinquency.

Crinolines

In 1859, French writer Baudelaire wrote that “the principal mark of civilization . . . for a woman, is invariably the crinoline.” The crinoline, or horsehair (“crin”) hoop, allowed women of the 1850s and 1860s to emulate Empress Eugénie in ballooning skirts supported by these Crystal Palaces of lingerie. From Paris to Scarlett O’Hara, women moved rhythmically and monumentally during “crinolineomania” (1856-68), assuming some power if only by taking up vast space. A culture of boulevards and spectatorship prized the volume of crinolines. In the 1950s, crinolineomania recurred: prompted by Christian Dior’s New Look, any poodle skirt or prom dress could be inflated by nylon crinolines as if to become the female version of mammoth 1950s cars and automobile fins. A culture of big cars valued the crinoline as well.

The Crisis

Founded as the monthly magazine of the National Association for the Advancement of Colored People in 1910, the *Crisis* has played an important role in the formation and development of African-American public opinion since its inception. As the official voice of America’s leading civil rights organization, the *Crisis* gained entry into a variety of African-American and progressive white homes, from the working class and rural poor to the black middle class. Through the mid-1930s, the *Crisis* was dominated by the character, personality, and opinions of its first editor and NAACP board member, W. E. B. Du Bois. Because of his broad stature within black communities, Du Bois and the NAACP were synonymous for many African Americans. One of his editorials or essays could literally sway the opinions of thousands of black Americans.

The Crisis

The teens were a time of dynamic change within black communities as the Great Migration began to speed demographic shifts and African-American institutions grew and expanded. As black newspapers and periodicals gained prominence within these rapidly developing communities, the New York-based magazine the *Crisis* emerged as one of the most eloquent defenders of black civil rights and racial justice in the United States. During this era, the magazine led the pursuit of a federal anti-lynching law, equality at the ballot box, and an end to legal segregation. As war approached, the *Crisis* ran vigorous denunciations of racial violence in its columns. Following a bloody riot in east St. Louis in 1917, Du Bois editorialized with melancholy, “No land that loves to lynch ‘niggers’ can lead the hosts of the Almighty.” In the same year, after black servicemen rampaged through the streets of Houston, killing seventeen whites and resulting in the execution of thirteen African Americans, the *Crisis* bitterly lamented, “Here at last, white folks died. Innocent, adventitious strangers, perhaps, as innocent as the thousands of Negroes done to death in the last two centuries. Our hands tremble to rise and exult, our lips strive to cry. And yet our hands are not raised in exultation; and yet our lips are silent, as we face another great human wrong.”

After the initial success of black troops stationed in France during the summer of 1918, Du Bois penned the controversial editorial “Close Ranks.” In it, he wrote, “Let us, while this war lasts,

forget our special grievances and close our ranks shoulder to shoulder with our own white fellow citizens and the allied nations that are fighting for democracy. We make no ordinary sacrifice, but we make it gladly and willingly with our eyes lifted to the hills." Appealing to the ideals of patriotism, citizenship, and sacrifice connected to military service, the *Crisis* editors believed that by fighting a war "to make the world safe for democracy," African Americans would be in a better position to expect a new era of opportunity and equality after the war's end. As the war drew to a close and black soldiers returned home, the *Crisis* continued its determined efforts to secure a larger share of democracy for African Americans. In "Returning Soldier," the magazine captured the fighting spirit of the moment: "We return. / We return from fighting. / We return fighting. Make way for democracy! We saved it in France, and by the Great Jehovah, we will save it in the United States of America, or know the reason why."

The next two decades, though, did not bear out the optimism of *Crisis* editors. During the 1920s, as racial conservatism set in nationwide and the hopes of returning black soldiers dimmed, the *Crisis* shifted its focus to the development of the cultural politics of the "New Negro" movement in Harlem. With the addition of celebrated author Jessie Fauset to the editorial board, the *Crisis* printed essays from Harlem Renaissance architect Alain Locke, as well as early works of fiction and poetry by Fauset, Langston Hughes, and Zora Neale Hurston, among others. The 1930s proved contentious years for the *Crisis* as it went to battle with the Communist Party over the fate of nine African Americans in the Scottsboro case. In addition, the Depression put the magazine in financial peril. As Du Bois struggled to find solutions to the dire circumstances facing most black Americans, he published a series of essays advocating the creation of "urban black self-determination" through the creation of race-based economic cooperatives. This stance irked many NAACP leaders who saw the remarks as a repudiation of the organization's integrationist goals. The clash precipitated a split within the group which resulted in the resignation of Du Bois from both the magazine and the NAACP board in 1934.

What the *Crisis* lost in the departure of Du Bois, it regained with the rapidly increasing membership of the NAACP during the Second World War and the rising tide of civil rights protest throughout the nation. While the magazine no longer had the stature, intellectual respect, or skillful writing associated with Du Bois, it remained an important public African-American voice. In particular, as the NAACP legal attack on segregation crescendoed in 1954 with the *Brown v. Board of Education* decision, the *Crisis* ran a special issue dedicated solely to the NAACP victory, featuring the full text of the decision, historical overviews, and analysis. One editorial gloated, "The 'separate but equal' fiction as legal doctrine now joins the horsecar, the bustle, and the five-cent cigar." While the *Crisis* trumpeted the victory, it also kept a pragmatic eye on the unfinished business of racial justice in America, stating, "We are at that point in our fight against segregation where unintelligent optimism and childish faith in a court decision can blind us to the fact that legal abolition of segregation is not the final solution for the social cancer of racism."

Over the next decade, as the NAACP struggled to find its place in the post-*Brown* movement, the *Crisis* maintained its support of nonviolent civil rights activity, although it no longer set the agenda. Thurgood Marshall, in an article on the student sit-in wave sweeping the South in 1960, compared Mississippi and Alabama to South Africa and argued, "Young people, in the true tradition of our democratic principles, are fighting the matter for all of us and they are

doing it in the most effective way. Protest—the right to protest—is basic to a democratic form of government." Of the 1963 "Jobs and Freedom" march on Washington, D.C., the *Crisis* beamed, "Never had such a cross section of the American people been united in such a vast outpouring of humanity." Similarly, in 1964, with the passage of the historic Civil Rights Act, the *Crisis* editorialized, "[the Act] is both an end and a beginning: an end to the Federal Government's hands-off policy; a beginning of an era of Federally-protected rights for all citizens."

As the movement spun off after 1965 toward Black Power, increasing radicalization and, in some cases, violence, the NAACP and the *Crisis* began to lose their prominent position in shaping African-American attitudes and opinions. Against these new politics, the *Crisis* appeared more and more conservative. Continuing to oppose violent self-defense and separatism, the *Crisis* also came out against radical economic redistribution as well as the Black Studies movement of the late sixties and early seventies. Over the next two decades, the *Crisis* evolved into a more mainstream popular magazine, upgrading its pages to a glossy stock and including more advertisements, society articles, and human interest stories. Unable to recapture the clear programmatic focus that had driven its contents during the previous fifty years, the *Crisis* articles tended to be more retrospective and self-congratulatory than progressive. In the late 1980s, the *Crisis* took a brief hiatus but reappeared in the 1990s in a revised form, focusing primarily on national politics, cultural issues, and African-American history.

Croce, Jim (1943-1973)

Singer and songwriter Jim Croce is remembered for beautiful guitar ballads like "Time In a Bottle" and, in contrast, his upbeat character-driven narratives like "Bad, Bad Leroy Brown" that deftly combined folk, blues, and pop influences. Croce's brief but brilliant musical career was tragically cut short by his death in a plane accident in 1973.

Born to James Alford and Flora Croce in Philadelphia, Pennsylvania, Croce's interest in music got off to a slow start. He learned to play "Lady of Spain" on the accordion at the age of five, but didn't really take music seriously until his college years. He attended Villanova College in the early 1960s, where he formed various bands and played parties. One such band had the opportunity to do an Embassy tour of the Middle East and Africa on a foreign exchange

Jim Croce

program, which encouraged Croce to focus on his music. He earned a degree in psychology from Villanova in 1965.

The music career came slowly, though, interrupted by the other odd jobs he took to make a living. Croce worked in construction, welded, and even joined the army. He spun records as a university disc jockey on a folk and blues show in Philadelphia and wrote ads for a local R&B station. He married Ingrid in 1966, and the two spent the summer teaching at a children's camp in Pine Grove, Pennsylvania. He taught guitar, and she taught ceramics and leather crafts. The following autumn he served as a teacher for problem students at a Philadelphia High School.

Finally becoming truly serious about a career in music, Croce moved to New York in 1967 where he and his wife Ingrid played folk clubs and coffee houses. By 1969, the pair were signed to Capital Records where they released an album called *Approaching Day*. The album's lack of success led the couple to give up New York and return to Pennsylvania. Jim started selling off guitars, took another job in construction, and later worked as a truck driver. Ingrid learned how to can foods and bake bread to help stretch the budget. On September 28, 1971, they had a son, Adrian James Croce.

But Croce never lost his love of music, and he played and sang on some commercials for a studio in New York. His break came when Croce sent a demo tape to Tommy West, a Villanova college pal who had found success as a New York record producer. West and his friend Terry Cashman helped Croce land a contract with ABC records. He also had a fortuitous meeting with guitarist Maury Muehleisen while working as a studio freelancer. Croce had played backup guitar on Muehleisen's record, *Gingerbread*. The album

flopped, but Croce remembered the young guitarist and called him in to work with him. The two worked closely in the studio, trading rhythm and lead parts. The first album, *You Don't Mess Around with Jim*, was a huge success, giving Croce two top ten hits with the title track and "Operator (That's Not The Way It Feels)." Before long Croce was a top-billing concert performer, known as much for his friendly and charming personality as for his songs.

His second album, *Life and Times*, had a hit with the July, 1973, chart topper "Bad, Bad Leroy Brown." This first blush of success turned bittersweet for his family and friends, however. Leaving a concert venue at Northwestern State University in Natchitoches, Louisiana on September 20, 1973, Croce's plane snagged the top of a pecan tree just past the runway, and he and Maury Muehleisen, as well as four others, were killed. Croce is buried at Haym Salomon Memorial Park in Frazer, Pennsylvania. The third album, *I've Got a Name*, was released posthumously, and the hits kept coming. The next chart hit was the title track, and "Time In a Bottle" was the number one hit of the year in 1973. The following year, "I'll Have to Say I Love You in a Song" and "Workin' at the Car Wash Blues" hit the charts. The ongoing string of hits only highlighted the tragic loss of a performer who was just coming into his own.

Jim's widow Ingrid opened Croce's Restaurant and Jazz Bar 1985 in San Diego's Gaslamp Quarter in Jim's memory. The restaurant features musical acts nightly and is decorated with Jim Croce memorabilia. Ingrid Croce also wrote a book of recipes and memories called *Thyme in A Bottle*. Son A. J. Croce started his own musical career in the 1990s. He released his eponymous first album in 1993, a 1995 follow-up, *That's Me in the Bar*, and 1997's *Fit to Serve*. He said of his father, "I think the most powerful lesson I learned from him was the fact there is no reason to write a song unless there is a good story there. He was a great storyteller and, for me, if there is any way that we are similar, it's that we both tell stories."

Cronkite, Walter (1916—)

Walter Cronkite's 19-year tenure as anchorman of the *CBS Evening News* was an uncanny match of man and era. Two generations of Americans came to rely upon his presence in the CBS

Walter Cronkite

television anchor chair in times of war and crisis, scandal and celebration. His was a forthright, solemn presence in a time when each new dawn brought with it the prospect of nuclear annihilation or a second American civil war. Yet the master journalist was also a master performer—Cronkite was able and quite willing to display a flash of emotion or anger on the air when it suited him; this combination of stoic professionalism and emotional instinct earned the broadcaster two enduring nicknames: the man known familiarly as “Uncle Walter” was also called “The Most Trusted Man in America.” When Cronkite closed the *Evening News* each night with his famous sign-off “And that’s the way it is,” few doubted he was telling them the truth.

Cronkite’s broadcasting career had a unique prologue; the young war correspondent did what few others dared: he turned down a job offer from Edward R. Murrow. The CBS European chief was already a legend; the radio correspondents known as “Murrow’s Boys” were the darlings of the American press, even as they defined the traditions and standards of broadcast journalism. Cronkite, however, preferred covering the Second World War for the United Press. It was an early display of his preference for the wire-service style and attitude; the preference would mark Cronkite’s reporting for the rest of his career.

When Cronkite accepted a second CBS offer several years later, the budding broadcaster found himself assigned—perhaps relegated—to airtime in the new medium that seemed little more than a journalistic backwater: television.

He anchored the local news at Columbia’s Washington, D.C., affiliate starting soon after the Korean War began in 1950, his broadcast a combination of journalism and experimental theater. There were no rules for television news, and Cronkite had come in on the ground floor. He had little competition; few of the old guard showed much interest in the new medium. Cronkite was pressed into service to anchor the 1952 political conventions and election for CBS television, his presence soon taken for granted in the network anchor chair. Walter Cronkite had established himself firmly as the network’s “face” in the medium which was, by now, quite obviously the wave of the future.

He continued to anchor much of CBS’s special events coverage, including the 1956 and 1960 political conventions. In 1962, he succeeded Doug Edwards as anchor of the *CBS Evening News*, in those days a fifteen-minute nightly roundup that found itself regularly beaten in the ratings by the runaway success of NBC’s anchor team of Chet Huntley and David Brinkley.

Ratings aside, however, television news was finally coming of age; CBS news was expanding staff, adding bureaus and airtime. That TV news veered away from the staged, hackneyed style of its most obvious model, the movie newsreels—and instead became a straightforward, serious purveyor of hard news—is thanks in no small part to the efforts and sensibilities of Cronkite and his colleagues. His *Evening News* expanded to thirty minutes in September, 1963, premiering with an exclusive interview of President John F. Kennedy.

Yet Cronkite, like Doug Edwards before him, regularly spoke to an audience much smaller than that of Huntley and Brinkley. And while it is Cronkite's shirtsleeves pronouncement of the Kennedy assassination that is usually excerpted on retrospective programs and documentaries ("From Dallas, Texas, the flash, apparently official. . . President Kennedy. . . died. . . this afternoon. . ."), the simple fact is that NBC was the clear audience choice for much of the early and mid-1960s.

Cronkite's ratings dropped so low during the 1964 Republican convention, the behind-the-scenes turmoil growing so intense, that he was removed from his anchor chair, replaced for the Democratic convention by Robert Trout and Roger Mudd, two fine veteran broadcasters whose selection nonetheless was a thinly veiled effort to capture some of the Huntley-Brinkley magic. It didn't work; a viewer uprising and a well-timed prank (a walk through a crowded hotel lobby with a high NBC executive) quickly led to Cronkite's re-instatement.

Meanwhile, Cronkite threw himself into coverage of the American space program. He displayed obvious passion and an infectious, even boyish enthusiasm. His cries of "Go, baby, go!" became familiar accompaniment to the roar of rockets lifting off from Cape Canaveral. Cronkite anchored CBS's coverage of every blast-off and splashdown; arguably the single most memorable quote of his career came as astronauts Neil Armstrong and Buzz Aldrin touched down on the moon the afternoon of July 20, 1969. "The Eagle has landed," Armstrong radioed, and Cronkite added his benediction: "Gosh! Oh, boy!" He later recalled it as the only time he'd come up speechless on the air. That afternoon, Cronkite's audience was more than that of NBC and ABC combined. Huntley-Brinkley fever had cooled. Walter Cronkite had become "the most trusted man in America," and his stature in American living rooms resounded throughout the television industry.

This was the age in which local television news departments strove to emulate the networks—not the other way around—and the success of Cronkite's dead-earnest *Evening News* led many local TV newscasts soon to adapt a distinctly Cronkite-ish feel. Likewise, there's no official count of how many anchormen around the world, subconsciously or not, had adapted that distinctive Cronkite cadence and style. Politicians and partisans on all sides complained bitterly that Cronkite and CBS were biased against them; this was perhaps the ultimate tribute to the anchorman's perceived influence on American life in the late 1960s.

In truth, Cronkite had grown decidedly unenthusiastic about the Vietnam War. A trip to Vietnam in the midst of the Tet offensive led to arguably the most courageous broadcast of the anchorman's career. . . . Cronkite returned home, deeply troubled, and soon used the last few moments of a CBS documentary to call for an end to the war. It was a shocking departure from objectivity, easily the most brazen editorial stand since Ed Murrow criticized Senator Joe McCarthy nearly a decade-and-a-half earlier. At the White House, President Lyndon Johnson is said to have remarked "If I've lost Cronkite, I've

lost middle America." Whether the anecdote is apocryphal is irrelevant; that it is widely accepted as fact is the real testament to Cronkite's influence as the 1960s drew to a close.

Cronkite rode his *Evening News* to ratings victory after victory through the 1970s, the whole of CBS news now at the pinnacle of its ability and influence. Cronkite cut short his summer vacation to preside over the August 8, 1974 resignation of President Nixon; he anchored an all-day-and-all-night television bicentennial party on July 4, 1976; later he stubbornly closed every nightly newscast by counting the number of days the American hostages had been held captive in Iran. The Carter administration likely was not amused. When the hostages' release on January 20, 1981 coincided with the inauguration of President Ronald Reagan, Cronkite held forth over his last great news spectacular, calling the historic convergence of events "one of the great dramatic days in our history."

By then, Cronkite was on his way out, giving up the anchor chair to Dan Rather, narrowly forestalling Rather's defection to ABC. Cynics have long speculated Cronkite was, in fact, pushed aside to make way for Rather, but everyone involved—including Cronkite—has clung to the story that the veteran anchorman was genuinely tired of the grind and had repeatedly asked to be replaced. His final *Evening News* came March 6, 1981, his final utterance of "And that's the way it is" preceded by a brief goodbye speech. . . . "Old anchormen don't go away, they keep coming back for more." He couldn't have been more wrong.

Cronkite had not intended to retire completely upon stepping down from the anchor chair, but to his utter astonishment, he found the new CBS news management literally would not let him on the air. An exclusive report from strife-torn Poland was given short shrift; later, his already limited participation in the network's 1982 Election Night coverage was reportedly reduced even further when anchorman Rather simply refused to cede the air to Cronkite. The new brass feared reminding either viewers or a jittery, ratings-challenged Rather of Cronkite's towering presence; Rather himself was apparently enjoying a little revenge. "Uncle Walter" had for years been known behind-the-scenes as a notorious air-hog, filling airtime with his own face and voice even as waiting correspondents cooled their heels. Now, suddenly, the original "800-pound gorilla" was getting a taste of his own medicine.

It only got worse. Cronkite's fellow CBS board members roundly ignored the elder statesman's heated protests of mid-1980s news budget cuts, even as it appeared the staid, substance-over-style approach of Cronkite's broadcasts was falling by the CBS wayside. His legacy was fading before his very eyes. That he never pulled up stakes and left the network (as a disgruntled David Brinkley had recently bolted from NBC) is a testament either to true professional loyalty. . . . or an iron-clad contract.

In the 1990s, however, Cronkite made a broadcasting comeback. He produced and narrated a series of cable documentaries, including a multi-part retrospective of his own career; his 1996 autobiography was a major bestseller. In late 1998, Cronkite accepted CNN's offer to co-anchor the network's coverage of astronaut John Glenn's return to space. On that October day, Cronkite returned to the subject of one of his great career triumphs: enthusiastic, knowledgeable coverage of a manned spaceflight. It was thrilling for both audience and anchor; yet it was also clear Cronkite's day had come and gone. He was frankly a bit deaf; and he thoroughly lacked the preening, all-smiles, shallow aura of hype that seems to be a primary qualification for today's news anchors. His presence that day was, however, undoubtedly a glorious reminder of what Cronkite had been to the nation for so long: the very

manifestation of serious, hard news in the most powerful communications medium of the twentieth century. He was a rock, truly an anchor in some of the stormiest seas our nation has ever navigated.

Crosby, Bing (1903-1977)

Bing Crosby is widely recognized as one of the most influential entertainers of all time. He first came to popularity as America's most popular crooner during the 1930s, with his much-copied low-key manner, and during his long career he recorded more than sixteen hundred songs. He also starred in a long string of highly successful movies, including the classic *Going My Way* (1944), and, having amassed a huge fortune, eventually became a major presence behind the scenes in Hollywood.

Bing Crosby

Born Harry Lillis Crosby into a large family in Tacoma, Washington, Crosby grew up to study law at Gonzaga University in Spokane but soon became more interested in playing drums and singing with a local band. It was then that he adopted his professional name, reportedly borrowing the "Bing" from his favorite comic strip, *The Bingville Bugle*. In the early 1930s Crosby's brother Everett sent a record of Bing singing "I Surrender, Dear" to the president of CBS. Crosby's live performances from New York ended up being carried over the national radio network for twenty consecutive weeks in 1932. Crosby recorded more than sixteen hundred songs for commercial release beginning in 1926 and ending in 1977. With his relaxed, low-key manner and spontaneous delivery, Crosby set a crooning style that was widely imitated for decades. At the time of his death, he was considered the world's best-selling singer. Crosby's records have sold in the hundreds of millions worldwide, perhaps more than a billion, and some of his recordings have not been out of print in more than sixty years. He received twenty-two gold records, signifying sales of at least a million copies per record, and was awarded platinum discs for his two biggest selling singles, "White Christmas" (1960) and "Silent Night" (1970).

Crosby's radio success led Paramount Pictures to contract him as an actor. He starred in more than fifty full-length motion pictures, beginning with *The Big Broadcast of 1932* (1932) and ending with the television movie *Dr. Cook's Garden* (1971). His large ears were pinned back during his early films, until partway through *She Loves Me Not* (1934). His career as a movie star reached its zenith during his association with Bob Hope. Crosby and Hope met for the first time in the summer of 1932 on the streets of New York and in December performed together at the Capitol Theater, doing an old vaudeville routine that included two farmers meeting on the street. They did not work together again until the late 1930s, when Crosby invited Hope to appear with him at the opening of the Del Mar race track north of San Diego. The boys reprised some old vaudeville routines that delighted the celebrity audience. One of the attendees was the production chief of Paramount Pictures, who then began searching for a movie vehicle for Crosby and Hope and ended up finding an old script intended originally for Burns and Allen, then later Jack Oakie and Fred MacMurray. The tentative title was *The Road to Mandalay*, but the destination was eventually changed to Singapore. To add a love interest to the movie, the exotically beautiful Dorothy Lamour was added to the main cast. Although *The Road to Singapore* was not considered as funny as the subsequent "Road" pictures, the chemistry among the three actors came through easily and the film was a hit nevertheless.

At least twenty-three of Crosby's movies were among the top ten box office hits during the year of their release. He was among the top ten box office stars in at least fifteen years (1934, 1937, 1940, 1943-54), and for five consecutive years (1944-48) he was the top box office draw in America. But real recognition of his talent as an actor came with *Going My Way*: his performance as an easygoing priest guaranteed him the best actor Oscar. His work in *The Country Girl* (1954)—in which Crosby played an alcoholic down on his luck opposite Grace Kelly—also received excellent critiques.

Crosby married singer Dixie Lee in 1930, and the couple had four sons—Garry, Dennis and Phillip (twins), and Lindsay—all of whom unsuccessfully attempted careers as actors. Widowed in 1952, Crosby married movie star Kathryn Grant (thirty years his junior) in 1957. She bore him two more sons—Harry and Nathaniel—and a girl, Mary, a TV and film actress famed for her role as the girl who shot J. R. Ewing in the television series *Dallas*.

During his four decades as an entertainer, Crosby gathered a fortune from radio, records, films, and TV and invested wisely in a broad array of business ventures. Second in wealth only to Bob Hope among showbiz people, Crosby's fortune was at one time estimated at anywhere between 200 and 400 million dollars, including holdings in real estate, banking, oil and gas wells, broadcasting, and holdings in the Coca-Cola Company. From the 1940s to the 1960s, Crosby owned 15 percent of the Pittsburgh Pirates baseball team, but playing golf was what he liked the most. He died playing at a course outside Madrid—after completing a tour of England that had included a sold-out engagement at the London Palladium.

After his death, Crosby's Hollywood persona—established largely by his role as the warm-hearted, easygoing priest in *Going My Way*—underwent much reassessment. Donald Shepherd and W. H. Allen composed an unflattering portrait of Crosby as an egotistic and heartless manipulator in their biography, *Bing Crosby—The Hollow Man* (1981). In *Going My Own Way* (1983), Garry Crosby, his eldest son, told of his experiences as a physically and mentally abused child. When Bing's youngest son by Dixie Lee, Lindsay Crosby, committed suicide in 1989 after finding himself unable to provide for his family, it was revealed that Crosby had stipulated in his will that none of his sons could access a trust fund he had left them before reaching age sixty-five.

Crosby, Stills, and Nash

David Crosby, Stephen Stills, and Graham Nash came together in the late 1960s as idiosyncratic individual talents in flight from famous groups. Their 1969 debut album arguably initiated the dominance of singer-songwriters in popular music until the mid-1970s. After appearing at the Woodstock festival, augmented by Neil Young, they achieved a wider public role as the artistic apotheosis of the hippie ideals of "music, peace, and love." As the 1970s progressed, however, CSN(&Y) became infamous for an inability to show enough peace and love to one another to continue playing and recording music together.

David Crosby had been an integral member of folk-rock pioneers The Byrds until he left the group amidst acrimony in 1967. Crosby had first encountered Stephen Stills when the latter's band, Buffalo Springfield, supported The Byrds in concert in early 1966. In May 1968, just after the demise of Buffalo Springfield, Crosby and

Stills met disillusioned Hollies frontman Graham Nash. As suggested by the unassuming name, Crosby, Stills, and Nash was conceived as a loose collective in order to foster creative freedom and forestall the internal strife which each individual had experienced in his previous band. Yet, with the release of *Crosby, Stills and Nash*, CSN was hailed as a "supergroup," and not just because of their prestigious genealogy. Lyrics which concurred with the ideals of the "counter-culture" were immersed in acoustic guitars and immaculate vocal harmonies. Crosby and Stills' "Wooden Ships" envisioned a new Eden in the aftermath of nuclear apocalypse, while Nash's "Marrakesh Express" less grandly located utopia on the Moroccan hippie trail.

Stills' Buffalo Springfield colleague and rival Neil Young was recruited in June 1969 in order to bolster their imminent live shows. Ominously, there were squabbles over whether Young should get equal billing. With only one recently released record to their name, and in only their second ever concert performance, CSN&Y wowed the Woodstock festival in July 1969. There was a certain amount of manipulation involved in the rapid mythologization of CSN&Y as the epitome of the "Woodstock nation." Their manager, David Geffen, who also represented many of the other acts which appeared, threatened to withdraw his cooperation from the film of the festival unless CSN&Y's cover of Joni Mitchell's Woodstock was used over the opening credits. Their record label, Atlantic, disproportionately featured CSN&Y on two very successful soundtrack album sets. In contrast, CSN&Y's appearance at The Rolling Stones' disastrous free festival at Altamont in December 1969 was, as Johnny Rogan has observed, "effectively written out of rock history" by journalists sympathetic to the CSN&Y-Woodstock cause.

There were unprecedented pre-release orders worth over \$2 million for *Deja Vu*, released in March 1970. Though it was somewhat more abrasive than the debut album, due to the arrival of Young and his electric guitar, *Deja Vu* was suffused with hippie vibes. These were amusingly conveyed on Crosby's "Almost Cut My Hair," but Nash's "Teach Your Children" sounded self-righteous. In May 1970, CSN&Y rush-released the single "Ohio," Young's stinging indictment of President Nixon's culpability for the killing of four student protesters by the National Guard at Kent State University. After completing a highly successful tour in 1970 (documented on the double-album *Four-Way Street*), CSN&Y were lauded by the media as the latest American answer to the Beatles, a dubious honor first bestowed on The Byrds in 1965, but which CSN&Y seemed capable of justifying.

Instead, the foursome diverged into various solo ventures. While this was informed by their insistence that, in Crosby's words, "We're not a group, just one aggregate of friends," individual rivalries and the tantalizing example of Young's flourishing solo career were also determining factors. The flurry of excellent solo albums in the early 1970s, invariably featuring the "friends" as guests, only increased interest in the enigma of the "aggregate." When CSN&Y finally regrouped in 1974, popular demand was met by a mammoth worldwide tour of sport stadia which redefined the presentation, scale, and economics of the rock'n'roll spectacle. But CSN&Y failed to complete an album after this tour, and they never again attained such artistic or cultural importance. After further attempts at a recorded reunion failed, Crosby, Stills, and Nash eventually reconvened without Young for *CSN* (1977). The album was another huge seller and spawned CSN's first top 10 single, Nash's "Just a Song Before I

(From left) David Crosby, Stephen Stills, Graham Nash, and Neil Young, 1988.

Go.” Nevertheless, each member was past his peak in songwriting terms, and their musical style and political views were being vociferously challenged by punk rock and its maxim, “Never trust a hippie.”

Crosby was becoming ever more mired in cocaine and heroin addiction. A farcical series of drug-related arrests culminated in his incarceration in 1986. In that year’s “Hippie Dream,” Neil Young transformed Crosby’s personal fate into a fable of the descent of countercultural idealism into rock ‘n’ roll hedonism (“the wooden ships / were just a hippie dream / capsized in excess”). Crosby’s physical recovery resulted in a much-publicized first CSN&Y album in 18 years, *American Dream* (1988). The artistic irrelevance of Crosby, Stills, and Nash, however, was highlighted not only by comparisons between the new CSN&Y record and *Deja Vu*, but also by *Freedom* (1989), the opening salvo of Neil Young’s renaissance as a solo artist. In the early 1990s, while Young was being lauded as the “Godfather of Grunge,” Crosby, Stills, and Nash operated, as Johnny Rogan observed, “largely on the level of nostalgia. This was typified by their appearance at “Woodstock II” in August 1994. Young refused to appear with CSN, and instead designed a range of hats

depicting a vulture perched on a guitar, a parody of the famous Woodstock logo featuring a dove of peace. It was Young’s pithy comment on the commodification of a (counter) cultural memory with which his erstwhile colleagues were, even 25 years later, inextricably associated.

Crossword Puzzles

Once a peripheral form of entertainment, crossword puzzles have become a popular national institution. They appear in almost every newspaper, have become the focus of people's daily and weekend rituals, are published in their own books and magazines, appear in foreign languages—including Chinese—and have inspired other gridded word games like acrostic, cryptic, and diagramless puzzles.

Arthur Wynne constructed the first crossword, which appeared in 1913 in the *New York World*. His word puzzle consisted of an empty grid dotted with black squares. Solvers entered letters of intersecting words into this diagram; when correctly filled in, the answers to the “across” and “down” numbered definitions would complete, and hence solve, the puzzle. The layout and concept of the crossword has not changed since its inception.

Although crossword puzzles appeared in newspapers after Wynne's debut, the *New York Times* legitimized and popularized the pastime. The *Times*'s first Sunday puzzle appeared in the *New York Times Magazine* in 1942, and daily puzzles began in 1950.

Cruise, Tom (1962—)

Tom Cruise is perhaps the most charismatic actor of the 1980s and 1990s. Although initially dismissed as little more than a pretty face with a million dollar smile when he made his screen debut as a member of Hollywood's “Brat Pack” generation of youthful leading men in the early 1980s, he has demonstrated considerable staying power and fan appeal. At one point between 1987 and 1989, four of his films combined to post more than one billion dollars in box office receipts. Yet, at the same time, he has proven to be a very serious actor earning Academy Award nominations for “Best Actor” in 1989 in *Born on the Fourth of July*, in which he portrayed disabled Vietnam Vet Ron Kovic, and again in 1996 for a high energy performance in *Jerry Maguire*. The latter film, in fact, served as an extremely insightful commentary on many of the cocky, swaggering characters he had portrayed in such exuberant films as *Top Gun* (1986), *The Color of Money* (1986), *Cocktail* (1988), and *Days of Thunder* (1990).

Cruise made the jump to producer in 1996 with the blockbuster *Mission Impossible*, a big screen remake of the popular 1960s television series. In 1999, he took on his most challenging leading role in Stanley Kubrick's sexual thriller *Eyes Wide Shut*, teaming with his wife, Nicole Kidman.

Crumb, Robert (1943—)

Robert Crumb is the most famous and well respected of all underground comic artists, and the first underground artist to be accepted into the mainstream of popular American culture. His comics are notable for explicit, detailed, and unflattering self-confessions, in which strange sexual fantasies abound. When not writing about himself, he has targeted the American consumer-culture establishment, but also anti-establishment hippies and dropouts as subjects for his satire. Crumb's art veers from gritty, grubby realism to extremes of Expressionism and psychedelia. As both an artist and a writer, Crumb is a true original. Relentlessly unrestrained and impulsive, his work reflects few influences other than the funny animal comics of Carl Barks and Walt Kelley, and the twisted, deformed monster-people of *Mad* artist Basil Wolverton.

The Philadelphia-born Crumb lived his childhood in many different places, including Iowa and California. Seeking refuge from an alienated childhood and adolescence, he began drawing comics with his brothers Charles and Max. As a young adult he lived in Cleveland, Chicago, and New York before moving to San Francisco in 1967, the year he began his rise to prominence. He had worked for a greeting card company until he was able to produce comic books full time, and his first strips appeared in underground newspapers such as

Robert Crumb

New York's *East Village Other* before the first issues of his *Zap* comic book were published in 1967. *Zap* introduced many of Crumb's most popular characters, as well as the unforgettable "Keep On Truckin'" logo, and made a tremendous impact on the underground comics scene. In 1970, particularly dazzling examples of his bizarre and imaginative art appeared—with little in the way of story—in the excellent *XYZ Comics* (1970).

Among Crumb's most notable characters are Mr. Natural, a sort of sham guru who lives like a hedonist and prefers to tease, and occasionally exploit, his devotees rather than enlighten them, and his occasional disciple, Flakey Foont, emblematic of the suburban nebbish fraught with doubts and hang-ups. Others include Angelfood McSpade, a simple African girl exploited by greedy and lecherous white Americans, diminutive sex-fiend Mister Snoid, and Whiteman (a big-city businessman, proudly patriotic and moralistic yet inwardly repressed and obsessed with sex). But Crumb's most famous character is Fritz the Cat, who first appeared in *R. Crumb's Comics and Stories* (1969). Fritz, a disillusioned college student looking for freedom, knowledge, and counterculture kicks, became popular enough to star in the 1972 animated movie *Fritz The Cat*, directed by Ralph Bakshi, which became the first cartoon ever to require an X-rating. While the movie proved a huge success with the youth audience, Crumb hated the film and retaliated in his next comic book by killing Fritz with an ice pick through the forehead.

By the late 1990s, Crumb's comic-book work had been seen in a host of publications over the course of three decades. In the early days he was featured in, among other publications, *Yellow Dog*, *Home*

Grown Funnies, *Mr. Natural*, *Uneeda Comix*, and *Big Ass*. In the 1980s, he was published in *Weirdo* and *Hup*. In addition to his comic-book work, he became well known for his bright, intense cover for the *Cheap Thrills* album issued by Janis Joplin's Big Brother and the Holding Company in 1968. Though much of Robert Crumb's best-loved work was produced in the late 1960s and early 1970s, he reached a peak of widespread fame in the mid-1990s with the successful release of filmmaker Terry Zwigoff's mesmerizing documentary, *Crumb* (1995), which interspersed shots of Crumb's works between frank interviews with the artist and his family, and comments from media and culture critics. *Crumb* won the Grand Jury prize at the Sundance Film Festival and was widely praised by critics. The film's impact is twofold: viewers are stunned by Crumb's genius, while being both moved and disturbed by the images of an unfortunate and dysfunctional family. The film is honest in acknowledging controversial aspects of the artist's work, with critics on-camera pointing out the racist caricatures, perverse lust, and, above all, the overt misogyny that runs through much of Crumb's *oeuvre*. Some of those images have depicted scantily clad buxom women with bird heads, animal heads, or no heads at all.

Despite the controversy, however, the 1980s and 1990s brought a multitude of high quality Crumb compilations and reprints, including coffee-table books, sketchbooks, and complete comics and stories from the 1960s to the present. Meanwhile, his continuing output has included the illustration of short stories by Kafka and a book on early blues music. Profiles of Crumb have appeared in *Newsweek* and *People* magazines, and on BBC-TV, while his art has been featured at New York's Whitney Museum and Museum of Modern Art, as well as in numerous gallery shows in the United States, Europe, and Japan. His comic characters have appeared on mugs, T-shirts, patches, stickers, and home paraphernalia.

A fan of 1920s blues and string band music, Crumb started the Cheap Suit Serenaders band in the 1970s, with himself playing banjo, and recorded three albums. Remarkable in his personality as well as his work, the shy Crumb prefers to dress, not like a bearded longhair in the style of most male underground artists, but like a man-on-the-street from the 1950s, complete with suit, necktie, and short-brimmed hat. In 1993, he left California to settle in southern France with his wife and daughter.

Crystal, Billy (1947—)

Billy Crystal went from stand-up comedy to playing Jodie Dallas, American TV's first major gay character, on the sitcom *Soap* (1977-81). As a cast member on *Saturday Night Live* (1984-85), Crystal was known for the catch-phrases "you look mahvelous" and "I hate it when that happens." After he moved from the small screen to films, Crystal's endearing sensitivity and gentle wit brought him success in movies such as *Throw Momma from the Train* (1987), *When Harry Met Sally* (1989), and *City Slickers* (1991). He made his directorial debut with *Mr. Saturday Night* (1992), the life story of Buddy Young, Jr., a fictional Catskills comedian Crystal created on *Saturday Night Live*.

Cukor, George (1899-1983)

An American film director whose career spanned over fifty years, Cukor was particularly adept at female-centered melodrama (*Little Women*, 1933; *The Women*, 1939), romantic comedy (*The Philadelphia Story*, 1940; *Adam's Rib*, 1949), and musicals (*A Star Is Born*, 1954; *My Fair Lady*, 1964, for which he received a Best Director Oscar). Often derided as a workman-like technician, revelations about Cukor's homosexuality led to reappraisals of his work by, in particular, queer academics, who focused on his predilection for more 'feminine' genres and gender-bending narratives, as seen in *Sylvia Scarlett* (1935), for example. Cukor has thus, like fellow director Dorothy Arzner, come to be perceived as an auteur, whose sexual identity influenced the final form taken by the Hollywood material he handled.

Cullen, Countee (1903-1946)

Among the most conservative of the Harlem Renaissance poets, Harvard educated Countee Cullen exploded onto the New York literary scene with the publication of *Color* (1925) and solidified his reputation with *Copper Sun* (1927) and *The Black Christ and Other Poems* (1929). His verse defied the expectations of white audiences. Where earlier black poets like Paul Laurence Dunbar had written in dialect, Cullen's tributes to black life echoed the classical forms of Keats and Shelley. The young poet was the leading light of the African-American literary community during the 1920s. Although his reputation waned after 1930 as he was increasingly attacked for ignoring the rhythms and idioms of Black culture, Cullen's ability to

present black themes in traditional European forms made him one of the seminal figures in modern African-American poetry.

Cult Films

Cult films are motion pictures that are favored by individual groups of self-appointed connoisseurs who establish special meanings for the films of a particular director or star or those which deal with a particular theme. In practical terms, however, cult status can be conferred on almost any film. In fact, such an occurrence is particularly sought after by filmmakers to maintain interest in the film once its initial theatrical run has been completed. Thus cult films might be more accurately defined as those special films which, for one reason or another, "connect" with a hard-core group of fans who never tire of viewing them or discussing them.

Cult films, by their very nature, deal with extremes, eschewing, for the most part, middle of the road storylines and character stereotypes commonly seen in Hollywood studio products. These normally small movies present unusual if not totally outrageous protagonists involved in bizarre storylines that resolve themselves in totally unpredictable ways. According to Daniel Lopez's *Films by Genre*, cult films may be divided into three basic categories: popular cult, clique movies, and subculture films.

A prime example of the first type is George Lucas's 1977 *Star Wars*, which began as an evocation of the Saturday matinee serials of the 1940s and 1950s. Using a basic cowboys vs. Indians theme borrowed from the westerns of his childhood, Lucas updated the frontier theme by adding technology and relocating the drama to outer space. His effort, while failing to do much for the Western, created a resurgence of interest in the science fiction and "cliffhanger" serial genres. In the years that followed, Hollywood was inundated with sci-fi thrillers, of which the most popular were the *Star Trek* sagas. At the same time, another Lucas creation, the Indiana Jones films, showed that there was still some interest in action adventure serials, a fact that was further illustrated by Warner Bros. resurrection of the Batman character, who had first come to the screen in the multi-episode adventure short subjects of the 1940s. *Star Wars* elevation to cult status was re-affirmed when it was re-released in theaters in 1997 and broke all existing box-office records as its fans rushed to view it over and over.

Yet widespread popularity and big box office receipts are usually the antithesis of what most cult films are about, a fact

illustrated by the so called “clique” films that appeal to a select few. These are films that tend to be favored by special interest groups such as film societies, cinefiles, and certain academics. Generally speaking the films that appeal to cliques are either foreign, experimental, or representative of a neglected genre. In the latter case, in particular, proponents of a specific film usually believe that it has either been overlooked or misinterpreted by filmgoers at large. They rediscover the works of “B” movie directors such as Douglas Sirk or Sam Fuller and, through retrospective screenings and articles in film journals, attempt to make the case for their status as auteurs whose body of works yield a special message heard only by them. In many cases, the cult status awarded these directors has led to a re-evaluation of their contributions to film by historians and scholars and to the distribution of new prints of their works.

This process also works with individual films made by established directors that somehow made only a slight impact during their initial theatrical runs. The major example is Frank Capra’s *It’s a Wonderful Life* (1946). Originally dismissed as a sentimental bit of fluff, the film was seen primarily at Christmas Eve midnight screenings for its faithful band of adherents until the 1980s, when it was rediscovered by television and designated a classic. Similar transformations have occurred for John Ford’s *The Searchers* (1956) and, surprisingly, Victor Fleming’s *The Wizard of Oz*, which was first released in 1939 to a lackluster reception and did not make money until its second and third re-releases in the late 1940s.

The third type of cult film and, perhaps, the first one that comes to mind for the average person is the “subculture cult film.” These are small films created in a cauldron of controversy, experimentation, and contention in every aspect of their production ranging from story themes to casting. They are often cheaply made and usually don’t last long at the box-office. Yet, to their fans, these films contain special messages sent by the filmmakers and by the stars. Through word-of-mouth contacts and, increasingly, by a variety of new media including video and the Internet, cultists recruit new fans for the film, thus serving to keep it alive well beyond its maker’s original intentions. What is particularly fascinating, however, is the fact that all over the world, a certain segment of filmgoers will react to these exact films in the same way without word-of-mouth or advance indoctrination as to its special status. This is the true measure of a film’s cult potential.

The fanatical appeal of these subculture favorites has also altered the traditional patterns of movie going and the unique role of the audience. In traditional viewing, the audiences are essentially passive, reacting to onscreen cues about when to laugh or cry and whom to root for. The subculture film audience, however, takes on an auteurial role on a performance-by-performance basis. This is due to the fact that the viewers have seen the film so many times that they know all of the lines and the characters by heart. Thus, they attend the screening in the attire of their favorite characters and, once that character appears on the screen, begin to shout out new dialogue that they have constructed in their minds. The new script, more often than not, alludes to the actor’s physical characteristics or foreshadows future dialogue or warnings about plot twists. In many cases, audience members will yell out stage directions to the actor, telling him that he should come back and turn out a light or close a door.

Perhaps the most notable example of this auteuristic phenomenon is the undisputed queen of cult films, the British production *The Rocky Horror Picture Show* (1975), which treats the plight of two newlyweds, Brad (Barry Bostwick) and his virgin bride Janet (Susan Sarandon), who become trapped in a spooky house on a rainy night in

Ohio. They are met by a group of fun loving aliens from the planet Transylvania who are being entertained by Dr. Frankenfurter (Tim Curry), who struts around in sexy female underwear and fishnet stockings belting out gender bending tunes such as “I’m a Sweet Transvestite From Transsexual Transylvania.” He is in the process of creating a Frankenstein type monster, Rocky Horror (Peter Hinwood), to be employed strictly for sexual purposes. During the course of the evening, however, he manages to seduce both of the newlyweds and also causes a suddenly liberated Janet to pursue a fling with Rocky Horror, as well.

The film proved to be a box-office disaster when it was released in 1975 but it did develop an underground “word-of-mouth” reputation, causing its American producer, Lou Adler, to convince Twentieth-Century Fox to search for alternative ways to publicize it in order to prevent a total disaster. The film was re-released at the Waverly Theater in Greenwich Village and soon after at theaters throughout the country for midnight performances. Its first audiences consisted primarily of those groups represented in the film—transvestites, gays, science fiction fans, punk rockers, and college psychology majors (who presumably attended to study the rest of the audience).

For its avid viewers, attendance at a midnight screening began to take on the form of a ritual. In addition to wearing costumes, members of the audience would talk to the screen, create new dialogue, dance in the aisles, and shower their fellow viewers with rice during the wedding scene and water during the rainy ones. Experienced fans, of course, attended with umbrellas but virgins (those new to the film) generally went home bathed in rice and water. In the years since its first screenings, the film has become a staple at midnight screenings around the country and has achieved its status as the most significant cult film of all time.

Performers in subculture films have acquired cult followings as well. Many hard-core fans, in fact, view their favorite performers as only revealing their real personalities in their “special” film. In attempting to interpret the actor’s performance in this context, the fans will also bring into play all of the performer’s previous characterizations in the belief that they have some bearing on this particular role. To such fans, the actor’s whole career has built toward this performance. Although this perception has had little effect on the careers of major stars, at least during their lifetimes, it has enhanced the careers of such “B” movie icons as Divine and horror film actor Bruce Campbell, making them the darlings of the midnight theatrical circuit and major draws at fan conventions. Even deceased performers have been claimed by cult film devotees. The screen biography of Joan Crawford, *Mommie Dearest* (1981), elevated—or lowered—her from stardom to cult status, and Bela Lugosi attracted posthumous fame with fans who revisited his old horror films with an eye to the campy elements of his performances.

While not everyone agrees on which films are destined to achieve special status with subcultures, a great many of them fall into the horror and science fiction genres. The horror films that appeal to this audience share most of the characteristics of cult films in general. They are only rarely major studio productions but they frequently “rip off” such larger budgeted mainstream productions as *The Exorcist* (1973), *The Omen* (1976), or the various manifestations of Bram Stoker’s *Dracula*. Cult horror films inhabit the margins of the cinema in pursuit of off-beat themes, controversial subject matter, and shocking scenes of mayhem. They are either so startlingly original as to be too “far out” for most viewers or they are such blatant derivations of existing films that they are passed over by general audiences and critics alike.

Horror films take on a special status with cultists for a number of reasons. First and foremost is the authorial role certain films allow the audience to play. Most horror film directors do not intend to send out a specific message with their work. They simply want to make some money. For this reason, most plots involve a demonic disruption in the normal order of things which must be righted by each film's protagonist before the status quo can be restored. This fundamentally safe view of the world allows the audience to write its own text with any number of subjective meanings regardless of what happens in the story as a whole. The conservative stance of the filmmakers leaves plenty of room for re-readings of the text to allow issues incorporating a questioning of authority, a rejection of government and the military-industrial complex, sexism, and a host of environmental concerns that inevitably arise when horror films deal with the impact of man upon nature. Perhaps the first cult horror film to raise such issues was Tod Browning's *Freaks* (1932), which was banned for 30 years following its initial release. The film basically dealt with the simple message that beauty is more than skin deep. When the protagonist, a circus trapeze star, attempts to toy with the affections of a side show midget, she is set upon by the side show "freaks," who transform her physical beauty into a misshapen form to reflect the ugliness within her. While Browning was clearly attempting an entertaining horror film which stretched the boundaries of the genre, there is no evidence that he intended the many metaphysical meanings regarding the relationship of good and evil and body and soul that audiences have brought to the film in the 60 years since its initial release.

Another film, 1956's *Invasion of the Body Snatchers*, has been celebrated by scholars as a tract against the McCarthyism of the 1950s, though it is probably more rightly read as a more general statement against conformity and repression of individual thought that transcends its period. Similarly, George Romero's legendary *Night of the Living Dead* (1968) was not only the goriest movie of its time but it also worked on our basic fears. Like its inspiration, Alfred Hitchcock's *The Birds* (1963), it deals with a group of people confined to a certain geographic area while nature runs amok because man has transgressed against the natural law. The film is particularly effective because it deals with gradations of insanity, beginning with stark fear and escalating to show that man is totally powerless to deal with the things that he fears most. Audiences sat riveted to their seats, convinced that there was no way out except death. The film began as the second feature on drive-in movie double bills and, through strong word-of-mouth and gradual acceptance from critics, took on a second life in college retrospectives and museum screenings (where it was declared a masterpiece) before winding up on the midnight movie circuit.

Another reason for the cult appeal of low budget horror films is the fact that they often push the limits of what is traditionally thought to be acceptable. For example, the legendary *Blood Feast* (1976) became the first film to go beyond mere blood to the actual showing of human entrails, a technique that was later picked up by Hollywood for much larger special effects laden films. Another low budget film, *Evil Dead II* (1987), directed by Sam Raimi, surpassed its bloody predecessor presenting extreme violence at such a fast pace that the human eye could barely register the images flashing by.

A final appeal of low budget horror films is the fact that a number of major actors and directors—including Jack Nicholson, Tom Hanks, Francis Ford Coppola, and Roger Corman—got their start in them. Corman once referred to these pictures as a film school where he learned everything he would ever need to become successful in motion pictures. But it worked the other way as well. Many stars on

the downslope of their careers appeared in grade "B" horror films to keep their fading careers alive, hoping that they might accidentally appear in a breakthrough film. Former box-office stars—including Boris Karloff (*The Terror*), Bela Lugosi (*Plan Nine From Outer Space*), Yvonne DeCarlo (*Satan's Cheerleaders*), and Richard Basehart (*Mansion of the Doomed*)—who had been forgotten by Hollywood received a new type of stardom in these grade "B" films, and often spent the last years of their careers appearing at comic book and horror film conventions for adoring fans.

Science fiction films are very similar to horror movies in that they push the cinematic envelope by their very identification with their genre. They are futuristic, technologically-driven films that employ astonishing special effects to create a world that does not yet exist but might in the future. Sci-fi movies can also be horror films as well. It took technology to create the Frankenstein monster and it took technology to encounter and destroy the creature in *Alien* (1979). But, like horror films, they also question the impact of man and his technology on the world that he lives in. They make political statements through their futuristic storylines, saying, in effect, that 20 or more years in the future, this will be mankind's fate if we do not stop doing certain things.

Science fiction films that achieve cult status do so because, even within this already fantastic genre, they are so innovative and experimental that they take on a life of their own. With the exceptions of the *Star Wars*, *Star Trek*, and *Planet of the Apes* series and a number of individual efforts such as *2001* (1968), the films that attract the long term adulation of fans are generally not large studio products. They are normally small films such as the Japanese Godzilla pictures; minor films from the 1950s with their dual themes of McCarthyism and nuclear monsters; and low budget favorites from the 1970s and 1980s.

Again, as in horror, the pictures seem to fall into three categories of fan fascination. These include films such as *Brain Eaters* (1958), *Lifeforce* (1985), and *The Incredible Two-Headed Transplant* (1971) that feature major stars such as Leonard Nimoy, Patrick Stewart, and Bruce Dern on the way up. Conversely, a number of major stars ranging from Richard Burton and Henry Fonda appeared in some otherwise forgettable science fiction films during the twilight of their careers which have made their performances memorable to aficionados of embarrassing moments on film. Still other stars, however, are able to turn almost any film that they are in into a sci-fi cult film. The list is headed by Zsa Zsa Gabor, Vincent Price, Bela Lugosi, and John Agar.

In the final analysis, cult films say more about the people who love them than about themselves. To maintain a passion for a film that would compel one to drive to the very worst parts of town dressed in outlandish costumes to take part in a communal viewing experience sets the viewer apart as a special person. He or she is one of a select few that has the ability to interpret a powerful message from a work of art that has somehow escaped the population at large. In pursuing the films that they love, cultists are making a statement that they are not afraid to set themselves apart and to take on the role of tastemakers for the moviegoers of the future. In many cases, the films that they celebrate influence filmmakers to employ new subjects, performers, or technology in more mainstream films. In other instances, their special films will never be discovered by the mainstream world. But that is part of the appeal: to be different, to be "out there," is to be like the cult films themselves.

—Steve Hanson

Cults

The 1978 Jonestown Massacre, where 913 of the Reverend Jim Jones' followers were forced to commit suicide, marked the high point in America's condemnation of cults. Spread across newspaper front pages and national magazines from coast to coast, the slaughter gave focus to an alarm that had grown throughout the decade. Were cults spreading like wildfire? Were Rasputin-like religious leaders luring the nation's youth into oblivion like modern-day Pied Pipers? The Jonestown coverage reinforced the common perception that, in cults, America harbored some alien menace. The perception could not be further from the truth. In a sense, America was founded by cults, and throughout the nation's history, cults and splinter groups from established religions have found in America a fertile cultural terrain. That modern-day Americans find cults alarming is yet another example of America's paradoxical culture.

Webster's Collegiate Dictionary defines a cult as "a religion regarded as unorthodox and spurious; also: its body of adherents." Cults as they are understood in the popular imagination have some additional characteristics, and can include: any religious organization that spends an inordinate amount of time raising money; any religion that relies on a virulent us-vs.-them dogmatism, thereby alienating its members further from mainstream society; and any religion where the temporal leader holds such sway as to be regarded as a deity, a deity capable of treating cult members as financial, sexual, or missionary chattel to be exploited to the limits of their endurance. In this expanded definition, a Pentecostal such as Aimee Semple McPherson, the Los Angeles preacher, and not technically a cult leader, fits adequately into the definition, as does Jim Jones, Charles Manson, or Sun Myung Moon.

Originally, America was a land of pilgrims, and the Plymouth colonists were not the last to view the New World as a holy land. And as in all times and all religions, religious charlatans were a constant. By the close of the nineteenth century, Americans had founded some peculiar interpretations of Christianity. The Mormons, Seventh Day Adventists, Christian Scientists, and Jehovah's Witnesses all had their origins in the nineteenth century, and by dint of accretion, they had developed from dubious, persecuted faiths into respectable institutions. In the history of Mormonism one can discover much that is pertinent to understanding modern-day cults; elements of this tale

are reminiscent of the histories of Scientology, The Unification Church, and People's Temple, among others. A charismatic leader, claiming divine inspiration and not above resorting to trickery, amasses a following, who are viewed with derision by the general populace. The faith aggressively recruits new members and later attempts to gloss over its dubious origins, building enormous and impressive edifices and going out of its way to convey an image of solidity.

From time to time, waves of religious fervor have swept across America—the Shakers and Pentecostals early in the nineteenth century, for instance, or the Spiritualist and Theosophy movements at century's end. In western New York state, where the Church of Latter Day Saints originated, so many evangelical movements caught fire in the 1820s that it was nick-named the "Burned-over District." The church's founder, Joseph Smith, claimed to have received revelation directly from an angel who left Smith with several golden tablets on which were inscribed the story of Hebraic settlers to the New World. Smith and his band of youthful comrades "was regarded as wilder, crazier, more obscene, more of a threat" writes Tom Wolfe, "than the entire lot of hippie communes put together." Smith's contemporaries called him "a notorious liar," and, "utterly destitute of conscience" and cited his 1826 arrest for fortune-telling as evidence of his dishonesty. But by the time Smith fled New York in 1839, he was accompanied by 10,000 loyal converts who followed him to Nauvoo, Illinois, with an additional 5,000 converts from England swelling their numbers. After Smith began a systematic power-grab, using the Mormon voting block in gaining several elected positions, he was lynched by the locals, and (shades of Jim Jones' flight to Guyana) the Mormons continued westward to Utah, where the only threat was the Native Americans.

An earnest desire to bring people into the fold has often devolved into hucksterism in the hands of some religious leaders. Throughout the twentieth century, Elmer Gantry-esque religious leaders, from the lowly revivalist preacher to the television ministries of a Jimmy Swaggart or Oral Roberts, have shown as much concern with fleecing their followers as with saving their souls. When the founder of the Church of Christ, Scientist, Mary Baker Eddy, died in 1910, she left a fortune of three million dollars. George Orwell once mused that the best way to make a lot of money is to start one's own religion, and L. Ron Hubbard, founder of Scientology, took Orwell's maxim to heart.

A pulp fiction writer by trade, Hubbard originally published his "new science of Dianetics," a treatise on the workings of the mind, in the April, 1950 issue of *Astounding Science Fiction*. Dianetics was a technique for self-actualization and understanding, and Hubbard couched his theories in scientific rhetoric and obscure phraseology to appeal to a well-educated, affluent constituency. Published in book form, *Dianetics* became an overnight success, and Hubbard quickly set up a "research institute" and began attracting adherents. Dianetics, as practiced by Hubbard, straddled the gap between the self-actualization movements typical of later religious cults, and religion (though Scientology's mythos was not set down until shortly before Hubbard's death). In *Dianetics*, an auditor ran a potential follower through a list of questions and their emotional response was measured with an e-meter, a simple galvanic register held in both hands. This meter revealed the negative experiences imprinted in one's unconscious in an almost pictorial form called an engram, and *Dianetics* promised to sever the unconscious connection to negative experiences and allow the follower to attain a state of "clear," an exalted state similar to enlightenment. Hubbard's idea appeared scientific, and like psychotherapy, it was an inherently expensive, time-consuming process.

From the beginning, Hubbard ran into all manner of legal troubles. He squabbled with the I.R.S. over the church's tax-exempt status, and the F.D.A. over the use of the e-meter. Scientology met stiff government opposition in every country in which it operated. An Australian Board of Inquiry, convened in 1965, called Scientology "evil, its techniques evil, its practice a serious threat to the community, medically, morally, and socially. . . . Scientology is a delusional belief system, based on fictions and fallacies and propagated by falsehoods and deception"; it was banned from Australia until 1983. The British government banned foreign Scientologists in 1968, and Hubbard was convicted on fraud charges, *in absentia*, by a Paris court in 1978. The Church lost its tax-exempt status in France and Denmark in the mid-1980s, and has had to seriously curtail its operations in Germany. More than most cults, Scientology's travails appeared to be symptomatic of its founder's mental instability. As an institution, Scientology was marked by an extreme fractiousness and a pronounced penchant for litigation. Ruling in a 1984 lawsuit brought by the church, a Los Angeles judge stated, "The organization clearly is schizophrenic and paranoid, and this bizarre combination seems to be a reflection of its founder."

In many ways Scientology anticipated the tactics of the wave of cult groups that would sweep America in the 1960s and 1970s. There numbers are almost innumerable, therefore, a look at two of the most infamous—the Unification Church and the Hare Krishnas—must suffice to explain this religious revival, what Tom Wolfe termed "the Third Wave." Better known by the pejorative term, Moonies, in 1959, the Unification Church, a radical offshoot of Presbyterianism, founded its first American church in Berkeley. Its founder, the Reverend Sun Myung Moon, converted from his native Confucianism as a child, receiving a messianic revelation while in his teens. Moon was expelled from his church for this claim, as well as his unorthodox interpretation of Christianity, but by the late-1950s he had established a large congregation and the finances necessary to begin missionary work abroad. Like many cults, the church's teachings were culturally conservative and spiritually radical. Initially, it appealed to those confused by the rapid changes in social mores then prevalent, offering a simple theology and rigid moral teachings.

The Unification Church was aggressive in its proselytizing. Critics decried its recruitment methods as being callous, manipulative, and deceitful; the charge of brainwashing was frequently leveled against the church. Adherents preyed on college students, targeting the most vulnerable among them—the lonely, the disenfranchised, and the confused. The unsuspecting recruit was typically invited over to a group house for dinner. Upon arrival, he or she was showered with attention (called "love-bombing" in church parlance), and told only in the most general terms the nature of the church. The potential member was then invited to visit a church-owned ranch or farm for the weekend, where they were continually supervised from early morning until late at night.

Once absorbed, the new member was destined to take his/her place in the church's vast fund-raising machine, selling trinkets, candy, flowers, or other cheap goods, and "witnessing" on behalf of the church. Often groups of adherents traveled cross country, sleeping in their vehicles, renting a motel room once a week to maintain personal hygiene, in short, living lives of privation while funneling profits to the church. Moonie proselytizers were known for their stridency and their evasions, typically failing to identify their church affiliation should they be asked. On an institutional level, the church resorted to this same type of subterfuge, setting up dozens of front

groups, and buying newspapers and magazines—usually with a right-wing bias (Moon was an avowed anti-Communist, a result of his spending time in a North Korean POW camp). The Unification Church also developed an elaborate lobbying engine; it was among the few groups that actually supported Richard Nixon, organizing pro-Nixon demonstrations up until the last days of his administration. Allusive, shadowy connections to Korean intelligence agencies were also alleged. The church, with its curious theology coupled with a rabid right-wing agenda, was and is a curious institution. Like Hubbard, many Christian evangelists, and other cult leaders, Moon taught his followers to be selfless while he himself enjoyed a life of luxury. But the depth and scope of his political influence is profound, and among cults, his has achieved an unprecedented level of political power.

Like the Unification Church, the International Society for Krishna Consciousness (ISKCON), better known as the Hare Krishna movement, has drawn widespread criticism. Unlike the Unification Church, the Hare Krishnas evince little concern for political exigencies, but their appearance—clean-shaven heads and pink sari—make the Hare Krishnas a very visible target for anti-cult sentiments, and for many years, the stridency of their beliefs exacerbated matters. A devout Hindu devotee of Krishna, A.C. Bhaktivedanta Swami Prabhupada, was charged by his guru with bringing Hinduism to the west. Arriving in America in 1965, Prabhupada's teachings became popular with members of the emerging hippie populace, who adopted the movement's distinctive uniform, forswearing sex and drugs for non-chemical bliss. Hare Krishnas lived in communes, practicing a life of extreme asceticism and forsaking ties with family and friends. Complete immersion in the group was de rigueur. The movement spread rapidly, becoming infamous for its incessant street proselytizing, in which lines of devotees would play percussion instruments while chanting for hours. The sect's frequenting of airports and train stations, importuning travelers with flowers or Prabhupada's translation of the classic Indian text, the Bhagavad-Gita, also drew public scorn. Like the Moonies, the Hare Krishna's fundraising efforts helped turn public opinion against the cult.

In the 1970s, as more and more American joined such groups as the Unification Church, the Hare Krishnas, or the "Jesus People" (an eclectic group of hippies who turned to primitive charismatic Christianity while retaining their dissolute fashions and lifestyle), parental concern intensified. An unsubstantiated but widely disseminated statistic held that a quarter of all cult recruits were Jewish, provoking alarm among Jewish congregations. To combat the threat, self-proclaimed cult experts offered to abduct and "deprogram" cult members for a fee, and in the best of American traditions, deprogramming itself became a lucrative trade full of self-aggrandizing pseudo-psychologists. The deprogrammers did have some valid points. Many cults used sleep deprivation, low-protein diets, and constant supervision to mold members into firmly committed zealots. By stressing an us-vs.-them view of society, cults worked on their young charges' feelings of alienation from society, creating virtual slaves who would happily sign over their worldly possessions, or, as was the case with a group called the Children of God, literally give their bodies to Christ as prostitutes.

For those who had lost a child to a cult, the necessity of deprogramming was readily apparent. But in time, the logic of the many cult-watch dog groups grew a bit slim. If anything, the proliferation of anti-cult groups spoke to the unsettling aftershocks of the 1960s counterculture as much as any threat presented by new religions. Were all religious groups outside the provenance of an

established church to be equally condemned? Were all religious beliefs that weren't intrinsically exoteric to be rejected out of hand? By stressing conformity, many watch-dog groups diluted their moral authority.

Ironically, while cult watchdog groups focused public outrage on the large, readily identifiable cults—Scientology, ISKCON, the Unification Church—it was usually the smaller, homegrown varieties that proved the most unstable. Religions are concerned with self-perpetuation. When a charismatic leader dies, stable religious groups often grow more stable and moderate and perpetuate themselves (as has the now respectable Church of Latter Day Saints). But smaller cults, if they do not dissolve and scatter, have often exploded in self-destruction. The People's Temple, the Branch Davidians (actually a sect of Presbyterianism), and the Manson Family were such groups. In 1997, Heaven's Gate, a cult with pronounced science fiction beliefs based in California, committed mass suicide in accordance with the passing of the Hale-Bopp comet.

The Jonestown massacre in the Guyanese jungle in 1978 marks the period when cult awareness was at its height, although incidents like the Heaven's Gate mass suicide have kept cults in the headlines. Such is the degree of public suspicion of cults that, when necessary, government agencies could tap into this distrust and steer blame away from their own wrongdoing, as was the case when the Bureau of Alcohol, Tobacco, and Firearms and the F.B.I. burned the Branch Davidian compound in Waco, Texas, to the ground in 1993 after followers of cult leader David Koresh refused to surrender themselves to authorities. At the time of the massacre, media reportage was uniform in its condemnation of Koresh, and vociferous in its approval of the F.B.I.; it was only with the release of *Waco: The Rules of Engagement*, a 1997 documentary on the FBI's mishandling of the situation, that a dissenting note was finally heard.

America is not unique in its war between the "positive," socializing aspects of religion, and the esoteric, ecstatic spiritualism running in counterpoint beside it. "As Max Weber and Joachim Wach have illustrated in detail," writes Tom Wolfe, "every major modern religion, as well as countless long-gone minor ones, has originated not with a theology or set of values or a social goal or even a vague hope of a life hereafter. They have all originated, instead, with a small circle of people who have shared some overwhelming ecstasy or seizure, a 'vision,' a 'trance,' an hallucination; in short, an actual neurological event." This often-overlooked fact explains the suspicion with which mainstream religions view the plethora of cults that rolled over America since its founding, as well as the aversion cult members show to society at large once they have bonded with their fellows in spiritual ecstasy. It is precisely these feelings of uniqueness, of privileged insight, that fraudulent cult leaders work on in their efforts to mold cult members into spiritual slaves. The problem is this: not all cults are the creation of charlatans, but the opprobrium of society towards cults is by now so ingrained that on the matter of cults, there is no longer any question of reconciling the historical precedent with the contemporary manifestation.

But one salient fact can still be gleaned from the history of cults in modern America: to quote H.L. Mencken, "nobody ever went broke underestimating the intelligence of the American people." Americans are and will continue to be endlessly susceptible to simple, all-encompassing explanations, and what most cults share is a rigid dogmatism that brooks no argument, a hermetically sealed belief-system, eternally vulnerable to exposure from the world-at-large. The rage of a Jim Jones or Charles Manson springs from not only their personal manias, but in their impotence in controlling the world to suit

their teachings. When cults turn ugly and self-destructive, it is often in reaction to this paradox. Like a light wind blowing on a house of cards, cults are fragile structures—it does not take much to set them tumbling down. Still, given mankind's pressing spiritual needs, and despite society's abhorrence, it seems likely that cult groups will continue to emerge in disturbing and occasionally frightening ways.

Cunningham, Merce (1919—)

The dancer and choreographer Merce Cunningham influenced 20th century art with his postmodern dance and his collaborations with other important figures of the American art scene such as John Cage, Robert Rauschenberg, and Andy Warhol. With his own dance company, founded in 1953, Cunningham challenged traditional ideas of dance and the expectations of audiences. Cunningham declared all elements of a performance—music, dancing bodies, set, and costumes—to be of equal importance, and dispensed with conventional plots. His pioneering video work further questioned the use of the stage. Cunningham and his collaborators incorporated chance into the elaborate systems of their performances, creating abstract and haunting dances.

Curious George

Since 1941, when Curious George was first introduced in an eponymous children's book, the mischievous monkey has been embraced by children and adults alike and has become a cultural icon. The hero of seven books for children co-created by H. A. and Margaret Rey, Curious George retains his appeal because he is like a universal child who often does what his readers are too afraid to do. As well-known author Madeleine L'Engle writes in the introduction to *The Complete Adventures of Curious George*, "George, like most true heroes, is a creature of action; he acts, rather than being acted upon."

Often referred to as the "father" of Curious George, Hans Augusto Rey (1898-1977) began drawing at the age of two. He had a passion for animals, which could be seen in his initial drawings and the menagerie of animals he kept as pets over the years. In his native Hamburg, Germany, H. A. often visited the nearby Hagenbeck Zoo, where he perfected his animal imitations. A love of languages helped H. A. to master four different tongues and encouraged a lifelong fascination with the study of linguistics. As a soldier fighting in World War I, H. A. would pass the time by studying the constellations

An illustration depicting Curious George.

in the evening sky. His interest in astronomy would later lead to two books on the subject, one written for a younger audience and the other for a more advanced reader.

Prior to leaving Germany in 1923 for Rio de Janeiro, H. A. met Margaret (1906-1996) through mutual friends. While H. A. was selling bathtubs in Brazil for a relative's firm, Margaret was studying art at the Bauhaus in Dessau, the Academy of Art in Dusseldorf, and attending art school in Berlin. She worked as a newspaper reporter and a copywriter for an advertising agency. In her memoir, included in *The Complete Adventures of Curious George*, Margaret explains how writing a jingle for a margarine campaign inspired a lifelong distaste for commercials.

In 1935 Margaret left Germany for Rio, where she and H. A. became collaborators in business as well as in life. According to Margaret, they formed "a sort of two-person advertising agency, doing a little of everything..." to make ends meet. After their marriage in 1936, the Reys traveled to Paris, planning to spend only a few weeks. Instead, their visit lasted four years. It was here in Paris that the little monkey first appeared on paper. H. A. had drawn funny illustrations of a giraffe for a Parisian magazine, which caught the attention of French publishing house Gallimard, who approached the illustrator about writing a children's story using the drawings. The result was *Cecily G. and the Nine Monkeys*. This book, which featured a monkey named George, led to other children's books, and if not for the start of World War II, the Reys might have remained in Paris.

In a tale that has become as legendary as their fictional creation, the Reys escaped Paris on bicycles one rainy morning in June of 1940. Strapped to their bike racks were their manuscripts, which included a draft of their first book, *Curious George*. Abandoning their bikes at the French-Spanish border, the Reys hopped a train to Lisbon. By October of that same year, they arrived in New York intent on selling their stories. Shortly after their arrival, they sold *Curious George* to publishers Houghton Mifflin, who released the book in 1941. For the next 20 years, the Reys lived and worked in New York, turning out six more Houghton Mifflin books about the curious monkey and his trusted companion, the man with the yellow hat.

According to Margaret, the Reys did not want to write another book about Curious George, and they took nearly six years to do other things before they published *Curious George Takes a Job* in 1947. Despite their apparent simplicity, the Curious George books took nearly a year to write and were often quite challenging for the couple. "Sometimes, it became more like mathematics than writing a book," Margaret once told an interviewer. Inspiration came from many places: friends, newspaper stories, even chance conversations with strangers. Generally, H. A. presided over the illustrations and Margaret wrote the stories, but the books more often were a complicated merger of the couple's various talents. As Margaret writes in her memoir, "at times it confused even us."

Many have pondered the appeal of Curious George since the first book appeared in 1941. Children like how the pictures tell the story, which liberates non-readers from their literate older brothers, sisters, or parents, and allows them to tell themselves the stories again and again. H. A.'s illustrations deftly capture a sense of George's mischievousness. In *Curious George*, the little monkey takes an unexpected swim in the ocean on his voyage from Africa to the United States, and the illustration of George coughing up sea water and swallowing fish delightfully conveys the results of his curiosity. Children also can

relate to George's curiosity and the trouble this frequently inspires. When the Reys wrote, "George promised to be good, but sometimes little monkeys forget. . .," they could have been writing about any little girl or boy. While George's adventures are thrilling, they also can be scary, and the man with the yellow hat adds a soothing quality to the stories since he often helps George out of his scrapes. George also shows readers that it is okay to be afraid and to cry, but his quick mind demonstrates the benefits of becoming self-reliant, too. Above all, Curious George entertains and delights readers of all ages.

In the 1960s, after writing nearly all of the seven *Curious George* books, the Reys moved from New York to Massachusetts. After a long illness, H. A. died in 1977. In the 1980s, Margaret and collaborator Alan J. Shelleck worked together on a second series of Curious George stories. Through various licensing agreements carefully selected by Margaret and secured through a series of legal battles in the 1990s, the instantly recognizable image of the curious little monkey began appearing on greeting cards, children's toys, clothing, and even CD-ROMs. Since 1941 when the first book appeared, the *Curious George* stories have sold more than 20 million copies and continue to have solid sales each year. *Curious George* sales received a boost in 1994 when the movie *Forrest Gump* featured a scene with Forrest's mother (played by Sally Field) reading a *Curious George* book to her son (played as an adult by Tom Hanks).

Poet W. H. Auden once wrote that a good children's book also should interest a clever adult. If this is true, then the *Curious George* series certainly qualify as good children's books. The stories have been translated into many languages, which further demonstrates their wide appeal. "It does not matter much that there are some I cannot read," wrote Margaret about the different language versions of her books. "It so happens that I know the story."

Currier and Ives

The decorative and hugely popular colored lithographs mass produced by Currier and Ives in the nineteenth century and familiar to subsequent generations through Christmas cards and calendars illustrate sporting scenes and sailing ships, noteworthy triumphs and disasters, Indian uprisings and comic vignettes, rustic beauty and domestic bliss, and, in general, evoke an idealized and sentimental view of life in nineteenth-century America. Typically, a well-known artist's work would be reproduced as a black-and-white lithograph, hand colored by a team of women, and distributed by the thousands at costs ranging from a few cents to a few dollars, depending on size. The firm was founded in New York City in 1834 by Nathaniel Currier, employed James Merritt Ives in 1852, and became Currier and Ives in 1857; the two were succeeded by their sons, who managed the company until its closing in 1907, by which time more than seven thousand different prints had been produced.

D

Dahmer, Jeffrey (1960-1994)

At his 1992 trial, Jeffrey Dahmer, an alcoholic worker in a chocolate factory, admitted to the murder of seventeen young men during a thirteen-year killing spree. His gruesome full disclosure, including accounts of cannibalism, fired the popular imagination and helped spawn a virtual cottage industry of books, trading cards, movies, and other products. But behind the monstrous ghoul of popular imagination, there lurked a desperately lonely young man whose killings were the result of years of progressive mental illness.

While pregnant with Dahmer, his mother, Joyce, endured a particularly trying pregnancy, suffering extended bouts of nausea and nervousness and strange fits of rigidity. Doctors prescribed morphine and phenobarbital, among other medications. At one point Joyce was taking twenty-six pills a day, immersing her fetus in a soup of powerful depressants. Joyce Dahmer also found nursing to be acutely unpleasant and within a week of Dahmer's birth was nursing him from a bottle. Nevertheless, Dahmer grew into a happy, normal child, although displaying an aversion to the roughhousing of most boys and a predilection for nonconfrontational games based on themes of stalking and concealment, such as hide-and-seek or kick the can. But after a hernia operation, six-year-old Dahmer's behavior changed profoundly. He became remote, fearful, and distant—sitting for hours

Jeffrey Dahmer

in front of the television without moving. Even his body language changed. His movements grew stiff and labored, like those of an old man.

By the time he began grade school, Dahmer had become so shy and reclusive that a teacher felt compelled to bring his behavior to his parents' attention. Nothing was done, and young Dahmer grew increasingly remote, submerged in a realm of unpleasant fantasies and, in increasing degrees, alcohol. In early adolescence, he often occupied himself by collecting road kills, stripping the flesh and assembling the bones in a nearby wood—once mounting a dog's head on a stick as a bizarre totem. In his late teens, Dahmer's obsessions had begun to overwhelm him. So fearful was he of others that he could only relate to them as inert objects. In 1978 he committed his first murder, picking up a hitchhiker and bringing him back to his parents' house where he plied him with beer and marijuana. As the hitchhiker prepared to depart, Dahmer killed the boy with a piece of gym equipment.

Unaware of Dahmer's blossoming psychosis, his father, Lionel—divorced and remarried—continued to counsel the apathetic boy to the best of his ability, insisting on his enrollment at Ohio State University. At the end of Dahmer's first quarter, he had earned a cumulative GPA of .45. He was returned home, and Lionel drove to the university to pick up his possessions, where he was further dismayed to learn that his son had done little else than drink, selling his plasma to secure the necessary funds. In frustration, his father insisted Dahmer join the military. Packed off to boot camp, Dahmer seemed to blossom under the rigid discipline, but the improvement was short-lived. Stationed for active duty in Germany, his behavior quickly lapsed into a nonstop debauch. He received an early discharge for drunkenness.

Now at his wits' end, the elder Dahmer packed his son off to live with his aging grandmother in a suburb outside Milwaukee. There, Dahmer's behavior became increasingly bizarre. Once, his grandmother found a fully clothed male mannequin in his closet; another time, a .357 under his bed. At times the house would be suffused with unpleasant odors. As he had in the past, Dahmer lamely explained away his activities, though he now convinced no one. Finally, he moved out of his grandmother's house. On the first day at his new apartment, he was arrested for drugging and molesting a thirteen-year-old Laotian boy. Dahmer served a year in a Milwaukee work-release program, during which time his father lobbied aggressively for additional treatment for his alcoholism. It was to no avail. In March of 1990, Dahmer was released on probation.

In the year and a half before his arrest, Dahmer, now living on his own, was able to indulge his tastes fully, killing thirteen men in the ensuing months. His modus operandi consisted of haunting the bars and street corners, trolling for a likely victim from amongst the hustlers who worked his neighborhood, many of them black, a fact that would later lead to charges that the murders were racially motivated when, in fact, the race of his victims was merely a consequence of proximity. To conceal his activities, Dahmer bought a freezer, installed an elaborate security system, and separated his bedroom from the rest of the apartment with a heavy metal door. Once secure within apartment 213, Dahmer would drug, then strangle his victim, molest the corpse, and finally eat or preserve parts of his victim as he saw fit, disposing of the remains with quicklime and an

enormous plastic bucket. He was finally apprehended when a victim escaped his clutches, returning accompanied by police officers, who discovered polaroids of dead and dismembered men strewn about Dahmer's bedroom.

Hoping an insanity defense might lead to institutionalization rather than imprisonment, Dahmer chose a jury trial—during which he was protected from would-be assailants with the aid of a bullet-proof glass booth. Dahmer had said he wanted to find out why he did such things, but the only elucidation to come was from the ravenous public, who ate up the details of Dahmer's crimes. The jury, unmoved by his plea of insanity, sentenced him to nine consecutive life terms.

In prison, Dahmer found Jesus as well as the death he had long desired. He was fatally bludgeoned in 1994 while mopping a bathroom facility. (Dahmer's assailant, himself a convicted killer of questionable mental health, claimed he had acted under God's direction.) A figure at once pathetic and monstrous, Dahmer was generally reviled, although there was still something in his deflated appearance that generated sympathy. The wounded little boy had not been vanquished by the man's acts. And the enormous volume of letters Dahmer received after his incarceration, more often sympathetic than threatening, would seem to bear this out: he was not alone in his alienation. Ultimately, Dahmer killed not out of hatred, but out of loneliness.

In a final footnote to Dahmer's story, in 1996 a Milwaukee civic group bought his belongings for \$407,000 to prevent their public auction on behalf of the victims' families. Instead of the auction block, Dahmer's possessions were incinerated, and the money was distributed to the families without fanfare.

Dallas

With the 1980 episode that answered the question "Who Shot J.R.?", *Dallas* became the most-watched program in the history of television. The originator of the prime-time soap opera, *Dallas*' serial

Larry Hagman (seated) with Steve Kanaly and Linda Gray as they appeared on *Dallas*.

stories about the exploits of a Texas oil family provided fodder for water-cooler gossip as well as real bookie-joint wagering. The program enjoyed a 13 year run, making superstars of Larry Hagman, Victoria Principal, Patrick Duffy, and others. The program foundered in the early 1990s and is remembered more than any other program as the epitome of the unabashedly capitalistic Reagan era.

Premiering April 2, 1978 on CBS, the series revolved around the relationships and tribulations of patriarch Jock Ewing and wife "Miss Ellie" (played by Jim Davis and Barbara Bel Geddes) and their three sons: J.R. (Hagman), the deceitful, conniving businessman who with his father ran the family oil company; Bobby (Duffy) a freewheeling playboy as the series began; and Gary (first David Ackroyd, then Ted Shackelford), a weak-willed alcoholic who long ago had fled the family's Southfork Ranch. J.R.'s wife was boozy Sue Ellen (Linda Gray). Bobby, in the series' first episode, eloped with Pamela (Victoria Principal), the sexy daughter of family arch-enemy Digger Barnes. Their marriage set the stage for years of conflict, especially with Pamela's brother Cliff (Ken Kercheval).

In early episodes, the series was structured as a traditional weekly drama; each episode presented a stand-alone story, with Pamela ostensibly the focal point of the narrative. It quickly became clear, however, that wily J.R. was the real favorite of both the series' writers and the audience. By 1979, the series threaded continuing

stories through several stand-alone episodes. Alcoholic Sue Ellen turned up pregnant: was the baby J.R.'s or Cliff's? J.R.'s turncoat secretary Julie (Tina Louise) was murdered: would J.R. succeed in framing Cliff for the killing?

The series settled into a Friday at 10:00 p.m. time-slot, growing in popularity until the final episode of the 1979-1980 season, when J.R. was shot by an unknown assailant. There was no shortage of suspects: he had spent the season acquiring, then unloading what proved to be worthless Asian oil leases, swindling everyone from the family banker to his own mother in the process; he had driven Bobby and Pam off Southfork; and he had shipped wife Sue Ellen off to a sanitarium, even as he bedded her younger sister.

During that summer of 1980, *Dallas* fever exploded. "Who Shot J.R.?" was a sensation, the subject of everything from fan speculation to Las Vegas betting. The press scrambled in vain to uncover details of the fall scripts; elaborate security precautions were put into effect at the studio. Producers took no chances; each actor was brought in to film scenes of his or her character "shooting" J.R.

A lingering actors' strike—and Larry Hagman's demand for a raise—threatened the solution to the mystery, but the public finally learned the answer on November 21, 1980. Sue Ellen's sister Kristin, J.R.'s former mistress, had pulled the trigger, infuriated by J.R.'s attempts to run her out of town. Sue Ellen herself solved the mystery, realizing her sister was plotting to frame her for the crime. Unfortunately, Kristin revealed she was pregnant with J.R.'s baby; instead of sending her to prison, J.R. shipped his assailant off to California, where she would have her illegitimate child in secret. The episode set an all-time ratings record: an unprecedented 53.3 Nielsen mark, meaning more than half of America's television households were tuned in—the highest rating in history, a figure exceeded only once in later years.

Dallas was now the most popular series on American television. Actor Jim Davis passed away in early 1981 and Jock was eventually written out of the series. His will set up a power struggle at Ewing Oil that unfolded over most of the 1982-1983 season, arguably the series' creative peak. Barbara Bel Geddes (Miss Ellie) departed for health reasons in 1984; she was replaced by Donna Reed. Barely a year later, Reed was reportedly livid to discover she had been fired to make way for Bel Geddes' return. She sued the series' producers.

Meanwhile, J.R. and Sue Ellen divorced, remarried, then divorced again; Bobby and Pam had also divorced by 1984. The characters were moving toward reconciliation when actor Patrick Duffy announced he was leaving the show. In the final episode of the 1984-1985 season, Bobby was killed—murdered by his deranged former sister-in-law, even as he had just professed his undying love for Pam.

Yet even as the series spun its larger-than-life stories, it also managed to capture the real-life flavor of a turbulent decade: the 1982-1983 recession figured prominently in the story; later, the mid-decade mania of big-business mergers and take-overs was reflected on-screen. The fictional Ewing Oil was now worth two billion dollars, but the *Dallas* franchise itself was priceless to CBS and its affiliates.

The series had begotten one spin-off (brother Gary and wife Val set up housekeeping in *Knots Landing* in 1979) and a host of imitators, from *Falcon Crest* to *Flamingo Road* to *Dynasty*. *Dynasty*, in particular, caught the public's fancy. Where *Dallas*' stories had at least some grounding in real life, *Dynasty* was simply glamorous, over-the-top high camp. By the end of the 1984-1985 season, *Dynasty* ran neck-and-neck with *Dallas* for the number one position in the ratings.

A behind-the-scenes shakeup followed; that *Dallas* suddenly looked a lot more like *Dynasty*—soapier plots, more elaborate costumes—was apparently no coincidence. When a *Cosby*-led sitcom resurgence pushed all the evening soaps down the ratings chart by 1986, the production staff was overhauled again: much of the old guard returned, and Larry Hagman began assuming some creative control over the series. Hagman himself reportedly engineered one of the biggest television coups of 1986 when he personally convinced Patrick Duffy to return to the series. In the final 1985-1986 episode, Pamela awoke from a night's sleep, only to find the long-dead Bobby lathering up in her shower. The audience was left to wonder all summer: Who was that? How did he get there? The cliffhanger was nearly as big a sensation as "Who Shot J.R." had been six years earlier, and the producers hyped it expertly—going so far as to film fake footage, then allowing it to find its way into the tabloids.

"Bobby in the Shower" was an inspired stunt; the resolution was a disaster. In the opening moments of the fall season, it was revealed that Bobby had never died; instead, Pamela had simply dreamt the entire 1985-1986 season. An entire year's worth of narrative and character development were simply wiped out. Fans howled in protest; the move was a critical and creative debacle.

The episode also turned out to be the last great moment of the "prime-time soap" craze. *Dynasty*'s ratings had collapsed; *Dallas*, while strong, was losing ground. Victoria Principal departed in 1987; several supporting characters were written out about the same time. Everyone from Priscilla Presley to a young Brad Pitt had passed through Southfork by this time, but the characters' antics were becoming sillier. A stranger claimed to be the presumed-dead Jock; he was revealed as an impostor. J.R.'s dirty dealings finally cost him Ewing Oil; he went into business for himself. In 1988, J.R. was held captive by some good ol' boys in Arkansas; he later married their virgin young sister. The character's 1990 stay in a mental institution (he had infiltrated it to meet a business contact, only to find himself committed by his disgruntled illegitimate son) was a low point.

Yet even in its dotage, the series made waves. Location filming in Europe and the Soviet Union in 1989 drew considerable press; later that year, CBS switchboards lit up when Linda Gray's final appearance as Sue Ellen was interrupted for news bulletins (the network repented by showing the "missing minutes" in late-night several weeks later). An experimental return to single-story episodes in 1988 drew little attention; a try-out of several-episode "story arcs" in 1990 featured a guest appearance by Susan Lucci and a reunion with Hagman's *I Dream of Jeannie* co-star Barbara Eden. The venerable series ended its run in May, 1991, with a take-off of *It's A Wonderful Life* where J.R. was visited not by an angel, but by a messenger of Satan (Joel Grey) who, along with favorite characters from the past, presented a series of vignettes demonstrating what life would have been had J.R. never been born. In the series' final scene, the mysterious visitor goaded the character into an apparent suicide attempt.

A pair of mid-1990s reunion movies (J.R. of course had not killed himself, but merely shot a mirror!) failed utterly to capture the spirit of the series in its best day. Inevitably, *Dallas*'s day had come and gone. The free-wheeling, politically incorrect, every-man-for-himself age of the 1980s had long since passed; indeed, *Dallas* was as much period piece as soap, a true historical artifact that both reflects and explains the culture that elevated it to its legendary status.

The Dallas Cowboys

The NFL's Dallas Cowboys have been characterized as America's team, thanks to their winning ways and their once squeaky clean image. Their immense popularity comes largely from their success, for the team has won five Super Bowls. The stability of the organization has also been unique. The team has had only three owners and four head coaches, Tom Landry, Jimmy Johnson, Barry Switzer, and Chan Gailey. The first three men led the Cowboys to Super Bowl wins. Landry established himself as one of the greatest coaches in the history of the National Football League. Star players also established the Cowboy's legacy. A brief list of some of the Cowboys reads like a Who's Who of the football world; Bob Lilly, Mel Renfro, Roger Staubach, Randy White, Tony Dorsett, Michael Irvin, Emmitt Smith, and Troy Aikman are just a few of the names associated with the

success of the Dallas Cowboys. The Cowboys are also well known for the prominence of their cheerleading squad, named simply the Dallas Cowboy Cheerleaders. Emerging in the mid-1970s as beguiling half-time entertainment, the cheerleading squad has thousands of fans of its own, as evidenced by the sales of calendars and the turnout at promotional events.

Dallas was awarded a National Football League expansion franchise in 1960. The Cowboys lost their inaugural game 35-28 to Pittsburgh on September 24, 1960. The Cowboys got their first win in 1961 with a 27-24 victory over the Pittsburgh Steelers in the Cotton Bowl in Dallas. In 1966, the Cowboys won their first Eastern Conference championship but lost the NFL Championship to the Green Bay Packers 34-27. Throughout the 1960s the Cowboys were prime competitors for the NFL championship. In 1967, the Cowboys fell to Green Bay 21-17 in the NFL Championship. The game, generally regarded as one of the greatest games in the history of professional football, has become known as the Ice Bowl because it was played in Green Bay in temperatures dropping as low as 13 degrees below zero. In 1969, Cowboy quarterback Don Meredith, who went on to further fame announcing Monday Night Football with Howard Cosell and Frank Gifford, retired. As an announcer Meredith was best known for singing the phrase, "Turn out the lights. The party's over," once the outcome of a game was no longer in doubt.

The Dallas Cowboy Cheerleaders

In 1970, the Cowboys once again won the Eastern Division championship, but lost in their first Super Bowl appearance to the Baltimore Colts, 16-13. In 1971, the Cowboys moved from the Cotton Bowl in Dallas to Texas Stadium in suburban Irving, a facility known for a large hole in the roof, left to preserve the atmosphere of an outdoor stadium, but providing fans with protection from the rain. That year the Cowboys marched through the playoffs and won their first NFL Championship by beating the Miami Dolphins 24-3 in Super Bowl VI in New Orleans. Dallas quarterback Roger Staubach passed for two touchdowns and was named the Most Valuable Player.

The Cowboys missed the playoffs for the first time in eight years when they stumbled to an 8-6 record in 1974. In 1975, the Cowboy's returned to the playoffs as a wild card team. In the opening round, they shocked Minnesota on a last second 50-yard touchdown completion from Roger Staubach to Drew Pearson. One of the most famous plays in NFL history, the pass became known as the Hail Mary. Despite contending for the championship for the next several years, the Cowboys would not win the title again until 1977, when Dallas defeated the Denver Broncos 27-10. Defensive linemen Harvey Martin and Randy White were named co-Most Valuable Players.

On March 31, 1980, legendary quarterback Roger Staubach retired, and on August 2, 1980, Bob Lilly became the first Cowboy to enter the Professional Football Hall of Fame. Behind new quarterback Danny White, the Cowboys made the playoffs as a wild card team and beat Los Angeles 34-13 and Atlanta 30-27 to advance to the NFC Championship, where they lost 20-7 to Philadelphia. In May of 1984 Clint Murchison sold the Cowboys to H.R. "Bum" Bright. The Cowboys then went on to post a 9-7 record and miss the playoffs for the first time in 10 years.

In 1986, the Cowboys streak of 20 consecutive winning seasons was broken when the club finished 7-9. Jerry Jones purchased the Cowboys from Bright in 1989 and shocked the city of Dallas, the state of Texas, and Cowboy fans everywhere when he unceremoniously replaced Tom Landry, the Cowboy's only coach for 29 seasons, with University of Miami head coach Jimmy Johnson. Landry was inducted into the Pro Football Hall of Fame on August 4, 1990.

In 1991, for the first time since 1985, Dallas was back in the playoffs as a wild card. Dallas defeated the Chicago Bears 17-13 in the opening round of the playoffs but then lost 38-6 to the Detroit Lions. The Cowboys claimed the Eastern Division Championship in 1992. They then advanced to the NFC Championship, where they beat the San Francisco 49ers 30-20 and then defeated the Buffalo Bills 52-17 in Super Bowl XXVII in Pasadena. The Cowboys repeated as Super Bowl champions the following year, when they again defeated Buffalo by the score of 30-13.

Due to difficulties with owner Jerry Jones, Jimmy Johnson resigned as the Cowboys head coach, and Barry Switzer became the third head coach in team history on March 30, 1994. Tony Dorsett and Randy White were inducted into the Pro Football Hall of Fame on July 30, 1994. Later that year the Cowboys went on to capture the Eastern Division Championship. However, the Cowboys lost the NFC Championship game to San Francisco 38-28.

In 1995, the Cowboys were again Eastern Division Champions. Dallas beat Green Bay 38-27 to advance to Super Bowl XXX, where the Cowboys knocked off Pittsburgh 27-17. Mel Renfro was inducted into the Pro Football Hall of Fame in 1996; but the Cowboys did not continue to enjoy success under Switzer, and he was replaced by Chan Gailey after the 1997 season. In Gailey's first season as the Cowboys head coach, Dallas won the NFC Eastern Division, but lost in the first round of the playoffs to Arizona 20-7. Few teams in NFL history can

claim the consistent record of success associated with the Dallas Cowboys. They remain one of the preeminent franchises in football history.

Daly, Tyne (1946—)

Actress Tyne Daly earned her high profile through her three-dimensional portrayal of Mary Beth Lacey, the dark-haired, well-grounded foil and partner to Sharon Gless's blonde, less stable Christine Cagney in television's pioneering female cop series in the 1980s. She went on to demonstrate her versatility with a stunning, Tony Award-winning performance as Mama Rose in the Broadway revival of the musical *Gypsy* in 1989.

Born Ellen Tyne Daly in Madison, Wisconsin, one of four children of actors James Daly and Hope Newell, she drifted into acting over her parents' objections. Ironically, she auditioned for the role of young Louise (Gypsy Rose Lee) to Ethel Merman's Mama Rose in the original *Gypsy* in 1959, but failed to get the part. Her first television appearance was in *The Virginian*, followed by a brief run with the soap opera *General Hospital* and guest appearances on several other shows. Daly made a handful of films, including *The Enforcer* (1976) opposite Clint Eastwood, before earning her first Emmy Award nomination for the television movie *Intimate Strangers* (1977), and made a number of other TV films before beginning her run in *Cagney and Lacey* in 1982. In real life a divorced mother of three children, Daly brought sympathy and conviction to her role as an undercover detective, coping with the pressures of New York police work while dealing with husband, home, children, and even pregnancy. Her consistently appealing performance over the show's

seven seasons earned her six Emmy nominations and four best actress awards.

Dana, Bill (1924—)

In the heyday of the network era of broadcasting, writer, actor, and producer Bill Dana created a nationally recognized comic character who endured in the American consciousness for over a decade. When that character first uttered his signature phrase, “My name . . . Jose Jimenez,” on *The Steve Allen Show* in 1959, he became one of the clearest representatives of a familiar American type. Portraying a Mexican immigrant on the bottom half of the social ladder, Dana’s Jimenez worked at various times as an elevator operator and a bellboy. By today’s standards, that portrayal, which included Jimenez’s broken English and naive innocence, appears to many condescending at best. However, Jimenez was a singularly noble character, possessing goodness, wisdom, and sincerity, traits comparatively unusual in the history of American TV characters. Although he exhibited

Bill Dana

stereotypical racial characteristics common to the period, at the same time Jimenez displayed more positive tendencies. He was confused and clueless, but also resourceful and crafty; he had a stereotypically huge family back home, but he supported them faithfully through the sweat of his own brow; he worked as a salaried servant of the wealthier residents of the hotel, but he often proved kinder and smarter than his social superiors.

Like many film and television actors, the public identity of Bill Dana became inseparable from the celebrated persona he portrayed. What was unusual about Dana/Jimenez, however, was that he was able to escape the show on which he first appeared and to move fluidly, and often simultaneously, to an assortment of other venues. After Dana introduced Jimenez on *The Steve Allen Show*, the character resurfaced regularly over the next five years on *The Spike Jones Show*, *The Danny Thomas Show*, and *The New Steve Allen Show*, as well as becoming the principal character of *The Bill Dana Show* (NBC, 1963-1965). Through the 1960s, Dana also made guest appearances as Jimenez on a wide variety of contemporary TV series and featured the character in several comedy record albums. Dana (as Jimenez) even showed up briefly in the 1983 feature film, *The Right Stuff*.

By 1970, the ethnic humor and dialect comedy upon which Jose Jimenez depended was growing increasingly less fashionable. The fact that Dana was not himself Hispanic intensified developing claims that the character was a racist representation. As American television moved into the more politically conscious “relevance” era of the 1970s with shows like *All in the Family*, *M*A*S*H*, and *The Mary Tyler Moore Show*, Jimenez became a vestige of a bygone time and all but disappeared. Released from his signature creation, however, Dana would reemerge in other roles.

Born William Szathmary in Quincy, Massachusetts, on October 5, 1924, Dana entered the television industry in 1950 as a page at NBC in New York City. Through the 1950s he performed in nightclubs and played bit parts on television shows. He worked as a production assistant on *The Phil Silvers Show*, wrote for *The Milton Berle Show*, and got his big break when he was hired as a writer on *The Steve Allen Show* in 1956. He moved up to head writer, earning an Emmy nomination for his work, and became a performer on the show in 1959.

Though his other achievements were eclipsed by the popularity of his Jose Jimenez, Dana also wrote and produced for the several shows in which Jimenez was featured, and, as a character actor of some note, he played guest roles on a number of series, including *Get Smart*, *The Man from U.N.C.L.E.*, and *Batman*. Dana’s presence on American TV waned after the retirement of the Jose Jimenez character, though he did continue to play occasional parts in TV series into the 1970s. One of the brightest spots in his career came in 1972 when he wrote the classic episode of *All in the Family* in which Sammy Davis, Jr. visits the Bunker household.

In the 1980s, when Jose Jimenez had become a distant memory, Bill Dana moved into a new period of activity. Having appeared in *Get Smart*, he co-wrote and acted in *The Nude Bomb* (1980), a feature film based upon the TV comedy. He was in the principal cast of two network comedy series, *No Soap, Radio* (ABC, 1982) and *Zorro and Son* (CBS, 1983), but neither of these lasted longer than a few months. In 1988 and 1989, he also wrote for and appeared on a series of specials featuring the Smothers Brothers, who had appeared regularly on *Steve Allen* in 1961. During this decade, Dana was also reunited with many other of his co-stars from *The Steve Allen Show*, including Allen himself, Jayne Meadows, Louis Nye, and Tom Poston, all of

whom played recurring guest roles with Dana on the hit medical drama *St. Elsewhere* (NBC, 1982-1988).

Dance Halls

Dancing has been regarded as a social institution in America for over a century. Many famous dance venues, from the Cotton Club and Roseland in New York, the Avalon Ballroom on Catalina Island, Aly Baba in Oakland, to the Old Roosevelt Hotel in New Orleans, attest to the tremendous influence which dancing has had on American culture. These are just a few of the popular meeting spots where people interact socially and can be seen publicly, dancing to the popular music of the day. Local community dance halls thrive in recreation centers, churches, and high school gymnasiums as well as commercial night clubs. The primary requirement in any dance hall is to provide ample music and the room for people to dance. Food and beverages are often served as light refreshments, and seating arrangements allow people to meet, to comment, and to view others who are out on the dance floor. An important concept of the dance hall is “to see and be seen,” and rites of passage into society including coming-of-age events, proms and pageants, ceremonies such as weddings, and musical debuts have centered around dance events and subsequently are popular uses for dance halls.

The forum of entertainment generally known as the dance hall evolved over the course of several centuries, taking on a distinctive function and purpose in each succeeding generation. The notion of halls as social meeting places may have its origins in northern Europe during the middle ages, when one large, central room with an elevated ceiling was used for dining, reveling, convening, and even sleeping by large groups of tenants and visitors of no particular relation. The British connotation of the word “hall” more often refers to a large common room used as a meeting place for particular events. By contrast, the American sense of the word, as a central space or passageway usually into which the front door opens, is related in the sense that the hall is a room common to all people who enter a particular building.

As feudal houses grew in stature and European nobility became more pronounced, “great halls” were designed as distinct chambers for meeting and gathering. Great halls were featured in many palaces and country manors of the 14th through 18th century, used as places of social gathering for important events, coronations, festivals, and celebrations. Court dancing evolved in these great halls throughout Europe, developing intricate codes of conduct and ritual which persisted through the turn of the 20th century. Grand balls were an important social component of the 17th through the 19th centuries, and dancing was regarded as a prime element of display, courtship, and social manners. Dance balls of the Victorian era usually lasted entire evenings, where the hosts served multi-coursed suppers and attendees literally danced “until they dropped,” finding back rooms and quiet corners to sleep when they could dance no longer. It is notable that most dance events of the western hemisphere are for the celebration of social occasions. In the east, dancing is more often reserved strictly for religious ceremonies, with elaborate costumes and traditions which have remained intact for centuries.

The modern dance hall has a more obscure origin. Dance halls in America seem to have grown out of refugee immigration from eastern

and southern Europe during the mid-1900s. Folk dancing, most particularly the polka, has enjoyed a rich tradition in the immigrant working-class, who find dancing to be an essential element of recreation after long hours in labor-intensive jobs. Dance halls naturally grew up around this need to socialize. Many dance hall regulars attribute the Polish immigration of the 1940s and 1950s with the establishment of the American dance hall. The Nazi and Soviet occupations, leading up to the outbreak of World War II, forced thousands of working-class and minority Poles and Slavs to come to the United States. Once arrived, Polish immigrants succeeded in venerating traditional customs including social folk dancing. Primary among these was the polka. Polka parties, international polka associations, and dance competitions continue to thrive in the late 20th century in the United States, while in eastern Europe this dance form has virtually died out, mostly likely due to the influence of foreign political regimes.

In rural areas, dance halls are generally known for their live bands, and it is not unusual for attendees to drive in from 50 to 100 miles away. Dance halls in rural areas tend to feature food and beverages more prominently, whereas the urban disco will emphasize dance floor decorations, settings, and acoustics. The dance hall’s modern cousin, the discotheque or night club, has distinctly urban origins. Discotheques, or discos, began in Paris with the advent of the phonograph album in the late 1950s and early 1960s. Discos tend to feature more modern forms of popular music, and many new dances have been invented in reaction to new music. Whether the music is being played live or in recordings, the important feature of all dance halls, night clubs, and discos is the emphasis on dancing and socializing.

A resurgence in vintage dancing, most notably 1930s-1940s era swing parties and 19th century Victorian dance balls, has flowered in the United States during the 1980s and 1990s. Vintage dance balls tend to emphasize social entertainment through historic recreation. These recreations can be very elaborate, and authentic period attire or costume recreations, selected beverages and foods of the era, and the teaching and calling of traditional dance forms are key elements of vintage dance events. Attendees are often educated professionals or middle-class descendants of European immigrants. Music is most often supplied by live musicians, although recorded music may be featured in regular clubs.

Dance halls in the 1990s have often featured a wide variety of dance events on their calendars. Many dance halls are rented out for rehearsals, parties, social occasions and receptions, or are otherwise used for public recreational evenings which may or may not feature noted bands. Attendees tend to favor one form or series of forms over others based on cultural bias, perceived social stature, or personal tastes. Fans of noted bands will anticipate scheduled appearances and may prepare for occasions for months in advance. In general, attendees may gather for celebration of a particular event such as a wedding reception, or as a regular social activity with their friends.

Dandridge, Dorothy (1924-1965)

Born in Cleveland, Ohio, actor-singer-entertainer Dorothy Dandridge was smart, immensely talented, and alluringly beautiful. In her three-decade career in Hollywood she endured the bittersweet distinction of being the first sexy black woman film artist of the postwar period. Dandridge attempted to forge a career in Hollywood when the only roles for black women were as servants, or in brief, non-speaking cameo roles. Dandridge claimed a number of “firsts”: she was the first African American woman to grace the covers of *Life* magazine; the first black woman to showcase the posh, all-white Waldorf-Astoria; and the first black woman to receive an Oscar nomination for a leading role. Dandridge’s film credits include *Bright Road* (1953), *Carmen Jones* (1954), *Tamango* (1957), *Island in the Sun* (1957), *The Decks Ran Red* (1958), *Porgy and Bess* (1959) and *Malanga* (1959). Dandridge’s tragedy-filled life and her mysterious death on September 8, 1965, resulted in exposés, film biographies, and a major biography.

Daniels, Charlie (1936—)

Charlie Daniels came to prominence during the early 1970s, at a time when country music was caught up in Vietnam patriotism and anti-hippie sentiment. Rock was the music of the counterculture, which saw the South through newsreels of civil rights battles and movies like *Easy Rider*. A white southern band had to choose one or

Charlie Daniels

the other, and many followed the lead of the likes of the Allman Brothers to create the sound known as Southern Rock. The Charlie Daniels Band began as Southern Rockers with an anti-redneck anthem, “Uneasy Rider” (1973), a song about a longhaired guy going into a bar full of good old boys. One of the few musicians to fit into both rock and country genres, Daniels’ manipulated his image and music brilliantly in an attempt to capture his place in twentieth-century popular culture.

Most of the Southern Rockers separated themselves totally from country music . . . and they remained separate. Even in the 1980s and 1990s, when rock had become a staple of the new country sound, groups like the Allman Brothers, Little Feat, and the Marshall Tucker Band never showed up at country concerts or on the country charts. Daniels was an exception. Right from the start he managed to keep a presence in both worlds, working as a studio fiddle player on Nashville sessions. When pop came to Nashville, Daniels was there, playing hot fiddle parts on Bob Dylan’s album *Nashville Skyline*. Even “Uneasy Rider” made the lower rungs of the country charts (it was in the top ten on the pop charts).

Southern Rock faded as a chart phenomenon with the end of the 1970s; it did, however, retain a core audience. Daniels then made his move toward country. In 1980, country music was in the grip of the Urban Cowboy phenomenon, and there was a lot of country overlap on the pop charts. Daniels was no Urban Cowboy, but he was an artist with the capacity to play to both audiences, and he made the most of it with his biggest hit “The Devil Went Down to Georgia,” which hit number one on the country charts and was number three as a pop hit. It won him a Grammy for best country music performance by a group,

and the Country Music Association award for Single of the Year. The single was Daniels' high water mark as his career was middling through the 1980s. He continued to have a mystique of sorts, remaining signed to the same label (Epic), releasing one record after another, and never cracking the top ten—mostly, in fact, languishing near the bottom of the charts.

Then, in 1989, Daniels had another career breakthrough. His hit album, *A Simple Man*, aggressively advocated the lynching of bad guys and hopped onto the anti-communist bandwagon (a little late) by suggesting that it would not be such a bad idea to assassinate Gorbachev. And, as a final rejection of his youthful fling with the counterculture, he recorded a new version of "Uneasy Rider" in which the hero is himself—one of the good old boys from whom the original uneasy rider had his narrow escape. This time, he accidentally wanders into a gay bar. Daniels had made himself over completely, from protest-era rebel to Reagan-era conservative.

—Tad Richards

See Queen, Ellery

Daredevil, the Man Without Fear

Daredevil, the Man Without Fear is a superhero comic book published by Marvel Comics since 1965. Blinded by a childhood accident involving radioactivity that has also mysteriously enhanced his remaining senses to superhuman levels, defense attorney Matt Murdock trains himself to physical perfection, and crusades for justice as the costumed Daredevil.

Daredevil remained a consistently popular but decidedly second-tier Marvel superhero until the late 1970s when writer/artist Frank Miller assumed the creative direction of the series. By emphasizing the disturbing obsessive and fascistic qualities of the superhero as a modern vigilante, Miller transformed *Daredevil* into one of the most graphic, sophisticated, and best written comic books of its time. His work on the series became a standard for a new generation of comic-book creators and fans who came to expect more violence and thematic maturity from their superheroes.

Dark Shadows

In the world of continuing daytime drama, or "the soaps," *Dark Shadows* remains an anomaly. Unlike any other day or evening

television show, *Dark Shadows*' increasing popularity over the course of its five year run from 1966 to 1971 led to the creation of two feature films entitled *House of Dark Shadows* and *Night of Dark Shadows*, a hit record album of themes from the show, and a series of 30 novels, comic books, and other paraphernalia—a development unheard of in the world of daytime television. *Dark Shadows* had unexpectedly evolved from another afternoon soap into a cultural phenomenon and franchise. Indeed, *Dark Shadows* was in a genre all to itself during this period of twentieth-century television history.

Like other soaps, *Dark Shadows* dealt with forbidden love and exotic medical conditions. Unlike any other, however, its conflicts tended to extend beyond the everyday material most soaps cover into more "otherworldly" phenomena. Nestled in the fog-enshrouded coastal town of Collinsport, Maine, the Collins family was repeatedly plagued by family curses which involved ghosts, vampires, werewolves, and "phoenixes"—mothers who come back from the dead to claim and then kill their children. In fact, there were as many curses as there were locked rooms and secret passageways in the seemingly endless family estate known as Collinwood. Characters had to travel back and forth in time, as well as "parallel time" dimensions, in order to unravel and solve the mysteries that would prevent future suffering.

Amazingly, despite its cancellation some 30 years ago and the fact that during its time on the air it was constantly threatened with cancellation by the management of ABC, *Dark Shadows* is fondly remembered by many baby-boomers as "the show you ran home after school to watch" in those pre-VCR days. It is the subject of dozens of fan websites and chatrooms, an online college course, and even a site where fans have endeavored to continue writing episodes speculating what might have transpired after the last episode was broadcast in 1971. There are even yearly conventions held by the International Dark Shadows Society celebrating the show and featuring former cast members who are asked to share their memories.

The concept for *Dark Shadows* originated in the mind of Emmy-winning sports producer Dan Curtis, who wanted to branch out into drama. His dream of a mysterious young woman journeying to an old dark house—which would hold the keys to her past and future—became the starting point, establishing the gothic tone which combined elements of *Jane Eyre* with *The Turn of the Screw*—the latter of which would figure repeatedly in later plotlines.

The young woman was known as Victoria Winters (Alexandra Moltke). She accepted a post as a governess of ten-year-old David Collins (David Henesy), heir to the family fortune and companion to Collinwood's stern and secretive mistress, Elizabeth Collins (Joan Bennett). Believing herself to be an orphan (she is in fact the illegitimate daughter of Elizabeth Collins), Victoria senses that the keys to her past and future lie with the Collins family.

While plot complications in the first few months of the show concerned mysterious threats on Victoria's life, there was little in the turgid conflicts between the Collins family and a vengeful local businessman to attract viewers, and ratings were declining rapidly. This is when Curtis decided to jazz things up by introducing the first of the series' many ghosts. While exploring in an obscure part of the rambling Collins estate, young David encounters the ghost of a young woman, Josette DuPres. As ratings began to rise, Josette becomes integral in helping to protect David from Curtis' next supernatural phenomenon—the arrival of Laura Collins (Diana Millea), David's deceased mother who has risen from the dead as a phoenix to claim him.

While this influx of the supernatural buoyed up the flailing ratings, it was the introduction of Jonathan Frid as vampire Barnabas

Collins—originally intended to be yet another short term monster to be dealt with and destroyed—that established the tone for the show and caused its popularity to steadily rise. Cleverly, Barnabas was not depicted as a mere monster, but as a man tortured by his conscience. Barnabas had once been in love with Josette DuPres and, upon encountering local waitress Maggie Evans (Kathryn Leigh Scott), he attempts to hypnotize her into becoming Josette, hoping to then drink her blood and transform her into his eternal vampire bride. His efforts, however, are thwarted by the intervention of yet another benevolent ghost.

The increasing popularity of the tortured Barnabas and his sufferings in love led the writers to attempt yet another first—in a seance Victoria Winters is instantaneously transported to 1795, and there, along with the audience, witnesses the events surrounding the original Barnabas/Josette love story. This extended flashback—with the cast of actors playing the ancestors of their present characters—ran for months to high ratings as young uncursed Barnabas goes to Martinique on business, and there meets and prepares to marry young Josette DuPres, the daughter of a plantation owner. Simultaneously, he initiates an affair with her maid Angelique Bouchard (Lara Parker), who is herself in love with Barnabas and attempts to use witchcraft to possess him. When he attempts to spurn her, Angelique places an irreversible curse on him and, suddenly, a vampire bat appears and bites him. Though he manages to kill Angelique before he can transform Josette into his vampire bride, the spirit of Angelique appears to her, shows her the hideousness of her future, and in response the traumatized girl runs from Barnabas and throws herself off the edge of Widow's Hill, to be dashed on the rocks below. The fateful lovers' triangle of Barnabas, Josette, and Angelique was repeated in various forms throughout the life of the show.

Always searching for a novel twist, the writers then toyed with the concept of "parallel time." Barnabas discovers a room on the estate in which he witnesses events transpiring in the present, but the characters are all in different roles—the result of different choices they made earlier. This is essentially a parallel dimension, and he enters it, hoping to learn that there he is not a vampire. Kathryn Leigh Scott suggested that this innovation proved to be so complex that it hastened the demise of the show, for both the writers and audience were having trouble keeping track of the various characters in "real" time versus the variations they played in alternate "parallel times." But as Victoria Winters had suggested in her opening voice-over, essentially the past and present were "one" at Collinwood.

Over the course of its approximately 1,200 episodes, *Dark Shadows*' ratings ebbed and peaked, drawing an extremely diverse audience. By May of 1969, the show was at its peak of popularity as ABC's number one daytime drama which boasted a daily viewership of some 20 million. It was this status that led producer/creator Dan Curtis to envision a *Dark Shadows* feature film—yet another first for a daytime drama. Despite the show's success, however, most studios laughed off the idea until Metro-Goldwyn-Meyer (MGM) green-lighted it and *House of Dark Shadows* became the first of the show's movie adaptations. For this big screen incarnation, Curtis decided to go back to the central and most popular plotline involving Barnabas' awakening/arrival at Collinwood, his meeting Maggie Evans, and his subsequent effort to remake her into his lost love Josette. Curtis did attempt to change the tone of the film version of the story—instead of being the vampire with a conscience, Barnabas would be what Curtis originally envisioned him to be; a monster that would motivate the greater gore ratio Curtis intended for the film audiences.

Released in 1971, *House of Dark Shadows* was such a success that some claim it helped to save a failing MGM, and Curtis was commissioned by the studio to create another film. Its successor, *Night of Dark Shadows* was a smaller scale effort. Adapting one of the parallel time plotlines, Quentin Collins (David Selby) inherits the Collins' estate and brings his young wife (played by Kate Jackson, later of *Charlie's Angels* and *Scarecrow and Mrs. King*) there to live. There he begins painting the image of Angelique, whose ghost appears to seduce and take possession of him. Less successful than its predecessor, but still a moneymaker, there were plans to make a third film when *Dark Shadows* was canceled and Curtis decided to move on to other projects.

Some 20 years later, in 1991, Curtis joined forces with NBC to recreate *Dark Shadows* as a prime-time soap opera. In this incarnation, Curtis attempted to initiate things with the arrival of Barnabas Collins (played by *Chariots of Fire* Oscar nominee Ben Cross) and the subsequent recounting of his history via the 1795 flashback. As he did with Joan Bennett before her, veteran actress (and fan of the original show) Jean Simmons took over the role of Elizabeth Collins Stoddard, and British scream queen Barbara Shelley was cast as Dr. Julia Hoffman. This casting also included Lysette Anthony as Angelique, and Adrian Paul—future star of *Highlander: The Series*—as Barnabas' younger brother Jeremiah Collins. Despite much anticipation by fans, the show debuted as a mid-season replacement just as the Gulf War began. It was both pre-empted and shifted around in its time slot due to low ratings until the producers finally chose to cancel it after 12 episodes.

Darrow, Clarence (1857-1938)

Sometimes reviled for his defense of unpopular people and causes, Clarence Darrow was the most widely known attorney in the United States at the time of his death in 1938. He practiced law in the Midwest, eventually becoming chief attorney for the Chicago and North Western Railways. By 1900 he had left this lucrative position to defend Socialist leader Eugene Debs, who had organized striking American Railway Union workers. Involved in several other labor-related cases and an advocate of integration, he also worked as a defense attorney, saving murderers Nathan Leopold and Richard Loeb from the electric chair in 1924. His 1925 courtroom battle against bible-thumping politician William Jennings Bryant in the Scopes trial—called the "Monkey Trial" due to its focus on teaching Darwin's theory of evolution in schools—was immortalized in the

play and film *Inherit the Wind*. Darrow wrote several books, including *Crime: Its Cause and Treatment* (1922).

Davis, Bette (1908-1989)

Born Ruth Elizabeth Davis in 1908, Bette Davis was one of the biggest stars of the Hollywood Studio Era. During her illustrious career, which spanned six decades, she appeared in over 100 films and made numerous television appearances. Her talents were recognized with 11 Academy Award nominations and two awards (1935 and 1938); three Emmy nominations and one award (1979); and she won a Life Achievement Award from the American Film Institute in 1997. In films such as *Marked Woman* (1937), *Jezebel* (1938), and *All About Eve* (1950) she played women who were intelligent, independent, and defiant, often challenging the social order. It is perhaps for these reasons that she became an icon of urban gay culture, for more often than not, her characters refused to succumb to the strict restraints placed on them by society.

Davis, Miles (1926-1992)

Trumpet player Miles Davis became famous among both jazz buffs and people who know very little about the art form. He did so through a combination of intelligence, charisma, awareness of his own abilities, and a feel for the music scene rarely equaled in jazz. Some critics note that he did so with less natural technical ability than most jazz stars.

In spite of attempts to portray himself otherwise, Davis was not a street kid. Rather, he came from comfortable, upper-middle-class surroundings. His father was a dentist in East St. Louis, and his

Miles Davis

mother was a trained pianist who taught school. Miles grew up listening to classical and popular music. In common with many teens of his day, he played in the school band and worked in a jazz combo around town. Davis learned quickly from older musicians, and many took a liking to a young man they all described as “shy” and “withdrawn.” Shy and withdrawn as he may have been, young Davis found the audacity to ask Billy Eckstine to sit in with his band. By all accounts, Davis was “awful,” but the musicians saw something special beneath the apparently shy exterior and limited technical ability.

In 1945 Davis went to New York to study at the Juilliard School of Music. In a typical move, he tracked down Charlie “Bird” Parker and moved in with him. Bird sponsored Davis’s career and used him on recordings and with his working band from time to time. Certainly, this work aided Davis in getting jobs with Benny Carter’s band and then taking Fats Navarro’s chair in the Eckstine band. In 1947 Davis was back with Bird and stayed with him for a year and a half. Although he still was not the most proficient trumpet player on the scene, Davis was attracting his own following and learning with each experience. It was, however, becoming obvious that his future fame would not be based on playing in the Dizzy Gillespie style so many other young trumpeters were imitating and developing.

In 1949 Davis provided a clear indication of his future distinctive style and pattern. He emerged as the leader of a group of Claude Thornhill’s musicians, and from that collaboration sprang *Birth of the Cool* and the style of jazz named after it. That Davis, still in his early twenties, would assume leadership of the group that boasted Lee Konitz, Gerry Mulligan, Gil Evans, and others was in itself remarkable, but that he had successfully switched styles and assumed

leadership of the style that he did much to shape was a pattern he repeated throughout his life.

Unfortunately, Davis's heroin addiction became the predominant force in his life, and for the next few years he did little artistically. Stories about his wrecked life circulated in the jazz world, which Davis confronted in his 1990 autobiography. Whether Clifford Brown actually did blow Miles off the stage and scare him straight, which Davis denied, depends upon whose version one believes. The fact is that the challenge of young giants like Brownie, who was Davis's opposite in so many ways, did stir up Davis's pride and led to his kicking his habit.

By 1954 Miles was back and heading toward the most artistically successful years of his life. The Davis style was fully matured; that style of the 1950s and early 1960s was marked by use of the Harmon mute, half valves, soft and fully rounded tones, reliance on the middle register, snatches of exquisite melodic composition, and general absence of rapid-fire runs. Davis attributed his sound to Freddie Webster, a St. Louis trumpet master, and his use of space to Ahmad Jamal, a pianist of great genius.

In the mid-1950s Davis pioneered the funk movement with songs like "Walkin'." He kept his own rather cool approach, accentuated by unparalleled use of the Harmon mute while typically surrounding himself with "hotter" players, such as Jackie McClean or Sonny Rollins. In 1955 the style came together with his "classic" quintet at the Newport Jazz Festival, where the quintet's enormous success led to a lucrative contract with Columbia Records, reputedly making Davis the highest paid jazz artist in history. The Miles Davis Quintet, consisting of John Coltrane on tenor sax, Paul Chambers on bass, Philly Joe Jones on Drums, and Red Garland on piano, was a band of all-stars and the stuff of which jazz legends are made. With the addition of Cannonball Adderly on alto sax, the sextet was able to use combinations and colorations that shaped the course of modern jazz. Above it all was the ultimate personification of cool, *Milestones* and *Bye, Bye, Blackbird* pointing the way to Miles's next experiments.

Davis's 1958 Paris recording of the music for *The Elevator to the Gallows* was a high point in his career. His use of unexpected note placement leading to suspended rhythms and simple harmonic structures led logically into the use of modes or scalar improvisation. (In modal improvisation the improviser uses one or two modes as the basis for improvisation rather than changing chord/scales each measure or even more frequently.) John Coltrane had taken that style to its logical conclusion, developing the work of Gillespie at a frantic pace. Davis had never been comfortable with playing at frantic speeds.

Kind of Blue, which featured Bill Evans on a number of cuts, fueled the modal explosion in jazz. Considered one of the finest jazz albums ever made, it was a commercial success, and Davis continued to use compositions from the album over a long period of his career. He did not, however, exclusively feature modal tunes in his repertoire. In fact, it should be noted that Davis never totally dropped one style as he moved on to another one. And the challenge of Free Jazz was about to launch him into another phase of his career, a series of records with his friend Gil Evans featuring a big band. The first album, which some consider the best, was *Sketches of Spain*, featuring "Concierto." Davis did not abandon his small group career, although he did frequently perform with a big band and recorded more albums in that format, including *Porgy and Bess*, featuring the marvelous "Summertime."

By 1964 Davis was ready to change again. His albums were not selling as they once had. They were receiving excellent reviews, but

they were not reaching the pop audience. Davis still refused to try the Free Jazz route of Don Cherry and Ornette Coleman or even of his former colleague, John Coltrane. Davis was more inclined to reach out for the audience his friend Sly Stone had cultivated—the huge rock audience, including young blacks. It was at this point that Davis, already possessing something of a reputation as a "bad dude," truly developed his image of a nasty street tough. He had always turned his back on audiences and refused to announce compositions or performers, but now he exaggerated that image and turned to fusion.

Beginning in 1967 with *Nefertiti* and following in 1968 with *Filles de Kilimanjaro*, Davis began incorporating rock elements into his work. He used Chick Corea on electric piano and replaced his veterans with other younger men, including Tony Williams on drums, Ron Carter on bass, and Wayne Shorter on tenor sax. The success of these records, although somewhat short of his expectations, forced Miles to explore the genre further. That led to his use of John McLaughlin on *In a Silent Way* in 1969 and the all-out fusion album, *Bitches Brew*, the same year. *Bitches Brew*, which introduced rock listeners to jazz, marked a point of no return for Davis. The 1970s were a period that led to great popular success for his group. Davis changed his clothing and performing styles. He affected the attire of the pop music star, appeared at Fillmore East and West, attracted young audiences, attached an electric amp mike to his horn, and strode the stage restlessly.

For a period of years, he stopped performing, and rumors once again surfaced regarding his condition. In the early 1980s Davis made a successful comeback with a funk-oriented group. This was a different sort of funk, however, from "Walkin'" and his other 1950s successes. He was still able to recruit fine talent from among young musicians, as saxophonist Kenny Garrett attests. As the 1980s came to an end, however, Davis's loyal jazz followers saw only a few sparks of the Miles Davis whom they revered. There were, however, enough of these sparks to fuel the hope that Davis might just once more play in his old style.

Finally, at the Montreux Festival of 1992, Quincy Jones convinced Davis to relive the work he had done with Gil Evans. Davis had some fears about performing his old hits, but as he rehearsed those fears subsided, and the documentary based on that performance, as well as the video and CD made of it, demonstrate that he gained in confidence as he performed. While not quite the Davis of the 1950s and 1960s, he was "close enough for jazz." These performances as well as the soundtrack of *Dingo* have gone far to fuel the jazz fans' lament for what might have been. They display a Davis filled with intelligence, wit, and emotion who responds to the love of his audience and who is for once at ease with his own inner demons.

The rest of the Montreux performance featured Miles Davis with members from his various groups over the years. The range of the groups offered proof of Davis's versatility and his self-knowledge of his strengths and weaknesses. After the festival, Davis performed in a group with his old friend Jackie McClean. Rumors persist of tapes they made in Europe which have not yet surfaced commercially. In December 1992, Davis died of pneumonia, leaving a rich legacy of music and enough fuel for controversy to satisfy jazz fans for many years.

Davy Crockett

Walt Disney's 1950s television adaptation of the Davy Crockett legend catapulted the coonskin-capped frontiersman into a national role model who has had an enduring appeal for both academic historians and popular culture producers and their audiences through the end of the twentieth century. The marketing frenzy surrounding the Crockett fad represented the first real mass-marketing campaign in American history, promoting a new way of marketing films and television shows. Many baby boomers can still recite the lyrics to "The Ballad of Davy Crockett" and have passed down their treasured items, such as Crockett lunch boxes, to their children.

One of the legendary American heroes whose stories dramatize American cultural values for a wide popular audience, the historical David Crockett was born on August 17, 1786, near Limestone, Tennessee. He went from a local folk hero to national media hero during his lifetime when the Whig party adopted him as a political party symbol in the early nineteenth century. He served as commander of a battalion in the Creek Indian War from 1813 to 1814, was a member of the Tennessee state legislature from 1821 to 1824, and was a member of the United States Congress from 1827 to 1831 and again from 1833 to 1835. He was renowned for his motto "be always sure you are right, then go ahead."

The myths surrounding Crockett began as the Whig party created his election image through deliberate fabrication so that they could capitalize on his favorable political leanings. His penchant for tall tales also made him a folk legend rumored to be capable of killing bears with his bare hands and of performing similar feats of strength. Even his trusty rifle, "Betsy," achieved fame and name recognition. Crockett was one of the several hundred men who died defending the Alamo from Mexican attack in March of 1836 as Texas fought for independence from Mexico with the aid of the United States. His legend quickly emerged as a widespread public phenomenon after his heroic, patriotic death at the Alamo. His tombstone reads "Davy Crockett, Pioneer, Patriot, Soldier, Trapper, Explorer, State Legislator, Congressman, Martyred at The Alamo. 1786-1836." His symbolic heroism and larger-than-life figure soon found its way into such popular cultural media as tall tales, folklore, journalism, fiction, dime novels, plays, television, movies, and music. Historian Margaret J. King has called him "as fine a figure of popular culture as can be imagined."

Disney understood the ability of popular culture to manipulate popular historical images and the power of the entertainer to educate. Disney took the Crockett legend and remade it to suit his 1950s audience. Disney planned a three-part series (December 15, 1954's

"Davy Crockett Indian Fighter," January 26, 1955's "Davy Crockett Goes to Congress," and February 23, 1955's "Davy Crockett at the Alamo") to represent the Frontierland section of his Disneyland theme park. Aired on the ABC television network, the series helped ABC become a serious contender among the television networks and catapulted Disney's Davy Crockett, little-known actor Fess Parker, to stardom. The American frontier spirit that formerly had been embodied by Daniel Boone now immediately became associated with Davy Crockett. Walt Disney himself was surprised by the size and intensity of the overnight craze: King quotes him as having said, "It became one of the biggest overnight hits in television history and there we were with just three films and a dead hero." Disney quickly rereleased the series as feature film *Davy Crockett, King of the Wild Frontier* (1955) in order to cash in on the Crockett craze. The weekly television show, which aired on Wednesday nights, also spawned *Davy Crockett and the River Pirates* (1956), which was made from two of the television shows, including the Mike Fink keelboat race story.

Disney's interpretation of the Crockett legend arrived soon after television enjoyed widespread ownership for the first time and leisure activities began to center around the television. Disney proved the powerful ability of television to capture and influence wide audiences. Television programmers and mass advertisers discovered sizable new markets in the children and baby boom audience who quickly became infatuated with all things Crockett. The promotional tie-in has enjoyed widespread success ever since the first young child placed Davy's coonskin cap on his head so that he could feel like Davy Crockett as he hunted "b'ars" in the backyard. Raccoon skin prices dramatically jumped practically overnight. Hundreds of products by various producers quickly saturated the market as Disney was unable to copyright the public Crockett name. Guitars, underwear, clothes, toothbrushes, moccasins, bedspreads, lunch boxes, toys, books, comics, and many other items found their way into many American homes. Many producers simply pasted Crockett labels over existing western-themed merchandise so as not to miss out on the phenomenon. Various artists recorded sixteen versions of the catchy theme song "The Ballad of Davy Crockett," which was originally created as filler. It went on to sell more than four million copies.

The legendary Davy Crockett was born of a long tradition of creating national heroes as embodiments of the national character, most in the historical tradition of the great white male. Disney's Davy Crockett was a 1950s ideal, a dignified common man who was known for his congeniality, neighborliness, and civic-mindedness. He was also an upwardly mobile, modest, and courageous man. He showed that God's laws existed in nature and came from a long line of American heroes who represented the national ideal of the noble, self-reliant frontiersman. It was men such as the legendary Davy Crockett that led the American people on their divinely appointed mission into the wilderness and set the cultural standard for the settlements that would follow. Some detractors, however, felt that some of Crockett's less refined qualities were not the American ideals that should be passed on to their children. This led to a debate over the Disney Crockett's effectiveness and suitability as a national hero. King terms such controversy as exemplary of the volatile encounter among mass media, national history, and the popular consciousness. Disney's Davy Crockett, and the many popular Crocketts that went before, are central figures in the search for how American historical legends have affected what Americans understand about their history and how this understanding continues to change over time.

—Marcella Bush Treviño

Day, Doris (1924—)

Vocalist and screen actress Doris Day, a freckle-faced buttercup blonde with a sunny smile that radiated wholesome good cheer,

Doris Day

embodied the healthy girl-next-door *zeitgeist* of 1950s Hollywood. The decade marked the fall of the Hollywood musical and Day, with her pleasing personality and distinctive voice, huskily emotive yet pure and on-note, helped to prolong the genre's demise. Thanks largely to her infectious presence, a series of mostly anodyne musical films attracted bobby-soxers and their parents alike during the otherwise somber era of the Cold War and McCarthyism.

Behind the smile, however, Doris Day's life was marked by much unhappiness endured, remarkably, away from the glare of publicity. She was born Doris von Kappelhoff in Cincinnati, Ohio on April 3, 1924, the daughter of German parents who divorced when she was eight. She pursued a dancing career from an early age, but her ambitions were cut short by a serious automobile accident in her mid-teens, and she turned to singing as an alternative. She had two disastrous early marriages, the first, at the age of 17, to musician Al Jorden, by whom she had a son. She divorced him because of his violence, and later married George Weidler, a liaison that lasted eight months. By the age of 24, she had worked her way up from appearing on local radio stations to becoming a popular band singer with Bob Crosby and Les Brown, and had begun to making records.

In 1948, Warner Brothers needed an emergency replacement for a pregnant Betty Hutton in *Romance on the High Seas*. Day was suggested, got the part and, true to the cliché, became a star overnight. The movie yielded a huge recording hit in "It's Magic," establishing a pattern which held for most of her films and secured her place as a best-selling recording artist in tandem with her screen career. The songs as sung by Day threaded themselves into a tapestry of cultural consciousness that has remained familiar across generations. Notable among her many hits are the wistfully romantic and Oscar-winning "Secret Love" from *Calamity Jane* (1953) and the insidious "Que Sera Sera" from Hitchcock's *The Man Who Knew Too Much* (1956), which sold over a million at the time and earned her a Gold Disc.

No matter what the role or the plot of a movie, Day retained an essentially "virginal" persona about which it was once fashionable to make jokes. She confounded derision, however, with sheer energy and professionalism, revealing a range that allowed her to broaden her scope and prolong her career in non-musicals—an achievement that had eluded her few rivals.

Early on, her string of Warner musicals, which paired her with Jack Carson, then Gordon MacRae, or Gene Nelson, were interrupted by a couple of straight roles (opposite Kirk Douglas' Bix Beiderbecke in *Young Man With a Horn* and murdered by the Klan in *Storm Warning*, both 1950), but it was for Metro-Goldwyn-Meyer (M-G-M), in the biopic *Love Me or Leave Me* (1955), that Day won her colors as an actress of some accomplishment and grit. As Ruth Etting, the famed nightclub singer of the 1920s who suffered at the hands of her crippled hoodlum husband (played by James Cagney), she was able to meet the acting challenge while given ample opportunity to display her vocal expertise. She had, however, no further opportunity to develop the dramatic promise she displayed in this film.

The most effervescent and enduring of Day's musicals, the screen version of the Broadway hit *The Pajama Game* (1957), marked the end of her Warner Brothers tenure, after which she studio-hopped for three undistinguished comedies, *Tunnel of Love* (M-G-M 1958, with Richard Widmark), *Teacher's Pet* (Paramount 1958, with Clark Gable), and *It Happened to Jane* (Columbia, 1959, with Jack Lemmon). A star of lesser universal appeal might have sunk with these leaden enterprises, but her popularity emerged unscathed—indeed, in 1958 the Hollywood Foreign Press Association voted her the World's

Favorite Actress, the first of several similar accolades that included a Golden Globe in 1962.

In 1959, any threat to Day's star status was removed by a series of monumentally profitable comedies in which oh-so-mild risqué innuendo stood in for sex, and the generally farcical plots were made to work through the light touch and attractive personalities of Day and her coterie of leading men. The first of these, *Pillow Talk* (1959), teamed her with Rock Hudson, grossed a massive \$7.5 million and won her an Oscar nomination for her masquerade as a buttoned-up interior designer. The Day-Hudson formula was repeated twice more with *Lover Come Back* (1962) and *Send Me No Flowers* (1964). In between, *That Touch of Mink* (1962) co-starred her with Cary Grant, while *The Thrill of It All* and *Move Over Darling* (both 1963) added James Garner to her long list of leading men. The last years of the 1960s saw a decline in both the number and the quality of her films, and she made her last, *With Six You Get Eggroll*, in 1968, exactly 20 years after the release of her first film.

Her third husband Martin Melcher, who administered her financial affairs and who forced the pace of her career in defiance of her wishes, produced most of Doris Day's comedies. After his death in 1968, nervous exhaustion, coupled with the discovery that he had divested her of her earnings of some \$20 million, leaving her penniless, led to a breakdown. She recovered and starred for five years in her own television show to which Melcher had committed her without her knowledge, and in 1974 was awarded damages (reputed to be \$22 million) against her former lawyer who had been a party to Melcher's embezzlement of her fortune.

Other than making a series of margarine commercials and hosting a television cable show *Doris Day and Friends* (1985-1986), she retired from the entertainment profession in 1975 to devote herself to the cause of animal rights. She married Barry Comden in 1976, but they divorced four years later. From her ranch estate in Carmel, she now administers the Doris Day Animal League, working tirelessly to lobby for legislative protection against all forms of cruelty. Her recordings still sell and her films are continually shown on television. To some, Doris Day is a hopeless eccentric, to many a saint, but she continues to enjoy a high profile and the loyalty of her many fans—her celluloid image of goodness lent veracity by her actions.

The Day the Earth Stood Still

The Day the Earth Stood Still (1951), still playing in cinema revivals in the 1990s, at outdoor summer festivals, and regularly on cable channels, was at the forefront of the science fiction film explosion of the 1950s. A number of its basic elements, from its moralizing to its music, from its fear of apocalypse to its menacing

A scene from the film *The Day the Earth Stood Still*.

robot, are aspects of the genre which remain today. Though the film did not bring all these elements to science fiction for the first time, the film's strong and sophisticated visual and aural style was to have a lasting impact on how the scenario of alien visitation has subsequently been presented. *The Day the Earth Stood Still* outlined creatively, some might even say factually, the images of alien visitation that have fascinated increasing numbers of people in the second half of the twentieth century.

Between 1950 and 1957, 133 science fiction movies were released. *The Day the Earth Stood Still* was one of the earliest, most influential, and most successful. Its story was relatively simple: the alien Klaatu (with his robot, Gort) arrives on this planet and attempts to warn Earthlings, in the face of increasing fear and misunderstanding, that their escalating conflicts endanger the rest of the universe. The film was unusual as a science fiction film in this period in that it was produced by a major production company (Twentieth Century-Fox) on a large budget, and this is reflected in the pool of talent the film was able to call upon, in terms of scripting, casting, direction, special effects, and music. The commentator Bruce Fox has even claimed, in *Hollywood Vs. the Aliens*, that the film's resonance in the depiction of alien visitation reflected testimony and information withheld by the government from the public concerning sightings and contact with "real" UFOs at the time.

Director Robert Wise had worked as an editor for Orson Welles (1915-1985) and directed a number of Val Lewton (1904-1951) horror films. In *The Day the Earth Stood Still*, Wise is restrained in the use of special effects (though Klaatu's flying saucer cost more than one hundred thousand dollars), maintaining their effectiveness by

contrasting them with scenes showing a claustrophobic and suspicious Washington in a light we might usually associate with film noir. Edmund North's script, based on the story "Farewell to the Master" by the famous science fiction magazine editor Harry Bates (1900-1981), emphasizes distinct religious parallels while balancing the allegory with Klaatu's direct experience with individual humans' hopes and fears. The film's mood of anxiety is underlined by the score of Bernard Herrmann (1911-75), who was to do the music for a clutch of Hitchcock films and Martin Scorsese's *Taxi Driver* (1976). Herrmann's use of the precursor of electronic instruments, the theremin, as well as the more usual piano, percussion, and brass helped create a disturbing background. It is not until towards the end of the film that the art direction and special effects take over. More than the spaceship, however, the film's biggest selling point was the eight-foot Gort. Though clumsy and simplistic by today's standards, his huge stature and featureless face give a real sense of presence and menace. The talismanic phrase that had to be said to Gort to save the world, "Klaatu, Barada, Nikto," was on the lips of many a schoolchild of the period.

In many ways *The Day the Earth Stood Still* is far from being the most representative or the most original science fiction film of this period. There were many more thematically interesting films that appeared risible because they lacked the budget of Wise's film. The film's liberal credentials seem rather compromised by its lack of belief in the ordinary individual to avoid panic and suspicion in the face of anything different, while there is something rather patrician in the idea that, because Earth cannot be trusted to guard its own weapons of mass destruction, it must be put in the charge of a larger, wiser, scientifically more advanced intergalactic power. This faith in the rationality of the scientist to overcome all the fears and anxieties of the period was far from a unanimously held view.

Despite these drawbacks, *The Day the Earth Stood Still* is a successful film in popular terms for other reasons. Its influence is obvious: its opening scenes of the flying saucer coming in over the symbols of American democracy in Washington, D.C., resonate all the way down to similar scenes in *Independence Day* (1996); the alien craft and the tense scenes when figures descend from the craft to face a watching crowd create an archetypal image repeated again and again in science fiction films, most potently in *Close Encounters of the Third Kind* (1977); finally, Gort is the prototype for the robot in the American science fiction film, a figure both menacing and protective, a precursor to every man-made humanoid machine from Robbie the Robot to the Terminator, one of the most original and beguiling figures the science fiction genre has offered the cinemagoer.

Days of Our Lives

Developed by Ted Corday, Irna Phillips, and Alan Chase, the daytime drama *Days of Our Lives* premiered on NBC in 1965. With Phillips' creation for Procter & Gamble, *As the World Turns* serving as a model, *Days* proceeded to put increasingly outrageous twists on established formulae for the next three decades. By the mid-1990s, its flights into the postmodern and the macabre had themselves become models for a struggling genre.

"Like sands through the hourglass, so are the days of our lives," proclaims the show's opening narration, voiced by former film actor MacDonald Carey over the appropriate image. Carey portrayed patriarch Tom Horton, all-purpose physician in *Days*' midwestern hamlet of Salem, from the program's inception until the passing of both actor and character in 1994. Accompanied by dutiful wife Alice (Frances Reid), the elder Hortons are two of a handful of veterans who evolved over the years as virtual figureheads on a conspicuously youth-oriented program.

After Ted Corday's passing in 1966, and under the stewardship of his widow, Betty, and headwriter Bill Bell, *Days* began, in the words of author Gerard Waggett, "playing around with the incest taboo." Young Marie Horton (Marie Cheatham) first married and divorced the father of her ex-fiance and then fell for a man later discovered to be her prodigal brother. Marie was off to a nunnery, and the "incest scare" was to pop up on other soaps, including *Young and the Restless*, Bell's future creation for CBS.

The incest theme carried the show into the early 1970s with the triangle of Mickey Horton (John Clarke), wife Laura Spencer (Susan Flannery), and her true desire, Mickey's brother Bill (Edward Mallory)—a story which inspired imitation on *Guiding Light*. Bill's rape of Laura, whom he would later wed, muddied the issue of whether "no" always means "no." Co-writer Pat Falken Smith later penned the similarly controversial "rape seduction" of *General Hospital's* Laura by her eventual husband, Luke. *Days* soon featured another familial entanglement in which saloon singer Doug Williams (Bill Hayes) romanced young Julie Olson (Susan Seaforth), only to marry and father a child by her mother before being, predictably, widowed and returning to Julie's side.

Bell's departure in 1973 provided Smith with interrupted stints as headwriter, as the show's flirtations with lesbian and interracial couplings were short-circuited due to network fears of a viewer backlash. The introduction of popular heroine Dr. Marlena Evans (Deidre Hall) late in the decade was a highlight, but the "Salem Strangler" serial killer storyline spelled the end for many cast members by the early 1980s. Marlena's romance with cop Roman Brady (Wayne Northrop) created a new "super couple" and established the Bradys as a working-class family playing off the bourgeois Hortons.

General Hospital's Luke and Laura, along with their fantasy storylines—which were attractive to younger viewers in the early 1980s—were emulated, and thence, by *Days*. Marlena and Roman were followed by Bo and Hope (Peter Reckell and Kristian Alfonso), Kimberly and Shane (Patsy Pease and Charles Shaughnessy), and Kayla and Steve (Mary Beth Evans and Stephen Nichols), who anchored Salem's supercouple era, and whose tragic heroines are profiled in Martha Nochimson's book, *No End to Her*. Their Gothic adventures involved nefarious supervillains such as Victor Kiriakis (John Aniston) and, later, Stefano DiMera (Joseph Mascolo), whose

The cast of *Days of Our Lives*.

multiple resurrections defied any remaining logic. Kayla and Steve's saga revived the program's sibling triangle and rape redemption scenarios. Identities also became tangled, with Roman returning as the enigmatic John Black, portrayed by another actor (Drake Hogestyn), and brainwashed to temporarily forget his "true" identity. When Wayne Northrop was available to reclaim the role, however, Black's identity became a mystery once again.

In the 1990s, with the next generation, Ken Corday was at the producer's helm, and with innovative new headwriter James Reilly, *Days* crossed a horizon into pure fantasy. Vivian Alamain (Louise Sorel) had one rival buried prematurely and purloined another's embryo. Marlena, possessed by demons, morphed into animals and levitated. Later, she was exorcised by John Black, now found to have been a priest, and imprisoned in a cage by Stefano. Super triangles supplanted supercouples, as insecure and typically female third parties schemed to keep lovers apart. The most notorious of these was teen Sami Brady (Alison Sweeney), whose obsession with Austin Reed (Patrick Muldoon, later Austin Peck), produced machinations plaguing his romance with Sami's sister, Carrie (Christie Clark), and led Internet fans to nickname her "Scami." While many longtime fans lamented the program's new tone, younger viewers adored it. By 1996, the program had risen to second in ratings and first in all-important demographics.

To the chagrin of their fans, other soaps soon found themselves subject to various degrees of "daysification," even as *General Hospital* was devoting itself to sober, socially relevant topics. But overall viewership of the genre had diminished, and when *Days*' ratings dipped in the late 1990s, its creators seemed not to consider that postmodern escapism might work to lure very young fans but not to hold them. NBC hired Reilly to develop a new soap and threatened its other soaps with cancellation if they did not get up to pace. Its stories were risky, but in eschewing the socially relevant and truly

bold, *Days of Our Lives* might have succeeded in further narrowing the genre's purview and, with it, its pool of potential viewers for the new millennium.

Daytime Talk Shows

The daytime television talk show is a uniquely modern phenomenon, but one with roots stretching back to the beginning of broadcasting. Daytime talk programs are popular with audiences for their democratic, unpredictable nature, with producers for their low cost, and with stations for their high ratings. They have been called everything from the voice of the common people to a harbinger of the

end of civilization. Successful hosts become stars in their own right, while guests play out the national drama in a steady stream of confession, confrontation, and self-promotion.

Daytime talk shows can be classified into two basic formats. Celebrity-oriented talkers have much in common with their nighttime counterparts. The host performs an opening monologue or number, and a series of celebrity guests promote their latest films, TV shows, books, or other product. The host's personality dominates the interaction. These shows have their roots in both talk programs and comedy-variety series. The basic formula was designed by NBC's Sylvester "Pat" Weaver, creator of both *Today* and *The Tonight Show*. Musical guests and comic monologues are frequently featured along with discussion. Merv Griffin, Mike Douglas, Dinah Shore, and Rosie O'Donnell have all hosted this type of show.

The more common and successful category of talk shows is the issue-oriented talker. Hosts lead the discussion, but the guests' tales of personal tragedy, triumph, and nonconformity are at the center. Phil Donahue was the first, beginning in 1979, to achieve national prominence with this style of talk show. Oprah Winfrey was transformed from local Chicago television personality to national media magnate largely on the strength of her talk program. In the 1990s, these shows grew to depend more and more on confession and confrontation. The trend has reached its apparent apotheosis with *The Jerry Springer Show*, on which conflicts between guests frequently turn physical, with fistfights erupting on stage.

With the tremendous success in the 1980s of *Donahue*, hosted by Phil Donahue (most daytime talk programs are named for the host or hosts) and *The Oprah Winfrey Show*, the form has proliferated. Other popular and influential hosts of the 1980s and 1990s include Maury Povich, Jenny Jones, Sally Jesse Raphael, former United States Marine Montel Williams, journalist Geraldo Rivera, actress Ricki Lake, and Jerry Springer, who had previously been Mayor of Cincinnati. On the celebrity-variety side, actress-comedienne Rosie O'Donnell and the duo of Regis Philbin and Kathie Lee Gifford have consistently drawn large audiences.

The list of those who tried and failed at the daytime talk format includes a wide assortment of rising, falling, and never-really-were stars. Among those who flopped with issue-oriented talk shows were former *Beverly Hills, 90210* actress Gabrielle Carteris, actor Danny Bonaduce of *The Partridge Family*, ex-*Cosby Show* kid Tempestt Bledsoe, Mark Walberg, Rolanda Watts, Gordon Elliott, Oprah's pal Gayle King, Charles Perez, pop group Wilson Phillips' Carnie Wilson, retired Pittsburgh Steelers quarterback Terry Bradshaw, and the teams of gay actor Jim J. Bullock and former televangelist Tammy Faye Baker Messner and ex-spouses George Hamilton and Alana Stewart. Others have tried the celebrity-variety approach of Mike Douglas and Merv Griffin; singer-actress Vicki Lawrence and *Night Court*'s Marsha Warfield both failed to find enough of an audience to last for long.

Issue talk shows like *Sally Jesse Raphael* and *The Jerry Springer Show* rely on "ordinary" people who are, in some way, extraordinary (or at least deviant.) Though celebrities do occasionally appear, the great majority of guests are drawn from the general population. They are not celebrities as traditionally defined. Though the talk show provides a flash of fleeting notoriety, they have no connection with established media, political, or social elites. They become briefly famous for the contradictory qualities of ordinariness and difference. Show employees called "bookers" work the telephones and read the great volume of viewer mail in search of the next hot topic, the next

great guest. Those chosen tend to either lead non-traditional lifestyles—such as gays, lesbians, bisexuals, prostitutes, transvestites, and people with highly unorthodox political or religious views—or have something to confess to a close confederate, usually adultery or some other sexual transgression. If the two can be combined, e.g., confessing a lesbian affair, which *The Jerry Springer Show* has featured, then so much the better. The common people gain a voice, but only if they use it to confess their sins.

Like all talk shows, daytime talkers rely on the element of unpredictability. There is a sense that virtually anything can happen. Few shows are broadcast live, they are taped in a studio with a "cast" of nonprofessional, unrehearsed audience members. The emotional reaction of the audience to the guest's revelations becomes an integral part of the show. The trend in the late 1990s was deliberately to promote the unexpected. The shows trade heavily on the reactions of individuals who have just been informed, on national television, that a friend/lover/relative has been keeping a secret from them. Their shock, outrage, and devastation becomes mass entertainment. The host becomes the ringmaster (a term Springer freely applies to himself) in an electronic circus of pain and humiliation.

Sometimes the shock has implications well beyond the episode's taping. In March of 1996, *The Jenny Jones Show* invited Jonathan Schmitz onto a program about secret admirers, where someone would be confessing to a crush on him. Though he was told that his admirer could be either male or female, the single, heterosexual Schmitz assumed he would be meeting a woman. During the taping, a male acquaintance, Scott Amedure, who was gay, confessed that he was Schmitz's admirer. Schmitz felt humiliated and betrayed by the show, and later, enraged by the incident, he went to Amedure's home with a gun and shot him to death. Schmitz was convicted of murder, but was granted a new trial in 1998. In a 1999 civil suit, the *Jenny Jones Show* was found negligent in Amedure's death and the victim's family was awarded \$25 million. The ruling forced many talk shows to consider how far they might go with future on-air confrontations.

Talk, as the content of a broadcasting media, is nothing new. The world's first commercial radio broadcast, by KDKA Pittsburgh on November 2, 1920, featured an announcer giving the results of the Presidential election. Early visions of the future of radio and TV pictured the new media as instruments of democracy which could foster participation in public debate. Broadcasters were, and still are, licensed to operate in "the public interest, convenience and necessity," in the words of the communications Act of 1934. Opposing views on controversial contemporary issues could be aired, giving listeners the opportunity to weigh the evidence and make informed choices. Radio talk shows went out over the airwaves as early as 1929, though debate-oriented programs took nearly another decade to come to prominence. Commercial network television broadcasts were underway by the fall of 1946, and talk, like many other radio genres, found a place on the new medium.

Television talk shows of all types owe much to the amateur variety series of the 1940s and 1950s. Popular CBS radio personality Arthur Godfrey hosted *Arthur Godfrey's Talent Scouts* on TV in prime time from 1948 to 1958. *The Original Amateur Hour*, hosted by Ted Mack, ran from 1948 to 1960 (at various times appearing on ABC, CBS, NBC, and Dumont.) These amateur showcases were genuinely democratic; they offered an opportunity for ordinary people to participate in the new public forums. Talent alone gave these guests a brief taste of the kind of recognition usually reserved for celebrities. Audiences saw themselves in these hopeful amateurs

looking for their big break. Winners were a source of inspiration; losers provided a laugh. Godfrey added another element to this mix: unconventionality. He was unashamedly emotional and unafraid to push the envelope of acceptable (for the era) host behavior. Breaking the rules became part of his persona, and that persona made him a star. Talk show hosts from Jack Paar to David Letterman to Jerry Springer would put Godfrey's lesson to productive use.

One of the earliest daytime talkers was *Art Linkletter's House Party*. Many of the elements of the successful, modern talk show were in place: Linkletter was a genial host who interacted with a live audience. They participated in the program by confessing their minor transgressions and foibles. Linkletter responded with calm platitudes, copies of his book (*The Confessions of a Happy Man*), and pitches for Geritol and Somnex. No matter what the trouble, Linkletter could soothe his audience members' guilt with reassurances that they were after all perfectly normal, and that "people are funny" (an early title for the series.) Sin (albeit venial) was his subject, but salvation was his game. Each show concluded with his "Kids Say the Darndest Things" segment, wherein Linkletter milked laughs from children's responses to questions about grown-up subjects. This bit proved both endearing and enduring; in 1998 it was revived in prime time by CBS as a vehicle for another genial comedian, Bill Cosby.

Linkletter gave the modern talk show confession, but Joe Pyne gave it anger. *The Joe Pyne Show*, syndicated from 1965 to 1967, offered viewers a host as controversial as his guests. Twenty years before belligerent nighttime host Morton Downey, Jr., Pyne smoked on the set and berated his guests and audience. The show was produced at Los Angeles' KTTV. At the height of the Watts riots of 1965, Pyne featured a militant black leader; both men revealed, on the air, that they were armed with pistols. Other guests included the leader of the American Nazi Party and Lee Harvey Oswald's mother. Pyne, like Downey, lasted only a short time but made a major impression.

In the 1960s and 1970s, the celebrity-variety talk show flourished. This was the era of Mike Douglas, Merv Griffin, and Dinah Shore. Douglas was a former big-band vocalist who occasionally sang on his show. *The Mike Douglas Show* ran in syndication from 1961 to 1982. His variation on the daytime talk formula was to have a different celebrity co-host from Monday to Friday each week. For one memorable week in the early 1970s he was joined by rock superstars John Lennon and Yoko Ono. His guests ran the gamut from child actor Mason Reese to pioneering heavy metal rock band KISS. In 1980 his production company replaced him with singer-actor John Davidson, in an unsuccessful attempt to appeal to a more youthful audience. Douglas stayed on the air for two more years, then faded from public view. His impact on daytime talk shows was underappreciated by many until 1996, when *The Rosie O'Donnell Show* premiered to immediate acclaim and ratings success. Multiple-Emy winner O'Donnell frequently cited both Douglas and Merv Griffin as major inspirations.

The modern issue-oriented daytime talk show began with *Donahue*. From the beginning, Phil Donahue knew he was doing something different, neither purely journalism nor purely entertainment. It was not news, but it was always new. The issues were real, the guests were real, but the whole package was ultimately as constructed a piece of entertainment as any of its predecessors. By making television spectacle out of giving voice to the voiceless, Donahue found an audience, thus meeting commercial broadcasting's ultimate imperative: bringing viewers to the set. Though the market has since become saturated with the confessional show, Phil Donahue's concept was as radical as it was engaging. For the first time, the

marginalized and the invisible were given a forum, and mainstream America was fascinated.

A true heir to Donahue's throne did not appear until 1986, with the premiere of *The Oprah Winfrey Show*. Winfrey was a Chicago TV personality who burst onto the national scene with her Academy Award-nominated performance in Steven Spielberg's *The Color Purple* (1985). She took Donahue's participatory approach and added her own sensibility. Winfrey, an African-American and sexual abuse survivor, worked her way out of poverty onto the national stage. When her guests poured out their stories, she understood their pain. Unlike many who followed, Winfrey tried to uplift viewers rather than offer them a wallow in the gutter. She started "Oprah's Book Club" to encourage viewers to read contemporary works she believed important. She sought to avoid the confrontations so popular on later series. After one guest surprised his wife on the air with the news that he was still involved with his mistress, and had, in fact, impregnated her, Winfrey vowed such an episode would never occur again. In 1998, in response to the popularity of *The Jerry Springer Show*, Oprah Winfrey introduced a segment called "Change Your Life Television," featuring life-affirming advice from noted self-help authors. *The Oprah Winfrey Show* has received numerous accolades, including Peabody Awards and Daytime Emmys. Winfrey may well be the most powerful woman in show business, as strong an influence on popular culture as any male Hollywood mogul.

The next big daytime talk success was *Geraldo*. Host Geraldo Rivera made his reputation as an investigative journalist on ABC's newsmagazine series *20/20*. After leaving that show, his first venture as the star of his own show was a syndicated special in 1986. The premise was that Rivera and a camera crew would enter Chicago mobster Al Capone's long-lost locked vault. The program was aired live. All through the show Rivera speculated on the fantastic discoveries they would make once the vault was open. When it finally was opened, they found nothing. What he did find was an audience for the daytime talk series that premiered soon after. He also found controversy, most notably when, during a 1988 episode featuring Neo-Nazis, a fight broke out and one "skinhead" youth hit Rivera with a chair, breaking his nose. In 1996, Rivera ended *Geraldo* and signed with cable network CNBC for a nighttime news-talk hour. Though often accused of sensationalism, even he had become disgusted with the state of talk TV, especially the growing popularity of *The Jerry Springer Show*.

A new era of daytime talk began with Jerry Springer. His is the most popular daytime talk show of the late 1990s, often beating *The Oprah Winfrey Show* in the ratings. Springer's talker began its life as another undistinguished member of a growing pack. Viewership picked up when the subject matter became more controversial and the discussion more volatile. Confrontation over personal, often sexual, matters is Springer's stock in trade. Guests frequently face lovers, friends, and family members with disapproval over their choice of lifestyle or romantic partner. Taking the drama a step beyond other daytime talkers, these arguments have frequently come to physical blows. The fights have become a characteristic, almost expected part of the show, which, indeed, is sometimes accused of choreographing them. The content of the series has inspired some stations to banish it from daytime to early morning or late night hours when children are less likely to be watching. Springer's production company sells several volumes of *Too Hot For TV* videos, featuring nudity, profanity, and violence edited from the broadcasts. Critics declaim the show as a further symptom of the moral decline of America, especially

American television. Some bemoan the “Springerization” of the nation. Springer defends his show as reflecting the lives of his guests, and giving his audience what they want to see. The series’ consistently high ratings, at least, seem to bear out his claim. Springer saw less success when the show became the first daytime talk program to inspire a feature film version, *Ringmaster* (1999). It was a failure at the box office.

With Springer and Winfrey still drawing large audiences, and Rosie O’Donnell’s show a breakout hit, daytime talk shows faced the end of the 1990s more popular than ever. New contenders like former sitcom star Roseanne, comedian Howie Mandel, and singing siblings Donny and Marie Osmond have joined the veteran hosts in the battle for a share of the large talk audience, and new talk programs premiere every season. Many people say that they turn on the television for “company,” and talk shows bring a wide variety of acquaintances into American living rooms, kitchens, and bedrooms. Their revelations, whether it is an unguarded moment with a celebrity or a painful confession from an unknown, give audiences a taste of intimacy from a safe distance. In a world many Americans perceive as more and more dangerous, this is the ultimate paradox of television, the safe invitation of strangers into the house. Whether they inspire sympathy or judgement, talk shows have become a permanent part of the television landscape.

Daytona 500

The five-hundred-mile, National Association for Stock Car Auto Racing (NASCAR) Daytona 500 is commonly referred to as “the Great American Race.” Its reputation for exciting finishes, horrendous crashes, Florida-in-February weather, and bumper-to-bumper and door-handle-to-door-handle racing along the Daytona International Speedway’s two-and-a-half-mile, tri-oval, high-banked track with the long back-straight thrills the fans and challenges the drivers and mechanics. Stock car legends are born here.

The first race of the NASCAR season, the Daytona 500 is the final, paramount event of a spring speedweek featuring three weeks of racing starting with the world-famous 24 Hours of Daytona and two qualifying races. Thanks to television and professional marketing, the Daytona 500 is the premier stock car race of the year, bringing the thrills and violence of racing into the homes of millions. Sponsors of the top cars are afforded a three-and-a-half-hour commercial. Although the Indianapolis 500 has a larger viewing audience, in-car cameras at the Daytona 500 allow the viewer to watch the driver, the cars in front, and the cars behind from the safety of the roll cage. A roof-mounted camera shows the hood buckle in the wind. Another allows the viewer to ride out a spin at two hundred miles per hour. Another planted under the rear bumper allows the viewer to read bumper stickers on the car behind.

The winner of the race is awarded the Harley J. Earl Daytona 500 trophy and a quarter million dollars in prize money. (Earl, 1839-1969, was responsible for the design of the modern American car while at General Motors in the 1930s, 1940s, and 1950s when the “stock car” was born.)

The track was started in 1957 by Bill France to take his fledgling NASCAR franchise off the beach of Daytona and bring it into a legitimate race facility. The first Daytona 500 was run in 1959 and won by Lee Petty. Since that time, the number of fans as well as the speed of the cars have increased. The cost of racing has also gone up, and NASCAR and the Daytona track owners have continued to enlarge their entertainment empire. The corporation that owns Daytona also owns Darlington (South Carolina), Talladega (Alabama), and Watkins Glen (New York) race tracks.

The track design and the speeds require an appreciation, if not a dread, on the part of the mechanics and drivers of the modern high-speed professional racing leagues that use the track. The turns—wide U-shaped continuous corners—are banked at thirty-one degrees, and because there are no short chutes between them, they are called one-two and three-four, too steep to walk up let alone drive on. The tri-oval (sort of a turn five) is relatively flat at eighteen degrees but is connected by short, flat straights from the exit of turn four to the entrance of turn one. Flipped up on their sides by the banking, the drivers look “up” to see ahead in the turns, and have to deal with a downforce caused by the car wanting to sink down into the pavement. Drivers actually steer fairly straight to accomplish a 120-degree change in direction (one thousand foot radius for three thousand feet of turn). Drivers must do all that and keeping his 3,400-pound car out of the front seat of the one next to him.

The road abruptly flattens after three thousand feet of turns one-two where the equally long straight that is the signature of Daytona now requires the driver to draft within a yard of the car in front, race three wide, keep his foot to the floor, and relax—for a moment—until the car upends again in turns three-four. The driver and car suffer gravitational forces that push down and out in the high banks, immediately followed by a tremendous downward slam at the start of the back-straight, and then in the tri-oval the g-forces are more outward than down. The suspension has to keep the wheels evenly on the surface, and the aerodynamics have to keep the car in a line with itself. Two hundred laps, six hundred left turns, three or four stops for gasoline, all lead to one winner.

Daytona is the track where “Awesome Bill from Dawsonville” Elliott achieved fame and fortune, and Lee Petty began the Petty dynasty. It is the race Dale Earnhardt took twenty-one years to win after winning NASCAR races everywhere else. It is the race Mario

Stock cars racing around a curve at the Daytona International Speedway during the Daytona 500, February 18, 1996.

Andretti won once in 1967, but, like Indy (1969), never repeated. Two lasting images from the race are Donnie Allison and Cale Yarborough (1968, 1977, and 1983 winner) duking it out in the back-stretch grass, and Richard Petty and David Pearson colliding with each other after coming out of turns three-four on the last lap—Petty spinning off the track with a dead motor and Pearson sliding along the track killing his engine, too. As Petty, farther downtrack than Pearson, frantically tried to restart, Pearson ground the starter with his Mercury in gear to creep across the finish line and win the race.

—Charles F. Moore

DC Comics

As the leading publisher during the first three decades of the comic book industry, DC Comics was largely responsible for the look and content of mainstream American comic books. By the end of the twentieth century, DC had become not only the longest established purveyor of comic books in the United States, but arguably the most important and influential in the history of comic book publishing. Home to some of the genre's most popular characters, including Superman, Batman, and Wonder Woman, DC's initial innovations in the field were quickly and widely imitated by its competitors, but few achieved the consistent quality and class of DC's comic books in their heyday.

In 1935, a 45-year-old former U.S. Army major and pulp magazine writer named Malcolm Wheeler-Nicholson started up a small operation called National Allied Publishing. From a tiny office in New York City, Wheeler-Nicholson launched *New Fun* and *New Comics*. Although modeled after the new comics magazines like

Famous Funnies, Wheeler-Nicholson's titles were the first to feature original material instead of reprinted newspaper funnies. The Major, remembered by his associates as both an eccentric and something of a charlatan, started his publishing venture with insufficient capital and little business acumen. He met with resistance from distributors still reluctant to handle the new comic books, fell hopelessly into debt to his creditors and employers, and sold his struggling company to the owners of his distributor, the Independent News Company. The new owners, Harry Donenfeld and Jack Liebowitz, would eventually build the Major's tiny operation into a multi-million dollar company.

In 1937 Donenfeld and Liebowitz put out a third comic book title, *Detective Comics*. Featuring a collection of original comic strips based on detective-adventure themes, *Detective Comics* adapted those genres most associated with "B" movies and pulp magazines into a comics format, setting a precedent for all adventure comic books to come. With their own distribution company as a starting point, Donenfeld and Liebowitz developed important contacts with other national distributors to give their comic books the best circulation network in the business. Their publishing arm was officially called National Periodical Publications, but it became better known by the trademark—DC—printed on its comic books and taken from the initials of its flagship title.

What truly put DC on top, however, was the acquisition of Superman. In 1938 Jerry Siegel and Joe Shuster reluctantly sold the rights to their costumed superhero to DC for \$130. When Superman debuted in the first issue of DC's *Action Comics*, the impact on the market was immediate. Sales of the title jumped to half-a-million per issue by year's end, and DC had the industry's first original comic book star. In 1939 Bob Kane and Bill Finger created Batman for DC as a follow-up to Superman, and this strange new superhero quickly became nearly as popular as his predecessor. DC's competitors took note of the winning new formula and promptly flooded the market

with costumed imitators. DC immediately served notice that it would protect its creative property and its domination of the market by suing the Fox Syndicate for copyright infringement over “Wonderman,” a flagrant imitation of Superman. It would later do the same to Fawcett Publications over Captain Marvel, in a lawsuit of dubious merit that dragged on for over a decade.

DC made it a policy to elevate the standards of its material over that of the increasing competition. In 1941 the company publicized the names of its Editorial Advisory Board, which was made up of prominent educators and child-study experts, and it assured parents that all of DC’s comic books were screened for appropriate moral content. The strategy worked to deflect from DC much of the public criticism being directed at comic books in general, but it also deprived their publications of the edgy qualities that had made the early Superman and Batman stories so compelling. DC stayed with this conservative editorial policy for the next several decades.

The World War II years were a boom time for DC (as for most other comic book publishers). They added to their stable of stars such popular characters as Wonder Woman, the Green Lantern, the Flash, and the Justice Society of America. More so than any other publisher, DC worked to educate readers on the issues at stake in the war. Rather than simply bombard young people with malicious stereotypes of the enemy as most of the competition did (although there was plenty of that to be found in DC’s comics as well), DC’s comic books stressed the principles of national unity across ethnic, class, and racial lines, and repeatedly stated a simplified forecast of the postwar vision proclaimed by the Roosevelt administration. The company was also consistent enough to continue its celebration of a liberal postwar order well into the postwar era itself, although it generally did so in dry educational features rather than within the context of its leading adventure stories.

During the 1940s and 1950s DC strengthened and consolidated its leading position in the industry. The publisher remained aloof when its competitors turned increasingly toward violent crime and horror subjects and, although it made tentative nods to these genres with a few mystery and cops-and-robber titles, DC was rarely a target of the criticism directed at the comic book industry during the late 1940s and early 1950s. When the industry adopted the Comics Code in 1954, DC’s own comic books were already so innocuous as to be scarcely affected. Indeed, spokesmen for DC took the lead in extolling the virtues of the Code-approved comics. With its less scrupulous competitors fatally tarnished by the controversy over crime and horror, DC was able to dominate the market as never before, even though the market itself shrank in the post-Code era. By 1962, DC’s comic books accounted for over 30 percent of all comic books sold.

The company published comics in a variety of genres, including sci-fi, humor, romance, western, war, mystery, and even adaptations of popular television sitcoms and movie star-comics featuring the likes of Jerry Lewis and Bob Hope. But DC’s market strength continued to rest upon the popularity of its superheroes, especially Superman and Batman. While the rise of television hurt comic book sales throughout the industry, DC enjoyed the cross-promotional benefits of the popular *Adventures of Superman* TV series (1953-1957). Beginning in 1956, DC revised and revamped a number of its 1940s superheroes, and the new-look Flash, Green Lantern, Hawkman, and Justice League of America comprised the vanguard of what comic book historians have termed the “Silver Age” of superhero comics (as opposed to the “Golden Age” of the 1930s-1940s).

DC’s comic books were grounded firmly in the culture of consensus and conformity. In accordance with the Comics Code and

DC’s long-standing editorial policies, the superheroes championed high-minded and progressive American values. There was nothing ambiguous about the character, cause, or inevitable triumph of these heroes, and DC took pains to avoid the implication that they were glorified vigilantes and thus harmful role models for children. All of the superheroes held respected positions in society. When they were not in costume, most of them were members of either the police force or the scientific community: Hawkman was a policeman from another planet; the Green Lantern served in an intergalactic police force; the Atom was a respected scientist; the Flash was a police scientist; and Batman and his sidekick, Robin, were deputized members of the Gotham City police force. Superman, of course, was a citizen of the world. These characters all underscored the importance of the individual’s obligation to the community, and did so to an extent that, in fact, minimized the virtues of individualism. All of the DC heroes spoke and behaved the same way. Always in control of their emotions and their environment, they exhibited no failings common to the human condition. Residing in clean green suburbs, modern cities with shining glass skyscrapers, and futuristic unblemished worlds, the superheroes exuded American affluence and confidence.

The pristine comic books promoted by DC were, however, highly vulnerable to the challenge posed by the new “flawed” superheroes of Marvel Comics. Throughout the 1960s, figures such as Spider-Man, the Incredible Hulk, and the Fantastic Four garnered Marvel an anti-establishment image that was consciously in synch with trends in contemporary youth culture. DC’s star performers, on the other hand, epitomized the “Establishment,” seeming like costumed Boy Scout Troop leaders by comparison. By the late 1960s, DC recognized their dilemma and clumsily introduced some obvious ambiguity and angst into their superhero stories, but the move came too late to reverse the company’s fall from the top. By the mid-1970s Marvel had surpassed DC as the industry’s leading publisher.

In spite of falling sales, DC’s characters remained the most popular and the most lucrative comic book properties. In 1968 DC was purchased by the powerful Warner Brothers conglomerate, which would later produce a series of blockbuster movies featuring Superman and Batman. Throughout the 1970s DC enjoyed far greater success with licensing its characters for TV series and toy products than it did selling the actual comics. In 1976 Jeanette Kahn became the new DC publisher charged with the task of revitalizing the comic books. In the early 1980s Kahn helped to institute new financial and creative incentives at the company. This attracted some of the top writers and artists in the field to DC and set a precedent for further industry-wide creator’s benefits.

From the late 1980s DC found success in the direct-sales market to comic book stores with a number of titles labeled “For Mature Readers Only,” and also took the lead in the growing market for sophisticated and pricey “graphic novels.” Established superheroes such as Batman and Green Arrow gained new life as violent vigilante characters and were soon joined by a new generation of surreal post-modern superheroes like the Sandman and Animal Man. Such innovative and ambitious titles helped DC to reclaim much of the creative cutting edge from Marvel. Although DC’s sales lagged behind Marvel’s throughout the 1990s, the company retained a loyal following among discerning fans as well as longtime collectors, remaining highly respected among those who appreciate the company’s historical significance as the prime founder of the American comic book industry.

De La Hoya, Oscar (1972—)

Nicknamed “The Golden Boy” for his Olympic boxing achievement during the 1992 Summer Games, Oscar De La Hoya promised his dying mother that he would win the gold medal for her and did just that. He then turned pro and cashed in on his amateur fistic glory. The only fighter campaigning below heavyweight to command eight-figure purses since Sugar Ray Leonard, De La Hoya’s appeal crossed over from mostly male boxing fans to women attracted by his charm and good looks. Guided with savvy by promoter Bob Arum, De La Hoya became one of America’s richest and best-known athletes even before taking on any of the world’s best young fighters. In addition to exploiting the markets that Leonard did before him, De La Hoya also has a huge Latin American fan base as a result of his Mexican American heritage. His willingness to engage opponents in exciting fights makes him a television favorite as well.

—Max Kellerman

De Niro, Robert (1943—)

For approximately a decade from the mid-1970s, screen actor Robert De Niro came to embody the ethos of urban America—most particularly New York City, where he was born, raised, and educated—in a series of performances that demonstrated a profound and introspective intelligence, great power, and the paradigm skills of the acting technique known as the Method at its best.

In his gallery of violent or otherwise troubled men and social misfits, it is in his portrayal of Travis Bickle in Martin Scorsese’s *Taxi Driver* (1976) that his image is likely to remain forever enshrined. As the disturbed, nervy, under-educated Vietnam vet who, through the skewed vision of his isolation and ignorance, sets out on a bloody crusade to cleanse society’s ills, De Niro displayed an armory of personal gifts unmatched by any actor of his generation. The film itself was a seminal development in late-twentieth-century cinema, and it is not too fanciful to suggest that, without its influence, certain films in which De Niro excelled for other directors, notably Michael Cimino’s *The Deer Hunter* (1978), might not have existed—at least not in as uncompromising a form. It is impossible to catalogue or categorize De Niro’s work without examining his significant actor-director relationship with Martin Scorsese, for, while the actor’s

substantial skills and the concentrated intensity of his persona were very much his own, it is to that symbiotic collaboration that much of his success could be credited. Scorsese explored, interpreted, and recorded the underbelly of Manhattan as no director before him—not even Francis Coppola—had done.

It was *Mean Streets* (1973), Scorsese’s picture of small-time gangster life in New York’s Little Italy, that focused major attention on De Niro, albeit his role as Johnny Boy, a brash, none-too-bright and volatile hustler, was secondary to that played by Harvey Keitel. De Niro had already appeared in Roger Corman’s *Bloody Mama* (1970) and the unfunny Mafia comedy *The Gang That Couldn’t Shoot Straight* (1971) at the time of *Mean Streets*, and he soon became stamped as American cinema’s most authoritative and interesting purveyor of criminals, large and small.

The son of an artist-poet father and an artist mother, Robert De Niro decided in his teens to become an actor and studied at several institutions, including the Stella Adler Studio and with Strasberg at the Actors Studio in New York City. He worked in obscurity off-Broadway and in touring theater companies before Brian De Palma discovered him and used him in his first three little-seen films—*The Wedding Party* (1963, released 1969), *Greetings* (1968), and *Hi Mom!* (1969). In these, the young De Niro revealed an affinity with the anarchic, and, indeed, De Palma perhaps came closest to Scorsese in being, at that time, a natural director for De Niro. They worked together again almost twenty years later when De Niro, honed in cold villainy, enhanced *The Untouchables* (1989) as a mesmerizing Al Capone. It was his supporting role in *Bloody Mama* that brought De Niro meaningful attention, and several minor movies followed before *Mean Streets* and his first real mainstream appearance as the baseball player in *Bang the Drum Slowly* (1973), which earned him the New York Critics Circle best actor award.

His rising reputation and compelling presence survived his somewhat uncomfortable inclusion in Bertolucci’s Italian political epic *1900* and his blank, if elegant, performance in Elia Kazan’s disastrous *The Last Tycoon* (both 1976). His Oscar-nominated Travis Bickle, followed by his Jimmy Doyle in Scorsese’s *New York, New York* (1977) fortunately superseded both. The director’s dark take on a musical genre of the 1940s was badly cut before its release and suffered accordingly. Underrated at the time and a commercial failure, it nonetheless brought plaudits for De Niro, essaying a saxophonist whose humor and vitality masks arrogance, egotism, and an inability to sustain his love affair with, and marriage to, Liza Minnelli’s singer.

Next came *The Deer Hunter*, giving the actor a role unlike anything he had done before, albeit as essentially another loner. A somber treatment of male relationships, war, and heroism in which a bearded De Niro, voice and accent adjusted to the character, was as tough and tensile as the steel he forged in a small, bleak Pennsylvania town. His Michael is the authoritative leader of his pack of hunting and drinking buddies, a fearless survivor—and yet locked into a profound and unexpressed interior self, permitted only one immensely effective outbreak of overt emotion when confronted by the death wish of his buddy (Christopher Walken), which his own heroics are finally powerless to conquer.

De Niro began the 1980s with a triumphant achievement, shared with Scorsese. *Raging Bull* (1980), filmed in black-and-white, dealt with the rise, fall, and domestic crises of middleweight boxing champ Jake LaMotta, an Italian American who copes with his personal insecurities with braggadocio and bullying. It was known that De

Niro went to lengths in preparing his roles, keeping faith with the letter and spirit of the Method in his search for authenticity. In preparing to play LaMotta, he trained in the ring, entering some amateur contests, and famously put on sixty pounds for the later-life sequences. It was a bravura performance in one of the best fight films ever made. The actor was garlanded with praise and awards, including the Best Actor Oscar, and nine years later the film was voted the best of the decade. It was a faultless achievement for both star and director.

Inexplicably, although widely acknowledged and admired as a great *actor*, De Niro, for all his achievements, was not proving a great *movie star*—a label that refers to marquee value and box office clout. It was to the Stallones and the Schwarzeneggers that producers looked for big financial returns, which might account for some of De Niro's erratic choices during the 1980s. He was brilliant on familiar ground, aging thirty years as a gangster in Sergio Leone's epic *Once upon a Time in America* in 1983, the year of *The King of Comedy* for Scorsese. This superb collector's piece for the cognoscenti failed disastrously at the box office, despite De Niro's deathless portrayal of would-be comedian Rupert Pupkin, a pathetically disturbed misfit whose obsessional desire for public glory through television leads him to kidnap TV star Jerry Lewis and demand an appearance on his show as ransom. The film is cynical, its title ironic: tragedy lies at its heart. It lost a fortune, and director and star went their separate ways for seven years.

Until then, and for much of the 1990s, De Niro's career had no discernible pattern. Desirous of expanding his repertoire on the one hand, and seeming bored with the ease of his own facility on the other, he appeared in numerous middle-of-the-road entertainments which had little need of him, nor he of them. After *King of Comedy*, he went into *Falling in Love* (1984) with Meryl Streep, about an abortive affair between two married commuters, largely perceived as a contemporary American reworking of *Brief Encounter*. The result was a disappointment and a box-office failure. *Variety* accurately noted that "The effect of this talented pair acting in such a lightweight vehicle is akin to having Horowitz and Rubinstein improvise a duet on the theme of 'Chopsticks.'" "

Other attempts to break the mold between 1985 and 1999 included a Jesuit priest in *The Mission* (1986), worthy but desperately dull; his good-natured bounty hunter in *Midnight Run* (1988), entertaining but unimportant; an illiterate cook in *Stanley and Iris* (1990), a film version of the novel *Union Street* that verged on the embarrassingly sentimental; *Guilty by Suspicion* (1991) an earnest but unconvincing attempt to revisit the McCarthy era in which De Niro played a film director investigated by the HUAC—the list is endless.

On the credit side, among the plethora of undistinguished or otherwise unworthy vehicles and performances delivered on automatic pilot, De Niro met a major challenge in Penny Marshall's *Awakenings* (1990), earning an Academy Award nomination for his moving portrayal of a patient awakened from a twenty-year sleep by the drug L-dopa; he did all that could have been expected of him in the political satire *Wag the Dog* (1997); and he gave an accomplished character performance in Quentin Tarantino's *Jackie Brown* (1997). Almost unrecognizable as a shambling wreck of an ex-con, he seemed initially disconcertingly blank, but this proved deceptive as, in one of the film's best moments, he revealed the chilling hole where a man's heart would normally reside.

It was, however, three more films with Scorsese that made public noise. Their long separation was broken by *GoodFellas* (1990), a brilliant and violent evocation of the Mafia hierarchy, but while De

Niro shared in the accolades and acquitted himself with the expertise that was only to be expected, he was in a sense retreading familiar ground. The same was true of the over-long and less successful *Casino* (1995). In between, he scored his biggest success as Max Cady, the vengeful psychopath in Scorsese's remake of *Cape Fear* (1991). Threateningly tattooed, the actor broke the bounds of any conventional villainy to come up with a character so evilly repellent as almost, but not quite, to flirt with parody. The film, and his uncompromising performance, raised up his star profile once more, only for it to dissipate in the run of largely unmemorable films.

An intensely private man, Robert De Niro has eschewed publicity over the years and been notoriously uncooperative with journalists. His unconventional private life has been noted but caused barely a ripple of gossip. Married from 1975 to 1978 to Diahnne Abbott, by whom he had a son, he fathered twins by a surrogate mother for his former girlfriend Toukie Smith, and he married Grace Hightower in 1997. He seemed to grow restless during these years of often passionless performances, seeking somehow to reinvent himself and broaden the horizons of his ambition. In 1988 he bought an eight-story building in downtown Manhattan and set up his TriBeCa Film Center. Aside from postproduction facilities and offices, it housed De Niro's Tribeca restaurant, the sought-after and exclusive haunt of New York's media glitterati.

It was from there that De Niro launched himself as a player on the other side of the camera, producing some dozen films between 1992 and 1999. One of these, *A Bronx Tale* (1993), marked his directing debut. Choosing a familiar milieu, he cast himself as the good guy, a bus driver attempting to keep his young son free of the seemingly glamorous influence of the local Mafia as embodied by Chazz Palminteri—a role that he once would have played himself.

After attempting to regain the acting high ground as a tough loner in John Frankenheimer's ambiguous thriller *Ronin* (1998)—material inadequate to the purpose—De Niro began displaying a new willingness to talk about himself. What emerged was a restated ambition to turn his energy to directing because, as he told the respectable British broadsheet *The Guardian* in a long interview during the fall of 1998, "directing makes one think a lot more and I have to involve myself—make my own decisions, my own mistakes. It's more consuming. The actor is the one who has to grovel in the mud and jump through hoops."

His words had the ring of a man who had exhausted his own possibilities and was searching for a new commitment, but whatever the outcome, Robert De Niro's achievements had long assured his place in twentieth-century American cultural history.

The Dead Kennedys

Singer Jello Biafra's politically confrontational lyrics lived up to the provocative billing of his group's name: the Dead Kennedys. Biafra's equal-opportunity outrage reproached a wide collection of targets: callow corporations, the Reagan Administration, the Moral Majority, then-California Governor Jerry Brown, feeble liberals, punk rockers with fascist leanings, and MTV. When asked if playing a concert on the anniversary of John F. Kennedy's assassination wasn't distasteful, guitarist East Bay Ray responded that the assassination wasn't in particularly good taste either. Generally acknowledged as pioneers in the American hardcore scene, which was centered in Washington, D.C., and Los Angeles in the early 1980s, the Dead Kennedys' faster variant of punk never fully matched the fury in Biafra's lyrics. By the mid-1980s, in the midst of a political backlash against rock music, Biafra, the group, and its record label became the targets of a misguided obscenity trial. The Dead Kennedys' case was a forewarning of future prosecutions against musicians and record retailers.

The Dead Kennedys' 1981 debut, *Fresh Fruit for Rotting Vegetables*, was released on the group's own label, Alternative Tentacles, and featured the political sarcasm that became the group's strength. The album's opening track, "Kill the Poor," is a Swiftian

The Dead Kennedys with singer Jello Biafra.

proposal about the neutron bomb. "California Uber Alles" imagines Jerry Brown's "Zen Fascist" state: "Your kids will meditate in school . . . You will jog for the master race . . . Mellow out or you will pay." During the same year, the Dead Kennedys' released *In God We Trust, Inc.*, which attacked corporate religion's self-righteousness in the age of televangelism. *Plastic Surgery Disasters* (1982) ridiculed personal identifications such as the preppy, the car enthusiast, and the RV tourist. *Frankenchrist*, the group's first release after a three-year break, was an uneven mixture of scathing commentary and didacticism.

However one felt about his vitriol, Biafra's political carplings often included some sort of constructive solution. For Biafra, merely pointing out the shortcomings in American society was not an answer: "You fear freedom / 'Cos you hate responsibility," he sang in 1985's "Stars and Stripes of Corruption." Even Michael Guarino, the Los Angeles deputy city attorney who unsuccessfully prosecuted the band, was forced to acknowledge the band's social commitment, commenting in the *Washington Post* that, "midway through the trial we realized that the lyrics . . . were in many ways socially responsible, very anti-drug and pro-individual." Biafra's fourth-place run for mayor of San Francisco in 1979 showed that 6600 people had been equally discontented with the establishment and that Biafra's level of political involvement ran deeper than mere complaint. Although his campaign was farcical at times—Biafra's platform suggested that all downtown businessmen wear clown suits—there were serious proposals from the candidate whose slogan was, "There's always room for Jello." For example, Biafra's platform called for neighborhood elections of police officers long before the Rodney King beating compelled urban leaders to demand that local police departments hold themselves more accountable.

Ultimately, the Dead Kennedys' attacks on the status quo didn't provoke authorities so much as the H. R. Giger "Landscape #20" poster in *Frankenchrist* did. Commonly referred to as "Penis Landscape," the poster's artwork depicted an endless series of alternating rows of copulating penises and anuses. Biafra decided that the poster merited inclusion for its depiction of everyone getting screwed by everyone else. A Los Angeles parent filed a complaint in 1986, and police raided Biafra's San Francisco apartment, Alternative Tentacles' headquarters, and the label's distributor. Police confiscated copies of *Frankenchrist* and the Giger poster, charging the Dead Kennedys with "distribution of harmful matter to minors."

The year 1985 had marked the beginning of a national backlash against rock music that had lasting effects. The Parents Music Resource Center, a political action group cofounded by Tipper Gore, held congressional hearings on rock music lyrics. The hearings focused on rap and heavy metal music, but the ensuing publicity questioned rock lyrics in monolithic terms. In 1986, the PMRC succeeded in pressuring the Recording Industry Association of America to voluntarily include warning stickers ("Parental Advisory: Explicit Lyrics") on albums. A series of First Amendment disputes was under way as rock and rap artists faced obscenity charges, and retailers who sold stickered albums to minors faced fines and imprisonment.

Biafra soundly contended that the group's political views, and the limited resources of their independent record company, made them an expedient target. The band found support from other underground musicians who performed benefit concerts to augment the band's defense fund. Pre-trial wrangling pushed the trial's length to a year and a half, and with that, the Dead Kennedys were effectively finished. In 1987, the case was dismissed, due to a hung jury that leaned toward acquittal. His band finished, Biafra became a spoken

word performer, recording *No More Cocoon*s (1987), a collection of political satire in the tradition of Lenny Bruce. Biafra recounted the trial in 1989's *High Priest of Harmful Matter—Tales from the Trial*.

The history of censorship in rock and roll reverts back to Elvis Presley's first television appearance, when cameras cut off his performance at the waist. New to this history are politically organized forces of censorship. Large superstores, like Wal-Mart, by threatening not to sell albums that have warning labels, have compelled artists to change lyrics or artwork. These gains by the anti-rock forces made the Dead Kennedys' legal victory a crucial one; the case was an invaluable blueprint for rap groups with incendiary lyrics or sexually explicit lyrics, like 2 Live Crew, who faced prosecution in the late 1980s.

Dean, James (1931-1955)

Perhaps no film actor is as emblematic of his own era as is James Dean of his. Certainly, no screen-idol image has been as widely disseminated—his brooding, enigmatic, and beautiful face has sold everything from blue jeans to personal computers, and 45 years after his death, his poster-size image was still gracing the bedroom walls of millions of teenage girls and beaming down on the customers in coffee bars throughout America and Europe.

Whether or not he intended to take it to its logical and tragic conclusion, James Dean's credo was to live fast, die young, and leave a good-looking corpse. Thus, his legendary legacy is comprised of only three major motion pictures (though he had small roles in three others prior to this), a handful of seldom-seen television dramas, and an admired Broadway stage performance seen only by a relative handful of people. But Dean, like Brando whom he idolized, was able to blend his life and his art so seamlessly that each seemed an extension of the other. And he harbored a long-festering psychic wound, a vulnerability that begged for redemption. It was the omnipresent wounded child in Dean's persona that made him so appealing, and gave his acting such visceral impact.

Born in Marion, Indiana, James Dean spent his early childhood in Los Angeles where his father worked as a dental technician for the Veterans Administration. His mother, Mildred, overly protective of her son and with a preternatural concern for his health, died of cancer when he was nine, and he was sent to live with his father's sister in Fairmount, Indiana. There, he developed the hallmark traits of an orphan: depression, an inexplicable feeling of loneliness, and anti-social behavior. But Dean's childhood was bucolic as well as tormented. His aunt and uncle doted on him, and nurtured his natural talents. Good at sports, particularly basketball (despite his short stature), and theater, the bespectacled teenager nevertheless required a reputation for rebelliousness that made him *persona non grata* with

James Dean

the parents of his classmates—particularly those of female students who, even then, were fascinated by this mysterious, faintly melancholy youth. Dean was also attractive to older men, and it was a local preacher in Fairmount who first sensed the boy's emotional vulnerability, grew fond of him, and showered him with favors and attention. This quality in the young Dean was a dubious asset that he would exploit to his advantage frequently over the course of his brief career.

Dean never entertained the idea of any career but acting. Upon graduating, he rejoined his father in Los Angeles and attended Santa Monica City College and UCLA before dropping out to pursue acting full-time. According to his fellow drama students at the latter institution, he showed little talent. After quitting UCLA, he lived hand to mouth, picking up bit parts on television and film. His acting may have been lackluster, but he had a pronounced gift for evoking sympathy, and it was during a lean stretch that he acquired his first patron. Dean had taken a job parking cars at a lot across from CBS and it was there that he met the director Rogers Brackett, who took a paternal, as well as a sexual, interest in the young man. Eventually Dean moved in with Brackett and was introduced to a sophisticated homosexual milieu. When Brackett was transferred to Chicago in 1951, he supplied Dean with the necessary money and connections to take a stab at New York.

There was nothing predestined about James Dean's eventual success. He went about just as any other young actor, struggling to eat, relying on the kindness of others, and changing addresses like he changed his clothes. At first he was timid; legend has it that he spent his first week either in his hotel room or at the movies, but just as he

had a flair for cultivating older men, he had an impeccable ear for self-promotion and slanting his stories for maximum advantage. Fortunately, his relationship with Brackett gave him entrée to an elegant theater crowd that gathered at the Algonquin and, helped by Brackett's influential contacts, Dean found television work and an agent. In the summer of 1952, he auditioned for, and was accepted into, the prestigious Actors Studio. Once again, the Dean mystique has distorted the facts to fit the legend: he never appeared in a studio production and his fellow members remembered him only as a vague presence, uncommunicative and sullen.

From a purely practical point of view, Dean's casual morals gave him one advantage over his struggling contemporaries. He was not averse to peddling his sexual favors to further his career, and his first real break came from his seduction of Lemuel Ayers, a successful businessman who invested money in the theater, and helped secure the aspiring actor a role in a forthcoming Broadway play called *See the Jaguar*. The play folded after four performances, but 1954 brought him *The Immoralist*, adapted from André Gide's novel, in which he played the North African street Arab whose sexual charisma torments a male married writer struggling with homosexual tendencies. Dean's own sexual charisma was potent, and his performance attracted notice, praise, and Hollywood. By the end of the following year, 1955, he had starred in *East of Eden* for Elia Kazan—mentor to Montgomery Clift and Brando—and, under Nicholas Ray's direction, became the idolized voice of a generation as the *Rebel Without a Cause*.

Many writers have attributed James Dean's winning combination of vulnerability and bravado to his mother's early death; certainly, he seemed aware of this psychic wound without being able to rectify it. "Must I always be miserable?" he wrote to a girlfriend. "I try so hard to make people reject me. Why?" Following his Broadway success, he abandoned his gay friends, as if in revenge for all the kindness they had proffered, and when he was cast in *East of Eden*, he broke away from his loyal patron, Rogers Brackett, then fallen on hard times. When a mutual friend upbraided him for his callousness, his response was, "I though it was the john who paid, not the whore." But to others, Dean seemed unaffected by success. He was chimerical, yet remarkably astute in judging how far (and with whom) he could take his misbehavior. This trait fostered his Jekyll-and-Hyde image—sweet and sensitive on the one hand, callous, sadistic, and rude on the other.

The actor's arrival in Hollywood presented a problem for studio publicists unsure how to market this unknown, uncooperative commodity. They chose to focus on inflating Dean's sparse Broadway credentials, presenting him as the New York theater actor making good in Hollywood. In New York, Dean had been notorious for skulking sullenly in a corner at parties and throwing tantrums and, although he could be perfectly delightful given sufficient motivation, he was not motivated to appease the publicists. What were taken for Dean's Actors Studio affectations—his ill-kempt appearance, slouching, and mumbling—was actually his deliberate attempt to deflate Hollywood bombast and pretension. The reigning queens of Hollywood gossip, Louella Parsons and Hedda Hopper, both took umbrage at Dean's behavior. His disdain for Hollywood was so overt that, before *East of Eden* was even complete, he had managed to set much of the entertainment press squarely against him. *East of Eden*, however, made a huge impact, won Dean an Academy Award nomination and launched him into the stratospheric stardom that was confirmed later the same year with the success of *Rebel Without a Cause*. In both films, the young actor played complex adolescents, alienated from the

values of the adult world around them—tormented, haunted by an extraordinarily mature recognition of pain that comes from being misunderstood and needing to be loved. The animal quality he brought to conveying anguish and frustration struck a chord in the collective psyche of 1950s American youth, and his almost immediate iconic status softened the scorn of journalists. His on-screen charisma brought forgiveness for his off-screen contemptuousness, and his uncouth mannerisms were suddenly accorded the indulgence shown a naughty and precocious child.

Stardom only exacerbated Dean's schizoid nature, which, paradoxically, he knew to be central to his appeal. When a young Dennis Hopper quizzed him about his persona, he replied, "... in this hand I'm holding Marlon Brando, saying, 'Fuck you!' and in the other hand, saying, 'Please forgive me,' is Montgomery Clift. 'Please forgive me.' 'Fuck you!' And somewhere in between is James Dean." But while playing the *enfant terrible* for the press, he reacted to his overnight fame with naïve wonder, standing in front of the theater unnoticed in his glasses and watching the long queues forming for *East of Eden* with delight. That was Dean's sweet side. He exorcised his demons through speed, buying first a horse, then a Triumph motorcycle, an MG, and a Porsche in short order. He delighted in scaring his friends with his reckless driving. Stories of Dean playing daredevil on his motorcycle (which he called his "murdercycle") are legion. Racing became his passion, and he managed to place in several events. His antics so alarmed the studios that a "no-ride" clause was written into his contract for fear that he would be killed or disfigured in the middle of shooting.

With the shooting of *Rebel* completed, he made his third film, co-starring with Rock Hudson and Elizabeth Taylor in *Giant*. As Jet Rink, the graceless farm laborer who strikes oil and becomes a millionaire, Dean was able to play to type for the first half of the film, but was seriously too young to meet the challenge of the second half in which Rink has become a dissipated, middle-aged tycoon. Nonetheless, he collected a second Oscar nomination—but was no longer alive to hear the announcement. On September 30, 1955, almost immediately after the completion of filming, James Dean and a mechanic embarked for a race in Salinas in the actor's new Porsche Spyder. Fate, in the form of a Ford, struck the tiny car head-on, breaking Dean's neck. He was dead at 24 years old.

Part of James Dean's enduring allure rests in the fact that he was dead before his two biggest films were complete. His legacy as an artist and a man is continually debated. Was he gay or straight? Self-destructive or merely reckless? Perhaps he didn't know himself, but doom hung about him like a shroud, and it came as no surprise to many of his colleagues when they learned of his fatal accident. Elia Kazan, upon hearing the news, sighed "That figures." After his death, his friend Leonard Rosenman commented, "Jimmy's main attraction was his almost pathological vulnerability to hurt and rejection. This required enormous defenses on his part to cover it up, even on the most superficial level. Hence the leather-garbed motorcycle rider, the tough kid having to reassure himself at every turn of the way by subjecting himself to superhuman tests of survival, the last of which he failed." Whether Dean had a death wish or simply met with an unfortunate accident will continue to be batted around for eternity; there are as many who will attest to his self-destructiveness as to his hope for the future. So, was it mere bravado or a sense of fatalism that made him remark to his friend and future biographer John Gilmore: "You remember the movie Bogie made—*Knock on Any Door*—and the line, 'Live fast, die young, have a good-looking corpse?' Shit,

man, I'm going to be so good-looking they're going to have to cement me in the coffin."

—Michael Baers

Death of a Salesman

In all of twentieth-century American drama, it is Arthur Miller's 1949 masterpiece *Death of a Salesman* that has been lauded as the greatest American play. The play deals with both the filial and social realms of American life, exploring and exploding the concept of the American dream. From its debut in New York in 1949 to its many international stagings since, *Death of a Salesman* has spoken to the concerns of middle-class workers worldwide and their struggle for existence in capitalist society. The play and its initial production set the tone for American drama for the rest of the century through its sociopolitical themes, its poetic realism, and its focus on the common man. Brenda Murphy observes, "Since its premier, there has never been a time when *Death of a Salesman* was not being performed somewhere in the world."

The play revolves around the story of the aging salesman Willy Loman, his wife, Linda, and their sons, Biff and Happy. Willy has reached a critical point whereby he cannot work as a traveling salesman and is disappointed in Biff's unwillingness to fulfill his father's dreams. When Willy finally summons the courage to ask his employer to be transferred to New York, he is fired. Linda informs Biff that Willy has secretly attempted suicide, and through a series of flashbacks it is revealed that Biff had found his father with a mistress, which led to Biff's decline. Two other subplots—involving Willy's neighbors, Charley and Bernard, and the appearance of Willy's dead brother Ben—interweave the story. Charley becomes Willy's creditor, and Bernard is the successful son Willy never had. Ben is the pioneering capitalist Willy could never be. Because he has a life insurance policy, Willy decides he is worth more dead, and he commits suicide. Linda is left at his grave uttering the famous lines "We're free and clear . . . We're free . . . And there'll be nobody home."

The play's subtitle is "Certain Private Conversations in Two Acts and a Requiem." Miller's first concept of the play was vastly different from its current form. "The first image that occurred to me which was to result in *Death of a Salesman* was of an enormous face

the height of the proscenium arch which would appear and then open up, and we would see the inside of a man's head. In fact, *The Inside of His Head* was the first title." Instead, Miller gives us a cross-section of the Loman household, simultaneously providing a realistic setting and maintaining the expressionistic elements of the play.

Miller also employs the use of realism for scenes of the present and a series of expressionistic flashbacks for scenes from the past. In his essay "Death of a Salesman and the Poetics of Arthur Miller," Matthew C. Roudanè writes, "Miller wanted to formulate a dramatic structure that would allow the play textually and theatrically to capture the simultaneity of the human mind as that mind registers outer experience through its own inner subjectivity." Hence, the play flashes back to visits from Ben and scenes from Willy's affair. Miller's juxtaposition of time and place give the play added dimension; Miller never acknowledges from whose point of view the story is told and whether the episodes are factual or recreations based on Willy's imagination. Miller also uses flute, cello, and other music to punctuate and underscore the action of the play.

Many critics have attempted to make connections between the name Loman and the position of the character in society, but Miller refuted this theory in his 1987 autobiography *Timebends: A Life*. He explained that the origin of the name Loman was derived from a character called "Lohmann" in the Fritz Lang film *The Testament of Dr. Mabuse*. "In later years I found it discouraging to observe the confidence with which some commentators on *Death of a Salesman* smirked at the heavy-handed symbolism of 'Low-man,'" Miller wrote. "What the name really meant to me was a terror-stricken man calling into the void for help that will never come." Miller describes the play simply: "What it 'means' depends on where on the face of the earth you are and what year it is."

Death of a Salesman originates from two genres: the refutation of the "rags-to-riches" theory first set forth by Horatio Alger, and the form of Miller's self-proclaimed "Tragedy and the Common Man." In stories such as *Ragged Dick*, Alger put forth the theory that even the poorest, through hard work and determination, could eventually work their way to the upper class. Willy Loman seems the antithesis of this ideal, as the more he works toward security the further he is away from it. Thomas E. Porter observes, "Willy's whole life has been shaped by his commitment to the success ideology, his dream based on the Alger myth; his present plight is shown to be the inevitable consequence of this commitment."

Miller attempted to define Willy Loman as an Aristotelian tragic figure in his 1949 essay "Tragedy and the Common Man." Miller stated that he believed "the common man is as apt a subject for tragedy in its highest sense as kings were." He went on to parallel Willy's fall with that of Oedipus and Orestes, claiming that tragedy was "the consequence of a man's total compulsion to evaluate himself justly." Despite Miller's claims, he has been attacked for his views by literary critic Harold Bloom. "All that Loman shares with Lear or Oedipus is agony; there is no other likeness whatsoever. Miller has little understanding of Classical or Shakespearean tragedy," Bloom wrote in *Willy Loman*. "He stems entirely from Ibsen."

The play's placement in the history of American drama is critical, as it bridged the gap between the melodramatic works of Eugene O'Neill and the Theatre of the Absurd of the 1960s. The original production was directed by Elia Kazan and designed by Jo Mielziner, the same team that made Tennessee Williams's *The Glass Menagerie* a Broadway success. Along with the works of Tennessee Williams, Arthur Miller's plays of this period defined "serious"

John Malkovich (left) and Dustin Hoffman in a scene from the television production of Arthur Miller's *Death of a Salesman*.

Broadway theatre. In the 1950s and 1960s, Miller's refusal to submit to the House Committee on Un-American Activities and the onslaught of the avant-garde in the theatre both served to squelch his dramatic voice.

Several productions of *Death of a Salesman* have been performed to great acclaim, including the 1975 George C. Scott production and the 1984 Michael Rudman production starring Dustin Hoffman, John Malkovich, and Kate Reid, which was later filmed for television. Other notable productions include the 1983 production at the Beijing People's Art Theatre and the 1997 Diana LeBlanc production at Canada's Stratford Festival.

Debs, Eugene V. (1855-1926)

Eugene Victor Debs, labor leader and five-time Socialist candidate for President, was born in Terre Haute, Indiana, on November 5, 1855. Working on the railroads since he was 14, Debs founded the American Railway Union in 1893. The following year, the union was destroyed and Debs served six months in jail after a failed strike against the Pullman company in Chicago. Subsequently, Debs joined the Socialist Party of America and was their presidential candidate in 1900, 1904, 1908, and in 1912 when he received about 6 percent of

votes cast. Opposing United States entry into World War I, Debs was sentenced to 10 years in prison for sedition in 1918. In 1920, from his prison cell in Atlanta, Georgia, Debs ran for the presidency again gaining about 3.5 percent of the vote. A year later President Warren G. Harding commuted his sentence and Debs spent his last years in relative obscurity until his death on October 20, 1926. Debs is remembered as the most viable Socialist candidate for the nation's highest office and as a champion of workers' rights.

Debutantes

The debutante (from the French *débuter*, to begin) is a young woman, usually of age 17 or 18, who is formally introduced to affluent society at a ball or “coming out” party. The original purpose of the “debut” was to announce that young women of prominent social standing were available for courtship by eligible young men. This social ritual was necessitated by the traditional upper-class

The Seattle Rhinestone debutantes of 1956.

practice of sending girls away to boarding school where they were virtually hidden from view—prohibited from dating, attending parties of mixed company, or socializing with adults. A formal announcement thus introduced the debutante to her social peers and potential suitors. The custom had been long established among the aristocracy and the upper classes in England, where debutantes were, until the mid-twentieth century, presented at Court. In America, the debutante ball derived from the formal etiquette of the nineteenth century, but the ritual has been transformed by each generation's evolving notions about the proprieties of class, sexual freedom, and the role of women.

According to the 1883 etiquette reference, *The Manners That Win*, a debutante should have graduated school, sing or play an instrument gracefully, dance with elegance, and know the rules governing polite society. Having mastered these essential skills, she was presumed ready for courtship, leading, of course, to marriage—at the time the single vocational avenue open to the well-to-do woman. A second purpose was, however, implicit in debut parties of the Gilded Age. Since debutante balls were private affairs, held at the family's residential estate or at a fashionable hotel until the early twentieth century, they also pointed to a given family's wealth, prestige, and style.

By the 1920s, some latitude had relaxed the rules of the debut. In her seminal *Etiquette: The Blue Book of Social Usage* (1922), Emily Post described several ways that a young woman might be introduced to society. These included a formal ball, an afternoon tea with dancing, a small dance, or a small tea without music. In addition, Post listed a fifth and more modest way for a family to announce that a daughter had reached the age of majority: mother and daughter might simply have joint calling cards engraved. For the most part, private debuts had become a thing of the past, replaced by public cotillions or assemblies that invited prominent young women to make their debuts collectively. These long established debutante balls include the Passavant Cotillion in Chicago; Boston's Cotillion; the Junior Assemblies in New York; and the Harvest Ball at the Piedmont Driving Club in Atlanta.

After World War II, the debutante ball spread to almost every city in America and enjoyed a heyday during the conservative Eisenhower years. Yet a decade later, anti-establishment sentiment led many young women of even the most affluent status to abandon the event, dismissing it as anachronistic snobbery. In addition, sexual liberation and the feminist movement challenged the very basis of the century-old convention, as women began to seek both sexual and professional fulfillment outside of marriage. In the exuberantly prosperous 1980s, the debutante ball witnessed a popular resurgence and, by the century's end, cotillions were frequently being sponsored by charitable organizations that extended invitations exclusively to philanthropically active women.

If there is one rule that has not changed over the years, though, it is the debutante's dress. She is to wear a white gown, though a pastel shade may be considered acceptable. Loud colors or black have remained always inappropriate.

The Deer Hunter

Before Director Michael Cimino's 1978 film *The Deer Hunter*, the only cinematic treatment of the Vietnam War most Americans had seen was John Wayne's *The Green Berets* a decade earlier. By 1978, however, American audiences were finally ready to deal with the war on-screen. *The Deer Hunter* was popular with audiences and critics alike, nominated for nine Academy Awards and winning five, including Best Picture, Best Director, and Best Supporting Actor (Christopher Walken). *The Deer Hunter* broke the ground in the cinematic treatment of Vietnam, opening the door for films like *Apocalypse Now* a year later, *Platoon* (1986), and *Full Metal Jacket* (1987). All of these "Vietnam" films shared the same shattering emotional impact on audiences, but none was as moving as *The Deer Hunter*.

The Deer Hunter deals not only with Vietnam, but also foregrounds the contrast between the soldier's comparatively gentle life at home with the brutal trauma of war. The film opens in the Clairton, Pennsylvania steel mill where Michael (Robert DeNiro), Nick (Christopher Walken), and Steve (John Savage) are working their last shift before shipping out to Vietnam. The quotidian details of their working-class lives revolve around work, hunting, drinking, and playing pool. But Steve, like so many soldiers before him, is getting married before he leaves for the war. Cinematographer Vilmos Zsigmond beautifully photographs the Russian Orthodox wedding ceremony, but portents of the war intrude upon the revelry. A Green Beret mysteriously appears at the wedding like Coleridge's Ancient Mariner, foreshadowing the death and destruction that await in Vietnam.

The brutal rituals of war replace the rituals back in Pennsylvania; however, Cimino and co-writer Deric Washburn use Russian roulette in a North Vietnamese prison camp as their metaphor for combat. The Russian roulette game is an ironic, terrifying counterpoint to the trios hunting and pool playing stateside, and the prison camp scenes are a chilling condensation of the Vietnam war itself—bamboo, rain, and death. The end of the film leaves us with three characters that represent the spectrum of the Vietnam veterans' experience. Nick

A scene from *The Deer Hunter* featuring (from left) John Cazale, Chuck Aspegren, Christopher Walken, Robert De Niro, and John Savage.

dies, Steve returns home in a wheelchair, and Michael returns emotionally crippled.

Besides the emotional impact of the story and the photography, the film benefits from its excellent ensemble cast. In addition to Oscar winner Christopher Walken, Oscar nominee Robert DeNiro (Best Actor), and John Savage, the film stars Meryl Streep (nominee for Best Supporting Actress), George Dzundza, and John Cazale in his last film (Cazale died of cancer right after filming was completed). Stanley Myers' powerful, melancholy musical score, mostly consisting of a solitary, plaintive guitar, adds to the film's heartbreaking effect.

The Deer Hunter, according to literary critic Leslie Fiedler, is "the reenactment of a fable, a legend as old as America itself: a post-Vietnam version of the myth classically formulated in James Fenimore Cooper's *The Deerslayer* and *Last of the Mohicans*." The myth that is played out in *The Deer Hunter* is an ancient one: The transition from innocence to experience. War films, according to author John Newsinger, "are tales of masculinity. They are stories of boys becoming men, of comradeship and loyalty, of bravery and endurance, of pain and suffering, and the horror and the excitement of battle. Violence—the ability both to inflict it and to take it—is portrayed as an essential part of what being a man involves." No film before *The Deer Hunter* and few since have so brutally captures war as an initiation rite.

DeGeneres, Ellen (1958—)

Ellen DeGeneres attracted massive media attention when she came out as a lesbian on her television show in 1997. Known as "the puppy episode," the program stirred controversy and drew criticism from conservative sectors. DeGeneres and her partner, actress Anne Heche, came out at the same time, DeGeneres appearing on the covers of national magazines. The caption accompanying her photograph on the cover of *Time* read, "Yep, I'm Gay." Her place in history as TV's first gay lead character was thus secured.

Born in New Orleans in 1958, DeGeneres' sometimes difficult life inspired her to use humor as a coping device. After her parents' divorce when she was 13, she and her mother, Betty, moved to Texas.

Ellen DeGeneres

It was a hard time, and DeGeneres used humor to buoy her mother's spirits. "My mother was going through some really hard times and I could see when she was really getting down, and I would start to make fun of her dancing," DeGeneres has said. "Then she'd start to laugh and I'd make fun of her laughing. And she'd laugh so hard she'd start to cry, and then I'd make fun of that. So I would totally bring her from where I'd seen her start going into depression to all the way out of it."

After graduating from high school in 1976, DeGeneres moved back to New Orleans where she worked a series of dead-end jobs: house painter, secretary, oyster shucker, sales clerk, waitress, bartender, and vacuum salesperson. At the encouragement of friends, she tried out her comedy on an amateur-hour audience, in 1981. Her act went over well, and her niche had been found. Only a year later, she entered and won Showtime's "Funniest Person in America" contest. The title, which brought both criticism and high expectations, was her springboard to stardom.

One of her better-known stand-up routines, "A Phone Call to God," came from one of her own darkest moments of despair, when a close friend and roommate had been killed in a car accident while out on a date. The girl was only 23, and it seemed very unfair to DeGeneres. She wanted to question God about a lot of things that seemed unnecessary, and again she turned to humor. She sat down one night and considered what it would be like if she could call God on the phone and ask him about some of the things that troubled her. As if it was meant to be, the monologue poured from her pen to paper, and it was funny, focusing on topics such as fleas and what their purpose might be. DeGeneres performed "A Phone Call to God" on the Johnny Carson show six years later. Everything clicked that night,

and Carson signaled her over to sit on the couch after her performance. She was the only female comedian Carson ever called to come over and talk to him on a first appearance on the *Tonight Show*.

DeGeneres continued on the comedy circuit and started acting; one memorable performance was with dancing fruit in Very Fine juice commercials. She eventually landed small roles in several short-lived television series: *Duet*, *Open House*, and *Laurie Hill*. Her feature acting debut was in the 1993 movie *Coneheads*.

By 1994 she was starring in a series called *These Friends of Mine* on ABC. The first season was aided by a prime slot, following Tim Allen's *Home Improvement*. The network had such confidence in her that they announced that she would be the ABC spokesperson for radio ads and on-air promos, allowing her to introduce the debut of every show in the fall lineup. She also co-hosted the 1994 Emmy Awards ceremony.

Despite DeGeneres' fervent backing by ABC, the show had a number of problems, not the least of which were critical comparisons to *Seinfeld*, and a number of personnel changes on both sides of the camera. The show's name was changed to *Ellen* for its second season, its concept was changed, and Ellen was given more creative input.

By the third season, *Ellen* had failed to find an audience, however, and the show needed a boost. DeGeneres and her producers decided to announce the character's homosexuality to give the show a new edge—and to tell the truth. As DeGeneres told *Time*: "I never wanted to be the lesbian actress. I never wanted to be the spokesperson for the gay community. Ever. I did it for my own truth." After months of hinting around on the show, Ellen came out in an hour-long episode featuring guest stars Laura Dern, Melissa Etheridge, k.d. lang, Demi Moore, Billy Bob Thornton, and Oprah Winfrey. The result was a clamor among conservatives and the religious right; evangelist Jerry Falwell called DeGeneres a "degenerate." The show won an Emmy for best writing in a comedy series, and a Peabody award for the episode. *Entertainment Weekly* named DeGeneres the Entertainer of the Year in 1997. In 1998, the Gay and Lesbian Alliance against Defamation (GLAAD) awarded DeGeneres the Stephen F. Kolzak Award for being an openly gay celebrity who has battled homophobia. The series itself was given the award for Outstanding TV Comedy. The show was even praised by vice president Al Gore for forcing Americans "to look at sexual orientation in a more open light."

In the following season the show continued to focus mainly on gay issues, despite declining ratings, and ABC decided not to renew the show for a sixth season. Critics noted that the show had become one-dimensional, with Ellen's homosexuality overshadowing all other topics. As the show declined, however, DeGeneres began branching out, writing a book, *My Point . . . And I Do Have One*, in 1996 and releasing an album collection of stand-up material called *Taste This*. She also had her first leading role in a film, a romantic comedy with actor Bill Pullman called *Mr. Wrong*. Meanwhile, her series was picked up in syndication by the Lifetime channel in 1998.

Del Río, Dolores (1905-1983)

Acclaimed as the female Rudolph Valentino, Dolores del Río starred in more than 50 full-length motion pictures including *Flying Down to Rio* (1933), *Journey Into Fear* (1942), *Las Abandonadas* (1944), *Doña Perfecta* (1950), and *El Niño y la Niebla* (1953). With her first husband, millionaire Jaime Martínez del Río, she traveled around the world, learned several languages and moved to Hollywood. She had an intense love life, marrying three times and having affairs with Gilbert Roland and Orson Welles, among others. In 1942, when her career started to decline, she returned to Mexico City. Del Río dropped her "femme fatale" image and through Gabriel Figueroa's camera and Emilio Fernández's direction she helped create the so-called Mexican Cinema Golden Era, winning the Ariel (the Mexican equivalent of the Academy Award) three times, in 1946, 1952, and 1954. In her later years, her work with orphan children was highly praised.

DeMille, Cecil B. (1881-1959)

Director Cecil B. DeMille epitomized the film epic and Hollywood's "Golden Age." From the 1910s through the 1950s, he was able to anticipate public taste and gauge America's changing moods. He is best known for his spectacularly ambitious historical and biblical epics, including *The Sign of the Cross*, *The Crusades*, *King of Kings*, *The Ten Commandments*, *Cleopatra*, *Unconquered*, and *The Greatest Show on Earth*, but he also made domestic comedies such as *The Affairs of Anatol*. Originating the over-the-top reputation of

Cecil B. DeMille

Hollywood filmmakers, DeMille is famous for his huge crowd scenes, yet his films also clearly demonstrate his mastery as a storyteller. He avoided camera trickery and developed plots in a traditional manner that film audiences appreciated. In narrative skill and action, DeMille had few competitors.

Cecil Blount DeMille was born in Ashfield, Massachusetts, on August 12, 1881. His father was of Dutch descent and an Episcopalian lay preacher, Columbia professor, and playwright. His mother, Beatrice Samuel, also occasionally wrote plays and ran a girls' school. DeMille attended the Pennsylvania Military Academy from 1896 to 1898 and the American Academy of Dramatic Arts in New York from 1898 to 1900. He had his Broadway acting debut in 1900 and struggled to make his living as an actor for the next decade.

Abandoning his acting career in 1913, DeMille went into partnership with vaudeville musician Jesse L. Lasky and glove salesman Samuel Goldfish (later changed to Goldwyn) to form the motion-picture production company that would eventually become Paramount Studios. It was then that DeMille directed his first film, *The Squaw Man*, shot on location in the Los Angeles area, bringing

DeMille to the southern California locale he would help develop into the enclave of Hollywood. The film's success and popularity established DeMille in the nascent motion-picture industry; he was understood to be the creative force at Paramount, not only directing many films but also overseeing the scripts and shooting of Paramount's entire output.

DeMille capitalized on the same themes throughout his lengthy career. He often used a failing upper-class marriage, an exoticized Far East, and obsessive, hypnotic sexual control between men and women. At the same time, he emphasized Christian virtues alongside heathenism and debauchery. He repeatedly mixed Victorian morality with sex and violence. DeMille's popularity can largely be attributed to his dexterity with these seemingly contradictory positions and their appeal to audiences.

Instead of focusing on big-name stars, DeMille tended to develop his own roster of players. With the money he saved, he centered his energies on higher production values and luxurious settings. The players he developed include soprano Geraldine Ferrar in *Carmen*, *Joan the Woman*, *The Woman God Forgot*, *The Devil Stone*, and

Gloria Swanson in *Male and Female*, *Why Change Your Wife?*, *Something to Think About*, and *The Affairs of Anatol*.

DeMille produced and directed 70 films and participated in many more. He co-founded the Screen Directors Guild in 1931, and from 1936 to 1945, he was a producer for Lux Radio Theater of the Air, a position that consisted of adapting famous films and plays to be read by noted actors and actresses. He was awarded the Outstanding Service Award from the War Agencies of the United States government and he also received a Special Oscar for lifetime achievement in 1949. His long list of awards continues with the Irving Thalberg Award from the Academy of Motion Pictures in 1952, the Milestone Award by the Screen Producers' Guild in 1956, and an honorary doctorate from the University of Southern California.

Dempsey, Jack (1895-1983)

Boxer Jack Dempsey heralded the Golden Age of Sports. Like Babe Ruth, Red Grange, Bill Tilden, and Bobby Jones, Dempsey was the face of his sport. "In the ring, he was a tiger without mercy who shuffled forward in a bobbing crouch, humming a barely audible tune and punching to the rhythm of the song," wrote Red Smith in the *Washington Post*, adding, "he was 187 pounds of unbridled violence." Jack Dempsey was a box-office magnet, attracting not only the first \$1 million but also the first \$2 million gate. He held the world heavyweight boxing title from July 4, 1919, when he knocked out Jesse Willard—who retired at the end of the third round with a broken jaw, two broken ribs, and four teeth missing—until September 23, 1926, when he lost it to Gene "The Fighting Marine" Tunney on points after ten rounds. Of a total of 80 recorded bouts he won 60, lost 6, drew 8, and fought 6 "No Decisions." He knocked out 50 opponents, 25 in the first round; his fastest KO came in just 14 seconds.

Born William Harrison Dempsey in Manassa, Colorado, on June 24, 1895, into a Mormon family of thirteen, young Jack started doing odd jobs early on but eventually finished eighth grade. At fifteen his brother Bernie (a prizefighter with a glass chin) started training William Harry. Dempsey chewed pine gum to strengthen his jaw, "bathing his face in beef brine to toughen the skin," as he wrote in his *Autobiography*. A year later he got his first serious mining job, earning three dollars a day. When William Harry wasn't mining, he was fighting. By 1916 he had already fought dozens of amateur fights.

Jack Dempsey

As "Kid Blackie" he hopped freight trains and rode the rails from town to town, announcing his arrival in the nearest gym and boasting that he would take on anyone.

"Kid Blackie" became "Jack" Dempsey on November 19, 1915, when he TKOed George Copelin in the seventh round. Dempsey was actually substituting for his brother Bernie, who had until then fought under the name of Jack Dempsey, in honor of the great Irish middleweight Jack Dempsey the Nonpareil, who died in 1895, the year in which William Harrison was born. The newly named Jack Dempsey flooded New York sports editors with clippings of his 26 KOs, though no one noticed him but journalist Damon Runyon, who nicknamed him the "Manassa Mauler." Late in 1917 Dempsey caught the attention of canny fight manager Jack "Doc" Kearns, who recruited him. Under Kearns, the ballyhoo began: Dempsey KOed his way through the top contenders and within 18 months he took the heavyweight title from Jesse Willard. Dempsey's glory was short-lived, however, for the very next day writer Grantland Rice labelled Dempsey a "slacker" in his *New York Tribune* column, referring to his alleged draft evasion. Though a jury found him not guilty of the charge in 1920, it took Dempsey six years to overcome the stigma associated with the label and become a popular champion.

Dempsey soon found himself in a peculiarly modern position: he became a sports hero—or anti-hero—whose image took on extraordinary significance in the climate of publicity and marketing that was coming to dominate sports promotion. Pre-television marketing techniques which stressed his rogue style of fighting and his alleged draft evasion turned his title fight against the decorated French combat pilot George Carpentier into a titanic clash between “Good” and “Evil.” The July 2, 1921, match was a fight of firsts: it was the first fight ever to be broadcast on radio, the first fight to gross over a million dollars, and it was fought before the largest crowd ever to witness a sporting event up to that time. Amid a chorus of cheers and jeers of “Slacker!,” Dempsey dispatched Carpentier in round three and somehow won over the 90,000 member crowd. Dempsey defended his crown several more times, most notably against Argentinian Luis Angel “The Bull of the Pampas” Firpo. Dempsey sent Firpo to the floor seven times before Firpo knocked the champ clear out of the ring to close the first round. Dempsey made it back into the ring and ended the fight 57 seconds into the second round with a knockout.

Dempsey lost his title on points to Gene Tunney. The resulting rematch would become one of the most contested fights in boxing history. Chicago’s Soldier Field was swollen with the 104,943 fans who packed the stadium for the September 23, 1927, fight and provided boxing’s first two-million dollar gate. Referee Dave Barry made the terms of the fight clear: “In the event of a knockdown, the man scoring the knockdown will go to the farthest neutral corner. Is that clear?” Both men nodded. Tunney outboxed Dempsey in the first six rounds, but in the seventh Dempsey unloaded his lethal left hook and sent Tunney to the floor. Barry shouted, “Get to a neutral corner!” but Dempsey stood still. At the count of three he moved to the corner; at five he was in the neutral zone. In one of the most momentous decisions in boxing history, referee Barry restarted the count at “One.” Tunney got up on “Nine”—which would have been “Fourteen” but for Barry’s restart. Tunney stayed out of Dempsey’s reach for the rest of the round, floored Dempsey briefly in the eighth, and won a 10-round decision. The bout, immortalized as “The Battle of the Long Count,” has been described in an *HBO* sports documentary as “purely and simply the greatest fistic box-office attraction of all time.” Despite the fact that Dempsey lost, the fight allowed him to reinvent himself, according to Steven Farhood, editor-in-chief of *Ring* magazine: “He was viewed as a villain, not a hero, but after losing to Tunney, he was a hero and he remained such until his death.”

Dempsey retired after this match, although he still boxed exhibitions. A large amount of the \$3.5 million that he earned in purses was lost in the Wall Street Crash, but Dempsey was a shrewd businessman who had invested well in real estate. In 1936 he opened Jack Dempsey’s Restaurant in New York City and hosted it for more than thirty years. During World War II, he served as a physical education instructor in the Coast Guard, thus wiping his alleged “slacker” slate clean. Jack Dempsey, “the first universally accepted American sports superstar,” according to Farhood, died on May 31, 1983, at the age of 87 in New York City.

Denishawn

In 1915, dancers Ruth St. Denis and Ted Shawn founded a pioneering company and training school in Los Angeles that became known as Denishawn. The training they provided for their students—who also served as company members—was highly disciplined and extremely diverse in its cultural and stylistic range. Denishawn toured worldwide and was the first dance company to tour extensively in America, bringing the concept of serious dance and an appreciation of unknown cultures to American audiences. Denishawn students Martha Graham, Doris Humphrey, and Charles Weidman went on to become legendary dancer-choreographers. Musical director Louis Horst led the way in the composition of music for dance, while Pauline Lawrence became a legendary accompanist, costume designer, and dance administrator. These students instructed and inspired succeeding generations, and in this way, the “family tree” of Denishawn influenced virtually every American dancer and choreographer in the twentieth century.

Denver, John (1943-1997)

John Denver, so much a part of 1970s music, always marched to the beat of his own drummer. At a time when the simplicity of rock ‘n’ roll was fading to be replaced with the cynicism of punk rock, Denver carved out his own niche and became the voice of the recently disenfranchised folk-singer/idealist who believed in love and hope and fresh air. With his fly-away blond hair and his signature granny glasses, Denver had a cross-generational appeal, presenting a nonthreatening, earnest message of gentle social protest.

John Denver was born Henry John Deuschendorf on December 31, 1943, in Roswell, New Mexico. His entire life was shaped by trying to measure up to his father, who was a flight instructor for the Air Force. In his autobiography *Take Me Home, Country Roads*, Denver described his life as the eldest son of a family shaped by a stern father who could never show his love for his children. Denver’s mother’s family was Scotch-Irish and German Catholic, and it was they who imbued Denver with a love of music. His maternal grandmother gave him his first guitar at the age of seven.

Since Denver’s father was in the military, the family moved often, making it hard for young John to make friends and fit in with people his own age. Constantly being the new kid was agony for the introverted youngster, and he grew up always feeling as if he should

John Denver

be somewhere else but never knowing where that “right” place was. Denver was happier in Tucson, Arizona, than anywhere else; but his father was transferred to Montgomery, Alabama, in the midst of the Montgomery boycotts. John Denver saw Alabama as a place of hatred and mistrust, and he wanted no part of it. It was in Montgomery, however, that he discovered that music was a way to make friends. When he sang and played his guitar, others paid attention to him. Nonetheless, he continued to feel alienated and once refused to speak for several months when he was severely bruised by a broken romance.

Attending high school in Fort Worth, Texas, was a distressing experience for the alienated Denver. Once he gave a party to which no one came. In his third year of high school, he took his father’s car and ran away to California to visit family friends and pursue a musical career. However, he returned obediently enough when his father flew to California to retrieve him, and he finished high school.

While studying architecture at Texas Tech, Denver became disillusioned and dropped out in his third year to follow his dreams. He managed to get a job at Ledbetter’s, a night club that was a mecca for folk singers, as an opening act for the Backporch Majority. Destiny had placed John Denver in the ideal spot for an aspiring young singer because he found himself living and working with more established artists who taught the idealistic young entertainer how to survive in his new world. It was then that he was encouraged to change his name. He chose Denver to pay homage to the mountains that he loved so dearly.

John Denver’s big break came when he met Milt Okum, who represented the folk group Peter, Paul, and Mary. Okum was looking for a replacement singer for another group, the Chad Mitchell Trio,

and Denver perfectly fit the requirements. Although the group disbanded not long after Denver joined, his experience with them taught him much about the world of professional musicians. When the group disbanded because of huge debts, Denver felt a personal obligation to pay them off.

In 1967, while laying over in a Washington airport, John Denver wrote “Oh, Babe, I Hate to Go,” or as it became known, “Leaving on a Jet Plane” out of his sense of loneliness and the desire for someone to ease that desolation. Both the Mitchell Trio and Spanky and Our Gang recorded the song, but it was Peter, Paul, and Mary who turned it into a number one hit in 1969. After being turned down by 16 record companies, Okum negotiated a recording contract for Denver with RCA Records.

Denver met his first wife Annie in 1966 while touring, and they were married in June 1967. In 1970 the couple moved to Aspen, Colorado. They could not afford to build a house on the land they bought, so they rented and saved. No matter, John Denver had come home. He had discovered the place he had been seeking his entire life. Unable to have children, John and Annie adopted Zachery and Anna Kate. Unfortunately, nothing could hold the marriage together, and it ended in bitter divorce. A subsequent marriage also ended unhappily, leaving him with daughter Jessie Bell.

Denver admitted in his autobiography that he had less trouble talking to large groups of people than to those whom he loved. This ability that caused him so much damage in his personal life gave him the uncanny ability to connect with the audience that set his music apart. His purpose was always greater than simple entertainment. He clothed his messages in everyday scenes to which everyone could relate, whether it be the airport of “Leaving on a Jet Plane” or the forests of “Annie’s Song” or the mountains of “Rocky Mountain High” or the homecoming of “Back Home Again” or the country roads of “Take Me Home, Country Roads” or the feather bed of “Thank, God, I’m a Country Boy” or the bad days of “Some Days Are Diamonds (Some Days Are Stone).” People related to John Denver as if he were a friend who shared their personal history. His message behind the simple pleasures of life was always to protect the world that provides so much beauty and to enjoy life to the fullest every day because life is a gift.

John Denver’s success would have been impressive at any time, but it was particularly impressive in the changing environment that made up the 1970s music scene. He had 13 top ASCAP hits, 9 platinum albums, one platinum single (“Take Me Home, Country Roads”), 13 gold albums, and six gold singles. He also had gold records in Canada, Australia, and Germany. In 1975 he was named CMA’s Entertainer of the Year and “Take Me Home, Country Roads” won the best song of the year. He won a People’s Choice Award, a Carl Sandburg People’s Poet Award, and was named the Poet Laureate of Colorado. He made 21 television specials, 8 of which won awards. He was also a successful actor, starring in *Oh, God* and *Walking Thunder*. Denver had come a long way from the young boy whose friends had ignored his party.

Once his consciousness was raised in the early 1970s, Denver became an activist for the causes he loved, including campaigning against nuclear arms and nuclear energy. In 1976, when he was the country’s biggest recording star, Denver established the Windstar Foundation on 1000 acres in Snowmass, Colorado, to fight world hunger. He was deeply hurt when he was not invited to join in the noted album, “We Are the World,” dedicated to that same cause. Denver was also the moving force behind Plant-It 2000, a group that promoted the planting of as many trees as possible by the year 2000.

Denver made his first trip to Africa when he was appointed to President Jimmy Carter's Commission on World Hunger. Always fascinated by space exploration he unsuccessfully sought to be included in a space mission. Upon his first visit to Alaska, Denver was captivated by its beauty and worked hard for its preservation. He became the first American musician to perform in the Soviet Union and mainland China and even collaborated with Russian musicians on a project. He often said that he considered himself a "global citizen" because he believed so strongly in an interconnected world.

After the 1970s, Denver's career declined in the United States and he was arrested for drugs and driving while intoxicated. He was involved in a plane crash from which he walked away. Devastated by his two unsuccessful marriages, Denver remained close to his children. He also continued to be a strong presence on the international music scene. Before his death he had begun to reclaim his domestic audience. With his "Wildlife Concert" in 1995, it was plain to see that he had matured. The glasses were gone, as was the innocence. His hair was shorter and neater. His face was lined and often sad. Yet, his voice was stronger, more sure and arresting. He was still John Denver, and he still knew how to connect with the audience. Denver followed the success of the "Wildlife Concert" with a hit album, *Best of John Denver* in 1997. Tragically, his comeback was cut short on October 12, 1997, when his experimental aircraft crashed into Monterey Bay.

Department Stores

With the creation of the first department stores at the end of the nineteenth century, came the inception of that most American of diversions—shopping. Though people had always purchased necessities, it was the development of the emporium that turned the perusal of a wide variety of goods, both the necessary and the frivolous, the affordable and the completely out of reach, into a leisure pastime. Between the late 1800s and the 1970s, department stores continued to grow and evolve as the quintessential modern market-place, both elite and accessible. Huge department stores, named for the families who founded them, dominated urban centers, and store and city became identified with each other. Filene's of Boston, Macy's and Bloomingdale's of New York, Marshall Field of Chicago, and Rich's of Atlanta are only a few of the stores recognized nationwide as belonging to their city. The era of the department store is rapidly fading, replaced by consumer choices that are more consistent with modern economics, just as the department stores themselves once replaced their predecessors.

As the nineteenth century drew to a close, citizens began to enjoy the benefits of a new cash economy. Improved postal service and a

Macy's, New York City.

new nationwide rail network allowed for an unprecedented flow of goods. Previously, consumers had been dependent on traveling peddlers, who carried such stock as sewing needles, thread, and fabrics from town to town in bulky packs on their backs or in horse-drawn carts. As these peddlers grew more prosperous, they began to settle in small storefronts. As economic times improved with the modernizations of the late 1800s, savvy shopkeepers began to expand, offering not only a wider variety of goods, but also an air of refinement and personal service that had previously been available only to the very rich. An example of this was Marble Dry Goods, opened by A. T. Stewart in Manhattan in 1846. Stewart set up posh parlors for his female customers with attentive sales clerks and the first Parisian style full-length mirrors in the United States. Thus, department stores drew all classes of customers by making them feel as if they were part of society's elite while shopping there.

Owners of the new department stores were able to undercut the prices of their competitors in the specialty shops by going directly to the manufacturers to purchase goods, bypassing the wholesalers' mark-up. Some even manufactured their own products. Where once stores had been slow, sedate places where goods had to be requested from behind the counter, the lively new department store displayed products prominently within reach and encouraged browsing. To keep customers from leaving, stores expanded to sell anything they

could possibly need. Smaller stores responded with outraged protests that the larger stores were employing unfair practices and running them out of business, but they had little success in slowing the growth of the giant emporiums.

As the cities grew, so did the stores, becoming multi-floor edifices that were the primary generators of retail traffic in newly burgeoning downtown areas. Women, who were enjoying some new rights due to the wave of feminism in the late 1800s and early 1900s, began to have more control over the shopping dollar. By 1915, women did 90 percent of consumer spending in the United States, and the department stores catered to women and began to hire them to work as salesclerks.

Stores competed with each other to have the most refined atmosphere, the cheapest bargain basement, the most fashionable tea room, the fastest delivery, and, most of all, the most attentive service—the most important product offered in the grand emporiums.

In 1911, Sears and Roebuck offered credit to their customers for large mail order purchases, and by the 1920s the practice had spread to most of the large department stores. Customers carried an imprinted metal “charge plate,” particular to each store. Because they were the only form of credit available at the time, department store charge accounts inspired loyalty, and increased their store’s customer base.

In 1946, writer Julian Clare described Canada’s famous department store, Eaton’s, in *MacClean’s* magazine: “You can have a meal or send a telegram; get your shoes half-soled or buy a canoe. You can have your other suit dry cleaned and plan for a wedding right down to such details as a woman at the church to fix the bride’s train. You can look up addresses in any Canadian city. You can buy stamps or have your picture taken.” Department stores also developed distinctive departments, with features designed to attract trade. Filene’s in Boston made the bargain basement famous, with drastically reduced prices on premium goods piled on tables, where economically-minded customers fought, sometimes physically, over them, and even undressed on the floor to try on contested items. Department store toy departments competed to offer elaborate displays to entertain children, who were often sent there to wait for parents busy shopping. Marshall Field’s toy department introduced the famous puppet act “Kukla, Fran, and Ollie” to the Chicago public before they found their way onto television screens, while Bullocks in Los Angeles had a long wooden slide from the toy department to the hair salon on the floor below, where children might find their mothers. Department store window displays were also highly competitive, fabulous artistic tableaux that drew “window shoppers” just to admire them.

Department stores even had an effect on the nation’s calendar. Ohio department store magnate Fred Lazarus convinced President Franklin Roosevelt to fix Thanksgiving on the fourth Thursday of November, rather than the last Thursday that had been traditional. The extra week of Christmas shopping afforded by the switch benefitted the department stores and, Lazarus assured the president, the nation. John Wanamaker of the famous Philadelphia store created Mother’s Day, turning a little-known Catholic religious holiday into another national day of spending. Christmas itself became strongly identified with the stores as thousands of department store Santas were photographed holding future customers on their laps.

In the 1950s, middle class families began to abandon the cities for the suburbs. More and more, only less affluent people were left in the urban centers, and as a result, the great flagship downtown department stores began to lose money. Suburban shopping malls began to spring up, and most department stores opened branches

there. For over 20 years it was considered necessary to have a large department store as an “anchor” for a mall, and customers continued to patronize the department stores as their main retail sources. Beginning in 1973, however, the oil crisis, inflation, and other economic problems began to cause a slowing of growth in the department stores. The arrival of bank credit cards such as Visa and MasterCard put an end to customer dependence on department store credit. Discount stores, large stores that offered a wide inventory like the department stores, but without the grand style and attentive service, often had lower prices. In an economy more and more focused on lower prices and fewer amenities, department stores waned and discount stores grew.

Gradually, many of the once-famous department stores went out of business. Gimbals’, B. Altman’s, and Ohrbach’s in New York, Garfinkel’s in Washington, D. C., Frederick and Nelson’s in Seattle, and Hutzler’s in Baltimore are just a few of the venerable emporiums that have closed their doors or limited their operations. They have been replaced by discount stores, specialty chains, fast-growing mail order businesses, and cable television shopping channels like QVC. Huge discount chains like Wal-Mart inspire the same protests that the department stores drew from their competition at the early part of the twentieth century: they are too big and too cheap, and they run the competition out of business, including the department stores. Chains of specialty shops fill the malls, having national name recognition and offering customers the same illusion of being part of the elite that the department stores once did. Mail order houses flood potential customers with catalogs and advertisements—over fourteen billion pieces a year—and QVC reached five billion dollars in sales within five years of its inception, a goal department stores took decades to achieve.

Besides bringing together an enormous inventory under one roof and customers from a wide range of classes to shop together, department stores helped define the city centers where they were placed. The failure of the department stores and the rise of the suburban shopping mall and super-store likewise define the trends of late twentieth century society away from the city and into the suburb. Though acknowledgment of class difference is far less overt than it was at the beginning of the century, actual class segregation is much greater. As the cities have been relegated to the poor, except for those who commute there to work during the day, public transportation (except for commuter rush hours) and other public services have also decreased in the city centers. Rather than big stores that invite everyone to shop together, there are run-down markets that sell necessities to the poor at inflated prices and specialty shops that cater to middle class workers on their lunch hour. There are few poor people in the suburbs, where car ownership is a must and house ownership a given. There too, shopping is more segregated, with the working and lower middle class shopping at the discount houses and the upper middle class and wealthy frequenting the smaller, service-oriented specialty stores. The department stores that remain have been forced to reduce their inventory. Priced out of the market by discount stores in appliances, electronics, sewing machines, fabrics, books, sporting goods, and toys, department stores are now mainly clothing stores with housewares departments.

Depression

One of the most common modern emotional complaints, depression is sometimes referred to as "the common cold of psychiatric illness." In its everyday usage, the word "depression" describes a feeling of sadness and hopelessness, a down-in-the-dumps mood that may or may not be directly attributed to an external cause and usually lasts for weeks or months. Sometimes it is used casually ("That was a depressing movie") and sometimes it is far more serious ("I was depressed for six months after I got fired"). Though depression has been recognized as an ailment for hundreds of years, the numbers of people experiencing symptoms of depression has been steadily on the rise since the beginning of the twentieth century.

The cause of depression is a controversial topic. Current psychiatric thinking treats depression as an organic disease caused by chemical imbalance in the brain, while many social analysts argue that the roots of depression can be found in psychosocial stress. They blame the increasing incidence of depression on an industrial and technological society that has become more and more isolating and alienating as support systems in communities and extended families break down. Though some depression seems to descend with no explanation, more often depression is triggered by trauma, stress, or a major loss, such as a relationship, job or home. Many famous artists, writers, composers, and historical figures have reportedly suffered from depressive disorders, and images and descriptions of depression abound in literature and art.

In its clinical usage, "depression" refers to several distinct but related mental conditions that psychiatrists and psychologists classify as mood disorders. Although the stresses of modern life may leave a great many people with feelings of sadness and hopelessness, psychiatrists and psychologists make careful distinctions between episodes of "feeling blue" and "clinical depression." According to the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*, an episode of depression is not a "disorder" in itself, but rather a "building block" clinicians use in making a diagnosis. For example, psychiatrists might diagnose a person suffering from a depressive episode with substance-induced depression, a general medical condition, a major depression, chronic mild depression (dysthymia), or a bipolar disorder (formerly called manic depression).

Psychiatrists attribute specific symptoms to "major depression," which is diagnosed if a client experiences at least five of them for at least two weeks. In addition to the familiar sad feeling, the symptoms of major depression include: diminished interest and pleasure in sex and other formerly enjoyable activities; significant changes in appetite and weight; sleep disturbances; agitation or lethargy; fatigue; feelings of worthlessness and guilt; difficulty concentrating; and thoughts of death and/or suicide.

Although people of all ages and backgrounds are diagnosed with major depression, age and culture can affect the way they experience and express their symptoms. Children who suffer from depression often display physical complaints, irritability, and social withdrawal, rather than expressing sadness, a depressed mood, or tearfulness. While they may not complain of difficulty concentrating, such difficulties may be inferred from their school performance. Depressed children may not lose weight but may fail to make expected weight gains, and they are more likely to exhibit mental and physical agitation than lethargy.

Members of different ethnic groups may also describe their depressions differently: complaints of "nerves" and headaches are common in Latino and Mediterranean cultures; weakness, tiredness, or "imbalance" are more prevalent among Asians; and Middle Easterners may express problems of the "heart." Many non-western cultures are likely to manifest depression with physical rather than emotional symptoms. However, certain commonalities prevail, such as a fundamental change of mood and a lack of enjoyment of life. Many studies have shown that cross-national prevalence rates of depression seem to be at least partially the result of differing levels of stress. For example, in Beirut, where a state of war has existed since the 1980s, nineteen out of one hundred citizens complained of depression, as compared to five out of one hundred in the United States.

One thing that does appear to be true across lines of culture and nationality is that women are much more likely than men to experience depression. The DSM-IV reports that women have a 10-25 percent lifetime risk for major depression, whereas men's lifetime risk is 5-12 percent. Some theorists argue that this difference may represent an increased organic propensity for depressive disorders, or may be due to gender differences in help-seeking behaviors, as well as clinicians' biases in diagnosis. Feminists, however, have long linked women's depression to social causes. Poverty, violence against women, and lifelong discrimination, they contend, offer ample triggers for depression, especially when coupled with women's socialized tendency to internalize the pain of difficult situations. Whereas men are socialized to express their anger outwardly and are more likely to be diagnosed with antisocial personality disorder, women are far more likely to entertain feelings of guilt and thoughts of suicide. Interestingly, there is evidence that in matriarchal societies, such as Papua New Guinea, the statistics of male and female depression are reversed.

Manic depression or bipolar disorder is the type of depression which has received the most publicity. The theatrical juxtaposition of the flamboyant manic state and incapacitating depression has captured the public imagination and been the inspiration for colorful characters in print and film from Sherlock Holmes to Holly Golightly. Clinicians diagnose a bipolar disorder when a person experiences a manic episode, whether or not there is any history of depression. The DSM-IV defines a manic episode as "a distinct period of abnormally and persistently elevated, expansive or irritable mood that lasts at least one week," and is characterized by: inflated self-esteem or grandiosity; decreased need for sleep; excessive speech; racing thoughts; distractibility; increased goal-directed activity and/or agitation; and excessive pleasure-seeking and risk-taking behaviors (the perfect personality for a dramatic hero). Bipolar disorders are categorized according to the type and severity of the manic episodes, and the pattern of alteration between mania and depression.

Depression is not only an unpleasant experience to live through, it is often fatal. Up to 15 percent of those with severe depression commit suicide, and many more are at risk for substance abuse and

other self-destructive behavior. It is no wonder that doctors have tried for centuries to treat those who suffer from depression. Aaron Beck, author of *Depression: Clinical, Experimental, and Theoretical Aspects*, credits Hippocrates with the first clinical description of melancholia in the fourth century B.C.E. and notes that Aretaeus and Plutarch—both physicians in the second century C.E.—described conditions that would today be called manic-depressive or bipolar disorders. Beginning in antiquity, melancholia was attributed to the influence of the planet Saturn, and until the end of the seventeenth century, depression was believed to be caused by an accumulation of black bile, resulting in an imbalance in the four fluid components of the body. Doctors of the time used purgatives and blood-letting to treat depression. Despite changes in the nomenclature and the attribution of causes for melancholia, contemporary psychiatric criteria for major depression and the bipolar disorders are strikingly consistent with the ancient accounts of melancholia.

In the nineteenth century, melancholia was similarly described by such clinicians as Pinel, Charcot, and Freud. In his essay “Mourning and Melancholia,” written in the 1930s, Sigmund Freud distinguished melancholia from mourning—the suffering engendered by the loss of a loved one. In melancholia, Freud argued, the sufferer is experiencing a perceived loss of (a part of) the self—a narcissistic injury that results in heightened self-criticism, self-reproach, and guilt, as well as a withdrawal from the world, and an inability to find comfort or pleasure. Freud’s psychoanalytic interpretation of melancholia reflected a shift from away from biological explanations.

Following Freud, clinicians ascribed primarily psychological causes—such as unresolved mourning, inadequate parenting, or other losses—to the development of depression, and prescribed psychotherapy to seek out and resolve these causes. Today, the pendulum has swung back to include the biological in the understanding of depressive disorders. While most contemporary clinicians consider psychological causes to be significant in triggering the onset of depressive episodes, research has indicated that genetics play a significant role in the propensity toward clinical depression. In the 1960s and 1970s radical therapy movements, along with feminism and other social movements, began to question the entirely personal interpretation placed on depression by many psychiatrists and psychologists. These activists began to look to society for both the cause and the cure of depression and to question therapy itself as merely teaching patients to cope with unacceptable societal situations.

Along with “talking therapy,” science continues to search for a medical cure. In the 1930s, Italian psychiatrists Ugo Cerletti and Lucio Bini began to experiment with electricity to treat their patients. Electroconvulsive shock therapy (ECT) became a standard treatment for schizophrenia and depression. ECT lost favor in the 1960s when many doctors and anti-psychiatry activists, who considered it as barbaric and dangerous as leeches, lobbied against its use. Shock therapy was often a painful and frightening experience, sometimes used as a punishment for recalcitrant patients. Public feeling against it was aroused with the help of books such as Ken Kesey’s *One Flew Over the Cuckoo’s Nest* in 1963, actress Frances Farmer’s 1972 autobiography *Will There Really be a Morning?*, and Janet Frame’s *Angel at My Table* in 1984. Perhaps as a testimony to the inherent drama of depression and its treatment by ECT, each of these books were made into films: *One Flew Over a Cuckoo’s Nest* (1975), *Frances* (1982), and *Angel at My Table* (1990). ECT made a comeback in the 1990s, when proponents claimed that improved techniques made it a safe, effective therapy for the severely depressed patient. Side effects of ECT still include loss of memory and other

brain functions, however, and in 1999, Italy, its birthplace, severely restricted the use of ECT.

Many medications have been developed in the fight against depression. The tricyclics—which include imipramine, desipramine, amitriptyline, nortriptyline, and doxepin—have been found to be effective in controlling classic, melancholic depression, but are known for triggering side effects associated with the “flight or fight” response: rapid heart rate, sweating, dry mouth, constipation, and urinary retention. Another class of antidepressant medication, the monoamine oxidase inhibitors (MAOIs) have been more effective in alleviating the “non-classical” depressions that aren’t helped by tricyclics. Although the MAOIs—phenelzine, isocarboxazid, nialamide, and tranylcypromine—are more specific in their action, they are also more problematic, due to their potentially fatal interactions with some other drugs, alcohol, tricyclic antidepressants, anesthetics, and foods containing tyramine. The most dramatic and widely publicized development in the psychopharmacological treatment of both major depression and chronic mild depression has been the availability of a new class of antidepressant medication, the selective serotonin reuptake inhibitors (SSRIs). SSRIs increase brain levels of serotonin, a neurotransmitter linked to mood. These medications—which include Prozac, Paxil, and Zoloft—are highly effective for many people in alleviating the symptoms of major depression, and have had a surprising success in lifting chronic depressions as well. They are touted as having far fewer adverse effects than drugs previously used to treat depression, which has contributed to their enormous popularity. However, they do have some serious side effects. These include reduced sexual drive or difficulty in having orgasms, panic attacks, aggressive behavior, and potentially dangerous allergic reactions. Prozac, probably one the most widely advertised medicinal brand names in history, has also had considerable exposure on television talk shows and other popular media, and has become the antidepressant of the masses. By 1997, just ten years after it was placed on the market, twenty-four million people were taking Prozac in almost one hundred countries. While most of these were grasping at the appealing notion of a pill to make them feel happier, Prozac is also prescribed in a wide variety of other cases, from aiding in weight loss to controlling adolescent hyperactivity.

In general, psychiatrists do not prescribe antidepressant medications in the treatment of bipolar disorders, because of the likelihood of triggering a manic episode. Rather, extreme bipolar disorders are treated with a mood stabilizer, such as Lithium. Lithium is a mineral, which is found naturally in the body in trace amounts. In larger amounts it can be toxic, so dosages must be closely monitored so that patients do not develop lithium toxicity. Lithium has received much popular publicity as a dramatic “cure” for manic-depression, notably in television and film star Patty Duke’s autobiography, *Call Me Anna* (1987), where Duke recounts her own struggles with violent mood swings. Other, more extreme, drugs also continue to be prescribed to fight depression. These are the anti-psychotics, also called neuroleptics or even neurotoxins. These drugs, such as Thorazine, Mellaril, or Haldol—may be used to alleviate the psychotic symptoms during a major depressive episode. The neuroleptics can have extremely harsh adverse effects, from Parkinson’s disease to general immobility, and are sometimes referred to as “pharmacological lobotomy.” The stereotypical movie mental patient with glazed eyes and shuffling gait is derived from the effects of drugs like Thorazine, which are often used to subdue active patients.

In 1997, antidepressants represented an almost \$7 billion a year industry. Though safer and more widely available antidepressant medication has clearly been a breakthrough for many of those who suffer from debilitating depression, three out of ten depression sufferers don't respond at all to a given antidepressant, and of the seven who respond, many do so only partially or find that the benefits "wear out." Some therapists and other activists worry about the implications of the "chemical solution," claiming that antidepressants are over-prescribed. For one thing, all of the drugs have worrisome adverse effects, which are often downplayed in manufacturers' enthusiastic advertisements. For another, there has been successful research into using antidepressants to help victims of rape, war, and other traumatic stress. In a study at Atlanta's Emory University, four out of five rape victims became less depressed after a twelve-week program of the SSRI Zoloft. While some greet this as a positive development, others are chilled at the prospect of giving victims pills to combat their natural reactions to such an obvious social ill. Most responsible psychologists continue to see the solution to depression as a combination of drug therapy with "talking therapy" to explore a client's emotional reactions.

Many famous artists and historical figures have reportedly suffered from depression (melancholia) or bipolar disorder (manic depression). Aristotle wrote that many great thinkers of antiquity were afflicted by "melancholia," including Plato and Socrates, and cultural historians have included such names as Michaelangelo, Danté, Mary Wollstonecraft, John Donne, Charles Baudelaire, Samuel Coleridge, Vincent Van Gogh, Robert Schumann, Hector Berlioz, Virginia Woolf, Sylvia Plath, and Anne Sexton among their lists of melancholic artists, writers and composers.

Depression has also been described in literary texts throughout history. In his seminal essay "Mourning and Melancholia," Freud referred to Shakespeare's Hamlet as the archetype of the melancholic sufferer, and Moliere's "Misanthrope" was "atrabilious," a term denoting the "black bile" that medieval medicine considered to be the cause of melancholia. Descriptions of characters suffering from depression can also be found in Flaubert's *Madame Bovary* and Kafka's *Metamorphosis*. The poetry of Edna St. Vincent Millay presents a depressed cynicism that is the result perhaps of both personal loss and the wider cultural loss of disillusion and war. And of course, Sylvia Plath's *The Bell Jar* (1963) is one of the most finely crafted modern portraits of the depressed heroine, "the perfect set-up for a neurotic. . . wanting two mutually exclusive things at the same time." In recent years, perhaps in response to the increasing discussion of depression, a new genre has appeared, the memoir of depression. *Darkness Visible* (1990) by William Styron, *Prozac Nation: Young and Depressed in America* (1995) by Elizabeth Wurtzel, and *An Unquiet Mind* by Kay R. Jamison (1995) are examples of this genre, where the author explores her/his own bleak moods, their causes, their effects on living life, and—hopefully—their remedy.

Whether one defines depression as a biological tendency that is activated by personal experience or as a personal experience that is activated by socio-political realities, it is clear that depression has long been a significant part of human experience. Coping with the complexities and contradictions of life has always been an overwhelming prospect; as society becomes more complex, the job of living becomes even more staggering. In words that still ring true, Virginia Woolf, who ended her own recurrent depressions with suicide at age 59, described this feeling:

Why is life so tragic; so like a little strip of pavement
over an abyss. I look down; I feel giddy; I wonder how I
am ever to walk to the end.

—Tina Gianoulis and Ava Rose

Derleth, August (1909-1971)

A better description of August Derleth's massive output could not be found than in Alison M. Wilson's *August Derleth: A Bibliography*. Born February 24, 1909, "August Derleth . . . one of the most versatile and prolific American authors of the twentieth century is certainly one of its most neglected. In a career that spanned over 40 years, he produced a steady stream of novels, short stories, poems, and essays about his native Wisconsin; mystery and horror tales; and biographies, histories, and children's books, while simultaneously writing articles and reviewing books for countless magazines and newspapers, and running his own publishing house." Despite the flood that streamed from his pen, none of Derleth's critically acclaimed regional novels ever sold over 5,000 copies, while his fantasy, children's, and mystery fiction fared only marginally better. Since his death in 1971, he is best remembered for his Solar Pons stories, modeled closely on Doyle's Sherlock Holmes tales, and for his founding with Donald Wandrei in 1939 of Arkham House, a publishing concern that specialized in macabre fiction. Arkham House was notable for publishing the work of neglected pulp fiction horror and fantasy writers of the 1930s like H. P. Lovecraft, as well as European weird fiction writers such as Arthur Machen and Lord Dunsany.

Detective Fiction

Mysteries and their solutions have always been used in fiction, but detective fiction as a recognisable genre first appeared in the mid-nineteenth century. Despite detective fiction becoming one of the most popular of literary genres of the twentieth century, disputes over the point at which a story containing detection becomes a detective fiction story continued. In its most obvious incarnation detective fiction is to be found under the heading “Crime” in the local bookstore; it includes tales of great detectives like Holmes and Dupin, of police investigators, of private eyes, and little old ladies with a forensic sixth sense. But detective fiction can also be found disguised in respectable jackets, in the “Classic Literature” section under the names Dickens and Voltaire. Within detective fiction itself, there are many varieties of detectives and methods of detection; in its short history, the genre has shown itself to be a useful barometer of cultural conditions.

Defining detective fiction, then, is fraught with problems. Even its history is in dispute, with critics claiming elements of detective fiction in Ancient Greek tragedies, and in Chaucer. Part of the problem is that while the category “Crime Fiction” includes all fiction involving crime, and, very often, detective work as well, “Detective Fiction” must be restricted only to those works that include, and depend upon, detection. Such a restrictive definition leads inevitably to arguments about what exactly constitutes “detective work,” and whether works that include some element of detection, but are not dependent on it, should be included. Howard Haycraft is quite clear on this in his book *Murder for Pleasure* (1941), when he says, “the crime in a mystery story is only the means to an end which is—detection.”

Perhaps the first work in English to have its entire plot based around the solution to a crime is a play, sometimes attributed to Shakespeare, called *Arden of Faversham*. The play was first published in 1592, and is based on the true story of the murder of a wealthy, and much disliked landowner, Thomas Arden, which took place in 1551. Arden’s body is discovered on his land, not far from his house. The fact that the body is outside points to his having been murdered by neighbouring farmers and labourers, jealous at Arden’s acquisition of nearby land. What the detective figure, Franklin, sets out to prove is that Arden was murdered in his house, by his adulterous wife, Alice, and her lover. He manages to achieve this by revealing a clue, a piece of rush matting lodged in the corpse’s shoe, which could only have found its way there when the body was dragged across the floor of the house.

Although the plot of *Arden of Faversham* revolves around the murder of Thomas Arden and the detection of its perpetrators, Julian Symons suggests that the purpose of the play itself lies elsewhere, in characterization, and, among other things, the moral issues surrounding the allocation of land following the dissolution of the monasteries. Because the element of crime and detection is merely a vehicle for other concerns, the place of *Arden of Faversham* in the canon of detective fiction remains marginal. But this is a debatable point. As Symons says, the exact position of the line that separates detective from other fiction is a matter of opinion. Nevertheless, early detective stories such as this play, and others, by writers such as Voltaire, certainly prefigure the techniques of detectives like Sherlock Holmes and Philo Vance.

What critical consensus there is on this topic suggests that the earliest writer of modern popular detective fiction is Edgar Allan Poe.

In three short stories or “tales,” “The Murders in the Rue Morgue” (1841), “The Mystery of Marie Rogêt” (1843), and “The Purloined Letter” (1845), Poe established many of the conventions that became central to what is known as classical detective fiction. Perhaps reacting to the eighteenth-century idea that the universe is a mechanical system, and as such can be explained by reason, Poe devised a deductive method, which, as he shows in the stories, can produce seemingly miraculous insights and explanations. This deductive method, sometimes known as “ratiocination,” goes some way in defining the character of the first “great detective,” C. Auguste Dupin, whose ability to solve mysteries borders on the supernatural, but is, as he insists to the narrator sidekick, entirely rational in its origins. The third important convention Poe established is that of the “locked room,” in which the solution to the mystery lies in the detective’s working out how the criminal could have left the room unnoticed, and leaving it locked from the inside.

Other writers, such as Wilkie Collins and Emile Gaboriau, began writing detective stories after Poe in the mid-nineteenth century, but rather than making their detectives aristocratic amateurs like Dupin, Inspectors Cuff and Lecoq are professionals, standing out in their brilliance from the majority of policemen. Gaboriau’s creation, Lecoq, is credited with being the first fictional detective to make a plaster cast of footprints in his search for a criminal. Perhaps the most famous of the “great detectives,” however, is Sir Arthur Conan Doyle’s creation Sherlock Holmes, whose method of detection, bohemian lifestyle, and faithful friend and narrator, Watson, all suggest his ancestry in Poe’s creation, Dupin, but also look forward to the future of the genre. Although Conan Doyle wrote four short novels involving Holmes, he is best remembered for the short stories, published as “casebooks,” in which Holmes’s troubled superiority is described by Watson with a sense of awe that the reader comes to share. Outwitting criminals, and showing the police to be plodding and bureaucratic, what the “great detective” offers to readers is both a sense that the world is understandable, and that they themselves are unique, important individuals. If all people are alike, Holmes could not deduce the intimate details of a person’s life from their appearance alone, and yet his remarkable powers also offer reassurance that, where state agents of law and order fail, a balancing force against evil will always emerge.

While Holmes is a master of the deductive method, he also anticipates detectives like Sam Spade and Philip Marlowe by his willingness to become physically involved in solving the crime. Where Dupin’s solutions come through contemplation and rationality alone, Holmes is both an intellectual and a man of action, and Doyle’s stories are stories of adventure as well as detection. Holmes is a master of disguise, changing his appearance and shape, and sometimes engaging physically with his criminal adversaries, famously with Moriarty at the Reichenbach Falls.

The Poe-Gaboriau-Doyle school of detective fiction remained the dominant form of the genre until the late 1920s in America, and almost until World War II in England, although the influence of the short story gradually gave way to the novel during that time. Many variations on the “great detective” appeared, from G. K. Chesterton’s priest-detective, Father Brown, solving crime by intuition as much as deduction, through Dorothy L. Sayers’s return to the amateur aristocrat in Lord Peter Wimsey, Agatha Christie’s unlikely detective Miss Marple, and her eccentric version of the type, Hercule Poirot. In Christie’s work in particular, the “locked room” device that appeared in Poe occurs both in the form of the room in which the crime is committed, and at the level of the general setting of the story; a

country house, an isolated English village, a long-distance train, or a Nile riverboat, for example. This variation of the detective story became so dominant in England that classical detective fiction is often known as the “English” or “Country House” type.

However, detective fiction of the classical type was very popular on both sides of the Atlantic and the period from around 1900 to 1940 has become known as the “Golden Age” of the form. In America, writers like R. Austin Freeman, with his detective Dr. Thorndike, brought a new emphasis on forensic science in the early part of the twentieth century. Both Freeman and Willard Huntingdon Wright (also known as S. S. Van Dine), who created the detective Philo Vance, wrote in the 1920s that detective fiction was interesting for its puzzles rather than action. Van Dine in particular was attacked by critics for the dullness of his stories and the unrealistic way in which Philo Vance could unravel a case from the most trivial of clues. Nevertheless, huge numbers of classical detective stories were published throughout the 1920s and 1930s, including, in the United States, work by well-known figures like Ellery Queen (the pseudonym for cousins Frederic Dannay and Manfred B. Lee), John Dickson Carr (Carter Dickson), and Erle Stanley Gardner, whose series detective, Perry Mason, has remained popular in print and on screen since he first appeared in 1934. Elsewhere, the classical detective story developed in the work of writers such as Georges Simenon, Margery Allingham, and Ngaio Marsh. While all of these writers have their own particular styles and obsessions—Carr is particularly taken by the locked room device, for example—they all conform to the basic principles of the classical form. Whatever the details of particular cases, the mysteries in works by these writers are solved by the collection and decoding of clues by an unusually clever detective (amateur or professional) in a setting that is more or less closed to influences from outside.

Just as the classical form of the detective story emerged in response to late eighteenth and early nineteenth-century beliefs in the universe as rationally explicable, so hard-boiled detective fiction appeared in the United States in the 1920s perhaps in response to doubts about that view. Significantly, just as the influence of the short story was declining in the classical form, early hard-boiled detective fiction appeared in the form of short stories or novellas in “pulp magazines” like *Dime Detective* and *Black Mask*. These magazines were sold at newspaper stalls and station bookstores, and the stories they published took a radical turn away from the sedate tone of classical detective fiction.

Hard-boiled detective stories, as they became known, for their clipped, unembroidered language, focus not on the detective’s intellectual skill at interpreting clues, but on his—and, since the 1980s, her—experiences. This type of detective fiction encourages the reader to identify with the detective, rather than look upon him/her as a protective authority; it champions the ability of “ordinary” people to resist and combat the influences of crime and corruption on their lives. As part of their rejection of the puzzle as a center for their narratives, hard-boiled detective stories are also concerned with the excitement generated by action, violence, and sex. So graphic did their description of these things seem in the 1920s that some stories were considered to border on the pornographic. The effect of this on detective fiction as a genre, however, was profound for other reasons. Hard-boiled detective stories described crimes taking place in settings that readers could recognize. No longer was murder presented as a remote interruption to genteel village life, but something that happened to real people. Crime was no longer the subject of an interesting

and challenging puzzle, but something with real human consequences, not only for the victim, but for the detective, and society at large. This new subject matter had limited impact within the restricted space of the short story, but came to the fore in the hard-boiled detective novels that gained popularity from the late 1920s onwards.

Carroll John Daly is usually credited with the invention of the hard-boiled detective, in his series character Race Williams, who first appeared in *Black Mask* in 1922. But Dashiell Hammett, another *Black Mask* writer, did the most to translate the hard-boiled detective to the novel form, publishing his first, *Red Harvest*, in 1929. The longer format, and the hard-boiled form’s emphasis on the detective’s actions, meant that Hammett’s detectives, who include the famous Sam Spade, could confront, more directly than classical detectives, complex moral decisions and emotional difficulties. Raymond Chandler, who also began his career writing for *Black Mask* in the 1930s, took this further, creating in his series detective, Philip Marlowe, a sophisticated literary persona, and moving the focus still further away from plot and puzzle and on to the detective’s inner life. Chandler is also well known for his realistic descriptions of southern California, and his view of American business and politics as underpinned by corruption and immorality.

Other writers picked up where Hammett and Chandler left off; some began using their work to explore particular issues, such as race or gender. Ross MacDonald, whose “Lew Archer” novels are generally considered to follow on from Chandler in the 1950s and 1960s, addresses environmental concerns. Mickey Spillane, who began publishing in the late 1940s, and has continued into the 1990s, took the sub-genre further by having his detective, Mike Hammer, not only confront moral dilemmas but take the law into his own hands. Sara Paretsky, writing in the 1980s and 1990s, reinvents the masculine hard-boiled private eye in V.I. Warshawski, a female detective whose place in a masculine environment enables her to explore feminist issues, while Walter Mosley uses a black detective to explore problems of race. While hard-boiled detective fiction shifts the focus from the solution of the problem to the search for that solution, and in doing so is able to address other topics, it remains centred on the idea of the detective restoring order in one way or another. Hard-boiled detectives do, in most cases, solve mysteries, even if their methods are more pragmatic than methodical.

In the 1920s, hard-boiled detective fiction was considered a more realistic approach to crime and detection than the clue-puzzles of the classical form. Since the early 1970s, however, the idea that a single detective of any kind is capable of solving crimes has seemed more wishful than realistic. In the three decades since then, the police-procedural has become the dominant form of detective fiction, overturning the classical depiction of the police as incompetent, and the “hard-boiled” view of them as self-interested and distanced from the concerns of real people. Police-procedurals adapt readily for TV and film, and come in many forms, adopting elements of the classical and hard-boiled forms in the police setting. They range from the tough “precinct” novels of Ed McBain, to the understated insight of Colin Dexter’s “Inspector Morse” series, or P. D. James’s “Dalglish” stories. The type of detection ranges from the violent, chaotic, and personal approach of the detectives in James Ellroy’s L.A. series, to the forensic pathology of Kay Scarpetta in Patricia Cornwell’s work. What all of these variations have in common, however, is that the detectives are backed up by state organization and power; they are clever, unusual, inspiring characters, but they cannot operate as detectives alone in the way that Sherlock Holmes and Philip Marlowe can.

This suspicion that detectives are not the reassuring figures they once seemed is explored in a variation of the classical form known as “anti-detective” fiction. In the 1940s, Jorge Luis Borges produced clue-puzzle detective stories whose puzzles are impossible to fathom, even by the detective involved. At the time, the hard-boiled novels of Dashiell Hammett and Raymond Chandler were also challenging the idea that the detective could know or fathom everything, but Borges’s work undermines even the very idea of finding truth through deductive reasoning. In one well-known story, “Death and the Compass” (1942), Borges’s detective unwittingly deduces the time and place of his own murder. In the 1980s, Paul Auster’s *New York Trilogy* (1988) explored contemporary theories about language and identity to produce detective stories with no solution, no crime, and no detective. Anti-detective fiction provides an interesting view of detection, and a comment on the futility of trying to understand the universe, but it is of limited scope and popular appeal.

Detective fiction in the 1990s remains highly popular in all its forms. It has also begun to be appreciated in literary terms; it appears as a matter of course on college literature syllabuses, is reviewed in literary journals, and individual writers, like Conan Doyle and Chandler, are published in “literary” editions. Much of that academic attention might seem to go against the popular, commercial, origins of the form. But whatever its appeal, detective fiction seems to reflect society’s attitudes to problems of particular times. That was as true for Poe in the 1840s, exploiting his culture’s fascination with rationality and science, as it is for the police-procedural and our worries about state power, violence, and justice at the end of the twentieth century.

The Detroit Tigers

Baseball—with its cheap bleacher seats, Sunday doubleheaders, and working-class heroes—is the most blue-collar of all sports. It is therefore no surprise that one of the most famous, durable, and successful baseball teams should be from the bluest of blue-collar cities, Detroit, Michigan. With a professional club dating back to 1881, Detroit was one of the charter members of the American League in 1901. While never as successful as the New York Yankees, the Tigers have a rich history and tradition. Like the city’s dominant economic force, General Motors, the Tigers have been a conservative force, resisting change to the game. When free-agent frenzy hit in the

1970s, the Tigers reacted to the new high salaries, according to baseball writer Bill James, “like a schoolmarm on a date with a sailor.”

While the Tigers have not always had the best teams, many times they have had the brightest star on the field. Ty Cobb was baseball’s first superstar: he *was* Tiger baseball from 1905 to 1928, their top player and, in his later years, the team’s manager. He played hero for hometown fans, but acted as villain on road trips when his intensity led to many violent confrontations, some with fans. Cobb was suspended in 1912 for punching a fan, but the team backed him and went on strike, forcing management to put together a team of sandlot players for a game against Philadelphia.

The year 1912 also moved the Tigers into Navin Field on the corner of Michigan and Trumbull. Named after team owner Frank Navin, the ballpark would remain in use for the rest of the century. Although led by Cobb, as well as stars like Sam Crawford, the team competed for some years without capturing a pennant. In the 1930s, three future Hall of Fame icons—Charlie Gehringer, Hank Greenberg, and Mickey Cochrane—wore Tiger uniforms. The decade also gave birth to another Detroit tradition: when spectators hurled garbage onto the field during the 1934 World Series, they initiated a tradition of hooliganism among Tiger fans which persisted for years afterward.

After a World Series victory in 1935, the Tigers ownership changed hands when Walter Briggs, an auto parts manufacturer, purchased the team. His family owned not only the team but also its playing field, which was renamed Briggs Stadium. Although they enjoyed a World Series win in 1945, the Tigers—like the rest of the American league—were overshadowed by the dominance of the Yankees from 1949 to 1964. Only the development of outfielder Al Kaline, who played his entire Hall of Fame career with the Tigers, highlighted this period of Tiger history. The Briggs family sold the team in 1952 to a group of 11 radio and television executives led by John Fetzer, an event that foreshadowed the marriage of media and sports that became a trend in the next decades. Thus, for once, the Tigers were ahead of the curve. With Detroit’s WJR station broadcasting games across the entire Midwest, the team’s following spread beyond Michigan to Ohio, Wisconsin, Indiana, and across the river to Ontario, Canada. Later, its TV broadcasting team, with former Tiger George Kell on play-by-play, created even more fans.

With the Tigers’ conservative tradition and the arguably racist nature of both its management and its blue-collar fans, Detroit was slow to integrate black players into the team. Despite the steady increase in Detroit’s black population, throughout the 1960s the team rarely included more than a small handful of black players, among them the city’s already established sandlot star Willie Horton. The contradictions of racial politics in Detroit exploded, literally, in the 1967 riots that changed the history of the city. The violence resulted in unprecedented white flight that left parts of the city, including the neighborhoods around Tiger Stadium, devastated. Ravaged and divided, the city came together as the Tigers won the 1968 World Series. Although the factual basis for the team’s role in uniting Detroit communities has remained debatable, sports historian Patrick Harrington noted that “the myth of unity is important, illustrating the impact many Detroiters give baseball as a bonding element.”

The key to the 1968 team was Denny McLain, an immature wonderkid with a great arm, who won 31 games that year, but whose career then self-destructed. McLain was baseball’s equivalent to football’s Joe Namath—brash, cocky, quotable, and unconventional. The 1968 Tigers team held together for a few more years and, managed by Billy Martin, another brash, cocky and quotable figure,

won the Eastern division crown on the last day of the 1972 season. While the team attempted to rebuild its strengths over the next decade, it endured many setbacks. Racial tensions and economic conditions in the city worsened, spectator attendances declined, and the Tigers lost 100 games in the 1975 season. Yet, from the mire emerged one more bright shining star: Mark “the Bird” Fidrych. Nicknamed after the *Sesame Street* character Big Bird because of his lanky appearance and curly blond mane, Fidrych was a right-handed pitcher with the eccentric on-field habit of talking to the baseball. Already a local hero, he burst into the national spotlight with a masterfully pitched victory over the Yankees on ABC’s *Monday Night Baseball* in 1976. He was quickly on the cover of *Sports Illustrated* and his games, both at home and on the road, were sellouts. Yet, like McLain before him, Fidrych’s immaturity (he injured his knee horsing around in the outfield) led to his rapid decline.

The franchise, however, was improving. The devastation of the economy in Detroit in the late 1970s led to the dispersal of Tiger fans across the country, but the team’s popularity in the 1980s was acknowledged when Tom Selleck’s *Magnum PI* character donned the navy blue Tigers cap with the Old English “d” on it. The Tigers were a hot item. After hiring manager Sparky Anderson and developing a stable of great young players, the Tigers went 35-5 to start the 1984 season. This was the first year of new ownership under Tom Monaghan, a lifelong Tiger fan who made his fortune with the Domino’s Pizza franchise. The 1984 World Series win by the Tigers was the “fast food series”—the Kroc family of McDonald’s fame owned the opposing Padres. The 1984 season was also marked by two significant spectator developments. Fans at Tiger Stadium popularized “the wave,” a coordinated mass cheer from fans who jumped from their seats with their hands in the air in succession around a stadium. Less happily for the game, they also popularized the ritual of turning victory celebrations into all-night melees, with some becoming near riots as Detroit fans gave the city another black eye. Coupled with the annual “Devil’s Night” fires and Detroit’s dubious position as leader of the nation’s crime rate, even the frenzy over the Tigers’ triumph couldn’t mask the problems in the Motor City.

Monaghan ran into financial problems and sold the team to his business rival, Mike Illitch, owner of the Little Caesar’s pizza chain, in 1992. The franchise had been in trouble for many reasons, among them “a series of public relations disasters, including the botched dismissal of popular announcer Ernie Harwell that alienated its most loyal followers,” according to Harrington. At the same time, the city was harming rather than helping as “a bellicose mayor alienated the suburbanites and outsiders. A few highly publicized incidents in the downtown area magnified fear of coming to the Stadium. . . . The club became separate from the city, and the wider community divorced itself from the city.” Despite having Cecil Fielder, a home-run hero and the team’s first black superstar in over 20 years, the main interest in the Tigers concerned the team’s future. By the late 1990s, following years of bitter debate, lawsuits, and public hearings, the building of a new stadium was begun in downtown Detroit to keep the team in town. Although the 1994 baseball strike, and poor teams devastated Tiger attendance in the late 1990s, the new century held promise with a new ballpark. The move marked a break with the past as baseball prepared to leave the corner of Michigan and Trumbull, accompanied by the hopes of owners and city leaders, that the tradition of blue-collar support for the Tigers would continue in the new millennium.

Devers, Gail (1966—)

Labeled “the world’s fastest woman” after she won the 100-meter dash and a gold medal in the summer Olympics at Barcelona in 1992, Gail Devers has become exemplary of excellence, grace, and courage, and has served as an inspiration to other athletes, especially women, throughout the world. In 1988, she set an American record in the 100-meter hurdles (12:6l). What happened to Devers between 1988 and 1992, however, created a story, notes Walter Leavy in *Ebony*, “that exemplifies the triumph of the human spirit over physical adversity,” for Devers was sidelined with Graves disease, a debilitating thyroid disorder. After nearly having to undergo the amputation of both feet in March 1991, Devers not only recovered to run triumphantly in 1992 but went on to win her second gold in the 100 meters at the Atlanta Olympics in 1996, becoming only the second woman to win back-to-back gold medals in this competition.

Devo

Proving that America’s most engaging and original artists do not have to come from culture industry hubs like New York and Los Angeles, Ohio’s Devo crawled out of the Midwest industrial city of Akron to become one of the most well-known conceptual-art-rock outfits of the late twentieth century. Formed in 1972 by a pair of offbeat art student brothers and their drummer friend, Devo began making soundtracks for short films such as *The Truth About De-evolution*. Over the course of the 1970s, the group went from being an obscure Midwest oddity to, for a brief moment, one of New Wave’s most popular exports. While Devo did adopt a more accessible sound at their commercial peak, they never toned down the “weirdness factor,” something that may have alienated mainstream audiences once they ran out of ultra-catchy songs.

Devo was formed by brothers Jerry and Bob Casale (bass and guitar, respectively) and Mark, Jim, and Bob Mothersbaugh (vocals,

Devo

drums, and lead guitar, respectively—Alan Myers replaced Jim Mothersbaugh early in Devo’s career). The name Devo is derived from their guiding conceptual principle, “de-evolution.” As a concept, “de-evolution” is based on the notion that, rather than evolving, human beings are actually de-volving—and the proof is manifested in the myriad of social problems of the late twentieth century that, from Devo’s point of view, are the result of a conformist American ideology that renders its population mindless clones. “De-evolution” was derived from a crackpot text the brothers found entitled *The Beginning Was the End: Knowledge Can Be Eaten*, which maintained that humans are the evolutionary result of a race of mutant brain-eating apes.

Part joke, part art project, part serious social commentary, Devo went on to make the short film, *The Truth About De-evolution*, which won a prize at the Ann Arbor Film Festival in 1976, garnering them significant—though small scale—attention. This helped push the band to move to Los Angeles, where Devo gained even more attention as a bizarre live act which, in turn, led to a hit British single on the Stiff label and, soon after, an American contract with Warner Brothers

Records. Between the band’s formation and its Brian Eno-produced debut album in 1978, the band recorded a number of tracks on a basement four track recording studio; many of these songs were documented on Rykodisc’s two volume *Hardcore Devo* series. These unearthed songs showcase a band that, with the exception of the arty-weirdos the Residents, created music without precedent. At a time dominated by prog-rock bands, disco acts, and straightforward pop/rock, Devo was crafting brief, intense bursts of proto-punk noise that fused electronic instruments, rock ’n’ roll fervor, and ironic detachment.

The Brian Eno-produced *Q: Are We Not Men? A: We Are Devo!* announced to the world their de-evolution philosophy, and sold respectfully, though not spectacularly. Sonically speaking, the group’s second album, *Duty Now for the Future*, matched Devo’s conceptual weirdness to the point that it was their most challenging album. Their breakthrough came with the ironically titled *Freedom of Choice*, where the group adopted a more New Wave synth-pop sound that did not reduce Devo’s musical punch, it just made them more accessible to a wider audience. The success of “Whip It,” the group’s sole Top 40 hit, was in part due to their edgy video, making them one of the few

American groups to embrace music videos during the early stages of MTV (Music Television).

Devo's popularity and artistic quality steadily dropped off with their release of *New Traditionalists*, *Oh, No! It's Devo*, and *Shout*, all of which replace the playful quirkiness of their earlier albums with a more heavy-handed rendering of their philosophy (which may have been a reaction to their brief popularity). During the mid-1980s when Devo was largely inactive, Mark Mothersbaugh made a name for himself as a soundtrack producer on the demented Pee-Wee Herman Saturday morning live action vehicle *Pee-Wee's Playhouse*, which led to numerous other scoring jobs. In 1988 Devo returned with *Total Devo* on the indie label Enigma, which did not restore anyone's faith in this band's relevance. They followed that album with an even less worthwhile effort, the live *Now it Can Be Told*. Still, they were able to produce a few decent songs, such as "Post-Post-Modern Man" from their 1990 album *Smooth Noodle Maps*. In 1996, Devo released a CD-Rom and soundtrack album, *Adventures of the Smart Patrol*, and played a few dates for the Alternative music festival, Lollapalooza.

Diamond, Neil (1941—)

In a career spanning four decades, Neil Leslie Diamond offered his listeners a collection of songs that were sometimes schmaltzy, sometimes openly patriotic, but always melodic and well-sung. Beginning his career while a student at New York University, Diamond worked as a Tin Pan Alley writer before starting his solo career. His songs, ranging from "Solitary Man" (1966) to "Headed to the Future" (1986), reflected the condition of the era in which they were written and performed, while songs like "Heartlight" (1982) reflected a nation's consciousness. Known for his pop hits, Diamond also tried his hand at country music and traditional Christmas songs. Diamond's ventures into films include *Jonathan Livingston Seagull* (1973) and *The Jazz Singer* (1980), in which he starred. Diamond's works have been performed by such diverse groups as the Monkees and UB40.

Diana, Princess of Wales (1961-1997)

The most charismatic and publicly adored member of the British royal family, Diana, Princess of Wales not only imposed her own distinctly modern style and attitudes on Great Britain's traditionalist monarchy, but served to plunge that institution into its lowest level of public unpopularity, fueling support for Republicanism and, after her death, forcing the Royal family to moderate its aloof image. However, as a glamorous and sympathetic icon of an image-driven and media-fueled culture, Diana's celebrity status and considerable influence traveled across continents. Her fame, matched by only a handful of women during the twentieth century, notably Jacqueline Kennedy Onassis and Princess Grace of Monaco (Grace Kelly), made her a significant popular figure in the United States, where her visits were welcomed with the fervor once reserved for the most famous stars of the Golden Age of Hollywood. Diana was the most photographed woman in the world, and from the time of her marriage to her premature and appalling death in 1997, she forged a public persona that blended her various roles as princess, wife, mother, goodwill ambassador for England, and international humanitarian. Diana's fortuitous combination of beauty and glamour, her accessible, sympathetic, and vulnerable personality, and an ability to convey genuine concern for the affairs of ordinary people and the world's poor and downtrodden, set her apart decisively from the distant formality of the British monarchy. She became an object of near-worship, and her lasting fame was ensured. Ironically, the intense media attention and public adulation that came to define her life were widely blamed for

Diana, Princess of Wales

the circumstances of her death. Her untimely demise, however, served only to amplify the public's romantic perception of her as a modern goddess cruelly destroyed by a faithless husband, unsympathetic in-laws, and prying *paparazzi*. The life and death of the Princess of Wales, is, indeed, a monument to sad contradictions and ironies.

Lady Diana Spencer was born into aristocratic privilege, the daughter of Viscount Althorp, on July 1, 1961 at the remote and spacious family estate near Sandringham in Norfolk. Her parents divorced when she was still a child, leaving Diana and her siblings in the care of her father and his second wife. She was a shy child, unhappy about the absence of her mother, and early on developed a passion for children, which led her to become a nursery school teacher in London. At 18, she re-met Prince Charles, 13 years her senior and heir to the British throne, whom she had known slightly in childhood. Their courtship became public, and she had the first taste of the media circus that was to dog her every move for the rest of her life. On July 29, 1981, three weeks before her twentieth birthday, Diana married her prince—the first English woman in 300 years to become the wife of a future English king—in a wedding aptly described by the Archbishop of Canterbury as “the stuff of which fairy tales are made.” The ceremony took place before an overflowing congregation of some 2,500 in London's St. Paul's Cathedral and drew a record-breaking global radio and television audience of nearly one billion. A worldwide media event, the wedding affirmed Diana's value as an internationally marketable personality whose image soon appeared not only in magazines, newspapers, and television programs across the globe, but also adorned an unending stream of merchandise ranging from postage stamps to coffee mugs.

Diana's married life revolved around her official Court duties and, increasingly, her own public causes. Ten days after her twenty-first birthday, the princess gave birth to the next heir apparent, Prince William, and, two years later, to Prince Henry (known as Harry). She insisted on taking her young sons on “normal” outings to cinemas and theme parks and on informal holidays abroad, and she bestowed lavish affection on them in public. Her conduct represented a sharp break from the stiff conventions of royalty and contributed to her position as the media's darling and to the discomfiture of her less demonstrative mother-in-law. On the one hand, Diana seemed determined to protect her sons from the harsh glare of public scrutiny; on the other, she kept the people abreast of the family's life by granting interviews and making numerous public appearances. She fed the media's hunger even while expressing despair at its persistence.

By the mid-1980s, rumors of a rift between Charles and Diana were growing, accompanied by whispers of infidelity and reports that the princess was far from well or happy. By the end of the decade, it was public knowledge that Diana was suffering from bulimia, a fact that she courageously admitted in public in hopes of helping other sufferers; that Charles had resumed his long-standing love affair with Mrs. Camilla Parker-Bowles early in his marriage; and that Diana had sought solace in an affair with an army officer named James Hewitt, who co-operated in a scandalous tell-all book about their relationship.

For a time, Diana was cruelly treated by the media and criticized by the public, who simultaneously relished and disapproved of a spate of further revelations. When, however, Charles consented to an in-depth television interview with his biographer Jonathan Dimbleby, and confessed to the Parker-Bowles affair, Diana retaliated with her

own interview that effectively put the knife into the royal family and re-established her position in the public affection. To the evident distress of the queen, the couple announced a separation in 1992, the year in which Britain and America were agog at the publication of Andrew Morton's book, *Diana, Her True Story*. The royal divorce followed four years later.

Her marital woes and personal troubles only served to raise Diana's public profile even higher, and she took advantage of the media's relentless coverage of her every move by redirecting their attention from her private life to her charity work. Though stripped of her full title—no more Her Royal Highness—she continued to upstage her beleaguered husband and his family in the public eye. She ruffled the feathers of politicians with her international campaign for the banning of land mines, visited lepers, and indicated her sympathy and support for AIDS sufferers by embracing one such for the television cameras.

But even as Diana worked to focus the world's attention on her pet causes, the public remained most keenly interested in her post-divorce love life. The public's seemingly insatiable appetite for detail was both whetted and offended by Diana's sudden whirlwind romance with Egyptian playboy Dodi Al-Fayed, which hit the headlines in 1997. Her new lover was the son of Mohammed Al-Fayed—the owner of Harrod's department store and the Ritz Hotel in Paris, from where the couple left on their last fateful car journey—and had long been a figure of ugly controversy in Britain. When the Mercedes in which Diana and Al-Fayed were traveling crashed at high speed in a Paris tunnel on the night of August 30, 1997, immediate blame was laid at the door of the press photographers who were giving chase to the car, and gave rise to protracted legal hearings in Paris in a futile attempt to charge somebody with the couple's senseless deaths.

The news of Princess Diana's death sent shock waves around the world and plunged millions into a near-hysterical frenzy of grief. The profound sense of loss that was experienced, particularly in Britain, elevated Diana's mythic-martyr status to unprecedented levels. In the aftermath of Diana's death, her brother, Earl Spencer, remembered his sister as “the very essence of compassion, of duty, of style, and of beauty.” Indeed, when, in the eyes of the public, the queen failed to show the requisite level of emotion at the news of Diana's death, she endured outraged criticism for “not responding to the pain of Britons.” To quell the anger, she spoke publicly about Diana's death on television, and agreed to lower the Union Jack atop Buckingham palace to half-mast—an honor that had, for nearly a thousand years, been reserved solely for reigning monarchs. As further evidence of Diana's impact on staid British institutions, although a divorcee, she was given a state funeral on September 5, 1997. Her coffin was borne, in a simple but ceremonial procession, from her home at Kensington Palace to Westminster Abbey, where the service was conducted in the presence of television cameras. The cameras then followed the cortege to her final resting-place at Althorp, and two-and-a-half billion television viewers in 210 countries worldwide watched the hours of filmed coverage. In Britain, sporting events were postponed, bells chimed every minute, and a moment of silence was observed before the take-off of each British airline flight in memory of the princess.

In death, Diana hardly eluded the international cult of celebrity that had haunted her during her life. Thriving on the controversy over who was to blame for her death, the international media sold more magazines and newspapers worldwide than they had at any time

during her life. Even the charities to which she had been patron were complicit in exploiting her valuable name and image. The Diana, Princess of Wales Memorial Fund, established to endow a suitable memorial, was still riven by indecision, controversy and exploitation by the end of the 1990s, while her name and likeness was continually exploited by the souvenir market. While Diana's status as an exemplary mother and world-class humanitarian became cemented in the popular imagination, she left behind a darker legacy, that of a public figure who became a past master at manipulating the media and the celebrity culture that had both exploited and promoted her. As the object of the world's infatuation, Diana was, in the words of her brother, "the most hunted person of the modern age." The British Prime Minister, Tony Blair, however, addressing the nation on the Sunday morning following the accident, dubbed her "The People's Princess." So she was, and so she is remembered.

DiCaprio, Leonardo (1974—)

After his critically-acclaimed performances in *This Boy's Life* (1993) and *What's Eating Gilbert Grape* (1993), Leonardo DiCaprio quickly gained a reputation for playing tormented young men in such films as *The Basketball Diaries* (1995), *Total Eclipse* (1995), and *William Shakespeare's Romeo and Juliet* (1996). His boyish good looks and sensitive, troubled persona made DiCaprio a favorite of young women. Starring in the romantic tragedy *Titanic* (1997), which grossed more money than any film ever had before, broadened DiCaprio's popularity even further.

Dick and Jane Readers

For nearly 40 years, from 1930 through about 1970, more than 85 million American schoolchildren learned to read using the *Dick and Jane* readers that were part of a series published by the Scott Foresman Company. The books took their name from the series' lead characters who, with a dog named Spot and a kitten named Puff, inhabited a nostalgic, innocent American landscape of white picket fences and neighborliness. So deeply have the *Dick and Jane* stories been etched into the minds of the Baby Boomer generation and their immediate predecessors that the repetitive phrase "See Spot run! Run, Spot, run!" is today remembered by millions as the very first sentences they could read on their own. It has been estimated that four-fifths of the nation's schools were using *Dick and Jane* readers, ranking the books with the venerable *McGuffey Readers* of the nineteenth century as a tool of universal literacy.

With an emphasis on methodology over content, the *Dick and Jane* series was conceived in part as a rebellion against then in-vogue didactic traditions that relied heavily on moralistic and patriotic texts drawn from the Bible, Shakespeare, and American historical legends. The *Dick and Jane* readers emphasized non-phonetic sight reading and repetitive, limited vocabulary, a formula that became a parody of itself by the time their approach was jettisoned in the tumultuous 1960s, to be replaced by phonics and books with more diverse characters and situations. The fact that method trumped content in the choice of storylines for the *Dick and Jane* readers provoked frequent criticism, such as this acerbic remark from educational critic Arther S. Trace: "Students could learn a great deal indeed from early American readers, but the only possible answer to what children can learn from the *Dick-and-Jane* type reader is, 'Nothing of any consequence.'"

The *Dick and Jane* program was developed by three people—Dr. William S. Gray, an authority on pedagogy, and by Zerna Sharp and Harry B. Johnston. Working with teachers and school psychologists, the three worked as a team to develop the Scott Foresman series, using the limited vocabulary technique advocated by Dr. Gray. Thus, the first grade *Dick and Jane* readers had only about 300 words, the third grade reader about 1,000, and the sixth grade reader about 4,000. Writers for the series had to adhere to strict guidelines about using limited words, and were required to introduce only a few of them on each page, then repeat them frequently in forthcoming pages. Poetry and imaginative literature were nonexistent. All this led to criticism that the books were uninteresting and unnatural.

Dick and Jane first made their appearance in 1930, in a primer of the *Elson-Gray* basic reader series, with stories in large type under vividly colored heavy-line illustrations set in boxes according to 1920s graphics conventions. It was not until 1941, when Eleanor Campbell began illustrating the series, that the *Dick and Jane* characters, in pastel, took on the rounder, "cuter" form known to most Baby Boomers, inviting comparisons with Norman Rockwell for their evocation of idyllic small-town life and situations. Within a short time, other books were added to the series, including *More Dick and*

Jane Stories and *Dick and Jane*. In 1937, a pre-primer *Before We Read* was introduced. The concept caught on, and by the end of the 1930s half of America's schoolchildren were learning to read with Dick and Jane.

The *Dick and Jane* series was completely revised in 1940, introducing Campbell's illustrations and three paper-bound pre-primers—*We Look and See*, *We Work and Play*, and *We Come and Go*, which prepared students for the 160 page primer *Fun With Dick and Jane*. It was in this edition that "Baby" became known as "Sally," that Spot became a long-haired spaniel, and in which the kitten previously known as "Little Mew" was renamed "Puff." In 1950 another revision introduced *The New Basic Readers*, with updating of storylines and illustrations to reflect a more suburban postwar lifestyle.

In 1941, a special edition of the *Dick and Jane* readers was developed for Roman Catholic schools, the nation's largest non-public school system. Called the *Cathedral* series, this version featured Catholic situations and even changed the names of the characters to children with more "Catholic" names—John, Jean, and Judy.

The universe of the *Dick and Jane* readers was one of optimism and innocence, inviting criticism that the situations were unreal and stereotypical. As Sara Goodman Zimet writes in *What Children Read in School*: "Dick and Jane's world is a friendly one, populated by good, smiling people who are ready and eager to help children whenever necessary . . . There are no evil impulses to be controlled. Instead, free rein and encouragement is given for seeking more and more fun and play." Arther S. Trace, Jr. complained that the *Dick and Jane* readers ironically painted authority figures in an unfavorable light, noting that "Father behaves like a candidate for the all-American clown. He acts, in fact, like an utter ass, and Mother is almost as good a representative of the female of the species . . . These stories do, of course, help adjust students to life if their fathers and mothers are fools . . . The Dick and Jane readers for the early grades are comic books in hard covers." City life is generally ignored in the *Dick and Jane* readers, leading other critics to implicate the books as partially responsible for low reading scores in inner-city schools. The series was not adapted for racial diversity until shortly before its demise; it was not until 1965 that African American characters were introduced in the form of Dick and Jane's neighbors, Mike, Pam, and Penny. The *Dick and Jane* readers fell into general disfavor around this time, partly due to changes in reading pedagogy that advanced more realistic and relevant storylines, and partly because of complaints of the book's racial and sex-role stereotyping. Still, the books retain a sentimental hold over the millions of Americans who learned their first words within their covers, and the *Dick and Jane* readers have become both collectors' items and cultural icons.

—Edward Moran

Dick, Philip K. (1928-1982)

Author of 26 novels and 112 short stories, Philip K. Dick started his career as a science fiction writer in 1952. He was awarded the Hugo Award, a presentation made by fans, for his novel *The Man in the High Castle* in 1962, but he had to wait until the late 1970s to receive critical acclaim rivalling his popular reputation. His novels are uneven in quality, most containing powerful social satire. Dick has been immensely influential in contemporary science fiction writing, identifying many of the prominent concerns of cyberpunk, particularly consumerism, the cyborg, issues surrounding memory, surveillance, and mediated or artificial reality. *Bladerunner* (1982), the film version of his novel *Do Androids Dream of Electric Sheep?* (1968), has become a central reference point for critical discussions of both science fiction and modern technologically driven society.

Dick's career can be roughly divided into three main stages. In the 1950s, after he had been expelled from the University of California at Berkeley, he produced fiction for magazines and Ace books. Writing against a backdrop of McCarthyism, the first novels Dick produced present satirical dystopias, exaggerating aspects of contemporary social experience. *Solar Lottery* (1955) presents an economic

The cover illustration of Philip K. Dick's *Time Out of Joint*.

dystopia, *The World Jones Made* (1956) concerns the power of the police, *Vulcan's Hammer* (1956) the rise of a computer technocracy, and *The Man Who Japed* (1956) examines the totalitarianism inherent in democracy. These novels also established his interest in themes of political power and messianic figures.

It is, however, the consideration of different levels of reality and the world of appearances imposed upon ordinary characters which marks out Dick's work as radically creative and culturally astute. *The Eye in the Sky* (1957), *The Cosmic Puppets* (1956), and *Time Out of Joint* (1959), which all have structural inconsistencies in the worlds they portray, each deal with shifting realities and characters who defy illusion. These convoluted plots circle the issue of defining the real from the ersatz, which is a predominant theme throughout Dick's work.

The Man in the High Castle (1962), which earned Dick his Hugo Award, also debates the same theme. It is an alternate history, where the Allies have lost World War II. The novel stands out from his earlier work because it is less allegorical; its length allows Dick the space for deeper characterization and to dwell on ambiguity and irony. From this point Dick writes about existence within depleted environments and derelict worlds, particularly the harshness visualized in the Martian colonies. In *The Three Stigmata of Palmer Eldritch* (1964) Dick concentrates on the use of drugs which allow Martian colonists to escape the severity of their lives. Dick's fiction often explores the social use of drugs, including their economic and psychological effects. This interest culminates in *A Scanner Darkly* (1977), where drugs promote such powerful illusions that they preempt reality.

Flow My Tears the Policeman Said (1974) was nominated for both the Nebula (writers) and the Hugo (fan) awards and it won the John W. Campbell Award, which is presented by academic writers for the best science fiction novel of the year. The book marked a stage in which Dick was ready to cast aside the more traditional conventions of science fiction, e.g., time travel, space colonies, technology, aliens, and telepathy, in order to focus on the more philosophical concerns of mainstream writing. He wrote a series of non-generic novels during the 1950s, but only one—*Confessions of a Crap Artist* (1975)—was published in his lifetime. His last novels, *VALIS* (1981), *The Divine Invasion* (1982), and *The Transmigration of Timothy Archer* (1982) combine autobiography and realism with the metaphysical search for God.

Dick will be most remembered for *Do Android's Dream of Electric Sheep?*, which best exemplifies his preoccupation with the nature of humanity, realized in the dystopia of a society that has wiped out animal life and supplanted it with androids. It is a novel of deep existential insight which expands its hardboiled genre for the popular market. Dick died of a stroke just before the completion of *Blade Runner*. In acknowledgement of his achievements, the Philip K. Dick award was established after his death to recognize the best novel of the year published originally in paperback.

Dick Tracy

Dick Tracy has been called America's most famous detective, but his fame does not stop in this country. With his chiseled countenance and tough-guy morality, Tracy has become recognizable throughout the world. When Chester "Chet" Gould created the character—the first *Dick Tracy* comic strip ran on October 4, 1931—he could not have foreseen the influence of his tough but honest police detective. In fact, the influence extends well beyond the comics, into film, radio, and television. The timing of the comic strip's release was perfect. The Depression paved the way for a character who upheld traditional values even as he fell hard on the sordid underworld—he was just a regular guy fighting to make the world a better place. Moreover, prohibition, though nearing its demise, had established heretofore unknown levels of underground criminal activity. The strip also suggested better times with its presentation of new inventions, tools to continue the war against crime, and more importantly, inspiring signs of progress to come. *Dick Tracy* was created as a reflection of his times, and Gould's genius is reflected in the fact that the comic strip has survived for so long.

Gould always regarded himself as a cartoonist and he had done quite a number of odd illustration jobs before showing a strip called *Plainclothes Tracy* to Captain Joseph Medill Patterson, co-founder and director of the New York Daily News. Patterson was himself something of a powerhouse in the world of comics. He was the editorial force behind the development of such strips as *Little Orphan Annie*, *Moon Mullins*, and *Gasoline Alley*. Patterson saw promise in "Plainclothes Tracy" and set up a meeting with Gould. It was Patterson who was responsible for the name change. The name "Dick" was slang for a detective, and complemented "Tracy," Gould's play on the word "tracing." Patterson also suggested a basic outline for the first story, in which the father of Tess Trueheart, Tracy's sweetheart, was robbed and murdered and, consequently, Tracy went into the crime fighting business. Dick Tracy made his premier in the Detroit *Sunday Mirror* and about a week later, on October 12, 1931, began as a daily.

Dick Tracy quickly became not only Gould's claim to fame, but also Patterson's greatest success in the field. For readers, *Dick Tracy* was something completely different. Moral tales in the comics, nearly half of which at the time were serial strips like *Dick Tracy*, were not uncommon. But *Dick Tracy* presented a rough kind of morality. Tracy was always good, the villains always evil, and the confrontations always flamboyant. The level of violence was new to the comics, and Gould was not above bringing his villains to the cruelest of all possible ends. Audiences were also fascinated by the details of police procedure. Fisticuffs and gunfire were there, but Gould always remembered that Dick Tracy was first and foremost a detective.

The strip also gained notoriety for its take on technology and its pageant of some of the most bizarre villains to appear anywhere. Of the inventions, the most famous was the two-way wrist radio which later became a television and, finally, a computer. Gould believed that technology was the key to the future. Because of this, he was always experimenting with new fictional inventions that would range from items that would eventually find equivalents in the real world, like the Voice-O-Graph voice print recorder, to the absurd. His placement of an antennae race of humanoids and giant snails on the moon is, however, regarded by many as the low point of the strip. At any rate, Gould lent the strip a gruesome edge with the villains whose corrupted morals were reflected by their physical deformities. The names of

the criminals are evocative in and of themselves: The Blank, Flyface, The Mole, Pruneface, and B-B Eyes.

When Chester Gould retired from *Dick Tracy* in December of 1977, its artistic responsibilities were taken over by Gould's longtime assistant Rick Fletcher while the writing became the responsibility of Max Allan Collins. Collins was a young mystery novelist who would also go on to script comic books like *Batman* along with his own detective creation, Ms. Tree. Fletcher was eventually replaced by Pulitzer Prize winning political cartoonist Dick Locher in 1983 and Collins was later replaced by Mike Killian.

Although Gould himself did not give it much consideration, *Dick Tracy* refused to be simply confined to the comics page. He would appear on radio and television, in books and movies—serial and feature—and in animated cartoons. He has been personified by the likes of Ralph Byrd, Morgan Conway, Ray MacDonnell, and, in a 1990 motion picture, Warren Beatty. In addition, *Dick Tracy* has been the basis for a great multitude of licensed products, from toys to clothing, and, of course, watches.

Clearly, the influence of *Dick Tracy* can be seen across a spectrum of media. Although the serial strip has lost much of its foothold in American newspaper comics, comic books owe much to *Dick Tracy*. Though perhaps not the greatest draftsman to work in comics, Gould was, without a doubt, original. His use of shadows opened doors for comics to explore darker visuals. One might even see Gould's work as a precursor of sorts to the techniques of *film noir*, and the police procedure of *Dick Tracy* became a staple of detective stories in virtually all narrative media. *Dick Tracy* also served as the model for yet another icon of American culture. Bob Kane credited *Dick Tracy* as the inspiration for his own creation, the Batman, and Gould's menagerie of grotesque villains found reflection in the likes of the Joker and Two-Face, a virtual duplicate of Gould's Haf-and-Haf. It could be argued that *Dick Tracy* invented the look that would come to be associated with both an era and a type of character. When we hear the words "hard-boiled" we can't help but think of the trenchcoat and fedora pioneered by the famed *Dick Tracy*.

Dickinson, Angie (1931—)

An attractive and talented film actress of the 1960s and 1970s, and star of the popular television show *Police Woman*, Angie Dickinson's lasting image was thrust upon her by Brian De Palma in 1980. By then an elegant and sophisticated presence, she was cast in De Palma's *Dressed to Kill* as a woman who is brutally and shockingly slashed to death in an elevator. Competing with the shower scene in *Psycho* as one of the most uncomfortably enduring celluloid murders of modern times, Dickinson's bloody demise guaranteed her immortality. Earlier in her career, Dickinson (born Angeline Brown in North

Dakota), exuded a unique blend of up-front acting, all-American girl charm, sympathetic femininity, and good-natured sex appeal. She was perfect as both foil and comfort to the men in her several male-oriented films, beginning with *Rio Bravo* (1959). Although she played many sympathetic characters, a tougher quality was exploited in *The Killers* (1964) and *Point Blank* (1967). She was married for a time to Burt Bacharach.

Diddley, Bo (1928—)

Best known for the "shave-and-a-haircut" beat that bears his name, Bo Diddley helped build the rhythmic foundations of rock and roll with a string of hits during the mid-1950s. Diddley came out of the Chicago blues scene, but also brought the African American traditions of child game songs, tall-tale telling, and ritualized rounds

Bo Diddley

of bragging and insults into popular music, making him an early practitioner of rap. Diddley's chunky riffs and early use of distortion and tremolo effects on his unique square guitar were later used in 1960s funk and 1970s heavy metal.

The history of Diddley's beat has been traced to African Yoruba and Kongo cultures in Nigeria, and from there to Cuba, where the clave pattern was the basis for nineteenth century dance hall music. Early New Orleans jazz composer Jelly Roll Morton employed it in "Black Bottom Stomp" in the early twentieth century, and it was a common rhythm played by children on diddley bows—homemade single-stringed instruments—in rural Mississippi. The rhythm is also commonly referred to as "hambone," a method of slapping and stomping often used by shoeshine boys.

Diddley was born Ellas McDaniel in McComb, Mississippi, and moved to Chicago at the age of eight where he was undoubtedly exposed to these traditions. "Truthfully, I don't know where it came from exactly. I just started playing it one day," Diddley said in George R. White's biography *Bo Diddley: Living Legend*. "I figured there must be another way of playing, and so I worked on this rhythm of mine. I'd say it was 'mixed-up' rhythm: blues, and Latin American, and some hillbilly, a little spiritual, a little African and a little West Indian calypso . . . I like gumbo, you dig? Hot sauces, too. That's where my music come from: all the mixture."

Young Ellas was entranced one day shortly after moving to Chicago by a man playing a violin. He signed up for classical lessons from Professor O.W. Frederick at the Ebenezer Baptist Church, where he studied for 14 years. After hearing John Lee Hooker on the radio, however, he decided to play guitar. His sister, Lucille, bought Diddley his first guitar when he was 13. According to Diddley, ". . . the violin was the railroad track, or lifeline, to me playing a guitar . . . I used the bow licks with the guitar pick, and that's the reason for the weird sounds. That was my way of imitating with the bow on the violin strings, and that was the closest I could get to it."

Diddley attended Foster Vocational High School, where he learned to build violins and guitars, but quit school to work manual labor jobs and play on street corners. He formed a small group and played in neighborhood taverns, recording a demo that got the attention of Chess Records. Diddley, along with maracas player Jerome Green, joined Otis Spann on piano, Lester Davenport on harmonica, and Frank Kirkland on drums to record "Bo Diddley" and "I'm a Man" in 1955.

Chess was prepared to issue the single under McDaniel's real name, but harmonica player Billy Boy Arnold suggested Bo Diddley, a slang term for a comical-looking, bow-legged, short guy. The name and the single caught on, reaching number two on Billboard's rhythm and blues singles chart. He charted six more singles through 1960 on Checker, a Chess subsidiary, and recorded 22 albums for Chess/Checker through 1974.

Countless artists have had hits using Diddley's rhythm, including Buddy Holly ("Not Fade Away") and Johnny Otis ("Willie and the Hand Jive"). Many more, including the Rolling Stones and Eric Clapton, have had hits covering these tunes. The Who, the Yardbirds, Ronnie Hawkins, and the Doors all employed Diddley's beat at one time or another. Unfortunately for Diddley, American copyright law does not cover a beat or rhythm—only lyrics or a melody—and he therefore never received royalties from these songs.

Diddley released a few albums in the 1980s and 1990s with his own company, BoKay Productions, and other small labels, but he found it difficult to fit in with the new style of popular music. Diddley returned to form with the release of *A Man Amongst Men* on Atlantic

Records in 1996. Featuring guest musicians Jimmie Vaughan, Ron Wood, Richie Sambora, Billy Boy Arnold, Johnnie Johnson, and Johnny "Guitar" Watson, the album was nominated for a Grammy Award as Best Traditional Blues Album.

Didion, Joan (1934—)

Joan Didion has proven herself one of the most acute observers of and commentators on American life in the latter half of the twentieth century. Her widely anthologized essays have been required reading for two generations of college students. Combining old-fashioned investigative reporting and New Journalistic subjectivity, she has brought her trademark style and deeply skeptical intelligence to bear on a variety of cultural phenomena, from her own marriage and the rock group the Doors, to the terror in El Salvador, Cuban exiles in Miami, and the Central Park jogger case. Her highly cinematic novels are stylistically and tonally of a piece with her nonfiction and have become increasingly journalistic and more political over the years. Focusing on women who are affluent but adrift, Didion's decidedly pessimistic novels expose not just her characters' self-delusions, but the political and psychological shortcomings of an American Dream gone sour. As such, the novels, along with the essays, give laconic voice to the disillusionment and pessimism that is the other face of the radicalism of the 1960s.

Didrikson, Babe (1911-1956)

More than a hero to feminists and young women who aspire to athletic achievement, athlete Babe Didrikson was a sports hero in the finest American tradition, larger than life, with super-sized faults to match her virtues. Carrying a chip on her shoulder from her rough and tumble upbringing, Didrikson approached life with a swagger and a wisecrack. She brought controversy and excitement to the refined world of women's golf, and challenged assumptions everywhere she went. She broke world records regularly and broke barriers set up

Babe Didrikson

against women. Her statistics are an inspiration to women athletes everywhere. But it is the flesh and blood Didrikson, angry, cocky, competitive, and irrepressible, that forged her place in history's sports hall of fame.

"Before I was even into my teens I knew exactly what I wanted to be when I grew up," Didrikson wrote, "My goal was to be the greatest athlete who ever lived." Didrikson achieved her goal. The Associated Press named her Female Athlete of the Year six times between 1932 and 1954, and in 1950, they gave her the title Female Athlete of the Half Century. She was an All-American basketball player, an Olympic gold medal winner in track and field, a record-breaking golf champion, and a proficient dabbler in other sports from swimming to shooting pool. Didrikson's athletic achievements clearly transcend the footnote usually allowed for women in sports.

Mildred Didrikson was born in the south Texas town of Beaumont. The sixth of seven children in a working-class family, she learned early the value of toughness and self-reliance. Roaming the streets of Beaumont, she taught herself to run by racing the streetcars and learned hurdles from leaping over hedges. It was the boys in her hometown who gave her the name "Babe" because she hit so many home runs in their sandlot games.

Didrikson dropped out of high school and was playing semi-professional basketball when she was made an All-American in 1932. That year she participated in an Amateur Athletic Union track-and-field championship as a one-woman team. She entered eight events and won six, and the championship. A team of twenty-two women came in second, eight points behind Didrikson. That day on the field, the smart-aleck kid from south Texas set world records for the high jump, the eighty-meter hurdles, the javelin, and the baseball throw. A few weeks later, competing in the Olympics in Los Angeles, she won gold medals for the javelin and the eighty-meter hurdles and a silver for the high jump. She would have won the gold for the high jump, but her best jump was disqualified on a technicality because her head went over the bar before her feet.

In 1935, Didrikson took the golf world by storm. Before her career was over she had won fifty-five professional and amateur tournaments and set a record with seventeen wins in a row. Staid golfing audiences were put off by Didrikson's irreverent, wisecracking style, but her drives were regularly fifty to one hundred yards longer than her opponents', and it was not uncommon for her to come in well under the men's par, so she was hard to dismiss. The upper-class golfing establishment tried to exclude her because she played professionally and most women's golf consisted of amateur events, but Didrikson got around them in typical aggressive style. In 1949, she helped found the Ladies Professional Golfers Association to put women's golf on more even footing with men's by giving professional women golfers a venue.

Didrikson remained the cocky, streetwise, tough kid from south Texas. Her style was both confrontational and comic, sometimes charming her audiences with silly trick golf shots, sometimes shocking them with her directness. Many of her opponents hated her, perhaps because she was an egotistical and graceless winner. The press nicknamed her "muscle moll," and college physical education departments warned women against emulating her. Didrikson was unabashed. She continued to start her golf matches with a grin and the quip, "Well, I'm just gonna have to loosen my girdle and let 'er fly!" She also continued to play almost every sport available. She played exhibition games in baseball and football, shot exhibition pool, and even sang and played harmonica on the vaudeville stage. When asked if there was anything she didn't play, Didrikson answered dryly, "Yeah. Dolls."

Didrikson married professional wrestler George Zaharias in 1938. They had met when they were partnered in the Los Angeles Open golf tourney. In 1941, Didrikson underwent surgery for colon cancer, and doctors told her that her athletic career was over. With typical unconcern for the opinions of naysayers, she continued to play, and in 1954, she won five golf tournaments, playing with pain, fatigue, and a colostomy bag. Two years later, she died. The epitaph on her tombstone in Galveston, Texas, reads "Babe Didrikson Zaharias—1911-1956—World's Greatest Woman Athlete."

Dieting

It would be hard to find anyone in the United States, or in any other part of the Western world, who has not at one time gone on a weight-loss diet. Perhaps the most long-lived fad of our society, the diet craze has grown and expanded its influence until almost every issue of every popular publication contains at least one diet article and television talk shows regularly feature diet gurus and those offering weight loss testimonials. With little evidence that such diets work, and with quite a bit of evidence to the contrary, a multi-billion dollar industry has grown up around the modern obsession with thinness. Women are the vast majority of consumers in the diet industry, and, though men do diet, it is almost exclusively women who focus a significant portion of their time and energy on the effort to become thin.

Though Americans are constantly bombarded with the concept of thinness as an ideal of health and beauty, it is a relatively new concept that would have seemed laughable just one hundred years ago. Though standards of beauty have varied from culture to culture and from century to century, plumpness has widely been viewed as signaling health, success, and sensuality. Many modern cultures do not place the same value on thinness as much of western society. Some, such as those in Polynesia and east and central Africa, value fat women to the extent of fattening up daughters to make them more marriageable.

Human bodies evolved in response to a struggle to survive with an uncertain food supply. The ability to store fat was a valued genetic trait. As long ago as 30,000 to 10,000 B.C.E., statues like the so-called Venus of Willendorf show an ideal of feminine beauty that includes large thighs, broad buttocks and pendulous breasts. The Biblical book of Proverbs says, "He that putteth his trust in the Lord shall be made fat." Even in Medieval Europe, when the religious art showed lank, acetic Marys and Eves, the secular art pictured round, fleshy women, brimming with laughter and sexuality. A fat, dimpled buttock or thigh was a universal symbol of sex appeal.

On the contrary, thinness was viewed as a sign of weakness, disease, and poverty. Eighteenth-century diet specialist Jean-Anthelme Brillat-Savarin called thinness "a terrible misfortune" for a woman. "Every thin woman wishes to put on weight," he said, "This is an ambition that has been confided to us a thousand times." He obliged them by prescribing fattening diets. By the end of the nineteenth century, women had begun to slim their waists through the use of tightly laced corsets, but ample cleavage and voluminous hips were still very much the style, helped along by contrivances called farthingales, panniers, and bustles. These were wire frames worn under the clothes to add desirable inches (or feet) to hips and buttocks. Indeed, most changes deemed necessary in the body were effected by additions to the costume. Only later would women begin to consider the idea of altering the body itself.

As the 1900s began, the country was in an era of tremendous growth and change. The industrial revolution was bringing science into the day-to-day lives of common citizens. A feminist age was beginning as women entered the work force in unprecedented numbers and began to demand more rights. Along with these changes came a new look in women's fashions. The corsets and cumbersome contraptions were gone and so was the abundant flesh. By the 1920s women were supposed to be slim, straight, and boyish. Hair was bobbed, breasts and hips were bound, and women began to try to lose

weight. Along with such extreme treatments as electrotherapy, tapeworm pills, and hot baths to melt fat off, miracle diets promised to fatten the scrawny as well as slim the stout.

Around the same time, the newly burgeoning insurance industry began to study the effects of weight and other features on longevity. Inspired perhaps by the fashion of thinness, researchers tended to ignore the evidence that the underweight and the tall had higher death rates too, and they only focused on the overweight. Even though their research methods were questionable and their samples included only the upper classes who had the money and inclination to purchase life insurance, the insurance tables were popularly accepted as fact in terms of optimum height-weight ratios. These tables have remained a standard by which modern people measure themselves, even though their recommendations have varied widely over the decades.

It was also around the 1920s that doctors began to abandon their condemnation of thinness as a sign of the common disorder "neurasthenia" and to attack excess weight as the cause of many health problems. Even then, there was not widespread belief that people could control their body size, and doctors worried that dieting, especially the dieting of young women, was dangerous to health.

The Roaring Twenties' dieting craze, which never penetrated much beyond the upper classes, waned during the late 1930s and early 1940s, as the poverty of the depression years deepened. But by the 1950s, the preference for thinness and disgust with fat was on its way to becoming a national obsession. This obsession was perhaps useful to a society which was trying to distract women from the increased responsibility they had been given during the war and refocus them on home, family, and fashion. The number of magazine articles about weight and diet skyrocketed, and fatness, which once had been viewed as a physical characteristic like any other, had become a vice and a moral failing. Weight loss products and diet foods began to appear on grocery shelves, and dieters bought them in huge quantities. Pharmaceuticals firm Mead and Johnson created an all-liquid diet food called Metrecal that boosted their earnings over 300 percent in the years between 1958 and 1960. Just as quickly, however, profits dropped again, as unsuccessful dieters moved on to try other products. Amphetamines, a fairly new drug about which little was known, were prescribed freely to women as a weight loss aid.

Diet books also began to appear, some with a health food bent, others purely fashionable. Exercise had long been seen as having a negative effect on weight loss because it stimulated the appetite, but modern experts made the case for exercise as an adjunct to a weight-loss diet. Fad and novelty diets began to pop up, often having nothing more to recommend them than sheer weirdness, but promising "miracle" results. The Drinking Man's Diet, offered permission to imbibe; the grapefruit diet ascribed extraordinary fat burning qualities to the acidic yellow fruit which was to be eaten several times a day. One diet prescribed only steak, another suggested eating foods high in fat. Americans were willing to try anything that promised results.

Medical opinions about the effects of obesity continued to follow closely the guidelines and research done by the insurance industry, even though that research was proved flawed and limited on many occasions. Since the major factor in body size seemed to be genetic, doctors began to prescribe weight-loss diets even for pregnant women and young children. As fat was seen as the result of moral flaws such as lack of willpower, it was also seen as a psychological problem, and fat people were sent to psychiatrists to seek the deep root causes of their body size.

The 1960s and 1970s saw the continued increase of the thinness obsession, perhaps more than coincidentally with the rise of a second

wave of women's liberation. Some feminists speculate that each time women gained power and pushed for more rights, they were purposefully distracted by a cultural insistence on an unattainable female body ideal. Women, though genetically predisposed to be fatter than men, have always borne the brunt of the weight-loss fad. Though some dieting occurs among men, it is far more common that even men who do not fit the media mold of beauty have little shame over exposing bellies and bare chests in public, while women, even admired models and actresses, experience shame and self-loathing about their bodies. Perhaps because men have had more economic and political power, it has been necessary for women to fit the mold most pleasing to men. If the eating disorders and obsession with dieting that women exhibit are reflected anywhere among men, it is among gay men, who have the same need that heterosexual women have to fit the male standard of beauty. Nowhere has that standard been challenged more strongly than within the lesbian community. Though not immune to cultural beauty standards, lesbians' relative independence from men has given them both room and incentive to question those standards. That questioning has led to pioneering work in the fat acceptance movement, which challenges the diet industry and medical establishment's demonization of fatness.

By the 1990s the diet fad has become so widespread that most Americans are continually on one sort of weight-loss plan or another, and most women consider themselves fat, no matter what their actual size. Studies have been done that show a high percentage of girls as young as eight years old have begun to diet. Fashion models appear acutely undernourished and even they must have their pictures airbrushed to remove offending flesh. Eating disorders such as anorexia (the rejection of food to achieve ever-increasing thinness) and bulimia (binge eating followed by forced vomiting or laxative-induced diarrhea) which once were rare, have become epidemic. Surgical procedures such as stomach-stapling and liposuction are in demand even though they are known to have dangerous or even deadly effects.

The media abounds with new "miracle" diets, and the diet business has grown from a few companies with names like Weight Watchers and Slenderella to a 50 billion dollar-a-year industry. With ads offering such perplexing promises as "Lose ten pounds for only ten dollars," these diet companies have perhaps finally achieved the perfect American solution to excess weight. If willpower, therapy, and even prayer don't work, one can *buy* weight loss.

The success of products like Metrecal in the 1950s has led to a boom in diet products and organizations. While some products like SlimFast and Lean Cuisine specialize in diet food, others have jumped on the bandwagon by offering "lite" or "lo-fat" versions of their products. Soft drink companies were among the first to offer profitable diet alternatives. These are guzzled in astounding quantities by Americans of all sizes, even though their artificial sweeteners, first saccharin, then cyclamates, and most recently aspartame, have in some cases been found to have damaging effects on the body. Often, as in Metrecal's case, when a new product is introduced, there is a rush to try it. When it proves to be less than miraculous, sales may drop as consumers move on to the next new promise.

Another form of diet business is the dieter's organization or "club." Affluent dieters often pay high prices to attend spas and "fat farms" to help them lose weight. For middle and working class dieters there are more affordable alternatives. Organizations like Weight Watchers and Jenny Craig offer counseling and group support for a price, plus a line of food products that are required or strongly suggested to go with the program. The twelve-step approach of

Alcoholics Anonymous is emulated by groups like Take Off Pounds Sensibly (TOPS) and Overeaters Anonymous, which tend to view fatness as a sign of addictive attitudes towards food and offer free support groups to combat the addiction.

Over the years, many weight-loss "gurus" have risen to media prominence, producing books or videos to promote their personal recommendation for weight loss. As early as 1956, Roy de Groot published his low-protein "Revolutionary Rockefeller Diet" in *Look* magazine, leading the way for Robert Atkins' *Dr. Atkins' Diet Revolution* in 1972, Herbert Tarnower's "Scarsdale" diet in 1979, and Jane Fonda's books and videos in the 1980s and 1990s. Trading on medical credentials or celebrity, these diet "experts" often become corporations in themselves, profiting handsomely from sales and public appearances.

Yet many Americans are still overweight. In fact, diets have never been successful at making fat people thin. Only about ten percent of dieters lose anything close to their goals, and only about half of those keep the weight off for an extended period of time. The body is an efficient processing machine for food and its response to the starvation message sent by dieting is to become even more efficient, thereby needing less food to maintain the same weight. The World Health Organization's definition of starvation is 1200 calories per day, the same intake as an average weight-loss diet. Even when caloric reduction causes the body to use stored resources, there is no guarantee that unwanted fat will be used. The body might as easily draw from muscle tissue, even from the brain or heart, with life-threatening results.

Some researchers claim that the rising numbers of fat people are caused by the incessant dieting practiced by most Americans. Each bit of weight loss causes the body to respond as it would to recurring famine, by storing food, and fat, more efficiently. Even aside from overtly dangerous diets, such as liquid protein diets or extreme 400 to 500 calorie diets, any sort of weight-loss diet can have seriously negative effects. Depression, irritability, and fatigue are frequent side effects, along with amenorrhea for women, muscle damage, and stress on liver, kidneys, and the cardiovascular system. In the long run, medical studies on the negative effects of being fat become useless, for, in a society where everyone diets, fat people, persecuted for being fat, often spend a large part of their lives dieting. It is difficult to separate the effect of weight on health from the effects of long-term dieting and from the stress of being fat in a culture that demeans fat people.

Though dieting has become so entrenched in American culture, some voices are being raised in protest. The fat-positive movement (also called the size-acceptance or size-diversity movement) is growing, energized by people who are no longer willing to devote their lives to fitting an impossible ideal. An anti-diet movement has arisen, drawing attention to the dangers of dieting with an annual International No-Diet Day. Concerned by the rising numbers (over 11 million in the 1990s) of young girls afflicted with anorexia and bulimia, some parents and educators are calling for more focus on raising the self-esteem of adolescent girls. However, surveys still report that a large percentage of women would prefer being run over by a truck or killed by a terrorist to being fat, and American culture has a long way to go to leave superficial values behind. Perhaps as long as there is still so much money to be made off of Americans' preoccupation with thinness, dieting will remain a lifestyle and an obsession.

Dietrich, Marlene (1901-1992)

Marlene Dietrich is a mythical woman and actress who worked actively on the creation of her myth. Her ability to create and manipulate a recognizable and durable star image influenced modern popular icons such as Madonna. The German Marlene Dietrich emerged onto the world stage as a screen idol taking Hollywood by storm in the 1930s, moved on to become a troop entertainer during the Second World War, and ended her career as an age-defying concert singer in the 1950s and 1960s. Gender-bending Marlene enjoyed many decades of a stardom that was predicated on one core attribute—her ability to remain ambivalent and mysterious.

Maria Magdalene Dietrich was born a policeman's daughter in Berlin, although her father died when she was young. She was a schoolgirl during the upheavals of World War I, during which her step-father, a colonel, died of war wounds. Although Marlene—a contraction of her first two names—played the violin and the piano, she was not accepted at the Weimar music school. Thus, after the depression following the war and with Weimar cultural life blooming around her, Marlene forsook her middle-class background and embarked on a more dangerous and decadent path: the stage. She found

Marlene Dietrich

entry into the Max Rheinhardt School, a renowned theater school with very good stage connections. By 1922, Marlene Dietrich was on the stage. With ceaseless energy, Dietrich worked her way through small supporting roles and, like many stage actors of the time, appeared in many silent films. By 1927, Dietrich had made it. Her sensuous appearance had won her the Berlin audience. Two years later, a big Hollywood director decided to come to Berlin to look for his latest star for the film *The Blue Angel* (1930), and a Hollywood legend began: the collaboration of Marlene Dietrich and Joseph von Sternberg. Dietrich was already well aware of her ability to embody ambivalent sex. Her risqué performances with well-known lesbian Maro Lion in their duet "It's in the air" had been deliciously scandalous. Under the guidance of her "Svengali" von Sternberg, this ability became the core of her star persona. Together, they fashioned the myth of Dietrich, a myth of sex, sadomasochism, cool poise, and darkness, which transplanted surprisingly well from permissive Weimar Berlin to a more strict Hollywood. In *The Blue Angel*, Dietrich played Lola Lola, the ruin of a professor who falls desperately in love with her and is treated cruelly and dismissively by his love object. In this film, Dietrich established her gender-bending image for the American audience by donning tails and a top hat. Another trademark which was to become mythical was displayed in detail to U.S. audiences—the long, sensual Dietrich legs.

The legs and trousers became fetishes of a woman surrounded by mystery. Dietrich wore her slacks outside the studio and, as a result, was called "the best dressed man in Hollywood." In a time when studios had a morality clause in their contracts allowing them to dispense with any star overstepping the rules, Dietrich's open bisexual affairs were indulged. Her foreign, ambivalent, dangerously sexual image, portrayed by an equally mysterious foreigner with strange tastes, was recognized as the main box-office draw. Films such as *Morocco* (1930) and *Blonde Venus* (1932) consolidated Dietrich as the cool, poised femme fatale in feathers and fur: an image of an erotic and sophisticated dominatrix made immortal in Sacher-Masoch's novel *Venus in Furs*. After the end of her relationship with von Sternberg, Dietrich continued to be a successful and (in)famous star, even if occasionally touted as "box office poison." Dietrich's desire to broaden her appeal and develop her image led to leads in productions by Ernst Lubitsch—*Desire* (1936) and *Angel* (1937)—which allowed her to display humor as well as sex. Other ventures into different genres include a western parody, *Destry Rides Again*, directed by George Marshall and released in 1939.

During the war-years, however, a new side was added to Marlene Dietrich's image. Her foreign origin, accent, and the decadent sexual persona of continental European ancestry were a recognized part of her image, but now a vehemently anti-Nazi stance and a belief in the American way of life led Dietrich to help the war effort. She worked for the United States Entertainment Organization, appeared at fund-raising events, and entertained the troops on the front-lines in Europe. Her most famous song, "Lili Marleen", stems from this period. The head of the German Nazi Ministry of Culture had earlier asked her to return, to be a great Nazi star, even after some of her films were banned in Germany. As an answer, Dietrich became a United States citizen in 1939. In 1945, she was back in Germany, to bury her mother, and, according to her daughter Maria Riva, to bury the Germany she once knew and loved.

After the war, Dietrich's film roles were sporadic. Films such as *Rancho Notorious* (1952) and *A Touch of Evil* (1958) are tongue-in-cheek takes on her own carefully nurtured star persona. Dietrich's main activity was now the stage: she had recaptured her original

calling from the years in Weimar, and embarked on a new, successful career as an international cabaret star. Although her singing voice was criticized, Dietrich's delivery was a full-blown stage cabaret show. Her repertoire embraced sexy songs, often originally written for male singers, allowing her worldly charm and eroticism full range. Numbers recorded by Dietrich include "One for My Baby," "One More for the Road," and "Makin' Whoopee." The older image of Dietrich as femme fatale was soon supplemented by a newer strand of anti-war songs including "Sag mir wo die Blumen sind" (Where Have All the Flowers Gone), as well as other Pete Seeger and Bob Dylan songs. During her concert in Israel she broke the taboo against the German language by singing her cry against wars in her mother tongue. She also went back to Germany, despite the fact that the voices calling her a traitor had not stopped. The concert was a success.

Dietrich paid a price for her decades of working and the self-fashioned myths around her. More and more scotch accompanied her touring. Finally, she ended her stage career when she broke a leg on stage in 1975. With many of her old friends dead, including her husband from her Weimar years, Dietrich led a lonely existence in Paris.

For decades, she had been a focal point for the famous. Her rumored lovers included Ernest Hemingway, Greta Garbo, and Jean Gabin. At the end of her career, she claimed that it was not vanity that made her camera-shy, but her need to sustain and nurture the myth of what she had become—an icon of glamour, ambivalent sexuality, erotic sophistication, and unknowable mystery. Her skill was well rewarded. Later generations of artists have plundered and recycled the rich image of Dietrich. Her most well-known "interpreter" has become Madonna—another star of ambivalence and mystery.

In her book *ABC*, Dietrich writes: "Dietrich—In the German language the name for a key that opens all locks. Not a magic key. A very real object, necessitating great skill in the making." Even her death did not erase this fascinating object.

Diff'rent Strokes

For eight seasons and 189 episodes, Americans tuned in to *Diff'rent Strokes*, a sitcom chronicling the family life of a wealthy white industrialist who adopts two African American children. The tepid comedy's lengthy television run made many cultural observers wonder if its creators had made a deal with the devil. Certainly the show's trinity of child stars seems to have spent the ensuing years in show business purgatory.

Developed by Norman Lear, the brains behind *All in the Family*, *Diff'rent Strokes* began as a well-meaning, if patronizing, look at America's racial and economic divides. Conrad Bain, a veteran of Lear's *Maude*, was cast as Philip Drummond, the white Daddy Warbucks to black ragamuffins Arnold and Willis Jackson, played by

(From left) Gary Coleman, Dody Goodman, and Conrad Bain in a scene from *Diff'rent Strokes*.

Gary Coleman and Todd Bridges. Stringy Dana Plato rounded out the main cast as Drummond's natural daughter, Kimberly. A succession of brassy housekeepers, vanguarded by Charlotte Rae, commented mordantly on the goings-on.

Conceived as an ensemble, *Diff'rent Strokes* quickly became a star vehicle for the adorable Coleman, a natural comedic talent relegated to Lilliputian stature by a congenital kidney condition. "What you talkin' 'bout, Willis?," Coleman's Arnold would bellow repeatedly at his older, worldlier sibling. Eventually this interrogative came to be something of a catch phrase, flung promiscuously by Coleman at any of the show's characters and accompanied by a mugging double take. As the years went by, however, Coleman's stunted growth began to take on an eerie, side show quality. Only at the very end of the eight-year run was his character allowed to grow up, "dramatically speaking," date girls, and behave like something other than a mischievous eight-year-old. Coleman was 17 at the time.

Medical oddities aside, *Diff'rent Strokes* was little more than light entertainment for the home-on-Saturday-night crowd. It did, however, occasionally tackle meaningful subject matter. In one memorable episode, Arnold converted to Judaism after attending a friend's bar mitzvah. Likening the solemn ceremony to a "Jewish Academy Awards," and pleased with his complimentary "yamaha," the diminutive adoptee was dissuaded from his change of faith only after Drummond engineered a visit from Milton Berle as a wisecracking rabbi. Terrified by the prospect of Hebrew School and Jewish dietary obligations, the impressionable tyke opted to forego his opportunity to celebrate "Harmonica."

Not all series installments, however, addressed weighty issues with such rampant insensitivity. Rotund *WKRP* fixture Gordon Jump played a child molester (all too believably) in one topical episode, while First Lady Nancy Reagan herself dropped by for a memorable 1983 show about drug abuse. The jaded Coleman was non-plussed by the visit from the power-suited astrology enthusiast, who stiffly hugged a group of child actors for the cameras and accepted a pair of *Diff'rent Strokes* tee-shirts from Conrad Bain before departing in a four-car motorcade. "It was just another show," Coleman shrugged after Reagan's visit. "We didn't talk about much. She came in, did her job, and left."

When the program's three young stars made their exits following *Diff'rent Strokes*' 1986 cancellation by ABC, they had no way of knowing that a living tabloid hell awaited them. Dana Plato posed nude for *Playboy* in 1989 to pay off her mounting personal debt, then robbed a Las Vegas video store at gunpoint in 1991 after being turned down for a job cleaning toilets. Her career reached a nadir in 1997 with an appearance in a porno film entitled *Different Strokes: The Story of Jack and Jill . . . and Jill*. (Plato died of an accidental drug overdose in 1999.) Todd Bridges was arrested for cocaine possession and later for shooting an accused drug dealer in a crack house. (He was subsequently acquitted of the latter crime.) He later blamed his problems on a cocaine habit dating back to 1982.

Even Gary Coleman, the little pixie with the atrophied kidney, could not escape controversy. In 1989 he sued his real-life adoptive parents and his former business manager, claiming they had stolen more than \$1 million from him. Tabloid rumors began to circulate reporting that Coleman had legally changed his name to Andy Shane and asked a female housemate if he could suck her toes. In 1998, the tubby actor, now working as a mall security guard, was himself sued by a Los Angeles bus driver who alleged that he had assaulted her after she asked him for an autograph.

"The world don't move to the beat of just one drum," went the theme to *Diff'rent Strokes*, the television show. "What might be right for you, may not be right for some." The program's troubled stars seem to have been following a rhythm all their own in their personal lives as well.

Dilbert

Dilbert's subject matter "strikes a nerve," as *Newsweek*'s cover story shouted in August of 1996, because it "portrays the bedrock truth of the American workplace, at least in the white-collar caverns where clerks, engineers, marketers, and salespeople dwell." This comic strip presents aspects of the corporate culture that veterans of the cubicle easily identify with: company monitoring of employee e-mail; management double talk; carpal tunnel syndrome; endless and pointless meetings; inane team-building exercises; and lower back pains resulting from excessive hours in front of the computer screen. Since his initial appearance in the early 1990s as the brain-child of

MBA-trained former Pacific Bell software engineer Scott Adams, Dilbert, a nerdy engineer and the strip's main character, has become a sort of corporate everyman.

The strip centers around an anonymous company where Dilbert is employed in an unnamed department. With co-workers, he struggles to meet deadlines, withstand management trends, and endure other indignities. Each of the strip's main characters is described in Adams' 1997 retrospective *Seven Years of Highly Defective People*, and was inspired and shaped by bits and pieces of Adams's own experience at Pacific Bell. Much of the subject matter is supplemented by "war stories" taken directly from reader e-mail and visitors to the "Dilbert Zone," Adams' web site. Each character, therefore, embodies some facet of actual corporate reality, which is probably why readers familiar with the environment identify with the strip's material so readily.

The more significant of Dilbert's co-workers are Wally, a fellow engineer and "thoroughly cynical employee who has no sense of company loyalty and feels no need to mask his poor performance or his total lack of respect," and Alice, a no-nonsense go-getter known for her "pink suit, her fluffy hair, her coffee obsession, her technical proficiency, and her take-no-crap attitude." Other characters include the "generic guy" Ted, whose manic work habits go unnoticed by the company bigwigs, and Tina, the technical writer who resents the engineers for their failure to appreciate her talents.

This motley cast struggles to withstand the whimsical machinations and inane directives of Dilbert's dog, the annoying know-it-all Dogbert; his cat, the head of the Evil Human Resources, Catbert; the troglodytes of the Accounting Department; the Teflon-coated PR types in marketing who have no clue about what engineers do; and ultimately, the "Pointy-Haired Boss," whose coif reflects his ultimately demonic stature as a figure of management inanity and cluelessness. Together, these characters represent the worst face of corporate culture, and are frequently seen drafting dehumanizing policies, issuing obscure directives, arbitrarily demonstrating their authority, and generally making miserable the lives of the employees who nonetheless "see through" their motives.

The reality of Dilbert's world isn't too different from that of his audience of real-life counterparts who identify with his struggle to maintain his sanity. In the mid 1990s, *Dilbert* became a hot topic for discussion among management strategists and human resource officers, and a voice of late-capitalist corporate worker cynicism. Management Consultant Tom Brown notes that Adams' strip "take(s) virtually every HR issue of the past 20 years and catapults it to the top of many management agendas via trenchant cartoons and scathing essays in books. . . . *Dilbert* is about human rights, human purpose, and human potential. It's what the human resources profession is about, or ought to be, as well." Indeed, recent years have seen Adams' comic lampoons of corporate America achieve their status as mandatory reading for those in the management and human resource professions.

Along with his stature as an embodiment of worker frustration, Dilbert has also become a prosperous commodity as a merchandising icon. In the late 1990s, the nerdy engineer's visage could be found on everything from ties to mouse pads to coffee mugs, and his website was both the bane and the boon to other corporations, some of whom advertised on it while others blocked employee access to it. An *Economist* article from April 1997 observed that "There are Dilbert Dolls, Dilbert calendars and ties, a \$20m contract for another five Dilbert books, plus plans for Dilbert-based television programmes and computer software. There is even talk of a Dilbertland theme

park, complete with boss-shooting galleries. Mr. Adams only real worry is over-exposure—and, as he happily points out, ‘you can’t get to over-exposure without going through filthy rich first.’” The prediction of a television show came true in 1999, when the pilot for *Dilbert* was aired on the Fox network.

Given its run of success, the strip has inevitably prompted criticism from those who see it as yet another management tool. Its critics argue that it nothing less than a statement that champions the virtues of efficacy, good sense, and common sense by assailing foolish bureaucracy, reductive company policy, and faddish but ineffective management schemes. In his 1997 critique *The Trouble with Dilbert: How Corporate Culture Gets the Last Laugh*, author Norman Solomon contends that with *Dilbert*, “corporate America is not selling us the rope to hang it with; corporate America is selling us the illusions to exculpate it with. To mistake pop-culture naughtiness for opposition to the corporate system is an exercise in projection—and delusion.” Others have also found it easy to point to the strip’s popularity and overexposure as signs that it represents not a paean to disenfranchised workers, but just another capitalist success story.

Within its series of strategies for avoiding work while still looking busy, *Dilbert*’s ultimate message is that the greater the technological and organizational sophistication in the workplace, the more opportunities exist to create the false image of actual productivity, as well as the documentation to validate it as production. Whether it be regarded as a subversive attack on the corporation or merely as a “steam valve” to give release to the corporate worker’s frustrations, *Dilbert* continues to provide an important voice in the dialogue between the corporation and those at the lower levels who make it run.

Dillard, Annie (1945—)

One of the best-known writers of the twentieth century and winner of the 1975 Pulitzer Prize for general nonfiction, Annie

Dillard developed a following unique among writers. Her readers embrace her mixture of literary, philosophical, theological, and scientific themes regardless of the genre in which they appear, from the essays of *Pilgrim at Tinker Creek*, *Holy the Firm*, and *Teaching a Stone to Talk*, to the poetry of *Tickets for a Prayer Wheel* and *Mornings Like This*, and from the autobiographical prose of *Encounters with Chinese Writers*, *An American Childhood*, and *The Writing Life* to the literary criticism of *Living by Fiction* and the fiction of *The Living*. In part, Dillard achieved her popularity because of her ongoing interest in spiritual experience, interdisciplinary knowledge, and aesthetic creation, all topics that mirror the concerns of a growing segment of the reading public.

Born Meta Ann Doak in Pittsburgh, Pennsylvania, on April 30, 1945, Dillard was the oldest of Frank and Pam Doak’s three daughters. She spent her youth reading books, studying the natural world, and “getting religion,” experiences she recounts in detail in *An American Childhood*. After graduating from the Ellis School in Pittsburgh, she attended Hollins College in Roanoke, Virginia, where she received her B.A. (1967) and M.A. (1968) in English literature. While there, she met her first husband—her writing teacher, Richard Dillard—whom she married in 1965 and whose name she retained after the marriage ended.

Her first book, the slim volume of poetry titled *Tickets for a Prayer Wheel* (1974), was well received, but its publication was overshadowed by *Pilgrim at Tinker Creek* (1974), released only a few months later. Described by Dillard, quoting Thoreau, as “a meteorological journal of the mind,” the book recounts the year (1972) she spent walking, reading, and journal-keeping while living on Tinker Creek in the Blue Ridge Mountains of Virginia. After advance chapters were published in *Harper’s* and the *Atlantic*, the book was widely and enthusiastically reviewed, launching its 29-year-old author into instant literary celebrity.

Disturbed by the attention she was receiving, especially after winning the Pulitzer Prize, Dillard accepted a position as scholar-in-residence at Western Washington University in 1975 and moved to an isolated island in Puget Sound. There she wrote *Holy the Firm* (1977), a short but powerful prose narrative about the relationship between beauty and violence, a topic she had previously begun to explore in *Pilgrim*. Inspired by a plane crash in which a neighbor’s child was badly burned, the book relates Dillard’s process of coming to terms with the seeming contradiction between the existence of human suffering and the idea of a loving and all-powerful God.

In 1979, Dillard took up a new post as visiting professor of creative writing at Wesleyan University in Middletown, Connecticut, where she subsequently remained as writer-in-residence. Having divorced her first husband in 1975, Dillard married anthropologist Gary Clevidence in 1980. In 1982 she published two books, *Teaching a Stone to Talk: Expeditions and Encounters* and *Living by Fiction*. The first, a collection of essays, received excellent reviews; the second, a work of literary criticism, garnered more muted praise. She followed these two works in 1984 with *Encounters with Chinese Writers*, an account based in part on her visit to China in 1982 as a member of a cultural delegation.

In 1988, having published *An American Childhood* (1987), Dillard divorced Gary Clevidence and married Robert D. Richardson, Jr., whom she had met after reading his biography, *Henry Thoreau: A Life of the Mind* (1986). At this time she also worked on *The Writing Life* (1989), a description of the writing process and the creative energies it entails.

Dillard published her first novel, *The Living*, in 1992. Expanding a short story of the same name that she had written for *Harper's* in 1978, the story spans 42 years, from 1855 to 1897, and explores the frontier history of Whatcom, a town on Bellingham Bay in Washington State. Although the tale is related by an omniscient narrator, *The Living* nonetheless reflects Dillard's continuing concerns throughout her books with the arbitrariness of death, the insignificance of individuals in an indifferent universe, and the necessity of faith despite the knowledge of these uncomfortable truths.

The popularity of Dillard's writing during the late 1980s and 1990s can be judged by the frequency with which her work was reprinted during these decades. As well as excerpts included in multi-author collections, the four-volume *Annie Dillard Library* appeared in 1989, followed by *Three by Annie Dillard* (1990), and *The Annie Dillard Reader* (1994). During these years, she also served as the co-editor of two volumes of prose—*The Best American Essays* (1988), with Robert Atwan, and *Modern American Memoirs* (1995), with Cort Conley—and crafted *Mornings Like This: Found Poems* (1995), a collection of excerpts from other writers' prose, which she reformatted into verse.

Though a minor work, *Mornings Like This* could be said to encapsulate all of the qualities that have made Dillard's work consistently popular among readers: clever and playful, it displays her wide learning and eclectic tastes, her interest in the intersection of nature and science with history and art, and her desire to create beauty and unity out of the lost and neglected fragments of human experience.

—Daniel J. Philippon

Diller, Phyllis (1917—)

Comedienne Phyllis Diller occupies a unique position in the annals of American stand-up comedy as the first woman to make her name in that previously all-male preserve. Remarkably, her show business career began in 1955 when she was 37 years old. In four decades, Diller progressed from being the only touring female comedienne within the United States to one of the world's most successful and best-loved comics, and the acknowledged forerunner to the many female comics who have followed her.

Diller was born Phyllis Ada Driver in Lima, Ohio. She studied classical piano at the Sherwood Conservatory of Music and received a

music education degree from Bufferton College, but shelved her music career to marry Sherwood Diller and start a family. It wasn't until almost fifteen years and five children later, in California, when desperation rather than dormant ambition drove her to reconsider a stage career.

As a housewife and mother, Diller's life began to fall apart in 1953. Her husband had lost his job, bills were past due, and it began to look as if the family would lose their house. Gathering her courage, Diller found herself a job writing for a local radio station; two years later, turning courage into chutzpah, she quit that job to pursue a career as a stand-up comic. She auditioned at San Francisco's Purple Onion, and, though female comedians were extremely rare, she was engaged for a two-week stint. Her instant popularity with audiences turned the two weeks into an 87-week run. In 1959 she appeared before the nation on Jack Paar's *Tonight Show*, and in 1960 she performed at Carnegie Hall, not at the piano, but on it—vamping and slithering, and singing satirical songs interspersed with rapid-fire comic patter.

Calling her comedy "tragedy revisited," Diller based her act on her experiences as a housewife. Dressed in outrageous costumes, with wildly disheveled bleached-blond hair and a raucous maniacal laugh, she lampooned housework, her neighbors, a fictitious husband she called "Fang," and, most of all, herself. She has always written her own material, and the jokes come fast and furious, sometimes as many as twelve punch lines a minute. She takes pride in the fact that her jokes are "clean," though she has been criticized by feminists for her self-deprecating put-downs of her own looks and abilities. Though "Fang" is a creation of her act and, she claims, not based on either of her two husbands, the family of her first husband once brought an unsuccessful lawsuit against her for denigrating him in her routine.

Diller continued to perform her comedy act in arenas as diverse as Las Vegas supper clubs and Madison Square Garden. She did, however, return to her classical music roots from 1971 to 1982, when she played as a soloist with over a hundred different symphony orchestras around the country, using the "virtuoso" name, Illya Dillya. She has also performed in stage shows and many films. Her one dramatic role was a surprising tour de force as the wife of Zero in the film version of Elmer Rice's expressionistic play, *The Adding Machine* (1969); while a high point of her stage career was on Broadway in 1970 where, for several months, she played Dolly Levi in *Hello Dolly!*

Though it was the comedic projection of herself as a frumpy grotesque that won Diller her fame and fortune, her image covered an intense insecurity about her looks. Determined to change the things she did not like about her face and body, she became notorious for her relationship with cosmetic surgery. Blatantly outspoken, she has always admitted to having herself "fixed," saying, "I used to be young and ugly. Now I'm old and gorgeous." Her very public admission of her many procedures—facelifts, nose job, tummy tuck, cheek implants, and straightened teeth among them—have caused plastic surgeons to hail her as a boon to their business. She has written humor books, and made many best-selling comedy albums. A gourmet chef, she turned entrepreneur to market her own chili and has sold her own lines of cosmetics and jewelry. There is, however, another side to Phyllis Diller. Like many celebrities, she has used her fame and wealth to support humanitarian causes and has been honored accordingly.

—Tina Gianoulis

Dillinger, John (1903-1934)

During the Great Depression, many Americans, nearly helpless against forces they didn't understand, made heroes of outlaws who took what they wanted at gunpoint and stole from the institutions that they felt were oppressing them. Of all these lurid desperadoes, John Dillinger came to evoke this Gangster Era, and stirred mass emotion to a degree rarely seen in this country.

In truth, Dillinger was not the leader of a crime syndicate but was merely a brutal thief and a cold-blooded murderer. From September, 1933, until July, 1934, he and his violent gang terrorized the Midwest, killing 10 men, wounding seven others, robbing banks and police arsenals, and staging three memorable jail breaks, killing a sheriff

John Dillinger

during one and wounding two guards in another. He became something of a folk hero for successfully thwarting his pursuers for a time.

John Herbert Dillinger was born on June 22, 1903, in the middle-class Oak Hill section of Indianapolis. His father, a hardworking grocer, raised him in an atmosphere of disciplinary extremes, harsh and repressive on some occasions, but generous and permissive on others. John's mother died when he was three, and when his father remarried six years later, John resented his stepmother.

In adolescence, Dillinger was frequently in trouble. Finally, he quit school and got a job in a machine shop in Indianapolis. Although intelligent and a good worker, he soon became bored and often stayed out all night. His father, worried that the temptations of the city were corrupting his teenaged son, sold his property in Indianapolis and moved his family to a farm near Mooresville, Indiana. However, John reacted no better to rural life than he had to that in the city and soon began to run wild again.

After being arrested for auto theft, Dillinger was given the opportunity to enlist in the Navy. There he soon got into more trouble and deserted his ship when it docked in Boston. Returning to Mooresville, he married 16-year-old Beryl Hovius in 1924 and moved to Indianapolis. Dillinger, finding no work in the city, joined the town pool shark, Ed Singleton, in his quest for easy money. They tried to rob a Mooresville grocer, but were quickly apprehended. Singleton pleaded not guilty, stood trial, and was sentenced to two years. Dillinger, following his father's advice, confessed, was convicted of assault and battery with intent to rob and conspiracy to commit a felony, and received joint sentences of 2-to-14 years and 10-to-20 years in the Indiana State Prison. Stunned by the harsh sentence, Dillinger became a tortured, bitter man in prison.

Dillinger's notoriety grew when he made a successful prison break. On May 10, 1933, he was paroled from prison after serving 8-1/2 years of his sentence, and almost immediately Dillinger robbed a bank in Bluffton, Ohio. Dayton police arrested him on September 22, and he was lodged in the county jail in Lima, Ohio, to await trial. In frisking Dillinger, the Lima police found a document outlining a plan for a prison break, but the prisoner denied knowledge of any plan. Four days later, using the same plans, eight of Dillinger's friends escaped from the Indiana State Prison, using shotguns and rifles that had been smuggled into their cells and shooting two guards.

On October 12, three of the escaped prisoners and a parolee from the same prison, Harry Pierpont, Russell Clark, Charles Makley, and Harry Copeland, showed up at the Lima jail where Dillinger was incarcerated. They told the sheriff that they had come to return Dillinger to the Indiana State Prison for violation of his parole. When the sheriff asked to see their credentials, one of the men pulled a gun, shot the sheriff, and beat him into unconsciousness. Then, taking the keys to the jail, the bandits freed Dillinger, locked the sheriff's wife and a deputy in a cell, and, leaving the sheriff to die on the floor, made their getaway.

Dillinger and his gang pulled several bank robberies and also plundered the police arsenals at Auburn, Indiana, and Peru, Indiana, stealing several machine guns, rifles, and revolvers, a quantity of ammunition, and several bulletproof vests. On December 14, John Hamilton, a Dillinger gang member, shot and killed a police detective in Chicago. A month later, the Dillinger gang killed a police officer during the robbery of the First National Bank of East Chicago, Indiana. Then they made their way to Florida and, subsequently, to Tucson, Arizona. There on January 23, 1934, a fire broke out in the hotel where Clark and Makley were hiding under assumed names. Firemen recognized the men from their photographs, and local police

arrested them, as well as Dillinger and Harry Pierpont. They also seized three Thompson submachine guns, two Winchester rifles mounted as machine guns, five bulletproof vests, and more than \$25,000 in cash, part of it from the East Chicago robbery.

Dillinger was sequestered at the county jail in Crown Point, Indiana, to await trial for the murder of the East Chicago police officer. Authorities boasted that the jail was "escape proof," but on March 3, 1934, Dillinger cowed the guards with what he claimed later was a wooden gun he had whittled. He forced them to open the door to his cell, then grabbed two machine guns, locked up the guards and several trustees, and fled in the sheriff's car, hightailing it to nearby Illinois. The stunt earned headlines around the world and put Dillinger as a top priority on FBI director J. Edgar Hoover's hit list.

By stealing the sheriff's car and driving it across a state line, Dillinger had violated the National Motor Vehicle Theft Act, which made it a Federal offense to transport a stolen motor vehicle across a state line. A Federal complaint was sworn charging Dillinger with the theft and interstate transportation of the sheriff's car, which actively involved the FBI in the nationwide search for Dillinger.

Meanwhile, Pierpont, Makley, and Clark were returned to Ohio, convicted of the murder of the Lima sheriff, with Pierpont and Makley being sentenced to death, and Clark to life imprisonment. But in an escape attempt, Makley was killed and Pierpont was wounded. A month later, Pierpont had recovered sufficiently to be executed.

Hoover protégé Melvin Purvis was put in charge of capturing Dillinger, and in late April, "Nervous" Purvis received a tip-off that the bandit was holed up at Little Bohemia, a lakeside resort in Wisconsin. Purvis and his team blundered onto the resort grounds and blazed away indiscriminately at what proved to be innocent customers leaving a restaurant.

While an agent was telephoning about the debacle, the operator broke in to tell him there was trouble at another cottage about two miles away. FBI Special Agent W. Carter Baum, another FBI agent, and a constable went there and found a parked car which the constable recognized as belonging to a local resident. They pulled up and identified themselves. Inside the other car, "Baby Face" Nelson, a member of Dillinger's gang, was holding three local residents at gunpoint. He turned, leveled a revolver at the lawmen's car, and ordered them to step out. But without waiting for them to comply, Nelson opened fire. Baum was killed, and the constable and the other agent were severely wounded. Nelson jumped into the Ford they had been using and fled.

For the second time in three weeks, Dillinger had made the Feds look like fools. Hoover appointed a trusted Washington inspector, Sam Cowley, to take thirty handpicked men and form a special Dillinger squad in Chicago, though Purvis remained Agent in Charge. Dillinger was rated Public Enemy Number One and was featured on Wanted posters all over the United States. Eliminating him had become a public relations imperative, despite the lack of proof that he personally had ever killed anyone.

Late in the afternoon of Saturday, July 21, 1934, the madam of a brothel in Gary, Indiana, contacted one of the police officers with information. This woman called herself Anna Sage; however, her real name was Ana Cumpanas, and she had entered the United States from her native Rumania in 1914. Because of the nature of her profession, she was considered an undesirable alien by the Immigration and Naturalization Service, and deportation proceedings had started. Anna was willing to sell the FBI some information about Dillinger for a cash reward, plus the FBI's help in preventing her deportation.

At a meeting with Anna, Cowley and Purvis were cautious. They promised her the reward if her information led to Dillinger's capture, but said all they could do was call her cooperation to the attention of the Department of Labor, which at that time handled deportation matters. Satisfied, Anna told the agents that a girl friend of hers, Polly Hamilton, had visited her establishment with Dillinger. Anna had recognized Dillinger from a newspaper photograph.

Anna told the agents that she, Polly Hamilton, and Dillinger probably would be going to the movies the following evening at either the Biograph or the Marbro Theaters. She said that she would notify them when the theater was chosen. She also said that she would wear a red dress so that they could identify her.

On Sunday, July 22, Anna Sage called to confirm the plans, but she still did not know which theater they would attend. Therefore, agents and policemen were sent to both theaters. At 8:30 p.m., Anna Sage, John Dillinger, and Polly Hamilton strolled into the Biograph Theater to see Clark Gable in *Manhattan Melodrama*. Purvis phoned Cowley, who shifted the other men from the Marbro to the Biograph.

Cowley also phoned Hoover for instructions, who cautioned them to wait outside rather than risk a shooting match inside the crowded theater. Each man was instructed not to unnecessarily endanger himself and was told that if Dillinger offered any resistance, it would be each man for himself.

At 10:30 p.m., Dillinger, with his two female companions on either side, walked out of the theater and turned to his left. As they walked past the doorway in which Purvis was standing, Purvis lit a cigar as a signal for the other men to close in. Dillinger quickly realized what was happening and acted by instinct. He grabbed a pistol from his right trouser pocket as he ran toward the alley. Five shots were fired from the guns of three FBI agents. Three of the shots hit Dillinger and he fell face down on the pavement. At 10:50 p.m. on July 22, 1934, John Dillinger was pronounced dead in a little room in the Alexian Brothers Hospital.

The agents who fired at Dillinger were Charles B. Winstead, Clarence O. Hurt, and Herman E. Hollis. Each man was commended by J. Edgar Hoover for fearlessness and courageous action. None of them ever said who actually killed Dillinger. The events of that sultry July night in Chicago marked the beginning of the end of the Gangster Era. Eventually, 27 persons were convicted in Federal courts on charges of harboring and aiding and abetting John Dillinger and his cronies during their reign of terror. "Baby Face" Nelson was fatally wounded on November 27, 1934, in a gun battle with FBI agents in which Special Agents Cowley and Hollis also were killed.

Dillinger was buried in Crown Point Cemetery in Indianapolis, Indiana. It has long been rumored that his supposedly generously endowed member was kept in storage at the Smithsonian. In his 1970 book *The Dillinger Dossier*, Jay Robert Nash, citing flaws in the autopsy evidence and detailed testimony, even offers the thesis that Dillinger did not die in Chicago at all, but rather an underworld fall guy sent to take his place.

In 1945, former bootleggers turned filmmakers, the King Brothers, Frank and Maurice, produced a low budget, largely non-factual biography of Dillinger called *Dillinger*, which starred Lawrence Tierney and was scripted by famous front Philip Yordan. It surprised the film industry by turning a tidy profit. A third of the film consisted of stock footage lifted from other classic gangster films, from Howard Hawks' *Scarface* to Fritz Lang's *You Only Live Once*. The film's non-stop action set a pattern for future gangster epics from the 1960s onward, but was unique for its time.

Writer-director John Milius made his film debut with another biography of Dillinger called simply *Dillinger* (1973) and starring Warren Oates, though it too owes little to the actual facts of Dillinger's life. Dillinger's noted demise also inspired Lewis Teague's film *The Lady in Red* (1979; also known as *Guns, Sin and Bathtub Gin*), scripted by John Sayles with Robert Conrad playing the famed bank robber. Other treatments of Dillinger on film include *Young Dillinger* (1965), *Dillinger and Capone* (1995), and a documentary, *Appointment with Death: The Last Days of John Dillinger* (1971).

Dillinger's legacy continued to be enshrined in song and story. Hoover put a plaster cast of the gangster's face on display at FBI headquarters and for years Hoover's reception room contained a .38 automatic that was purported to be Dillinger's gun, even though the particular make of Colt did not leave the factory until December 1934, five months after the Dillinger shooting. Dillinger had been inflated from a simple bank robber into a legend, and remains one to this day.

DiMaggio, Joe (1914-1999)

Joe DiMaggio is one of the few athletes who truly transcend their sport. His Hall of Fame career, leading the Yankees to nine World Series in 13 years, bridged two great eras of baseball—the post-war days of Babe Ruth and the post-integration days of Jackie Robinson. But he will always be best known as “Joltin’ Joe,” whose record-breaking 56 game hitting streak in 1941 captivated the country. DiMaggio's fame only grew after retirement, with his brief, but highly publicized marriage to movie star Marilyn Monroe, and frequent public appearances. The cool, classy ballplayer was immortalized in music and literature, as an enduring symbol of decency and order during a confusing era. In the words of the *New York Times* on the day of his retirement, DiMaggio had “something that no baseball averages can measure.”

He was born Joseph Paul DiMaggio in San Francisco in 1914, one of nine children; his parents were part of a wave of Sicilian immigrants to emigrate to the United States at the turn of the twentieth century. The shy, unsociable DiMaggio was expected to get an education, but his only true interest was baseball, so he dropped out of school at age 16 . . . a decision he would later regret. The story of DiMaggio's discovery has become baseball legend; a member of the San Francisco Seals organization spotted the thin 17 year old peaking through a hole in the outfield fence, hoping to find his brother Vince, a Seals player. The Seals offered the talented sand-lot player an

opportunity to play, and he stayed for four years, becoming a hero in the Italian community in San Francisco. The year 1933 proved to be a harbinger of things to come; DiMaggio chalked up a minor league record with his 61 game hitting streak.

At the end of the 1935 season, the New York Yankees signed DiMaggio, hoping he would lead the team into the post-Ruth era. Despite the pressures of following Ruth, DiMaggio had a fabulous rookie season in 1936, hitting .323 with 29 home runs, 125 RBIs, and a league leading 15 triples. Writers across the country marvelled at his exceptional clutch hitting, skilled base running, and graceful defensive play. The shy, conservative DiMaggio, a sharp contrast from the wild gregarious Ruth, became an instant celebrity. He led the Yankees to four straight World Series titles from 1936 to 1939 and constantly appeared among the leaders in batting, home runs, and RBIs. He became the most popular player in baseball, although he angered fans in 1938, sitting out the beginning of the season due to a contract dispute, a theme prevalent throughout his career. Despite the new celebrity status, DiMaggio continued to live a very normal life, returning to San Francisco to live with his family during the winter. At the end of the 1939 season, DiMaggio married Dorothy Arnold, and two years later, they had a son, Joe Jr.

All of the fanfare could not prepare DiMaggio for the 1941 season. DiMaggio collected a hit in every game from May 15th to July 14th, an astonishing stretch of 56 games. Never before did an individual sports record receive so much public attention; radio stations across the country regularly interrupted broadcasts to give updates on “the streak.” It seemed to come at a perfect time for a nation on the brink of war. Songwriter Alan Courtney wrote “Joe, Joe, DiMaggio, we want you on our side,” as if his hitting streak could protect America from the turmoil overseas. DiMaggio himself joined the Air Force at the end of the 1942 season, while in the prime of his baseball career. Like many ballplayers, he saw no combat, spending the majority of his service time entertaining the troops in exhibition games. But the distance from his family was frustrating, and in 1944 Dorothy DiMaggio filed for divorce.

When DiMaggio returned to baseball in 1946, his finest years were clearly in the past. He did, however, add to his fame by constantly playing through injury. In 1949, he made a remarkable comeback from a leg injury and “took his place in that select circle of athletes, like Babe Ruth and Jack Dempsey, who are not only adored but beloved,” according to *Life Magazine*. DiMaggio continued to show flashes of his former brilliance, but lost consistency and fought with Yankee manager Casey Stengel. At the end of the 1951 season, DiMaggio retired having amassed a .325 lifetime average and 361 career home runs in 13 seasons. That same year, he was immortalized in the Ernest Hemingway classic *The Old Man and the Sea*, the tale of an tired, aging fisherman, stuck at seas for days, and turning to “the Great DiMaggio” for solace.

Unlike many former players, DiMaggio had little trouble adjusting to life without baseball. He spent his first year of retirement working as a broadcaster for the Yankees, and went on to work in public relations with a variety of companies and charitable foundations. DiMaggio reentered the public consciousness in 1952 when he met a young Marilyn Monroe. The relationship between these two very different celebrities—the quiet, conservative former ballplayer and the beautiful but troubled movie star—was instant front page news. They married on January 14, 1954, but constantly fought over DiMaggio's traditional views of marriage and views of the Hollywood life, and divorced just nine months later. DiMaggio remained a close, dependable friend to Monroe, right until her death in 1962. He

Joe DiMaggio

made all the funeral arrangements, excluding the Hollywood crowd in the hope it would restore some dignity to her tragically short life.

In 1967, DiMaggio was introduced to a new generation of Americans by Paul Simon and Art Garfunkel's "Mrs. Robinson," a sad lament to lost innocence from the film *The Graduate*. Simon and Garfunkel asked "Where have you gone, Joe DiMaggio?," looking for a hero to guide them through troubled times. More than 25 years after the magical summer of 1941, Joltin' Joe became a symbol of fundamental good to a confused generation. His image continued to grow through the 1970s and 1980s, through his charitable work and public appearances. DiMaggio died on March 8, 1999, after a bout with cancer.

Dime Novels

A popular form of literary entertainment in the late nineteenth and early twentieth centuries, dime novels were works of sensational fiction published in paper-covered booklets, issued at regular intervals, and priced at five to ten cents. Profitable mainstays of the

American publishing industry for many years, dime novels gradually waned as pulp magazine consumption increased, and by 1915, motion pictures had replaced dime novels as inexpensive forms of entertainment. Since that time, dime novels have become significant resources for examining the development of American popular culture in that they exemplify early printing methods, serve as rudimentary forms of genre fiction, and reflect aspects of the social history of the United States.

Published in four basic formats between 1860 and 1915, dime novels usually possessed pictorial covers with black-and-white or colored illustrations, ranged in size from four by six inches to eight by 12 inches, and varied in length from 32 to 250 pages. Initially produced for an adult market, early versions detailed life on the American frontier. Later publications, however, featured detective mysteries, adventure stories, and science fiction tales and were primarily read by juveniles.

The idea of producing cheap paper-covered novels in a continuous series was conceived by Irwin P. Beadle. In 1860, Beadle, along with his older brother, Erastus, and Robert Adams, established the publishing firm of Beadle & Adams in New York City and launched *Malaeska, the Indian Wife of the White Hunter* by Mrs. Ann S. Stephens, as the first entry in a series entitled *Beadle's Dime Novels*. Achieving success with the publication of this story and others, Beadle & Adams were for a time the principal publishers of dime novels until competitors George P. Munro, his brother Norman L. Munro, Frank Tousey, and Street & Smith began to publish dime novels as well.

Dime novel authors had strict guidelines to follow—stories had to be exciting, entertaining, and moral. Each of the major publishers employed regulars who wrote for a particular series. In some instances, authors published stories for several firms. Prolific contributors to *Beadle's Dime Novels* (1860-1874) included Mrs. Ann S. Stephens, Mrs. Metta Victor, Edward S. Ellis, Edward L. Wheeler, Philip S. Warne, and Ned Buntline. George P. Munro's *Old Sleuth Library* (1885-1905) highlighted the detective adventures of Old Sleuth, a pseudonym for Harlan Page Halsey, and other authors. His brother, Norman, published works by W. I. James in the *Old Cap Collier Library* (1883-1899), another dime-novel detective series. Frank Tousey's small group of authors wrote under so many pseudonyms that the amount of contributors to the *Wide Awake Library* (1878-1898) appeared greater than it actually was. Street & Smith, as the last major publishing firm to produce dime novels, featured authors Horatio Alger, Jr., Ned Buntline, Gilbert Patten, and Colonel Prentiss Ingraham, among others, in several series between 1883 and 1899. When dime-novel production ceased, most of the once prolific authors faded into obscurity.

Often, characters appearing in dime-novel series were better known than their authors were. Ned Buntline's famous western hero, Buffalo Bill, based on United States scout and performer William Frederick Cody, appeared in numerous publications by Beadle & Adams, Street & Smith, and Frank Tousey. Amateur detective Nick Carter proved to be so popular after his first appearance in *The Old Detective's Pupil* (1886), that Street & Smith featured his adventures in three different series between 1891 and 1915, *The Nick Carter Library*, *The New Nick Carter Weekly*, and *Nick Carter Stories*. Similarly, the exploits of Deadwood Dick, Kit Carson, Jr., Jesse James, Old Sleuth, Young Wild West, Frank Reade, Jr., Tiger Dick, and Frank Merriwell appeared in more than one dime novel.

Covering a wide variety of subjects, dime novels promoted traditional American values of patriotism, rugged individualism, and moral behavior. Many of the early dime novel stories focused on

historical events such as the Revolutionary War, the War of 1812, and conflicts with Native Americans. Others were set in gold mining camps or towns within the expanding western frontier, and featured gunfighters, villains, and damsels in distress. Reflecting the urbanization of cities, the industrial revolution, and increased transportation modes, subsequent dime novel subjects included circuses, railroad workers, firefighters, sports, science fiction, fantasy, sea or polar explorations, and mysteries with detectives from every walk of life. Moving beyond the borders of America, a few detail adventures in distant places.

In the 1990s, few original dime novels exist outside of libraries and personal collections. Moreover, owing largely to their sheer numbers and past popular appeal, dime novels are seldom considered by literary scholars to be good examples of American literature. Their value as historical artifacts, however, is considerable.

Dime Stores/Woolworth's

Dime Stores, or five-and-dimes, maintained a central place in American life from before 1900 until after World War II. Woolworth's was the original and dominant dime-store chain. In the first half of the twentieth century, the main street of virtually every town and city in the United States featured a Woolworth's; it was the first place many people went to look for basic merchandise of all sorts. Woolworth's offered its customers a wide assortment of very affordable household items and the working class appreciated finding basic things at basic prices. The dime store's lunch counter was a common meeting place, its toys made it a favorite destination of children, and its endless locations meant it served as the neighborhood store for many. Although part of Woolworth's appeal was in its ubiquitous presence, local stores were also encouraged to remain local institutions. They varied widely from region to region and from city to town. Each filled a particular role and developed its own character.

In 1919, when F. W. Woolworth died, his chain of five-and-dimes consisted of 1,081 stores in the United States and Canada. At that time, department stores were all regional; Woolworth's was one of a very few nationwide chains. Department stores were also notably more lavish and expensive than dime stores. Millions of working people depended on Woolworth's and other five-and-dimes for many basic needs. As the nation's largest food-service retailer by the 1940s, Woolworth's maintained nearly a thousand inexpensive lunch counters across the United States before the first McDonald's opened.

Before Woolworth, shopping meant bartering. Merchandise was kept behind counters or on inaccessible shelves and customers had to ask clerks to show them an item. Fixed pricing had begun appearing in

An F. W. Woolworth Co. five and dime store.

a few places, notably Michigan, in the 1870s, but was sporadic and unorganized. Other merchants had set up five-cent counters from time to time for limited runs, but no one had worked hard to make it consistently profitable, and certainly no one had devoted an entire variety store to the same fixed price. Frank Woolworth was not a natural salesman or bargainer, but he held a strong Yankee work ethic and recognized and exploited a good idea. He assiduously sharpened his bargaining skills until he became known for them. They helped him negotiate endless deals with wholesalers which allowed Woolworth's to make a profit on items under 10¢.

He had opened his first "5¢ store" in Utica, New York, on February 22, 1879, with \$350 loaned him by his former employer. That first store barely turned a profit, but it spawned twenty more over the next ten years, twelve of which were partnerships and five of which failed within a few months. His fourth store, opened in Scranton, Pennsylvania, on November 6, 1880, was the first "5-&-10¢ store." Frank Woolworth never stopped opening or buying new stores: he ran twelve in 1890, fifty-four in 1900, two hundred thirty-eight in 1910, and three hundred nineteen by the December 1911 merger that created F. W. Woolworth & Co. Combined with his brother Charles's fifteen stores, his cousin Seymour Knox's ninety-eight, Fred Kirby's ninety-six, Earle Charlton's thirty-five, and William Moore's two, Woolworth became the first retail company to

operate stores in all forty-eight states. As he planned for the merger that created F. W. Woolworth & Co., Frank Woolworth also oversaw the construction of the Woolworth Building in Manhattan. The tallest building in the world at the time of its completion in 1913, Woolworth insisted that it surpass the Metropolitan Life Building, which company had refused him a policy when he was laying the foundation for his empire.

Frank Woolworth said that he aimed "to open a store in every civilized town throughout the world." He expanded into England in 1909, then Germany, Canada, South Africa, and elsewhere. Woolworth's critics complained that Woolworth's was creating a monopoly and Congressman John J. Cochran championed legislation that would have taxed Woolworth's into collapse. Many people were dismayed by "the chain store menace" of Woolworth's in the 1930s, just as many recoiled when Wal-Mart built stores in their communities in the 1980s and 1990s. In 1935 Representative Cochran led a congressional investigation into the "super-lobby" of chain store interests. Woolworth's and drug-store chain A&P were the primary targets. Fortunately for the chains, a 1939 bill that would have broken them up died in committee. Woolworth's did indeed try to drive out or buy out much of its competition. The company knew that many of the towns and districts where they opened could not support more than one dime store.

Woolworth's remained literally a dime store for over fifty years, until 1932, when the top price was raised to 20¢. In 1935 the limited price policy ended as the company expanded into higher-priced merchandise such as furniture and appliances. Despite fixed, low prices, Woolworth paid better wages than most of his competitors. He introduced minimum wages for all positions, paid vacations, and Christmas bonuses. These things were far from standard early in the twentieth century. Woolworth's was also a major employer of women, although by the 1950s many were protesting their lack of promotion in the company.

Woolworth's lunch counters will be long remembered as the site of civil-rights sit-ins in 1960. The first one began at the Woolworth's in Greenville, North Carolina, on February 1, 1960. Soon protesters throughout the South were occupying lunch counters and calling for a nationwide boycott against Woolworth's. The company's earnings dropped 8.9 percent in March. Many cities integrated their restaurants after a few weeks, but Greenville endured sit-ins and demonstrations until July 25.

Woolworth's perfectly filled a key place in American culture in the first half of the twentieth century, but as the culture changed after World War II, Woolworth's importance waned. As other chains emulated Woolworth's low-cost approach, it became little more than another department store. The 2,850 Woolworth's stores of the early 1960s sold enormous quantities of merchandise, but held onto a very thin profit margin.

In the postwar era, Woolworth's seemed stale and staid; its workforce aged with its clientele as it failed to change with the times. A succession of company-trained presidents found it impossible to halt the gradual decline. The last 400 Woolworth's in North America were closed in 1997 and 1998. Woolworth's survives in the United States as Venator, a corporation consisting primarily of Footlocker athletic shoe stores. In Great Britain and Australia Woolworth's remains a major variety and, in Australia, grocery chain.

Yet the legacy of the dime store thrives in the myriad discount department stores throughout the world, in the many "dollar stores" now occupying the neighborhood malls that have taken the place of downtown shopping districts, and in the merchandise purchasing, display, and pricing policies that have become standards of modern commerce.

—Paul Gaffney

Diners

Restaurants commonly referred to as "diners" have held a special place in American popular culture since the 1930s. Once sleek, futuristic icons of post-war optimism, they now capture our

attention as objects of nostalgia. As the precursor to fast-food restaurants, diners were one of the unique building types spawned by the burgeoning automobile society. Their very appearance—with streamlined, movement-implying shapes and bright neon lights—captured the spirit of the new mobile culture.

The diner evolved from horse-drawn night lunch wagons of the late nineteenth century. These convenient wagons served walk-up customers in downtown areas after restaurants had closed for the evening. The next generation of wagons featured indoor seating; by the turn of the century, many lunch wagons had become stationary. The early diners' forte was the quick, inexpensive meal—atmosphere was not important. The clientele consisted of night workers and late revelers. Sandwiches, hamburgers, pies, hot dogs, and breakfast fare were standard items. By the 1890s, Thomas H. Buckley was mass-producing lunch wagons and had placed them in at least 275 cities across the country. Early diners were also converted from railroad or trolley cars.

The diner that has become the object of popular affection dates to the 1930s and 1940s. The machine-influenced, Art Deco or Moderne design style that emphasized smooth curves, simplicity, and shiny surfaces was inherent in much product design of the time, but in the diner it was integrated into a total environment. Diners from the Golden Age were long and low in shape, with streamlined effects and clean surfaces, evoking a feeling of both futurism and movement. Formica, stainless steel, and Naugahyde were the most popular interior materials. Diners contained booths, but the highlight of the interior was a long, shiny counter. Meals were simple and inexpensive. The imagery of speed and progress fit perfectly with the rapidly developing mobile society, in which the automobile was reshaping the landscape and creating opportunities for new building.

In the 1950s, as more families began to eat outside the home, and the diner became more "respectable," diners expanded in size and menu. The 1960s marked a turning point for the diner, as the fast-food restaurant industry proliferated. Fast-food represented standardization, as opposed to the uniqueness of diners. You knew beforehand what was on the McDonald's menu, while every diner had a specialty and a different atmosphere. In response, many diners tried to emphasize their individuality by expanding their menus and adopting more conservative imagery. Apart from their smaller size and the word "diner," many of these diners became difficult to distinguish from standard restaurants. Booth and table service came to predominate over the traditional counter. Colonial and Mediterranean architectural styles often replaced the Art Deco model familiar from past decades.

Beginning in the 1970s, diners began to make a comeback as nostalgic reminders of a more innocent time. They also became legitimate subjects of study by architectural and popular culture scholars. In 1978 the Cooper-Hewitt branch of the Smithsonian held an exhibit on architectural packaging which looked at four popular American building types: fast-food restaurants, diners, gasoline stations, and museum-village restorations. An article by Richard Oliver and Nancy Ferguson, the curators of the exhibit, appeared in *Architectural Record* for February 1978 and also as a reprint catalog. Also, Barry Levinson's 1982 movie *Diner* helped introduce the phenomenon to a new audience. In the late 1990s, diners were still being manufactured and patronized. Many older models have been restored. Diners are the subject of books and museum exhibitions. The Henry Ford Museum in Dearborn, Michigan, now includes a 1946 diner as part of its collection of twentieth-century cultural artifacts, in an exhibition entitled, "The Automobile in American Life." Diners have thus been recognized as unique cultural inventions which, like

An example of the diner, 1952.

the gas station and fast-food restaurant, were byproducts of the automobile revolution of the twentieth century.

Dionne Quintuplets (1934—)

Yvonne, Annette, Cécile, Émilie, and Marie Dionne are the first monozygotic—all from one fertilized ovum—quintuplets known to have survived to adulthood. They were nearly sextuplets, but the sixth fetus miscarried in the third month of pregnancy. Born to Oliva and Elzire Dionne, French-Canadian peasants, in their seven-room farmhouse near Callander, Ontario, the premature babies weighed a total of 13 pounds, 6 ounces. They owe their survival to the quick and intelligent care of the local general practitioner, Dr. Allan Roy Dafoe, who collected virtually every incubator in the province and kept the

tiny girls alive through his excellent scientific care. Nevertheless, the significance of the Dionne Quintuplets rests not in their place in medical history, but as examples of exploitation and publicity. Their birth and survival created a worldwide sensation, and their father collected a fortune by serving as their "manager," selling the right to photograph them, to have them appear in motion pictures, and to secure their "endorsement" of various products. They were made wards of the Canadian government in 1935, and for their first ten years were raised in a special nursery built for them out of public funds. After a protracted lawsuit, their parents recovered custody in 1944.

The birth of multiple children in the United States never garnered as much interest as that of the Dionne quintuplets. However, the subsequent birth of the Thompson sextuplets and the McCaughey septuplets in 1997 brought to light racial tensions in the United States. Unlike the worldwide attention given to the Dionne family, the birth of the first African-American sextuplets on May 8, 1997 came with little fanfare. Living in a two-bedroom apartment, the Thompson family struggled to make ends meet with the money Linden Thompson could make from his two jobs. Only after the much-publicized birth of the white McCaughey septuplets, seven months later that year, did corporations extend the same free products and aid to the Thompson sextuplets as well. Although not the riches given to the Dionne family, the lifetime of free diapers, college scholarships, and use of a mini-van relieved some of the stresses on the newly enlarged families.

The Dirty Dozen

Directed by Robert Aldrich, *The Dirty Dozen* tells the story of Major Reisman (Lee Marvin) and the twelve hardened convicts he selects to join him on a suicide mission behind German lines in 1944. *The Dirty Dozen* remains an interesting and popular film, as it is meticulously crafted, deftly edited, and features several future stars at the beginning of their careers (including Donald Sutherland, Charles Bronson, and Telly Savalas). Although released in 1967 at the height of the anti-Vietnam war movement, *The Dirty Dozen* was nevertheless a success, becoming one of the biggest box-office hits in MGM's history. War protesters readily accepted the film's depiction of officers as indiscriminate killers, while more militaristic moviegoers approved of the film's brutal combat scenes.

Disability

The presence of disability in popular culture has taken many forms; indeed, people with disabilities (PWDs) have appeared frequently across the pop-culture spectrum: movies, television, print media, dance, theater, music, and sports. Disability representations have never been in short supply, though many produced by the mainstream cultural industries remain questionable at best, hurtful and divisive at worst.

Images of disability have perhaps found their most frequent expression in movies, with the vast majority created from the perspective of able-bodied filmmakers and intended primarily for able-bodied audiences. The earliest silent movies, each only a few minutes long, tended to portray PWDs as comic figures given to pursuing others or being pursued themselves, as in *The Legless Runner* (1907), *The Invalid's Adventure* (1907), and *Don't Pull My Leg* (1908). As the medium matured, moviemakers borrowed heavily from such nineteenth-century literary fare as *Moby Dick*, *A Christmas Carol*, *Notre Dame de Paris* (*The Hunchback of Notre Dame*), *Treasure Island*, and *The Two Orphans*, to create more intricate narratives that

portrayed disabled people either as innocent victims or incarnations of evil. The films in this tradition included *Orphans of the Storm* (1921), *The Hunchback of Notre Dame* (1923, but many versions made since), *The Sea Beast* (1926), and numerous adaptations of *A Christmas Carol*. The 1930s saw a continuing interest in such stereotypical extremes—most notably in *Moby Dick* (1930), Charlie Chaplin's *City Lights* (1931), Todd Browning's famous gallery of grotesques, *Freaks* (1932), and a 1939 remake of *Hunchback*. Such images began fading during the World War II era in favor of relatively realistic and sensitive portraits of disabled veterans. *Pride of the Marines* (1945) and *Bright Victory* (1951) both dealt with blinded ex-servicemen; real-life veteran Harold Russell, whose service legacy was to lose his hands (replaced by metal hooks), played himself in *The Best Years of Our Lives* (1946), and Fred Zinnemann's *The Men* (1951), Marlon Brando's first film, dealt with paraplegics. These images, in turn, began giving way to famously larger-than-life civilians who "triumphed" over their disabilities: opera singer Marjorie Lawrence and Franklin D. Roosevelt, both polio victims, in *Interrupted Melody* (1955) and *Sunrise at Campobello* (1960) respectively, Helen Keller, deaf, dumb, and blind, in *The Miracle Worker* (1962). Stanley Kubrick's *Dr. Strangelove* (1964), however, mocked these latter types with its title character, and signaled their temporary demise.

With alarming regularity, Hollywood has continued churning out regressive disability movies such as *Hook* (1991), *The Fugitive* (1993), *Speed* (1994), and *Forrest Gump* (1994), reflecting the age-old practice of linking evil or innocence with disability, but an increasing number of films since the 1960s have offered positive images. Hollywood has often reserved the most resonant and poignant portrayals for disabled Vietnam veterans, as in *Coming Home* (1978), *Cutter's Way* (1981), and *Born on the Fourth of July* (1989). Other memorable, if not entirely progressive, films since the 1960s include *The Other Side of the Mountain* (1975), *The Elephant Man* (1980), *Children of a Lesser God* (1986), *Rain Man* (1988), and *Scent of a Woman* (1992), which range over a variety of afflictions and film styles.

Despite its relatively short history, the television industry has also demonstrated an interest in portraying the disabled experience, with a number of series presenting disabled characters in continuing roles. *Gunslinger's* mobility-impaired sidekick Chester Goode, played by Dennis Weaver for nine seasons (1955-1964) during the program's 20-year run, competes with Raymond Burr's wheelchair-dependent police detective on *Ironside* (1967-1975), as television's most popular disabled character, while James Franciscus played a blind insurance investigator on *Longstreet* (1971-1972). Taking a different approach, nuclear-powered prostheses and implants turned disabled figures Steve Austin (Lee Majors) and Jaime Sommers (Lindsay Wagner) into the title characters of *The Six Million Dollar Man* (1974-1978) and *The Bionic Woman* (1976-1978), respectively. Later, LeVar Burton played the blind chief engineer Lt. Geordi LaForge in *Star Trek: The Next Generation* (1987-1994) and a string of follow-up movies.

Most of these films and TV programs featured able-bodied actors playing the disabled characters, a situation that some disability activists have likened to the now discontinued practice of white actors masquerading in blackface as African Americans or Shakespeare's Othello. Actors with actual disabilities have been employed only sporadically in the film and television industries, but their influence continues to rise. Some old-line actors, such as Sarah Bernhardt, Harold Lloyd, Herbert Marshall, and Lionel Barrymore, tended to mask their disabilities before the cameras (Barrymore's performance

in the 1946 film *It's a Wonderful Life* is a notable exception), but for more recent actors, their disabilities became part of the characters they played. Harold Russell, whose hands were blown off in a demolition exercise, won two Oscars for his work in *The Best Years of Our Lives*, and Marlee Matlin, a hearing-impaired performer, won an Oscar for her role in *Children of a Lesser God* (1986) and went on to play bank-robber-turned-mayor Laurie Bey in the final years of the acclaimed TV series *Picket Fences*. Chris Burke, a developmentally disabled actor, co-starred as Corky Thatcher on the popular drama *Life Goes On* during its 1989-1993 run, and wheelchair-user Nancy Becker Kennedy played a sharp-tongued secretary on *The Louie Show* in 1996. Mitch Longley, a wheelchair-using heartthrob who once modeled shirts for Ralph Lauren, appeared as Byron Pierce on the soap opera *Another World* during the 1991/92 season and, beginning in 1997, played the double role of Dr. Matt Harmon and Eric Mancusi on the long-running soap opera, *General Hospital*, and its spin-off, *Port Charles*.

Longley is only one of several PWDs who have also made inroads into the modeling field. One of the most famous, wheelchair-user Ellen Stohl, posed nude for the July 1987 issue of *Playboy*, making her that magazine's first disabled centerfold, while runway models now have PWDs among their ranks, including Kitty Lunn and Kim Barreda. A number of American corporations, such as McDonald's and K-Mart, have begun using disabled performers in their commercials. A prime example is The Home Depot, which has featured disabled employees Henry Gibson and Dan Brady in its ads.

Since the latter decades of the twentieth century, PWDs have taken a more direct role in the creation of a pop-culture presence. Ron Kovic, a disabled Vietnam veteran who wrote the searing autobiography, *Born on the Fourth of July*, in 1976, also co-wrote the screenplay, in which he was played by Tom Cruise, for the like-titled movie in 1989. Three years later, Neil Jimenez wrote and co-directed *The Waterdance*, a film modeled largely on his own experiences as a newly disabled person. Billy Golfus, who suffered brain damage during a 1984 vehicular accident, eventually secured funding through the Independent Television Service to produce *When Billy Broke His Head . . . and Other Tales of Wonder* in 1995. This documentary film told not only his story but also the "tales" of other PWDs and their struggles for civil rights. Disabled journalist and poet Mark O'Brien collaborated with Jessica Yu on *Breathing Lessons: The Life and Work of Mark O'Brien* (1996), an Oscar-winning film for best short-subject documentary and a recipient of a special National Educational Media Network award. In 1992, Greg Smith founded *On a Roll*, a nationally syndicated radio talk show dedicated to disability issues, while John Hockenberry, a two-time Peabody Award-winning TV network correspondent, shared his perspectives about life as a disabled person in a 1995 memoir, *Moving Violations*, and in his one-man show, *Spokesman*, produced off-Broadway in 1996. Christopher Reeve, whose spinal cord was severed in a 1995 horseback-riding accident, directed a one-hour AIDS drama in 1997 titled *In the Gloaming*, and served as an executive producer for the 1998 TV remake of Hitchcock's *Rear Window*, in which he played the James Stewart role of a wheelchair-bound man who witnesses a murder across the courtyard of his apartment building.

Many other PWDs have contributed to the performing arts. Among the more notable are three singers who happen to be blind: Ray Charles and Stevie Wonder, who have enjoyed long careers as popular musicians; and Andrea Bocelli, who crossed over from opera to become something of a pop sensation. The National Theater of the Deaf, a mixed troupe of hearing and deaf actors founded in 1965, has

performed across the country and on national TV. Mary Verdi-Fletcher, a wheelchair-user born with spina bifida, founded the Cleveland Ballet Dancing Wheels, a group of dancers with differing degrees of mobility that has given hundreds of performances on several continents.

PWDs have had their greatest successes in the literary field, with memoirs and poetry volumes. Nancy Mairs' *Waist-High in the World* (1996) and Kenny Fries' anthology *Staring Back* (1997) are prominent among the countless examples. The influence of the disability press has also grown appreciably, with *New Mobility*, *The Ragged Edge* (formerly *The Disability Rag*), and *Mouth* playing crucial roles.

In the world of sports, the Paralympic Games typically attracts thousands of amateur athletes and delegates from more than a hundred countries and are by far the most famous of competitions for PWDs. Among professional athletes, Monty Stratton pitched professional baseball for a few seasons in the 1940s despite having lost a leg in a 1938 hunting accident. He went on to supervise *The Stratton Story* (1949), a movie based on his life, which starred James Stewart. Despite a congenitally deformed hand, Jim Abbott enjoyed several seasons as a Major League pitcher and threw a no-hitter for the New York Yankees in 1993. In the National Football League, New Orleans Saints place kicker Tom Dempsey, born without a right hand and only half a right foot, used that foot to kick a 63-yard field goal against the Detroit Lions in 1970, a NFL record that stood unmatched for 28 years. Casey Martin, a professional golfer with a rare and painful birth defect in his right leg, made headlines in early 1998 by suing the PGA Tour and winning the right to ride in a cart while participating in the pro golf tour.

Of all pop-culture arenas, comic-strip art is decidedly the most problematic as regards the treatment of disability. Berke Breathed's syndicated cartoon strip *Bloom County* and its wheelchair-using Vietnam vet, Cutter John, are among the high points, but the field has generally been dominated by cartoonists such as Charles Addams and Gahan Wilson, long known for their "sick-humor" takes on such topics as blindness, deformity, and dismemberment. Their work arguably paved the way for John Callahan's repellent *Hustler* cartoon images and Gary Larson's skewed view of disabling conditions in his near-legendary strip, *The Far Side*.

Despite the excesses of comic-strip art and certain other media, however, the pop-culture representation of disability is constantly advancing. As more and more PWDs get involved in the creation of popular culture, the images can only improve.

Disaster Movies

In disaster movies, natural disasters, accidents, and terrorist actions provide the setting for daring escapes and incredible heroism. The films rely heavily on special effects to recreate on screen the violent consequences of earthquakes, plane crashes, and meteorite storms; the category also includes monster-disaster movies in which an enraged, oversized creature destroys buildings and other large objects. It is an important part of disaster movies that in them heroic acts are performed by unlikely heroes—by people with psychological wounds, with limited experience of the things they are asked to do, and in situations where the odds against success seem impossibly high. Because these films are about averting and surviving disaster, it may be significant that disaster movies began to be produced in large numbers in the years after the horrors of World War II. If the twentieth century has seen great advances in technology, disaster movies reflect a fear that technology alone will not save us. Although their plots are

often unrealistic and the acting and special effects unconvincing, they offer the message that, through self-belief and the right moral choices, people just like us have the ability to save themselves.

Disasters featured in disaster movies can be divided into three main types: natural disasters, disasters caused by technology failing or being accidentally damaged, and disasters caused by terrorism or by the recklessness of an individual or agency. The most successful disaster movies are usually the simplest, but popular disaster-based films can contain elements of one, two, or even all of these scenarios. The actual type of disaster involved is only one of many reasons for a particular film's popularity. Among other things, audiences want to know how the characters will escape with their lives, they watch for the special effects, and also for sentimental reasons; popular disaster movies almost always include a love affair developing alongside the disaster plot. When the type of disaster is significant, it is often because it reflects current or local concerns. In the 1990s, for example, perhaps cashing in on pre-millennium fears, a rash of films such as *Independence Day* (1996) and *Deep Impact* (1998) appeared, with plot lines based around threats to life on earth posed by attacks from extraterrestrials or from asteroids. Similarly, in the 1980s films such as *Testament* (1983) and *The Day After* (1983) appeared in response to the threat posed by the nuclear arms race. Because most disaster movies are made in Hollywood and Japan, it is probably no

Passengers struggle for survival during a scene from the disaster film *The Poseidon Adventure*.

coincidence that a large number of them feature earthquakes, tidal waves, and volcanic eruptions.

The history of disaster movies is a relatively short one. Although disasters have featured in movies from the beginning of the twentieth century, films in which the disaster is the reason for making and watching the film did not become common until the 1950s when alien invasion and monster movies were popular. Before then, disasters of various kinds had appeared in adventure films and films about war, but true disaster movies were rare. One precursor to modern monster-disaster movies such as *Jurassic Park* (1993) is Cooper and Schoedsack's *King Kong* (1933), but the film is really an exotic adventure thriller with only a small element of disaster movie action. Such extravagant special effects as were needed to make the famous scene on the Empire State Building are remarkable for their time, but it was not until the 1950s that such effects could be achieved with much regularity.

In the 1950s, advances were made in film technology that allowed filmmakers to make better use of special effects techniques pioneered in the 1930s. Many of the resulting films were a combination of science fiction and horror, but disaster was often at their heart, as titles such as *When Worlds Collide* (1951) and *War of the Worlds* (1954) suggest. It has been suggested that the new threat of nuclear destruction meant that filmmakers and audiences became concerned with global, rather than local, conflicts and many of the monster-based disaster movies of the 1950s involve mutant creatures terrorizing and destroying cities. New film techniques such as "3-D," made possible by improvements in color film, made monster movies still more thrilling as giant creatures appeared to step off the screen and into the audience. Perhaps because of the Japan's own experience of nuclear destruction the Japanese film industry has been prolific in the field of atomic monsters, its most famous being Inoshiro Honda's *Godzilla, King of Monsters* (1954).

In the 1960s, science fiction disaster movies and nuclear accident films remained popular in Japan, where Honda's *Godzilla* and other monster series continued until late in the decade. Although extra footage of well-known American actors was added to Honda's films for American distribution, disaster movies in the United States generally did less well in this period. American disaster movies in the 1950s had mostly upheld Hollywood's conservative values and, in the 1960s, the genre perhaps seemed less suitable for exploring the new moral climate than, for example, the westerns of Sam Peckinpah or the thoughtful science fiction of Stanley Kubrick's *2001: A Space Odyssey*. It was not until 1970, with the release of *Airport*, that disaster movies became popular again.

The Golden Age for American disaster movies was the 1970s. As Hollywood re-embraced the idea of making popular, big budget features, the disaster movie became an important format for demonstrating spectacular special effects and for drawing in audiences to watch destruction on a large scale. Exactly what appeals to audiences in watching planes crash, ships sink, trains collide, and tall buildings burn will probably never be known for sure, but films like *The Poseidon Adventure* (1972), *The Towering Inferno* (1974), and the *Airport* series gave Hollywood some of its most lucrative successes. Unlike the futuristic films of the 1950s, disaster movies in the 1970s often dealt with familiar events and situations, ones that already caused anxiety for many people. For example, the number of miles Americans travelled by air doubled between 1965 and 1970, and air travel is one of the most common themes for disaster movies of the 1970s. Similarly, at a time when many new highrise blocks were being built and planned, Paul Newman and Steve McQueen braved

flames and smoke to rescue people from a party on the top floor of "the tallest building in the world" in John Guillermin's *The Towering Inferno*.

While the special effects in films like *The Towering Inferno* are impressive for their time, as with many disaster movies the biggest challenge its makers faced was to prevent the record-breaking skyscraper—the "Tower of Glass"—from looking like a model. In the 1990s the situation has been helped by improvements in digital technology and, in particular since the late 1980s, the ability to mix live action with what are known as Computer Generated Images (CGI). CGI has become widely used in the production of many kinds of films, but it is used most spectacularly in disaster movies which, in the 1990s, have become much more realistic in terms of sound and vision. The turning point in the relationship between conventional filmmaking and CGI was James Cameron's deep-sea disaster movie *The Abyss* (1989). The plot of Cameron's film peripherally involves a research team working on the edge of a deep ocean trench, whose seabed living quarters seem certain to be dragged down into the abyss. The discovery of friendly aliens living at the bottom of the trench allows the opportunity for some impressive effects, such as a suspended column of seawater known as a "pseudopod," exploring the corridors of the deep-sea craft. Cameron used CGI and improved digital sound technology to excellent effect in his 1997 disaster film *Titanic*, creating convincing footage of the great ship's final hours. Director Steven Spielberg used similar techniques to bring dinosaurs back to life in *Jurassic Park* (1993) and the more overtly disaster-based *The Lost World* (1997).

Disaster movies have a tendency to take themselves too seriously and if improvements in special effects mean that comical visual effects are rarer in the 1990s, disaster movie plots have improved very little. Emotions are still crudely acted and contrived situations—such as the appearance of a dinosaur in San Diego in Spielberg's *The Lost World*—still challenge audiences to believe. Because of these weaknesses and responding to the popularity of disaster movies in the 1970s, parodies of disaster movies have also proved popular. In particular, the *Airport* series of films, the last of which appeared in 1979, was parodied in 1980 by *Airplane!*, a film advertised with the tag-line "What's slower than a speeding bullet, and able to hit tall buildings in a single bound?" The film spoofs the typical disaster movie plot when a pilot who is afraid of flying becomes the only person capable of flying the plane, while the score by Elmer Bernstein parodies the melodramatic music that accompanies all popular disaster movies.

While disaster movies have tended to be made as fictional entertainment, other categories of disaster movie have taken a more serious approach. There are films based on the Exxon Valdez oil spill and the Mount St. Helens volcanic eruptions, while others, such as the many Titanic disaster films, add a fictional or semi-fictional dramatic element to the real-life story. Still others, such as the British-made semi-documentary *Threads* (1985), mix documentary reporting with dramatization to make a serious point, in this case about the threat of nuclear war and its long-term effects. Whatever the reason for their appeal, in the 1990s disaster movies continue to be produced in large numbers and with great commercial success. Hard-core disaster movie fans will argue that they watch for the scenes of destruction and to revel in the special effects, but the importance of even a basic human story unfolding alongside the disaster suggests that their popularity has as much to do with sentiment as with spectacle.

Disc Jockeys

Since the early days of radio broadcasting, the disc jockey or DJ has been an essential part of radio, not just playing records but serving as an intermediary between the listening audience and the stars of popular music. Disc jockeys enjoyed the most influence on their listeners in the 1950s and 1960s, when they introduced new music to Americans and made rock and roll the dominant force in youth culture.

In the first two decades of radio in the United States, the person who introduced records and made station announcements was usually a technician who worked the broadcast equipment. It was a policy of the large radio networks to avoid recorded sound as much as possible and rely on live programming. Thus there was little call for disc jockeys in the 1920s and 1930s. The radio networks were forced to drop their opposition to canned music as their studio musicians were called up to join the armed forces in the 1940s. Thus began the rise of the radio announcer who played recordings on the air, the so-called disc jockey.

The most popular was Martin Block, whose “Make Believe Ballroom” invited listeners to a pretend concert and entertained them with humor and records. His program was networked in the 1940s and reached a national audience. The monopoly of the three national radio networks—NBC, CBS and ABC—was broken in the 1950s and this allowed many small independent stations to go on the air. Lacking the programming resources of the great networks, the independent stations relied on recorded music. The man spinning the records also made commercial announcements and read the news. At this time an estimated 75 percent of all programming on American radio came from records, providing many job opportunities for young men with ambitions in the music industry. Many important entertainers, record producers, and entrepreneurs of the 1950s got their start on local radio

Famed disc jockey Wolfman Jack.

stations playing records, including Bill Haley, Norman Petty, and Sam Phillips.

African Americans in southern cities and urban ghettos in the Northeast were an important new market for independent radio and many urban stations began to realign their programs to suit a predominantly African American audience. Ownership of black radio remained in the hands of whites, but gradually black disc jockeys were allowed to broadcast. It was this group that began to play rhythm and blues records and create a new kind of radio personality who was to inaugurate the era of rock and roll.

Most radio announcers maintained a dignified demeanor and spoke in clear, correct English, but some African American disc jockeys broke all the rules of on-air behavior and invented outrageous alter egos for themselves. Their antics were rapidly copied by their white counterparts, who also stole the most commercial songs from their playlists and introduced them to the great white teenaged audience.

It is significant that the term “rock and roll” was coined by a white disc jockey from Cleveland, who played rhythm and blues records and created an entertaining on-air personality for himself. Alert to telephone requests and the sales of records in local stores, Alan Freed responded quickly to the growing appeal of R&B and turned his show into a showcase for the music. In 1951 he started to call it rock and roll. Such was the success of his “Moondog’s Rock and Roll Party” that he moved to New York in 1954 and a much larger audience. The program climbed to the top of the ratings chart as rock music became more and more popular. Freed was America’s most influential disc jockey, a conduit through which the “race” music of the 1940s became the rock and roll music of the 1950s.

The disc jockey of the late 1950s and early 1960s was an extremely important figure in the business of popular music. Radio play constituted the main form of promoting a record and many stations allowed the disc jockey to choose what records were to be broadcast. He decided which up-and-coming bands would get the radio play essential to selling records and moving up to bigger audiences and better paying shows. Disc jockeys found that repeated play of a record could make it a hit and the mythology of rock and roll is full of stories of unknown performers becoming stars overnight because of a radio personality who “broke” the record to his listening audience. Disc jockeys did a lot more than play records—they managed bands, promoted tours and public appearances, acted as master of ceremonies in rock shows, and became friends and advisors to the stars. Their name would share equal billing on the billboard of a typical rock and roll performance of the 1950s and early 1960s, as announcer and promoter. They became active intermediaries between rock and roll musicians and their audiences. Several of them, such as Alan Freed and “Murray the K” Kaufman, became stars of popular culture in their own right. Murray the K of station WINS of New York played an important part in introducing American youth to the Beatles during their first tour of the United States in 1964. Kaufman certainly promoted the Beatles but his position on the Beatles’ bandwagon also helped his own career and his station.

The great power enjoyed by disc jockeys in the marketing of recordings encouraged corruption. The practice of “payola” (a contraction of “pay” and “Victrola”) in which the disc jockey was bribed with money or a share of the publishing rights of the song was widely used to get airplay. The smaller record companies commonly paid disc jockeys and juke box operators to use their recordings. This practice came under scrutiny of the U.S. House of Representatives at the end of the 1950s and the ensuing Payola scandal ended the careers of several influential disc jockeys, including that of Alan Freed. The

payola scandal was only one of the factors reducing the power of disc jockeys in the 1960s. The move to the Top 40 format—in which the playlist was based on the Billboard charts—narrowed down the choice of records to be played, and the gradual consolidation of the radio industry—with one business organization controlling several stations—often took the decision about what records were to be played out of the hands of the on-air staff.

The great technological watershed of the late 1960s and 1970s was the migration from AM to FM broadcast bands, which brought a significant increase in sound quality and encouraged stations to use high fidelity long playing records rather than the 45 rpm singles that had been the staple of commercial radio for two decades. The typical disc jockey of the FM album-oriented station was much quieter and unobtrusive compared with the radio personalities of the 1950s and 1960s. The person playing the records was expected to have more knowledge of the music and indulge in less histrionics. Women were now finding it easier to get jobs in radio stations as the archetype of the disc jockey was recast.

Although disc jockeys were still instrumental in finding new music and introducing new performers, their power in popular music was in constant decline in the 1970s and 1980s. Commercial radio relied less on the individual in front of the microphone and more on the programming director and market analyst to choose the records to be played. The flamboyant radio personality survived only on the morning show; the rest of the days broadcast was handled by anonymous interchangeable voices. Disc jockeys did find opportunities to set themselves up as independent businessmen who played parties and clubs. The creation of rap and hip-hop came out of the activities of disc jockeys in the New York area, who kept the records playing while “toasters” or master of ceremonies spoke over and in between the music. The introduction of music television in the 1980s raised expectations that the presenter would wield some influence but the “vee jay” proved as disposable and ephemeral as his or her counterpart on the radio. The continuing pattern of consolidation in the American radio industry in the 1990s ensured that the disc jockey would be the person playing the records not the unique performer influencing musical trends and making the stars of popular culture.

Disco

Derived from the French discotheque, disco refers not only to a musical style but to a unique brand of dance-club decor, a sexy-synthetic manner of dress, a style of dance, and an attitude toward

sexual promiscuity and night life, all of which came together during the 1970s as “disco,” one of the most glitzy and celebrated fads in American popular cultural history. Between 1975 and 1979, the established sensibilities of rock and pop, which emphasized sincerity, emotion, and rebellion, gave way to the enchantment of dance floor rhythms, which colonized popular imagination as an alluring dream-scape of pleasure and sexual utopia. In disco, the boundary between commercial fabrication and real experience became blurred. Disco ushered in a new post-1960s concept of hedonistic weekends, holidays, and exciting after-hours activity that was open to anyone with a reasonable income, a basic sense of rhythm and a good body. However, for all its fashionable accouterments, what lay at the essential heart of the disco craze was the music. Characterized by an insistently repetitive base and a hypnotic beat, overlaid with teasing, sexy vocals, it captivated and mesmerized its adherents.

Though psychedelic dance bars had experimented with combinations of dance, music, and lighting since the 1960s (“oil wheels” and “sound-to-light” systems), it was during the 1970s that the technological, musical, and fashion elements that define the culture of the dance club were refined and popularized. In the early 1970s discos began expanding their equipment to include a wider array of musical and visual props. The “mirror ball,” which could fragment a white spotlight into a million rotating dots, became the symbol of the new disco, along with synchronized lights that were matched to the bass track of a record. Later, with the appearance of the smoke machine and dry ice, came the “pin spot” light, which could stab through a cloud of smoke to cast an illuminated shaft across a darkened room. Throughout the 1970s, commercial dance clubs sprang up across the country, ranging from fashionable and exclusive big city venues like New York’s Studio 54, to more modest hotel discos and revamped bars and clubs. The larger venues included advanced lighting and music systems controlled by a disc jockey, or DJ, who lorded over the collective euphoria from an elevated booth, cajoling the crowd to “get down and boogie.” Disco fashions highlighted the tight fit, high heels, platforms, and the funky “gentleman’s” three-piece suits, and displayed an unabashed preference for polyester.

Pop music had always been danceable and flamboyant, but what set disco apart was that it was not only music *for* dancing, but also music *about* dancing. The disco beat was the anthem of the dancers, the disco floor a wonderland of sexual promise where anything might happen, providing the perfect environment to indulge the pursuit of one’s fantasy. Unlike the “be-ins,” the pot parties, and other escapades favored by hippies, disco promised an experience of the exotic that could be easily slotted into a well ordered working week and coordinated with a regular pattern of one night stands. Film titles such as *Thank God It’s Friday* and *Saturday Night Fever* reflected the compartmentalized nature of this package-tour utopia. Though disco’s dreamland of sexual fulfillment is often remembered as the longing of the heterosexual male libido, the real origins of disco’s sexual imagery lie in the gay club scene of New York and San Francisco, where its camp atmosphere of sexual reverie was first born. This fact was largely obscured from disco’s audiences at the time. With hindsight, it is astonishing that middle-class, heterosexual listeners were oblivious to the homo-erotic suggestions that permeate the songs of such widely accepted groups as The Village People—songs such as “Macho Man,” “In the Navy,” and “YMCA.” As it matured, disco sanitized and commercialized itself and, at its peak, it was targeted at an age group too young to be admitted to a real dance club, let alone have any clue as to what separated gay from straight dance culture.

Disco’s real ground zero, however, was not the concert hall or even the dance floor, but the AM radio dial. Mainstream radio started playing disco music in the mid-1970s, and by December 1978, 200 disco-only formats aired across the country. Six months later, the number had increased by a further 50. In 1974 and 1975 respectively, George McCrae’s “Rock Your Baby” and Van McCoy’s “The Hustle” introduced the sounds of disco to AM radio, though it was a few years before artists such as Kool & The Gang, Gloria Gaynor, Donna Summer, the Bee Gees, KC and The Sunshine Band, Sister Sledge, Diana Ross, and the Village People rode the wave of disco enthusiasm. By the time disco dominated the airwaves in 1979, even Rod Stewart and the Rolling Stones were among those who had hopped onto the bandwagon.

No group stands out as more emblematic of the period than the Bee Gees, who began the 1970s as a British-Australian pop phenomenon with moderate sales, and made a sensational breakthrough on the soundtrack of *Saturday Night Fever*. The film, which made a star of John Travolta, focused on a working-class youth who escapes the mundane reality of life by becoming a demi-god of the local disco scene. The soundtrack was originally released as a double LP in 1977, becoming the industry’s biggest selling soundtrack album and producing ten singles hits from its 17 tracks, of which “How Deep Is Your Love,” “Stayin’ Alive,” and “Night Fever” dominated the pop charts in 1977 and 1978. The famous image of Travolta, wearing a white polyester suit, his pelvis thrust forward and his finger raised skyward against a background of disco lights, came to define the decade, an emblem of disco’s garish eroticism. The Bee Gees, whose thumping, squealing ballads of sexual enterprise saturated the film, typified disco music for the remainder of the decade. Ironically, both Travolta and the Bee Gees later fell victim to the fickleness of fads and fashion, and became easy objects of ridicule for some years to come.

By the end of 1979, disco’s celebration of the fanciful and the fake was beginning to wear thin. After a stream of “one-hit wonders,” disco seemed to be more the product of producers and promoters than of the artists themselves. One of the problems was that disco music seemed to lack talented performing musicians: electronically manipulated sounds replaced the bass, drums and guitar that had typified rock, and in live performances disco stars came to rely increasingly on recorded tracks and off-stage musical support. The Village People, largely a stage act, kept back-up singers entirely out of view of the audience. More than this, disco proved notoriously adaptable to a variety of commercial marketing devices. A record called *Hooked on Classics*, whose cover featured a Mozart-like character mimicking Travolta’s famous pose from *Saturday Night Fever*, mixed well-known classical music hits to a disco beat. Novelty songs like “disco duck” climbed the AM charts, and even the theme from the film *2001: A Space Odyssey*, was re-recorded as a disco hit.

Perhaps the most interesting thing about disco was its strange demise and long disgrace. Its commercialism, its ersatz sexuality and its reliance on radio to reach an average music consumer—rather than record sales to reach a “fan” market of countercultural listeners—seemed to violate everything rock stood for, and provoked a powerful backlash from fans of “real” rock. Hostility came to a head in 1979 when a “Disco Demolition Derby” was organized by radio DJ Steve Dahl at a baseball game at Detroit’s Tiger Stadium. Anti-disco fans burned more than 100,000 albums, hoisted “disco sucks” banners, and rioted, forcing the cancellation of the game. The precise nature of this backlash remains unclear: Dahl’s event, which has since been compared to fascist book burnings, may have been homophobic, sexist or racist, or it may have expressed a widespread disappointment

with the increasing commercialism of a supposedly rebellious musical form. It was most likely a combination of these factors, but, whatever the case, not since John Lennon's fateful remark about the Beatles being more famous than Christ had there been such a widespread consumer revolt against the music industry. The reaction against disco's commercialism, cheap sentiment, and *faux* sexuality fueled the emergence of other more "authentic" expressions of youth culture, punk and heavy metal. By 1981 the disco boom was bust.

Disney (Walt Disney Company)

When it was founded in 1923, Walt Disney Productions consisted of a small cracker-box studio in Hollywood housing a small group

Mickey and Minnie Mouse in Disneyland.

of creative artists headed by a young visionary who had recently arrived from the Midwest to produce cartoons for the movies. Beyond that, there was little more than a paper menagerie of barnyard animals and a mouse nicknamed "Mickey" who emerged at night to seek crumbs left behind by the artists. Five years later, that mouse had made the jump to the silver screen starring in *Plane Crazy* (1928) with the assistance of artist Ub Iwerks who supplied the artwork and Walt Disney, himself who came up with the trademark squeaky voice. The company was on its way.

At the end of the twentieth century, The Walt Disney Co. was considered by many to be the most influential company in the world surpassing even its founder's vision as it has established footholds not only in motion pictures but in such diverse industries as television, electronic media, book publishing, hotels, transportation, tourism, amusement parks, real estate, sports, and communications. In an industry where "vertical integration" had become increasingly important, Disney and its chief rival Time Warner have their corporate fingers in more pies than any other entertainment entities. Yet, the mouse continued to lead the way.

Perhaps, the most recognizable logo in the history of the world, Mickey Mouse has left his footprints on every country and culture in the world but the road to success has not been entirely without its share of ups and downs. Walt Disney was born in Chicago in 1901, the son of a ne'er-do-well father who drifted from one job to another. He learned to work hard early in life and had very little escape from the drudgery of his life except for the drawings he would create when no one was looking. This early experience instilled two traits in Disney that would follow him for all of his life. One was that he learned the value of hard work and became a compulsive "workaholic." The other was a firm belief that the public thirsted for escapism and "happy endings."

In 1919, Disney went to work for the Kansas City Film Ad Company where he put his drawing talents to use working on short animated commercials for local merchants. He also met another young artist named Ub Iwerks. Together the two learned the fundamentals of animation and decided to strike out on their own producing a series of ads and comic shorts called Newman's Laugh-O-Grams for the local Newman's Theater. In 1922, Disney took the Newman's concept further by creating pure entertainment oriented theatrical cartoons satirizing popular fairy tales. Unfortunately, he had the habit of spending more money on the production and technical aspects of each film than they brought in. The result was that, artistically, the films were quite polished for their time with full background detail and a full spectrum of wash tones that served to establish the basic Disney style. Financially, however, the company was forced to go out of business because its production costs were simply too high.

In 1923, Disney moved to Hollywood with his brother Roy and formed the Disney Brothers studio to produce short subjects which combined both live action and animation. The impetus for the move was based on an experimental short subject based on *Alice in Wonderland* which was a reversal of rival animator Max Fleischer's *Out of the Inkwell* series which featured a cartoon clown having adventures against a live background. Disney's version featured a live Alice character juxtaposed with cartoon backgrounds and animated characters. The series, which was dubbed *Alice in Cartoonland* was picked up by a Los Angeles distributor named M.J. Winkler. Yet, with the formation of the company, both Disney brothers realized that animation was not a one or two man job. Additionally, Walt realized that he was not the animator that his friend Ub Iwerks was so he hired a small staff including Iwerks and an up and coming animator named

Hugh Harmon. Some of the titles in the “Alice Series” included *Alice’s Wild West Show* (1924), *Alice’s Egg Plant* (1925), and *Alice Chops the Suey* (1925). These shorts were innovative in that they integrated the real and animated action, showing a live girl jumping out of an animated ink well or blowing animated smoke rings or being splattered with cartoon eggs. Yet, at the speed that the small studio was required to turn them out (approximately one every two weeks), they couldn’t experiment with too many ideas and the novelty began to wear off.

Disney quickly introduced a new character and series—“Oswald the Lucky Rabbit.” These cartoons reflected a higher quality of animation and experimented with a variety of visual effects, particularly the manipulation of light and shadow, not seen in the Alice series. In addition, the use of an animated central character as opposed to a live figure made a certain reality defying flexibility possible. In one adventure, Oswald attempts to kiss a medieval maiden’s hand and arm and keeps pulling more and more arm out of her sleeve until he has a seemingly endless expanse of arm to kiss. In another cartoon, his car expands and contracts to fit a variety of continuously changing road conditions.

Like the cartoons themselves, the planning sessions for them were equally flexible. Instead of formal scripts, the stories were conceived at what amounted to corporate bull sessions consisting of Disney and four other animators. Ideas were tossed into the ring until a basic plot evolved. Disney would then divide the elements into four sequences with each animator responsible for his own area of the cartoon’s action. Each animator could then freely improvise within his own area subject to Disney’s approval.

The Oswald series was so fresh and innovative that it made Disney’s company a modest success. Yet, when he approached his current distributor Charles Mintz who had taken over the Winkler Company for larger production budgets, Mintz refused and took both Oswald and all of the key animators who participated in the project away from Disney. Only Iwerks remained. The experience made the Disney brothers determined to own all of their own films and copyrights in the future.

In 1928, Disney and Iwerks fashioned another animal character to replace Oswald. However, Mickey Mouse who made his debut in *Plane Crazy* followed by *Galloping Gaucho* was not an immediate success. Although the animation and story ideas were good, the character itself looked like Oswald with shorter ears and a longer nose. There was nothing intrinsically interesting about the character to separate it from the multitudes of other animals cavorting on the screen. It took the invention of sound in 1928 to make Mickey Mouse a superstar. While the first live action sound films such as *The Jazz Singer* (1928) put the sound in somewhat gratuitously counting on the technology to thrill the audience, Disney created an integrated film in which sound and images worked together. When *Steamboat Willie* was released at the end of the year, audiences were captivated by the idea that a character plainly drawn with pen and ink could actually sing and dance in rhythm. The secret was that Disney began with song and music first and then drew the characters and backgrounds to reflect the sounds.

Disney built on the success of *Steamboat Willie* by working with his musical director Carl Stallings to create animated cartoons based on specific musical pieces. The first of these was *Skeleton Dance* (1928), a non-character cartoon that demonstrated animation’s ability to evoke mood and atmosphere. Suddenly cartoons were no longer the poor relative of live action feature films but works of art in themselves. In the years that followed, Disney created the *Silly Symphonies*

series of music-based animation and introduced new characters including Pluto (1930), Minnie Mouse (1933), and Donald Duck (1934). In 1932, he switched to the new medium of Technicolor for *Flowers and Trees* and won the Academy Award for “Best Short Subject.” After that, the young company maintained an exclusive agreement with Technicolor for all of their animated productions.

But, cartoon shorts could only evolve so far. Disney became determined to create a feature length animated film. Although conventional Hollywood wisdom dictated that an animated cartoon could not hold audience interest beyond seven minutes, Disney envisioned a fairly simple structure, which would allow one sequence to flow into another and in which musical numbers would evolve from and add to character development, as a viable formula for such a film. In *Snow White and the Seven Dwarfs* (1938), he created seven distinctly individual personalities in addition to his main characters, a feat which never before had been accomplished in animation. To accomplish such distinction, Disney crafted the characters, particularly Snow White, in such a degree of detail that they could convey human emotions in a believable manner. Audiences reacted to *Snow White* as if the characters were real, showing a variety of emotions ranging from horror at the sight of the queen’s transformation into a witch to happiness as Snow White frolics with the dwarves and charms the woodland animals.

Following *Snow White* came a steady flow of animated features, each one expanding the techniques of animation. By the beginning of the 1940s, the company geared up to produce a steady stream of animated features and literally become an animation factory employing hundreds of artists and technical personnel even though the studio had not gained “major” status as a full production/distribution entity on a par with Warner Brothers or Columbia. *Pinocchio* and *Fantasia* appeared in 1940, blazing a trail for such other notable productions as *Dumbo* (1941), *Bambi* (1942), *Cinderella* (1950), *Sleeping Beauty* (1959), and *101 Dalmations* (1961). Interspersed with these animated features were documentary and live action productions, including *The Living Desert* (1953), *20,000 Leagues Under the Sea* (1954), and *Mary Poppins* (1964). During the early 1950s, Disney founded his own distribution company, Buena Vista, to release these films thus freeing him from his reliance on RKO and other larger companies to determine the venues for his products.

But Disney did not confine himself to one medium. In 1954, he made the jump to the new medium of television with a weekly series called *Disneyland* which would be followed by an afternoon children’s series the *Mickey Mouse Club*. In 1955, he fulfilled his personal vision by creating an escapist world in Anaheim, California, in which reality dare not intrude. The Disneyland theme park featured a nostalgic Main Street USA and four thematically constructed “lands”: Adventureland, Fantasyland, Frontierland, and Tomorrowland. Each of these lands reflected motifs first delineated in Disney films or television programs. It was a “first” for the entertainment industry in that for the first time, viewers could actually enter the world of their favorite Disney films and interact with fictional characters. The company also led the way in creating spin-off products from the films and theme parks with lines of toys, clothing, records, and similar merchandise. By the end of the 1950s, Walt Disney was America’s undisputed king of family entertainment.

After its founder’s death in 1966, the company coasted along for a number of years turning out acceptable products and fulfilling several of Disney’s unrealized dreams, notably an updated East Coast version of Disneyland, Walt Disney World in Orlando, Florida, in 1971, and the futuristic Epcot Center several years later. Under the

management of Disney's successor E. Cardon Walker, the company was faced by a defection of a number of its leading animators led by Don Bluth, who felt that the company's standards had deteriorated after Walt's death. Yet, after venturing out on their own, they quickly discovered that while they could duplicate the legendary Disney animation, they could not capture the elusive Disney touch which transformed drawings into real characters capable of expressing human emotions within innovative storylines.

Walker's successor Ron Miller, faced with declining film revenues created a new division called Touchstone in 1984 to turn out more adult products than the Disney image would allow. This prompted Roy Disney, still a major shareholder in the company to resign from the board of directors, initiating a management struggle for control of the company which by the mid-1980s was producing only four films a year and was reliant on the theme parks for the bulk of its revenue (nearly 83 percent in 1983 alone).

Miller resigned under pressure in September 1984 just as Touchstone's first release, *Splash*, boosted the film division's earnings to record highs, and became the highest grossing film in Disney history while making a star of Tom Hanks. His successor, Michael Eisner, lured from Paramount Pictures, appeared cut from the Disney mold. He followed up on the success of *Splash* with two more non-traditional features *Down and Out in Beverly Hills* (1985) and *Three Men and a Baby* (1987). These would be followed by the worldwide mega-hit *Pretty Woman* (1990), a story of a romance between a prostitute and a millionaire which took the old Cinderella story in a modern direction that Walt probably would not have approved of. With chairman Jeffrey Katzenberg, Eisner effected a renaissance of the animated feature at a time when conventional wisdom had declared it moribund. Beginning with the critically acclaimed *The Black Cauldron* in 1985, Eisner started a new golden age of animation which surpassed the box-office successes of the 1930s and 1940s. Yet, the formula was very much the same: realistic characters that tugged at the viewers emotions, superb animation, and memorable music. Such films as *The Little Mermaid* (1989), *Beauty and the Beast* (1991), *Aladdin* (1992), and *The Lion King* (1994) generated grosses in the hundreds of millions prompting many of Hollywood's major studios to jump into animation in order to compete. *Beauty and the Beast* became the first animated feature to be nominated for an Academy Award.

By the mid-1990s, production at Disney had risen from the four films per year of a decade earlier to more than 20 per annum. Eisner's strategy of producing tightly budgeted films pairing "low cost name talent" such as Richard Dryfuss and Bette Midler who were in temporary career lulls with widely appealing stories paid major dividends. Films such as the aforementioned *Pretty Woman*, *Sister Act*, *Stakeout*, and *Honey I Shrunk the Kids* achieved grosses that greatly exceeded their small (by Hollywood standards) production budgets. The success of these features prompted the studio to open a third production entity, Hollywood Pictures, in 1990.

Disney had at last acquired major studio status by the 1990s. It's distribution company Buena Vista was regularly in the top one or two in film grosses and it was out-producing all of the studios in Hollywood in sheer number of films. With its ownership of a cable TV channel, a successful video distribution empire, and the ability to distribute its product worldwide via satellite, Disney became one of the earliest studios to realize the financial value of a large library. In 1996, the company purchased the ABC television network for \$19 billion, giving it a national outlet for its product as well as an all encompassing venue for plugging its upcoming films. While the

network has not regained the top spot it held in the 1970s, it nonetheless presents some of the more innovative new shows on television and is a leader in sports and news programming.

Eisner also took major steps to revitalize the theme park side of the ledger by creating EuroDisney outside of Paris in 1992, a wild animal theme park in Florida in 1997 and by starting a project to expand the original Disneyland in Anaheim, California. The ancillary markets for Disney product were expanded as well. The company refurbished the El Capitan Theater in Hollywood as a showcase for its new releases and added promotional stage acts as well as a place to buy the company's products in the lobby.

On the opposite coast, Disney refurbished a Broadway theater and began to turn its film hits, including *Beauty and the Beast* and *The Lion King*, into musical plays with new numbers and scenes added to make them successful on the stage. Similarly, several of the animated productions were turned into ice extravaganzas which toured the country blending the traditional stories and songs with fancy skating numbers arranged specifically for the frozen medium.

Yet, the ultimate spin-off of a motion picture concept occurred in the early 1990s when Eisner bought an Anaheim NHL hockey franchise and named it after a moderately successful live action feature *The Mighty Ducks*. The company purchased the Anaheim Angels baseball team and the highly popular cable TV station Entertainment and Sports Network (ESPN). After these purchases, Disney had only two rivals in the sports arena: Rupert Murdoch with his Fox Sports Cable Channel on the Fox Network; and the ownership of the Los Angeles Dodgers, the Angels' chief rival for the L.A. sports dollar.

By the end of the twentieth century, The Walt Disney Company had grown from the small Hollywood studio of 1923 to a recreational empire. With holdings so expansive, the nostalgic Disney vision has been applied beyond mere entertainment. The company's theme-oriented steamship line (floating Disneylands), Disney Stores, innovative theme parks, music, video and television endeavors, have allowed the company unprecedented power to shape the perceptions of consumers, offering people the chance to see, experience, and purchase Disney-styled versions of Americana.

Ditka, Mike (1939—)

Football player-turned-football coach “Iron” Mike Ditka is described in his Football Hall of Fame enshrinee data as a “fast, rugged, outstanding blocker [and a] great competitor.” In 1960, he was a consensus All-American at the University of Pittsburgh, and became the Chicago Bears’ number one draft pick the following year. From 1961 through 1972, Ditka was a hard-nosed tight end for the Bears, Philadelphia Eagles, and Dallas Cowboys. He was the NFL rookie of the year in 1961, starred on the Bears’ 1963 NFL title squad, and scored the final touchdown for the Cowboys in Super Bowl VI. During his career, he caught 427 passes for 5,812 yards and 43 touchdowns. He made all-NFL four times, played in five straight Pro Bowls, was named to the NFL 75th Anniversary Team, and in 1988 became the first tight end to enter the Hall of Fame.

Despite Ditka’s eminence as a player, he is best known today as an NFL head coach. He worked as an assistant under Tom Landry in Dallas from 1973 through 1981, and was hired to lead the Bears in 1982. While Ditka has willingly parodied his in-your-face, bullying, drill-instructor coaching style on television shows and particularly in TV commercials, he is all business when it comes to winning football games. During eleven seasons coaching the Bears, he led the team to six NFC Central crowns, three trips to the NFC Championship game, and a 46-10 whipping of the New England Patriots in Super Bowl XX. After retiring from the Bears in 1992 and working as an NBC sports broadcaster, he was lured back onto the field in 1997 as coach of the New Orleans Saints.

Divine (1945-1988)

The obese transvestite character-actor Divine personified self-consciously campy underground films and ushered in a new threshold of bad taste in cinema. Starring mainly in the films of offbeat director John Waters, Divine cultivated an outrageous drag queen image, with gaudy makeup, a blonde mane the texture of cotton candy, and tight dresses on his more-than-300-pound frame. In the majority of his films, he played female characters and dressed in women’s garb during his short-lived career as a singer. Though Divine was poised to break through into mainstream film and television at the end of his

Divine (right) with Grace Jones.

life, most of his appearances were in films with shocking subject matter. He will likely remain famous for his role as the Filthiest Person Alive” in the 1972 Waters film *Pink Flamingos*, especially due to the notorious scene at the end in which he consumes freshly excreted poodle dung.”

Divine was born Harris Glenn Milstead on October 19, 1945, and raised in an upper-middle-class home in a suburb of Baltimore, Maryland, the city that provided the backdrop for the bulk of his films. His parents ran a successful nursery and regularly attended a local Baptist church. As a teen, Divine was active in school plays, and began associating with Waters, who lived nearby. They were both outcasts, and Divine noted in Waters’ book *Shock Value* that he required a daily police escort to and from school to avoid constant beatings by other students. After high school, Divine graduated from beauty school and became known as an excellent stylist. His parents even bought him his own salon, but he became bored with it. He later opened a fashion boutique in Provincetown, Massachusetts. Meanwhile, he also began acting in Waters’ independent movies. His first role was in *Roman Candles* (1966), a home movie of Waters’ friends stealing and then modeling dresses. It was at this time that Waters recognized the actor’s potential and renamed his friend “Divine.”

After that unceremonious induction into film, Divine starred in *Eat Your Makeup* (1968), in which he played the part of Jacqueline

Kennedy in the movie's central scene re-enacting President John Kennedy's assassination. Subsequently, Waters made another film of questionable taste that is rarely noted in official sources, *The Diane Linkletter Story*, named after Art Linkletter's daughter, who committed suicide allegedly after taking large amounts of hallucinogenic drugs. In 1969, Waters and his troupe, known as the Dreamlanders, made *Mondo Trasho*, which established Divine's bizarre look. In *Not Simply Divine*, Bernard Jay quoted Divine as saying that his new image was based on Waters' concept of a blend of "the wicked stepmother in *Cinderella*, the evil queen of *Snow White*, and the bad witch in *The Wizard of Oz*," combined with a touch of Jayne Mansfield. Continuing down a slippery slope of poor taste, *Mondo Trasho* was followed by *Multiple Maniacs* in 1970, which professed that Divine was the actual killer in what were later dubbed the Manson Family murders. It also featured Divine being raped by a 15-foot-tall lobster.

After *Multiple Maniacs*, Divine and Waters garnered a good deal of attention from underground publications. Their next collaboration, though, dwarfed their previous efforts. *Pink Flamingos* was the tale of a battle for the title of "Filthiest Person Alive," and featured a couple who kidnap women, impregnates them, and sells the babies to lesbians on the black market in order to raise money for their elementary school heroin ring. They want to take the distinction away from Divine, an incestuous, trailer-dwelling matriarch who firmly maintains her disgusting reputation with the dog excrement scene. *Pink Flamingos* generated a flurry of attention and became one of the premier cult films of all time.

Divine had acted in stage plays in San Francisco in the early 1970s, and after *Pink Flamingos*, began appearing off-Broadway in productions such as *Women Behind Bars* (1976) and *The Neon Woman* (1978). He also launched a disco singing career. In fact, he often attended the legendary Studio 54 disco in full drag and mingled with other icons of the day. Divine made a number of other films with Waters throughout the years, including *Female Trouble* (1975), *Polyester* (1981), and *Lust in the Dust* (1985), as well as a few on his own. Though Divine made his mark as the garish caricature of himself that people usually saw, he grew weary of dressing in drag and yearned to be accepted as a talented character actor. Finally, in 1988 he was noticed for his dual role in Waters' *Hairspray* as both proud stage mother Edna Turnblad and bigoted television executive Arvin Hodgepile. After that, he was slated to appear on the popular television program *Married . . . With Children*, and was eager to line up other work as well. Just as he seemed on the verge of making an entrance into the mainstream, however, Divine died of a heart attack in a hotel room in Los Angeles on March 7, 1988. Almost a decade after his death, *Pink Flamingos* stirred a new wave of publicity with its 25 year anniversary release, padded with new footage and commentary by Waters.

Divorce

Marriage, the legally sanctioned and structured pairing of heterosexual couples, has long been an established practice in human civilization all over the world. Divorce, the dissolution of a marriage agreement, is as old as marriage itself. Since the 1960s, rapidly rising divorce rates have placed the ending of marriage among the most common rituals of modern society. In the late 1990s, almost half of all marriages ended in divorce, and the prevalence of divorce has changed not only the nature of marriage, but the definition of family as well.

Early cultures often permitted divorce with relative ease. Roman law allowed couples to divorce simply by mutual consent, while Jewish Talmudic law granted divorce on a variety of grounds, including adultery and desertion. Greek, Germanic, and Frankish law also recognized couples' right to divorce, as did Islam and the Orthodox Church. The Roman Catholic Church became one of the first institutions to outlaw divorce, claiming marriage as a sacrament of the church. Dissolution of marriage could only be granted by the church under special circumstances, such as an annulment if one's spouse was a close relative, or a "judicial separation," where husband and wife were permitted to live apart without remarrying. Repercussions of the attitudes of the Catholic church about divorce were felt into future centuries and in lands as far apart as Ireland, Latin America, and parts of the American South.

The Protestant Reformation brought with it new perspectives on marriage. While Catholics had viewed it as a sacred sacrament, taken for life, Protestants saw marriage as a contract, changeable if it no longer met the needs of the contracted parties. Likewise, while Catholics had primarily defined the purpose of marriage as procreation, Protestants included in it such functions as companionship, support, and sexual pleasure, inspiring radical Protestants, such as poet John Milton, to argue that divorce should be allowed for simple incompatibility.

In the United States, from colonial times to the present, divorce was widely permitted but frowned upon socially. By the time of the Civil War, divorces were granted in most parts of the country on grounds of cruelty, abandonment, drunkenness, nonsupport, or verbal threats or insults. As legal divorces became easier to obtain, the divorce rate began to climb steadily. By the early 1900s the United States was granting the most divorces of any Western country, six times as many as France, in second place. The number had risen dramatically, from 7,380 divorces nationwide in 1860 to 83,045 in 1910.

In the 1950s, divorce dropped somewhat with that decade's glorification of the nuclear family. Women who worked as homemakers, supported by their husbands, found themselves unprepared to support themselves and their children should they divorce. In contrast, the 1960s and 1970s saw more women graduating from college with career aspirations and the skills to achieve them. The divorce rate shot up, as these women no longer felt forced to remain in unhappy marriages.

Though more and more marriages ended in divorce each decade, divorce was still largely stigmatized by society and pathologized by experts who defined divorced people as neurotic and sought cures for their ills. This perception finally began to change in the 1970s when feminism and the sexual revolution combined to give divorce a positive new image of liberation and independence. In the 1980s, rates dipped once again as the threat of AIDS encouraged monogamy. In addition, married baby boomers of the 1980s began to find

financial reasons to stay together, since two incomes were needed to support their lifestyles. These factors, coupled with the 1980s political conservatism and backlash against feminism, caused more couples to seek counseling to save their marriages. The divorce lull did not last, however. Rates continue to climb as, approaching the twenty-first century, generation Xers, many the children of divorce themselves, attempt to determine the boundaries of commitment. Divorce is such a commonplace that while many couples still use lawyers to work out their disputes, others now go to mediators and many more execute their own divorces quite amicably. Along with divorcing couples, there are now numerous cases of children divorcing their parents and vice versa.

Until fairly recently, wives were considered little more than the property of their husbands, and the treatment of women in the divorce process has reflected this attitude. Though many women have been unhappy in the marital roles assigned them, women have always had more to lose financially from divorce. Less valued in the marketplace than men, women often lose further ground by removing themselves from the work force while working as mothers and homemakers. When a woman divorces, the standard of living for her and her children falls an average of 73 percent, often placing them below poverty level. Men, by contrast, released from familial obligations, are free to put more energy into their existing jobs. After divorce, a man's average standard of living rises 42 percent. The devaluing of women's role in the home has also contributed to unfair distribution of assets after divorce. Except in "community property" states, where any property acquired by either partner during the marriage is divided equally, a woman may receive little or none of the family resources, which may be in the husband's name.

Beginning with the so-called "tender years" legislation of the nineteenth century, custody of young children has traditionally been awarded to the mother in divorce settlements. Courts may also choose to award child support and alimony, or spousal support payments, which also traditionally were paid by the husband as the primary earner. In recent years, courts have begun to change assumptions about gender roles, sometimes awarding custody and even spousal support to the husband if he is judged to be the better parent or the wife has greater earning power. "No-fault" divorce, a concept developed in the 1980s, has further eroded the system of spousal support by removing the factor of blame and responsibility for the end of the marriage. While many applaud these changes, they often have resulted in even worse conditions for women following divorce.

Another product of the rising divorce rate has been the prenuptial agreement, wherein couples plan for the possibility of divorce before they are married and agree upon future division of property. Originated by the lawyers of wealthy people who felt they had lost an unfair amount in a divorce, the "pre-nup" is now as much a part of an upper-class wedding as the wedding cake.

Social attitudes toward men and women surrounding divorce have tended to be quite different, especially prior to the 1970s. Divorced men have often been viewed as roguish or even slightly dangerous, not undesirable qualities in a male. Also, the addition of another available man to the social pool is generally looked upon as a good thing. Divorced women, on the other hand, have been seen traditionally as promiscuous, and the addition of an unattached woman to society is usually viewed as threatening to other women.

Images of divorce in the media have contributed to these perceptions. Entertainers have always lived by their own rules, and even in decades when divorce was most stigmatized in ordinary society, the public avidly followed the marital adventures of the

movie stars. Even in the repressive 1950s, actors such as Elizabeth Taylor and Mickey Rooney set records for numbers of marriages that are still impressive today. Fascinated fans reacted with outrage when divorcee Taylor broke up the "idyllic" marriage of Eddie Fisher and Debbie Reynolds. In the mid-1970s they formed strong opinions about the so-called "palimony" suit following the breakup of long-term unmarried lovers Lee Marvin and Michelle Triola when Triola insisted that she was entitled to spousal support after their six-year relationship ended.

Films tended to both reflect and mold social attitudes. In 1934, Fred Astaire and Ginger Rogers danced their way through lighthearted marital misunderstandings in *The Gay Divorcee*. In the early 1960s, anti-divorce attitudes won out in *The Parent Trap*, when twin daughters (played by Hayley Mills) of a divorced couple managed to reunite their parents, whose breakup was clearly ill-advised. The 1980s backlash was represented nowhere better than in the Oscar winner for best picture *Kramer vs. Kramer*, in which Dustin Hoffman and Meryl Streep played divorcing parents. Both were motivated by their own selfishness, but in the end it was the husband who was redeemed by learning the joys of familyhood and was rewarded with custody of the couple's son.

By the 1990s, divorce was so common that it had lost much of its social stigma and much of its value as scandal. Fans still followed the love lives of the stars, but it took an exceptionally short marriage or brutal breakup to arouse much public interest. Celebrity-watchers felt vindicated when superstar Julia Roberts walked away from unlikely spouse Lyle Lovett after only a few months, and they cheered for beloved icon Carol Channing when she left her forty-one-year marriage at age seventy-seven, citing lack of sex as one of the reasons. Film portrayals tended to show divorce as a positive solution to a bad situation. The 1989 film *The War of the Roses* was a disturbing comedy about violent breakup where neither partner was presented in a positive light, while *The First Wives Club* (1996) was a sort of revenge comedy where the mistreated wives took action against their boorish ex-husbands.

In past centuries, marriage was a pragmatic agreement and the family an economic unit, whether industrial or agricultural. Members each had a unique function and derived stability and protection from their place in the unit, which was most often an extended family comprising elders, adults, and children. Marriage and the creation of a family was part of survival. As American society evolved, the nuclear family replaced the extended family as the major social unit, and its function has more and more become that of emotional support and physical caretaking rather than working together. As partners enter marriage, they have higher expectations of happiness and satisfaction. Some sociologists cite these rising expectations as the reason for rising rates of divorce, while others contend that since marriage and family are no longer a necessity of physical survival, it is natural that couples tend to drift apart.

As divorce becomes more prevalent, the image of the family continues to change. Though political and religious conservatives have tried to restore a more traditional concept of the nuclear family, they have not been able to stop these changes. While many bemoan the ill-effects of divorce on children, most modern studies show that children do not benefit from growing up in a traditional nuclear family where the parents are unhappy together. The definition of family is now broadening to include not only nuclear families, but also unmarried heterosexuals and gays living together, single-parent families, stepfamilies, foster and adoptive families, childlessness, nonmonogamous relationships, and multiple-adult households. Family

is not only biological, but also chosen, a complex network of economic support and affection that is no longer easily catalogued. Even Madison Avenue has begun to understand and speak to these changes, as companies such as Hallmark Greeting Cards and John Hancock Insurance develop advertising campaigns directed at the families of divorce and other nontraditional units. A Rite-Aid Drug ad, first screened in 1998, shows two girls helping their mother get ready for her first (postdivorce) date, while a 1991 MCI Communications ad shows a workaholic father sadly explaining how his personal toll-free number helps him keep in touch with the son who now lives with his mother far away. These images show how the reality of divorce has been incorporated into American culture, and, indeed, culture worldwide.

Dixieland

Dixieland jazz is a style that blends New Orleans jazz and classic jazz—also called "Chicago jazz"—of the 1920s. The music is generally thought of as a collective improvisation during the choruses, with individual solos that include riffing by the horns, and a two- to four-bar call and response tag game between the drummer and the full group at the closing of the song. While almost any song can be played in the dixieland style, the music is most often associated with about forty songs, including "That's a Plenty" and "Tin Roof Blues." Most dixieland bands are comprised of a trumpet or cornet, a harmonizing trombone, a clarinet, and a piano, string bass, or tuba. Occasionally a guitar or banjo is also included. The style has enjoyed many revivals throughout the years and "dixieland" has become a blanket term for the earliest blending of New Orleans and Chicago jazz between 1917 and 1923, as well as the many revivals of the style.

Despite the wide use of the term, some confine the definition of dixieland jazz to New Orleans music played by white New Orleans performers or in their style. Others limit the definition to the earliest white players in Chicago. Some of the most important albums of the dixieland style include Louis Armstrong's 1927 *Hot Fives and Sevens*, Vol. 3, Eddie Condon's 1939 *Dixieland All-Stars*, Kid Ory's Creole Jazz Band's 1955 *Legendary Kid*, and Pete Fountain's 1965 *Standing Room Only*.

Despite the controversy surrounding how the term should be used, many musicians have been labeled and identified as playing dixieland music. The white Chicago musicians usually included as dixieland musicians are Jimmy McPartland, Bud Freeman, and Frank Teschemacher. These musicians first heard the white New Orleans bands of the 1920s associated with Nick LaRocca in the Original Dixieland Jass (later Jazz) Band which began recording in 1917, and with Paul Mares in the New Orleans Rhythm Kings (originally the Friar's Society Orchestra), which recorded between 1922 and 1923. This "white" style had a great influence on the development of jazz and was not too far removed from the style of the great black pioneers. White New Orleans bands and their dixieland followers drew less on ragtime and ethnic African sources than did the black pioneers. They also drew quite heavily on European sources. One of the most inspirational musicians of the dixieland sound of the 1920s was Louis Armstrong, who noted opera as a strong influence on his style.

The popularization of jazz beyond the New Orleans area and the development of dixieland can be traced to the U.S. Navy's 1917 closure of the Storyville base near New Orleans' red light district. The closure put many musicians out of work. Seeking work, musicians relocated to Chicago, Illinois. Joe "King" Oliver was the hottest cornetist in New Orleans in 1917 and by 1918 he had moved to Chicago. Jelly Roll Morton, jazz's first noted composer and innovative pianist, had moved to Chicago at the turn of the century. Many of New Orleans' best musicians followed and played for a time in Chicago. Others moved elsewhere: from 1919-1924 Kid Ory worked in Los Angeles and Sidney Bechet, the fine clarinetist and soprano saxophonist, played in London. As the musicians moved, the music they played changed and dixieland became a discernable style.

The carefree style of dixieland music soon lost favor to swing, especially after the stock market crash in 1929, but it did not disappear. From 1945 through 1960 dixieland actually became one of the more popular forms of jazz. The revival of dixieland in the 1940s can be traced to Lu Watters' Yerba Buena Jazz Band out of San Francisco. Much of the music was based on King Oliver's Creole Jazz Band, but Watters' developed his own style, sometimes called San Francisco Jazz. Eddie Condon was also influential in the revival of dixieland; he featured a dixieland band on his weekly half-hour radio broadcast *Town Hall Concerts* from 1944 to 1945 and led a band at his Chicago nightclub for a few decades. And though there were many styles of jazz at the time, Louis Armstrong disbanded his big band in 1947 and led his All-Stars as a dixieland style sextet for the rest of his career. Despite the overwhelming popularity of rock 'n' roll after the 1950s, Armstrong proved dixieland's lasting appeal in 1964 with the success of his "Hello Dolly."

The success of the dixieland style in the mid-1940s ignited the release of a flurry of hasty and uninspired imitations of the music. By the 1950s dixieland was often associated with the embarrassingly garish groups who played amateurishly and donned straw hats and wore vintage clothing. Nevertheless, serious and competent musicians still played dixieland music. In 1974 the first Sacramento Dixieland Jubilee was held, the success of which inspired other such

events. By the end of the twentieth century, jazz festivals that feature dixieland along with other styles could be found throughout the year and many record labels such as Stomp Off, GHB, and Jazzology continued to release dixieland music. Many of the greatest players and innovators of dixieland are dead, but younger musicians like Winston Marsalis and Jim Cullum continue to incorporate the dixieland style into their music.

Do the Right Thing

As many film scholars have noted, the Hollywood film industry's construction of race has been problematic, reflecting the racial divisions of the wider culture. While whites have been considered as representing the "norm," people of color have been rendered invisible, stereotyped, and denigrated in every decade and in every genre. A major shift occurred in the 1980s, when an unprecedented number of studio-backed films written and directed by African-American filmmakers were released. This movement was led by Spike Lee, whose arthouse success, *She's Gotta Have It*, opened doors previously closed to black filmmakers. Able to control the images presented, Lee and the African-American directors who followed brought to the screen issues and concerns so often ignored by Hollywood. One such film, *Do the Right Thing*, written and directed by Lee and released in 1989, is a postmodern masterpiece and a controversial film about issues of race, gender, class, and politics.

The film is set in the predominantly African-American neighborhood of Bedford Stuyvesant, located in Brooklyn, New York. It covers twenty-four hours of the hottest day of the year, which is communicated well by the award winning cinematography of Ernest Dickerson, with its use of highly saturated reds and orange. Featuring an ensemble cast—Ossie Davis, Ruby Dee, Giancarlo Esposito, Rosie Perez, Danny Aiello, John Turturro, Bill Nunn, Robin Harris, Roger Guenveur Smith, and Lee himself—the film presents a tense atmosphere of varied characters with differing political outlooks. Full of numerous confrontations, the main conflict concerns the decor of

the local pizzeria, Sal's, owned by an Italian American. Buggin Out, who wants the "wall of fame" to display pictures of African Americans rather than Italian Americans, tries to organize the community in a boycott. Incensed, he enters the pizzeria with Radio Raheem, who carries with him a portable stereo blaring the anthem "Fight the Power" by hip hop artists Public Enemy. Radio Raheem engages in a physical dispute with Sal and, in the midst of the struggle, is killed by a policeman's stranglehold. A riot ensues and Sal's Pizzeria is burned to the ground.

As noted above, the film created a controversy in both critical and popular circles. What is the right thing? Does the film advocate violence? Some panned the film because it did not make use of well-rounded, complex characters, did not support productive collective action, and presented less-than-positive images of women. Yet the film brought forth a dialogue about one of the most ingrained aspects of American culture—racism. It presents the issue as complex and multi-faceted, while at the same time questioning the ideologies represented by the numerous characters.

Dobie Gillis

The Many Loves of Dobie Gillis is a classic sitcom of the late 1950s. If on the surface the show seems unassuming and standard early sitcom fare, just below the surface is a show that breaks new ground in television. Two significant aspects set it apart from the other shows of that era and make it watchable and influential well into the 1990s. First is the show's focus on teenagers. Second is the addition of a new type of character in the form of Maynard G. Krebs, the outsider.

Dobie Gillis is a teenager in small-town America; the plot revolves around Dobie's life and thoughts. In the course of the show Dobie graduates from high school, briefly joins the army, and returns to the same town to attend college. The show was adapted from Max Shulman's short stories of the 1930s and was updated for the teenagers of the 1950s. It premiered in September of 1959 and ran until 1963. The main characters were Dobie Gillis (Dwayne Hickman), the forever-girl-chasing and money-short lead; his best friend and side-kick Maynard (Bob Denver) the cool jazz beatnik; Dobie's hard-working father Herbert T. Gillis (Frank Faylen); and Zelda Gilroy (Sheila James), who was determined to marry Dobie one day.

Before Dobie there had been teenagers in television shows but always in secondary roles and usually within the confines of a very structured family—e.g., *The Adventures of Ozzie and Harriet* and *Father Knows Best*. While there were occasional episodes dealing with teenage issues, they were usually reserved for comic relief or family homilies. *Dobie Gillis* offered an entirely different way of viewing the subject. Although most of the stories deal with the basic trials and tribulations of teenage life—getting a date, getting money, and getting out of work—they are taken seriously; each show starts and ends with Dobie speaking to us from a pose near a replica of the

A publicity shot for *The Many Loves of Dobie Gillis*.

Rodin sculpture known as “The Thinker.” In this way, we are told that the problems of money, girls, and work are important to the youth.

Dobie’s world includes several recurring characters who provide the basic themes for the show. His father runs the Gillis Grocery Store and cannot understand his son (he continually tries to instill in him the need for hard work), while his mother (Florida Friebus) attempts to mediate between father and son. In the beginning of the series Tuesday Weld plays Thalia Meninger, Dobie’s dream girl whom he hesitates to pursue because he does not have money. As one might expect, there are several rivals who do have money—Milton Armitage (Warren Beatty), followed by Chatsworth Osborne Jr. (Stephen Franken). It is their presence that generates many of the show’s conflicts.

As the series unfolds a more striking character also takes form, that of Maynard. Maynard is the classical beatnik: he has the goatee, the ripped sweatshirt, the love of jazz, and the “like” vocabulary. He seems out of place in this little town, and that is the point. Maynard (played by Bob Denver, later of *Gilligan’s Island*) is Dobie’s “good buddy” and he is loyal to him to the end. While Dobie dreams of money so that he can get the girls, Maynard has no need for either. His mannerisms and clothes make him stand out from everyone, and his simple ways and shuddering at the thought of work seem to hold him apart from the suburban dream. Maynard sets a standard for every other outsider with a message in shows to come.

Despite the concentration on themes of money and dating, or perhaps because of it, the show occasionally slides into uncharted areas. Dobie tends to think and speak about life in terms of big questions or, more accurately, he tends to make whatever he is thinking about seem big. Dobie, like many teenagers, is in search of many things, including an understanding of himself and the world in which he lives.

The impact of this show extends far beyond the 1950s. Shows that centered on teens and tried to gather the baby-boomer-market would be a staple from the 1960s on. The outsider beatnik character could easily metamorphose into the hippie of the 1960s or even to “The Fonz” of *Happy Days*. Dobie has since resurfaced in two sequels; a 30-minute pilot for a revival of the show in 1977 named *What Ever happened to Dobie Gillis?*, and a reunion movie in 1988 called *Bring Me the Head of Dobie Gillis*.

Doby, Larry (1923—)

African-American baseball player Larry Doby was an unlikely Civil Rights pioneer. Unlike Major League Baseball’s first Black player, Jackie Robinson, Doby was “shy, quiet, and unassuming”; he’d grown up in integrated Patterson, New Jersey, attended predominantly white Long Island University and lived a life far more sheltered from the stings and arrows of racial prejudice than the vast majority of African Americans. Yet it was Doby, even more than Jackie Robinson, whose courage and determination helped transform Major League Baseball into a national pastime for people of all races. In 1947, Doby became the first African-American player in the American League; he was also the first player to jump straight from the Negro Leagues to the majors. He later integrated Japanese baseball in 1962 and went on to become the sport’s second Black manager and one of its first African-American executives. However it was in his role as the second Black player in baseball that Doby had his most significant impact on professional athletics. His Major League debut demonstrated to the American public that Jackie Robinson’s entrance into white baseball was not a publicity stunt and that Black players were destined to become permanent fixtures in Major League Baseball.

When integration-minded Cleveland Indians owner Bill Veeck sought to sign a Black player in 1947, the Newark Eagle’s Doby appeared to be the obvious choice. The twenty-two year old Doby, a former high school football and basketball star, led the Negro National League with a batting average of .458 and thirteen home

Larry Doby

runs. He was the top Black prospect who had not already signed a contract with the Brooklyn Dodgers (After Jackie Robinson's successful debut, the Dodgers had acquired several other talented African Americans for their minor league clubs). Veeck, unlike the Dodgers' general manager Branch Rickey, was determined to integrate his organization from the top down. On July 5, 1947, he purchased Doby's contract from the Eagles for \$10,000. Three hours later, he sent the surprised young athlete onto the field as a pinch hitter against the Chicago White Sox. This courageous decision, coming without warning, drew 20,000 letters of protest from irate fans.

Doby's sudden entrance into the majors relieved much of the pressure on the Dodgers' Robinson. Both men faced extraordinary pressures that first season, including open hostility from teammates and opposition players, and they formed a close relationship that endured through their lifetimes. Upon Doby signing, Robinson stated, "I no longer have the feeling that if I don't make good, it will kill the chances of other Negro players." Doby's debut opened the way for three more Blacks to enter the majors within a month and made it clear that baseball was on a permanent course toward integration. His presence on the Indians also contributed to the more general cause of Civil Rights for African Americans when Washington's exclusive

Hotel Statler, formerly whites-only, permitted Doby to room with his team.

After a rough first season in which he batted only .156 in a limited thirty at-bats, Doby found his stride and became one of the game's marquee figures. In 1948, he batted an impressive .301 with 14 homeruns and 65 runs batted in. He led the Indians to a victory over the Boston Braves in the World Series, becoming the first African American to play on a World Series Champion team. He later led the American league in home runs in 1952 and again in 1954. When he retired after thirteen seasons with the Indians, White Sox, and Detroit Tigers, he had a formidable career batting average of .283 and 253 lifetime homeruns. For these achievements, he was elected to Baseball's Hall of Fame in 1998.

Long after Major League baseball had fully integrated, Doby continued to be a pioneer among Black athletes. In 1962, he became one of the first Blacks to play professional baseball in Japan. He returned to the United States and served in several administrative jobs with the Montreal Expos, Indians, and White Sox. He became the Indians' manager in 1978—after Frank Robinson, the second African American ever to manager a Major League club. He later returned to executive duties as a special assistant to Dr. Gene Budig, the President of the America League. Throughout the 1960s and 1970s—when Blacks were welcome on the baseball field and in the stands but not in the front office—Doby continued to push for expanded opportunities for African Americans.

After Jackie Robinson's death, the "Silk City Slugger" became a living symbol of the early Civil Rights movement. He is indisputably the most popular player in the history of the Cleveland Indians and, along with later Black stars Willie Mays and Hank Aaron, continues to be one of baseball's chief attractions at special events and Old Timers' games.

Doc Martens

More than just functional footwear, Doc Martens shoes and boots have become a staple among decades of style-conscious subcultures and eventually emerged as a fashion phenomenon. Once synonymous with angry British youth, Doc Martens, like their sturdy leather uppers, have mellowed with age. Bavarian physician Claus Maerten designed the clunky, cushiony, thick-soled boot out of old tires in 1945 after a skiing accident necessitated more comfortable footwear. Union-plagued customers became converts until the 1960s,

when fascist skinheads appropriated the boots. Rock stars soon followed the trend, and after punk rockers in the 1970s began painting on their own designs, the company came out with wildly colored and patterned models. The brand was a must-have for the young and hip throughout the 1980s, from hip-hop to grunge fans. By the late 1990s, women accounted for seventy percent of the fast-growing market, picking up the pairs at upscale department stores.

Doc Savage

During the 16-year run of *Doc Savage Magazine*, Clark Savage, Jr. (better known as Doc) was one of the most exciting and popular pulp magazine characters. The appeal of Doc Savage is succinctly stated in the promotional blurb that appears on the back of the Bantam paperback editions that reprint his pulp adventures: "To his fans he is the greatest adventure hero of all time, whose fantastic exploits are unequaled for hair-raising thrills, breathtaking escapes, and bloodcurdling excitement." Doc is a transitional hero who unites the intellect

Ron Ely stands beside a painting of the pulp fiction character Doc Savage, who he played on screen in 1975.

of Sherlock Holmes and the physical prowess of Tarzan with the best gadgets imagined by the new genre of science fiction. In bringing together all of these elements, Doc Savage served as a model for the superheroes that followed.

Doc Savage was the creation of Street and Smith business manager Henry Ralston and editor John Nanovic, who hoped to duplicate the success of the company's first single-character pulp magazine, *The Shadow*. While Ralston and Nanovic created the concept, the characters, and even many of the colorful details, it was a young writer named Lester Dent who brought Doc Savage to life. The house byline used was Kenneth Robeson, and there were six different authors who contributed Doc Savage stories under that byline. Lester Dent, however, wrote the vast majority of the Doc tales and edited, or at least approved, the work of the writers who ghosted for him. It was also Lester Dent, following his "master plot" outline and hammering out his pithy prose, who established the distinctive style of the Doc Savage adventures.

Doc Savage appeared in 181 fantastic pulp magazine adventures from 1933 to 1949. In October of 1964, Bantam Books began paperback reprints of every one of the pulp stories, plus one previously unpublished Doc manuscript by Lester Dent (*The Red Spider*). In 1991 Bantam began publishing original Doc Savage material. *Escape from Loki* was written by long-time Doc aficionado Philip Jose Farmer. Doc Savage fan and scholar Will Murray wrote seven books based on Lester Dent story fragments and outlines. There was a Doc Savage radio show in the 1930s, a Doc Savage movie in the 1970s, another radio show in the 1980s, and Doc Savage comic books from at least six different publishers, but the true Doc Savage adventures are the 182 stories written for the pulps.

Doc Savage is a hero of mythic proportions. Clark Savage, Jr., was born one stormy night aboard a tiny schooner anchored off Andros island in the infamous Bermuda Triangle. Doc dwells far above ordinary humans on the eighty-sixth floor of the Empire State Building. Both his strength and intellect are herculean. At the age of 14 months he began his strenuous and life-long training. Even after Doc reaches adulthood and begins traveling the globe to right wrongs and help the oppressed, he adheres faithfully to a two-hour routine of intensive exercises for his muscles, senses, and mind. Though he excels in virtually every endeavor, Doc displays his most prodigious talent in the practice of medicine. By the time he was 30, Doc Savage was the world's most brilliant surgeon. In fact, he "rehabilitates" criminals using an intricate brain surgery procedure only he has the skill to perform.

When Doc first appears in 1933 he is six feet tall and weighs 200 pounds. In later tales Doc is usually described as somewhat larger—around six feet eight inches and weighing 270 pounds. Yet, his build has such symmetry and proportion that he does not look big unless he is standing next to someone. Beneath his sun-bronzed skin, his muscles are "like cables" or "bundles of piano wire." When he flexes those great muscles he often rips his shirt and coat. His hair is combed straight back and resembles a metal skullcap. Doc's most riveting characteristic is the gently swirling flakes of gold in his eyes. Thanks to the dynamic covers painted by James Bama for the Bantam reprints, a virtual costume was established for Doc. On most paperback covers Doc wore boots, aviator pants, and a very precisely ripped shirt.

The first Doc Savage story, *The Man of Bronze*, establishes that the men who compose Doc's amazing crew are "the five greatest brains to ever assemble in one group." They include: "Long Tom," the frail-looking wizard of electricity who is a wildcat in a fight;

“Renny,” a grim-faced giant of a man who likes to smash his huge fists through solid panel doors and is the greatest engineering expert of his time; the tall, gaunt, bespectacled Johnny, with his bulging forehead and big words, who is one of the world’s foremost experts on geology and archaeology; “Ham,” who is a dapper clothes horse and possibly the greatest lawyer Harvard has ever produced; and the most remarkable of Doc’s companions “Monk,” a short, barrel-chested man whose knuckles nearly drag the ground. Although he looks like a red-haired ape pretending to be a man, he is one of the world’s top chemists. Monk, however, would much rather work with his fists than with test tubes. The frontispiece of the Bantam paperbacks gives this characterization of the men who joined Doc Savage in his work: “Together with their leader, they would go anywhere, fight anyone, dare everything—seeking excitement and perilous adventure.”

Although Doc Savage is a relatively minor fictional character, he has influenced some major popular culture icons. Superman is the most obvious “descendent” of Doc. In fact, in the stories themselves and in the advertisements for the magazine, Doc was often referred to as a “superman.” In addition to sharing the first name Clark, both heroes have a Fortress of Solitude somewhere in the arctic. Both also have female cousins that look like them, have their powers, and want to horn in on their adventures. Doc was known as the Man of Bronze, and Superman is known as the Man of Steel. Doc’s connection to Batman is less obvious, but more fundamental. Both heroes are “self-made supermen” who, beginning in childhood, devoted themselves to intense training. Both have considerable scientific know-how, as evidenced by Doc’s utility vest and Batman’s very similar utility belt. It is even possible that the batmobile is patterned after Doc’s bulletproof and gadget-filled sedan.

Doctor Who

Doctor Who is the world’s longest continually produced science fiction serial. It aired on the British BBC network from 1963 until 1989, and was revived briefly as a television movie in 1996. In the United States, *Doctor Who* first began broadcasts on independent channels in 1972, and was still broadcasting on some local PBS affiliates in the late 1990s. It has, like *Star Trek*, engendered movies, radio dramas, lucrative novel series, non-fiction, comic books, and an extensive home video market.

Doctor Who revolves around the adventures of the mysterious time-traveling title character, simply known throughout as The Doctor. The Doctor, as first seen in the 1963 pilot episode, broadcast in the midst of the BBC’s coverage of the Kennedy Assassination, is outwardly human. William Hartnell, the actor to first portray the Doctor (1963-1966), presented audiences with a cranky old man who

had a gross lack of basic human kindness. Initially, the Doctor was accompanied on his travels through time and space by his granddaughter and her human school teachers. In the serial’s second episode, he seemed to encourage his companion to kill an incapacitated caveman. Later, his selfish, obsessive desire to learn placed him and his companions in danger when they met the alien Daleks. The character began to soften his edges as he was exposed to the ideals and attitudes of his human companions. His scientific curiosity and towering ego remain, but his ego became tempered with an increasing respect for his companions and the races that he encountered.

When Hartnell became too ill to continue the role, the producers came up with the ingenious idea of having the character “regenerate” into a new body with a new personality. Since 1966, the Doctor has been played by seven more actors: Patrick Troughton (1966-1970), Jon Pertwee (1970-1974), Tom Baker (1974-1981), Peter Davison (1981-1983), Colin Baker (1983-1986), Sylvester McCoy (1986-1989), and Paul McGann (1996). Richard Hurndall also played the role of the First Doctor in place of the late William Hartnell in the 1983 anniversary serial “The Five Doctors.” This change in the lead actor (and usually in the rest of the cast and the production teams) allowed the show to adapt to and change with the times. Hartnell’s serials began originally as a children’s program, but by the late 1970s Tom Baker’s serials were also targeted towards the science fiction aficionado. Low ratings and lack of support from the BBC (it went on an 18 month hiatus in the middle of Colin Baker’s tenure) soon saw the serial descending into self-parody. Towards the end it began to recover some of its ground, but in 1989 it was taken off the air, though never officially canceled. The 1996 television movie was co-produced by the BBC and the FOX Network in the United States at a sum of \$5 million (an unusual amount for such a production), but it did not achieve great ratings. There are constant rumors among fans of another revival; meanwhile the serial continues in original novels published first by Virgin Books and later by BBC Books.

Two theatrical movies were made in the 1960s, based on the scripts of two of the television serials, *Doctor Who and the Daleks* (1965) and *Daleks—Invasion Earth, 2150 A.D.* (1966), starring Peter Cushing as the Doctor. In the television serial, it was the popularity of the Daleks, created by writer Terry Nation and a BBC special effects wizard, that propelled the Doctor to instant stardom in the United Kingdom. It was not until the first Tom Baker serials began broadcasting in the United States, however, that the show earned anything more than an American cult audience. The Doctor has since earned cameos in episodes of *The Simpsons*, and cancellation of the serial usually results in a PBS station being inundated with masses of fan mail.

Like *Star Trek*, the fans of *Doctor Who* run major conventions every year which are attended in the thousands by fans sporting scarves and cricket jackets. Instantly recognizable at these conventions is the Doctor’s unique TARDIS—an acronym for Time and Relative Dimension in Space. On the outside it resembles a battered London police call box. Inside, however, it is, in reality, a large ship, its cavernous interior seemingly endless. The Doctor and his fans also have a strong presence on the Internet, where hints of new television projects compete for attention with spoilers of the novel plots.

Icons of the show include the pepperpot shaped Daleks, and the silver enshrouded Cybermen. Also earning a place in history was the show’s electronic theme music, which evolved over the years but still retained an eerie hint of the otherworldly. On the whole, the show was a hodge-podge of what is good and bad about long-running serial television: devoted audiences, a long history, and very bad continuity.

The video market ensures that the show is introduced to new audiences and that it has a life beyond its original television run.

Doctor Zhivago

This only novel by the famed Russian poet Boris Pasternak received the 1958 Nobel Prize for literature. The story traces the experiences of a Moscow doctor, Yuri Zhivago, during the Russian Revolution of 1917 and the ensuing civil war from 1918 to 1921. Zhivago's independence, religious convictions, and conflict with the Soviet regime were considered too controversial for publication by the editors of the leading Soviet literary journal, *Novy Mir*, to which Pasternak had submitted his work, despite the fact that the Soviet Union was experiencing greater openness following the death of dictator Joseph Stalin in 1953. Pasternak had the manuscript smuggled out of the Soviet Union in late 1956, and it was first published in Italy in November 1957. The book was translated into more than twenty languages in the next two years and became an international best-seller. A 1965 film adaptation of the book, directed by David Lean, received five Academy Award nominations.

Doctorow, E. L. (1931—)

As Matthew Henry noted in *Critique*, "E.L. Doctorow has made a career out of historical fiction, and he is renowned for both examining and rewriting the American past . . . because for Doctorow there is no fact or fiction, only narrative." In his attempt to examine the cultural myths of America and their impact on society, E.L. Doctorow created some of the most noted works of postmodern historical fiction of the late twentieth century through his unique ability to weave documented historical facts and figures with invented ones. As Henry noted, this brand of historical fiction allowed Doctorow to present different histories, not only those accepted by consensus. Doctorow's approach to history and his style of writing mark him as one of the significant contributors to the postmodern literary movement.

Edgar Laurence Doctorow was born in 1931 in New York City, the setting of many of his novels. Doctorow began his writing career

E. L. Doctorow

within a decade after graduating from Kenyon College in 1952. His first three novels were experiments with different fiction genres. The first novel, *Welcome to Hard Times*, was a western and focused on the common theme of man's relationship to evil. *Big as Life*, Doctorow's second novel, was a science fiction work about two giants materializing in New York City. Yet, it was not until Doctorow experimented with the historical form in his third novel, *The Book of Daniel*, that he achieved commercial and critical success. It was here, in Doctorow's account of Julius and Ethel Rosenberg and their children, where he first experimented with what would later be called postmodern historical fiction—historical facts blended with contemporary fiction styles and elements.

Doctorow's postmodern historical fiction approached the writing of history as a reconstitution of history. Unlike the many historical fiction writers before him, he did not attempt to present history as fact. As he did with the Rosenbergs in *The Book of Daniel*, Doctorow's interweaving of historical facts and figures with fictional ones was best done in his fourth novel, *Ragtime*. This novel intertwined the lives of many famous historical figures, such as Harry Houdini, Henry Ford, and Emma Goldman, with three fictional families—an upper class white family, a poor immigrant family, and a ragtime black musician's family. By mixing history with fiction, Doctorow confused and, to a degree, falsified history as he investigated the myths and realities of the American dream in *Ragtime*, a theme that reappears in his next novel, *Loon Lake*.

It is Doctorow's approach to history and writing style that make his novels postmodern. Just as Toni Morrison did in her novel *Jazz*, Doctorow used the combination of the repetition and improvisation in

music to create a relentless narrative prose style in *Ragtime*, a style that would continue in his following novels. What at first may look like out of control prose became finely crafted prose that worked on multiple levels of meaning and interpretation, what Andrew Delbanco called more associative than sequential and what Michelle Tokarczyk called “accessible experimentation.” Doctorow experimented with syntactical structures as well as point of view and voice, so there were many instances in his novels where it was difficult to ascertain who was saying what to whom, where the narrative did not instantly reveal itself. This postmodern language play added to the historical reconstructions, sometimes labeled allegorical romances, of twentieth-century American life as it occurred in Doctorow’s novels.

In addition to writing novels, in the 1990s Doctorow has used his position in American society to take on many social issues. Citing what he called a “gangsterdom of the spirit,” Doctorow believed American life near the end of the twentieth century was suffering from a loss of cohesion and morality. Some of his social projects of the 1990s include the saving of Walden Woods in Massachusetts, developing a cable television channel dedicated to books, peacefully settling the American conflict with Iraq, and analyzing the presidencies of Ronald Reagan and Bill Clinton.

Docudrama

Docudrama is a film genre which is found primarily, but not exclusively, on television. *Brian’s Song* (1970)—the story of the tragic death of football player Brian Piccolo—was the first notable U.S. example. The success of *Brian’s Song* proved to the television networks that the made-for-television, reality-based telefilm could be both a critical and popular success. However, the docudrama has been

a controversial form in North America because of its apparently cavalier mixture of truth and fiction, drama and documentary—a case of blurred boundaries which unsettles some viewers and critics. The genre has had at least a dozen names and several uncomplimentary epithets applied to it: drama-documentary, dramatized documentary, dramadoc, faction, infotainment, reconstruction, historical drama, biographical drama, historical romance, thesis drama, problem play, and “based-on-fact.”

For many of those who do not like the form, the television docudrama is a cheap replacement for the more distinguished Hollywood social-issue picture. But docudramas have been extremely popular with audiences (and hence advertisers), and cheaper to make than theatrical feature films. Because the majority of them are based on some well-known recent event, they require much less in the way of promotion since the audience already knows at least part of the story. The turnaround time (the time between a public event and the film based on it) for such films has become incredibly brief; the most infamous example was the filming of the story about the violent deaths of several FBI agents and members of a religious cult in Waco, Texas, while those tragic events were still unfolding (*In the Line of Duty: Ambush in Waco*, 1993).

Until very recently, the docudrama has generally been considered a hybrid form, caught somewhere between documentary and drama, often doing justice to neither. Film and television critics have tried to define its conventions with mixed success since the seventies. Andrew Goodwin and Paul Kerr, authors of the *BFI Drama-Documentary Dossier*, even claim that it is impossible to define the genre, arguing that such failure is a result of “the break up of consensual views of social reality” in a postmodern world. For these critics and others the mixture of fact and fiction leads to the creation of a “hyperreality” where audiences can no longer make the distinction between truth and fiction—with the result that history, as told by the media, tends to become reality itself. Steven Spielberg’s *Schindler’s List* (1993) is often cited as a prime example since the only information that many people around the world have about the Holocaust comes from the film, known for its fictionalizing of “the truth.”

Critic Derek Paget has argued that the docudrama has been around long enough to be considered a genre in itself with well established conventions. He traces the U.S. history of the form from early documentary-like television anthology programs like *Armstrong Circle Theatre* or *Kraft Television Theatre*, through a second phase of made-for-TV movies like *Brian’s Song* or *Roots* (1977), and finally to a more controversial type of “trauma drama” which has been largely influenced by tabloid television with stories based upon well-known scandals such as the Amy Fischer “Long Island Lolita” attempted murder, *Amy Fisher: My Story* (1992) and *The Amy Fisher Story* (1993), or the O.J. Simpson murder trial, *The O.J. Simpson Story* and *The Trial of O.J. Simpson* (both 1995).

Critical quibbling aside, the docudrama is one of the most popular and lucrative genres in North America, perhaps because it blurs the boundaries between reality and fiction and in the process draws attention to the media’s manipulation of “fact.” One need only think of the battles fought in the United States over docudramas like Oliver Stone’s *JFK* (1991) or *Nixon* (1995) to see the heat which docudrama has generated. The docudrama has become a culturally important form which is the site of political battles over the nature of “truth,” “reality,” and the tabloidization of everyday life.

Do-It-Yourself Improvement

The term "do-it-yourself" applies in its broadest sense to a range of tasks, usually domestic projects of repair or improvement, completed by individuals who are amateurs in the field. Instead of hiring professional contractors, many homeowners enjoy the challenge of learning new skills, adapting individual styles, and incorporating materials and techniques from local sources to beautify and improve their homes. The high degree of personal satisfaction, not to mention cost-of-labor savings, provide substantial incentives to many do-it-yourselfers. Many view the work they do on their homes as a

hobby, and do-it-yourselfers can now learn and master home improvement methods and techniques from an enormous variety of books, television shows, and multimedia computer programs.

Though people had relied on manual skills before industrialization, personal skills and expertise gave way to organized labor and specialized craftsmanship by the early nineteenth century when early industrialization and the infusion of power-driven machinery created a revolution in manufacture. Items which had been hand-crafted and individually created could now be produced by machine automation. The novelty of mass production generated a craze in the purchase of prefabricated goods. By the 1950s in America, mass production had spread to home building, as evidenced by the first neighborhood tract homes.

People have turned to hand-crafting in times of hardship such as the Great Depression and World War II when there were shortages of building materials and sundry items. Shortages fostered the development of independent home improvement solutions ranging from construction using found materials to the brewing of homemade beer. Propaganda during war time also encouraged individual thrift and problem-solving as important contributions to the war effort. In addition, following the Allied victory, many people returned home with new skills gained through military service and focussed on rebuilding their homes and families. Do-it-yourself home building kits were available in America as early as the late 1940s.

But during the prosperity of the 1950s, home improvement was enjoyed as a family hobby and social activity among neighbors. By the 1960s, young homeowners began home-crafting and personalized home improvement less as a hobby and more as a statement of individuality. While rebelling against what was generally called "the establishment," young people saw opportunities in home industry which provided an avenue of freedom from commercial and industrial ventures. Homemade items from clothing to bread to wall-hangings and interior decorations enjoyed popularity throughout the 1960s and 1970s.

Interest in homemade items waned in the 1980s as Americans returned to more conservative politics, but the spirit of being able to "do-it-yourself" continued not only among first-time home-buyers, who were principally interested in savings (not to mention putting a personal "stamp" on their new homes), but also among the wealthy who continued the trend in home improvement as a personal hobby. Many chose to develop home improvement projects themselves not because politics or economics dictated that they do so, but out of the personal satisfaction derived from individual achievement. A week-end painting project, for example, provided the opportunity to enhance one's self-esteem as well as reduce stress. People who do-it-themselves tend to see themselves as competent, capable, and goal-oriented.

In this light many women increased their involvement in home improvement activities throughout the 1990s, taking on plumbing, minor carpentry, and mechanical repair jobs which were previously considered to be a man's job. In this way women have been able to express their self-confidence and ability in ways which had previously been discouraged.

By the end of the twentieth century, do-it-yourself projects were supported by a growing network of home improvement stores. With vast inventories and knowledgeable salespeople providing instruction, stores like the Home Depot, HomeBase, and Lowe's Improvement Warehouse helped people finish their own projects.

Domino, Fats (1928—)

The music of Fats Domino embodies the spirit of early rock and roll. His work reveals the links between rock and roll, rhythm and blues, and the black Southern singers of the early twentieth century. His music was recorded by most of the rock artists of the 1950s, who recognized his significant contribution to establishing the rock and roll sound, and he is acknowledged as a pioneer in leading the way across the racial barriers of the music industry. With more than 65 million record sales, Domino was second only to Elvis Presley in popularity during the 1950s, and is credited with bringing mass attention to the New Orleans sound, inspiring many other Southern black singers to record for white audiences.

Domino's New Orleans style of piano playing is a combination of traditional jazz, Latin rhythms, blues, Cajun, and boogie woogie that reflects that city's rich heritage of cultural amalgamation. From the mid-1940s through the early 1950s he was an established rhythm and blues recording artist who had successfully toured the nation, but his pounding playing style made him well suited to crossover into the emerging rock format. Domino's greatest popularity arrived in 1955 with the release of "Ain't That a Shame," which became an early rock hit, and although his career began to fade somewhat in the 1960s, he continued to tour and record into the 1990s.

The man considered the most famous New Orleans-born musician since Louis Armstrong was born Antoine Domino, one of a large family, on February 26, 1928. He developed an early interest in music, began playing the piano at age nine, and was performing publicly at local honky-tonks a year later. He quit school at 14 and took a job at a bedspring factory so that his nights would be free to play the area bars and clubs. A large young man, at this time he acquired the nickname "Fats" from bandleader Bill Diamond. The entertainer was spotted in 1949 by trumpeter Dave Bartholomew and Lew Chudd of Imperial Records, who soon signed him to a recording contract. His first hit song, "The Fat Man," sold more than a million

Fats Domino

copies. Domino formed an especially close professional relationship with Bartholomew, and the pair co-wrote, arranged, and produced most of the singer's material for the next two decades. Among his hits of this period are "Goin' Home," "Goin' to the River," and "Every Night about This Time."

Domino's rollicking piano playing allowed him to cross onto the pop charts in the mid-1950s, the time when young white audiences were discovering rock and roll. However, white artists were also covering his initial pop records—Teresa Brewer recorded "Bo Weevil" and Pat Boone's mild version of "Ain't That a Shame" sold even more copies than Domino's own—but he broke into the pop Top Ten himself with the release of "I'm in Love Again." Fats Domino became a national sensation and was one of the first black recording stars to prove that he could appeal to white listeners. He proceeded to enjoy a string of major hits from 1955 to 1960, of which the most instantly recognizable are "Blueberry Hill," "Blue Monday," "I'm Walkin'," "My Blue Heaven," "Whole Lotta Loving," and "Walkin' to New Orleans."

The second half of Fats Domino's career lacked the continuous commercial success of the first half. Although he continued to tour and did occasionally produce some notable recordings, more magnetic (and frenetic) performers such as Little Richard, Chuck Berry, and Jerry Lee Lewis eclipsed his gentle, laid-back stage persona. In the 1970s, he released a New Orleans-style version of the Beatles' "Lady Madonna" that gained some attention, and in 1993 he returned to the recording studio for the first time in nearly 25 years to produce his *Christmas Is a Special Day* set. The results received much critical acclaim. In his later years Domino was much honored for his

achievements: in 1986 he was in the inaugural group of artists inducted into the Rock and Roll Hall of Fame, and in 1998 President Clinton awarded him the National Medal of Arts. By the late 1990s, though entering his seventies, Fats Domino was still touring in between enjoying life in his palatial New Orleans home.

Donahue, Phil (1935—)

Talk show host Phil Donahue is credited with pioneering the daytime television talk show format. His programs introduced viewers to sensitive and intelligent discussions of topics and issues that had never before been seen on the small screen. From the debut of *The Phil Donahue Show* in 1969, which originated out of Dayton, Ohio, Donahue challenged, informed, and entertained daytime audiences and helped establish the talk show as one of television's most prolific

and profitable formats. Beginning in the 1970s, his promotion of feminism, and the frequent airing of women's health issues on his program identified him as the embodiment of the "sensitive man." As daytime TV shows became raunchier in the 1990s, Donahue came to be viewed as the patriarch of the genre. While he did present programs with outrageous content—senior citizen strippers, for example—he continued to offer sober conversations about politics and social concerns and a mix of celebrity interviews. Phil Donahue's decision to treat the female television viewer as an intelligent, active, and aware participant in society challenged those programmers wedded to the conviction that women would only watch soap operas and cookery demonstrations.

For a man who later symbolized the modern era's willingness to talk openly about the most personal issues, Donahue's beginnings were very traditional. He was born Phillip John Donahue, the son of a furniture salesman in Cleveland, Ohio, on December 21, 1935. He was an altar boy and, after graduating high school, studied for a B.A. in theology at the University of Notre Dame. After completing his degree, he found work as a radio announcer in Cleveland and, later, Dayton. (One of his first professional positions involved delivering the five a.m. hog report.) His first talk show was a Dayton radio program titled *Conversation Piece*, which aired from 1963 to 1967. He later accepted a position with Dayton's WLWD television station

Phil Donahue (right) and guests on *The Phil Donahue Show*.

to host a local call-in talk show but, unable to attract top guests, he and his producers focused each episode on relevant issues of the day.

The Phil Donahue Show premiered in November 1967 with an appearance by celebrated atheist Madalyn Murray O'Hair, who was considered by some the most hated woman in America for her anti-religion stance. That first week also included film of a woman giving birth and a discussion on the appropriateness of anatomically correct male dolls. Donahue's likable personality and his ease in addressing often uncomfortable issues tempered the daring subject matter. A further innovation was his solicitation of questions and comments from the studio audience, previously regarded as little more than background for hosts and their guests. Donahue's charm, coupled with his bold choice of topics, attracted national attention when he moved his show, renamed simply *Donahue*, to Chicago in 1974. The program was soon syndicated nationwide and boasted millions of viewers, of whom 85 percent were women.

In a career that spanned more than 6000 hours of programming, there was no subject that Phil Donahue was unwilling to confront and present to mainstream America. Some complained that his choices were often inappropriate or too outlandish. TV host Merv Griffin expressed the opinion of many when he complained that Donahue and his imitators were most interested in controversy and titillation. Griffin stated, "What they have to resort to in subject matter is sometimes a pain in the neck. You know, the sex lives of Lithuanian doctors and dentists is not all that interesting." Donahue did, indeed, parade bizarre guests at times and was not above risking offense to capture high ratings. He interviewed nudists, drag queens, neo-Nazis, and strippers of all sorts. The episode that caused the most controversy and hysteria was titled "Transvestite Fashion Show" and featured Donahue wearing a dress.

However, complaints that daytime talk shows peddled only salacious material ignored Donahue's many episodes that focused on serious issues such as race relations, class differences, and feminist causes. In 1982, he presented the first national program devoted to the AIDS crisis, and a high point of his series was a 1988 discussion of the disease in children, led by the HIV-positive boy Ryan White. Over the years the series also welcomed politicians and advocates from across the political spectrum to express their views. In the late 1980s, Donahue initiated a series of "space bridge" shows with Russian TV host Vladimir Pozner, designed to promote understanding between the peoples of the United States and the Soviet Union. The host's own stand on abortion rights, the Equal Rights Amendment, and other feminist causes, identified him as one of TV's outstanding liberal voices.

Donahue's success continued into the 1980s and 1990s. In 1980, the divorced father of five married actress Marlo Thomas, best known for TV's *That Girl*. The couple had met several years earlier when Thomas was a guest on Donahue's program. The series relocated to New York in 1985, but the following year saw the first real challenge to Donahue's ratings dominance with the arrival of Oprah Winfrey. The pair battled for the position of TV's top daytime talk show host for a decade until Donahue announced his retirement in 1996. The final episode of his show was a national event.

After his departure, daytime TV sank into a mire of freak shows, fights, and shocking behavior. The intelligence, curiosity, and humane probing that characterized Donahue's approach were sadly absent in an era filled with hosts such as Geraldo Rivera, Jenny Jones, and Jerry Springer. Where Donahue had sought to inform and entertain, others set out to demean, to provoke and to shock—an unworthy tribute to Phil Donahue's ability to present often controversial subjects to the mass American audience which had once appeared

to mark the nation's growing willingness to confront previously taboo topics.

Donovan (1946—)

The rise and fall of British singer Donovan's career and popularity paralleled that of the 1960s counterculture. In the dreamy world of the late 1960s, the exotic and popular performer personified the earthly flower child. Appearing simultaneously wide-eyed and cynical, a little silly yet nobody's fool, and an intensely commercial hippie, he seemed to embrace antithetical categories in popular

Donovan (right) with his musical director, David John Mills.

culture. For five years between 1965 and 1970, he lived so close to the cutting edge of each new trend that it almost seemed as if he had initiated them. Then, with shocking rapidity, he became irrelevant, discarded—like the counterculture—by critics and audiences alike as passé and/or uncool. Yet, for a singer so identified with that specific time and world view, his best songs never lost either their catchiness or their ability to charm.

Donovan Leitch was born in an old section of Glasgow, Scotland, but his family moved to the outskirts of London in 1955. He learned the rudiments of music at folk enclaves in St. Albans, north of London and in the coastal artists' colony of St. Ives in Cornwall. At age 18 he began recording demo discs which were heard by talent scouts from the British rock television show *Ready Steady Go*, and he began appearing regularly on the program in 1965. Initially, Donovan's music was entirely acoustic and, while noting his English accent and more romantic attitude, critics labeled him "Britain's answer to Bob Dylan." In 1965, thousands of youngsters learned to play the guitar using the chords to his first hit, "Catch the Wind." Follow-up singles included the folksy "Colours," Buffy St. Marie's "Universal Soldier" (a standard of the anti-war movement), and a jazzy drug-tour of "Sunny Goodge Street," with one of the first explicit references to hashish in rock music. Donovan made his American debut at the Newport Folk Festival in 1965, the same year the crowd booed Bob Dylan for performing with electric accompaniment.

By 1966, the 20-year-old Donovan had shed his anti-bomb rhetoric and completely reinvented himself as a psychedelic troubadour of "flower power," the epitome of 1960s mysticism. With Mickie Most, his new producer at Epic Records (with whom he worked until 1969), Donovan kept the folk-like refrains of his songs, but added quirky pop instrumentation (sitar, flutes, cellos, and harps). His work in this period often exhibited wonderful musical inventiveness and a fine ear for a lyrical phrase, although he occasionally crossed the line into pomposity and pretension. His biggest hit, "Sunshine Superman," reached number one in July 1966 in both Britain and the United States, and remains one of the most engaging and innovative singles of the 1960s. The album of the same name also included drug favorites, "The Trip," and the ominous "Season of the Witch." Later that year, Donovan released "Mellow Yellow" (which reached the number two spot with lines whispered by Paul McCartney). Baby boomers everywhere debated whether the lyrics advocated smoking banana peels, although Donovan later claimed the song concerned an electric dildo. His subtle drug references endeared him to the hippie movement, though some complained that his songs were mawkish, the lyrics overloaded with images of trees, sunny days, and laughing children.

Donovan seemed omnipresent in the late 1960s, hanging out with the Byrds, the Rolling Stones, and Dylan, and parodied in Peter, Paul and Mary's "I Dig Rock 'n' Roll Music." The hits kept coming, including the druggie "Epistle to Dippy," and "Young Girl Blues," with its perfectly captured sense of rock ennui set off by the shocking-for-the-times sexual imagery. He was a "must" to headline the Monterey Pop Festival in 1967, but his visa was revoked due to a drug charge. He then traveled to India at the same time as the Beatles to study with the Maharishi Mahesh Yogi. Shortly thereafter, he publicly renounced drug use and requested that his followers substitute meditation for getting stoned. Donovan now appeared on stage in

flowing robes with love beads; one album cover depicted him, scepter in hand, in a ceremonial barge at England's romantic Bodiam Castle, a leaf-strewn lake in the foreground.

Nowhere was Donovan's versatility better displayed than in the hit singles he penned in rapid succession in 1968. His acoustic skill was featured in the sweet hymn to childhood, "Jennifer Juniper"; in "Wear Your Love Like Heaven," the soft, layered harmonies consisted of little more than the names of exotic colors, and the song later gained wide circulation as the ubiquitous advertising jingle for Love cosmetics. At the other end of the popular music spectrum, the drug/fairy tale imagery of the Top Ten hit "Hurdy Gurdy Man," featured Donovan's distinctive, tremulous intonation against layers of Jimmy Page's wailing guitars. Three-quarters of the future Led Zeppelin group played on the single, and they later used the same contrast between acoustic and electric sound to great effect.

Donovan's work continually displayed an original bent and a desire to move beyond traditional popular forms while retaining commercial appeal. "There is a Mountain," a hypnotic calypso-based song with lyrics inspired by Japanese haiku, reached the top fifteen in 1967, and he also borrowed successfully from West Indian traditions in "Rikki-Tikki-Tavi" (1970). In 1969, the unique, albeit bizarre story-song "Atlantis" was the last of his efforts to make the top ten. He also experimented with jazz-based sound, most noticeably in "Goo Goo Barabajagal (Love is Hot)," a searing collaboration with the Jeff Beck Group that marked the end of his string of popular hits.

Ironically, just as the singer-songwriter movement seemed to peak in the early 1970s, Donovan completely fell from commercial grace. A critical backlash intensified after he released a double album of children's songs, and the underrated album *Open Road* in 1970 failed to stem the decline. After his sparsely attended 1971 American tour, he became involved with movies, and wrote scores for, among others, Franco Zeffirelli's *Brother Sun, Sister Moon* (1973). His early 1970s albums met with mixed critical acclaim and declining sales. Among these was *7-Tease* (1974), a conceptual album about a young hippie and his search for inner peace, which also toured as a stage revue with some collaboration from David Bowie. By 1980 Donovan had ceased to be a concert attraction and lacked any major record company affiliation. He recorded only sporadically in the next decade.

After several inactive years, the musician enjoyed a minor renaissance in the 1990s. The spacey British dance band Happy Mondays brought Donovan back into favor by praising his work and touring with him. In 1991, they included an irreverent tribute to Donovan on *Pills 'n' Thrills and Bellyaches*; the hit album precipitated a flood of Donovan reissues. There was considerable interest in *Sutras*, Donovan's "comeback" effort in 1996, but the purely acoustic work, filled with cosmically sincere and occasionally cloying material, found no audience.

Donovan will undoubtedly be forever associated with naive psychedelia. This is unfortunate, because he was a consistently imaginative lyricist who pioneered novel sounds such as Caribbean forms long before such work became fashionable. His popular music career may have fit the typical rock star paradigm, but the best of his work remains uniquely original.

The Doobie Brothers

The Doobie Brothers, or "Doobies," are a California-based rock band, formed in 1970, whose most popular singles stand among the definitive songs in 1970s rock and roll. Their hits "Listen to the Music," "Long Train Running," "China Grove," and "Takin' It to the Streets" all possess the trademark upbeat, easygoing, Doobie Brothers sound, influenced by R&B and soul. Their two number one hits, "Black Water" (1975) and "What a Fool Believes" (1979) have become soft-rock classics. Not quite as original or as influential as the Eagles, the Allman Brothers, or Steely Dan, the Doobie Brothers must yet be counted among the best of the American light rock and country rock groups of the 1970s. Successful on stage as well as over the airwaves, they continued to tour after the peak of their popularity had passed, and still released occasional albums throughout the 1980s and 1990s.

Doonesbury

On October 26, 1970, Garry Trudeau's comic strip *Doonesbury* debuted in 28 newspapers around the United States, revolutionizing the language and cultural significance of cartoon art forever with its depth of focus, breadth of satirical targets, and richness of character development. From its roots as a *Yale Daily News* strip satirizing college life, *Doonesbury* expanded the horizons of its content and its popularity until, almost 30 years after its first national appearance, it was a feature in over 1,350 newspapers across the country.

Following on ground broken by Walt Kelly's *Pogo*, Trudeau challenged the definition of the comic page as escape and silliness by bringing sharp satire, social commentary, and adult issues into his strip. His heroes, and their quirky responses to the ups and downs of life in the late twentieth century, have stood the test of time, chronicling the changing priorities and dilemmas of the baby-boom generation from college into middle age. His style of cartooning, with its panels of complex artwork and extensive bubble-free dialogue, has been much imitated.

In the 1970s, the initial *Doonesbury* focus was on the inhabitants of an anonymous eastern college campus and its nearby Walden

commune. Conservative, gung-ho football star B.D. (a tribute to a real Yale athlete, Brian Dowling) and his loopy, girl-crazy roommate Mike Doonesbury formed the initial core of the strip. Soon they were joined by "Megaphone Mark" Slackmeyer, a campus radical, Calvin, a revolutionary Black Panther, and Zonker, a stoned, irreverent hippie. B.D.'s cheerleader girlfriend Boopsie, and her intellectual roommate Nicole have perpetual disagreements about women's liberation, while the clueless college president constantly tries to sidestep controversy. As time passes, Mike learns about economics, racism, and class when he tutors a savvy inner-city black kid, while B.D. takes his raging drive to win from the football field to Vietnam, where he is captured by Phred, a charming Viet Cong terrorist who teaches him something about the history of Vietnam and the absurdities of war. Those still left at school move to a communal house on idyllic Walden Puddle, where they are joined by still more refugees of the turbulent 1970. One such is Joanie Caucus, an older housewife who has left her stifling life and her husband behind to return to college, and becomes the spokesperson for women's liberation while she tries to get into law school.

Across the decades, these core characters, and many others, tracked the trends and current events of their time and place in history, graduating from college, surviving the yuppie years, and experiencing marriage, divorce, and parenthood. Through many thousands of ingeniously created panels, *Doonesbury* has offered complex insights into personal relationships together with incisive social commentary. Joanie Caucus, remarried to Washington, D.C. columnist Rick Redfern, bemoans the difficulty of non-sexist child rearing as her young son, holding the doll she gave him for Christmas as if it were the rifle she would never buy him, aims it straight at her. Radio talk-show host Mark Slackmeyer, still the leftist radical, comes out as gay late in the 1980s, but his boyfriend is a dyed-in-the-wool conservative who gets along with Mark's right wing father better than Mark ever did. The quandaries of everyday modern life ring true, as does Trudeau's ironic, wish-I'd-said-that dialogue.

Interspersed with the "personal" stories of the characters are direct visitations from public figures. A favorite *Doonesbury* scenario is a four-panel strip with the White House in each panel, unchanged except for dialogue. In these, presidents from Nixon to Clinton are effectively skewered by the words Trudeau puts in their mouths. In later years, with a technique possibly inspired by the icons of modern computer jargon, presidents and others have been represented only by meaningful icons—a floating feather for vice-president Dan Quayle, for example, or a buttery waffle for Bill Clinton, proving perhaps that a symbol may be worth a thousand caricatures.

One of the most powerful symbols Trudeau created is that of Mr. Butts, the talking spokes-cigarette for the tobacco lobby. Mr. Butts originally appeared in a troubled Mike Doonesbury's nightmares when Mike, by then an advertising agent, is asked to design a campaign to improve tobacco's image. The cynical Mr. Butts has reappeared frequently thereafter to lampoon the tobacco lobby, becoming a powerful image in the anti-smoking campaign. Indeed, *Doonesbury* has frequently been a catalyst for change as well as presaging events. Senator Bob Dole once called the strip the "best source for what's going on in Washington." In 1971, well before the conservative Reagan years, a forward-looking B.D. called Ronald Reagan his "hero." In 1984, almost 10 years before Congressman Gingrich became Speaker of the House, another character worried

that he would “wake up someday in a country run by Newt Gingrich.” Repressive laws in the wealthy town of Palm Beach, Florida, allowed people of color to be stopped regularly by police, and required domestic servants to register with local authorities. After the bright light of *Doonesbury*’s satire was focused on the town’s policies for a time, the laws were repealed.

Because of its mission to attack difficult issues and mock public figures, *Doonesbury* has always roused controversy. Many newspapers place the strip on their editorial page, considering it inappropriate for the comics, while others regularly pull individual strips when the content is judged too extreme. In the 1990s, when *Doonesbury* came out with a series of strips in support of legalization of marijuana for medical use, the attorney general of California railed against the strip and tried unsuccessfully to have it pulled from papers in the state. It is this hard-hitting political satire that earned Garry Trudeau the Pulitzer Prize for political cartoon commentary in 1975, the first time that honor had ever been conferred on a comic strip.

Trudeau, born into a family of physicians in New York City in 1948, came honestly by his gift for trouble-causing satire—his great-great-grandfather was driven out of New York because of the caricatured sculptures he made of his colleagues. Known for his avoidance of the press, Trudeau, an avid student and researcher of the U.S. political scene, also writes editorials and draws editorial cartoons for the *New York Times*. He has written film scripts, and the book for a Broadway musical of *Doonesbury* in 1983, though many critics did not think the cartoon translated well to the stage. He has also created *Doonesbury* television specials and a musical revue called *Rap Master Ronnie*, spoofing the Reagan years. For decades, he refused to compromise the principles of his creation by allowing merchandising, but he finally succumbed in 1998, when he permitted *Doonesbury* products to be sold, with all proceeds going to the campaign for literacy.

In 1988, when president George Bush said of Trudeau, “He speaks for a bunch of Brie-tasting, Chardonnay-sipping elitists,” he was simply referring to the most negative baby boomer stereotype of the 1980s, the pampered yuppie. But Trudeau’s strip speaks for more than the elite, clearly addressing a far wider audience than liberal Americans of a certain generation. *Doonesbury* fills a need in the American press for progressive readers who appreciate the demystification of complex issues through no-nonsense, direct language and humor. Though, by the late 1990s, many other comics had appeared that attempted to fill this need (even one especially for conservative readers), *Doonesbury* paved the way for these, and for a comics page that explores adult issues through humor. The characters who inhabit the panels of *Doonesbury* are old friends to its readers, and one of Trudeau’s great talents is his ability to make these characters—with the possible exception of faceless politicians—lovable to his readers. They keep reading to enjoy a cynical and satirical take on current events. And they keep reading to see how life is turning out for the old gang.

—Tina Gianoulis

The Doors

With their mix of music, poetry, theater, and daring, the Doors emerged as America’s most darkly innovative, eerily mesmerizing musical group of the 1960s. Founded concurrently with the English invasion, the college-educated, Los Angeles-based group stood apart from the folk-rock movement of Southern California and the peace and flower power bands of San Francisco. In exploring death, doom, fear, and sex, their music reflected the hedonistic side of the era. Writing for the *Saturday Evening Post* in 1967, Joan Didion called them “the Norman Mailers of the Top 40, missionaries of apocalyptic sex.” The group’s flamboyant lead singer, Jim Morrison, said, “Think of us as erotic politicians.” A seminal rock figure, Morrison’s dark good looks and overt sexuality catapulted him to sex symbol status, akin to that of Elvis Presley.

Morrison’s provocative stage presence, combined with the group’s mournfully textured, blues-rooted music, suggested the musical theater of Kurt Weill and Bertolt Brecht, and the edginess of the avant-garde troupe, The Living Theater. But the complicated, clearly troubled Morrison could not overcome personal demons, which he sated with drugs and alcohol. By late 1968, his frequently “stoned” demeanor became off-putting, his on-stage rants pretentious. His behavior at a Miami concert in March 1969, and his resulting arrest on charges including indecent exposure, represented not only his downfall but also the Doors’ looming disintegration. But if the group’s rise and fall was fast and furious, encompassing just four years, their anarchist influence is undeniable. Their hard-driving music bridged the heavy-metal 1970s; their murky, cerebral lyrics spanned the new wave 1980s, and the alternative 1990s, and Jim Morrison remains the undisputed forerunner of the sexy, leather-clad, on-the-edge rock martyr.

The Doors’ saga began in the summer of 1965 on the beach at Venice, California, where singer-musician Ray Manzarek ran into his former UCLA classmate, Jim Morrison. After listening to Morrison sing the haunting lyrics to a song he had written called “Moonlight Drive,” Manzarek proposed they start a band, and “make a million dollars.” Manzarek then approached two other musicians who were studying with him at a Maharishi meditation center. Thus, with Manzarek on piano and organ, songwriter Robbie Krieger on guitar, John Densmore on drums, and Morrison before the microphone, the group was in place. It was Morrison who came up with their moniker, derived from a William Blake passage, which had inspired the title of Aldous Huxley’s book about his mescaline experiences, *The Doors of Perception*. As paraphrased by Morrison: “There are things that are known and things that are unknown, in between [are] the doors.”

Working their way through the Los Angeles club scene, the Doors initially performed blues and rock ‘n’ roll standards, in addition to material written by Morrison. They were playing the London Fog on the Sunset Strip, making five dollars apiece on weeknights, ten dollars apiece weekends, when they were spotted by a female talent booker who was especially struck by the star quality of the lead singer. Hired to work the Strip’s popular Whiskey a Go Go, the Doors became the club’s unofficial house band, second-billed to groups including the Turtles, Them, and Love. During sets, the group was an anomaly; the four members appeared disparate, as if each were on a plane all his own, but their sound had a synchronicity. And there was no denying the allure of the group’s pretty-boy singer.

The Doors: (from left) John Densmore, Robbie Krieger, Ray Manzarek, and Jim Morrison.

In his earliest performances, Morrison was so introverted that he performed with his back to the audience. Some nights, his baritone was barely audible. However, his confidence grew with the group's reputation and, certainly, his stage presence was unique. He had languid body movements, tended to throttle the microphone, and often emoted with closed eyes as if in a spectral trance. Also, he could be counted on to be unpredictable. Sometimes he dropped to the floor to sob out his lyrics; other times he danced with abandon as if possessed. One night at the Whiskey in late 1966, he delivered an improvised rendition of his oedipal song, "The End." The eleven-and-a-half minute song climaxed with a young man's screaming threat to kill his father and rape his mother, but Morrison used a word other than "rape," bringing the entire club, including the go-go girls in hanging cages, to a stunned silence. That very night the Doors were fired. They would, however, ultimately have left on their own accord, for they already had a contract with Elektra Records.

Released in January 1967, their debut album *The Doors* included "Light My Fire," which, at six minutes and 50 seconds, was considered too long for Top 40 airplay. As the group toured nationally, a shorter version began climbing the AM charts; meanwhile, the full-length version became a favorite of FM. Eschewing the matching costumes that were then in vogue among music groups, the Doors also had no official leader, but in interviews, as well as on the stage, it was

invariably Morrison who took the spotlight. Shrewdly, the photogenic singer-songwriter exploited his rapport with the camera, as well as his appeal to journalists, who found him sensual, mystical, and eminently quotable. For the erudite rock star was also a poet, who read and quoted the nineteenth-century French poets Arthur Rimbaud and Charles Baudelaire, and German philosopher Friedrich Nietzsche. Moreover, when not waxing metaphysical or apocalyptic, Morrison could be surprisingly playful. When asked how he had prepared for stardom, he once quipped, "I stopped getting haircuts."

In his Elektra Records publicity biography, he claimed to have no family; in fact, he was the son of a Navy rear admiral, and from a family of career militarists. As a performer, Morrison assumed various alter egos. For a while, he called himself the "King of Orgasmic Rock," and as the "Lizard King" he donned tight-fitting snakeskin pants. He also claimed to be possessed by the spirit of a dead Indian, the result of a childhood trip across the desert. He and his family had once passed an overturned truck, which had resulted in fatalities, and Morrison claimed that the spirit of one of the dead Indians somehow entered him. He accessorized that persona by donning a concho belt, leather pants, and dancing in a ritualistic style.

But the role he played to the hilt was that of the rebel. When the Doors appeared on *The Ed Sullivan Show* in September 1967, Morrison defied the famed host's request that a particular line, with

possible drug connotations, be deleted from "Light My Fire." Three months later, the singer made headlines when he was arrested on stage in New Haven, Connecticut, on charges including "breach of the peace" and indecent and immoral exhibition. In August 1968 he was again arrested, this time for disorderly conduct on board a flight to Phoenix.

Increasingly, Doors concerts became known for their dangerous atmosphere, as an incorrigible and no-longer-slender Morrison staggered across the stage, taunting the audience, inciting them to riot, screaming at them to "Wake up!" He also clutched at his crotch and tugged threateningly at his pants. The Doors were in a slump when they embarked on a 21-city tour in March 1969 and, following the arrest of the bloated, bearded Morrison in Miami, the rest of the tour was canceled. The group's symbiosis was on the wane when they recorded their blues-oriented collection, *L.A. Woman*. Afterward, it was a burned-out Morrison who headed for Paris to concentrate on his poetry. He was just 27 when he died on July 3, 1971, reportedly of a heart attack suffered while in the bathtub. Because of Morrison's penchant for substance abuse, and the curious handling of his death and burial by several close friends, questions persist over how he actually died. Since his body was found by his common-law wife, who died in 1974 of a heroin overdose, there have long been allegations that drugs were a factor. Whatever the cause, his death was yet another reminder of the perils of the dark side of rock 'n' roll. It was also the third untimely passing of a rock star in less than a year, following those of heavy metal guitarist Jimi Hendrix and rock-blues queen Janis Joplin, both of whom died of overdoses.

Following Morrison's death, the surviving Doors recorded two additional albums. Manzarek also sought to reinvent the group, with Iggy Pop as lead singer, but it was clear that the magic had died with Morrison. It was Morrison's mystique that led to a Doors rediscovery that has enshrined the rock star as a modern-day Dionysus, the Greek god of revelry and wine who was dismembered, and later resurrected. The 1980 rock biography, *No One Here Gets Out Alive*, by rock journalist Jerry Hopkins and Doors associate Danny Sugerman, spurred on the revival, and sent other biographers in search of similarly debauched rock subjects. And the 1980 reissue of the Doors' *Greatest Hits* album, which entered *Billboard's* Top 10 Chart, proved that defunct groups can sell as well as those still active. *Rolling Stone* acknowledged the power of dead celebrity with its September 1981 Morrison cover story, proclaiming "He's hot, he's sexy and he's dead." Hollywood heralded Morrison in 1990 when a decade-long quest to make a feature film was realized by controversial filmmaker Oliver Stone, with the movie *The Doors*, starring Val Kilmer.

In the era of incarnations that dawned in the 1990s, Morrison was depicted as a poet trapped in a self-created rock star image. He is, after all, buried in Pere La Chaise Cemetery, the famous final resting-place in Paris of such notables as Edith Piaf, Oscar Wilde, Honoré de Balzac, and Frédéric Chopin. Moreover, the poetry he self-published in 1970 was republished in the late 1980s and during the 1990s. His writings have also been the subject of scholarly studies, including one in which he is compared to his idol, the French symbolist, Rimbaud.

Yet if the Doors' spotlight remains on Morrison, his musical legacy came from his collaborative work with Manzarek, Krieger, and Densmore. Benchmarks of the 1960s Doors songs—among them "Light My Fire," "Hello, I Love You," "Touch Me," "Love Her Madly," "People Are Strange," and "Riders on the Storm"—have

remained accessible. Staples of the airwaves, they attest to the power of provocative music, and to the seemingly-enduring interest wrought by the potent combination of sex, drugs, and rock 'n' roll.

Doo-wop Music

"Doo-wop" is a form of close-harmony singing, based in rhythm-and-blues. The style became popular in the 1950s, originating among African-American vocal groups in urban centers. One of the most common rhythm phrases used by 1950s groups in performance and on their recordings, "doo-wop" came to name the musical style. To sing in the doo-wop style, phonetic or nonsense words are used as rhythmic parts in harmonic arrangements. Usually this is done by a trio or quartet of vocalists, over which a soloist sings a melody. The melody is expressed through understandable words, often accented by the nonsense words of the vocal accompaniment. By the end of the 1960s, doo-wop groups were losing popularity. Yet rock 'n' roll musicians would often use doo-wop for their background vocal arrangements, and in this way the style continued to develop beyond the 1950s and to exert its influence on popular music.

Dorsey, Jimmy (1904-1957)

In the 1920s, Jimmy Dorsey toured with the Paul Whiteman and Red Nichols bands, and was considered an excellent clarinet performer and the leading jazz performer on alto saxophone, influencing such

Tommy (left) and Jimmy Dorsey

jazz greats as Charlie Parker and Lester Young. He and his brother, Tommy, founded the Dorsey Brothers Orchestra 1933, starring Glenn Miller on trombone and Ray McKinley on drums. After Tommy left to form his own orchestra in 1935, Jimmy Dorsey led the band to national stardom in the 1940s, featuring the popular singing duo of Helen O'Connell and Bob Eberly. The song "Green Eyes," as sung by O'Connell, was the band's most requested number. In 1953, the brothers reunited.

Dorsey, Tommy (1905-1956)

A trombone-player known for his warm, silken tone on ballads as well as upbeat improvisations, Tommy Dorsey, "The Sentimental Gentleman of Swing," led one of the most versatile orchestras of the big band era. With its premier jazz stars, the band could swing with the best, and none equaled its style on slow ballads, as sung by Frank Sinatra and Jo Stafford.

By age 25, Tommy had become a successful free-lance radio and recording star, and in 1933 he and his brother Jimmy formed the Dorsey Brothers Orchestra. Within two years Tommy left to start his own orchestra. His band's best-selling record was the swinging *Boogie-Woogie*, selling over four million copies, but the most requested number was the poignant "I'll Never Smile Again." The brothers reunited in 1953.

Double Indemnity

Double Indemnity (1935) is one of the classic, tough-talking murder stories of the late 1930s. Written by controversial mystery novelist James M. Cain (1892-1977), *Double Indemnity* is based upon a true story about a weak-willed insurance agent, Walter Huff, who falls for sultry blond, Phyllis Nirdlinger. Nirdlinger's inconvenient husband has to be eliminated so that his wife and her lover can collect on his life insurance, a policy which doubles in value if the holder dies by accident.

Like *The Postman Always Rings Twice*, upon which it is modeled, l'amour fou, or sexually charged obsessive love, is at the heart of this psychologically realistic novel. Cain, along with, for example, Raymond Chandler and Dashiell Hammett have been called, perhaps unjustly in Cain's case, members of the hard-boiled school of detective novelists. Edmund Wilson has referred to them as "the poets of the tabloid murder" because of their interest in the low life aspects of American culture, and the often sordid stories of murder, eroticism, and adultery that fascinated them.

Unlike Chandler, with whom he has been compared (and who wrote the screenplay for the film version of *Double Indemnity*), Cain's writing is deeply pessimistic and far less romantic. His characters are terribly flawed yet very human in their failings, and the eroticism of many of his novels made them controversial in their day. Cain's interests and lean writing style also made him stand apart from much of the popular writing of his time. His gritty, downbeat, stories, like *The Postman Always Rings Twice*, *Mildred Pierce*, and *Double Indemnity* had a pictorial quality which made them attractive for adaptation to the movies. All, however, underwent considerable sanitation before the more censorship-plagued Hollywood studios could make them into films.

In the case of *Double Indemnity*, the novel ends with Huff and Phyllis on a freighter going nowhere in particular, unable to return to the United States because of their murderous pasts, and contemplating suicide by jumping off the boat into shark infested waters. As Phyllis says, "There's nothing ahead of us, is there Walter." And Walter replies, "No, nothing." This existential gloom did not survive in the film version where Walter, after narrating his sordid tale of adultery and betrayal, lies dying from a gunshot wound inflicted by, perhaps, Phyllis, who he has murdered a few hours before.

Billy Wilder turned the novel into a convention-setting film noir in 1944, starring Fred MacMurray, Barbara Stanwyck, and Edward G.

Barbara Stanwyck and Fred MacMurray in a scene from *Double Indemnity*.

Robinson. Told in a confessional flashback by the dying insurance agent, Wilder's more cynical, but less gloomy version, helped establish flashback—first person narration as a convention in film noir. The unconventional casting of Fred MacMurray, who was noted for his roles in comedy, helped the audience identify with the amoral, but ruthless Huff, who is now called Walter Neff.

In the film version, the first person narration helps to draw the audience into a morally complex position where they viscerally experience the amoral world in which Neff and Phyllis operate—we see the events unfold through his eyes. To put the spectator on edge, Wilder sets the rigid and righteous Barton Keyes (Edward G. Robinson), an insurance investigator and Neff's boss and friend, up against the Neff character, giving the audience a choice between identifying with a slippery, ruthless, and greasily charming insurance salesman or his cold and obsessive nemesis. As in Alfred Hitchcock films, the audience becomes ethically involved with the criminals hoping that they will elude the ever present, relentless Keyes. With its raw, more naturalist flavor, and serious, unsentimental prose the novel makes identification with the characters more difficult. Thus in the film

when Neff sets out to kill Phyllis, the audience is uncomfortably aware that they have identified with a hero who is a callous and brutal loner.

—Jeannette Sloniowski

Douglas, Lloyd C. (1878-1951)

With the publication of *The Robe* in 1942, Lloyd C. Douglas became the most influential religious novelist in the world. Following in the tradition of Lew Wallace's *Ben Hur* (1880), Douglas' novels satisfied a reading public's demands for rollicking adventure and historical romance, combined with piety. *The Robe* purports to tell what happened to the Roman soldier who acquired Jesus' garment at the Crucifixion. After many adventures, this soldier meets St. Peter and accepts Christianity, later to die a happy martyr's death. Douglas, who retired from the Congregational ministry to write, never pretended his novels were refined works of literature. He graciously suffered the attacks of reviewers, who found him loquacious and sentimental. Yet he proved incapable of writing a book that did not become a best seller; the public loved his vintage narratives of decent characters who worked through problems to happy resolutions. In 1953, Henry Koster directed a major Hollywood film adaptation of *The Robe* which is still highly regarded. Douglas' continuing though diluted influence may be seen in books by Fulton Oursler, Taylor Caldwell, and Frank G. Slaughter.

Douglas, Melvyn (1901-1981)

Although he acted in motion pictures from the early 1930s to the late 1970s, Melvyn Douglas was never especially fond of most of the more than three score and ten movies in which he starred. He much preferred the theater and returned to the stage whenever he got the chance. A versatile actor, he excelled in both dramatic and comedy roles. He appeared in horror films, mysteries, and melodramas, but is best remembered for playing opposite Greta Garbo in the comedy *Ninotchka* (1939). Later in his screen career, when he'd ceased doing dapper leading man roles and was showing up in character parts, Douglas earned two supporting actor Oscars. A dedicated liberal, he was active in politics and his wife, Helen Gahagan Douglas, ran against Richard Nixon for the United States Senate but was defeated.

Born Melvyn Hesselberg in Macon, Georgia, he grew up in the Midwest. He served in the Army during World War I, but never went overseas—"The closest I personally came to death was in the kitchen, narrowly avoiding a meat cleaver thrown at me by a furious

cook," he remembered in *See You at the Movies*. After the war, he joined his family—his father was a modestly successful concert pianist—in Chicago. Douglas hadn't yet picked a career and had "no idea what to do with my life." By the early 1920s he'd decided on the theater and was touring the Midwest. After several years of this, with an assortment of companies, he reached Broadway in 1928 in *A Free Soul*. He played the gangster, a role that made Clark Gable a star when he appeared later in the movie version.

Melvyn Douglas's work in the 1930 Broadway comedy *Tonight or Never* changed his life in two important ways. It was in the play that he first met Helen Gahagan, his costar, and fell in love with her. And when the play was filmed, Douglas repeated his role in Hollywood. He went on to make several films in the early 1930s, including *The Vampire Bat* (1933), *The Old Dark House* (1932), and *As You Desire Me* (1932), in which he first starred opposite Garbo. Unimpressed with the movie business, the actor left Hollywood for a time to return to the New York stage. "I had gotten disgusted with being photographed at close range," he later explained, "with a microphone down my throat."

He soon was lured back to Hollywood and began working again in a wide variety of films. He played such reformed rogues as the Lone Wolf and Arsene Lupin and a range of sleuths in mystery movies such as *Fast Company* (1938), *Tell No Tales* (1939), and *There's That Woman Again* (1939). He also began to shine in a successful string of screwball comedies. He worked opposite Irene Dunne in *Theodora Goes Wild* (1936), with Marlene Dietrich in *Angel* (1937), and with Myrna Loy in *Third Finger Left Hand* (1940). In 1939 he made Garbo laugh in Ernst Lubitsch's *Ninotchka*.

Douglas said that he didn't become politically active until "just before Roosevelt's reelection in 1936." His wife was a singer as well as an actress and he'd accompanied her on a tour that took her to Germany. Once they saw Hitler's campaign against the Jews firsthand, Helen Douglas cancelled her tour and they returned home. Melvyn Douglas joined the Hollywood Anti-Nazi League, worked for the rights of migrant workers, campaigned for the Democratic candidate for governor, and in June of 1938 he organized the Motion Picture Democratic Committee, the earliest group of movie people to campaign for a specific political party. Never a Communist, Douglas found himself attacked by the local members of the party when he called Russia as big a totalitarian threat as Germany and Italy. And for his criticisms of Nazi Germany he was labeled a "premature anti-Fascist." When Helen Gahagan Douglas ran against fledgling politician Richard Nixon for the U.S. Senate in 1950, some of Nixon's campaigners introduced a strong note of anti-Semitism. And in speaking of his opponent, the future President of the United States would often refer to her as Mrs. Hesselberg. One of Nixon's more extreme supporters, the racist Gerald L. K. Smith, told his followers that they must "not send to the Senate the wife of a Jew."

During World War II Douglas enlisted in the Army and was eventually stationed in the China-Burma-India war area. He returned to the movies after the war—notably in *Mr. Blandings Builds His Dream House* (1948) with Cary Grant and Myrna Loy. But after 1951, he concentrated on the stage again, winning a Tony for his performance in Gore Vidal's political drama, *The Best Man*. Older, and letting his age show, Douglas reentered motion pictures once again in the early 1960s. He made over a dozen films in his last years, including *Hud* (1963) for which he won his first Oscar, and *Being There* (1979) for which he won his second.

Douglas, Mike (1925—)

Daytime television talk show host Mike Douglas personified mainstream popular entertainment during the 21-year run of *The Mike Douglas Show* from 1961 to 1982. The show, which initially originated from Cleveland, Ohio, and later moved to Philadelphia, Pennsylvania, was a 90-minute syndicated program that dominated the ratings during the important weekday afternoon/early evening time slots. Douglas served as an affable Midwestern everyman who welcomed guests from show business, politics, and current events. Unlike many daytime shows of the 1990s, which focused primarily on confrontations between outrageous and often vulgar guests, *The Mike Douglas Show* offered viewers a mixture of thoughtful conversation and wholesome entertainment. Douglas once described his personality and appeal to the mass audience by stating, "I'd have to say I'm square and I'm happy that I am." His charming "Mr. Nice Guy" image made him the quintessential TV host and encouraged such personalities as Marlon Brando, John Lennon, Barbra Streisand, Rose Kennedy, and Princess Grace of Monaco to choose his program for their rare talk show appearances.

Born Michael Dowd on August 11, 1925, in Chicago, Illinois, Mike Douglas served in the Navy during World War II and first attracted attention with an impromptu singing performance while visiting the famous Hollywood Canteen. His rendition of "When Irish Eyes Are Smiling" so impressed nightclub manager Earl Carroll that the young sailor was given a standing offer of a job as a singer as soon as he was free to take it. However, upon leaving the service in 1945, Dowd turned down Carroll's offer and a Hollywood film contract to join Kay Kayser's big band as a featured male singer. For five years Douglas, whose professional name was bestowed upon him during a performance by Kayser, sang on both the radio and television versions of *Kay Kayser's Kollege of Musical Knowledge*. Among his most popular songs with Kayser and his own spin-off group Michael Douglas & The Campus Kids were "Ole Buttermilk Sky" (1946) and "The Old Lamplighter" (1947). Upon Kayser's retirement in 1950, Douglas began a solo singing career. His most noteworthy performance of this period occurred when he provided the singing voice for Prince Charming in Walt Disney's animated fairytale classic *Cinderella* (1950).

Douglas moved into television in the early 1950s and appeared on numerous programs originating from Chicago. In 1961, he arrived in Cleveland to launch his own talk show. Westinghouse, which syndicated the Douglas show, owned KYW-TV in Cleveland and believed it would be most cost-effective to originate the program from those facilities. Later, an FCC ruling on a legal technicality forced Westinghouse and NBC to swap their stations in Cleveland and Philadelphia. In 1965, Douglas and his successful program relocated to Philadelphia's Independence Mall. Each episode of *The Mike Douglas Show* began with Douglas singing an opening number (most often "On a Wonderful Day Like Today") and then commenting on his personal life with his wife Genevieve and their three daughters.

He then welcomed various guests and participated in comedy-variety segments.

One of the most noteworthy elements of the *Douglas Show* was the inclusion of a celebrity guest co-host each week. Performers such as Rosemary Clooney, Jim Nabors, Fred Astaire, Gene Kelly, and Gloria Swanson would join Mike in this role for five days. Perhaps Douglas's most unconventional co-hosts were John Lennon and Yoko Ono, who appeared for a week in February 1972. The couple introduced Douglas and his Middle American audience to such counterculture figures as Jerry Rubin, Black Panther Bobby Seale, and several segments of performance art. Highlights of the unusual week included Lennon playing with his rock idol Chuck Berry and Douglas joining the couple in an unrehearsed segment where they phoned strangers to say they loved them.

Mike Douglas symbolized family entertainment during the turbulent 1960s and 1970s. He was extremely popular and prominent on the American scene. Beyond his own afternoon program, he often substituted for Johnny Carson on *The Tonight Show*. Douglas even produced a hit record, "The Men in My Little Girl's Life," a song about fatherhood that reached number three on the *Billboard* charts. He was even seen on the big screen when he made a cameo appearance as a southern governor in the Burt Reynolds film *Gator* (1976). After *The Mike Douglas Show* ceased production in 1982, the host moved to the fledgling CNN cable network to briefly host an interview show. Douglas remained out of the spotlight until 1996 when he made a special guest appearance during the premiere week of *The Rosie O'Donnell Show*. Rosie O'Donnell credited Douglas as the inspiration for the positive, entertainment-based, and family-friendly show she hoped to create. Her great success in the late 1990s proved the daytime talk show format pioneered by Mike Douglas still resonated with many Americans.

—Charles Coletta

Downs, Hugh (1921—)

Throughout his more than sixty years in broadcasting, Hugh Downs has been the embodiment of reassurance and congeniality. Learning his craft as a radio announcer in the late 1930s and 1940s, Downs became the master host of television. After serving as announcer on *Caesar's Hour* and *The Tonight Show*, Downs simultaneously hosted an early morning series, *Today*, and a daily game show, *Concentration*. Always curious about health and science, Downs oversaw the first successful series on aging, *Over Easy*, for PBS. When the magazine series, *20/20*, was floundering, ABC lured the affable Downs out of semi-retirement to anchor the show in 1978. He reported on many of his special interests, including sailing, psychology, and astronomy, for *20/20*, helping to make it the network's signature primetime newsmagazine for over two decades. Because of his decency and trustworthiness, Downs is one of the most familiar and reassuring figures in the history of television, clocking more

hours on the air than any other network personality according to *The Guinness Book of World Records*.

Doyle, Arthur Conan (1859-1930)

So great is the influence of Sherlock Holmes, that only the truest of the great detective's fans know that his creator, Arthur Conan Doyle, thought far less of Holmes than he did of his other creative efforts. For Doyle was not a stock-in-trade mystery writer, a genre that was still finding its legs. He certainly had not "invented" the genre of detective fiction, a privilege that belonged to Edgar Allan Poe and his own creation, master detective August Dupin. Although Doyle claimed that Holmes had been modeled on his medical school teacher, Dr. Joseph Bell, the writings of Edgar Allan Poe, as well as Emile Gaboriau, Charles Dickens, Eugene Vidocq, and Wilkie Collins, were what provided Doyle with the basic elements for building his mythic detective.

Arthur Conan Doyle was born on May 22, 1859 in Edinburgh, the eldest son of Charles Altimont Doyle and his wife, Mary Foley. Doyle's father, a builder and designer in the Edinburgh Public Works

Arthur Conan Doyle

Office, was from a staunchly Catholic family. In 1869, Doyle was enrolled in Hodder Preparatory, a Jesuit school in Lancashire. Two years later he attended the Jesuit college, Stonyhurst School, also in Lancashire. Upon graduating, he traveled to Austria, where he spent a year studying German in Feldkirch School before entering Edinburgh University in 1876 to study medicine. Despite his Jesuit education, Doyle's year in Austria proved a major turning point, as a crisis of faith led him to abandon his Catholic upbringing for a studied agnosticism. This change in religious perspective, based on his own faith in scientific reasoning, prepared Doyle for the rigors of medical school.

Interestingly, it was Doyle's avowed agnosticism and unwavering commitment to honest dealing that led to his becoming a writer. After he informed his father's well-to-do family of his religious disillusionment, all social and financial help was withdrawn. Barely able to support himself, Doyle turned in his third year in medical school to writing fiction for extra cash, using as material his own adventures serving while in school as a ship's doctor on a whaling vessel to the Antarctic and later on an African freighter. Between the few stories he published, which paid just enough to keep him and his family afloat, Doyle racked up a good number of rejections before achieving steady work as a writer.

In 1882, Doyle established a private practice in Southsea, Portsmouth. Three years later, he married Louise Hawkins, whose own small family income offered him greater freedom to write more. His first novel, *The Firm of Girdlestone*, written in 1886, was soundly rejected by the British publishing industry and did not see publication until 1890. His next work was his first Sherlock Holmes story, the novella *A Study in Scarlet*, which after several initial rejections, was published in the 1887 issue of *Beeton's Christmas Annual*. Despite Doyle's faith in the quality and originality of the story's hero, *A Study in Scarlet* gained little notice among readers. His next novel, however, *Micah Clarke* (1889), caused a great stir after its publication—following the usual round of rejections by British publishers—by Andrew Lang, as chief editor at Longmans Publishing Company. *Micah Clarke*, a story about the dangers of fanaticism, was Doyle's first work of historical fiction and an immediate success, propelling the author into literary stardom in England.

Meanwhile, despite the poor showing Holmes had made in his creator's home country, Doyle's detective fared quite well in the United States, where a request for another story about the master detective was made to Doyle while he was deep in his next historical novel, *The White Company* (1890). As soon as Doyle had completed *The White Company*, which was to be his personal favorite, he dashed off *The Sign of Four* (1890) which was, once again, well received in America. Fortunately for Doyle, Holmes' stock, despite his poor initial showing, was beginning to rise in England by leaps and bounds. In July 1891, Doyle wrote his first of six Sherlock Holmes tales for *The Strand*, making Doyle England's most popular serialized fiction writer. Doyle continued to write Sherlock Holmes stories over the next two years until he decided to have Holmes killed by his arch-nemesis, Dr. Moriarty, in December 1893, with the story "The Final Problem."

Doyle's decision was a momentous one. Holmes' death was met with howls of outrage and large-scale subscription cancellations of the magazine. The pressure on Doyle was enormous to continue the series, but he was adamant about letting Holmes rest in peace. As it was, the production of a Holmes story for serial publication proved to be an enormous strain on Doyle's creative powers, draining precious energy that he thought better spent on his now little known historical

novels, such as *Rodney Stone* (1896) and *Uncle Bernac* (1897). In the early 1900s, Doyle added to his output two works of historical nonfiction, *The Great Boer War* (1900) and *The War in South Africa* (1902), which sought not only to document the Boer War but to defend the British role in it.

In 1901, Doyle published *The Hound of the Baskervilles*, in which Holmes was reintroduced to solve one of his older cases. By 1903, Doyle had accepted an American offer of \$5,000 per story for a series of new tales about the great detective, regardless of how many Doyle wrote or how often. Doyle continued to write stories of Holmes and his companion Watson over the next 20 years, although they tended to appear in short bursts, when they appeared at all. After Holmes' resurrection, Doyle's early passion for historical fiction sought an outlet in other genres, such as the scientific romance, resulting in the writing of *The Lost World* (1912), *The Poison Belt* (1913), and *The Land of Mist* (1926). Concurrent with these began a spate of Spiritualist works that included *The New Revelation* (1918), *The Vital Message* (1919), *The Wanderings of a Spiritualist* (1921), *The Coming of the Fairies* (1922), and the two-volume *History of Spiritualism* (1926).

Many consider Doyle's turn to spiritualism at the end of his life one of the strangest events to occur in the life of a man whose greatest creation was a detective who drew his conclusions from a hard and cold reality that disavowed all things supernatural. Few, however, recognize the important nuances in Doyle's thoughts about spiritualism, as well as the nuances within the spiritualist movement itself, which sought to treat spirits as a scientific reality, a view that Doyle favored. Doyle, after all, was an agnostic, not an atheist, and there is little doubt that notwithstanding his medical training and belief in scientific method, he remained unable to reconcile the loss of his childhood Catholic faith with his belief in a greater good that directed human conduct and morals. Indeed, Holmes' own work as a detective of "setting the world to rights" suggests a moral imperative that is explained more by Doyle's faith—in goodness, in man, and perhaps even in God—than his reason.

Dr. J

See Erving, Julius "Dr. J"

Dr. Jekyll and Mr. Hyde

The phrase "Dr. Jekyll and Mr. Hyde" is a popular metaphor to express the dual nature of human beings, who are capable of such

great goodness and almost unbelievable evil. It is derived from the respectable Victorian doctor with a demonic alter ego who first appeared in the eponymous novella (1886) by Scottish writer Robert Louis Stevenson (1850-94). The tragedy of the scientist who finds the formula to isolate his evil side but fails to control it has been frequently transferred to the screen. The story was first filmed in 1908, and versions range from Robert Mamoulian's 1931 film, with Academy Award-winner Fredric March in the title role, to Stephen Frears' irregular *Mary Reilly* (1995). However, the presence of Jekyll and Hyde can be detected in many other films, novels, and comics of the last one hundred years only remotely inspired by Stevenson. Stories dealing with scientists involved in fatal accidents, tormented serial killers, and even secret superheroes are ultimately indebted to Stevenson's Gothic masterpiece.

Dr. Kildare

In 1938 Metro Goldwyn Mayer (MGM) acquired the rights to author Max Brand's creation, *Dr. Kildare*, and began a series of popular films about a young intern in a metropolitan hospital, and his struggle to learn his profession and earn the respect of a crusty senior doctor in his specialty, internal medicine. In 1961 the same characters, with different actors, made a nationwide success of the television adaptation of *Dr. Kildare*, becoming the forerunner of the many medical dramas, like *ER* and *Chicago Hope*, that lit up the small screen in the 1990s.

In the cinema version, Lew Ayres starred in the title role and Lionel Barrymore played the senior doctor, a sharp-tongued old curmudgeon with a heart of gold, which he tried to conceal. The first in the series, *Young Dr. Kildare* (1938), presented a cast of regular characters that included Nat Pendleton as the ambulance driver and featured Laraine Day, who stayed in the troupe for five pictures. MGM released three Kildare pictures in 1940 alone, including *Dr. Kildare Goes Home*, *Dr. Kildare's Crisis*, and *Dr. Kildare's Strange*

Case. Dr. Kildare's Wedding Day, Laraine Day's last in the series, was one of the most popular and was marked by one of Red Skelton's early screen appearances. Lew Ayres, who had chosen to be a conscientious objector and refuse certain military duties, left the cast in 1941. Van Johnson and Keye Luke vied to become Dr. Gillespie's assistant in two films, *Dr. Gillespie's Criminal Case* and *Dr. Gillespie's New Assistant*.

Finding the right stars to play Kildare and Gillespie on television was a challenge. The first pilot shot for the series had Lew Ayres return to his role as a more mature Kildare, but executive producer Norman Felton said "The result was a clinical sort of film, too much like a documentary." They decided on a second pilot and quickly signed Raymond Massey, a Canadian actor famous for his portrayal of Lincoln, as Dr. Gillespie. More than 35 actors read for the Kildare part, and William Shatner was the leading contender for the role until he canceled out to accept the Captain's chair in a new science fiction series called *Star Trek*. One of the remaining actors was a nervous newcomer named Richard Chamberlain, who had done a few minor television roles and was then collecting \$38 a week at the unemployment office. Despite his lack of experience, the producer thought he had just the right physical appearance and decided to let him take the lead in the pilot film.

The show was an overnight success, and Chamberlain found himself the object of mobs of squealing women wherever he went. His boyish blond looks attracted 4,500 fan letters a week. The character of Dr. Kildare, however, a medical crusader and straight-arrow idealist, did not entirely appeal to Chamberlain. He told an interviewer in the *Saturday Evening Post* that Kildare is "nobler than humans prefer other humans to be. If I were to mold Kildare, I would make him more subject to faults and weaknesses—like the rest of us. I might even have him pinch a nurse or two." It was an attitude Dr. Gillespie would not have endorsed.

Despite the development of the show into a world-wide hit, with more than 80 million admirers around the globe, the series ended in 1966 after a five year run. Toward the end, the ratings declined somewhat as the show strayed from the key relationship between Kildare and Gillespie and focused more on the medical problems of its guest star patients. During the final season, some of the episodes were serialized in a 30 minute format rather than continuing in the hour-long version that had been so effective. Following the show's demise, Chamberlain, rather than being forced to return to the unemployment line as he feared, went on to become the "king of the miniseries" in the 1970s and 1980s, starring in such blockbusters as *Shogun*, *The Thornbirds*, and *Centennial*.

In 1972 MGM tried to revive the series in a new format called *Young Dr. Kildare*, starring Mark Jenkins as Kildare and Gary Merrill as Gillespie, but the series had a brief run, followed by a short after-life in syndication. Many have commented on the coincidence that two of the most successful medical shows ever to air on television arrived in the year 1961, with *Ben Casey* premiering four days after *Dr. Kildare*.

Dr. Seuss (1904-1991)

Author, illustrator, editor, and publisher, Dr. Seuss revolutionized materials directed at young readers by introducing humorous, rhymed, and colorful books using limited vocabularies and simple, appealing illustrations. Uniquely inventive in the annals of twentieth-century children's books, Seuss openly acknowledged that helping to kill off the predictable "Dick and Jane" primers of the 1950s was one of his proudest accomplishments. The bizarre creatures of his stories, which contained subtle moral messages that could be read on different levels, often acted with what their author termed "logical insanity." For example, if an animal had two heads, he must also have two toothbrushes.

Twice-married but childless, Seuss had not started out to be a children's book innovator. He was born Theodor Seuss Geisel in Springfield, Massachusetts, the son of a German immigrant who ran a brewery until the arrival of Prohibition. He later commented that his father was on track to become company president until circumstances forced him to switch his careers and become commissioner of parks. This helped instill an early cynicism in the future Dr. Seuss, while his frequent trips to the zoo thereafter helped to stimulate his fertile imagination.

Theodor "Dr. Seuss" Geisel

His mother, Henrietta Seuss Geisel, unwittingly lent him her maiden name, which he first used when writing a humorous scientific piece. While reading for a B.A. in English from Dartmouth, Seuss contributed to the school humor magazine, *Jack O'Lantern*, then studied literature for one year at Oxford. Returning to the United States in 1927, Seuss sold cartoons to the *Saturday Evening Post*, *Judge*, and *Vanity Fair*. He always considered himself to be an artist first and an author second. This belief received some confirmation in many of his books for which he initially drew sketches, afterwards devising dialogue to accompany them. When he later wrote books without illustrating them himself, Seuss used the pseudonym Theo LeSieg (Geisel spelled backwards.)

Seuss composed advertising illustrations for Standard Oil of New Jersey for 15 years after a company executive saw his cartoon of a knight trying to kill dragons with the insecticide Flit. This led to one of the 1930s most famous ad slogans, "Quick, Henry, the Flit." In 1932, Seuss wrote an ABC book for children but could not find a publisher. In 1936, while crossing the Atlantic by ship, he composed *And to Think That I Saw It On Mulberry Street* in rhyme inspired by the rhythm of the vessel's engines. About a boy whose imagination transformed a horse and wagon into various beasts, the book became his first published monograph, bought by Vanguard Press after some 20 other publishing houses had turned it down.

Vanguard also published his next book, *The 500 Hats of Bartholomew Cubbins*, in 1938. Seuss then moved on to Random House, where he remained for the rest of his life, founding its Beginner Books division in 1958. The year 1939 witnessed both *The King's Stilts* and Seuss's only novel, *The Seven Lady Godivas*, a commercial failure and one of only two books he wrote for adults. From 1940 to 1942, he worked as a political cartoonist for the anti-isolationist *PM* newspaper, revealing both his political concerns and his preference for drawing. The perennial favorite *Horton Hatches the Egg* appeared in 1940. Critics variously regard this first Horton book as a parable about the virtue of intervening in crises, about protecting unborn life, about perseverance and integrity, or as just an amusing story.

During a stint in the army Seuss worked with Warner Brothers cartoonist Chuck Jones (who later brought *How the Grinch Stole Christmas* to television) on training films. He also collaborated on documentaries in the Army Signal Corps with film director Frank Capra, from whom he learned the importance of plot development, and one could argue that the triumph of physically weak protagonists and the essential goodness that Seuss saw in most people reflect a Capraesque sensibility. Seuss garnered three Academy Awards in his lifetime: for two documentaries, *Hitler Lives* (1946) and *Design for Death* (1947, about the Japanese people), and for his animated cartoon *Gerald McBoing-Boing* (1951).

His postwar book production continued with *McElligot's Pool* (1947), *Thidwick the Big-Hearted Moose* (1948), *Bartholomew and the Oobleck* (1949), *If I Ran the Zoo* (1950), *Scrambled Eggs Super!* (1953), *Horton Hears a Who* (1954), *On Beyond Zebra* (1955), *If I Ran the Circus* (1956), and *How the Grinch Stole Christmas* (1957). But the debut of *The Cat in the Hat* in 1957 was the event that established Seuss's reputation. Produced as a supplementary first-grade reader with a controlled vocabulary of 223 words, it was the tale of a mischief-maker who teaches children to misbehave while their mother is away. Its success allowed Seuss to establish Beginner Books.

According to E. J. Kahn, Jr., writing in a December 1960 issue of *The New Yorker*, Geisel was a perfectionist. He often labored more than a year on a book and threw away 99 percent of his material before

he was satisfied, afterwards haunting the production department to ensure that it got his material right. Geisel later observed that his favorite book was *The Lorax* (1971), which came almost effortlessly to him, allegedly taking only 45 minutes to compose. This environmentally conscious allegory about trees so loved that they are all cut down and become extinct, was also the only one of his books that anyone ever tried to ban. That effort occurred in 1989 in the northern California logging town of Laytonville. Other direct message books such as *Yertle the Turtle and Other Stories* (1958), about a deceitful leader, and *The Sneetches and Other Stories* (1961), about a hateful competition between two kinds of creatures, had received uniformly welcome responses.

The characters in the Dr. Seuss books often encounter fearful situations, but wit and good luck see them through. Even the baddies are not irredeemably evil. The Grinch, for example, who starts out with a heart two sizes too small, ends up with one three sizes bigger than before. Seuss's trademarks are nonsense, humor, mischief, galloping rhymes, and tongue twisters. Some of his words are his own inventions; others, such as "burp," had never before been used in children's books. His illustrations—gangling cartoon-style figures, generally depicted in simple primary colors—are of ordinary characters with which children readily identify. All of his people look very much alike, which perhaps is part of the message. The lead characters are also invariably male, if they can be identified by gender at all. The novelist Alison Lurie asserted in the *New York Review of Books* in 1990 that there was an inherent sexism in his characters' roles. One book with a female protagonist, however, *Daisy-Head Mayzie* (1995), was published posthumously. Seuss's focus on the issues of aging, tolerance, laziness, individuality, and persistence were usually subtly intertwined in his stories.

In a career that spanned six decades, Dr. Seuss published 48 books, including his second for adults, this time the successful *You're Only Old Once: A Book for Obsolete Children* (1986). They sold 100 million copies in 18 languages. According to *Publishers' Weekly* in 1996, of the top 10 bestselling children's books of all time, Seuss wrote three: *The Cat in the Hat*, *Green Eggs and Ham* (1960, written in response to a challenge from publisher Bennett Cerf to write a book using 50 words or less), and *One Fish Two Fish Red Fish Blue Fish* (1960). Many others of his works were not far behind in popularity.

The last of Seuss's books to be published in his lifetime, *Oh, the Places You'll Go!* (1990), addressed the highs and lows of human experience—facing fear, loneliness, and confusion—and fittingly appealed to both adults and children. With its presence on the *New York Times* adult best-seller list for two years (1990-92), its author could say: "I no longer write for children, I write for people!" Older readers could appreciate the satire, younger readers the charm. In the end, Seuss's hegemony was challenged by lushly illustrated and more pragmatic books with more direct messages, but his books have retained their popularity.

—Frederick J. Augustyn, Jr.

Dr. Strangelove or: How I Learned to Stop Worrying and Love the Bomb

Produced and directed by Stanley Kubrick, this dark satire on Cold War relations paints a searing portrait of a world accidentally plunged into nuclear warfare. Intermingling sex, love, and war in unexpected ways (for example, its characters' names often suggest "strange loves" of various types), *Dr. Strangelove* (1964) is a rich, provocative film that stands up well to repeat viewings.

Dr. Strangelove tells the story of an insane Air Force general named Jack D. Ripper who orders a bomber wing to drop a nuclear bomb on the Soviet Union. Ripper, who favors rainwater as a drink mixer, believes the Soviets are poisoning "our precious bodily fluids," an allusion to an actual Cold War belief that the fluoridation

of America's water supply was a Communist plot. As the bomber unit headed by Major T. J. "King" Kong relentlessly approaches its primary target—a missile complex called Lapuda, a reference to a place in Jonathan Swift's satiric 1726 novel *Gulliver's Travels*—Soviet Ambassador de Sadesky confronts the president of the United States in the latter's "War Room" and tells him that a nuclear strike will detonate a Doomsday Device that will annihilate all living things on the surface of the planet. The wheelchair-using Dr. Strangelove, a presidential advisor on international political affairs and weapons development, explains the ramifications of the Doomsday Device while attempting to keep his bionic arm under control; during tense moments, the prosthesis has a tendency to choke its owner or give Nazi salutes. While making plans with others in the War Room for living underground in the post-Armageddon world, Strangelove unexpectedly rises out of his wheelchair and takes a few steps. "Mein Führer, I can walk!" he exclaims to the president, but his excitement is short-lived; Major Kong's bomber wing completes its grim mission at that moment, and a series of thermonuclear bomb blasts accompanied by the strains of the schmaltzy Vera Lynn tune "We'll Meet Again" concludes the film.

Kubrick began developing *Dr. Strangelove* in 1961 after reading *Red Alert* (also known as *Two Hours to Doom*), a 1958 Cold War novel written by ex-Royal Air Force officer Peter George. Kubrick

purchased the novel's screen rights and began working with George on the script with the hope of maintaining the book's solemn tone. His plans changed, though, as the screenplay took shape. As Kubrick told *New York Times* reporter Eugene Archer, "I was fascinated by the book—*Red Alert*, a serious suspense novel about what happens when one of the great powers pushes the wrong button. The film keeps the same suspense frame. But the more I worked on it, the more I was intrigued by the comic aspects—the facade of conventional reality being pierced." Shortly before filming started in early 1963, Kubrick brought in Terry Southern, a writer known for his sardonic humor, to play up the script's sense of absurdity.

Kubrick assembled an eclectic group of actors for his film, including Sterling Hayden as General Ripper, Slim Pickens as Major Kong, Keenan Wynn as Colonel "Bat" Guano, George C. Scott as General Buck Turgidson, Peter Bull as Ambassador de Sadesky, and James Earl Jones as Lieutenant Lothar Zogg. Heading the cast was Peter Sellers, a highly versatile actor at the peak of his powers. Sellers played three roles: British Col. Lionel Mandrake; American president Merkin Muffley; and Dr. Strangelove, a German presidential advisor—Kubrick wanted him to play a fourth character, Major Kong, but eventually assigned the role to Slim Pickens after Sellers begged off. Kubrick, who shot the movie in Great Britain mainly to accommodate Sellers, allowed the actor to improvise much of the Strangelove character, including the dramatic rise from the wheelchair. Sellers greatly appreciated the artistic license given him. "I especially enjoyed doing the mad scientist in *Dr. Strangelove* because Stanley Kubrick likes free improvisation that can be so stimulating," he told *New York Times* writer Howard Thompson. "Given a free hand, you can build, construct into the characterization. It's all any actor could ask for." His improvisation, in turn, helped Kubrick develop a strong finish for the film (he had originally filmed a monumental pie fight in the War Room but abandoned it, believing its slapstick tone would conflict with the rest of film).

Though its power has diminished somewhat during the post-Cold War era, *Dr. Strangelove* and its nightmarish visions of a world gone mad remains an important milestone in screen satire.

Dracula

Cursed to an endless life, Count Dracula is eternally resurrected in film and fiction, as well as in the vampire myth. Bela Lugosi's Dracula has become an indelible figure haunting the popular imagination since the release of *Dracula* in 1931. The definitive vampire,

Bela Lugosi as "Dracula."

Lugosi's well-groomed Count has spawned a diverse group of vampires, including *Sesame Street*'s Count, Grandpa Munster, Blackula, Duckula, and Count Chockula. The only vampire most people know by name, Dracula has sold innumerable books, plays, movies, costumes, toys, consumer products, and even tours of Romania.

Tod Browning's 1931 film *Dracula* is probably the most famous version of Bram Stoker's 1897 novel. Often criticized for its over resemblance to the drawing-room melodrama from which it was derived, the film has nevertheless had a tremendous and lasting impact on both film and popular culture. The film follows the journey of Renfield, a British businessman, who is visiting Count Dracula in Transylvania in order to sell the Count some London property. Slowly, Renfield realizes that he is a prisoner and that the Count is a vampire. Once in London, the Count must battle Professor Van Helsing, a doctor who specializes in ferreting out and eradicating the undead. Van Helsing and Count Dracula fight over the soul of the innocent Mina, and finally Van Helsing kills the Count by plunging a wooden stake through the vampire's heart.

Dracula was so successful that, almost single-handedly, it rescued Universal Studios from folding, giving the studio its first profit in two years. More importantly, it established talking horror movies as a popular and profitable genre. Lugosi's quintessential Dracula set the stage for the filmic and fictional vampires that

followed. Certainly Lugosi's sartorial elegance has become a trademark of Count Dracula—as George Hamilton complains in *Love at First Bite* (1979), “How would you like to spend 400 years dressed like a head waiter?” From the 1950s forward, Lugosi's image graced a staggering number of incongruous consumer goods, including swizzle sticks, jewelry, card games, decals, transfers, tattoos, cleaning products, Halloween costumes, albums, pencil sharpeners, greeting cards, plastic and wax figurines, clothing, puzzles, wind-up toys, candy, comic books, and bath products. By the 1960s, *Dracula* had become such a marketable image that he could be co-opted to sell just about anything.

The late 1950s and 1960s saw a resurgence of interest in monster culture centered around television showings of classic horror movies by hosts including Vampira and Ghoulardi, the proliferation of magazines like *Famous Monsters of Filmland*, and the development of popular television series like *The Munsters* and *The Addams Family*, which parodied the American nuclear family. Lugosi's disdainful Count (barely even interested in his female victims) was recreated by Christopher Lee in five films, beginning with *Horror of Dracula* (1958); by Jack Palance in a prime-time version of *Dracula* (1973); and by Louis Jordan in a BBC miniseries, *Count Dracula* (1978). While the kitsch market bearing Dracula's image continues to spread seemingly unabated, like vampirism itself, a new vampire has emerged who bears a resemblance to Lugosi's elegant, aristocratic Dracula, and yet who is markedly sympathetic as well as erotic. Beginning with Anne Rice's *Interview with the Vampire*, published in 1976, novels and movies told from the vampire's point of view have become increasingly popular, as have vampire stories and films created by and for women (e.g., the films *Lust for a Vampire* and *The Hunger*, and the novels *The Vampire Tapestry* (1983) and *A Taste of Blood Wine* (1992).

The repeated adaptation of a text can serve as a guide to changes in popular understandings of psychological and social issues. Vampirism has been read as a metaphor for gender and racial “otherness”; for the simultaneous desire and fear of female sexuality, male sexuality, and/or homosexuality; for contagion of all sorts; and for the relationship between the “new” worlds of Western Europe and North America and the “old” world of Eastern Europe. *Dracula* itself has been variously interpreted as a parable of the oppression and resistance of marginalized groups, the power and alienation resulting from technological reproduction, the repression of sexuality and desire, the effects of industrial capitalism on the working class, and the complex interdependencies of colonialism. Of course, on one level, *Dracula's* popularity lies in its face-value: the fear of (and possible desire for belief in) the notion that the dead are not really dead. Like much horror and monster culture, *Dracula* deals in the (linked) questions of sex and death. And like most horror films, *Dracula* tells the story of a contest between good and evil, between the normal and the abnormal or pathological.

Dracula also follows generic conventions by installing normalcy at the end of its story, reinstating and reaffirming the good and the true after an anxious yet enjoyable period of peril. And yet, *Dracula* plays with the boundary between good and evil, between the normal and the pathological, in a way that goes a long way in explaining the story's popularity. *Dracula* blurs and transgresses the distinctions between living and dead, East and West, male and female, heterosexual and homosexual, aristocratic and professional, healthy and diseased, and British and foreign before finally reinstating those terms as pairs of fixed opposites with the (apparent) death of the Count. It is Dracula's ability to appear normal, after all, to pass in the

nighttime streets of London, which make him both so dangerous and fascinating. Dracula does not look like a monster—in fact, he looks like an upscale version of his victims. It is, in the end, Dracula's very adaptability, his ability to confuse epistemological and social categories, which ensures his everlasting capacity to both frighten and entertain us.

—Austin Booth

The Draft

From America's founding through the twentieth century, the draft has been a familiar way to ensure the country's safety in terms of the numbers of soldiers it can mobilize to fight in wars. In the twentieth century, the draft has been used—in one way or another—during all of our major wars, from World War I to the Vietnam War. Naturally, then, draft-dodging has also played a part in American war history. From the famous to the infamous, numerous Americans—for one reason or another—have used whatever means they could to change their lot in the military during times of war or to avoid participation in war altogether.

The draft existed before American independence. In the colonies, young and middle aged (white) men were declared by law to constitute the militia of the colony, and such men were subject to compulsory militia training. After the adoption of the federal Constitution, Congress left militia matters largely to the judgment of the states.

In response to the Civil War, a federal draft law was passed in 1863 (and modified in 1864). The Civil War draft was not particularly effective: The draft law brought 46,000 draftees and 118,000 substitutes into the Union Army, which was eight percent of the federal army's total strength.

Congress passed a draft law in May, 1917 which lasted during America's participation in World War I. A majority of American troops who went to France during this war were draftees. The draft was administered by a decentralized civilian agency, the Selective Service System, whose power was largely exercised by local draft boards (the Civil War draft had been administered by the military).

In 1940, Congress again passed a draft law. Except for a draft-free period in 1947 and 1948, this law was renewed at four-year intervals until 1971, when it was renewed for two years. The draft then expired in 1973 when Congress failed to renew it. A Selective Service System, similar to that of World War I, supervised the draft.

During both world wars, the government eventually chose to rely solely on the draft for its military manpower needs, and volunteering for the military was forbidden. After World War II, however, the bans were lifted but by 1953 (the last year of the Korean War), still over half of enlisted men were draftees. After Korea, the military

increasingly came to rely on volunteers (some of them motivated by the desire to avoid the draft), and the proportion of draftees in the armed forces was further reduced. There was an upsurge in the use of draftees during the Vietnam period, but the majority of enlisted men remained volunteers.

Some young men were able to find various techniques of dodging the draft. Draft-dodging was a widespread practice whenever the United States had a draft. Draft-dodging means deliberately modifying one's behavior—legally or illegally—for the purpose of avoiding the draft. Draft-dodging is different from draft resistance, which involves the open defiance of the draft law.

One popular method of draft-dodging was to volunteer for military service before the draft caught up with you. To enter military service voluntarily had certain advantages over the draft. A volunteer had some control over which branch of the service he entered, whereas draftees tended to end up in the Army rather than the Navy or Air Force. A volunteer could choose a branch of the armed services, or a specialty, where there was less of a danger of doing infantry combat duty. For those who volunteered for the National Guard, one's tour of duty would be done in the United States. A Vietnam-era study of those who had volunteered for the armed forces found that 40 percent of the respondents indicated that the draft led them to enlist. The number of draft-dodgers in the Vietnam-era National Guard and reserves was even higher—70.7 percent, according to a 1964 Defense Department survey.

Another method of dodging the draft was simply ignoring the law. According to one estimate, 160,000 men on the side of the Union failed to appear when summoned by their draft boards during the Civil War. During the World War I draft, between 2,400,000 and 3,600,000 men failed to register for the draft as required. The federal government held "slacker raids" during World War I in which federal authorities (civil and military), with help from vigilantes, would stop and detain draft-age men and find out if they were properly registered. In other periods, the draft laws were enforced by more conventional law enforcement techniques.

Married men were more likely to get deferments, a fact which did not escape draft-dodgers. The draft law of 1940 seems to have prompted some marriages: While in 1939 there was a total of 1,404,000 marriages, there were over 5,000,000 marriages in 1940 in the 18 to 29-year-old group alone. The Selective Service was aware that some men were using marriage and fatherhood to avoid their military responsibilities, and tightened the regulations in response. By the Vietnam-era, marriage and having children were not particularly effective ways of dodging the draft.

Fleeing abroad was another method of avoiding the draft. Mexico was a destination for some draft-dodgers during World War I, while Canada was a destination during the Civil War and the Vietnam War—Sweden was also a popular destination for some Vietnam-era draft-dodgers.

Under the old militia laws in the various states, a man who had enough money could avoid militia duty by paying someone to go in his place. This method of hiring substitutes was included in the federal draft law in the Civil War. Until June 1864, those who could not afford substitutes could avoid the draft by paying a commutation fee of \$300.00. Many local and state governments gave financial assistance so that draftees could hire substitutes.

After World War II, attending a post-secondary school could also be a method of draft-dodging. If a college student satisfied the Selective Service that he had a good academic record, he could stave off the draft at least until graduation (in 1967, Congress made

deferments available to all undergraduates, regardless of their academic standing).

Draft-dodgers (and draft resisters) have sometimes benefitted from Presidential amnesties, including Franklin Roosevelt's limited amnesty for World War I offenders in 1933, Harry Truman's limited amnesty for World War II offenders in 1947, and Jimmy Carter's complete amnesty for non-violent Vietnam-era offenders in 1977.

Eminent draft-dodgers include future President Grover Cleveland, who hired a substitute so as to avoid the Civil War draft, future President William Clinton, who made use of student exemptions and the ROTC program to avoid the Vietnam War, and future Vice-President Dan Quayle, who joined the Indiana National Guard.

Drag

"Drag" was originally a theatrical term used to describe the women's clothing a man wore on stage. It came into use in the 1870s at the same time that cross-dressing, or dressing as the opposite sex, became popular in vaudeville variety shows. Men would dress in "drag" and women would "wear breeches," each one poking fun at the foibles and anxieties of the opposite sex. By the 1940s, drag had come to describe professional female impersonators and had begun to take on meanings associated with male homosexuality. Gay men who wore women's clothes off-stage started to be characterized as men in "drag" by mid-century.

Since the 1950s, the term "drag" has come to describe a form of cross-dressing for both men and women that intends to expose itself as false. In other words, men and women in drag broadcast the fact that they are *dressed up* as one sex or the other. Unlike some cross-dressers, they are not interested in wearing costumes that disguise who they "really" are underneath. Instead, they make costumes that are clearly costumes, putting on clothes that are stereotypically men's or women's, like floor length evening gowns, high heels, bow ties, or three-piece suits. Men and women in drag work to exaggerate masculine and feminine gestures, facial expressions, tones of voice,

A man in “drag” applies lipstick before a photo shoot in Philadelphia, 1995.

and scenarios in order to simultaneously enhance their performance and underline the fact that they are performing. Drag is most commonly associated with “drag queens,” or male performers who dress up as women. But, it can still describe women dressed as men, or even women dressed as women or men dressed as men as long as their outfits are designed to produce the sense that the gender they are performing is self-consciously acted out.

Gay male nightclubs often host “drag shows” as part of their nightly or weekly ritual, especially in urban areas with large gay populations like San Francisco or New York. These variety shows usually feature a line-up of drag queens who “lip-sync” to popular songs by female artists—moving their lips and performing along with previously recorded music. These numbers are often outrageously dramatic, extremely sentimental, or bitingly satirical. Each one is treated as an opportunity to experiment with the meanings of gender on stage. Sometimes performers make fun of mainstream gender relations, while at other times they take the insights of the songs they sing very seriously. Drag shows are usually emceed by a drag performer, who often presents a comedy routine on topics ranging

from gay sex to contemporary politics. Some clubs only hire professional performers, while others are strictly amateur.

There are many fewer drag kings than drag queens and they are far less visible. However, some lesbian clubs do sponsor drag shows that provide a forum for drag king performances. These shows often feature women dressed up in female drag as well as male drag. In other words, women dress in “campy” or exaggerated female clothes that draw attention to the ways that they must perform their femininity as they interact with other women who are dressed as men and who are drawing attention to their self-conscious decision to dress as their chosen gender.

Ultimately, drag performers explain, drag exposes the ways that everyone “performs” their gender, even when they are “wearing” the socially appropriate role. If gender can be successfully understood through sex-role behavior that is outrageous and clearly fake, then logically it follows that those traits and characteristics that we uncritically associate with one sex or the other are being put on or taken off by everyone. Rather than naturally coming out of biological sex, sex-role behavior is learned, performed, and always unreal.

Drag has become more mainstream in the last decade, both within the gay community and in American culture more generally. RuPaul was a crossover sensation in the early 1990s, and was, according to *People* magazine “the first drag queen ever to land on the pop charts.” Her album, *Supermodel of the World*, brought her into the limelight in 1993 and her perfectly accessorized seven foot frame has kept her in the public eye. Like other drag performers, RuPaul often openly reflects on the meanings of drag. “Drag queens,” she once explained, “are like the shamans of our society, reminding people of what’s funny and what’s a stereotype.”

Wigstock, an annual day-long drag show held on Labor Day in New York City, is another example of the mainstreaming of drag. It has attracted thousands of spectators and hundreds of local and national performers throughout the mid to late 1990s. A number of movies have also caught the national eye. The popularity of the Australian film *The Adventures of Priscilla, Queen of the Desert* in the United States as well as the success of *To Wong Foo, Thanks for Everything, Julie Newmar* attest to the American cultural interest in drag and particularly drag queens in the 1990s. Both of them feature a group of drag queens travelling across their respective countries and ultimately finding themselves stranded in backward small towns. *To Wong Foo*, especially, captures the bland moral most commonly associated with drag queens in popular culture. By first experiencing discrimination and then “educating” the provincial residents with whom they come into contact, the three drag queens represent American cultural fantasies about victimized people. Confronting and overcoming their oppression by drawing on the drag queen “spirit,” the queens of *To Wong Foo* tell Americans what they already think they know: that a good attitude on the part of oppressed people is the best way to overcome injustice.

While mainstream movies make these simple connections, drag queens and kings themselves discuss the disruptive potential of drag. Rather than reinforcing American’s comfort with oppression and their resolve not to take responsibility for victimization, drag underlines American cultural anxieties about difference and forces men and women to think critically about how cultural ideas structure their identities and their sense of possibility.

Drag Racing

Drag racing, an acceleration contest from a standing start between two vehicles covering a measured distance, is probably as old as the automobile itself. As a legal and commercially organized sport, however, it began on Sunday, June 19, 1950. On that day at an airstrip near Santa Ana, California, C. J. Hart, originally of Findlay, Ohio, hosted with two partners the Santa Ana Drags. A year before that, in Goleta, California, a drag race was held on a closed-off section of road with approval of the police, but it was only a one-time event. The surge of returning veterans at the end of World War II, many of whom could afford an automobile and had a sense of adventure as well as a desire to test the performance of their machines, gave rise to street racing or “hot rodding.” It was street racing, illegal and dangerous, which led to the need for safely organized events. Today drag meets take place all across the United States with some contests attracting upwards of 50,000 spectators.

Although drag racing has become more professional and commercialized than in the beginning, many hobbyists still have the opportunity to participate. There are a multiplicity of race classes, each held to certain rules regarding the weight of the vehicle, engine size and modification, and body configuration. In any major drag-race event there will be dozens of class winners. Drag meets in the United States are sanctioned by the National Hot Rod Association (NHRA), the American Hot Rod Association (AHRA), or the International Hot Rod Association (IHRA). These associations establish and enforce contest and safety rules. The NHRA, founded in 1951 by Wally Parks, remains the most influential drag-racing entity. The first NHRA national championship meet was held in Great Bend, Kansas, in 1951.

The measured course for most races is a quarter-mile, although some competitions are limited to one-eighth of a mile. The track is a straight strip made of asphalt or concrete. Race events usually begin with each class conducting trials; the 16 drivers with the lowest times are allowed starting positions in the official competition. After the 16 compete, eight winners advance to the semi-finals until the two remaining victors drag for the championship. The format and rituals of the race are generally the same for all race classes. In the “burnout box” behind the starting line, drivers will spin their rear tires to generate heat for better traction. Then on signal by the Christmas tree, the electronic starting pole, they will advance to the staging area and then to the starting line. The race will begin when three amber lights, mounted in a vertical row for each driving lane, flash in quick succession from top to bottom, followed by the green light. Should a racer start too soon, a red light at the very bottom of the Christmas tree will turn on, meaning automatic disqualification for the driver at fault. Most races, which last from five to ten seconds, are won and lost at the starting line for either “red lighting” or for not “attacking the green,” respectively.

Broadly, the main professional categories of racers are pro stock, top fuel, and funny cars. The pro stockers consist of production cars in which the engine is made by the same manufacturer as the body with the wheel base remaining unaltered. Otherwise, many performance modifications are allowed, including rebuilt engines, hood scoops, and header exhaust systems. While pro stockers must run only on gasoline, top fuel dragsters burn nitro, an explosive mixture of nitromethane and alcohol, commonly known as rocket fuel. The V-shaped racers—known as dragsters, rails, stilettos, or slingshots—are

Shirley Muldowney during a typical race.

25 feet long, 3 feet wide, and 3 feet high, and can clock speeds in excess of 300 miles per hour. Funny cars, sometimes called floppers, also run on nitro, but they have a body made of one piece of lightweight fiberglass or carbon fiber, not metal, and it is mounted over top of the driver and hooked to the chassis, or frame, of the vehicle. Both top fuelers and funny cars must use parachutes to aid in braking at the end of the race.

Three legendary top-fuel competitors are Don “Big Daddy” Garlits of Tampa, Florida; Don “The Snake” Prudhomme of Southern California; and Shirley Muldowney of Mount Clemens, Michigan. In 1964 Garlits was the first to break the barrier of 200 miles-per-hour. Later, Prudhomme would clock a speed of 300 miles-per-hour. During the 1980s Muldowney won the top-fueler championship three times. Both Prudhomme and Muldowney had started out racing funny cars. Muldowney’s life story was dramatized in the Hollywood movie *Heart Like a Wheel* (1983), starring Bonnie Bedalia. In 1984 Garlits opened his Museum of Drag Racing and International Drag Racing Hall of Fame in Ocala, Florida.

The culture of drag racing has been represented in various media, from a plethora of specialized magazines—including *Hot Rod Magazine*—and novels such as Henry Gregor Felsen’s *Street Rod* (1953), to recording group Tommy Dugan and the Hot Rodders. In the early 1960s, Charlie Ryan recorded several songs on car racing,

including the popular “Hot Rod Lincoln.” During the 1960s and 1970s, the California rock band the Beach Boys further glamorized hot rodding with the hits “Little Deuce Coup,” “409,” “Shut Down,” and “Fun, Fun, Fun.” Mattel, one of the first toy manufacturers to recognize the appeal of drag racing to young people, introduced Hot Wheels, a line of miniature die-cast cars, which included replicas of funny cars raced by Don “The Snake” Prudhomme and Tom “Mongoose” McEwen. In 1992, the NHRA established the Junior Drag Racing League, where drivers between the ages of eight and 17 could race half-sized copies of top fuelers, funny cars, and pro stockers.

Dragnet

Within two years of its 1952 small-screen debut, the eight-year long (1949-1957) radio series *Dragnet* had become television's number-one rated program. Created by actor Jack Webb, the series broke new ground from the outset, offering radio listeners rare authenticity of experience as they "accompanied" the police in following a case from beginning to final sentencing. Each episode unfolded at a measured pace, as detectives Friday and Smith followed clues, interviewed witnesses both friendly and hostile, and checked with various branches of law enforcement for information. Documentary realism was a key element of the show's appeal, with Jack Webb's own deadpan delivery and opening gambit, "This is the city. Los Angeles, California," making the mundane routine seem hip and cool.

The idea for *Dragnet* came to Webb after he had played a police lab technician in Anthony Mann's *He Walked by Night* (1948). He shared a belief with that film's technical adviser, Sgt. Marty Wynn of the LAPD, that pure investigative procedure was dramatic enough without introducing the traditional melodrama of the fictional hard-boiled private eye. In early 1949, Webb secured the cooperation of the LAPD and Chief William H. Parker. As long as Webb didn't compromise confidentiality, or portray the police in any "unflattering entanglements," Parker granted him access to all actual case files. Early in 1949, thus armed, Webb approached NBC with his radio pilot for *Dragnet*.

Webb's radio style was to underplay. He stood way back from the microphones and potted everything up high so that all of the ambient sounds could be heard. He told *Time* magazine that "underplaying is still acting . . . We try to make it as real as a guy pouring a cup of coffee." And the series was realistic. When Webb and his partner walked up the steps to headquarters, listeners heard the exact number of steps it took. With his tremendous success on radio, Webb took *Dragnet* to television.

On television, *Dragnet* was extraordinarily conservative. Webb put the hard-boiled edge of nonconformist heroes like Sam Spade and Philip Marlowe into the conformist mouth of a downtown cop: "My name's Friday. I carry a badge." The character of Friday had no tolerance or sympathy for anyone outside the system. Los Angeles lawbreakers had to be punished, and Friday's investigations were carried out with a terse, no-nonsense approach. "Just the facts, ma'am," he often said to witnesses who digressed from the point. He had no interest in witnesses as personalities, nor did he have any interests in life outside of police work. His whole duty was to "serve and protect." By contrast, his partner Frank Smith, played by former child star Ben Alexander, was much more human, and often fretted over his health or his wife, Fay. Friday's diligence, however, fit well within a 1950s Cold War context of conformity. During a time in which Americans feared the spread of Communism and atomic weaponry, Friday was a figure of dependability and stability. During *Dragnet*'s seven-year run, so pervasive was his image that, despite the rise in the national crime rate, the public came to believe that crime had diminished and that their city streets were safer than ever before.

The conservative tenor adopted by Webb can be detected in several episodes that border on a hysterical and paranoid vision. In

"The Big Producer," a bunch of "dirty" joke books and nude photographs make their way into a high school, but Friday and Smith can't bring themselves to label the materials pornography. Instead, a series of ellipses between the two convey their fear over this "filth." In "The Big Seventeen," the duo cracks down on drugs, "H" for heroin, in the schools, but they are too late to save a 17-year old boy from overdosing. The endings of this, and several other episodes, were downbeat, and in a 1950s context, the hysteria and paranoia worked. When *Dragnet* was revived for the "Go-Go" years, 1967-1970, the hysterical mood was far too judgmental for later audiences.

Stylistically, *Dragnet* generated a unique syntax on the American landscape in its use of abbreviations and numerical codes. MO (modus operandi), DMV (Department of Motor Vehicles), and APB (All Points Bulletin) became part of everyday speech, along with 212 (robbery), 459 (burglary), and 311 (lewd conduct). Walter Schumann's four-note theme musical theme, "Dum-de-dum-dum," was a motif evoking justice and retribution, but also a mood of agitation. The motif was taken up in popular culture as a metonym for trouble. In "Better Living Through TV," an episode of *The Honeymooners*, for example, Norton hums Schumann's *Dragnet* motif when Alice catches wind of another one of Ralph's "hare-brained schemes." And in the 1980s, a series of Tums ads that attacked antacid modified Schumann's theme to "Tum-te-tum-tum."

The series was immensely popular. Parodies of it abounded in the 1950s. *Mad Magazine* attacked its conformity and shilling for Chesterfield cigarettes. Radio comedians such as Stan Freberg and Bob and Ray had fun with its narrative excesses while, in a classic Chuck Jones cartoon, *Rocket Squad* (1954), featuring Daffy Duck and Porky Pig in the Friday and Smith parts, the two intrepid heroes become the villains. Moreover, the look of *Dragnet*, its reliance on shot/reverse shots and eyeline matches to connote judgment—a witness says something; Friday shakes his head and looks at an offscreen Smith; Smith shakes his head and looks in return at the offscreen Friday—became an industry standard in shooting such scenes with effective economy of style.

No doubt the success of *Dragnet*, and its chief ratings rival, *I Love Lucy*, in the early 1950s helped shape the direction of television's cop shows and sitcoms for years to come. The series also contributed to the positive portrayal of law enforcement that prevailed until the shocking images of Rodney King's beating in the early 1990s shook enlightened Americans' faith in the police. When loyal cop supporter Jack Webb died of a heart attack on December 23, 1982, the LAPD flew its flags at half-staff.

Dragon Lady

In movies and comic strips, the Dragon Lady epitomized a mythic female legend; the seductive, “exotic,” yet deadly Asian black widow. Although there is no evidence that a real Dragon Lady ever existed, her character was treated as real and was embodied by Anna May Wong in the 1931 Fu Manchu thriller, *Daughter of the Dragon*. The Dragon Lady persona gained additional popularity in Milton Caniff’s 1930s comic strip *Terry and the Pirates*. In this comic, the Dragon Lady “captivates men with her beauty then tramples them like insects when they cross her.” During World War II, the Dragon Lady persona became associated with an English-speaking radio announcer for Radio Tokyo, whose voice was broadcast to American soldiers. The American media dubbed her Tokyo Rose, and portrayed her as an Asian Mata Hari. Rose turned out to be a naive Japanese American girl named Iva Ikuko Toguri.

Dream Team

The United States’ vaunted Dream Team—unquestionably the greatest collection of basketball talent ever assembled—rolled to a gold medal in the 1992 Olympic Games in Barcelona, Spain. Comprised of eleven National Basketball Association members and one collegian, the Dream Team’s very existence was made possible by a 1989 agreement with the International Amateur Basketball Federation to allow professionals to participate in the Olympic Games. While the American team was greatest beneficiary of the rule change, its international organization, USA Basketball, had voted against the inclusion of NBA players. As David Wallechinsky noted, concerns were expressed that financial support for women’s and junior basketball programs would diminish and that one-sided games would markedly reduce the television audience.

The American team, averaging 117 ¼ points per game, swept to eight consecutive wins in Barcelona, while holding its opponents to 73 ½ points a game; the actual margin of victory could have been even greater had not various ailments afflicted several of the U.S. players, while others held back through fear of injury. The American roster nevertheless was star-studded. The Dream Team boasted the presence of Michael Jordan, Larry Bird, Magic Johnson, Charles Barkley, Karl Malone, Patrick Ewing, David Robinson, Scottie Pippen, Clyde Drexler, and John Stockton, all to be inducted into the Hall of Fame later. Also on the team were NBA star Christopher Mullin and Duke University’s Christian Laettner, while the coaches included Detroit’s Chuck Daly, Atlanta’s Lenny Wilkens, Portland’s P. J. Carlesimo, and Duke’s Mike Krzyzewski.

With the United States having lost the 1972 and 1988 Olympic Games, as well as a series of subsequent international events, Chicago Bull Michael Jordan, who had recently led his team to its second consecutive NBA championship, asserted, “We’ve got to regain our

Dream Team member Magic Johnson (center) watches as Michael Jordan (right) and David Robinson (left) go for a rebound.

sense of pride, our dignity. Some way—even if it’s just basketball. We can at least show the world that *we can take control of something.*” But it was the possibility of a financial windfall that undoubtedly led the NBA to support the sending of its greatest players to Barcelona, with Commissioner David Stern envisioning the possibility of a transoceanic league. NBA teams had recently added Lithuania’s Sarunas Marciulionis, Croatia’s Drazen Petrovic, Germany’s Detlef Schrempf, and Yugoslavia’s Vlade Divac to their rosters, and looked expectantly to the likes of Toni Kukoc, Arvidas Sabonis, and Dino Radja.

With its opponents already thoroughly intimidated before the first jump ball, the Dream Team, whose members received the public adulation generally reserved for pop stars, had to contend with the fact that the competition often seemed thrilled just to occupy the same basketball court. While the U.S. team was crushing defending champions Argentina 128-87 at the Tournament of the Americas, Jordan dunked the ball, resulting in wild cheering from the Argentine bench. Center Hernan Montenegro declared, “I played with great happiness against the monsters.” Guard Marcelo Milanesio stated, “When we met at the center of the court, I was very excited that it was Magic Johnson shaking my hand.” After a 136-57 shellacking, Cuban coach Miguel Gomez philosophized, “One finger cannot cover the sun.” American observers, such as Princeton coach Pete Carril, also waxing eloquent about the American players, said, “This is not a great team. This is the greatest team ever.”

During the Barcelona Olympics, the Americans, despite playing under international rules—two 20 minute halves, a shorter three-point

line, and zone defenses—scored better than 100 points each time out. The two closest games involved Croatia, featuring Petrovic and Kukoc, but the margins of victory were each better than 30 points. In their meeting, Chicago's Pippen shut down Kukoc, who had been offered more money by Bulls' general manager Jerry Krause than Jordan's teammate had been. The greatest notoriety involved Barkley's elbowing of an Angolan player in the midst of an opening-game rout (116-48). Jordan remarked, "Charles is Charles. He's not crazy. He just likes to push his behavior to the edge." Angolan coach Victorino Cunha dismissed the concerns: "We know Charles Barkley. No problem. He does this ten times a year in the NBA."

Following the Dream Team's gold medal win over Croatia, 117-85, Mullin mused about "everybody willing to throw egos, individual statistics and all that other stuff out the window to prepare to be the best team ever. Nope, it won't happen again." Johnson, speaking rhetorically, asked reporters, "When will there be another Olympic team as good as this one? Well, you guys won't be around, and neither will we." While Barkley led the team in scoring with an 18.0 point average, Jordan contributed 14.9 points per game and provided a tournament-high 37 steals. The most perceptive analyst of the Dream Team, *Sports Illustrated's* Jack McCallum, insisted that "on the most star-studded team in history, Jordan was, simply, the star stud. When Magic was on the floor finishing the fast break, Jordan was his finisher. When Jordan was called upon to run the offense, he did so with control and a few dazzling no-look passes. When Daly gave the ball to Scottie Pippen, Jordan acted as a decoy. When the [team] needed a defensive stopper, Jordan got the call. And when the team need a scoring jolt, Jordan went out early and kick-started the offense." The Dream Team was, indeed, as Coach Daly described it, "a majestic team."

Dreiser, Theodore (1871-1945)

A journalist turned novelist, Dreiser was at the forefront of the battle for social fact and sexual candor in the early twentieth-century

novel, treating popular sentimental and realist subjects with a refreshing lack of moralizing. Dreiser produced a number of dense, uneven, and controversial novels about the attempts of men and women to adapt themselves to the new urban, secular order of industrial capitalism. *An American Tragedy* (1925), Dreiser's great public success, is one of the first serious psychological studies of an American murderer.

Dreiser escaped a very poor and deeply religious upbringing through a successful career in journalism in the 1890s, writing his first novel, *Sister Carrie*, in 1900. Though the book had been recommended by rising author Frank Norris, publisher Doubleday's management was unhappy with what it considered the immorality of the story and published it without publicity. This, coupled with reviews uneasy with both its moral tone and scrappy prose, saw the book achieve initial sales of a mere nine hundred. This fiasco and Dreiser's failing marriage brought on a nervous breakdown, and he returned to journalism, not publishing another novel for a decade. His second novel, *Jennie Gerhardt*, (1911), began an increasingly fruitful fictional output (though his sexual frankness and social criticism continued to hamper his success) during the next fourteen years, including *The Financier* (1912), *The Titan* (1914), *The Genius* (1915), and most favorably, *An American Tragedy*. This last was based on a number of real-life murder cases and told the story of Clyde Griffiths: his youth, the murder of his pregnant girlfriend, and the court case that followed. The novel became a play and was filmed twice: in 1931 by Joseph von Sternberg and in 1951 under the title *A Place in the Sun*. Dreiser's output reduced once more as he involved himself with various left-wing causes.

Dreiser grew out of the newspaper and magazine revolution of the 1880s and 1890s, and though his novels reflect many of the themes of the sentimental tradition (marked by the love of the rags-to-riches story), he handles them in a way inflected by issues that came to the fore in the best journalism of his day (crime, disease, prostitution, vagrancy, and the violence and double-dealing behind huge wealth). Dreiser's subject matter also appears journalistic in its use of personal experience (*Sister Carrie* was based on one of his sisters) and real-life stories (*The Financier* is the first of a trilogy of novels based on Chicago financier Charles T. Yerkes, and *An American Tragedy* was based, centrally, on the murder trial of Chester Gillette). Dreiser's books, though berated for their style—their circumlocution, inversion, uncertain vocabulary, and overburdened syntax—are marked by a singular level of excited detail and documented fact. This reliance on facts and details reflects a contemporary scientific methodology pursued eagerly by Dreiser (he read widely on the subjects of biology, psychology, and sociology). Although Balzac, Zola, Tolstoy, and Hardy were all important literary models for him, literary allusions appear much less prevalent than scientific ones: his interest in every minute detail of biological and sociological influences on his characters pushes the literary into the background.

The characterization of his central figures is Dreiser's main achievement. His interest in what drives Carrie Meeber or Clyde Griffiths makes the figures around them appear little more than phenomena affecting them, while these major characters themselves become little more than the drives and desires brought on by economic, genetic, and psychological circumstances. These desires were not necessarily beautiful, imaginative, or morally right, and it was this, coupled with Dreiser's unflinching candor, that made his books so

controversial. Dreiser simply ignored genteel aspirations and probity, as he drew characters, logically and objectively, whose aspirations were powerful enough for a poor girl to become a kept woman, for a boy to kill a pregnant lover. Such desires destroy everything in their paths and do not bring happiness, certainly not the familial stability and financial security of the middle classes.

Dreiser was not the first novelist of his generation to write of the squalor, poverty, and violence of the city; both Stephen Crane and Frank Norris had done that before him, but he was singular in his personal experience of poverty. This is undoubtedly a major reason he was able to capture in such detail the desire to escape poverty and the desire to possess wealth in a society that was in a period of transformation. The tide of migration from country to city; the impersonal nature of the urban setting of factories, tenements, and department stores; the contrast of poverty and wealth; the new culture of conspicuous consumption were all at the center of Dreiser's work. Where many of the new journalistic, realist writers around him attempted to represent want, its nature and effects, Dreiser investigated wanting, one of the central mechanisms of the twentieth century. His attempts to delineate desire are what made him interesting and influential to many writers from F. Scott Fitzgerald to Saul Bellow. It is in showing a less intellectualized, aspirational, amorality deep within the American way of life that makes Dreiser the most radical, the most realistic, writer of his generation.

The Drifters

When Clyde McPhatter formed The Drifters in 1953, a new musical voice emerged. Combining doo-wop with gospel stylings, rhythm and blues changed. Songs like "Money Honey" (1953) and "White Christmas" (1954), second only to Bing Crosby's version, increased their popularity. McPhatter left the group in 1954, and a series of lead singers fronted the group until the arrival of Ben E. King in 1959, who changed the Drifters' image and sound. The baion, a Latino rhythm, and the addition of strings made songs like "There Goes My Baby" (1959) a success. From 1953 to 1966, The Drifters proved a driving force for Atlantic Records from which many rising musicians gained inspiration. The Drifters, who were inducted into the Rock 'n' Roll Hall of Fame in 1990, provided the music for a southeastern coastal dance, "the shag."

Drive-In Theater

As early as 1928, Richard Hollingshead, Jr., owner of an auto products business, was experimenting with screening films outdoors. In the driveway of his New Jersey home he mounted a Kodak projector atop his car and played the image on a nearby screen. In time, Hollingshead refined and expanded his idea, registering his patent for a drive-in theater in 1933. In doing so, he not only re-created an American pastime, but he also contributed to American popular culture for some time to come.

Drive-in theaters, also known as "ozoners," "open-air operators," "fresh-air exhibitors," "outdoorers," "ramp houses," "under-the-stars emporiums," "rampitoriums," and "auto havens," were just that . . . places where people drove their cars to watch movies on a huge outdoor screen. This was a seemingly preposterous idea—one would drive to a gate, pay an admission fee, park their car on a ramp to face the movie screen, and watch the movie from the car, along with hundreds of other people. But the drive-in caught on because it tapped into America's love for both automobiles and movies; going to the drive-in became a wildly popular pastime from its inauguration in the 1930s through the 1950s.

The first drive-in opened on June 6, 1933, just outside of Camden, New Jersey. The feature film was *Wife Beware*, a 1932 release starring Adolph Menjou. This movie was indicative of those commonly shown at drive-ins: the films were always second rate (B movies like *The Blob* or *Beach Blanket Bingo*) or second run. People, however, did not object. Throughout the drive-in's history its films were always incidental to the other forms of attractions it offered its patrons.

Around 1935, Richard Hollingshead sold most of his interest in the drive-in, believing that the poor sound and visuals, the great expense of construction, the limited choice of films, and other factors (like reliance on good weather) were enough to keep investors and customers alike from embracing this new form of entertainment. But people did not mind that viewing movies outdoors was not qualitatively as "good" as their experiences watching movies at indoor theaters. Just a few years after the first New Jersey drive-in opened, there were others in Galveston, Texas, Los Angeles, Cape Cod, Miami, Boston, Cleveland, and Detroit. By 1942 there were 95 drive-ins in over 27 states; Ohio had the most at 11, and the average lot held 400 cars.

Drive-ins peaked in 1958, numbering 4,063. They proved to be popular attractions for many reasons. After World War II, industries turned back to the manufacture of domestic products and America enjoyed a burgeoning "car culture." In addition, the post-War "baby boom" meant that there were more families with more children who needed cheap forms of entertainment. Packing the family into a car and taking them to the drive-in was one way to avoid paying a babysitter, and was also a way that a family could enjoy a collective activity "outdoors." Indeed, in the 1940s and 1950s many owners capitalized on this idea of the drive-in being a place of family entertainment and offered features to attract more customers. Drive-ins had playgrounds, baby bottle warmers, fireworks, laundry services, and concession stands that sold hamburgers, sodas, popcorn, candy, hotdogs, and other refreshments.

A typical drive-in theater.

Although owners emphasized family activities, by the 1940s and 1950s teenagers had taken over rows at the drive-in to engage in more private endeavors. Known as “passion pits,” drive-ins became places where kids went to have sex, since they could not go to their parents’ houses but did have access to automobiles. Therefore, families parked their cars in the front rows, dating teens sat in the middle rows, and teens having sex occupied the dark back rows. Sneaking into drive-ins was another popular teenage activity, with kids hiding in the trunk until the car was parked well away from the entrance booth. Teenagers from the 1960s on also used drive-ins as places to drink alcohol and smoke marijuana.

In the late 1940s, drive-ins became more popular than indoor theaters. One improvement that led to this was the development of a viable in-car speaker through which to hear a movie’s sound. Before the implementation of individualized speakers, drive-in owners used “directional sound,” three central speakers that projected the movie’s soundtrack over the entire drive-in. The sound was not only distorted, but also was nearly impossible for the cars in the back rows to hear. In addition, it was so loud that owners received complaints from neighbors who were usually unhappy about a drive-in’s presence to begin with. The first in-car speakers were put into production by RCA in 1946. In the 1950s people began experimenting with transmitting movie sound over radio waves; this was not feasible until

1982, when 20-30 percent of drive-ins asked viewers to tune in their radios. By 1985, 70 percent of drive-ins were using this sound transmission technique.

The drive-in business started to stagnate in the 1960s and began its decline in the 1970s. Land prices were increasing and drive-ins took up a lot of space that could be made more profitable with other ventures. By this time the original drive-ins were also in need of capital improvements in which many owners chose not to invest. In addition, theaters continued to get only B movies or second or third run pictures, and the industry charged higher rental fees and required longer runs, making it extremely difficult to compete with the multiplex indoor cinemas.

In the 1980s, the drive-ins lost most of their key audiences—by 1983 there were only 2,935 screens. Families could stay home and watch movies on cable television or on their video cassette recorders. When teenagers found other places to have sex, the drive-in was no longer a necessary locale for this activity. Due to gasoline shortages, many people opted for compact cars, which were not comfortable to sit in during double or triple movie features. By the 1990s there were few drive-ins left; those that remained were reminders of an American era that revered cars and freedom, with a little low-budget entertainment thrown in.

Drug War

The Drug War has attempted to diminish the flow of drugs into the country, the manufacture of drugs within American borders and the desire to use drugs with supply and demand tactics. On the supply side, legislators have created severe penalties for possession and sale, and toughened border patrols. To reduce the demand for drugs, community programs, television campaigns and crime-watch programs educate citizens on the dangers of drug use and abuse. The Drug War helped create drug-free school zones and increased penalties for drug crimes that involved weapons.

Although the intensity of the drug war escalated in the mid-1980s, legislators first enacted drug laws in 1914 with the Harrison Narcotics Act which taxed narcotics and required licensure for those who dispensed drugs. The Marijuana Tax Act of 1937 categorized marijuana as a narcotic for taxation and legislation purposes. Mandatory prison terms for drug use and sale were first introduced in the 1956 Narcotics Control Act.

Prior to the 1914 Harrison Narcotics Act, highly addictive opiates were the primary ingredient in the widely used elixirs. The users were mostly middle-class women and their addictions were not seen as a societal problem. The Civil War, however, brought the subject of addictions to the forefront. When physicians treated soldiers with morphine, they developed an addiction referred to as "soldier's disease."

When drug abuse was confined to non-threatening social classes, public knowledge and debate were minimal. In 1900, society pitied drug addicts. They were considered unfortunate citizens with medical problems. By 1920, the drug user became known as a drug fiend, an immoral outcast who spread his addictive disease to everyone he touched. Anti-drug campaigns blamed Chinese immigrant laborers who were railroad workers in California for bringing opiates into the country and encouraging Americans to smoke opium. In the South, anti-drug campaigns said blacks developed super-human strength after sniffing cocaine. The Mexicans were blamed for marijuana's popularity.

Legislation and anti-drug campaigns helped contain drug use until it became mainstream in the 1960s. In 1971, President Richard Nixon declare the first a "war on drugs" when he coordinated drug policies and legislation, and provided federal funds for education and prevention. He consolidated federal agencies into the Drug Enforcement Agency.

Cocaine use rose in the 1970s and 1980s. With the media sensationalism of such events as the death of Boston Celtic Len Bias and the arrest and conviction of Manuel Noriega, the drug war grew rapidly. Despite the lack of proof that a national drug use epidemic existed, Americans bought the media portrayal of the "crack baby" and inner city drug busts. In reality, the "crack baby" was the result of poverty and malnutrition and crack the result of prohibition. The

television reports of inner-city warfare and drug busts pinpointed young black men as the primary perpetrators.

By the mid-1980s, Congress and most state legislators enacted mandatory prison sentences based on the weight or quantity of a drug. The majority of federal and state drug offenders incarcerated in the 1990s were low-level sellers and dealers. High level traffickers and other dealers with information to share would trade information for lenient sentences. The prison industry grew faster than any other American industry in the 1990s and Americans incarcerated more of its own citizens than any other nation in the world.

The Drug Abuse Act of 1986 and 1988 set draconian penalties for drug possession and sale, including life in prison to property forfeiture. Other measures designed to curtail drug use and sale include denying convicted ex-drug offenders social programs such as government-backed college loans and grants, and welfare assistance. The Omnibus Crime Act of 1984 allowed police to confiscate property without due process. Authorities only needed an accusation or suspicion to enter such private domains as homes and cars, and conduct warrantless searches and seizures. Many critics argue that this practice violates basic personal liberties.

In the 1990, critics of the Drug War stated that American drug policies failed to put a dent in the drug trade. The U.S. government spent billions of dollars each year to improve border interdiction, increase the number of drug arrests and convictions, and build more prisons to house drug offenders.

The Drug War is also known for such issues as medical marijuana availability, legalization and decriminalization. Critics of the drug war argue that prohibition increases crime, deepens social and class conflict and defies basic democratic ideals. It increases health problems by denying treatment to and incarcerating addicts. It tears families apart by incarcerating small-time users and sellers for long prison sentences. It promotes poverty by denying welfare and educational assistance to ex-offenders and their dependents, and increases recidivism. Critics relate issues such as AIDS, IV drug use, street-level dealers, and gang-warfare to drug prohibition, not drug use.

Du Bois, W. E. B (1868-1963)

William Edward Burghardt Du Bois is remembered as one of twentieth-century America's foremost black leaders, intellectuals, and spokesmen. Multi-talented, in a long life he wrote as a sociologist, historian, poet, short story writer, novelist, autobiographer, and editor—and in all of these roles he was a crusading champion of racial justice. Though his ideological outlook changed many times during

W. E. B. Du Bois

his life, through phases of Darwinism, elitism, socialism, Pan-Africanism, voluntary self-segregation, and ultimately official communism, Du Bois consistently reiterated the view that the major problem of the twentieth century was “the problem of the color-line.” As historian Eric Sundquist has noted, Du Bois was born in Great Barrington, Massachusetts, 1868, the same year as the Fourteenth Amendment to the Constitution was adopted, and spent his life attempting to make the principles, promises, and protections of this landmark political article a reality for black Americans.

Despite the complex mixture of a racial background he summarized as “a flood of Negro blood, a strain of French, a bit of Dutch, but thank God! no ’Anglo-Saxon,’” the young Du Bois soon learned that his black ancestry assumed the greatest significance in the minds of his white school companions, the fact of his darker skin placing a “vast veil” between their social worlds. An exceptional student, Du Bois won a scholarship to enter Fisk University in 1885. The Nashville black college gave him the experience of extreme Southern racism and a new racial identity fostered by exposure to the region’s strong sense of African American culture and community. Moved by the religious faith and “sorrow songs” he came across during his stay in Tennessee, Du Bois later used these distinctive cultural expressions to recover, highlight, and discuss the meaning of the black historical experience in *The Souls of Black Folk*—which in turn inspired an

increased popular interest in black vernacular art forms. Graduating from Fisk in 1888, Du Bois took a second undergraduate degree at Harvard in 1890. In 1895 he became the first African American to gain a doctoral degree from Harvard, and publishing his thesis in 1896, *The Suppression of the African Slave Trade to the United States, 1638-1870*, Du Bois launched successful academic and publishing careers.

Accepting an invitation from the University of Pennsylvania to conduct a study examining the condition of the black population in Philadelphia, Du Bois published *The Philadelphia Negro: A Social Study* in 1899—this seminal critical survey cemented his academic reputation, and was cited as an influential model by sociologist Gunnar Myrdal some 45 years later. Between 1897 and 1910, Du Bois taught history and economics at Atlanta University. Here he had one of his most productive spells as a writer, and began to advance a political program that insisted on higher education as the foundation for black racial progress. This emphasis upon the ideals of the academy, together with his political activity in first, the Niagara Movement, then later as one of the founders of the National Association for the Advancement of Colored People (NAACP), placed Du Bois in opposition to the more vocationally oriented and seemingly accommodationist approach of Booker T. Washington. Editing and directing the publication of a multi-volume study of African Americans under segregation known as the Atlanta University Studies series, and a journal *The Horizon* from 1907-1910, Du Bois was gaining prominence as the self-appointed spokesman of what he called the black community’s “Talented Tenth”—“developing the Best of this race that they may guide the Mass away from the contamination and death of the Worst, in their own and other races.” Du Bois enhanced this position as race leader in his role as the editor of *The Crisis* from 1910 to 1934, the official organ of the NAACP that grew to have over 100,000 subscribers by the end of World War I. In this magazine, Du Bois featured the indignities and atrocities of racism in the United States, including regular reports and investigations into lynching, yet his appeal remained for the most part limited to the privileged literate Northern black middle classes and their white supporters.

As a scholar, propagandist, and organizer of the Pan-Africanist movement, Du Bois sought the means of uniting and making sense of the apparent disparate experiences of diaspora blacks. Unlike another of his African American political rivals of the 1920s, Marcus Garvey, Du Bois did not advocate a return to Africa as the route to black American political liberation. Instead, for Du Bois, Africa was more a source of common identity for blacks, and in the continent’s battle against European colonial domination, he found parallels with African Americans struggling for civil rights. Following his decision to leave the NAACP and resign his post at *The Crisis*, Du Bois no longer commanded a popular audience. In this period, however, he returned to Atlanta as Professor of Sociology and produced some of his most significant work, writing a history of *Black Reconstruction* (1935), *Dusk of Dawn* (1940), an autobiography, and founding *Phylon: The Atlanta University Review of Race and Culture* (1940). Although he briefly returned for a second period with the NAACP during World War II, Du Bois’ politics of self-segregation and a Marxist interpretation of history soon put him at odds again with the organization’s leadership and he was dismissed at the age of 80 in 1948. Du Bois’ life ended in intellectual exile from the United States, joining the Communist Party in 1961 and moving to Ghana where he died in 1963, the day before Martin Luther King Jr. led the long planned Civil Rights March on Washington.

Perhaps *The Souls of Black Folk* is Du Bois' most valuable literary legacy. Its recovery of the neglected black voices from the days of slavery, potent idea of "double-consciousness," and critique of modernity, continues to influence generations of black novelists (including Jean Toomer, Richard Wright, Ralph Ellison, and Alice Walker), historians, and scholars of culture and civilization in equal numbers.

Duck Soup

Though it failed at the box office upon its release, The Marx Brothers' 1933 feature *Duck Soup* is widely regarded as the comedy team's masterwork. By turns madcap, scathingly satirical, and genially surreal, the film chronicles the war fever that engulfs the mythical nation of Freedonia when Groucho becomes its dictator. Harpo and Chico play bumbling spies, with Zeppo relegated to the romantic subplot. Some critics found an anti-war subtext in the proceedings, but the brothers always denied any political agenda. Classic scenes abound, including the famous "mirror routine" and a rousing musical finale. Woody Allen paid homage to *Duck Soup*'s enduring comedic power by including scenes from it in the climax of his own classic *Hannah and Her Sisters* in 1986.

The Dukes of Hazzard

The *Dukes of Hazzard* television show, airing on CBS from 1979 to 1985, blended down-home charm, handsome men, beautiful women, rip-roaring car chases, and the simple message of good triumphing over evil; this successful combination made the program a ratings success and a longstanding campy cult favorite. The Dukes were country cousins Bo, Luke, and Daisy Duke, who lived in backwoods Hazzard County on their Uncle Jesse's farm. The formula storyline

usually involved the Dukes versus the town's gluttonous bigwig, Boss Hogg, and his lackey, Sheriff Rosco P. Coltrane. Episodes were liberally punctuated with raucous car chases in their orange 1969 Dodge Charger, the "General Lee," and Daisy's trademark short shorts inspired a 1993 hit rap song, "Dazzezy Dukes," which led to the term's use as a synonym for such apparel. The cast reunited for a television movie on CBS in 1997.

Duncan, Isadora (1877-1927)

The great American icon of dance, Isadora Duncan, who rose to prominence early in the twentieth century and met a tragic death at age 50, was ahead of her time in both her artistic ideals, her modes of physical expression, and her controversial private life. Greatly admired by many, she also became an object of scorn and derision, mocked for her uninhibited approach to her work and pilloried for her scandalous love affairs and "bohemian" associations and lifestyle. Ironically, Isadora Duncan's art has always been more highly valued abroad than in her native land, but her cultural influence in America was considerable. The development of the modern dance form as exemplified by Martha Graham and her contemporaries and successors owed much to Duncan's unshakable belief in the power and force of female self-expression.

Angela Isadora Duncan was born in San Francisco, the daughter of poor but liberal, art-loving parents, who gave relatively free rein to their children. Isadora and her siblings became involved with movement and dance early on, and taught the waltz and the mazurka to their friends. Meanwhile, Isadora attended sessions in gymnastics, a vigorous and increasingly fashionable form of exercise, free of the constraints of corsets or heavy clothing. The contrast with the rigidly formal balletic style that she and her family saw on the stages of local theaters was marked, and held more appeal for her. Isadora was still in her teens when she and her sister Elisabeth were listed in the San Francisco directory as teachers of dance, an occupation in which their brothers soon joined them. The Duncans loved to perform, and soon Isadora was part of a small family variety show touring California.

It did not take Duncan long to combine her love of expressive movement with the relative freedom offered to the female body by gymnastics. Delsarte's movement vocabulary, which sought exact expressions of emotions and inner states through physical actions, was much in fashion during the 1880s, and Duncan's later dances showed this influence in her use of a trained body, able to single out and intensify a whole-body expression. Another influence from her early years could be traced to the 1893 World Exhibition in Chicago. There, the Art Nouveau displays made a strong impression on her

Isadora Duncan

imagination, and her dances later reflected the organic lines and swirls that characterized Art Nouveau design.

After two years with a touring company and many excursions into acting, singing, and dancing, Isadora Duncan became bored with a theatrical environment which did not allow for the expression of her individuality. She began to develop her own style and work on a dance repertoire, and on March 14, 1899 she gave a solo performance in New York in which she danced to poetry. Her bare arms and legs caused some ladies to leave the auditorium, but those that remained were entranced by the classical purity of her art. Duncan had found her way out of the “low art” of club and theater dance to a new, high form of dancing, whose form was influenced by Greek statues, classical music, and poetry, and whose physical disciplines had their roots in calisthenics. Her favorite poet, Walt Whitman, inspired her to use her body as the instrument of a new poetry.

Later the same year, declaring the dedication of her life to Art and Beauty, Isadora Duncan embarked on travelling the world, taking her art to the sophisticated centers of 1920s bohemia: London, Paris, Berlin, and Moscow. She caused a sensation wherever she went and became an inspiration to poets, musicians, and painters, taking a succession of lovers from among their ranks. Among her most famous

liaisons was that with the famed English stage designer of the time, Gordon Craig, and she married the Russian poet Essenin.

In performance, Duncan was a euphoric dancer of sensual dreams. A free-thinking woman and an artistic visionary, she focused on the concerns of her time and translated them into movement, deserting the relatively static displays of the period for generous, sensitive dances in which she brought the accompanying music to three-dimensional life. To music that ranged from Schubert through Wagner to Chopin, she would fill the stage, her voluptuous body dressed in a Greek-style tunic, or veils, expressing her feelings and emotions through movement, able to communicate her presence to the audience. The influence of this style, while considerable, was concealed within the images of free, gracious, sensuous, and powerful dancing that mesmerized her audience through its simplicity—the Duncan approach could not be studied through preserved step patterns, finished dances, or her writings.

Parallel with her position as an exponent of a new form of dance, Duncan became an early symbol of personal women’s liberation, and of general political freedom. In her writings she attacked the constraints imposed on women, and exercised none in the conduct of her permissive sexual life. She even danced while pregnant. Although Duncan advocated the equality of both men and women in a new morality, she did not perceive her own work as erotic: her freedom was the freedom of the naked Greeks. Her audiences appreciated her in different ways, some for her purity of expression, others undoubtedly with prurient interest as they waited (successfully) for her breasts to fall out of her loose costume. It was not only gender politics that excited her: she saw Communism as a way forward, and offered her services to the Russian republic.

After a wandering life filled with ideas, achievements, personal tragedies such as the death of her children, many men, and few places to call home, Duncan died in a horrible yet appropriately flamboyant way. Her trademark flowing silk scarf became entangled in the wheels of a Bugatti sports car, causing a fatal broken spine.

The schools Duncan founded did not do very well, and few of her adopted daughters took on the mantle of teaching the next generation. Ballet masters dismissed her dances of free expression for their lack of technique, and saw Duncan herself as a mere amateur. Her writings were revived in the back-to-nature days of the 1970s, but had very little sustained influence on the further development of modern dance, but her powerful, free, and beautiful image has stayed with dancers all over the world. Isadora is cemented as one of the great feminine myths of the twentieth century, and was played by Vanessa Redgrave in Karel Reisz’s 1969 film, *The Loves of Isadora* (aka *Isadora*).

Dungeons and Dragons

Dungeons and Dragons, more commonly and affectionately known by its players as D&D, is the first and most famous of the

fantasy role playing games (RPGs). Dungeons and Dragons is based on traditional fantasy literature such as J.R.R. Tolkien's *Lord of the Rings* trilogy. In the game, players cast themselves as imaginary characters and go on imaginary adventures in a fantasy world of their own design. Gaining popularity in the 1980s, D&D perhaps symbolized the existential angst of a youth worried about inheriting a world that was not their own.

In D&D, the Dungeon Master (DM) creates an imaginary world full of monsters, dangers, and magic. Character-players then journey through the DM's world fighting battles, stealing treasures, or outwitting monsters. The game is played verbally with conflicts settled by a role of dice.

The players create characters for themselves based on a variety of traits; strength, intelligence, and endurance are three key qualities. The level of each trait that a character acquires is determined by the roll of a dice before the game starts. Players can choose a variety of roles for their characters such as thief, assassin, fighter, and cleric, among others. Players can also choose the race for each character; choices include humans, elves, and dwarfs. The game can be played with varying degrees of complexity, depending on the experience of the players and the Dungeon Master.

D&D was originally created by Gary Gygax and Dave Arneson. They simplified the game, moving from the action of regiments to the actions of individual fighters to create D&D. The first two print runs of the game sold out. TSR, Inc. produced the Dungeons and Dragons series starting in 1974. When D&D became very popular, especially among the college crowd, a whole industry arose. TSR published supplementary guides, including books of monsters and demigods based on world myths and legends. *Dragon Magazine* and other magazines devoted to gaming campaigns hit the newsstands. TSR also published book lines like *Forgotten Realms* and *Dragonlance* that had their origins in the games. Other fantasy authors incorporated D&D motifs into novels as well.

In addition to being popular, D&D was also very controversial. Campaigns can take hours, days, and sometimes even weeks to finish. Tales arose of promising college students flunking out of school because they spent all their time playing D&D. Other accusations against the game were even harsher. Many people accused it of instilling violence in the minds of the players; others said it produced suicidal tendencies, especially when a player over-identified with a character that had been killed during a game. Organizations and religious groups accused the game of being Satanic since it sometimes dealt with demons and conjuring devils. The campaign against Dungeons and Dragons eventually spawned a group known as BADD, (Bothered About Dungeons and Dragons). The group was founded by a woman who claimed that her child killed himself because of the game. The game took another publicity hit when the television movie *Mazes and Monsters* came out. The movie was based on an account of how D&D players took their role playing too seriously and started acting out the campaigns in the tunnels and sewers of their college.

Proponents of the games fought back, arguing that a game alone could not be the main cause of any psychological problems certain players were exhibiting. Advocates emphasized the notion that the game helped stimulate imagination and problem solving skills. Others claimed it helped vent violent feelings through imaginary play instead of acting such feelings out.

The debates about D&D generated negative publicity for the games and many concerned parents did not want their children playing. TSR continued its own positive publicity, and they began to

tone down some of their manuals and game-based fiction, especially the parts that dealt with demons and conjuring. Eventually, new technologies helped D&D and other role playing games recover some popularity. One player made an interactive on-line computer version of the game called a M.U.D., a Multi-User Dungeon. MUDs became the place where computer aficionados went to play.

The greatest blow against TSR and Dungeons and Dragons came in the 1990s, not from concerned parents but from bad business. TSR had its book contracts through Random House, which distributed the books through chain book stores. When the chain book stores stopped carrying the books, they tore off the covers and dumped them. Instead of a check from Random House, TSR received a huge bill they were not prepared to pay. In 1997, Wizards of the Coast, the producers of *Magic: The Gathering Cards*, another type of game playing, bought them out. Wizards of the Coast revived many TSR projects, including *Dragon Magazine* and D&D, in an attempt to keep the game alive. In the year following the buyout, the gaming industry started to swing back to RPGs and away from card games. Indeed, the future of RPGs continues to look promising.

Dunkin' Donuts

Associated with the working man's coffee break, Dunkin' Donuts catered to Americans' desire for a strong cup of coffee and a sweet treat long before Starbucks' coffee shops first started selling fancy pastries and gourmet coffee. Started in 1950, Dunkin' Donuts was ranked by *Entrepreneur* and *Franchise Times* magazines as one of the top franchises of 1998, when it was operating over 3,700 stores in 21 countries worldwide. In addition to coffee and doughnuts, the retail chain, with its ubiquitous pink and orange signs, sells muffins, bagels, and other bakery products. The world's largest chain of coffee and doughnut shops in the 1990s, founder William Rosenberg developed the chain from a string of canteen trucks after World War II. He bequeathed the business to his son Robert, who had managed doughnut shops during summer breaks from Harvard Business School. In 1989, Allied Domecq PLC, a British-based food and beverage conglomerate, whose portfolio of American quick service restaurants also includes Baskin-Robbins ice cream stores and Togo's sandwich shops, acquired Dunkin' Donuts. Dunkin' Donuts is Allied Domecq's flagship American operation, accounting for 70 percent of its total United States sales of \$2.5 billion in 1998.

Dunne, Finley Peter

See Mr. Dooley

Dunne, Irene (1898-1990)

Dubbed "The First Lady of Hollywood" in her day, her persona always charming, sweet, resourceful, and dignified, Irene Dunne evokes nostalgia for an era of romantic escape from harsh reality. Kentucky-born Dunne carved a successful career in musical comedy before entering films in 1930 (she starred as Magnolia in *Show Boat*, 1936), and was in the first rank of sympathetic screen heroines throughout the 1930s. She suffered gracefully through several sentimental, sometimes tragic, love stories, famously including *Back Street* (1932), *Magnificent Obsession* (1935), and *Love Affair* (1939), but also revealed an exceptional aptitude for comedy in such films as *Theodora Goes Wild* (1936) and *The Awful Truth* (1937). She received her fifth Oscar nomination for *I Remember Mama* (1947) which, together with *Life with Father* (1948), marked her last big successes. Dunne retired from the screen to devote herself to civic, philanthropic, and Republican political causes. Also a prolific radio and television performer, in 1985 she was honored at the Kennedy Center for her achievement in the performing arts.

See Buckwheat Zydeco

Durán, Roberto (1951—)

Roberto "Manos de Piedra" (Stone Hands) Durán is one of the few boxers in history to win world boxing titles in four different weight divisions—lightweight, welterweight, junior middleweight, and middleweight. Born in the poverty-stricken barrio of Chorillo, Panama, on June 16, 1951, Durán only received a third-grade education, after which he became a "street kid," making his living selling newspapers, shining shoes, committing petty theft, and doing whatever else he could to earn some money for his mother and eight siblings. Clearly one of the most talented boxers to enter the ring, Durán is also

well known for his contributions to the poor and his loyalty to family and friends.

Durán eventually followed an older brother into boxing and turned professional at the age of 16. A wealthy ex-athlete, Carlos Eleta, befriended Durán and arranged for his training with one of the best tacticians in American boxing, Ray Arcel, who taught Durán to become ambidextrous in the ring. Arcel also hired Freddie Brown, a trainer for 12 world champions, to work with Durán.

All of the attention paid off in 1972, when Durán won his first title as a lightweight against Ken Buchanan. Durán defended his title 11 times and won 70 of his first 71 fights. He reigned as a national hero in Panama, where he fed the poor, gave to numerous charitable causes, and was more than generous to his family. He made sure, in addition, to employ residents from his old barrio on his estate and in his various enterprises. In 1975, the most famous (or infamous) promoter in the fight game took on Durán—Don King. Durán's appetite for food forced him to move up in the weight divisions, as did the larger prizes that were offered through the assistance of King. One of the highlights of his career was his victory over one of the greatest boxers of all time, Sugar Ray Leonard in 1980 for the WBC (World Boxing Confederation) welterweight championship.

After this pinnacle of success, Durán gorged himself and could not control his weight before the Leonard rematch; he trained in a rubber corset and took diuretics before the weigh in, but soon stuffed himself with steaks and, by the time of the match, was too bloated and exhausted from the desperate training to put up a credible fight. Durán walked out of the ring in the eighth round, exclaiming a now infamous phrase: "No más . . . no peleo más" (No more . . . I won't fight anymore). Durán explained to the press that he had stomach cramps, but his reputation was sullied in the world sports press and among late-night television hosts, who satirized his surrender mercilessly. Durán, nevertheless, had earned \$3 million for the fight, but had lost Brown and Arcel from his team. In Panama, he was shunned and all of his acts of charity and goodwill were quickly forgotten.

In 1983, Durán made a comeback by winning the junior middleweight title from Davey Moore at Madison Square Garden, but soon lost a round of bouts. He came back once again to win the WBC middleweight title in 1989, after 22 years in the ring. Durán continued to fight into his forties, and became known as "the old man of boxing."

Durbin, Deanna (1921—)

Deanna Durbin's overnight rise to fame as an adolescent movie star began with *Three Smart Girls* (1936) and *One Hundred Men and a Girl* (1937). Her box office success was widely credited with saving Universal Studios from bankruptcy. Fans and critics alike were taken by her mature soprano voice and her wholesome, yet feisty, characters. Born Edna Mae Durbin in Winnipeg, Canada, she was dubbed "America's Kid Sister" and in 1939 was awarded a miniature Oscar. Although praised for her successful transition to adult roles in the 1940s, her popularity declined. In 1948, she permanently traded her

Durocher, Leo (1905-1991)

Leo Durocher, states one baseball publication, “was squarely at the center of some of the most exciting and controversial events in the

history of the game.” Durocher’s colorful and eventful baseball career spanned nearly 50 years as a major league player, manager, coach, and television commentator. But it was his tenure as a manager in New York City from 1941 to 1955 that made him a national sports celebrity and placed him at the heart of so many significant baseball events. Baseball writer Roger Kahn fondly remembered that era “when the Yankees, Giants, and Dodgers ruled the world.” On the field, Durocher managed both the Brooklyn Dodgers and the New York Giants; was directly involved in the controversy surrounding the game’s first black player, Jackie Robinson; and was a participant in what many sports writers consider the greatest game in baseball history—the 1951 final playoff between the Giants and the Dodgers.

Born in the industrial slums of West Springfield, Massachusetts, the young Durocher worked in factories and hustled pool to make money. He was suspended from high school for slapping a teacher and never returned. He began playing baseball on a railroad company team and made it to the major leagues in 1925. His playing career was mediocre at best, and his hitting was weak, but his flashy and acrobatic fielding was enough to make him an All-Star in 1936, 1938, and 1940. Durocher played for two of the most celebrated teams of the early twentieth century: in 1928 he spent his first full season in the major leagues with the legendary New York Yankees, led by Babe Ruth; and in 1934, he captained the St. Louis Cardinals, a team better

Former Giants manager Leo Durocher with his son.

known as the “Gas House Gang.” Those boisterous Cardinals were a hell-raising group that played hard on and off the field. Durocher and the Cardinals won the 1934 World Series.

In 1939, Durocher became player-manager for the Brooklyn Dodgers. He helped the Dodgers to a National League pennant in 1941 and, in what was perhaps his finest moment in baseball, stymied a 1947 rebellion by some Dodgers players protesting the presence of Jackie Robinson on the team. During spring training, Durocher discovered that several Dodgers were circulating a petition vowing they would never play on the same team as Robinson. Durocher called the team together and told them that Robinson was a great player and would help them to victory. He declared that, “He’s only the first, boys, only the first! There are many more colored ballplayers coming right behind him and they’re hungry, boys. They’re scratching and diving. Unless you wake up, these colored ballplayers are going to run you right out of the park. I don’t want to see your petition, I don’t want to hear anything else. This meeting is over.”

But he never had the opportunity to manage Jackie Robinson. A controversial figure, Durocher was suspended by the baseball commissioner for the entire 1947 season on the vague charge of moral turpitude. He had been under suspicion for being too friendly with New York gamblers and other shady characters, such as mobster Bugsy Siegel; and he had married movie actress Laraine Day in Mexico before her California divorce was final. Already a twice-divorced Catholic, Durocher had made enemies of powerful Roman Catholic Church officials and politicians in Brooklyn. Thus, public pressure, and the threat of keeping Catholic youth organizations from the ballpark, forced Durocher’s year-long sabbatical.

When he returned in 1948, the Dodgers faltered and he was fired early in the season. To the amazement of New York fans, however, he was immediately hired as manager of the cross-town rival, the New York Giants. He was also managing the Giants at the time of the legendary 1951 playoff game with the Brooklyn Dodgers on 12 August 1951. The Giants, trailing the first-place Dodgers by 13½

games, tied their rivals by season’s end and forced a three-game playoff. In game three, the Dodgers were leading 4-1 in the final inning when Bobby Thomson hit a dramatic home run to win the pennant for the Durocher-led Giants. Durocher took the team to two World Series, winning the 1954 contest, but despite these successes, the Giants finished a weak third in 1955 and Durocher was fired at the end of the season.

After working as a television commentator and coaching for several years with the Los Angeles Dodgers, Durocher returned to manage the Chicago Cubs in 1966. The Cubs had been one of the worst teams in baseball for nearly three decades, but Durocher helped turn them into winners. In 1969, his Cubs held a 9 ½-game lead in early August, but they folded in the last two months of the season and lost the National League pennant to the New York Mets. Durocher was criticized for not resting his players during the humid days of summer. He left the Cubs in 1972 and managed one more season with the Houston Astros before retiring.

Leo Durocher remains among the all-time leaders in games managed (3,740) and games won (2,010). In addition, he is the only baseball player cited in Bartlett’s Quotations. His quote, “Nice Guys Finish Last,” is also the title of his autobiography, which he wrote after leaving baseball. That renowned quotation was attributed to Durocher in 1947 and referred to his opinion of then Giants manager Mel Ott, whose team had been underachieving during the season. “Leo the Lip,” as the irascible Durocher was called, maintained that Ott and most of the Giants players were nice guys, but they would never be winners because nice guys finish last.

Duvall, Robert (1931—)

Veteran American actor Robert Duvall has been an integral part of a large portion of Hollywood cinema throughout his lengthy career, thanks to his ability to metamorphose fully into each character he plays. He is also a skilled director, producer, screenwriter, singer, and songwriter. One of his most memorable roles is as Colonel Kilgore in the 1979 Francis Ford Coppola film *Apocalypse Now*, in which he uttered the classic line, “I love the smell of napalm in the morning.”

Duvall also won an Academy Award for best actor for his part as a country singer in 1983's *Tender Mercies*, for which he wrote and performed some of the songs. In 1997 Duvall won critical plaudits for *The Apostle*, a pet project that was a long time coming. He wrote, directed, starred in, and funded the picture about a flawed southern minister.

Dyer, Wayne (1940—)

Charismatic and camera-friendly, Wayne Dyer became well-known after the phenomenally successful publication of his first best-selling book, *Your Erroneous Zones* in 1976. From that time, he became a constant proponent of such typically "New Age" concepts as "living in the moment" and making "choices that bring us to a higher awareness," as he told a reporter for the *St. Petersburg Times* in 1994. Since *Your Erroneous Zones*, Dyer has used books, tapes, and the broadcast media to his advantage, securing his position as a

Wayne Dyer

late-twentieth-century cultural icon, and a leading light in the areas of motivation and self-awareness.

Wayne W. Dyer was born in Detroit, Michigan, and began his professional career in Detroit as a high-school guidance counselor in 1965. In 1971, after earning a doctorate of education, he was appointed a professor of counselor education at St. John's University in Jamaica, New York, and began contributing articles to professional journals and co-authoring books on counseling with his colleague John Vriend. These established his credentials in academia, while, at the same time, he ran a lucrative private clinical psychology practice. His lectures at St. John's taught exercises in motivational speaking, and his upbeat, positive message was very well-received; students began bringing their friends to Dyer's lectures, and he amassed a small following.

News of these lectures intrigued a literary agent, who approached Dyer about the possibility of writing a book based on their ideas. He agreed, and wrote *Your Erroneous Zones*, sales of which were initially abysmal. Undaunted, its author bought up all the copies and, quitting both his teaching position and his practice, set out on the road with the books to make publishing and self-marketing history. In four months, Dyer covered all of the contiguous United States, making personal appearances at bookstores and giving radio and television interviews. By the end of his journey, he had been a guest on nationally televised talk shows and was interviewed by the likes of Phil Donahue, Johnny Carson, and Merv Griffin.

Wayne Dyer's status as a celebrity allowed him to publish more books on the same theme, and to generate an audience for his informal lecture tours. These tours cemented his following, and became the basis for the many acclaimed, high-selling audiotope sets that he recorded. His message offered something for everyone, since it was not specific to either any religion, or any particular portion of society. This was in contrast to self-help heroes such as Dale Carnegie and Stephen Covey, whose philosophies were somewhat hemmed in by their affiliations and concerns with the business and corporate worlds. Dyer even resisted the New Age tag, warning his audience in one of his tapes that the New Age phenomenon and its proponents were often superficial and could be dangerously misleading.

While his books all offered variations on the same theme, that theme became steadily more convoluted and esoteric as his career continued, accruing a certain degree of mysticism to accompany his pop psychology. In *Real Magic* (1993), for example, he discusses the potential for spiritual experience, while *Your Sacred Self* (1996) further expounds on the benefits of attaining a higher consciousness. Having remarried in 1979, he and his wife were raising a family of eight children throughout the 1980s, and his books largely recounted experiences and anecdotes culled from his family life. In 1998 he published *Wisdom of the Ages*, a collection of essays that reflected on the essence of certain literary quotations.

Dyer often said that his own life was his own best example, and much of his appeal can be attributed to his life experience, which he used consistently as an entry point into his discussions and writings. Many of his pre-teen years were spent in an orphanage, and although he grew up to be successful, he was also profoundly unhappy until he decided to take responsibility for his own life in the mid-1970s. The fact that his ideas were based on the psychological mechanisms that worked so well for him gave him his credibility among the consumers of self-development media.

Although the book sales and attendance numbers at Dyer's lectures were a testament to his following, and his continued appearance on talk shows throughout the 1980s kept him in the wider public

eye, he had his share of critics. Interviewing him in a 1983 issue of *Life* magazine, Campbell Geeslin suggests that Dyer's message is "a gospel in praise of the superficial" and that "Dyer is selling simplistic solutions to life's inevitable difficulties." Wayne Dyer, who was his own best advertisement in the late 1970s, turned out to be his own saboteur in the early 1990s. While remaining a hugely successful author, his increasingly mystical approach to his subject matter made him less desirable as a guest on the talk-show circuit and, while still visible, his voice and message no longer saturate the airwaves.

Dykes to Watch Out For

In the mid-1980s lesbian cartoonist Alison Bechdel began to create the family of lesbians who comprise her popular comic strip, *Dykes to Watch Out For*. By the mid-1990s, the strip—the first continuing lesbian cartoon—had been syndicated in over 50 lesbian, gay, and alternative periodicals and had been published in more than seven collections. *Dykes to Watch Out For* had become an institution.

The strip is a little like a soap opera, with a developing storyline, and a lot like a peek behind the scenes of any lesbian community. The cast of characters is a group of lesbian friends in a nameless mid-size city in the United States. Just as in any real group of friends, pairings change and priorities evolve, influenced by events both internal and external. Much of the action takes place at Madwimmin Books, a feminist bookstore owned by Jezanna, a no-nonsense lesbian entrepreneur. Among the staff at Madwimmin are Mo, a lovable curmudgeon filled with leftist angst, and Lois, a butch rake with a girl in every port. Their friends include Toni and Clarice, an accountant and lawyer with a baby boy—however uncomfortably, they are upwardly mobile and nuclear-family-bound. Lois lives in a group house with Ginger, an academic, and Sparrow is a pagan spiritualist who works at a battered women's shelter.

These women, and the friends who ebb and flow around them, form a diverse community. Through them, Bechdel pokes gentle fun at the foibles of lesbians, be they politically earnest, promiscuous, or pretentious. She also allows them to change as they experience the events of the real world, mirroring the real changes that occur both among lesbians and in the larger community. Just as traditional media reflects the effects of phenomena on the larger culture, *Dykes to Watch Out For* reflects lesbian culture. Presidential elections, the O.J. Simpson trial, prozac, sado-masochism, transsexuality—all appear in the panels of the comic strip, analyzed and digested by Bechdel's family of lesbians.

Bechdel calls her strip "half op-ed column and half endless Victorian novel." While her primary alter-ego is clearly Mo, the

anguished leftist, Bechdel does not take herself or her characters too seriously. She occasionally has her characters break the "fourth wall" and address her readers directly, or interact with each other as if they are quite different characters performing in the strip. One of the strip's calendars shows a large panel of the "green room" where characters display heretofore unseen personality traits as they wait for their "entrance" onto the strip. In another strip, characters of color, a Jewish character, and a disabled character bewail their token status in the storyline.

It is a tribute to Bechdel's skill as an artist and a writer that she can bring her characters enough life to argue with her from the page. Her drawings are clean yet complex, filled with subtle references and in-jokes for her audience, and the dialogue is lively and incisive. In fact, Bechdel's work and the success of *Dykes To Watch Out For* drew the attention of the mainstream press when Universal Press Syndicate approached her with an offer that could have placed her in the daily "funny papers." Though their interest was exciting to Bechdel, it only took a moment's thought to realize that whittling down her work to fit the narrow niche of the mainstream would have changed her work beyond recognition. The title would have to go, "dykes" being far too controversial, and out of six main characters only two would have been allowed to be lesbians. Unwilling to give up her vision of a strip that reflected the realities of lesbian life, Bechdel refused the offer and remained in the alternative press, where her uncensored style was welcome.

Her strips, collections, and calendars have always been eagerly awaited by her fans. In fact, the main dilemma for Bechdel's readers seems to be expressed by an urgent letter she received from a fan. "DO YOU HAVE ANY IDEA," the reader wrote, "WHAT IT'S LIKE TO HAVE A CRUSH ON A CARTOON CHARACTER?!?!?"

—Tina Gianoulis

Dylan, Bob (1941—)

The most influential musician to emerge out of the social unrest of the early 1960s, Bob Dylan dramatically expanded the aesthetic and political boundaries of popular song. Recognized almost immediately as the voice of his generation, Dylan began his brilliant career by performing blues, folk ballads, and his own topical compositions, many of which addressed issues of racial injustice and protested against the threat of nuclear war. By 1965 he transformed himself into a rock star, the first of many metamorphoses he would undergo over the next three decades. Mercurial, iconoclastic, and enigmatic, Dylan variously presented himself as a poet, gospel singer, bluesman, country musician, and minstrel, recording more than thirty albums that would make him one of the major popular artists of the twentieth century.

"Dylan has invented himself. He's made himself up from scratch," wrote playwright Sam Shepard. The point, Shepard suggested, "isn't to figure [Dylan] out but to take him in," to use him "as

Bob Dylan

a means to adventure.” Dylan began his extraordinary odyssey as Robert Zimmerman, the son of Jewish merchants from Hibbing, Minnesota, where he enjoyed a comfortable middle-class life. Although he was bar mitzvahed, Dylan listened to prophets who were unfamiliar to his parents. Little Richard, Elvis Presley, and Hank Williams inspired the young guitar player, while the rebels James Dean and Marlon Brando shaped the attitude he carried to the University of Minnesota in 1959.

His days as a student were numbered. Having received an assortment of Huddie “Leadbelly” Leadbetter’s recordings for graduation gifts, Dylan was more interested in music than his studies and promptly matriculated to Dinkytown, a hip section of Minneapolis renowned for its folk scene. It was here that he obtained a copy of Woody Guthrie’s autobiography, *Bound for Glory* (1943), a book that inspired him to learn the Dust Bowl balladeer’s compositions and to perform them in local coffeehouses. By 1960, this nineteen-year-old changed his name and adopted Guthrie’s nomadic ways, embarking on a cross-country trip that ended in New York City early in 1961.

Dylan immersed himself in the bohemian culture of Greenwich Village, where leftists old and new were participating in the folk music revival. Pete Seeger, Ramblin’ Jack Elliot, Ralph Rinzler, and scores of other young people enamored with folk music attended jam sessions in Washington Square Park and gathered regularly to pay

homage to Guthrie, the movement’s patron saint. Hospitalized with Huntington’s chorea, Guthrie made weekend visits to the East Orange, New Jersey, home of Bob and Sidsell Gleason, where Dylan temporarily resided. The two men established a warm relationship. Disease had nearly destroyed Guthrie’s creative and communicative abilities, but he managed to express his enthusiasm for his admirer. When Dylan debuted at Gerde’s Folk City in April, 1961, he donned one of his mentor’s old suits for the occasion.

A self-described “Woody Guthrie juke box,” Dylan recalled that he was “completely taken over by his spirit,” a claim to which his self-titled album (1962), attests. Released soon after he was signed to Columbia Records by John Hammond, this collection of folk standards and two originals established Dylan’s credentials as an authentic traditional artist, and as a nasal-voiced, road-weary traveler who had hoboed for most of his young life. The album included the poignant “Song to Woody,” a ballad written to the tune of Guthrie’s “1913 Massacre” that musically, stylistically, and lyrically declared Dylan’s intent to carry his hero’s mantle. Cover versions of songs by bluesmen Blind Lemon Jefferson and Bukka White placed Dylan firmly in the folk tradition as did a 1961 press interview, during which he claimed to have played with Jefferson and the Texas songster Mance Lipscomb.

Bored with the predictability and sheltered nature of his middle-class life, Dylan fabricated a past full of hard traveling and hard living. If, like his fellow baby boomers, his life was smothered by relative affluence and haunted by the specter of nuclear war, his ersatz travels were filled with adventure and possibility. But if Dylan responded to his generation’s ennui and malaise, he also began to absorb and shape its politics. “Whether he liked it or not, Dylan *sang for us*,” wrote the former president of Students for a Democratic Society, Todd Gitlin. “We followed his career as if he were singing our song; we got in the habit of asking where he was taking us next.”

The Freewheelin’ Bob Dylan (1963) was born out of his emerging political consciousness. Perhaps the most stinging indictment of the United States government ever released by the commercial recording industry, “Masters of War” condemned the men who produce weapons of mass destruction and warned them that even the most benevolent God would not absolve their transgressions. The politics of *Freewheelin’* did not stop here. “Oxford Town” mocked segregation at the University of Mississippi; “A Hard Rain’s A-Gonna Fall” imagined a stark and terrifying post-nuclear landscape; and “Blowin’ in the Wind,” which became a hit for Peter, Paul and Mary, was a simple, though poetic, call for racial harmony. After becoming the star of the 1963 Newport Folk Festival, Dylan actively supported a number of political causes, performing at a voter registration rally in Mississippi and at the March on Washington that summer. Meanwhile, the title track for his third album, *The Times They Are A-Changin’* (1964), furnished the anthem for a generation dedicated to transforming the social order.

Another Side of Bob Dylan (1964) suggested, however, that the artist was moving in new directions. Bitter love songs such as “It Ain’t Me Babe” replaced the moralism of *Freewheelin’* and *Times*, while “Chimes of Freedom” cloaked its social concerns beneath a virtuosic lyricism. Both the album and Dylan’s promotion of it at the 1964 Newport Festival were poorly received by members of the folk press, many of whom opined that their hero’s preoccupation with aesthetics forsook his political commitment. Their accusations were not unfounded. Unwilling to be shackled with the duties of generational spokesman, Dylan publicly renounced his involvement with the New

Left and, after shedding his denim shirt for black leather and sunglasses, repackaged himself as a poet and rock star.

By the end of 1965, perhaps the most important year in Dylan's career, the transformation was complete. Following the release of *Bringing It All Back Home* that March, Dylan embarked on a tour of England where he was met by transfixed crowds, screaming girls, and adoring musicians. D.A. Pennebaker's documentary film *Don't Look Back* (1967) chronicles the tour, presenting an increasingly arrogant artist who sounded more like an existentialist than a proponent of civil rights. In his interactions with the press, an irreverent Dylan attacked those who tried to categorize and explain his art. In fact, his most recent material seemed to question the ability of language to convey a sense of reality. Rather than writing topical songs, he assailed the social order by intimating that it was unreal, absurd, a mere construction of language. *Home*'s "Mr. Tambourine Man" (which the Byrds successfully covered in 1965) suggested that drugs may have been helping Dylan alter his own private reality, but the apocalyptic images encountered by the bizarre characters who traveled *Highway 61 Revisited* (1965)—Napoleon in rags, Einstein disguised as Robin Hood, and Mr. Jones—insinuated that an unjust present could only be transcended by the act of artistic creation itself.

To be sure, Dylan's complex, poetic lyrics altered the face of pop music and legitimated the genre as an art form. When Bruce Springsteen inducted Dylan into the Rock and Roll Hall of Fame in 1988, he recalled that when he first heard "Like a Rolling Stone," it "sounded like somebody'd kicked open the door to your mind." The six-minute single redefined the limits of popular song, declaring, Springsteen later recalled, that "everything"—aesthetics, politics, power, and perhaps reality itself—"was up for grabs."

Those who followed Dylan's career closely should not have been surprised when he turned his back on the folk revival at Newport in 1965. The breaking off of his romantic relationship with Joan Baez, his work on a collection of poems entitled *Tarantula* (eventually published in 1971), his arcane lyrics, and his interest in the musical arrangements of the Beatles, whom he had met on his British tour, all pointed to his intention to leave the movement. Nevertheless, his followers were shocked when Dylan appeared with an electric guitar. Among the stalwarts who suggested that rock-and-roll musicians had sold out to commercial interests, Seeger was rumored to have been so outraged that he tried to cut the power supply. The audience nearly booed Dylan from the stage. Although shaken, Dylan remained resolute about his artistic decision. After meeting The Band (then the Hawks) in the summer of 1965, he took his electric show on a tour of England, during which he continued to incur the wrath of folk purists. This reaction—as well as the stunning music that Dylan and The Band produced—is documented on *Live 1966* (released in 1998). Recorded at Manchester's Free Trade Hall, this concert included a riveting acoustic set which ultimately yielded to a full-blown rock show, where Dylan's voice and the masterful playing of his musicians soared above the audience's cries of betrayal.

Exhausted from the tour, Dylan returned to the United States, where, after sustaining serious injury in a motorcycle accident, he repaired to his home in Woodstock, New York. The silence of his convalescence ended in the summer of 1967, when he and the Band initiated a five-month jam session, most of which was released as the critically acclaimed *Basement Tapes* (1975). The search for personal redemption ("I Shall Be Released"), a sense of disillusionment and abandonment ("Tears of Rage"), and a persistent existential angst ("Too Much of Nothing"), remained prominent themes, but if the Dylan of 1966 was trying to inter the musical past, the *Basement*

Dylan exhumed it. Dock Boggs, Clarence Ashley, and Jefferson, traditional musicians whom Dylan encountered on the Folkways *Anthology of American Folk Music*, seemed to have a palpable presence on these recordings.

The *Basement Tapes* provide a segue between the modernism of *Blonde on Blonde* (1966) and *John Wesley Harding* (1968), the first album to appear after the accident. Replete with Biblical allusions, *Harding* was a largely acoustic collection of parables and allegories, one of which, "All Along the Watchtower," became a standard in Jimi Hendrix's repertoire. But if the children of Woodstock continued to embrace one of upstate New York's most famous residents, the artist himself seemed to be far removed from the Summer of Love. In the same year that flower children frolicked in the rain and mud, Dylan traveled south to record *Nashville Skyline* (1969), a collection of country-tinged love songs that included a duet with Johnny Cash. The man who began his career with protest songs ended the turbulent 1960s by embracing the form that such artists as Merle Haggard used to condemn the anti-war movement.

The albums that carried Dylan into the 1970s showed little of the genius that characterized his earlier work. The soundtrack to *Pat Garrett and Billy the Kid* (1973), a film in which Dylan played a bit part, was notable for the inclusion of "Knockin' on Heaven's Door," a song later covered by Eric Clapton and Guns 'n' Roses. *Before the Flood* (1974), a live album recorded with The Band, suggested that Dylan was perhaps undergoing a creative renaissance, an assessment that *Blood on the Tracks* (1975) confirmed. Here again were songs of love, but crisp acoustic guitar, wailing harmonica, and a voice filled with doubt and disappointment convey the pain, anguish, and longing of "Tangled Up in Blue" and "Shelter from the Storm" with remarkable weight and precision.

Desire (1976) indicated a renewed interest in politics. "Hurricane," the lengthy centerpiece, was the angriest song Dylan had recorded since "Masters of War." Co-written with Jacques Levy, this fierce narrative impugned the American justice system by considering the murder trial of former professional boxer Rubin "Hurricane" Carter. Contending that Carter's trial had been conducted unfairly, Dylan publicized the jailed athlete's case by marshaling the forces of his Rolling Thunder Revue, a melange of some seventy artists—Baez, Shepard, Elliot, and Allen Ginsberg among them—that toured the States under Dylan's direction. Dylan, who performed most of the shows with his face covered in white pancake make up, designated appearances in Madison Square Garden and the Astrodome as benefits for Carter. Although the Revue's efforts may have played a part in convincing a New Jersey court to throw out Carter's first conviction, the boxer was found guilty a second time. *Hard Rain* (1976) provides a sampling of the dramatic ways that Dylan rearranged his music during the tour.

After the unremarkable *Street-Legal* (1978), Dylan chose a path previously untrodden: the artist who spent much of the early 1970s exploring his Jewish roots suddenly became a born again Christian. Fans and critics had little tolerance for the musician's choice, particularly when he proselytized at concerts and refused to play his better-known songs. The dogmatic lyrics may have made audiences uneasy, but the music on *Slow Train Coming* (1979), *Saved* (1980), and *Shot of Love* (1981) was triumphant and exhilarating. Backed by powerful gospel arrangements, Dylan sings with a passion that convinces the congregation that he had finally found his direction home. "Gotta Serve Somebody," the single from *Train*, earned Dylan his first Grammy Award.

Infidels (1983) explored both political and spiritual issues, but perhaps because it eschewed the religious fanaticism of his previous efforts, it received warm praise from critics. Indeed, when such songs as “Jokerman,” “License to Kill,” and “I and I,” are heard alongside “Blind Willie McTell” and “Foot of Pride,” both of which were released on *The Bootleg Series, Volumes 1-3* (1991), these sessions rate among the most innovative of Dylan’s career.

If Dylan’s commitment to Christianity had not faded on *Infidels*, it was clear he had change a of heart when, on *Empire Burlesque* (1985), he proclaimed that he “never could learn to drink that blood and call it wine.” That same year he released *Biograph*, a retrospective of his career that included much previously unreleased material and initiated the “boxed-set” format to the recording industry. With his popularity again peaking, he participated in efforts to alleviate famine in Ethiopia, joining the chorus of U.S.A. for Africa to record “We Are the World” and issuing a ragged performance at the Live Aid Concert in Philadelphia. Political commentary extended into the 1990s. When he accepted a Grammy for lifetime achievement during 1991 Gulf War, he performed “Masters of War.”

Although Dylan released lackluster studio albums in the mid-1980s, he launched separate but noteworthy tours with Tom Petty and the Heartbreakers and the Grateful Dead. Perhaps his most interesting work from this period came as a member of the Traveling Wilburys, a group comprised of Petty, George Harrison, Roy Orbison, and Jeff Lynne. Released in 1988, the first of the Wilburys two albums included the foot-tapping singles “Handle Me with Care” and “End of the Line.” Dylan capped the 1980s with the critically acclaimed *Oh Mercy* (1989), which included the socially conscious “Political World” as well as “What Was It You Wanted,” a song that recalled the bitterness of such earlier compositions as “Don’t Think Twice, It’s All Right.”

His fourth decade of recording brought accolades and continued success. In October 1992, a panoply of artists including Harrison, Cash, Petty, Lou Reed, and Neil Young assembled at Madison Square Garden to celebrate the thirtieth anniversary of Dylan’s first album. When the honoree opened his own set with “Song for Woody,” he indicated that his career had come full circle. To be sure, his next two albums returned to his roots: *Good As I Been to You* (1992) and *World Gone Wrong* (1993) were both collections of traditional folk songs. Because these releases contained no new material, critics opined that Dylan’s creative powers were again on the wane. Their diagnosis was premature. In 1997, this man who once issued a resonant challenge to the American political system was recognized as one of the nation’s most important artists when he was feted at the Kennedy Center Honors. Soon thereafter he experienced a life-threatening illness and responded with the Grammy-winning *Time Out of Mind* (1997). Here the aging Dylan tried to come to terms with the emptiness of love and the limits of his own humanity. “The shadows are falling and I’ve been here all day,” he sings in “Not Dark Yet.” “It’s too hot to sleep and time is running away.” The hobo’s travels had not yet ended, but he was now worried about “Tryin’ to get to heaven before they closed the door.”

Dylan’s career had not yet ended, but the photograph that appeared on the inside cover of the *Time Out of Mind* compact disc box proclaimed a sense of closure. Shot from the shoulders up, a corpse-like Dylan stares into the camera, the soft focus connoting an elusiveness, his pale, worn face suggesting a weariness, his eyes glistening with the sadness of experience yet not devoid of hope, his riverboat minstrel costume, complete with string tie, underscoring the timelessness so powerfully communicated by the soulful and battered

vocal performance rendered on the album. As a new generation embraced him, as his son, Jacob, began his own recording career with the Wallflowers, Dylan had, like the hard-traveling minstrel he emulated, become the progenitor of the cultural and musical traditions he so carefully studied. His remarkable body of work and enigmatic persona had, in effect, delivered him out of time, had elevated him to the status of national myth. Nearly forty years after his first record, Dylan continued to provide audiences with a “means to adventure.”

Dynasty

Produced by Aaron Spelling for the ABC television network, *Dynasty* was introduced to American television as a three-hour movie, and lasted nine seasons in the form of a weekly one-hour drama serial, from 1981-89. Perfect for the decade, which, despite the conservatism and family values of the Reagan years, was characterized by increasing mass consumption, materialism, and the “me generation,” *Dynasty* celebrated glamour, wealth, and capitalism. Inspired by the monumentally popular CBS program *Dallas*, *Dynasty*, along with *Dallas* and *Falcon Crest* (also on CBS) helped to define a new genre—the prime-time soap opera—while reaching unprecedented heights of melodramatic, over-the-top, escapist absurdity. Like their daytime counterparts such as *General Hospital*, the prime-time soaps presented serialized narratives, with each episode ending on a “cliffhanger,” or storyline left unresolved at the highest point of tension, to be taken up in the next installment. The technique ensured a captive audience, and *Dynasty* came to be one of the most popular shows of the decade, dominating television screens not only in the United States, but also in more than 70 other countries.

The show centered on the lives of the dynastic Carrington family, headed by the patriarch Blake Carrington (John Forsythe), a Denver oil tycoon. To the traditional story formula of the daytime soaps was added a potent brew of adultery, murder, and deceit, as well as complicated plotlines centered in corporate greed, rivalries, takeovers, and mergers consonant with the patina of outrageous wealth that

was evident everywhere. Women were integral to *Dynasty*, no more so than the character of Alexis, who became a byword for female power and high-octane glamour. Ruthless, vengeful and cunning, she was played by Joan Collins and the role made her a major star and a household name in America and many other countries.

Much of *Dynasty*'s action involved the rivalry between Alexis, as Blake's ex-wife, and Krystle (Linda Evans), his current spouse, as they battled for dominance, both figuratively and literally, in numerous "cat fights." One of the most interesting aspects of their characters lay in presenting them as glamorous and sexy, albeit that they were over 40—a rare departure for American television which, like the movies, has tended to regard such attributes as belonging to the younger generation (of whom *Dynasty* had its fair share of both sexes). Audiences found the character of Alexis so deliciously conniving that she became the center of the weekly spectacle.

Because of their highly stylized representations of domesticity and personal problems, often characterized by excess, soap operas have been much denigrated by the high-minded. However, *Dynasty* was enjoyed by huge numbers of educated and intellectual viewers and, as many scholars have pointed out, it is the soap opera that has brought to American television those inflammatory issues so often ignored by more seriously intentioned programs. Towards the end of its run, it featured the first significant African American character in a prime-time soap, Dominique Deveraux, played by Diahann Carroll. Though the program did not directly confront issues of racism, Deveraux's presence raised the subject of interracial relationships, while in Steven Carrington (played by Al Corley and later, Jack Coleman), it introduced one of popular television's first regular homosexual characters.
