EDITOR'S NOTE

Thirty some years ago Ray Browne and several of his colleagues provided a forum for the academic study of popular culture by forming first the *Journal of Popular Culture* and later the Popular Culture Association and the Center for the Study of Popular Culture at Bowling Green State University. Twenty some years ago Thomas Inge thought the field of popular culture studies well enough established to put together the first edition of his *Handbook of Popular Culture*. In the years since, scholars and educators from many disciplines have published enough books, gathered enough conferences, and gained enough institutional clout to make popular culture studies one of the richest fields of academic study at the close of the twentieth century. Thirty, twenty, in some places even ten years ago, to study popular culture was to be something of a pariah; today, the study of popular culture is accepted and even respected in departments of history, literature, communications, sociology, film studies, etc. throughout the United States and throughout the world, and not only in universities, but in increasing numbers of high schools. Thomas Inge wrote in the introduction to the second edition of his *Handbook*: “The serious and systematic study of popular culture may be the most significant and potentially useful of the trends in academic research and teaching in the last half of this century in the United States.”² It is to this thriving field of study that we hope to contribute with the *St. James Encyclopedia of Popular Culture*.

The *St. James Encyclopedia of Popular Culture* includes over 2,700 essays on all elements of popular culture in the United States in the twentieth century. But what is “popular culture?” Academics have offered a number of answers over the years. Historians Norman F. Cantor and Michael S. Werthman suggested that “popular culture may be seen as all those things man does and all those artifacts he creates for their own sake, all that diverts his mind and body from the sad business of life.”¹ Michael Bell argues that:

At its simplest popular culture is the culture of mass appeal. A creation is popular when it is created to respond to the experiences and values of the majority, when it is produced in such a way that the majority have easy access to it, and when it can be understood and interpreted by that majority without the aid of special knowledge or experience.³

While tremendously useful, both of these definitions tend to exclude more than they embrace. Was the hot dog created for its own sake, as a diversion? Probably not, but we’ve included an essay on it in this collection. Were the works of Sigmund Freud in any way shaped for the majority? No, but Freud’s ideas—borrowed, twisted, and reinterpreted—have shaped novels, films, and common speech in ways too diffuse to ignore. Thus we have included an essay on Freud’s impact on popular culture. Our desire to bring together the greatest number of cultural phenomena impacting American culture in this century has led us to prefer Ray Browne’s rather broader early definition of popular culture as “all the experiences in life shared by people in common, generally though not necessarily disseminated by the mass media.”⁴

Coverage

In order to amass a list of those cultural phenomena that were widely disseminated and experienced by people in relatively unmediated form we asked a number of scholars, teachers, librarians, and archivists to serve as advisors. Each of our 20 advisors provided us with a list of over 200 topics from their field of specialty that they considered important enough to merit an essay; several of our advisors provided us with lists much longer than that. Their collective lists numbered nearly 4,000 potential essay topics, and we winnowed this list down to the number that is now gathered in this collection. We sought balance (but not equal coverage) between the major areas of popular culture: film; music; print culture; social life; sports; television and radio; and art and performance (which includes theatre, dance, stand-up comedy, and other live performance). For those interested, the breakdown of coverage is as follows: social life, 23 percent (a category which covers everything from foodways to fashion, holidays to hairstyles); music, 16 percent; print culture, 16 percent; film, 15 percent; television and radio, 14 percent; sports, 10 percent; and art and performance, 6 percent. A variety of considerations led us to skew the coverage of the book in favor of the second half of the century. The massive popularity of television and recorded music, the mass-marketing of popular fiction, and the national attention given to professional sports are historical factors contributing to the emphasis on post-World War II culture, but we have also considered the needs of high school and undergraduate users in distributing entries in this way.

The Entries

The entries in this volume vary in length from brief (75 to 150-word) introductions to the topic to in-depth 3,000-word explorations. No matter the length, we have asked our contributors to do two things in each entry: to describe the topic and to analyze its

significance in and relevance to American popular culture. While we hope that users will find the basic factual information they need concerning the topic in an entry, it was even more important to us that each user gain some perspective on the cultural context in which the topic has importance. Thus the entry on MTV, for example, chronicles the channel's rise to world popularity, but also analyzes the relationship between MTV, youth culture, and consumerism. The entry on John Ford, while tracing the outlines of the film director's long career, assesses the impact Ford's films have had on the film Western and on Americans' very perceptions of the West. Given the brevity of the entries, we chose to emphasize analysis of a topic's contribution to popular culture over a full presentation of biographical/historical information. The entry on World War I, for example, offers an analysis of how the war was understood in popular film, print culture, and propaganda rather than a blow-by-blow description of the actual military conflict.

Entries are accompanied by a list of further readings. These readings are meant to provide the user with readily accessible sources that provide more information on the specific topic. As befits a multimedia age, these "further readings" come not just from books and magazines, but also from albums, liner notes, films, videos, and web sites. Users of the Internet know well the perils of trusting the information found on the World Wide Web; there are as yet few filters to help browsers sift the useful from the absurd. We cited web sites when they provided information that was unavailable in any other known form and when our reasonable efforts to determine the veracity of the information led us to believe that the information provided was valid and useful. We have occasionally provided links to "official" web sites of performers or organizations, for the same reason that we provide citations to autobiographies. All web links cited were accurate as of the date indicated in the citation.

Organization and Indexing

Entries are arranged alphabetically by the name under which the topic is best known. For topics which might reasonably be sought out under differing names, we have provided in-text cross references. For example, a user seeking an entry on Huddie Ledbetter will be referred to the entry on Leadbelly, and a user seeking an entry on Larry Flynt will be referred to the entry on *Hustler* magazine. Far more powerful than the cross references, however, are the indexes provided in the fifth volume of the collection. The general index is by far the most powerful, for it leads the user searching for information on Humphrey Bogart, for example, to the entries on Lauren Bacall, *Casablanca*, *The Maltese Falcon*, *The African Queen*, and several other entries that contain substantive information about Bogie. Equally powerful is the subject index, a list of categories under which we listed all pertinent entries. Consulting the subject index listing for Sex Symbols, for example, will lead the user to entries on Marilyn Monroe, the Varga Girl, *Playboy* magazine, David Cassidy, Mae West, and a long entry on the Sex Symbol, among others. Finally, a time index, organized by decades, provides a list of the entries that concern each decade of the twentieth century. Those entries that concern nineteenth-century topics are indexed by the first decade of the twentieth century.

We encourage readers to use the indexes to discover the fascinating intertwinings that have made the development of popular culture in the twentieth century such a vital field of study. Using the indexes, it is possible to uncover the story of how the American humor that was first made popular on the vaudeville stage evolved into first the radio comedies that entertained so many Americans during the Depression and War years and later the sitcoms that have kept Americans glued to their television screens for the last 50 years. That story is here, in the entries on Vaudeville, the Sitcom, *Amos 'n' Andy*, and the many other programs and comedians that have defined this tradition. A teacher who wishes students to uncover the similarities between sitcoms of the 1950s, 1960s, 1970s, 1980s, and 1990s might well ask the students to use this collection to begin their research into such comedies. Similarly, a teacher who asks students to explore the cross-pollination between musical genres will find that the indexes reveal the mixing of "race music," rhythm and blues, gospel, soul, and rock 'n' roll. It is hoped that this collection will be of particular use to those instructors of high school and undergraduate courses who challenge their students to discover the real cultural complexity of the music, films, magazines, and television shows that they take for granted. This collection should also be of use to those more advanced scholars who are beginning new research into an area of popular culture or who are looking for some context in which to place their existing research.

Acknowledgments

The *St. James Encyclopedia of Popular Culture* represents the work of hundreds of people, and we owe our thanks to all of them. We have had the privilege of working with 20 advisors whose experience, knowledge, and wisdom have truly helped shape the contents of this collection. Each of our advisors helped us to discover hidden corners of popular culture that we would not have considered on our own, and the breadth of coverage in this collection is a tribute to their collective knowledge. Several of our advisors deserve special thanks: Paul Buhle, George Carney, B. Lee Cooper, Jerome Klinkowitz, and Ron Simon all showed an extraordinary level of commitment and helpfulness.

It has been a pleasure to work with the nearly 450 contributors to this collection; we've appreciated their expertise, their professionalism, and their good humor. Several of our contributors deserve special mention for the quality of their contributions to this collection: Jacob Appel, Tim Berg, Pat Broeske, Richard Digby-Junger, Jeffrey Escoffier, Bryan Garman, Tina Gianoulis, Milton Goldin, Ian Gordon, Ron Goulart, Justin Gustainis, Preston Jones, Robyn Karney, Deborah Mix, Leonard Moore, Edward Moran, Victoria Price, Bob Schnakenberg, Steven Schneider, Charles Shindo, Robert Sickels, Wendy Woloson, and Brad Wright. Our team of copyeditors helped us bring a uniformity of presentation to the writings of this mass of contributors, and spotted and corrected innumerable small errors. Heidi Hagen, Robyn Karney, Edward Moran, and Tim Seul deserve special thanks for the quality and quantity of their work; we truly couldn't have done it without them. The contributors and copyeditors provided us with the material to build this collection, but it has been the editors' responsibility to ensure its accuracy and reliability. We welcome any corrections and comments; please write to: The Editors, *St. James Encyclopedia of Popular Culture*, St. James Press, 27500 Drake Road, Farmington Hills, MI 48331-3535.

Gathering the photos for this collection was an enormous task, and we were helped immeasurably by the knowledgeable and efficient staff at several photo agencies. We'd like to thank Marcia Schiff at AP/Wide World Photos; Eric Young at Archive Photos; and Kevin Rettig at Corbis Images. Lisa Hartjens of ImageFinders, Inc. also helped us acquire a number of photos.

We would like to thank Shelly Andrews, Anne Boyd, Melissa Doig, Tina Gianoulis, Heidi Hagen, Robyn Karney, Edward Moran, Victoria Price, Rebecca Saulsbury, Tim Seul, and Mark Swartz for their careful copyediting of the entries.

At the St. James Press, we'd like to thank Mike Tyrkus for his good humor and efficiency in helping us see this project to completion; Peter Gareffa for his usual wise and benevolent leadership; Janice Jorgensen for helping us shape this project at the beginning; the permissions department for smiling as we piled the photos on; and the staff at the St. James Press for their careful proofreading and for all their work in turning so many computer files into the volumes you see today.

Finally, we'd like to thank Lee Van Wormer for his sage management advice and our children, Conrad and Louisa, for their warm morning cuddles and for the delightful artwork that adorns our office walls.

—Tom Pendergast and Sara Pendergast,
Editors

INTRODUCTION

The Art of Everyday Life

Sometimes, when I'm wandering in an art museum looking at the relics of an ancient civilization, I find myself wondering how a future society would represent a defunct American culture. What objects would be chosen—or would survive—to be placed on display? Would I agree with a curator's choices? Were I to choose the items that some future American Museum of Art should exhibit to represent twentieth-century American culture, here are some I would name: an Elvis Presley record; a Currier & Ives print; a movie still from *Casablanca*. To put it a different way, my priority would *not* be to exhibit fragments of an urban cathedral, a painted landscape, or a formal costume. I wouldn't deny such objects could be important artifacts of American culture, or that they belong in a gallery. But in my avowedly biased opinion, the most vivid documents of American life—the documents that embody its possibilities and limits—are typically found in its popular culture.

Popular culture, of course, is not an American invention, and it has a vibrant life in many contemporary societies. But in few, if any, of those societies has it been as central to a notion of national character at home as well as abroad. For better or worse, it is through icons like McDonald's (the quintessential American cuisine), the Western (a uniquely American narrative genre), and Oprah Winfrey (a classic late-twentieth century embodiment of the American Dream) that this society is known—and is likely to be remembered.

It has sometimes been remarked that unlike nations whose identities are rooted in geography, religion, language, blood, or history, the United States was founded on a democratic ideal—a notion of life, liberty, and the pursuit of happiness elaborated in the Declaration of Independence. That ideal has been notoriously difficult to realize, and one need only take a cursory look at many aspects of American life—its justice system, electoral politics, residential patterns, labor force, et. al.—to see how far short it has fallen.

American popular culture is a special case. To be sure, it evinces plenty of the defects apparent in other areas of our national life, among them blatant racism and crass commercialism. If nothing else, such flaws can be taken as evidence of just how truly representative it is. There is nevertheless an openness and vitality about pop culture—its appeal across demographic lines; its interplay of individual voices and shared communal experience; the relatively low access barriers for people otherwise marginalized in U.S. society—that give it real legitimacy as the art of democracy. Like it or hate it, few dispute its centrality.

This sense of openness and inclusion—as well as the affection and scorn it generated—has been apparent from the very beginning. In the prologue of the 1787 play *The Contrast* (whose title referred to the disparity between sturdy republican ideals and effete monarchical dissipation), American playwright Royall Tyler invoked a cultural sensibility where “proud titles of ‘My Lord! Your Grace/To the humble ‘Mr.’ and plain ‘Sir’ give place.” Tyler, a Harvard graduate, Revolutionary War officer, and Chief Justice of the Vermont Supreme Court, was in some sense an unlikely prophet of popular culture. But the sensibility he voiced—notably in his beloved character Jonathon, a prototype for characters from Davy Crockett to John Wayne—proved durable for centuries to come.

For much of early American history, however, artists and critics continued to define aesthetic success on European terms, typically invoking elite ideals of order, balance, and civilization. It was largely taken for granted that the most talented practitioners of fine arts, such as painters Benjamin West and John Singleton Copley, would have to go abroad to train, produce, and exhibit their most important work. To the extent that newer cultural forms—like the novel, whose very name suggests its place in late eighteenth- and early nineteenth-century western civilization—were noted at all, it was usually in disparaging terms. This was especially true of novels written and read by women, such as Susanna Rowson's widely read *Charlotte Temple* (1791). Sermons against novels were common; Harvard devoted its principal commencement address in 1803 to the dangers of fiction.

The industrialization of the United States has long been considered a watershed development in many realms of American life, and popular culture is no exception. Indeed, its importance is suggested in the very definition of popular culture coined by cultural historian Lawrence Levine: “the folklore of industrial society.” Industrialization allowed the mass-reproduction and dissemination of formerly local traditions, stories, and art forms across the continent, greatly intensifying the spread—and development—of culture by, for, and of the people. At a time when North America remained geographically and politically fragmented, magazines, sheet music, dime novels, lithographs, and other print media stitched it together.

This culture had a characteristic pattern. Alexis de Tocqueville devoted 11 chapters of his classic 1835-40 masterpiece *Democracy in America* to the art, literature, and language of the United States, arguing that they reflected a democratic ethos that required new standards of evaluation. “The inhabitants of the United States have, at present, properly speaking, no literature,” he wrote. This judgment, he made clear, arose from a definition of literature that came from aristocratic societies like his own. In its stead, he explained, Americans sought books “which may be easily procured, quickly read, and which require no learned researches to be understood. They ask for beauties self-proffered and easily enjoyed; above all they must have what is unexpected and new.” As in so many other ways, this description of American literature, which paralleled what Tocqueville saw in other arts, proved not only vivid but prophetic.

The paradox of American democracy, of course, is that the freedom Euro-Americans endlessly celebrated co-existed with—some might say depended on—the enslavement of African Americans. It is therefore one of the great ironies of popular culture that the contributions of black culture (a term here meant to encompass African, American, and amalgamations between the two) proved so decisive. In another sense, however, it seems entirely appropriate that popular culture, which has always skewed its orientation toward the lower end of a demographic spectrum, would draw on the most marginalized groups in American society. It is, in any event, difficult to imagine that U.S. popular culture would have had anywhere near the vitality and influence it has without slave stories, song, and dance. To cite merely one example: every American musical idiom from country music to rap has drawn on, if not actually *rested* upon, African-American cultural foundations, whether in its use of the banjo (originally an African instrument) or its emphasis on the beat (drumming was an important form of slave communication). This heritage has often been overlooked, disparaged, and even satirized. The most notable example of such racism was the minstrel show, a wildly popular nineteenth century form of theater in which white actors blackened their faces with burnt cork and mocked slave life. Yet even the most savage parodies could not help but reveal an engagement with, and even a secret admiration for, the cultural world the African Americans made in conditions of severe adversity, whether on plantations, tenant farms, or in ghettos.

Meanwhile, the accelerating pace of technological innovation began having a dramatic impact on the form as well as the content of popular culture. The first major landmark was the development of photography in the mid-nineteenth century. At first a mechanically complex and thus inaccessible medium, it quickly captured American imaginations, particularly by capturing the drama and horror of the Civil War. The subsequent proliferation of family portraits, postcards, and pictures in metropolitan newspapers began a process of orienting popular culture around visual imagery that continues unabated to this day.

In the closing decades of the nineteenth century, sound recording, radio transmission, and motion pictures were all developed in rapid succession. But it would not be until well after 1900 that their potential as popular cultural media would be fully exploited and recognizable in a modern sense (radio, for example, was originally developed and valued for its nautical and military applications). Still, even if it was not entirely clear how, many people at the time believed these new media would have a tremendous impact on American life, and they were embraced with unusual ardor by those Americans, particularly immigrants, who were able to appreciate the pleasures and possibilities afforded by movies, records, and radio.

Many of the patterns established during the advent of these media repeated themselves as new ones evolved. The Internet, for example, was also first developed for its military applications, and for all the rapidity of its development in the 1990s, it remains unclear just how its use will be structured. Though the World Wide Web has shown tremendous promise as a commercial enterprise, it still lacks the kind of programming—like *Amos 'n' Andy* in radio, or *I Love Lucy* in television—that transformed both into truly mass media of art and entertainment. Television, for its part, has long been the medium of a rising middle class of immigrants and their children, in terms of the figures who have exploited its possibilities (from RCA executive David Sarnoff to stars like Jackie Gleason); the new genres it created (from the miniseries to the situation-comedy); and the audiences (from urban Jews to suburban Irish Catholics) who adopted them with enthusiasm.

For much of this century, the mass appeal of popular culture has been viewed as a problem. “What is the jass [*sic*] music, and therefore the jass band?” asked an irritated New Orleans writer in 1918. “As well as ask why the dime novel or the grease-dripping doughnut. All are manifestations of a low stream in man’s taste that has not come out in civilization’s wash.” However one may feel about this contemptuous dismissal of jazz, now viewed as one of the great achievements of American civilization, this writer was clearly correct to suggest the demographic, technological, and cultural links between the “lower” sorts of people in American life, the media they used, and forms of expression that were often presumed guilty until proven innocent.

Indeed, because education and research have traditionally been considered the province of the “higher” sorts of people in American life, popular culture was not considered a subject that should even be discussed, much less studied. Nevertheless, there have always been those willing to continue what might be termed the “Tocquevillian” tradition of treating popular culture with intellectual

seriousness and respect (if not always approval). In his 1924 book *The Seven Lively Arts* and in much of his journalism, critic Gilbert Seldes found in silent movies, cartoons, and pop music themes and motifs fully worthy of sustained exploration. Amid the worldwide crisis of the 1930s and 1940s, folklorist Constance Rourke limned the origins of an indigenous popular culture in books like *American Humor* (1931) and *The Roots of American Culture* (1942). And with the rise of the Cold War underlining the differences between democratic and totalitarian societies, sociologists David Riesman and Reuel Denny evaluated the social currents animating popular culture in Denny's *The Astonished Muse* (1957), for which Riesman, who showed a particular interest in popular music, wrote the introduction.

European scholars were also pivotal in shaping the field. Johan Huizinga's *Homo Ludens* (1938), Roland Barthes's *Mythologies* (1957), and Antonio Gramsci's prison letters (written in the 1920s and 1930s but not published until the 1970s) have proved among the most influential works in defining the boundaries, strategies, and meanings of popular culture. While none of these works focused on American popular culture specifically, their focus on the jetsam and flotsam of daily life since the medieval period proved enormously suggestive in an American context.

It has only been at the end of the twentieth century, however, that the study of popular culture has come into its own in its own right. To a great extent, this development is a legacy of the 1960s. The end of a formal system of racial segregation; the impact of affirmative action and government-funded financial aid; and the end of single-sex education at many long-established universities dramatically transformed the composition of student bodies and faculties. These developments in turn, began having an impact on the nature and parameters of academic study. While one should not exaggerate the impact of these developments—either in terms of their numbers or their effect on an academy that in some ways has simply replaced older forms of insularity and complacency with new ones—it nevertheless seems fair to say that a bona fide democratization of higher education occurred in the last third of the twentieth century, paving the way for the creation of a formal scholarly infrastructure for popular culture.

Once again, it was foreign scholars who were pivotal in the elaboration of this infrastructure. The work of Raymond Williams, Stuart Hall, and others at Britain's Centre for Contemporary Cultural Studies in the 1950s and 1960s drew on Marxist and psychoanalytic ideas to explain, and in many cases justify, the importance of popular culture. Though not always specifically concerned with popular culture, a panoply of French theorists—particularly Jacques Derrida, Louis Althusser, and Michel Foucault—also proved highly influential. At its best, this scholarship illuminated unexamined assumptions and highly revealing (and in many cases, damning) patterns in the most seemingly ordinary documents. At its worst, it lapsed into an arcane jargon that belied the directness of popular culture and suggested an elitist disdain toward the audiences it presumably sought to understand.

Like their European counterparts, American scholars of popular culture have come from a variety of disciplines. Many were trained in literature, among them Henry Nash Smith, whose *Virgin Land* (1950) pioneered the study of the Western, and Leslie Fiedler, who applied critical talents first developed to study classic American literature to popular fiction like *Gone with the Wind*. But much important work in the field has also been done by historians, particularly social historians who began their careers by focusing on labor history but became increasingly interested in the ways American workers spent their free time. Following the tradition of the great British historian E. P. Thompson, scholars such as Herbert Gutman and Lawrence Levine have uncovered and described the art and leisure practices of African Americans in particular with flair and insight. Feminist scholars of a variety of stripes (and sexual orientations) have supplied a great deal of the intellectual energy in the study of popular culture, among them Ann Douglas, Carroll Smith-Rosenberg, and Jane Tompkins. Indeed, the strongly interdisciplinary flavor of popular culture scholarship—along with the rise of institutions like the Popular Press and the Popular Culture Association, both based at Bowling Green University—suggests the way the field has been at the forefront of an ongoing process of redrawing disciplinary boundaries in the humanities.

By the 1980s, the stream of scholarship on popular culture had become a flood. In the 1990s, the field became less of a quixotic enterprise than a growing presence in the educational curriculum as a whole. Courses devoted to the subject, whether housed in communications programs or in traditional academic departments, have become increasingly common in colleges and universities—and, perhaps more importantly, have become integrated into the fabric of basic surveys of history, literature, and other fields. Political scientists, librarians, and curators have begun to consider it part of their domain.

For most of us, though, popular culture is not something we have to self-consciously seek out or think about. Indeed, its very omnipresence makes it easy to take for granted as transparent (and permanent). That's why trips to museums—or encyclopedias like this one—are so useful and important. In pausing to think about the art of everyday life, we can begin to see just how unusual, and valuable, it really is.

—Jim Cullen

A

A&R Men/Women

Artist and Repertoire (A&R) representatives count among the great, unseen heroes of the recording industry. During the early decades of the recording industry, A&R men (there were very few women) were responsible for many stages in the production of recorded music. Since the 1960s though, A&R has become increasingly synonymous with “talent scouting.” A&R is one of the most coveted positions in the recording industry, but it may also be the most difficult. The ability to recognize which acts will be successful is critical to the survival of all record companies, but it is a rare talent. Those with “good ears” are likely to be promoted to a leadership position in the industry. Several notable record company executives, especially Sun’s Sam Phillips and Atlantic’s Ahmet Ertegun, established their professional reputations as A&R men. A few of the more legendary A&R men have become famous in their own right, joining the ranks of rock n’ roll’s most exclusive social cliques.

The great A&R men of the pre-rock era were multitalented. First, the A&R man would scout the clubs, bars, and juke joints of the country to find new talent for his record company. After signing acts to contracts, A&R men accompanied musicians into the studio, helping them to craft a record. A&R men also occasionally functioned as promoters, helping with the “grooming” of acts for the stage or broadcast performances.

Some of the most astounding A&R work was done before World War II. A significant early figure in the history of A&R was Ralph Peer. Peer was the first record company man to recognize, albeit by sheer luck, the economic value of Southern and Appalachian music. While looking to make field recordings of gospel in the South, Peer reluctantly recorded “Fiddlin’” John Carson, whose record yielded a surprise hit in 1927. Subsequent field recording expeditions into the South were immediately organized and among the artists soon signed to Peer’s Southern Music Company were Jimmie Rodgers and the Carter Family, the twin foundational pillars of country music. Peer’s A&R strategies were emulated by other A&R men like Frank Walker and Art Satherly, both of whom would eventually play significant roles in the development of country and western music. John Hammond, who worked many years for Columbia Records, likewise had an impressive string of successes. He is credited with crafting the early careers of Billie Holiday, Benny Goodman, and Count Basie in the 1930s. In the post war years, Hammond discovered among others Aretha Franklin, Bob Dylan, Bruce Springsteen, and Stevie Ray Vaughn.

In the 1950s, many new record companies emerged with aggressive and visionary A&R strategies. Until the early 1960s, top executives at record companies substantially controlled day-to-day A&R functions. In most instances, the chief executives’ personal biases and tastes conditioned company A&R strategies. These biases, which often hinged on old-fashioned notions of race, class, and region, permitted upstart companies to exploit the growing teen market for R&B and rock n’ roll. Several of the noteworthy independent record companies of the 1950s were headed by astute A&R men, like Ahmet Ertegun (Atlantic); Leonard Chess (Chess); and Sam Phillips (Sun), who eagerly sought talent among blacks and the Southern whites. Phillips’ discoveries alone read like a “who’s who” list of early R&B

and rock. Among the legends he found are B.B. King, Howlin’ Wolf, Elvis Presley, Johnny Cash, and Jerry Lee Lewis. Major labels eventually realized that their conservative A&R practices were eroding their market share. Major labels began using the independent labels to do A&R work, purchasing artist contracts from small labels (e.g., RCA’s purchase of Presley’s contract from Sun). The payola scandal of the late 1950s was in many ways a means of compensating for A&R deficiencies at the majors.

In the early 1960s, the major labels continued to display conservative tendencies in their A&R practices. Several famous A&R gaffes were made during this era. Columbia Record’s head, Mitch Miller, refused to recognize the staying power of rock n’ roll, and tried to promote folk revival acts instead. Dick Rowe, head of A&R at Decca, became the infamous goat who rejected the Beatles. Four other labels passed on the Beatles before London picked them up. When the Beatles became a sensation, A&R representatives flocked to Liverpool in hopes of finding the “next Beatles.” In the later 1960s, adjustments were made to overcome the scouting deficiencies displayed by the majors. Major labels increasingly turned to free-lance A&R persons, called “independent producers,” who specialized in studio production, but who were also responsible for discovering new talent. Phil Spector and his “wall of sound” emerged as the most famous of all the independent producers in the 1960s.

In the later 1960s, younger and more “street savvy” music executives began replacing older executives at the major labels. Several stunning successes were recorded. Capitol’s A&R machine brought them the Beach Boys. At Columbia, Mitch Miller was replaced by Clive Davis, who along with several other major label executives in attendance at the Monterrey Pop festival signed several popular San Francisco-based psychedelic acts. In an effort to increase both their street credibility and their street savvy, some labels even resorted to hiring “house hippies,” longhaired youths who acted as A&R representatives. Still the major labels’ scouting machines overlooked L.A.’s folk rock scene and London’s blues revival subculture. The ever-vigilant Ahmet Ertegun at Atlantic led a scouting expedition to England that won them both Cream and Led Zeppelin. In the 1970s and 1980s, major label A&R departments became larger and more sophisticated, which helped them beat back the challenge posed by independent label A&R. Some labels even tried hiring rock critics as A&R representatives.

A&R remains a challenging job. The “copy-catting” behavior displayed in Liverpool in the mid 1960s repeats itself on a regular basis. The grunge rock craze of the early 1990s revealed that a herding mentality still conditions A&R strategies. Visionary A&R representatives still stand to benefit greatly. Shortly after Gary Gersh brought Nirvana to Geffen Records he was named head of Capitol Records. Few A&R persons maintain a consistent record of finding marketable talent and consequently few people remain in A&R long. Those who do consistently bring top talent to their bosses, wield enormous power within the corporate structure and are likely to be promoted.

Aaron, Hank (1934—)

Atlanta Braves outfielder Hank Aaron was thrust onto the national stage in 1973 and 1974 when he threatened and then broke Babe Ruth's record of 714 home runs, one of the most hallowed records in all of American sports. In the mid-1970s, Ruth's legend was as powerful as it had been during his playing days five decades earlier and his epic home runs and colorful antics lived on in the American imagination. As Roger Maris had discovered when he broke Ruth's single season home run record in 1961, any player attempting to unseat the beloved Ruth from the record books battled, not only opposing pitchers, but also a hostile American public. When

Hank Aaron

a black man strove to eclipse the Babe's record, however, his pursuit revealed a lingering intolerance and an unseemly racial animosity in American society.

Henry Louis Aaron was born in Mobile, Alabama, in the depths of the Great Depression in 1934. One of eight children, Aaron and his family lived a tough existence like many other Southern black families of the time, scraping by on his father's salary as a dock worker. As a teenager, Aaron passed much of his time playing baseball in the neighborhood sandlots, and after short trials with two all-black teams Aaron attracted the attention of the Boston Braves, who purchased his contract in May of 1952.

Although Aaron faced several challenges in his introduction to organized baseball, he quickly rose through the Braves system. He was first assigned to the Braves affiliate in Eau Claire, Wisconsin, and he later wrote that "the middle of Wisconsin felt like a foreign country to [this] eighteen-year-old black kid from Mobile." After a successful season in Eau Claire, however, Aaron was moved up to the Braves farm team in Jacksonville, Florida, for the 1953 season, where, along with three other African-American players, he was faced with the unenviable task of integrating the South Atlantic League. Throughout the season, Aaron endured death threats, racial epithets from players and fans, and Jim Crow accommodations, yet he rose above the distractions and was named the SALLY League's Most Valuable Player.

By 1954, only two years removed from the sandlots of Mobile, Aaron was named to the opening day roster of the, now, Milwaukee Braves as a part-time player. The next year he won a starting position in the Braves outfield and stayed there for the next 19 years in Milwaukee and then in Atlanta as the franchise moved again. From 1955 until 1973, when he stopped playing full time, Aaron averaged nearly 37 home runs per year and hit over .300 in 14 different seasons.

As the years went by conditions began to improve for African-American players: by 1959 all major league teams had been integrated; gradually hotels and restaurants began to serve both black and white players; by the mid-1960s spring training sites throughout the South had been integrated; and racial epithets directed at black ball players from both the field and the grandstand began to diminish in number. Throughout the 1960s Americans, black and white, north and south, struggled with the civil rights movement and dealt with these same issues of desegregation and integration in their every day life. By the mid-1970s, however, African-Americans had achieved full legal equality, and the turbulence and violence of the sixties seemed to be only a memory for many Americans.

It was in this atmosphere that Hank Aaron approached Babe Ruth's all-time career home run record. By the end of the 1973 season, Aaron had hit 712 career home runs, only two shy of the Babe's record. With six months to wait for the opening of the 1974 season, Aaron had time to pour over the reams of mail he had begun to receive during his pursuit of Ruth's record. "The overwhelming majority of letters were supportive," wrote Aaron in his autobiography. Fans of all stripes wrote their encouragements to the star. A young African-American fan, for instance, wrote to say that "your race is proud." Similarly, another fan wrote, "Mazel Tov from the white population, [we've] been with you all the way. We love you and are thrilled."

Hidden in these piles of letters, however, were a distinct minority of missives with a more sinister tone. For the first time since integrating the South Atlantic League in 1953, Aaron was confronted with a steady stream of degrading words and racial epithets. "Listen Black Boy," one person wrote, "We don't want no nigger Babe

Ruth.” Many “fans” of the game just could not accept an African-American as the new home run champion. “I hope you don’t break the Babe’s record,” one letter read. “How do I tell my kids that a nigger did it?” Even more disturbingly, Aaron received thousands of letters which threatened the lives of both himself and his family. In response, the Atlanta slugger received constant protection from the police and the FBI throughout his record chase.

As sportswriters began to write about the virulent hate mail that Aaron was receiving, his supporters redoubled their efforts to let him know how they felt. One young fan spoke eloquently for many Americans when he wrote, “Dear Mr. Aaron, I am twelve years old, and I wanted to tell you that I have read many articles about the prejudice against you. I really think it is bad. I don’t care what color you are.”

Hank Aaron would eventually break Babe Ruth’s all-time record early in the 1974 season, and he would finish his career with a new record of 755 home runs. In 1982 he received the game’s highest honor when he was voted into the Baseball Hall of Fame. Aaron’s lifetime struggle against racism and discrimination served as an example for many Americans, both white and black, and he continued his public struggle against inequality after retiring from baseball.

Hank Aaron’s relentless pursuit of the all-time home run record in 1973 and 1974 forced America to realize that the civil rights movement of the 1960s had not miraculously solved the long-standing problem of racial animosity in the United States. The prejudice and racism that had been pushed underground by the successes of the 1960s were starkly revealed once again when a black man attempted to surpass the record of a white American icon.

AARP (American Association for Retired Persons)

The American Association for Retired Persons (AARP) is the premier special interest organization for Americans over age 50. AARP evolved from the National Retired Teachers Association, founded in 1947 and now an affiliated organization. Begun by Dr. Ethel Andrus, a pioneer in the field of gerontology and the first woman high-school principal in the state of California, AARP was created in large part to answer the need for affordable health insurance for seniors and to address the significant problem of age discrimination in society. By the end of the twentieth century AARP was commanding a membership of 31.5 million and, as critic Charles R. Morris points out, it had become known as the “800 lb. gorilla of American politics.” The organization states that “AARP is a non-profit, non-partisan, membership organization, dedicated to addressing the needs and interests of people 50 and older. We seek through education, advocacy and service to enhance the quality of life for all by promoting independence, dignity and purpose.” The motto of the organization is “To Serve, Not to Be Served.”

Known for its intensive lobbying efforts to preserve Medicare and Social Security, AARP has a wide range of programs that serve its members, notably the “55 ALIVE” driving course (a special refresher class for older drivers linked to auto insurance discounts); AARP Connections for Independent Living (a volunteer organization to assist seniors to live on their own), and the Widowed Persons Service, which helps recently widowed people with their bereavement. The AARP’s own publications range widely, but the best known is *Modern Maturity*, a glossy lifestyle magazine found in homes and doctors’ offices across America, offering informational articles on travel, profiles of active senior Americans, and targeted advertising for Americans over 50. The AARP also funds research through its AARP Andrus Foundation, primarily in the field of gerontology, which exhibited rapid growth resulting from the aging of the enormous postwar “Baby Boomer” generation.

Probably the most visible program—and one that is a key part of its success in Washington politics—is “AARP/VOTE.” This has informed and organized voters to support AARP’s legislative agenda, particularly in its ongoing campaign to protect entitlements in the late 1980s and 1990s. Social Security was once the “sacred cow” of American politics: former House Speaker Tip O’ Neill dubbed Social Security “the third rail of American politics—touch it and you die.” AARP maintains that Social Security is a lifeline for many seniors, and has resisted any attempt to limit the program. It has also successfully weathered a challenge, based on a belief that Social Security is insolvent and is forcing young workers to pay for seniors with no hope of receiving future benefits themselves. The AARP was termed “greedy geezers” by the media, and its support of the ill-fated Medicare Catastrophic Care Act (since repealed) during the 1980s was an image disaster. The organization regained the high ground when Speaker of the House Newt Gingrich led a fight to slash entitlements as part of his “Contract with America” pledge, a centerpiece of the 1994 midterm elections. The AARP skillfully deflected the conservative assault on Social Security by utilizing its fabled public relations machine: member phone trees, press releases, and media pressure on Gingrich, who was singled out as “picking on the elderly.”

The AARP has long been a controversial organization, subject to investigation by *Consumer Reports* magazine and the television show *60 Minutes* in 1978 for its too-cozy association with the insurance company Colonial Penn and its founder Leonard Davis. That association subsequently ended, and Davis’ image and influence was banished from the organization’s headquarters and promotional literature. In the 1990s, the AARP was attacked in Congress by long-time foe Senator Alan Simpson of Wyoming, who relentlessly investigated their nonprofit status. The AARP frequently testifies before Congress, but no longer functions as a lobbying organization because of Simpson’s efforts. Yet it has continued to grow in numbers and influence, due in large part to a savvy marketing scheme that grants members attractive discounts on insurance, travel, and other services for the price of an eight-dollar membership fee. In return, the AARP can boast of a large membership in its legislative efforts and can deliver a highly desirable mailing list to its corporate partners.

The AARP has made a significant effort to define itself as an advocacy organization which is changing the way Americans view aging, yet this has been a difficult message to sell to Baby Boomers in particular, many of whom are more interested in preserving a youthful appearance and attitude than in considering retirement. It has been attacked from the left and the right of the political spectrum: in a May 25, 1995 editorial, the *Wall Street Journal* opined: “AARP’s own

studies show that only 14% of its members join it to support its lobbying efforts. Its largely liberal staff has often felt free to go against the interest of its members. . . . AARP is the field artillery in a liberal army dedicated to defending the welfare state.” At the same time, the AARP is viewed with suspicion by many on the left who deplore its size and moderate politics.

ABBA

Associated with the disco scene of the 1970s, the Swedish quartet ABBA generated high charting hits for an entire decade, and for years trailed only the Volvo motor company as Sweden’s biggest export. Comprised of two romantic couples—Bjorn Ulvaeus and Agnetha Faltskog, and Benny Andersson and Frida Lyngstad—ABBA formed in the early 1970s under the tutelage of songwriter Stig Anderson and scored their first success with “Waterloo” in 1974. From that point on, ABBA blazed a trail in pop sales history with “Dancing Queen,” “Voulez Vous,” “Take a Chance on Me,” and many other infectious singles, spending more time at the top of United Kingdom charts than any act except the Beatles. Although the group (as well as the Andersson-Lyngstad marriage) dissolved in the early 1980s, ABBA’s legion of fans only grew into a new generation. Notably, ABBA was embraced by many gay male fans. Songs like “Dancing Queen” practically attained the status of gay anthems.

Abbey, Edward (1927-1989)

Edward Abbey’s essays and novels secured his position as a leading American environmentalist during the late 1960s through the

1980s. His nonconformist views, radical lifestyle, and revolutionary language created a cult following of fans whose philosophical outlooks developed from Abbey’s books. He is the author of 21 full-length works, numerous periodical articles, and several introductions to others’ books. With the exception of his first novel, all of Abbey’s works have remained in print to the end of the twentieth century, a fact that attests to his continuing popularity. His writing has inspired readers to support ecological causes throughout America.

Abbey’s father, a farmer, and his mother, a teacher, raised him on a small Appalachian farm in Home, Pennsylvania. When he was 18, Abbey served in the United States Army, and then in 1946 he hitchhiked west where he fell in love with the expansive nature of Arizona, New Mexico, and Utah. He studied philosophy and English at the University of New Mexico and the University of Edinburgh, earning a Master’s Degree and pursuing his career as a writer. His first novel was poorly received, but in 1962 Abbey’s second book, *The Brave Cowboy* (1958), was turned into a screenplay and released as a feature film, *Lonely Are the Brave*. From 1956 to 1971, to support himself and to enjoy the serenity of nature, Abbey worked for the Forest Service and the National Park Service. These early experiences provided subject matter for *Desert Solitaire* (1968), the book that catapulted him to the limelight of the growing environmental movement.

Desert Solitaire, and most of Abbey’s subsequent works, assaulted the American government for its environmental policies while exalting the natural beauty of America’s Southwest. Abbey became known as the “angry young man” of the environmental movement, a radical Thoreauvian figure whose adventures demonstrated the fulfillment that an individual might gain from nature if a commitment to protecting it exists. In 1975, Abbey published *The Monkey Wrench Gang*, a novel about environmental terrorists whose revolutionary plots to restore original ecology include blowing up the Glen Canyon Dam on the Colorado River. Even though its publisher did not promote it, the book became a best seller, an underground classic that inspired the formation of the radical environmentalist group “Earth First!,” whose policies reflect Abbey’s ecological philosophy. The tactics Earth First! employs to prevent the development and deforestation of natural areas include sabotaging developers’ chain saws and bulldozers, a practice that the group refers to as “monkeywrenching.”

Abbey is the subject of a one-hour video documentary, *Edward Abbey: A Voice in the Wilderness* (1993), by Eric Temple which augments the continuing popularity of Abbey’s writing. Abbey’s novel, *Fire on the Mountain* (1962), was made into a motion picture in 1981. Quotations from his works have been imprinted on calendars throughout the 1990s. Devoted fans have created web pages to tell how Abbey’s philosophy has influenced their lives. Even Abbey’s death in 1989 has added to his legend; he is reportedly buried at a secret location in the Southwestern desert land that he praised. Though Abbey scoffed at the idea that his literature had the makings of American classics, his works and the personality they immortalized have remained a popular force in the environmental segment of American culture.

Abbott and Costello

One of the most popular comedy teams in movie history, Bud Abbott (1895-1974) and Lou Costello (1906-1959) began in burlesque and ended on television. Along the way, they sold millions of tickets (and war bonds), almost single-handedly saved Universal Pictures from bankruptcy, and made a legendary catch-phrase out of three little words: "Who's on first?" Straight man Abbott was the tall, slim, sometimes acerbic con artist; Costello was the short, pudgy,

childlike patsy. Their unpretentious brand of knockabout comedy was the perfect tonic for a war-weary home front in the early 1940s. Though carefully crafted and perfected on the stage, their precision-timed patter routines allowed room for inspired bits of improvisation. Thanks to Abbott and Costello's films and TV shows, a wealth of classic burlesque sketches and slapstick tomfoolery has been preserved, delighting audiences of all ages and influencing new generations of comedians.

As it happens, both men hailed from New Jersey. William "Bud" Abbott was born October 2, 1895, in Asbury Park, but he grew up in Coney Island. Bored by school, and perhaps inspired by the hurly burly atmosphere of his home town, fourteen-year-old Abbott left home to seek a life in show business. The young man's adventures included working carnivals and being shanghaied onto a Norwegian freighter. Eventually landing a job in the box office of a Washington, D.C. theater, Abbott met and married dancer Betty Smith in 1918. He persisted for years in the lower rungs of show business, acting as straight man to many comics whose skills were not up to Abbott's high level. Louis Francis Cristillo was born in

Bud Abbott (left) and Lou Costello

Paterson, New Jersey, on March 6, 1906. As a child, he idolized Charlie Chaplin, and grew into a skillful basketball shooter. In 1927, he tried his luck in Hollywood, working his way at MGM from carpenter to stunt man, a job at which he excelled, until an injury forced him to quit the profession and leave California. Heading back east, he got as far as Missouri, where he talked his way into burlesque as a comedian. While the rest of the country suffered through the Depression, Lou Costello flourished in burlesque. In New York in 1934, he also married a dancer, Ann Battler.

When Abbott finally met Costello in the thirties, it was quickly apparent in their vaudeville act that each man had found in the other that ineffable quality every showbiz team needs: chemistry. Budding agent Eddie Sherman caught their act at Minsky's, then booked them into the Steel Pier at Atlantic City. (Sherman would remain their agent as long as they were a team.) The next big move for Abbott and Costello was an appearance on Kate Smith's radio program, for which they decided to perform a tried-and-true patter routine about Costello's frustration trying to understand Abbott's explanation of the nicknames used by the players on a baseball team.

Abbott: You know, they give ball-players funny names nowadays. On this team, Who's on first, What's on second, I Don't Know is on third.

Costello: That's what I want to find out. Who's on first?

Abbott: Yes.

Costello: I mean the fellow's name on first base.

Abbott: Who.

The boys and their baseball routine were such a sensation that they were hired to be on the show every week—and repeat “Who's on First?” once a month. When Bud and Lou realized that they would eventually run out of material, they hired writer John Grant to come up with fresh routines. Grant's feel for the special Abbott and Costello formula was so on target that, like Eddie Sherman, he also remained in their employ throughout their career. And what a career it was starting to become. After stealing the show from comedy legend Bobby Clark in *The Streets of Paris* on Broadway, Abbott and Costello graduated to their own radio program. There, they continued to contribute to the language they had already enriched with “Who's on first” by adding

the catch phrases, “Hey-y-y-y, Ab-bott!” and “Oh—I’m a ba-a-a-d boy!” (For radio, Costello had adopted a childlike falsetto to distinguish his voice from Abbott’s.)

Inevitably, Hollywood called, Abbott and Costello answered, and the result was 1940’s *One Night in the Tropics*—“An indiscretion better overlooked,” as Costello later called it. The comedy team was mere window dressing in this Jerome Kern operetta, but their next film put the boys center stage. 1941’s *Buck Privates* had a bit of a boy-meets-girl plot, and a few songs from the Andrews Sisters, but this time the emphasis was clearly on Bud and Lou—and it was the surprise hit of the year. The boys naturally sparkled in their patented verbal routines, such as the “Clubhouse” dice game, while an army drill-training routine demonstrated Lou’s gifts for slapstick and improvisation. Lou was overjoyed when his idol, Chaplin, praised him as the best clown since the silents. As for Universal, all they cared about was the box-office, and they were overjoyed, too. The studio rushed their new sensational comedy team into film after film (sometimes as many as four a year), and the public flocked to all of them: *In the Navy*, *Hold That Ghost*, *Ride’Em, Cowboy*, etc., etc. . . .

Compared to Laurel and Hardy, there was something rough and tumble about Abbott and Costello. It was like the difference between a symphony orchestra and a brass band. But clearly, Bud and Lou were playing the music the public wanted to hear. Once the war broke out, the government took advantage of the team’s popularity to mount a successful war bond drive which toured the country and took in millions for defense.

As fast as Bud and Lou could earn their own money, they couldn’t wait to spend it on lavish homes and dressing-room poker games. Amid the gags, high spirits, and big spending, there were also difficult times for the duo. They had a genuine affection for each other, despite the occasional arguments, which were quick to flare up, quick to be forgotten. But Lou inflicted a wound which Bud had a hard time healing when the comic insisted, at the height of their success, that their 50-50 split of the paycheck be switched to 60 percent for Costello and 40 percent for Abbott. Bud already had private difficulties of which the public was unaware; he was epileptic, and he had a drinking problem. As for Lou, he had a near-fatal bout of rheumatic fever which kept him out of action for many months. His greatest heartache, however, came on the day in 1943 when his infant son, Lou “Butch,” Jr., drowned in the family swimming pool. When the tragedy struck, Lou insisted on going on with the team’s radio show that night. He performed the entire show, then went offstage and collapsed. Costello subsequently started a charity in his son’s name, but a certain sadness never left him.

On screen, Abbott and Costello were still riding high. No other actor, with the possible exception of Deanna Durbin, did as much to keep Universal Pictures solvent as Abbott and Costello. Eventually, however, the team suffered from overexposure, and when the war was over and the country’s mood was shifting, the Abbott and Costello box office began to slip. Experimental films such as *The Time of Their Lives*, which presented Bud and Lou more as comic actors than as a comedy team per se, failed to halt the decline. But in the late forties, they burst back into the top money-making ranks with *Abbott and Costello Meet Frankenstein*, a film pairing the boys with such Universal horror stalwarts as Bela Lugosi’s Dracula and Lon Chaney, Jr.’s Wolf Man. The idea proved inspired, the execution delightful; to this day, *Meet Frankenstein* is regarded as perhaps the best horror-spoof ever, with all due respect to *Ghostbusters* and *Young Frankenstein*. Abbott and Costello went on to *Meet the Mummy* and *Meet the Invisible Man*, and, when the team started running out of gas

again, they pitched their tent in front of the television cameras on *The Colgate Comedy Hour*. These successful appearances led to two seasons of *The Abbott and Costello Show*, a pull-out-the-stops sitcom which positively bordered on the surrealistic in its madcap careening from one old burlesque or vaudeville routine to another. On the show, Bud and Lou had a different job every week, and they were so unsuccessful at all of them that they were constantly trying to avoid their landlord, played by veteran troupier Sid Fields (who contributed to writing the show, in addition to playing assorted other characters). Thanks to the program, a new generation of children was exposed to such old chestnuts as the “Slowly I Turned. . .” sketch and the “hide the lemon” routine. One of those baby-boomers was Jerry Seinfeld, who grew up to credit *The Abbott and Costello Show* as the inspiration for his own NBC series, one of the phenomena of 1990s show business.

By the mid 1950s, however, the team finally broke up. It would be nice to be able to report that their last years were happy ones, but such was not the case. Both men were hounded by the IRS for back taxes, which devastated their finances. Lou starred in a lackluster solo comedy film, made some variety show guest appearances, and did a sensitive acting turn on an episode of TV’s *Wagon Train* series, but in 1959 he suddenly died of a heart attack. Abbott lived for fifteen more years, trying out a new comedy act with Candy Candido, contributing his voice to an Abbott and Costello TV animation series, doing his own “straight acting” bit on an episode of *G.E. Theater*. Before he died of cancer in 1974, Abbott had the satisfaction of receiving many letters from fans thanking him for the joy he and his partner had brought to their lives.

In the 1940s, long before the animated TV show based on Bud and Lou, the Warner Bros. Looney Toons people had caricatured the boys as two cats out to devour Tweetie Bird. Already they had become familiar signposts in the popular culture. The number of comedians and other performers who have over the years paid homage to Abbott and Costello’s most famous routine is impossible to calculate. In the fifties, a recording of Abbott and Costello performing “Who’s on First” was placed in the Baseball Hall of Fame. This was a singular achievement, over and above the immortality guaranteed by the films in which they starred. How many other performers can claim to have made history in three fields—not only show business, but also sports and linguistics?

Abdul-Jabbar, Kareem (1947—)

With an intensity that disguised his shyness and a dancing jump shot nicknamed the “sky hook,” Kareem Abdul-Jabbar dominated

The Celtics' Greg Kite guards the Lakers' Kareem Abdul-Jabbar.

the National Basketball Association during the 1970s and 1980s. The seven-foot-two-inch center won three national collegiate championships at the University of California at Los Angeles (UCLA) and six professional championships with the Milwaukee Bucks and Los Angeles Lakers. He is the NBA's all-time leading scorer and was named the league's most valuable player a record six times. Beyond his athletic accomplishments, Jabbar also introduced a new level of racial awareness to basketball by boycotting the 1968 Olympic team, converting to Islam, and changing his name.

Abdul-Jabbar was born Ferdinand Lewis Alcindor in Harlem, New York, on April 16, 1947. His parents were both over six feet tall and Abdul-Jabbar reached six feet before the sixth grade. He attended a Catholic school in Inwood, a mixed middle-class section of Manhattan, and did not become aware of race until the third grade. Holding a black-and-white class photograph in his hand, he thought, "Damn I'm dark and everybody else is light." Able to dunk the basketball by the eighth grade, Abdul-Jabbar was highly recruited and attended Power Memorial Academy in New York. During Abdul-Jabbar's final three years of high school, Power lost only one game and won three straight Catholic league championships. He was named high school All-American three times and was the most publicized high school basketball player in the United States. The 1964 Harlem race riot was a pivotal event in Abdul-Jabbar's life, occurring the summer before his senior year. "Right then and there I knew who I was and who I was going to be," he wrote in *Kareem*. "I was going to be black rage personified, black power in the flesh."

Abdul-Jabbar accepted a scholarship from UCLA in 1965. Majoring in English, he studied in the newly emerging field of black

literature. As a freshman, Abdul-Jabbar worked on his basketball skills to overcome his awkwardness. He led the freshman squad to an undefeated season and a 75-60 victory over the varsity, which had won the national championship in two of the previous three years. In his second year, Abdul-Jabbar worked with coaching legend John Wooden, who emphasized strategy and conditioning in basketball. Abdul-Jabbar dominated the college game, averaging 29 points a game and leading the Bruins to an undefeated season. UCLA won the National Collegiate Athletic Association (NCAA) championship, defeating the University of Dayton. As a junior, Abdul-Jabbar developed jump and hook shots, averaging 26.2 points a game. He shut down University of Houston star Elvin Hayes in the NCAA semifinals before leading the Bruins to a victory over North Carolina. UCLA won a third consecutive national title during Abdul-Jabbar's senior year, and the young star was honored as the tournament's outstanding player for the third year in a row. "Alcindor has completely changed the aspect of the game. I saw great players actually afraid to shoot," said St. John's University coach Lou Carnesecca.

Abdul-Jabbar was the first pick in the professional draft of 1969 and went to the last-place Milwaukee Bucks. Averaging 28.8 points a game during his rookie season, Abdul-Jabbar led the Bucks to a 56-26 record, losing to the New York Knicks in the playoffs. Milwaukee play-by-play announcer Eddie Doucette coined the term "sky hook" for Abdul-Jabbar's trademark hook shot. During the off season, the Bucks obtained veteran Cincinnati Royals point guard Oscar Robertson, and the pair teamed up to help Milwaukee defeat the Baltimore Bullets for the 1971 NBA championship. Abdul-Jabbar was named the NBA's most valuable player and the playoff MVP. The Bucks returned to the finals in the 1973-74 season, but lost to the Boston Celtics. Robertson retired the following year and Abdul-Jabbar broke his hand on a backboard support. Milwaukee failed to make the playoffs.

Abdul-Jabbar made good on his promise to personify "black rage." Instead of starring in the 1968 Olympics, as he surely would have, he studied Islam with Hamaas Abdul-Khaalis. Abdul-Jabbar converted to the religion popular with many African Americans and changed his name to mean "generous powerful servant of Allah." Abdul-Khaalis arranged a marriage for Abdul-Jabbar in 1971 but the couple separated after the birth of a daughter two years later. Meanwhile, Abdul-Khaalis had been trying to convert black Muslims to traditional Islam. On January 18, 1973, a group of black Muslim extremists retaliated by invading a New York City townhouse owned by Abdul-Jabbar and killing Abdul-Khaalis' wife and children. Four years later, Abdul-Khaalis and some followers staged a protest in Washington, D.C. and a reporter was killed in the resulting disturbance. Abdul-Khaalis was sentenced to 40 years in prison with Abdul-Jabbar paying his legal expenses.

Feeling unfulfilled and conspicuous in the largely white, small-market city of Milwaukee, Abdul-Jabbar asked for a trade in 1975. He was sent to Los Angeles for four first-team players. Through the remainder of the 1970s, Abdul-Jabbar made the Lakers one of the NBA's top teams but even he wasn't enough to take the team to a championship alone. Angered by years of what he considered bullying by NBA opponents, Abdul-Jabbar was fined \$5,000 in 1977 for punching Bucks center Kent Benson. In 1979, the Lakers drafted Earvin "Magic" Johnson, and the point guard gave Los Angeles the edge it needed. The Lakers won the NBA title over Philadelphia in 1980. Abdul-Jabbar broke his foot in the fifth game, was taped and returned to score 40 points, but watched the rest of the series on television. The Lakers won again in 1982, 1985, 1987, and 1988.

Abdul-Jabbar surpassed Wilt Chamberlain's all-time scoring record in 1984, eventually setting records for most points (38,387), seasons (20), minutes played (57,446), field goals made (15,837), field goals attempted (28,307), and blocked shots (3,189); he averaged 24.6 points a game before he retired at the age of 42 following the 1988-89 season. He held the record for most playoff points until surpassed by Michael Jordan in 1998. He was elected unanimously into the Basketball Hall of Fame in his first year of eligibility on May 15, 1995, and was named one of the 50 greatest basketball players in history to coincide with the NBA's 50th anniversary in 1996.

Abdul-Jabbar's personal life remained unsettled during and after his Los Angeles playing years. He was always uncomfortable with reporters, describing them as "scurrying around like cockroaches after crumbs." Fans, especially white, found it difficult to understand his conversion to Islam; his attitudes towards race; and his shy, introverted personality. Abdul-Jabbar's Islamic faith also estranged him from his parents, although they eventually reconciled. His Bel Air house was destroyed by fire on January 31, 1983, and the fire contributed to bankruptcy for the former NBA star four years later. Abdul-Jabbar wrote two autobiographical accounts, *Giant Steps* in 1983 and *Kareem* in 1990, and a children's collection, *Black Profiles in Courage: A Legacy of African-American Achievement*, in 1996. He acted in motion pictures and television including *Mannix*, *21 Jump Street*, *Airplane*, *Fletch*, and a 1994 Stephen King mini-series, *The Stand*. He was the executive producer of a made-for-television movie about civil rights pioneer Vernon Johns. He was arrested in 1997 for battery and false imprisonment following a traffic dispute and underwent anger-management counseling. He paid a \$500 fine after drug-sniffing dogs detected marijuana in his possession at the Toronto airport the same year. He settled out of court with a professional football player in 1998 over a dispute involving the commercial use of his name.

Since his retirement, Abdul-Jabbar has made most of his living as a motivational speaker and doing product endorsements. He spends time with his five children, including his six-foot-six-inch namesake son who is a college basketball player. In the wake of former Boston Celtic Larry Bird's success as a head coach with the Indiana Pacers, Abdul-Jabbar embarked on an effort to return to the NBA by coaching high school boys on an Apache Reservation in Whiteriver, Arizona, learning to speak their language and writing another book in the process. The team's six-foot-six center remarked, "For the first time since I was little, I actually felt kind of small." "It's really a no-brainer for me," Abdul-Jabbar said. "Basketball is a simple game. My job [is to get] the guys ready to play."

Abortion

Abortion, or induced miscarriage, was one of the most controversial topics in the post-Civil War United States. Indeed, the rights an individual woman holds over her uterus seem to have been debated ever since the inception of such social institutions as religion and law. While some cultures have permitted or even encouraged selective termination of pregnancy—if, for example, the fetus turned out to be female when a family already had an ample supply of daughters; or if a woman was ill or not financially able to raise a child—in Western civilization, church and state traditionally forbade abortion and even contraceptive measures. If a woman was to be sexual, it seemed, she had to accept pregnancy and childbirth. Those opposed to abortion focused on the fetus and maintained that expelling it constituted the murder of a human being; the pro-abortion faction argued from the pregnant woman's perspective, saying that any woman had the right to choose elimination in case of risks to health or psyche, or if she simply did not feel ready to be a mother. Whatever opinions individuals might have held, by the end of the twentieth century the governments of almost all industrialized nations had stepped out of the debate; only in the United States did the availability of legal abortion remain the subject of political controversy, sparking demonstrations from both factions and even the bombing of abortion clinics and assassination of doctors.

Women seem to have had some knowledge of miscarriage-inducing herbs since prehistoric times, but that knowledge virtually disappeared during the medieval and Renaissance Inquisitions, when many midwives were accused of witchcraft and herbal lore was discredited. Thereafter, women of Western nations had to rely on furtive procedures by renegade doctors or self-accredited practitioners in back-street offices. Though exact statistics are difficult to calculate, in January 1942 the *New York Times* estimated that 100,000 to 250,000 illegal abortions were performed in the city every year. Pro-abortion doctors might use the latest medical equipment, but referrals were hard to get and appointments difficult to make; many women had to turn to the illegal practitioners, who might employ rusty coat hangers, Lysol, and other questionable implements to produce the desired results. The mortality and sterility rates among women who sought illegal abortions were high. Appalled by these dangerous conditions, activists such as Margaret Sanger (1883-1966) founded birth control clinics, fought for women's sexual health, and were often jailed for their trouble. Slowly evolving into organizations such as Planned Parenthood as they won government approval, however, such activists began distributing birth control and (in the

Anti-abortionists march in front of the United States Supreme Court on the 23rd anniversary of *Roe v. Wade*, 1996.

1970s) providing surgical abortions, which involved the dilation of the cervix and scraping or aspiration of the uterus. The mid-1990s saw the introduction of pharmaceutical terminations for early-term pregnancies; such remedies included a combination of methotrexate and misoprostol, or the single drug RU-486. At the end of the century, legal abortion was a safe minor procedure, considered much less taxing to a woman's body than childbirth.

Both parties in the abortion debate considered themselves to occupy a *pro* position—pro-life or pro-choice. Led by organizations such as Operation Rescue (founded 1988), the most extreme proliferators maintained that life begins at the moment of conception, that the smallest blastocyst has a soul, and that to willingly expel a fetus at any stage (even if the pregnancy is the result of rape or incest) is murder. Some argued that women considering abortion were mentally as well as morally deficient and should be taken in hand until their babies were born, at which time those infants could be adopted by deserving couples. The pro-choice faction, pointing out that many pro-lifers were also pro-death penalty, insisted that every woman had a right to decide what would happen to her own body. Extreme proponents

considered the fetus to be part of the mother until birth—thus asserted that aborting at any stage of pregnancy should be acceptable and legal.

Most people came down somewhere between the two extremes, and this moderate gray area was the breeding-ground for intense controversy. Arguments centered on one question: At what point did individual life begin? At conception, when the fetus started kicking, when the fetus could survive on its own, or at the moment of birth itself? The Catholic Church long argued for ensoulment at conception, while (in the landmark decision *Roe v. Wade*) the U.S. Supreme Court determined that for over a thousand years English common law had given women the right to abort a fetus before movement began. Even many pro-choicers separated abortion from the idea of or right to sexual freedom and pleasure; they felt abortion was to be used, as one scholar puts it, “eugenically,” for the selective betterment of the race. Twentieth-century feminists, however, asserted a woman's right to choose sexual pleasure, motherhood, or any combination of the two; British activist Stella Browne gave the feminists their credo when, in 1935, she said, “Abortion must be the key to a new world for women, not a bulwark for things as they are, economically nor

biologically. . . . It should be available for any woman without insolent inquisitions, nor ruinous financial charges, nor tangles of red tape. For our bodies are our own.” Nonetheless, women who sought and underwent abortions in this era kept their experiences a secret, as tremendous shame attached to the procedure; a woman known to have had an abortion was often ostracized from polite society.

From December 13, 1971, to January 22, 1973, the U.S. Supreme Court considered a legal case that was to change the course of American culture. *Roe v. Wade*, the suit whose name is known to virtually every adult American, took the argument back to the Constitution; lawyers for Norma McCorvey (given the pseudonym Jane Roe) argued that Texan anti-abortion laws had violated her right to privacy as guaranteed in the First, Fourth, Fifth, Ninth, and Fourteenth Amendments. Texas district attorney Henry Wade insisted on the rights of the unborn “person” in utero. In its final decision, the Court announced it had “inquired into . . . medical and medical-legal history and what that history reveals about man’s attitudes toward the abortion procedure over the centuries”; religion, culturally imposed morals, and the “raw edges of human existence” were all factors. In the end, the Court astonished America by finding it “doubtful that abortion was ever firmly established as a common-law crime even with respect to the destruction of a quick [moving] fetus.” By a vote of seven to two, the justices eliminated nearly all state anti-abortion laws, and groups such as the National Abortion Rights Action League made sure the repeals were observed on a local level.

Right-to-lifers were incensed and renewed their social and political agitation. The Catholic Church donated millions of dollars to groups such as the National Right to Life Committee, and in 1979 Baptist minister Jerry Falwell established the Moral Majority, a “pro-life, pro-family, pro-moral, and pro-American” organization. Pressure from what came to be known as the New Right achieved a ban against Medicaid funding for abortions. Pro-lifers picketed clinics assiduously, shouting slogans such as “Murderer—you are killing your baby!”, and sometimes eliminating abortionists before those workers could eliminate a fetus. There were 30 cases of anti-abortion bombing and arson in 1984, for example, and five U.S. abortion clinic workers were murdered between 1993 and 1994. U.S. President Ronald Reagan (in office 1981-1989) also got involved, saying abortion “debases the underpinnings of our country”; in 1984 he wrote a book called *Abortion and the Conscience of the Nation*. Under President George Bush (in office 1989-1993), the Supreme Court found that a Missouri law prohibiting abortion in public institutions did not conflict with *Roe v. Wade*; consequently, some states renewed nineteenth-century anti-abortion laws.

During this agitation, proponents of choice noted that many pro-life politicians were also cutting welfare benefits—although many women (an estimated 20,000 in 1978) would not have been on the public rolls if they had been allowed access to low-cost abortions. These activists estimated that for every one dollar that might have been spent on a Medicaid-funded abortion, four dollars had to go to caring for mother and child in the first two years. They concluded that favoring capital punishment and welfare cuts, while forbidding women to terminate their own pregnancies, was both hypocritical and inconsistent—especially as many of the New Right refused to condemn the clinic bombings and doctor assassinations.

In the final decade of the century, the controversy still raged, though many politicians were trying to avoid the issue—a move that some pro-choicers saw as positive, expressing an uneasiness with traditional condemnations. Such politicians often said they would leave the decision up to individual doctors or law courts. Operation

Rescue workers claimed to have scored a major coup in 1995, when they managed to convert McCorvey herself (then working in a women’s health clinic) to born-again Christianity; in a statement to the media, she said, “I think I’ve always been pro-life, I just didn’t know it.” Less attention was granted to her more moderate assertion that she still approved of first-trimester abortion. Meanwhile activists from both sides tried to make abortion a personal issue for every American; bumper stickers, newspaper advertisements, billboards, and media-directed demonstrations became part of the daily landscape. Crying, “If you don’t trust me with a choice, how can you trust me with a child?”, pro-choicers organized boycotts against the purveyors of pizza and juice drinks who had donated money to Operation Rescue and other pro-life organizations; these boycotts were mentioned in mainstream movies such as 1994’s *Reality Bites*. Eventually movie stars and other female celebrities also came out and discussed their own experiences with abortions both legal and illegal, hoping to ensure women’s access to safe terminations. Thus abortion, once a subject to be discussed only in panicked whispers—and a procedure to be performed only in hidden rooms—had stepped into the light and become a part of popular culture.

Abstract Expressionism

The emergence of Abstract Expressionism in New York City during the late 1930s both shocked and titillated the cultural elite of the international art scene. Abstraction itself was nothing new—modernist painters had been regulating the viewer’s eye to obscured images and distorted objects for quite some time. In fact, the bright, abstracted canvases and conceptual ideals of high modernist painters such as Joan Miro and Wassily Kandinsky tremendously influenced the Abstract Expressionists. What distinguished the movement from its contemporaries, and what effectively altered the acceptable standards of art, was the artists’ absolute disregard for some kind of “objective correlative” that a viewer could grasp in attempt to understand the work. The central figures of Abstract Expressionism—Jackson Pollock, Mark Rothko, Willem de Kooning, Robert Motherwell, and Clyfford Still, among others—completely rejected any kind of traditional thematic narrative or naturalistic representation of objects as valid artistic methods. Rather, they focused on the stroke and movement of the brush and on the application of color to

the canvas; the act of painting itself became a vehicle for the spontaneous and spiritual expression of the artist's unconscious mind. Pollock's method of "drip painting," or "all over painting" as some critics call it, involved spontaneous and uncalculated sweeping motions of his arm. He would set his large canvas on the floor and, using sticks and caked paintbrushes, would rhythmically fling paint at it. The act of painting became an art form in itself, like a dance. Under the rubric of Abstract Expressionism, colorfield painters like Rothko would layer one single color plane above another on a large surface, achieving a subtly glowing field of color that seems to vibrate or dance on the one dimensional canvas. The artists hoped that, independent of the formal language of traditional art, they would convey some kind of sublime, essential truth about humanity.

Interestingly, as a result of the highly subjective nature of the work, Abstract Expressionist painters actually negated "the subject matter of common experience." Rather, the artist turned to "the medium of his own craft," to the singular, aesthetic experience of painting itself. As art critic Clement Greenberg wrote in the seminal essay "Avant-garde and Kitsch," the very "expression" of the artist became more important than what was expressed. *The Partisan Review* published Greenberg's "Avant-garde and Kitsch" in 1939, and it was quickly adopted as a kind of manifesto for Abstract Expressionism. In the essay, Greenberg unapologetically distinguishes between an elite ruling class that supports and appreciates the avant-garde, and the Philistine masses, an unfortunate majority that has always been "more or less indifferent to culture," and has become conditioned to kitsch. Greenberg defines kitsch as a synthetic art that merely imitates life, while the avant-garde seeks "to imitate God by creating something valid in its own terms, in the way that nature itself is valid . . . independent of meanings, similars or originals." The Abstract Expressionist work, with a content that cannot be extracted from its form, answers Greenberg's call for an avant-garde "expression" in and of itself. The transcendentalist nature of an Abstract Expressionist painting, with neither object nor subject other than that implicit in its color and texture, reinforces Greenberg's assertion that the avant-garde *is* and *should be* difficult. Its inaccessibility serves as a barrier between the masses who will dismiss the work, and the cultured elite who will embrace it.

However valid or invalid Greenberg's claims in "Avant-garde and Kitsch" may be, inherent in the essay is a mechanism ensuring the allure of Abstract Expressionism. In the same way that the emperor's fabled new clothes won the admiration of a kingdom afraid to *not* see them, Abstract Expressionism quickly found favor with critics, dealers, collectors, and other connoisseurs of cultural capital, who did not wish to exclude themselves from the kind of elite class that would appreciate such a difficult movement. When *New York Times* art critic John Canaday published an article in 1961 opposed not only to Abstract Expressionism, but also to the critical reverence it had won, the newspaper was bombarded with over 600 responses from the artistic community, the majority of which bitterly attacked Canaday's judgement, even his sanity. Most art magazines and academic publications simply did not print material that questioned the validity or quality of a movement that the art world so fervently defended. By 1948, even *Life* magazine, ironically the most "popular" publication in the nation at the time, jumped on the bandwagon and ran a lengthy, illustrated piece on Abstract Expressionism.

While the enormous, vibrant canvases of Pollock, Rothko, and others certainly warranted the frenzy of approval and popularity they received, their success may also have been due to post-war U.S. patriotism, as well as to the brewing McCarthy Era of the 1950s. New

York City became a kind of nucleic haven for post-war exiles and émigrés from Europe, a melange of celebrities from the European art world among them. Surrealists Andre Breton and Salvador Dali, for example, arrived in New York and dramatically affected the young Abstract Expressionists, influencing their work with psychoanalysis. The immigration of such men, however, not only impacted the artistic circles, but also changed the cultural climate of the entire city. The birth of Abstract Expressionism in New York announced to the world that the United States was no longer a cultural wasteland and empire of kitsch, whose artists and writers would expatriate in order to mature and develop in their work. Thus the art world marketed and exploited Abstract Expressionism as *the* movement that single-handedly transformed America's reputation for cultural bankruptcy and defined the United States as a cultural as well as a political leader. Furthermore, as critic Robert Hughes writes, by the end of the 1950s Abstract Expressionism was encouraged by the "American government as a symbol of American cultural freedom, in contrast to the state-repressed artistic speech of Soviet Russia." What could be a better representation of democracy and capitalism than a formally and conceptually innovative art form that stretches all boundaries of art, and meets with global acclaim and unprecedented financial rewards?

Politics aside, of paramount importance in the discussion of this art movement is the realization that, more than any other art movement that preceded it, Abstract Expressionism changed the modern perception of and standards for art. As colorfield painter Alfred Gottlieb wrote in a letter to a friend after Jackson Pollock's death in 1956: "neither Cubism nor Surrealism could absorb someone like myself; we felt like derelicts. . . . Therefore one had to dig inside one's self, excavate what one could, and if what came out did not seem to be art by accepted standards, so much the worse for those standards."

—Taly Ravid

Academy Awards

Hollywood's biggest party—the Academy Awards—is alternately viewed as shameless self-promotion on the part of the movie industry and as glamour incarnate. Sponsored by the Academy of Motion Picture Arts and Sciences, the Academy Awards annually honor excellence in film. Although it has been said that the ceremony is merely a popularity contest, winning an Oscar still represents a significant change in status for the recipient. After more than 70 years

Kevin Costner at the Academy Awards ceremony in 1991.

of Academy Awards ceremonies, the event has been criticized as having become a self-congratulatory affair that gives Hollywood a yearly excuse to show off to a global televised audience of millions. But no one can deny that when Hollywood's stars don designer clothes and jewelry, the world turns up to watch, proving that star power and glamour are still the essence of American popular culture.

The Academy of Motion Picture Arts and Sciences (AMPAS) was the brainchild of Metro Golwyn Mayer (MGM) mogul Louis B. Mayer. In the late 1920s the motion picture industry was in a state of flux. Experiments being conducted with sound threatened the demise of silent pictures, even as the scandals which had rocked the industry in the early 1920s brought cries for government censorship. Additionally, Hollywood was seeking to unionize and, in 1926, the Studio Basic Agreement was signed, unionizing stagehands, musicians, electricians, carpenters, and painters. The major talent, however, still remained without bargaining power.

In this restive atmosphere, Louis B. Mayer proposed to create an organization that would bring together representatives from all the major branches of the movie industry in an effort to promote both progress and harmony. Thirty-six people attended the first meeting in January, 1928, including actress Mary Pickford, designer Cedric Gibbons, director John Stahl, producers Joseph Schenck and Louis B. Mayer, and actor Douglas Fairbanks, who became the first president of AMPAS. Six months later, an organizational banquet was held at the Biltmore Hotel, where 231 new members joined. During the next year, the new organization formed various committees, one of which sought to create an award that would honor excellence in the motion picture industry.

The first Academy Awards ceremony was held at the Hollywood Roosevelt Hotel on May 16, 1929. It took Academy president Douglas Fairbanks five minutes to hand out all the awards. Janet Gaynor and Emil Jannings were named Best Actress and Best Actor while *Wings* won Best Picture. The ceremony was brief and unspectacular. Janet Gaynor professed to have been equally thrilled to receive the award as to have met Douglas Fairbanks. The local and national media ignored the event completely.

Each winner received a small, gold-plated statuette of a knight holding a crusader's sword, standing on a reel of film whose five spokes represented the five branches of the Academy. The statuette quickly earned the nickname Oscar, although the source of the nickname has never been pinpointed; some say that Mary Pickford thought it looked like her Uncle Oscar, while others credit Bette Davis, columnist Sidney Skolsky, or Academy librarian and later executive director Margaret Herrick with the remark. Whatever the source, the award has since been known as an Oscar.

By 1930, the motion picture industry had converted to talkies, and the Academy Awards reflected the change in its honorees, signifying the motion picture industry's acceptance of the new medium. Silent stars such as Great Garbo, Gloria Swanson, and Ronald Coleman, who had successfully made the transition to talkies, were honored with Oscar nominations.

It was also during the 1930s that the Academy Awards began to receive press coverage. Once a year, an eager nation awaited the morning paper to discover the big Oscar winners. The decade saw the first repeat Oscar winner in actress Luise Rainer; the first film to win eight awards in *Gone with the Wind*; the first African-American recipient in Hattie McDaniel as best supporting actress for *Gone with the Wind*; and the first honorary statuettes awarded to child stars Judy Garland, Deanna Durbin, and Mickey Rooney.

In the 1940s, the Academy Awards were broadcast by radio for the first time, and Masters of Ceremonies included popular comedians and humorists such as Bob Hope, Danny Kaye, and Will Rogers. With a national audience, the Oscar ceremony, which had alternated annually between the banquet rooms of the Biltmore and Ambassador Hotels, moved to legitimate theaters such as the Pantages, the Santa Monica Civic Auditorium, and later the Shrine and the Dorothy Chandler Pavilion. No longer a banquet, the Oscars became a show—in 1936, AMPAS had hired the accounting firm of Price Waterhouse to tabulate votes, thus ensuring secrecy; in 1940, sealed envelopes were introduced to heighten the drama.

In 1945, the Oscars were broadcast around the world on ABC and Armed Forces radio, becoming an international event. With each passing year, the stars, who had first attended the banquets in suits and simple dresses, became more glamorous. The women now wore designer gowns and the men tuxedos. Additionally, each year the Oscars featured new hype. In 1942, sisters Joan Fontaine and Olivia de Havilland were both nominated for best actress. Fontaine won that year, but when the same thing happened four years later de Havilland had her turn and publicly spurned her sister at the ceremony. The press gleefully reported the feud between the two sisters, who never appeared together in public again. Rivalries were often played up between nominees, whether they were real or not. In 1955, for example, it was the veteran Judy Garland versus the new golden girl, Grace Kelly.

In 1953, the Oscars were televised for the first time. As the audience grew each year, the Oscar ceremony became a very public platform for the playing out of Hollywood dramas. In 1957, audiences eagerly awaited Ingrid Bergman's return from her exile to Europe. In

1972, Hollywood publicly welcomed back one of their most legendary performers, a man whom they had forced into exile during the McCarthy era, when Charlie Chaplin was awarded an honorary Oscar. And since the establishment of special awards such as the Irving G. Thalberg Memorial Award, considered the highest honor a producer can receive, and the Jean Hersholt Humanitarian Award, each year the Oscars honor lifetime achievement in a moving ceremony. Recipients of these special awards, often Hollywood veterans and audience favorites such as Henry Fonda and Jimmy Stewart, generally evoke tears and standing ovations.

Although the Academy Awards purport to be non-partisan, politics have always crept into the ceremony. In 1964, Sidney Poitier was the first African-American recipient of a major award, winning Best Actor for *Lilies of the Field*. In a country divided by the events of the civil rights movement, Hollywood showed the world where it stood. In 1972, Marlon Brando refused to accept his Oscar for Best Actor for *The Godfather*, instead sending Sacheen Littlefeather to make a proclamation about rights for Native Americans. When it was revealed that Miss Littlefeather was in fact Maria Cruz, the former Miss Vampire USA, the stunt backfired. In 1977, Vanessa Redgrave ruffled feathers around the world when she used her acceptance speech for best supporting actress in *Julia* to make an anti-Zionist statement. That, however, has not stopped actors such as Richard Gere and Alec Baldwin from speaking out against the Chinese occupation of Tibet in the 1990s.

Every March, hundreds of millions of viewers tune in from around the world to watch the Academy Awards. The tradition of having a comedic Master of Ceremonies has continued with Johnny Carson, David Letterman, Whoopi Goldberg, and Billy Crystal. Each year the ceremony seems more extravagant, as Hollywood televises its image around the globe. Academy president and two-time Oscar winner Bette Davis once wrote that “An Oscar is the highest and most cherished of honors in a world where many honors are bestowed annually. The fact that a person is recognized and singled out by those who are in the same profession makes an Oscar the most coveted award for all of us.” Although popular culture is now riddled with awards shows, the excitement of watching the world’s most glamorous people honor their own has made the Academy Awards the Grande Dame of awards ceremonies and a perennial audience favorite.

AC/DC

The Australian rock group AC/DC appeared on the international music scene in 1975 with their first U.S. release, *High Voltage*. Their songs were deeply rooted in the blues and all about sexual adventure. By the end of the decade, they had a solid reputation in the United

Angus Young of AC/DC.

States and Europe as one of the best hard rock concert bands in the world. *Back in Black* marked their breakthrough release, the number two album in the United States in 1980, and the beginning of a decade of largely uninterrupted success.

Throughout their career, AC/DC lived up to their credo of living hard, fast, and simple. This lifestyle is typified in the song “Rocker”: “I’m a rocker, I’m a roller, I’m a right out of controller/ I’m a wheeler, I’m a dealer, I’m a wicked woman stealer/ I’m a bruiser, I’m a cruiser, I’m a rockin’ rollin’ man.” The brothers Angus and Malcolm Young, Australians of Scottish descent, began AC/DC in the early 1970s. Discovered by American promoters, they first made a name for themselves opening for hard rock legends, Black Sabbath and Kiss.

Their music and stage show was built around the virtuoso solos and the schoolboy looks of Angus Young. He pranced, sweated profusely, rolled on the stage, and even mooned audiences mid-chord. AC/DC backed up their hedonistic tales in their lives off-stage. In 1979, Bon Scott, their first singer, was found dead in the backseat of a friend’s car after drinking too much and choking on his own vomit. His death came soon after the release of the band’s best-selling album at the time, *Highway to Hell* (1979). Whether they appreciated the irony of the album or not, fans began to believe in AC/DC’s self-proclaimed role as rock n’ roll purists. They also bought *Back in Black*, the first album to feature Scott’s replacement, Brian Johnson, at a feverish pace. The title track and “You Shook Me All Night Long” would become college party standards. Johnson’s voice was abrasive, his look blue-collar, and the band took off with Johnson and Angus at the helm. *Back in Black* also benefitted from the slick

influence of young producer Mutt Lange, who would go on to produce many Heavy Metal bands in the 1980s and 1990s. AC/DC followed up *Back in Black* with *Dirty Deeds Done Dirt Cheap*, a collection of unreleased Bon Scott pieces that also proved successful. The band spent the next ten years selling almost anything they released, and heading many of the “Monsters of Rock” summer tours popular at the time.

However, AC/DC did experience their share of problems along the way. When serial killer Richard Ramirez, the Los Angeles Nightstalker, was convicted in 1989, it was quickly publicized that he was a fanatic follower of AC/DC. In 1991, three fans were crushed at an AC/DC concert in Salt Lake City. AC/DC managed to weather the controversy quietly, continuing to produce loud blues-rock and play a demanding concert schedule throughout the 1990s. While often regarded as part of the 1980s heavy metal genre, AC/DC never resorted to the outlandish spike-and-leather costumes or science-fiction themes of many of their contemporaries, and may have had a more lasting impact on popular music as a result. AC/DC reinforced the blues roots of all rock genres, keeping bass and drum lines simple and allowing for endless free-form solos from Angus Young. Young carried the torch of the guitar hero for another generation—his antics and youthful charisma made him more accessible than many of his somber guitar-playing colleagues.

With songs such as “Love at First Feel” and “Big Balls,” and lyrics like “knocking me out with those American thighs,” and “I knew you weren’t legal tender/ But I spent you just the same,” AC/DC reaffirmed the eternal role of rock n’ roll: titillating adolescents while frightening their parents. AC/DC refused all attempts to analyze and categorize their music, claiming over and over that “Rock n’ Roll ain’t no pollution/ Rock n’ Roll is just Rock n’ Roll.” Longer hair and more explicit language notwithstanding, these Australian rockers were really just singing about the same passions that had consumed Jerry Lee Lewis, Little Richard, and their screaming teenage fans.

Ace, Johnny (1929-1954)

On Christmas day, 1954, backstage at the Civic Auditorium in Houston, Texas, blues balladeer, songwriter, and pianist Johnny Ace flirted with death and lost, shooting himself in the head while playing Russian roulette. Ace was at the peak of his brief musical career. In two years, he had scored six hits, two of them reaching number one on the *Billboard* R&B chart, and *Cash Box* magazine had named him the “Top Rhythm and Blues Singer of 1953.” Shocked by his violent death, Ace’s fans and his colleagues in the music industry searched for an explanation. The musician had everything to live for, yet made his demise his legacy. While no one will ever know why he committed suicide, his plaintive melodies and vocal delivery conjure associations filled with pathos.

Ace’s musical style, like that of many other Rhythm and Blues artists, was eclectic, drawing from both church and secular contexts and embracing blues, jazz, gospel, hymns, and popular songs. He was, however, first and foremost a blues balladeer whose effectively sorrowful baritone earned the description of “the guy with a tear in his voice.” His piano technique was limited, but his strength lay in his abilities as a songwriter and vocalist, and his compositions were memorable. He generally used a repeated pattern of simple motifs that made retention easy for his listening audience, many of whom were teenagers. Ace’s hits were sad, beautiful, touching songs that held his listeners and caused them to ponder life. While he could sing the straight 12-bar blues, this was not his forte. He was a convincing blues balladeer, and it was this genre that clearly established his popularity and his reputation. Ace’s blues ballads borrowed the 32-bar popular song form, and were sung in an imploring but softly colloquial style in the tradition of California-based blues singer and pianist Charles Brown.

John Marshall Alexander was born on June 9, 1929 in Memphis, Tennessee. The son of the Rev. and Mrs. John Alexander Sr., Johnny Ace sang in his father’s church as a child. He entered the navy in World War II, and after returning to Memphis began to study the piano and guitar. By 1949, he had joined the Beale Streeters, a group led by blues vocalist and guitarist B. B. King and which, at various times, included Bobby Bland, Roscoe Gordon, and Earl Forest. The Beale Streeters gained considerable experience touring Tennessee and neighboring states, and when King left the group, he charged young Ace as leader. John Mattis, a DJ at radio station WDIA in Memphis who is credited with discovering Ace, arranged a recording session at which Ace sang, substituting for Bobby “Blue” Bland, who allegedly couldn’t remember the lyrics to the planned song. Ace and Mattis hurriedly wrote a composition called “My Song,” and recorded it. While it was a technically poor recording with an out-of-tune piano, “My Song” was an artistic and commercial success, quickly becoming a number one hit and remaining on the R&B chart for 20 weeks. The song employed the popular 32-bar form that remained the formula for a number of Ace’s later compositions.

Ace signed with Duke Records, which was one of the first black-owned independent record companies to expose and promote gospel and rhythm and blues to a wider black audience. They released Ace’s second record, “Cross My Heart,” which featured him playing the organ in a gospel style, with Johnny Otis’s vibra-harp lending a sweet, blues-inspired counter melody to Ace’s voice. Again, this was a recording of poor technical quality, but it was well received, and climbed to number three on the R&B chart. The musician toured as featured vocalist with his band throughout the United States, doing one nighters and performing with Willie Mae “Big Mama” Thornton, Charles Brown, and Bobby Bland, among others. Ace made several other hit records, such as the chart-topping “The Clock”—on which he accompanied himself on piano with a wistful melodic motif in response to his slow-tempo vocal—and the commercially successful “Saving My Love,” “Please Forgive Me,” and “Never Let Me Go.” This last, given a memorable arrangement and superb accompaniment from Otis’s vibes, was the most jazz-influenced and musically significant of Ace’s songs, recalling the work of Billy Eckstine.

Two further recordings, “Pledging My Love” and “Anymore” (the latter featured in the 1998 film *Eve’s Bayou*), were Ace’s posthumous hits. Ironically, “Pledging My Love” became his biggest crossover success, reaching number 17 on the pop chart. The Late, Great Johnny Ace, who influenced California blues man Johnny Fuller and the Louisiana “swamp rock” sound, made largely poignant music which came to reflect his fate—that of a sad and lonely

man, whose gentle songs were unable to quell his inner tension or prevent his tragic end.

Acker, Kathy (1948-1997)

In a process she described as “piracy,” Kathy Acker appropriated the plots and titles of works such as *Treasure Island*, *Great Expectations*, and *Don Quixote* and rewrote them in her own novels to reflect a variety of feminist, political, and erotic concerns. Critics and readers praised these techniques, but after she took a sex scene from a Harold Robbins novel and reworked it into a political satire, Robbins threatened to sue her publisher. When her publisher refused to support her, Acker was forced to make a humiliating public apology. Although her work is marked by an insistence that individual identity is both socially constructed and inherently fragmented, Acker herself became perhaps the most recognizable member of the literary avant-garde since William S. Burroughs, whose work she deeply admired.

Acupuncture

While acupuncture has been a successful Chinese medical treatment for over 5,000 years, it was not well known to the general U.S. public until the early 1970s, when President Nixon reopened relationships with China. Acupuncture was first met with skepticism, both by the U.S. public at large and the conventional American Medical Association. Slowly, Americans and other western countries began to conduct studies, sometimes in conjunction with the Chinese, about the efficacy of acupuncture. Certain types of acupuncture, particularly for pain management and drug related addictions, were easily translated into western medical theory and could be easily learned and used by western doctors. Thus, the idea of using some acupuncture gained mainstream acceptance. As this acceptance grew, so did the use of acupuncture and Chinese medical theories and methods, at least amongst the numbers of people open to “alternative” medicine. By the 1990s, despite initial scientific skepticism,

acupuncture became one of the most accepted “alternative” medicines in the United States, used to varying degrees by AMA physicians and licensed Chinese doctors, and accepted on some levels by health and government institutions.

Acupuncture theory purports that the body has an energy force called Qi (“chee”) that runs through pathways, called meridians. Qi involves not only the physical, but also spiritual, intellectual, and emotional aspects of people. When the flow of Qi is disrupted for any reason, ill-health ensues. To get the Qi flowing smoothly and health restored, points along the meridians are stimulated either by acupuncture (very fine needles), moxibustion (burning herbs over the points), or acupressure (using massage on the points). Often, these three methods are used together. The concept of Qi is also used in other medical and spiritual philosophies, and was broadly used in the “New Age” theories of the 1980s and 1990s, which helped popularize acupuncture and vice versa.

Acupuncture began to be used in the United States primarily for pain relief and prevention for ailments including backaches, headaches, arthritic conditions, fibromylgia, and asthmatic conditions. Because the type of acupuncture used for these ailments was easy to learn and adapt to western medicine, it was more quickly accepted. The introduction of acupuncture in the United States sparked interest by western medical researchers to gain a more complete understanding of traditional Chinese medicine and to learn why, in western terms, acupuncture “works.” Theories soon abounded and those couched in western terms further popularized acupuncture. A study by Canadian Dr. Richard Chen, for instance, found that acupuncture produces a large amount of cortisol, the body’s “natural” cortisone, a pain killer. In 1977, Dr. Melzach, a noted physician in the field of pain, found that western medicine’s trigger points, used to relieve pain, correspond with acupuncture points.

Methods of acupuncture that became common in western culture were ones that seemed “high-tech,” were (partially or mostly) developed within western culture, or developed in contemporary times, such as Electro-acupuncture and Auricular acupuncture. Electro-acupuncture, often used for pain relief or prevention, administers a small amount of electric power with various frequencies to send small electrical impulses through an acupuncture needle. Electro-acupuncture was first reported successfully used as an anesthesia for a tonsillectomy in China in 1958, and the Chinese thereafter have used it as a common surgical anesthesia. Doctors at Albert Einstein Medical Center and Northville State Hospital successfully conducted surgeries using Electro-acupuncture as an anesthesia between 1971 and 1972. Contemporary Auricular acupuncture, or ear acupuncture, developed largely outside China in France in the 1950s. It started becoming popular in the United States mostly for treating addictions like cigarette smoking, alcoholism, and drug addiction.

By the 1980s, the popularity of acupuncture supported the establishment of many U.S. schools teaching acupuncture within a “Traditional Chinese Medicine” degree. Approximately sixty such schools existed by the late 1990s. A quasi-governmental peer review group recognized by the U.S. Department of Education and by the Commission on Recognition of Postsecondary Accreditation, called ACAOM (Accreditation Commission for Acupuncture and Oriental Medicine) was devoted specifically to accrediting schools of Traditional Chinese Medicine. Many states licensed acupuncturists and doctors of Traditional Chinese Medicine, while some states would allow only American Medical Association physicians to practice acupuncture.

Acupuncture also gained broader acceptance by the government and health institutions in the 1990s. The World Health Organization (WHO) estimated that there were approximately 10,000 acupuncture specialists in the United States and approximately 3,000 practicing acupuncturists who were physicians. In 1993 the Food and Drug Administration (FDA) reported that Americans were spending \$500 million per year and making approximately 9 to 12 million patient visits for acupuncture treatments. A few years later, the FDA lifted their ban of acupuncture needles being considered “investigational devices.” In late 1997, the National Institute of Health announced that “. . . there is clear evidence that needle acupuncture treatment is effective for postoperative and chemotherapy nausea and vomiting, nausea of pregnancy, and postoperative dental pain . . . there are a number of other pain-related conditions for which acupuncture may be effective as an adjunct therapy, an acceptable alternative, or as part of a comprehensive treatment program.” In late 1998, the prestigious and often conservative *Journal of the American Medical Association* published an article agreeing that acupuncture, as well as other alternative therapies, can be effective for certain disease management. This admission from the AMA was a sign of how far acupuncture and Chinese medicine had been accepted in “popular culture”—if the AMA had accepted acupuncture under certain conditions, then the general public certainly had accepted it to a much greater extent.

Adams, Ansel (1902-1984)

Photographer and environmentalist Ansel Adams is legendary for his landscapes of the American Southwest, and primarily Yosemite State Park. For his images, he developed the zone system of

photography, a way to calculate the proper exposure of a photograph by rendering the representation into a range of ten specific gray tones. The resulting clarity and depth were characteristic of the photographs produced by the group *f/64*, an association founded by Adams and fellow photographers Edward Weston and Imogen Cunningham. Adams' other important contribution in the development of photography as an artform was his key role in the founding of the Museum of Modern Art's department of photography with curator Beaumont Newhall. Adams' timeless photographs are endlessly in reproduction for calendars and posters, making his images instantaneously recognizable. Ansel Adams has become one of the most popular and familiar of photographers.

Addams, Jane (1860-1935)

Born in Illinois, Jane Addams is remembered as an influential social activist and feminist icon; she was the most prominent member of a notable group of female social reformers who were active during the first half of the twentieth century. Foremost among her many accomplishments was the creation of Hull House in Chicago. Staff from this settlement provided social services to the urban poor and successfully advocated for a number of social and industrial reforms. An ardent pacifist, Addams was Chair of The Woman's Peace Party and President of the International Congress of Women; she was also the first woman to receive the Nobel Peace Prize (1931). Addams supported women's suffrage, Prohibition, and was a founding member of the ACLU (American Civil Liberties Union). Her writings include the widely read, autobiographical *Twenty Years at Hull House*. Unmarried, Addams had romantic friendships with several women. She is the “patron” saint of social workers and a symbol of indefatigable social activism on the part of women.

The Addams Family

For years, beginning in the 1930s, cartoonist Charles Addams delighted readers of the *New Yorker* with his macabre graphic fantasies. Among his most memorable creations was a ghoulish brood known as the Addams Family. On television and film, the creepy, kooky clan has seemed determined to live on in popular culture long after its patriarch departed the earthly plane in 1988.

Like all of Addams's work, the Addams Family feature played off the identification the audience made with the characters. In many ways, the Addams clan—father, mother, two children, and assorted relatives (all unnamed)—were like a typical American family. But their delight in their own fiendishness tickled the inner ghoul in everyone. In one of Addams's most famous cartoons, the family gleefully prepared to pour a vat of boiling liquid from the roof of their Gothic mansion onto Christmas carolers singing below. No doubt millions of harried *New Yorker* readers harbored secret desires to follow suit.

To the surprise of many, the “sick humor” of the Addams Family found life beyond the printed page. In September 1964, a situation comedy based on the cartoons debuted on ABC. Producers initially sought input from Addams (who suggested that the husband

be called Repelli and the son Pubert) but eventually opted for a more conventional sitcom approach. The show was marred by a hyperactive laugh track but otherwise managed to adapt Addams's twisted sense of humor for mainstream consumption.

Veteran character actor John Astin played the man of the house, now dubbed Gomez. Carolyn Jones lent a touch of Hollywood glamour to the role of his wife, Morticia. Ted Cassidy, a heavy-lidded giant of a man, was perfectly cast as Lurch, the butler. The scene-stealing role of Uncle Fester went to Jackie Coogan, a child star of silent films now reincarnated as a keening, bald grotesquerie. Blossom Rock played the haggard Grandmama, with little person Felix Silla as the hirsute Cousin Itt. Lisa Loring and Ken Weatherwax rounded out the cast as deceptively innocent-looking children Wednesday and Pugsley, respectively.

The Addams Family lasted just two seasons on the network. Often compared to the contemporaneous horror comedy *The Munsters*, *The Addams Family* was by far the more sophisticated and well-written show. Plots were sometimes taken directly from the cartoons, though few seemed to notice. Whatever zeitgeist network executives thought they were tapping into when they programmed two supernatural sitcoms at the same time fizzled out quickly. *The Addams Family* was canceled in 1966 and languished in reruns for eleven years, at which point a Halloween TV movie was produced featuring most of the original cast. Loring did manage to capture a few headlines when she married porno actor Paul Siedermann. But the series was all but forgotten until the 1990s, when it was introduced to a new generation via the Nick at Nite cable channel.

The mid-1990s saw a craze for adapting old-school sitcom chestnuts into feature-length movies. On the leading edge of this trend was a movie version of *The Addams Family* released in 1991. Directed by Barry Sonnenfeld, the film boasted a top-rate cast, with Raul Julia as Gomez, Anjelica Huston as Morticia, and Christopher Lloyd as Uncle Fester. It was widely hailed as closer to Addams's original vision than the television series but derided for its woefully thin plot. A sequel, *Addams Family Values*, followed in 1993. In 1999, there was talk of yet another feature adaptation of Addams's clan of ghouls, this time with an entirely new cast.

Adderley, Cannonball (1928-1975)

Alto saxophonist, bandleader, educator, and leader of his own quintet, Cannonball Adderley was one of the preeminent jazz players of the 1950s and 1960s. Adderley's style combined hard-bop and soul jazz impregnated with blues and gospel. The first quintet he formed with his brother Nat Adderley disbanded because of financial difficulties. The second quintet, formed in 1959, successfully paved the way for the acceptance of soul jazz, achieved commercial viability, and remained intact until Adderley's untimely death on August 8, 1975. The group at various times consisted of Bobby Timmons, George Duke, Joe Zawinul, Victor Feldman, Roy McCurdy, and Louis

Anjelica Huston (left) with Raul Julia in the film *Addams Family Values*.

Hayes, among others. Occasionally, a second saxophonist was added to make a sextet.

The son of a jazz cornetist, Julian Edwin Adderley was born September 15, 1928 in Tampa, Florida. “Cannonball” was a corruption of cannibal, an appellation he earned during childhood for his rapacious appetite. His first professional musical experience was as a bandleader. He was band director at Dillard High School in Fort Lauderdale, Florida, while also leading a south Florida jazz group (1942-48); he later directed another high school band (1948-50) and the U.S. 36th Army Dance Band (1950-52).

Adderley captivated listeners when he moved to New York in the summer of 1955 and jammed with Oscar Pettiford at the Bohemia. This chance session landed him a job with Pettiford and a recording contract, causing him to abandon his plans for pursuing graduate studies at New York University. Adderley was labeled “the new Bird,” since his improvisations echoed those of Charlie “Yardbird” Parker, who died shortly before the younger man’s discovery in New York. The comparison was only partly accurate. To be sure, Adderley’s improvisations, like those of so many other saxophonists, imitated Parker; however, his style owed as much to Benny Carter as to blues and gospel. His quintet’s hard-bop style was largely a reaction against the third-stream jazz style of the 1950s: the fusion of jazz and art music led by Gunther Schuller. As a kind of backlash, Adderley

joined other black jazz musicians such as Art Blakey in a sometimes pretentious attempt to restore jazz to its African-American roots by making use of black vernacular speech, blues, gospel, call-and-response, and handclap-eliciting rhythms. Adderley maintained that “good” jazz was anything the people liked and that music should communicate with the people.

The Cannonball Adderley Quintet became popular after the release of the Bobby Timmons composition “This Here.” Several hits followed, all in the hard-bop gospel-oriented call-and-response style, such as Nat Adderley’s “Work Song” and “Jive Samba”; Joe Zawinul’s “Mercy, Mercy, Mercy”; and Cannonball Adderley’s “Sack O’ Woe.” As an educator and bandleader, Adderley introduced the compositions and contextualized them for audiences. In the late 1960s and early 1970s, Adderley led quintet workshops for colleges and universities.

Adderley’s musical legacy is assured due to his stellar improvisations and fluency on the alto saxophone. His style was not confined to hard-bop since he was equally adept at playing ballads, bebop, and funk. Adderley joined the Miles Davis Quintet in 1957, replacing Sonny Rollins, and remained through 1959, participating in the classic recording of the album *Kind of Blue*, one of the three most celebrated albums in jazz history. He also appeared on the albums *Porgy and Bess*, *Milestones*, *Miles and Coltrane*, and *58 Miles*. Davis

Cannonball Adderley

and Coltrane's modal style of jazz playing on *Kind of Blue* influenced Adderley. Musical characteristics such as a full-bodied tone, well-balanced phrases, sustained notes versus rapid flurries, and a hard-driving swinging delivery were the marks that distinguished Adderley's style.

Adderley recorded for a number of labels including Original Jazz Classics, Blue Note, Landmark, Riverside, and Capitol. Outstanding albums representing his work include *Somethin' Else* (1958) on Blue Note, *Cannonball and Coltrane* (1959) on Emarcy, *African Waltz* (1961; big band format), and *Nancy Wilson and Cannonball Adderley* (1961) on Capitol. The composition "Country Preacher," which appeared on the album *The Best of Cannonball Adderley* (1962), shows off Adderley's skillful soprano sax playing.

Cannonball Adderley's life and career are documented in a collection of materials held at Florida A&M University in Tallahassee. A memorial scholarship fund was established at UCLA by the Center for Afro-American Studies in 1976 to honor his memory with scholarships for UCLA students.

Adidas

In an era before athletic-performance gear with distinctive logos existed as a market commodity, Adidas footwear were the designer sneakers of their day. For several decades, Adidas shoes were worn by professional and Olympic athletes, and the company's distinctive

three-stripe logo quietly sunk into the public consciousness through years of television cameras trained on Adidas-wearing athletes. The company and its clothing—especially the trefoil logo T-shirt—became indelibly linked with 1970s fashion, and during the early years of rap music's ascendancy, Adidas became the first fashion brand name to find itself connected with hip-hop cool.

Like a Mercedes-Benz, Adidas shoes were considered both well designed and well made—and much of this was due to the product's German origins. The company began in the early 1920s as slipper makers Gebruder Dassler Schuhfabrik, in Herzogenaurach, Germany, near Nuremberg. One day in 1925 Adolf (Adi) Dassler designed a pair of sports shoes; thereafter he began to study the science behind kinetics and footwear. By 1931 he and his brother Rudolph were selling special shoes for tennis players, and they soon began to design specific shoes for the needs of specific sports. They devised many technical innovations that made their footwear popular with athletes, not the least of which was the first arch support. The brothers were also quick to realize that athletes themselves were the best advertisement for their shoes. Initiating a long and controversial history of sports marketing, in 1928 the company gave away their first pairs of free shoes to the athletes of the Olympic Games in Amsterdam. Eight years later, American sprinter Jesse Owens was wearing Adidas when he won a gold medal in track at the Berlin Olympic Games.

In 1948 the Dassler brothers had a falling-out and never spoke again. The origins of their split, which dissolved their original firm, remain somewhat of a mystery, but probably revolve around their shifting alliances before, during, and after Hitler, the Nazi Party, and World War II. Rudi was drafted and was later captured by Allied forces, while Adi stayed home to run the factory that made boots for Wehrmacht soldiers during the war. After the war, Rudi Dassler moved to the other side of Herzogenaurach and founded his own line of athletic footwear, Puma. Adolf Dassler took his nickname, Adi, and combined it with the first syllable of his last name to get "Adidas," with the accent on the last syllable. Cutthroat competition between the two brands for hegemony at major sporting events, as well as formal legal battles, would characterize the next three decades of both Adidas and Puma corporate history.

At Olympic and soccer events, however, Adidas had the advantage, especially when television cameras began broadcasting such games to a much wider audience: Adi Dassler had devised a distinctive three-stripe logo back in 1941 (and registered it as a trademark for Adidas after the split) that was easily recognizable from afar. The company did not begin selling its shoes in the United States until 1968, but within the span of a few short years Adidas dominated the American market to such an extent that two American competitors, Wilson and MacGregor, quit making sports shoes altogether. In 1971 both Muhammad Ali and Joe Frazier wore Adidas in their much-publicized showdown. At the 1972 Olympic Games in Munich, every official wore Adidas, and so did 1,164 of the 1,490 international athletes. Adidas also made hip togs for tennis, a sport then enjoying a wave of popularity, and by 1976 the Adidas trefoil-logo T-shirt had become a status-symbol item and one of the first brand-name "must-haves" for teenagers.

The Adidas craze dovetailed perfectly with the growing number of Americans interested in physical fitness as a leisure activity. By 1979, 25 million Americans were running or jogging, and the end of the 1970s marked the high point of Adidas's domination of the market. When Adi Dassler died in 1978, his son Horst took over the company, but both men failed to recognize the threat posed by a small Oregon company named Nike. Founded in 1972, Nike offered more

distinctive colors and styles than Adidas, while also patenting the technical innovations underneath and inside them. Adidas soon sunk far behind in sales. The company was overtaken by Nike in the 1980s and even damaged by the ubiquitousness of the Reebok brand, which made shoes that were considered anything but high-performance. When Horst Dassler died in 1987, Adidas spun further into financial misfortune, and would be bought and resold a number of times over the next few years.

Adidas's only high point of the decade came in 1986, when the New York rap group Run D.M.C.—the first of the genre to reach platinum sales—had a hit with “My Adidas,” a break-beat homage to the footwear. The rappers wore theirs without laces, a style imitated by legions of fans. Adidas signed them to an endorsement deal. But by the 1990s, Adidas was holding on to just a two to three percent share of the U.S. market and seemed doomed as a viable company. A revival of 1970s fashions, however—instigated in part by dance-club-culture hipsters in England—suddenly vaulted the shoes back to designer status. Among American skateboarders, Adidas sneakers became *de rigueur*, since the company's older flat-bottomed styles from the 1970s turned out to be excellent for the particular demands of the sport.

In the United States, part of the brand's resurgence was the common marketing credo that teens will usually shun whatever their parents wear, and their parents wore Nike and Reebok. Twenty-year-old Adidas designs suddenly became vintage collectibles, and the company even began re-manufacturing some of the more popular styles of yore, especially the suede numbers. Arbiters of style from Elle MacPherson to Liam Gallagher sported Adidas gear, but a company executive told *Tennis* magazine that when Madonna was photographed in a vintage pair of suede Gazelles, “almost overnight they were *the* hot fashion item.” In 1997 Adidas sales had climbed over fifty percent from the previous year, signaling the comeback of one of the twentieth century's most distinctive footwear brands.

See Sinbad

Adler, Renata (1938—)

Renata Adler achieved a controversial success and notoriety in the New York literary scene. Her film reviews for the *New York Times* (collected in *A Year in the Dark*, 1969) appeared refreshingly honest, insightful, and iconoclastic to some, opinionated and uninformed to others. But her essay collection *Towards a Radical Middle* (1970), a highly critical as well as high-profile review of the *New Yorker's* venerable film critic Pauline Kael, and a 1986 exposé of the media's “reckless disregard” for “truth and accuracy” confirmed her role as gadfly. Adler's two novels, *Speedboat* (1976) and *Pitch Dark* (1983), defined her as a decidedly New York author with her distinctive, detached, anonymous voice; shallow characters; minimalist plot; and sparse, cinematic style. Her style garnered criticism from some but resonated with others, especially women of Adler's (and Joan Didion's) pre-feminist generation and class, similarly caught between romantic yearning and postmodern irony.

The Adventures of Ozzie and Harriet

As television's longest running situation comedy, airing from 1952 to 1966 on the ABC network, *The Adventures of Ozzie and Harriet* provides a window into that era's perception of the idealized American family. The program portrayed the real-life Nelson family as they faced the minor trials and tribulations of suburban life: husband Ozzie (1906-1975), wife Harriet (1909-1994), and their two sons, David (1936-) and Ricky (1940-1985). Its gentle humor was enhanced by viewers' ability to see the boys grow up before their eyes from adolescents to young adulthood. Although Ozzie had no apparent source of income, the family thrived in a middle-class white suburban setting where kids were basically good, fathers provided sage advice, and mothers were always ready to bake a batch of homemade brownies. Critic Cleveland Amory, in a 1964 review for *TV Guide*, considered the wholesome program a mirage of the “American Way of Life.” Behind the scenes, however, the Nelsons worked hard to evoke their image of perfection.

The televised Ozzie, who is remembered, with Jim Anderson and Ward Cleaver, as the definitive 1950s TV dad—a bit bumbling but always available to solve domestic mishaps—stands in stark contrast to Ozzie Nelson, his driven, workaholic, off-screen counterpart. The New Jersey native was a youthful overachiever who had been the nation's youngest Eagle Scout, an honor student, and star quarterback at Rutgers. Upon graduating from law school he became a nationally known bandleader while still in his twenties. In 1935, he married the young starlet and singer Harriet Hilliard. The couple debuted on radio in 1944 with *The Adventures of Ozzie and Harriet*, a fictionalized version of their own lives as young entertainers raising two small boys. The children were originally portrayed by child

The cast of *The Adventures of Ozzie and Harriet* celebrate the show's 12th anniversary: (from left) Ricky, Harriet, Ozzie, and David.

actors, until the real-life Nelson kids took over the roles of "David" and "Ricky" in 1949. Eager to translate their radio success to television, Ozzie negotiated a deal with ABC and wrote a film script titled *Here Come the Nelsons*. The 1952 movie, in which the radio show's Hollywood setting was transformed into an anonymous suburbia, served as the pilot for the durable television program.

Ozzie's agreement with the ABC network gave him complete creative control over the series. Throughout its fourteen-year run on the television airwaves, he served as the program's star, producer, director, story editor, and head writer. He determined his show would be less frenetic than other sitcoms, like *I Love Lucy* or *The Honeymooners*, where zany characters were continually involved in outlandish antics. Rather, his series would feature gentle misunderstandings over mundane mishaps, such as forgotten anniversaries and misdelivered furniture. The Nelsons never became hysterical, but straightened out their dilemmas by each episode's end with mild good humor. The focus was strictly on the Nelsons themselves and only rarely were secondary characters like neighbors "Thorny" Thornberry and Wally Dipple allowed to participate in the main action. This

situation changed radically only late in the series after the Nelson boys married and their real-life wives joined the show to play themselves.

As the years went on, the show's focus shifted away from the parents and toward David and Ricky's teen experiences. David was portrayed as the reliable older brother, while Ricky was seen as more rambunctious and inclined to challenge his parents' authority. The younger brother's presence on the program was greatly expanded in 1957 with the broadcast of the episode "Ricky the Drummer." In real life, Ricky was interested in music and asked his father if he could sing on the show to impress a girl. Ozzie, who often based his scripts on the family's true experiences, agreed and allowed the boy to sing the Fats Domino hit "I'm Walkin'" in a party scene. Within days Ricky Nelson became a teen idol. His first record sold 700,000 copies as fan clubs formed across the nation. In 1958 he was the top-selling rock and roll artist in the country. To capitalize on the teen's popularity, Ozzie increasingly incorporated opportunities for Ricky to sing on the show. Filmed segments of Ricky performing such hits as "Travelin' Man" and "A Teenager's Romance" were placed in

the final segment of many episodes. Often the songs were unconnected to that week's plot. The self-contained performance clips reveal Ozzie as a pioneer in the development of rock videos.

The TV world inhabited by the fictionalized Nelsons was a much different place than that occupied by the real-life family. Ozzie was an often distant and authoritarian father who demanded his boys live up to their squeaky-clean images. Family friend Jimmie Haskell commented that Ricky "had been raised to know that there were certain rules that applied to his family. They were on television. They represented the wonderful, sweet, kind, good family that lived next door, and that Ricky could not do anything that would upset that image." Critics have charged that Ozzie exploited his family's most personal moments for commercial profit. The minor events of their daily lives were broadcast nationwide as the family unit became the foundation of a corporate empire. Tensions grew as Ricky began to assert himself and create an identity beyond his father's control. Their arguments over the teen's hair length, bad attitude, and undesirable friends foreshadowed disagreements that would take place in homes around America in the 1960s. It is ironic that Ricky's triumph as a rock singer revitalized his parents' show and allowed Ozzie to assert his control for several more years.

The Adventures of Ozzie and Harriet is not remembered as a particularly funny or well-written comedy. In many respects, it is a cross between a sitcom and soap opera. The incidents of individual episodes are enjoyable, but even more so is the recognition of the real-life developments of the Nelsons that were placed into an entertainment format. In the words of authors Harry Castleman and Walter Podrazik, "[The Nelsons] are an aggravatingly nice family, but they interact the way only a real family can . . . This sense of down to earth normality is what kept audiences coming back week after week." Perhaps the greatest legacy of Ozzie, Harriet, David, and Ricky is their continuing effect upon the American people. They and similar shows, such as *Father Knows Best*, *Leave It to Beaver*, and *The Donna Reed Show* display an idealized version of 1950s American life free from economic problems, racial tensions, and violence more severe than a dented fender. Ozzie and his imitators perpetuated an idyllic world where all problems were easily resolved and all people were tolerant, attractive, humorous, inoffensive, and white. David Halberstam, author of *The Fifties*, cites such shows as creating a nostalgia for a past that never really existed. *The New Yorker* captured this sentiment when it published a cartoon of a couple watching TV, in which the wife says to her husband, "I'll make a deal with you. I'll try to be more like Harriet if you'll try to be more like Ozzie." The senior Nelsons returned to television in the short-lived 1973 sitcom *Ozzie's Girls*. The plot revolved around the couple taking in two female boarders—one black and one white. The attempt to add "relevance" to the Ozzie and Harriet formula proved a failure. Audiences preferred to remember them as icons of a simpler past and not facing an uncertain present.

Advertising

Advertising, the promotion of goods or services through the use of slogans, images, and other attention-getting devices, has existed for thousands of years, but by the late 1990s in the United States it had become ubiquitous, permeating almost every aspect of American life. Indeed, the most omnipresent trend was the placement of advertisements and logos on virtually any medium that could accommodate them. Advertising and brand logos appeared regularly on T-shirts, baseball caps, key chains, clothing, plastic cups and mugs, garbage cans, bicycle racks, parking meters, the bottom of golf cups, in public restrooms, on mousepads, in public school hallways, and, for schools fortunate enough to be located near major airports, on school rooftops. The quest for new advertising venues never stopped—advertising has been placed on cows grazing near a highway (in Canada), and on the edible skins of hot dogs.

Television screens became commonplace in many places where the audience was captive—doctor's offices, which were fed specialized health-related programs interspersed with commercials for health-related products, airports (fed by CNN's Airport Network), and supermarket checkout counters. Indeed, by 1998 place-based advertising, defined by advertising scholar Matthew P. McAllister in *The Commercialization of American Culture* as "the systematic creation of advertising-supported media in different social locations" had reached almost any space where people are "captive" and have little to distract them from the corporate plugs. Advertising had invaded even what was once regarded as private space—the home office, via the personal computer, where advertisements on Microsoft Windows "desktop" were sold for millions of dollars.

By 1998, almost all sporting events, from the high school to professional levels, had become advertising vehicles, and the link between sports and corporations had become explicit. Stadiums (San Francisco's 3Com stadium, formerly Candlestick Park), events (The Nokia Sugar Bowl, the Jeep Aloha Bowl), teams (the Reebok Aggie Running Club), awards (the Dr. Pepper Georgia High School Football Team of the Week, the Rolands Relief Man award, for Major League Baseball's best relief pitcher), and even individual players had become, first and foremost, brand advertising carriers. Sports shoe manufacturers spent millions of dollars and competed intensely to have both teams and star players, at all levels of competitive sports, wear their shoes—as a basketball player wearing Nike shoes provided essentially a two-hour advertisement for the corporation each time the player appeared on television or in an arena.

It was not until the late 1800s that advertising became a major element of American life. Advertising had been a mainstay of U.S. newspapers beginning in 1704, when the first newspaper advertisement appeared. In the 1830s, new printing technologies led to the emergence of the "penny press," inexpensive city newspapers that were largely supported by advertising, rather than subscriptions. Until the late 1800s, however, most advertisements were little more than announcements of what merchant was offering what goods at what price. But in the late 1800s, the confluence of mass production, the trans-continental railway, and the telegraph necessitated what had before been unthinkable—a national market for products that could be promoted through national publications. Advertising promoted and branded products that had, until around 1910, been seen as generic commodities, such as textiles, produce, and coal.

Brooke Shields in an ad for Calvin Klein jeans.

At the same time, printing technology also advanced to a stage where it became possible to create visually appealing ads. Still, before the 1920s, advertising was, by current standards, fairly crude. Patent medicines were advertised heavily during the late 1800s, and the dubious claims made by advertisers on behalf of these products tainted the advertising profession. But, by the turn of the century, the new “science” of psychology was melded with advertising techniques, and within ten years advertising agencies—which had emerged in the late 1800s—and the men who worked for them began to gain some respectability as professionals who practiced the “science” of advertising and who were committed to the truth. After the successful application of some of these psychological principles during the U.S. Government’s “Creel Committee” World War I propaganda campaigns, advertising became “modern,” and advertising leaders strove to associate themselves with the best in American business and culture. Advertising men, noted advertising historian Roland Marchand in *Advertising the American Dream*, viewed themselves as “modernity’s ‘town criers.’ They brought good news about progress.” The creators of advertisements believed that they played a critical role in tying together producers and consumers in a vast, impersonal marketplace, in part by propagating the idea that modern products and ideas were, by their very newness, good. Advertising men, wrote Marchand, believed that “Inventions and their technological applications made a

dynamic impact only when the great mass of people learned of their benefits, integrated them into their lives, and came to lust for more new products.”

From the 1920s to the 1950s, advertisers and advertising dominated the major national media, both old (newspapers and magazines) and new (radio and television). The first radio advertisement was sent through the airwaves in 1922, and by the 1930s radio and its national networks—the Columbia Broadcasting System (CBS) and the National Broadcasting Corporation (NBC) were a firmly entrenched part of American life.

In the 1950s, television quickly became the medium of choice for national advertisers, and about 90 percent of all U.S. households had sets by 1960. After that, audiences became increasingly fragmented for all media and advertising soon became targeted to particular markets. Magazines and radio led the way in niche marketing. In the 1950s, these media were immediately threatened by television’s mass appeal. Radio, whose programming moved to television, began offering talk shows and music targeted at specific audiences in the 1950s, and with the targeted programs came targeted advertising, including acne medicine ads for teens on rock ‘n’ roll stations and hemorrhoid ointment commercials for older people listening to classical music. By the late 1960s and early 1970s, magazines became increasingly specialized; such general-interest,

mass-circulation magazines as *Life*, *Look*, and the *Saturday Evening Post* first lost advertising support and circulation, and in the case of the first two, went out of business. Meanwhile, the number of special-interest magazines increased from 759 in 1960 to 2,318 in the early 1990s. These magazines appealed to smaller audiences that shared common interests—hobbies, sports, fashion, and music. By the 1970s sleeping bags could be advertised in *Outside* magazine, rock albums in *Creem*, and gardening implements in *Herb Quarterly*.

Up until the 1990s, advertisers still had a relatively well-defined task: to determine where money would best be spent based on four primary criteria: reach, or how many people could possibly receive the message; frequency, or how often the message could be received; selectivity, or whether the advertisement would reach the desired potential customers; and efficiency, or the cost (usually expressed in cost per thousand people). However, during the 1980s, changes in society (government deregulation during the Reagan era) and technological changes (the broad acceptance of VCRs, cable television, and remote controls) forced advertisers to seek out new venues and to embrace new techniques. As the media became increasingly more complex and fragmented, corporations footing the bill for advertising also demanded more specific data than ever before, to the point where, in the late 1990s, there were serious—and increasingly effective—attempts to measure whether a specific ad led to a specific purchase or action by a consumer.

Advertisers in the late 1990s sought to regain some of the control they lost in targeting ads on television. Before the 1980s, most major markets had half a dozen or so outlets—CBS, NBC, ABC, PBS, and one or two independent stations. In addition, remote controls and VCRs were uncommon. Viewers' choices were limited, changing the channel was difficult, and it was difficult to “zap” commercials either by channel “surfing” (changing channels quickly with a remote control) or by recording a program and fast-forwarding over ads. “Advertisers are increasingly nervous about this recent, if superficial, level of power audiences have over their electronic media viewing,” wrote McAllister. “New viewing technologies have been introduced into the marketplace and have become ubiquitous in most households. These technologies are, in some ways, anti-advertising devices.”

Cable television had also, by the late 1980s, become troublesome for advertisers, because some stations, like MTV and CNN Headline News, had broken up programs into increasingly short segments that offered more opportunities to skip advertising. Sports programming, an increasing mainstay of cable, also puzzled advertisers, because commercials were not regularly scheduled—viewers could switch between games and never had to view a commercial. Attempts to subvert viewer control by integrating plugs directly into the broadcast had some success—and one advertiser might sponsor an ever-present running score in one corner of the screen, while another would sponsor instant replays and a third remote reports from other games. These techniques were necessary, as at least one study conducted in the 1980s indicated that when commercials came on, viewership dropped by 8 percent on network TV and 14 percent on cable stations.

Cable television, which had existed since the 1950s as a means of delivering signals to remote communities, blossomed in the 1970s. Home Box Office (HBO), became, in 1972, the first national cable network. By 1980, 28 percent of U.S. households had cable television, and by 1993 this figure reached 65 percent. Cable, with the ability to provide up to 100 channels in most areas by the late 1990s,

provided the means for niche marketing on television, and by the mid-1980s, advertisers took for granted that they could target television commercials at women via the Lifetime Network, teenagers through MTV, middle-class men through ESPN, blacks through BET, the highly educated through the Arts and Entertainment Network, and so on. Many advertisers found the opportunity to target specific audiences to be more cost-efficient than broadcasting to large, less well-defined audiences, because in the latter group, many viewers would simply have no interest in the product, service, or brand being pitched.

Advertising, in short, had a direct impact on television content. By the early 1990s, many individual programs had well-defined audiences, and could become “hits” even if they reached only a small portion of the potential general audience. For example, the WB network's *Dawson's Creek*, which debuted in 1998, only attracted nine percent of all viewers watching at the time it was broadcast, but it was considered a hit because it delivered a large teen audience to advertisers. Similarly, Fox's *Ally McBeal* achieved hit status by attracting only a 15 percent share of all viewers, because it appealed to a vast number of young women. These numbers would have been considered unimpressively small until the 1990s, but by then the demographics of the audience, rather than the size, had become all important to network marketers. In 1998, advertisers were paying between \$75,000 and \$450,000 for a 30-second commercial (depending on the show and the day and time it was broadcast), and demanded to know exactly who was watching. In the 1980s and 1990s, three new networks—Fox, UPN, and WB—had emerged to compete with the well-established CBS, NBC, and ABC, and succeeded by targeting younger viewers who were attractive to certain advertisers.

Despite strong responses to the many challenges advertisers faced, some groups remained elusive into the 1990s. People with active lifestyles were often those most desired by advertisers and could be the most difficult to reach. Non-advertising supported entertainment—pay cable (HBO, Showtime), pay-per-view, videos, CDs, laser disks, CD-ROMS, video games, the Internet, etc.—was readily available to consumers with the most disposable income. As opportunities to escape advertising increased, it paradoxically became more difficult to do so, as corporate and product logos found their way to the most remote places on earth. For example, outdoor gear manufacturer North Face provided tents for Mount Everest expeditions; these tents were featured in the popular IMAX film “Everest”; corporate logos like the Nike “swoosh” were embedded on every article of clothing sold by the company, making even the most reluctant individuals walking billboards who both carried and were exposed to advertising even in the wilderness.

As advertising proliferated in the 1980s and 1990s, so did its guises. Movie and television producers began to charge for including products (product placement) in films and programs. In exchange for money and tie-ins that plugged both the film and product, producers displayed brands as props in films, excluding competing brands. One of the most successful product placements was the use of Reese's Pieces in the movie *E.T.* (1982), which resulted in a sales increase of 85 percent. In *Rocky III*, the moviegoer saw plugs for Coca-Cola, Sanyo, Nike, Wheaties, TWA, Marantz, and Wurlitzer. Critics viewed such advertising as subliminal and objected to its influence on the creative process. The Center for the Study of Commercialism described product placement as “one of the most deceitful forms of advertising.” Product placement, however, was a way of rising above clutter, a way to ensure that a message would not be “zapped.”

Identifying targets for ads continued, through the late 1990s, to become increasingly scientific, with VALS research (Values and

Lifestyles) dividing audiences into categories such as “actualizers,” “achievers,” strivers,” and “strugglers.” Even one of the most traditional advertising methods, the highway billboard, had, in the 1990s, adapted sophisticated audience-identification techniques. One research firm photographed license plate numbers as cars drove by billboards, then matched the number with the car owner’s address, which gave the advertisers an indication of income and class by neighborhood. Billboard advertisers also successfully identified geographic areas with high numbers of people matching the characteristics of a company’s or product’s best customers. For example, Altoids, a strong mint, had, in the late 1990s, a strong customer base among young, urban, and socially active adults, who were best reached by billboards. Altoids’ advertising agency, Leo Burnett, identified 54 demographic and lifestyle characteristics of Altoids customers and suggested placing ads in neighborhoods where people with those characteristics lived, worked, and played. This was a wildly successful strategy, resulting in sales increases of 50 percent in the target markets.

By 1998, many businesses were having increasing success marketing to individuals rather than consumer segments. Combinations of computers, telephones, and cable television systems had created literally thousands of market niches while other new technologies facilitated and increased the number of ways to reach these specialized groups.

The most promising medium for individually tailored advertising was the Internet. Online advertising developed quickly; within five years of the invention of the graphical web browser in 1994, the Direct Marketing Association merged with the Association for Interactive Media, combining the largest trade association for direct marketers with the largest trade association for internet marketers. Advertisers tracked world wide web “page views” and measured how often Web surfers “clicked through” the common banner advertisements that usually led directly to the marketing or sales site of the advertiser. Many companies embraced the even more common medium of e-mail to successfully market to customers. For example, Iomega, a disk drive manufacturer, sent e-mail to registered customers about new products and received favorable responses. Online retailers such as bookseller Amazon.com touted e-mail announcements of products that customers had expressed interest in as a customer service benefit. Although internet advertising was still largely experimental in the late 1990s, many manufacturers, wholesalers, and retailers recognized that web advertising was a necessary part of an overall marketing plan. Companies that provided audience statistics to the media and advertising industries struggled to develop trustworthy, objective internet audience measurement techniques.

—Jeff Merron

Advice Columns

An often maligned and much parodied journalistic genre—though a telling and accurate barometer of moral assumptions and shifting sexual attitudes—the advice column has been a staple of various venues of American journalism for over a century.

Ironically, the grandmother of all advice columnists, Dorothy Dix, never existed in the real world at all. In fact, none of the major columnists—from Dix and Beatrice Fairfax to today’s Abigail “Dear Abby” Van Buren—were real people, as such. In keeping with a turn-of-the-century custom that persisted into the 1950s among advice columnists, pseudonyms were assumed by most women writing what was initially described as “Advice to the Lovelorn” or “Lonelyhearts” columns. In the pioneering days of women’s rights, journalism was one of the few professions sympathetic to women. In the so-called

Ann Landers

“hen coop” sections of papers, several progressive women used the conventional woman’s section—including its soon standard “Lonelyhearts” column—as both a stepping stone to other journalistic pursuits (and sometimes wealth and fame) and as a pioneering and functional forum for early feminist doctrine.

While the name of Dorothy Dix remains synonymous with the advice genre, the real woman behind Dix was much more than an advisor to the lovelorn. Elizabeth Meriwether Gilmer (1861-1951) was the daughter of a well-connected Southern family who had come to Tennessee from Virginia. In her early childhood she experienced both the Civil War and the death of her mother. Largely self-educated, she married a struggling inventor in 1882. The problematic union ended with George Gilmer’s death in a mental institution in 1929.

Gilmer suffered a breakdown in the early 1890s and was sent to the Mississippi Gulf Coast to recuperate, where she met Eliza Nicholson, publisher of the *New Orleans Picayune*. Nicholson offered Gilmer a job on her paper, and after a brief apprenticeship, Gilmer’s weekly column appeared in 1895 under the pen name of Dorothy Dix. Gilmer’s first columns were amusing, literate social satire, many geared to early women’s issues. They were an instant success, and readers began writing to Dorothy Dix for advice. In 1901 William Randolph Hearst assigned Gilmer to cover Carrie Nation’s hatchet-wielding temperance campaign in Kansas, which eventually led to a position on Hearst’s *New York Journal*. There Gilmer became a well-known crime reporter while continuing the Dix column, which was now running five times a week with an increasing volume of mail. In 1917 a national syndicate picked up Dorothy Dix, and Gilmer returned to New Orleans to devote all her time to the column. By the 1930s she was receiving 400 to 500 letters a day, and by 1939 she had published seven books. Even after achieving wealth and fame, she answered each of her letters personally, and when she retired in 1949 her column was the longest running one ever written by a single author. Elizabeth Gilmer, still better known to the world as columnist Dorothy Dix, died in 1951 at the age of 90.

In real life, Beatrice Fairfax, another name inextricably linked to the lovelorn genre, was Marie Manning (1873?-1945), who originated her column in 1898. Born of English parents in Washington, D.C., Manning received a proper education, graduating from a Washington finishing school in 1890. Shunning a life in Washington society, Manning (who shared Elizabeth Gilmer’s feminist leanings and desire for financial independence) was soon pursuing a journalistic career, first at Joseph Pulitzer’s *New York World*, and later at Hearst’s *Evening Journal*. It was in the *Journal*’s “Hen Coop” that Beatrice Fairfax, a name fused from Dante and the Manning’s family home in Virginia, was born.

Both Dix and Fairfax initially responded to traditional romantic/social problems of the times, but soon dealt with more essential quandaries as well. In the late Victorian era, when females were expected to be submissive dependents and when social codes dictated that certain aspects of marriage and relationships were taboo subjects for public airing in print, Dix and Fairfax provided practical, often progressive advice—counseling women to seek education, and to independently prepare to fend for themselves in a man’s world. Gilmer often spoke of her personal difficulties as the basis for her empathy for the problems of others. The financial vulnerability of women, which Gilmer herself experienced during the early years of her marriage, was also a persistent theme, as was her oft-stated observation that “being a woman has always been the most arduous profession any human being could follow.” Gilmer was also an active suffragist, publicly campaigning in the cause of votes for women.

Both the Dix and Fairfax columns quickly became national institutions, their mutual success also due to their appearance in an era when the depersonalization of urban life was weakening the handling of personal and emotional problems within the domestic environment. Help was now being sought outside the family via the printed word, and the Dix/Fairfax columns were an impartial source of advice for many women of the period. Both Gilmer and Manning were noted for a more practical approach than many of the subsequent so-called “sob sister” writers who began to proliferate with the popularity of Dix and Fairfax.

Manning left journalism for family life in 1905, but again took over the column after the stock market crash of 1929, noting that while her previous column had only rarely dealt with marriage, in the 1930s it had become women’s primary concern. By then the name of Beatrice Fairfax had become so familiar that it had even been mentioned in a verse of one of George and Ira Gershwin’s most popular songs, “But Not For Me”: “Beatrice Fairfax, don’t you dare, try to tell me he will care.” Along with writing fiction, an autobiography—*Ladies Now and Then*—and reporting on the Washington scene, Manning continued to write the Fairfax column until her death in 1945. But Manning’s demise was not to be the end of the column. In 1945 it was taken over by Marion Clyde McCarroll (1891-1977), a reporter/editor active in New York journalism during the 1920s and 1930s. McCarroll established a new, more functional column, referring persons needing more intensive counseling to professional help, while her personal responses took on an even more realistic, down-to-earth tone. McCarroll’s Fairfax column, which she wrote until her retirement in 1966, is said to have established the precedent for most subsequent advice columns.

Gilmer had also noted a shift in public attitude when she commented that, in the 1890s, readers questioned the propriety of receiving gentlemen callers without a chaperone, while by the 1940s girls were wondering if it was acceptable to take a vacation with their boyfriends. Picking up the rapidly changing thread of public morality in the 1950s were a pair of advice columnists who together cornered a national market that they still dominated into the 1990s.

The identical Friedman twins, Esther Pauline “Eppie” (who became columnist Ann Landers), and Pauline Esther “Popo” (who became “Dear Abby” Abigail Van Buren) were born in Iowa in 1918. They were inseparable; when Pauline dropped out of college, Esther did the same, and after a double wedding in 1939 they shared a double honeymoon. By 1955 they were living separately in Chicago and Los Angeles. Esther, who was once elected a Democratic Party chairperson in Wisconsin, was active in politics, while Pauline busied herself with Los Angeles charity work.

Though conflicting stories have been published as to exactly how it happened, with the sudden death of Ruth Crowley, who had originated the *Chicago Sun-Times* advice column, Esther (now Lederer) became “Ann Landers” in 1955. Her common sense responses and droll humor soon put Ann Landers into syndication across the country. In her first column on October 16, 1955, a one-liner response to a racetrack lothario—“Time wounds all heels, and you’ll get yours”—became an instant classic. Lander’s skill with snappy one-liners contributed to creating an instant and intimate rapport with her readers, as did the fact she was not above reproving letter writers who she felt had it coming. David I. Grossvogal writes: “From the earliest, Ann came on as the tough cookie who called a spade a spade, and a stupid reader Stupid.” But he also noted: “One of Ann Landers’s main gifts, and an underlying cause of her huge and nearly instant success, was this ability to foster an intimate dialogue between herself

and her readers. The caring Jewish mother appeared very soon and regularly. From the start she was able to turn the huge apparatus of a syndicated column into an expression of concern for the dilemma or pain of a single individual.”

Ann/Esther launched sister Pauline’s journalistic career when the popularity of “Ann Landers” instigated an overwhelming avalanche of letters that necessitated assistance. Ironically, Pauline’s independent success as Abigail Van Buren, a name chosen for her admiration of the American president, precipitated an eight-year feud between the twins who, nonetheless, separately but similarly developed into two of the most well-known women in America. (They eventually made up at their twenty-fifth high school reunion).

In tandem, the collected responses of Ann Landers and Abigail Van Buren reflect the changing values and assumptions of the second half of twentieth-century America—one of most rapid periods of overall social/cultural change in human history. While the essential issues remained naggingly the same—romance, sex, marriage, divorce—new and troubling variations appeared and persisted. In 1955 Landers and Van Buren could still refer to a generally accepted social structure, but one which was even then shifting, as family structure weakened, children became more assertive, and divorce more common. Even Ann Landers, basing her early judgments on her overriding belief in the traditional family as the center of society, had a difficult time dealing with issues such as the women’s liberation and feminism, and was not above airing her apprehensions in print. Landers’s involvement with the changing American values, as well as a profusely documented overview of both her letters and responses, is detailed in *Dear Ann Landers*, David Grossvogel’s 1987 biography.

Aside from the increasing complexity of the issues and the new public mindset with which she had to deal, Landers was not above facing up to her more misguided judgments on any subject. She herself has said: “When I make a mistake, I admit it. I don’t believe admitting a mistake damages a person’s credibility—in fact I think it enhances it.” And well into the 1990s, when readers overwhelmingly call either Ann and Abby on faulty judgments, neither is afraid to offer retractions in print, and controversial issues often lead to a kind of open forum. Evolving post-1950s columns introduced such previously taboo subjects as explicit sexual matters (including disease), alcoholism, and drug use. In the 1990s recurring subjects have included homosexuality, including the issues of same-sex marriage, and the less controversial but delicate issue of family etiquette in dealing with same-sex couples. A new and particularly hot issue circa 1998 was sexual obsession and contacts via the Internet.

The popularity of advice columns inspired an unusual spin-off, the celebrity advice column. In the 1950s Eleanor Roosevelt wrote “If You Ask Me” for the popular woman’s magazine, *McCall’s*. While eschewing the more mundane lovelorn complaints, Roosevelt still responded to many deeper personal issues, such as religion and death, as well as to a broad spectrum of requests for personal opinions on subjects ranging from Unitarianism and Red China, to comic strips and rock and roll. (Mrs. Roosevelt responded that she had never read a comic strip, and that rock and roll was a fad that “will probably pass.”) Nor was she above responding in a kindly but objective manner to such humble domestic concerns of young people such as hand-me-down clothes. In a similar serious vein, Norman Vincent Peale and Bishop Fulton Sheen also answered personal questions on faith and morality in some of the major magazines of the era.

On a more colorful level, movie magazines offered columns in which readers could solicit advice from famous stars. While no doubt ghostwritten, these columns are nonetheless also accurate barometers

of the popular moral climate and assumptions of the period, sometimes spiced up with a little Hollywood hoopla. In the early 1950s, Claudette Colbert provided the byline for a column entitled simply “What Should I Do?” in *Photoplay*. Around the same period *Movieland* was the home of “Can I Help You?,” a column by, of all people, Joan Crawford. (“Let glamorous Joan Crawford help you solve your problems. Your letter will receive her *personal* reply.”)

In the case of the *Photoplay* column, querying letters sometimes approached the complexity of a Hollywood melodrama. Colbert responded in kind with detailed and sometimes surprisingly frank comments, tinged with psychological spins popularized in 1940s Hollywood films such as *Spellbound*. To a detailed letter from “Maureen A.” which concluded with the terse but classic query, “Do you think Bob is sincere?,” Colbert responded: “Please don’t be hurt by my frankness, but I believe that stark honesty at this time may save you humiliation and heartbreak later. Your letter gives me the distinct impressions that you have been the aggressor in this romance, and that Bob is a considerate person, who perhaps really likes you and thinks he might come to love you. There are some men, usually the sons of dominant mothers, who go along the line of least resistance for long periods of time, but often these men rebel suddenly, with great fury. I also have the uncomfortable feeling that you were not so much thinking of Bob, as the fact you are twenty-seven and think you should be married.” A typical (and less in-depth) Crawford column dealt with topics such as age differences in romance (“I am a young woman of twenty-six. I’m in love with a young man of twenty-one.”), blind dates, and marital flirting. Surprisingly, men were frequent writers to both columns.

At the approach of the millennium, the advice column remains a popular staple of both mass and alternative journalism, effortlessly adapting to the changing needs of both the times and the people. The cutting-edge alternative papers of the West Coast provide orientation-specific and often “anything goes” alternatives to Abby and Ann. *IN Los Angeles* offers “advice from everyone’s favorite fag hag” in the regular column, “Dear Hagatha.” Readers are solicited to “Send in your burning questions RIGHT NOW on any topic,” and Hagatha’s scathing and often X-rated responses are both a satire of, and an over-the-top comment on the venerable advice genre. *Los Angeles’s Fab!* also offers “Yo, Yolanda,” by Yolanda Martinez, more earnest, but still biting advice to gays and lesbians. More serious aspects of gay mental and physical health are also addressed in many papers, among them *Edge’s* “Out for Life” column by psychotherapist Roger Winter, which frequently deals with issues such as sexual addiction, monogamy, depression, and AIDS.

A key and up-coming alternative advice column now featured in over sixty newspapers in the United States and Canada is Amy Alkon’s “Ask the Advice Goddess.” While still dealing with the traditional romantic/sexual quandaries that are seemingly endemic to human society—although now as frequently (and desperately) voiced by men as by women—the Advice Goddess responds to both men and women with an aggressive, no nonsense, and distinctly feminist slant, albeit one remarkably free of the New Age vagaries that the title of her column might otherwise suggest. Alkon frequently (and ironically) reminds women of their sexual power in today’s permissive, but still essentially patriarchal society: “Worse yet for guys, when it comes to sex, women have all the power. (This remains a secret only to women.)” Alkon started her advice-giving career on the streets of New York, as one of three women known as “The Advice Ladies” who dispensed free advice from a Soho street corner. The Advice Ladies co-authored a book, *Free Advice*, and Alkon also writes a

column for the *New York Daily News*, and is developing a television talk show.

“Miss Lonelyhearts went home in a taxi. He lived by himself in a room as full of shadows as an old steel engraving.” Nathanael West’s 1933 novel, *Miss Lonelyhearts*, told a depressing story of that rare bird, the male advice columnist. They still exist, and are only slightly less rare today. In a highly publicized search, *Wall Street Journal* writer, Jeffery Zaslow, was chosen out of twelve thousand candidates to replace Ann Landers when she moved from the *Chicago Sun-Times* to the rival *Tribune* in 1987. Don Savage’s “Savage Love” column offers witty male perspectives in the mode of the “Advice Goddess” to both gay and straight readers of Los Angeles’s *New Times*. Many other male advice advocates have found voices among the alternative free presses of today.

In his biography of Ann Landers, David I. Grossvogel comments on the problems facing the contemporary advice sage: “At a time when many of the taboos that once induced letter-writing fears have dropped away, the comforting and socializing rituals afforded by those taboos have disappeared as well. The freedom resulting from the loss of taboos also creates a multitude of constituencies with a babel of voices across which it is proportionately difficult to speak with assurance.” Grossvogel concludes that in the face of the increasingly depersonalization of modern society the “audibly human” voice of Ann Landers and others of her ilk “may well be the last form of help available at the end of advice.”

The increasingly complex nature of contemporary life, compounded by the apparently never-ending story of humanity’s depressingly changeless emotional, romantic, and sexual hang-ups, would seem to insure the enduring necessity of the advice column well into the next millennium. It remains the one element of the mass press still dedicated to the specific personal needs of one troubled, disgusted, hurting, frustrated, or bewildered human being, and thus to the needs of readers everywhere.

The Advocate

The Advocate has garnered the reputation as the news magazine of national record for the gay and lesbian community. The first issue of *The Advocate* was published in the summer of 1967, and released

under the September 1967 cover date. The magazine was an offspring of the Los Angeles Personal Rights in Defense and Education (PRIDE) newsletter. PRIDE members Richard Mitch, Bill Rau, and Sam Winston collaborated on the initial design of the news magazine. The inspiration for the magazine came from Richard Mitch’s 1966 arrest in a police raid at a Los Angeles gay bar. The mission of *The Advocate* was clear and straightforward: It was to be a written record for the gay community of what was happening and impacting their world. The first copy, titled *The Los Angeles Advocate*, was 12 pages long and sold for 25 cents in gay bars and shops in the gay neighborhoods of Los Angeles. The first run of 500 copies was surreptitiously produced in the basement of ABC Television’s Los Angeles office . . . late at night.

The following year Rau and Winston purchased the publishing rights for *The Advocate* from the PRIDE organization for one dollar. Gay activist and author Jim Kepner joined the staff and the goal was set to make the magazine the first nationally distributed publication of the gay liberation era. Within two years *The Advocate* had captured enough readership to move from a bimonthly to monthly publishing schedule. In April 1970, the title was shortened from *The Los Angeles Advocate* to *The Advocate*, mirroring its national focus. Five years later, David B. Goodstein purchased *The Advocate* and maintained control until his death in 1985. While Goodstein’s wealth bolstered the stature of the magazine, he often proved to be a troublesome leader. When he moved the magazine’s home base from Los Angeles to the gay mecca of San Francisco, the publication lost its political edge and adopted more of a commercial tabloid format. After noted gay author John Preston joined the staff as editor and Niles Merton assumed the role of publisher, however, *The Advocate* soon emerged as the “journal of record” for the gay community. Many other publications—gay and mainstream—began citing the news magazine as their source for information.

Near the end of Goodstein’s tenure in 1984, *The Advocate* returned to its original home of Los Angeles where it met with some debate and rancor from loyal readers and staff when it was redesigned as a glossy news magazine. During the next ten year period the magazine would go through numerous editors, including Lenny Giteck, Stuart Kellogg, Richard Rouillard, and Jeff Yarborough. Each sought to bring a fresh spin to the publication which was being directly challenged by the burgeoning gay and lesbian magazine industry. When Sam Watters became the publisher of *The Advocate* in 1992, the magazine moved to a more mainstream glossy design, and spun off the sexually charged personal advertisements and classifieds into a separate publication.

Because it covered very few stories about lesbians and people of color in the 1970s, *The Advocate* has been criticized by gay and “straight” people alike. It has met with criticism that its stories focus predominately on urban gay white males. Indeed, it was not until 1990 that the word lesbian was added to the magazine’s cover and more lesbian writers were included on the writing staff. The most grievous error *The Advocate* committed was its late response to the impending AIDS (Acquired Immune Deficiency Syndrome) crisis during the 1980s. Undoubtedly, when *The Advocate* moved from a hard edged political gay newspaper to a mainstream glossy news magazine, minus the infamous “pink pages” which made its so popular, many original readers lost interest.

In retrospect, no other news magazine has produced such a national chronicle of the growth and development of the gay community in the United States. *The Advocate* was a leader in the gay rights movement of the 1960s, and throughout its printing history has

achieved notable reputation in the field of gay journalism, oft cited by those within and without the sphere of gay influence.

Aerobics

Aerobics is a form of exercise based on cardiovascular activity that became a popular leisure-time activity for many Americans in the final quarter of the twentieth century. Dr. Kenneth H. Cooper, an Air

Force surgeon, coined the term aerobics in a book of that title published in 1968. Cooper viewed aerobic activity as the cornerstone of physical fitness, and devised a cardiovascular fitness test based on one's ability to run a mile and a half in twelve minutes, a task that was used in military training. Cooper's work was endorsed by the medical community by the early 1970s, and contributed to the popularity of running during that period. By the end of the decade, aerobics had become synonymous with a particular form of cardiovascular exercise that combined traditional calisthenics with popular dance styles in a class-based format geared toward non-athletic people, primarily women. Jackie Sorenson, a former dancer turned fitness expert, takes credit for inventing aerobic dance in 1968 for Armed Forces Television after reading Cooper's book. Judi Sheppard Missett, creator of Jazzercise, another form of aerobic dance combining jazz dance and cardiovascular activity, began teaching her own classes in 1969. By 1972, aerobic dance had its own professional association for instructors, the International Dance Exercise Association (IDEA).

By 1980, aerobics was rapidly becoming a national trend as it moved out of the dance studios and into fast-growing chains of health clubs and gyms. The inclusion of aerobics classes into the regular mixture of workout machines and weights opened up the traditionally

A group of women participate in an exercise program at the YWCA in Portland, Maine, 1996.

male preserve of the gym to female customers and employees alike. In the process, it created a newly heterosexualized atmosphere in health clubs, which would make them popular social spots for singles. Simultaneously, aerobics marketing was moving beyond real-time classes and into media outlets. Aerobic workouts had appeared on records and in instructional books since the late 1970s, but it was the introduction of videotaped aerobic sessions in the early 1980s that brought the fitness craze to a broader market. Actress Jane Fonda pioneered the fitness video market with the release of her first exercise video in 1982, which appeared on the heels of her best-selling *Jane Fonda's Workout Book* (1981). Fitness instructors and celebrities would follow Fonda's lead into tape sales, which continued to be a strong component of the fitness market in the 1990s. Exercise shows on television experienced a resurgence during the aerobics craze of the 1980s, spawning new-style Jack La Lannes in the guise of Richard Simmons and Charlene Prickett (*It Figures*) among others.

Even more impressive than the ability of aerobics to move across media outlets was its seemingly unbounded capacity for synergistic marketing. Tie-ins such as clothing, shoes, music, books, magazines, and food products took off during the 1980s. Jane Fonda again demonstrated her leadership in the field, moving from books and videos into records and audiotapes, clothing, and even her own line of exercise studios. Spandex-based fitness clothing became enormously popular as they moved beyond traditional leotards into increasingly outrageous combinations. Recognizing the potentially lucrative female aerobics market, leading sports-footwear manufacturers began marketing shoes specifically designed for aerobic activity. Reebok was the first to score big in the aerobic footwear market with a line of high-top shoes in fashion colors, though its market dominance would be challenged by Nike and other competitors. By the 1990s, Reebok attempted to corner the aerobics market through tie-ins to fitness videos and by exploiting new trends in aerobics like the step and the slide. Fitness clothing designer Gilda Marx's Flexitard line introduced the exercise thong as an updated version of the leotard, which relaxed the taboos on such sexualized garb for the mainstream of physically-fit women. The aerobics craze among women spawned a new genre of women's mass-market fitness magazines, led by *Self*, a Condé-Nast title first published in 1982, which seamlessly blended articles on women's health and fitness with promotional advertisements for a wide variety of products.

During the 1980s, aerobics transcended the world of physical fitness activities to become a staple of popular culture. The aerobics craze helped facilitate the resurgent popularity of dance music in the 1980s following the backlash against disco music. A notable example was Olivia Newton-John's 1981 song "Let's Get Physical," which became a top-ten hit. Aerobics made it to the movies as well, as in the John Travolta-Jamie Lee Curtis vehicle *Perfect* (1982), a drama that purported to investigate the sordid world of physical fitness clubs and their aerobics instructors, and was also featured on television shows from *Dynasty* to *The Simpsons*.

Despite the enormous popularity of the exercise form among women, aerobics was often harshly criticized by sports experts and medical doctors who faulted instructors for unsafe moves and insufficient cardiovascular workouts, and the entire aerobics marketing industry for placing too much emphasis on celebrity and attractiveness. While these criticisms were certainly valid, they were often thinly veiled forms of ridicule directed against women's attempts to empower their bodies through an extraordinarily feminized form of physical exertion.

By the end of the 1980s, aerobics had become an international phenomenon attracting dedicated practitioners from Peru to the Soviet Union. Moreover, aerobics began attracting increasing numbers of male participants and instructors. Along with its growing international and inter-gender appeal, aerobics itself was becoming increasingly professionalized. IDEA, AFAA (the Aerobics and Fitness Association of America), and other fitness organizations developed rigorous instructor certification programs to insure better and safer instruction. The classes became more intense and hierarchical, spawning a hypercompetitive aerobics culture in which exercisers jockeyed for the best positions by the instructor; to execute the moves with the most precision; to wear the most stylish workout clothes; and to show off their well-toned bodies. This competitive aerobics culture even gave birth to professional aerobics competitions, such as the National Aerobics Championship, first held in 1984, and the World Aerobics Championship, first held in 1990. A movement to declare aerobics an Olympic sport has gained increasing popularity.

Beyond professionalization came a diversification of the field in the 1990s. Specialized aerobics classes danced to different beats, from low-impact to hip-hop to salsa. Simultaneously, aerobics instructors began to move beyond dance to explore different exercise regimens, such as circuit training, plyometrics, step aerobics, water aerobics, boxing, "sliding" (in which the participants mimic the moves of speed skaters on a frictionless surface), and "spinning" (in which the participants ride stationary bikes). Even IDEA recognized the changing fitness climate, adding "The Association of Fitness Professionals" to its name in order to extend its organizational reach. As the 1990s progressed, aerobics, as both a dance-based form of exercise and as a term used by fitness experts, increasingly fell out of favor. Nike ceased to use it in their advertising and promotions, preferring the terms "total body conditioning" and "group-based exercise" instead. By the mid-1990s, fitness professionals were reporting declining attendance in aerobics classes due to increasing levels of boredom among physically fit women. Women in the 1990s engage in diverse forms of exercise to stay in shape, from sports, to intensive physical conditioning through weightlifting and running, to less stressful forms of exercise exhibited by the resurgence of interest in yoga and tai chi.

Aerosmith

Aerosmith's 1975 single "Sweet Emotion" cracked the Billboard Top 40 and effectively launched them from Boston phenomena into the heart of a growing national hard rock scene. They would

have significant impact on rock 'n' roll lifestyles and sounds for the next quarter of a century.

Vocalist Steven Tyler's leering bad-boy moves and androgynous charisma proved the perfect visual complement to lead guitarist Joe Perry's unstructured riffs and the band's bawdy subject matter. The band's most enduring single, "Walk this Way," chronicles the sexual awakening of an adolescent male.

In 1985, just when it seemed Aerosmith had faded into the same obscurity as most 1970s bands, a drug-free Tyler and Perry engineered a reunion. They collaborated in 1986 with rappers Run DMC on a hugely successful remake of "Walk this Way," won the Grammy in 1991 for "Jamie's Got a Gun," and showed no signs of slowing down approaching the turn of the century.

African American Press

"We wish to plead our cause. Too long have others spoken for us." This statement, written in 1827, was the lead sentence for an editorial in the first African American publication, *Freedom's Journal*, published in New York City. From that time until the present there have been more than 3,000 African American newspapers, magazines, and book presses. The African American press, also referred to as the black press, is strongly based on color, that is, on publications that are for black readers, by black staff members and owners, dealing largely with black issues and society. The black press has been largely made up of newspapers, a format that dominated the first 130 years. From the beginning, most newspapers have been driven by a mission—to improve the plight of African Americans. Through the Civil War, the mission was emancipation of slaves followed by later issues of citizenship and equality. Not only did the press serve as a protest organ, but also documented normal black life, especially as it existed under segregation and Jim Crow laws. In many cases, these papers provide the only extant record of African American life in forgotten and remote towns.

The purposes of the African American press often followed the beliefs of the publishers or editors, for example, Frederick Douglass, founder and editor of *The North Star* in 1847. Douglass believed that a successful paper managed by blacks "would be a telling fact against the American doctrine of natural inferiority and the inveterate prejudice which so universally prevails in the community against the colored race." A number of African American editors were also noted leaders in black liberation and civil rights, for example, P.B.S. Pinchback, Ida B. Wells Barnett, W.E.B. DuBois, and Adam Clayton Powell, Jr. These individuals, and many more like them, challenged the status quo by questioning social objectives in schools, the legal system, political structures, and the rights extended to minorities.

The high point of African American newspaper distribution came in the 1940s and 1950s, when circulation rose to more than two

million weekly. The top circulating black newspaper during this period was the *Pittsburgh Courier*. Following World War II, African Americans began demanding a greater role in society. Because of a significant role in the war, black social goals were slowly starting to be realized, and acts of overt discrimination moved toward more sophisticated and subtle forms. The civil rights movement made it seem that many battles were being won, and that there was less need for the black press. From the 1960s on, circulation dropped. There were additional problems in keeping newspapers viable. Advertising revenues could not keep pace with rising costs. Established editors found it difficult to pass on their editorial responsibilities to a new generation of black journalists. Mainstream presses had partially depleted the pool of African American journalists by offering them employment and giving space to the discussion of black issues.

African American magazines began in 1900 with the *Colored American*. Failures in the black magazine industry were frequent until John H. Johnson started the *Negro Digest* in 1942. The Johnson Publishing Company went on to publish some of the country's most successful African American magazines, including *Ebony* (beginning in 1945), a general consumer magazine that has outlasted its competitors including *Life* and *Look*, and *Jet* (beginning in 1951), a convenient-sized magazine that summarized the week's black news in an easy-to-read format. Among specialty magazines, the most successful has been *Essence*. Founded in 1970, it is a magazine dedicated to addressing the concerns of black women. The popularity of *Ebony* and *Essence* expanded to traveling fashion shows and television tie-ins. Examples of other specialty magazines include *Black Enterprise*, founded in 1970 to address the concerns of black consumers, businesses, and entrepreneurs, and *The Black Collegian*, a magazine addressing black issues in higher education. There have been a number of magazines from black associations and organizations, foremost *The Crisis*, a publication of the National Association for the Advancement of Colored People started by W.E.B. DuBois in 1910. There have also been a number of black literary and cultural magazines. Examples include *Phylon: A Review of Race and Culture*, founded by W.E.B. DuBois, and *CLA Journal*, a publication of the College Language Association. These journals have provided an outlet for works of scholars and poets, and have represented a social as well as literary effort where the act of writing became synonymous with the act of justice.

African American book presses have primarily published African American and multicultural authors. Typically, black book presses have been small presses, generally issuing fewer than a dozen titles per year. Examples of book presses include Africa World Press, Third World Press, and two children's book publishers, Just Us Books and Lee and Low. Publishers at these presses have been unable to give large advances to authors, and therefore have found it difficult to compete with large publishing houses. Large publishing houses, on the other hand, have regularly published books by black authors, though many have been popular celebrities and sports figures who were assisted by ghostwriters. These books have done little to add to the development of black literary voices, and have left the illusion that black writers are published in greater numbers than has been the case.

Throughout its history, the African American press grew out of distrust; that is, blacks could not trust white editors to champion their causes. Too many majority publications have portrayed blacks in a one-dimensional way—if they were not committing a crime or leeching off of society, they were running, jumping, joking or singing. It has taken the black press to portray African American people in

non-stereotypical ways and present stories of black achievement. When a black news story broke, these publications reported “what really went on.” In addition, much of what has been found in the black press was not reported elsewhere, for example, special dispatches from Africa oriented toward American readers.

Despite more than 170 years of publishing, most African American presses struggle to survive. While the oldest, continuously operating African American publication, the *Philadelphia Tribune*, dates back to 1884, virtually thousands of others have come and gone. Of the approximate 200 plus current newspapers, most are weekly, and none publish daily, though there have been a number of attempts at providing a daily. Those that do survive are generally in urban areas with large black populations. Examples include the *Atlanta Daily World*, the *Los Angeles Sentinel*, and the *New York Amsterdam News* (in New York City). These newspapers and others like them compete for scarce advertising revenue and struggle to keep up with the changes in printing technology.

The attempts at building circulation and revenue have philosophically divided African American newspapers. Throughout its history, black journalism has been faced with large questions of what balance should be struck between militancy and accommodation, and what balance between sensationalism and straight news. Focusing on the latter, in the early 1920s, Robert Sengstack, founder and editor of the *Chicago Defender*, abandoned the moral tone common to black newspapers and patterned the *Defender* after William Randolph Hearst’s sensationalist tabloids by focusing on crime and scandal. The formula was commercially successful and many other black newspapers followed suit.

The struggle of the African American press for survival, and questions of purpose and direction will likely continue into the foreseeable future. However, as long as a dual society based on skin color exists, there will be a need for an African American press. Given the dominance of majority points of view in mainstream publications and the low number of black journalists, it is more important than ever for the African American press to provide a voice for the black community. If African Americans do not tell their story, no one will.

The African Queen

John Huston’s *The African Queen* (1951) is one of the most popular films of all time. The film chronicles the adventures of an obstinate drunkard, Charlie Allnut (Humphrey Bogart), and a headstrong spinster, Rose Sayer (Katherine Hepburn), as they head down an African river towards a giant lake in which waits the “Louisa,” a large German warship, which they ultimately sink. The film was shot nearly entirely on location in Africa. The on-set battles between the hard-living Huston and Bogart and the more reserved Hepburn have become part of Hollywood legend. Despite their difficulties, in the end all became friends and the results are remarkable. In addition to a great script and beautiful location scenery, the on-screen electricity between Hepburn and Bogart, two of the screen’s most enduring stars, contributes to their equally spectacular performances. Hepburn was nominated as best actress, and Bogart won his only Academy Award for his role in *The African Queen*.

Agassi, Andre (1970—)

Tennis player Andre Agassi maintained the highest public profile of any tennis player in the 1990s—and he backed that profile up by playing some of the best tennis of the decade. Trained from a very early age to succeed in tennis by his father Mike, Agassi turned professional at age 16. By the end of his third year on tour in 1988 Agassi was ranked third in the world; by 1995 he was number one and, though he faltered thereafter, he remained among the top ten players in the world into the late 1990s. Through the end of 1998 Agassi had won three of the four major tournaments—Wimbledon, the Australian Open, and the U.S. Open, failing only at the French Open. Though his tennis game took Agassi to the top, it was his movie-star looks, his huge, high-profile endorsement deals—with Nike and Cannon, among others—and his marriage to model/actress Brooke Shields that made him one of sports’ best-known celebrities.

Agents

Talent agents began the twentieth century as vaudeville “flesh-peddlers” selling the services of their stable of comedians, actors, singers, animal acts, and freaks to theaters and burlesque houses for a percentage of these performers’ compensation. With the rise of radio, television, and the movies—and their accompanying star system—the balance of power shifted to the agents. With the influence to put together productions and dictate deals in the very visible business of media, these “superagents” themselves became powerful celebrities by the end of the century.

The emerging film industry of the 1910s and 1920s found that prominently featuring the lead actors and actresses of its movies—the “stars”—in advertisements was the most effective way to sell tickets. This gave the stars leverage to demand larger salaries and increased the importance of an agent to field their scripts and negotiate their salaries.

During this time, agents were often despised by the talent and the industry alike, called “leeches,” “bloodsuckers,” and “flesh-peddlers” because of their ruthless negotiating and the notion that they profited from the work of others, driving up film costs. In the 1930s, the Hollywood film industry began colluding to drive down star salaries and some studios banned agents from their premises. “Fadeout for Agents” read a 1932 headline in the film industry publication *Variety*. But in 1933, the Screen Actors Guild was formed to fight the collusion among studios and President Franklin Roosevelt signed a code of fair practices guaranteeing actors the freedom to offer their services to the highest bidder, making a good agent indispensable for most stars.

While it struggled during the days of vaudeville, the William Morris Agency, founded in 1898, came into its own with the advent of mass media and the star system. The agency recognized that it could make more money representing star talent than by representing the vaudeville houses in which the talent played. The newly codified freedoms agents and stars won in the 1930s helped William Morris grow from \$500,000 in billings in 1930 to \$15 million dollars in 1938, with a third of the revenue derived from each vaudeville, radio, and film. The agency also popularized the “back-end deal” in which stars received a percentage of the gross ticket sales from a production, elevating some actors’ status from that of mere employees to partners.

Another agency, the Music Corporation of America (MCA), was founded in 1930 and quickly rose to become the top agency in the country for the booking of big bands. MCA began to put together, or “package,” entire radio shows from its roster of clients, selling them to broadcasters and charging a special commission. By the mid-1950s, MCA was earning more from packaging radio and television shows than from its traditional talent agency business. Like the back-end deal, packaging effected a shift in power from the studio to the agent, enabling agents to put together entire productions. Studios could not always substitute one star for another and were forced to accept or reject packages as a whole.

In 1959, *TV Guide* published an editorial—titled “NOW is the Time for Action”—attacking the power and influence that MCA and William Morris had over television programming. In 1960, the Eisenhower administration held hearings on network programming and the practice of packaging. *Fortune* published an article in 1961 on MCA’s controversial practice of earning—from the same television show—talent commissions, broadcast fees, and production revenue. When it moved to purchase a music and film production company in

1962, the Justice Department forced MCA to divest its agency business. In practice, and in the public consciousness, agents had evolved from cheap hustlers of talent to powerful media players.

In 1975, after a merger formed International Creative Management (ICM), the Hollywood agency business was largely a two-company affair. ICM and William Morris each earned about \$20 million that year, primarily from commissions on actors they placed in television and film roles. That same year, five agents left William Morris to found Creative Artists Agency (CAA). Michael Ovitz emerged as CAA’s president, leading it to the number one spot in the business. CAA employed a more strategic approach than other agencies and took packaging beyond television and into movies, forcing studios to accept multiple CAA stars along with a CAA director and screenwriter in the same film.

This was a time when agents were moving beyond traditional film and television deals and into a new, expanded sphere of entertainment. In 1976 the William Morris Agency negotiated a \$1 million dollar salary for Barbara Walters as new co-anchor of the *ABC Nightly News*. This was double the amount anchors of other nightly news programs earned and reflected the expansion of the star and celebrity system to other realms. Another example of this phenomenon was the agency’s representation of former President Gerald Ford in 1977.

This trend continued into the 1980s and 1990s. Ovitz brokered the purchase of Columbia Pictures by Sony in 1989, and in 1992 CAA was contracted to develop worldwide advertising concepts for Coca-Cola. With CAA’s dominance and these high-profile deals, Ovitz himself became a celebrity. His immense power, combined with his policy of never speaking to the press and his interest in Asian culture, generated a mystique around him. A subject of profile pieces in major newspapers and magazines and the subject of two full-length biographies, he was labeled a “superagent.” It was major news when, in 1995, the Disney Corporation tapped Ovitz to become its number two executive and heir apparent; and it was bigger news when Ovitz resigned as president of Disney 14 months later.

The 1980s and 1990s were also a period of the “celebritization” of sports stars and their agents. Lucrative endorsement fees—such as the tens of millions of dollars paid to Michael Jordan by Nike—were the result of the reconception of sports as popular entertainment. The proliferation of million-dollar marketing and endorsement deals created a new breed of sports superagent. The movie *Jerry Maguire* and the television show *Arli\$\$* played up the image of most sports agents as big-money operators. When sports superagent Leigh Steinberg was arrested for drunk driving, he apologized by admitting that he did “not conduct myself as a role model should.” Agents were now public figures, caught in the spotlight like any other celebrity.

From their origins as mere brokers of talent, agents used the emerging star system to expand their reach, and in the process, helped build a culture of celebrity that fed on stars, enabling agents to win increasingly larger paydays for them. It was this culture that propelled agents to become celebrities themselves. While in practice “superagents” ranged from the flashy and aggrandizing to the low-key and secretive, their public image reflected their great power, wealth, and influence over the mechanisms of celebrity.

AIDS

Medically, AIDS is the acronym for “acquired immunodeficiency syndrome,” a medical condition which enables a massive suppression of the human immune system, allowing the body to be debilitated by a wide variety of infectious and opportunistic diseases. Culturally, AIDS is the modern equivalent of the plague, a deadly disease whose method of transmission meshed with gay sexual lifestyles to attack inordinate numbers of gay men—to the barbaric glee of those eager to vilify gay lifestyles. The syndrome is characterized by more than two dozen different illnesses and symptoms. AIDS was officially named on July 27, 1982. In industrialized nations and

Latin America AIDS has occurred most frequently in gay men and intravenous drug users, whereas on the African continent it has primarily afflicted the heterosexual population. From 1985 to 1995 there were 530,397 cases of AIDS reported in the United States. By 1996 it was the eighth leading cause of death (according to U.S. National Center for Health Statistics.) The AIDS epidemic transcended the human toll, having a devastating effect on the arts, literature, and sciences in the United States.

The first instance of this disease was noted in a Centers for Disease Control (CDC) report issued in June 1981. The article discussed five puzzling cases from the state of California where the disease exhibited itself in gay men. Following reports of pneumocystis carinii pneumonia, Karposi’s sarcoma, and related opportunistic infections in gay men in San Francisco, New York, and Los Angeles, the U.S. Centers for Disease Control began surveillance for a newly recognized array of diseases, later known as AIDS. Because the homosexual community was the first group afflicted by the syndrome, the malady was given the initial title of GRID (Gay Related Immunodeficiency). In the first years of the AIDS outbreak, the number of cases doubled annually, and half of those previously infected died yearly. The caseload during the 1990s has reached a

An AIDS warning notice at the Academy Sex Club, San Francisco.

plateau and with new medications on the market the death rate has started to decline. Discussions now focus on AIDS as a chronic manageable disease, rather than a fatal illness.

During the early years of the AIDS epidemic there was much fear of the disease, misinformation about its transmission, and lack of education covering prevention techniques. The United States closed its borders to HIV positive individuals. Members of the gay community became targets of homophobic attacks. The scientific community both nationally and worldwide took the lead in devoting time and research funds to unraveling the AIDS mystery, treatments for the disease, and possible future vaccines. Unfortunately many of the efforts have been dramatically underfunded, with university medical schools and major pharmaceutical corporations performing the majority of the research.

The vast majority of scientists believe AIDS originates from the human immunodeficiency virus (HIV). A number of forms of HIV have been identified, but those most prevalent to the AIDS epidemic are HIV1, globally disbursed, and HIV2, African in origin. HIV is classified as a retrovirus which, opposite to normal function, converts the RNA held in the virus core into DNA. Besides being a retrovirus, HIV is also a lentivirus. While most viruses cause acute infections and are cleared by the immune system, producing lifelong immunity, lentiviruses are never completely removed from the immune system. HIV's primary function is to replicate itself, with the unintended side effect of opportunistic infections in infected humans.

Scientists theorize that HIV originated from a virus which already existed and was now appearing for the first time in humans. Over the last decade there has been much contentious debate concerning the relationship of the West African simian immunodeficiency viruses (SIV) and a connection to HIV. A widely accepted theory is that the syndrome was transmitted to humans by monkeys with a different strain of the virus. Studies on the simian origin of HIV have made some progress beyond genetic comparison showing a close geographic relationship of HIV2 and SIV. Early in 1999 international AIDS researchers confirmed the virus originated with a subspecies of chimpanzee in West and Central Africa. This version was closely related to HIV1. Exposure probably resulted from chimp bites and exposure to chimp blood, but further research is still needed.

The rise of AIDS as a public health issue coincided with the ascension of a conservative national government. President Ronald Reagan established a political agenda based on decreased federal responsibility for social needs. Thus at the onset of the AIDS epidemic the issue was widely ignored by the federal government. Ever since, policy makers on the national, state, and local levels have been criticized for focusing upon prevention programs rather than the need for health care. Only after political pressure was exerted by gay activists, health care providers, and other concerned organizations was more money and effort directed toward funding medical care and research.

The AIDS epidemic has had a profound impact on gay and lesbian identity, politics, social life, sexual practices, and cultural expression. Many of those with AIDS were denied medical coverage by insurance companies, harassed in the workplace, and not given adequate treatment by medical practitioners. Meanwhile, there was a call by some right wing politicians and religious clergy for the quarantine or drastic treatment of AIDS patients. Gay-organized self help groups quickly developed around the country. By the 1990s over six hundred AIDS-related organizations were created nationwide. One of the first organizations was the Gay Men's Health Crisis in New York City; they were later joined by the Karposi's Sarcoma

Foundation (San Francisco), AIDS Project Los Angeles, Shanti Foundation, and countless others. Many people responded, especially those who had previously avoided gay movement work.

On the political front gay and lesbian activists waged a vigorous campaign to obtain adequate funding to halt the AIDS epidemic. Primarily through the media, activists waged a bitter campaign against the United States government and drug manufacturers, urging allocation of money and directing research for AIDS. The gay community has charged the federal government with negligence and inaction in response to the outbreak of AIDS. In the government's defense, it was the first time in years that industrialized nations had to come to terms with a previously unknown disease that was reaching epidemic proportions. Advancements in the analysis and treatment of the syndrome were impeded by institutional jealousies and red tape, and notable progress in the field did not start until the mid-1980s.

An unforeseen result of the epidemic was a renewed sense of cooperation between lesbians and gay men. Lesbians were quick to heed the call of gay men with AIDS in both the social service and political arenas of the crisis. Among gay men AIDS helped to bring together the community, but also encouraged the development of two classes of gay men, HIV "positive" and "negative." The sexually charged climate of the 1970s, with its sexual experimentation and unlimited abandon, gave way to a new sense of caution during the 1980s. Private and public programs were put into place urging the use of safer sexual practices, and a move toward long term monogamous relationships. The onslaught of AIDS made committed monogamous relationships highly attractive.

The collective effects of AIDS can be observed in the performing arts, visual arts, literature, and the media. The decimation of a generation of gay men from AIDS led to an outpouring of sentiment displayed in many spheres. The theater made strong statements concerning AIDS early on, and has continued ever since. Many AIDS-related plays have been staged on Off-Broadway, Off-Off-Broadway, and smaller regional theaters. Jeffrey Hagedorn's one-man play, *One*, which premiered in Chicago during August 1983, was the first theatrical work to touch upon the disease. Other plays such as William Hoffman's *As Is* (1985) and Larry Kramer's *The Normal Heart* (1985) were successfully presented onstage to countless audiences. Probably the most successful drama was Tony Kushner's *Angels in America* (1992).

Hollywood was a latecomer in the depiction of AIDS on the big screen. Most of the initial film productions were from independent filmmakers. Before *Philadelphia* (1993), the few other movies which dealt openly with AIDS as theme were Arthur Bressan Jr.'s *Buddies* (1985); Bill Sherwood's *Parting Glances* (1986); and Norman Rene and Craig Lucas's *Longtime Companion* (1990). Lucas's production was rejected by every major studio and was eventually funded by PBS's American Playhouse. Many of those afflicted with AIDS in the movie industry were treated as untouchables. Many times when AIDS was depicted in a film it was exhibited as a gay, white middle class disease. Meanwhile, photo documentaries produced outside Hollywood validated the lives of individuals with AIDS, revealing the gravity and reality of the disease and helping to raise funds for AIDS service organizations.

When the AIDS epidemic was first identified, the disease was not considered newsworthy by national television networks. The first mention of AIDS occurred on ABC's *Good Morning America* during an interview with the CDC's James Curran. Since the inception of CNN in 1980, the news network has provided continuous coverage of AIDS. Broadcast and cable television stations could have been used

to calm fears about AIDS by educating viewers about how the disease was transmitted, realistically depicting people with AIDS, and fostering understanding towards those affected. However, HIV/AIDS proved to be too controversial for most mainstream media. Even public service announcements and advertisements depicting contraceptives or safe sex practices came under fire. However, as more people became aware of HIV/AIDS the major media sources began to air more information about the disease. In 1985 NBC Television presented one of the first dramas on the small screen, *An Early Frost*. Regular television programming covering HIV/AIDS has paralleled the disease. Countless made for television movies, dramas, and documentaries have been produced on the networks and cable television stations.

National Public Radio has been a leader in providing information and coverage of HIV/AIDS. NPR has since 1981 worked at interpreting issues surrounding the epidemic, with its broadcast reaching not only urban areas but also into the hinterlands. It has helped to dispel much misinformation and created a knowledge base on a national scale.

The literary response to AIDS has matched its history and growth. As the disease spread so did the written word covering it. Literature has served as socio-historical record of the onset and impact of the disease. Nearly every genre is represented, ranging from poetry, personal stories, histories, self-help books, fiction, and non-fiction. Literature has provided some of the more honest depictions of AIDS.

The most visible symbol of the disease is the AIDS Memorial Quilt. The quilt was started in early 1987 to commemorate the passing of loved ones to AIDS. Each person was given a rectangular piece of cloth three feet by six feet, the size of a human grave, to decorate with mementoes or special items significant to the life of the person who lost their battle with AIDS. At the close of 1998 there were over 42,000 panels in the Names Quilt, signifying the passing of more than 80,000 individuals. The entire quilt covers eighteen acres, and weighs over 50 tons. Still, only 21 percent of AIDS related deaths are depicted by the quilt.

The last two decades of the twentieth century have witnessed an immense human tragedy not seen in the United States for many years. A large portion of the gay population between the ages of twenty and fifty were lost to the disease. Along with them went their talents in the visual arts, performing arts, and literature. Many cultural artifacts from the end of the century stand as mute witness to their lives and passing, foreshadowing the symbolism provided by the AIDS Memorial Quilt.

—Michael A. Lutes

Ailey, Alvin (1931-1989)

Choreographer and dancer Alvin Ailey transformed the U.S. dance scene in the 1960s with his work *Revelations*, a powerful and moving dance which expresses Black experiences set to gospel music. By the 1980s this dance had been performed more often than *Swan Lake*. As the founder of the interracial Alvin Ailey American Dance Theatre in 1958, Ailey was an important and beloved figure in the establishment of Black artists in the American mainstream. His company was one of the first integrated American dance companies to gain international fame.

Other artists did not always share his vision of Black dance and accused his creations of commercialism. After early success and a stressful career, Ailey's creativity waned in the late 1970s. Manic depression and arthritis undermined his health. He tried to find refuge

Alvin Ailey

in drugs, alcohol, and gay bars, and died of an AIDS related disease in 1989. His company continues under the direction of Judith Jamison, a dancer who inspired Ailey's 1971 creation of a dance to honor Black women called *Cry*.

Air Travel

For centuries people have been enthralled with the possibility of human flight. Early inventors imitated birds' wings and envisioned other devices that they hoped would enable them to conquer the sky. Not until the beginning of the twentieth century, however, did technology catch up with the dreams. Yet even after Orville and Wilbur Wright first flew at Kitty Hawk in 1902, most Americans did not view air travel as a realistic possibility.

Air shows during the first two decades of the twentieth century convinced Americans that flight was possible. Crowds thrilled as aviators flew higher and faster, and performed tricks with their small planes. Some tried to imagine the practical applications of flight, but at that point it was still a very dangerous endeavor. The early monoplanes and biplanes were fragile; wind and storms tossed them around and they frequently crashed. So when Americans went to air shows to see the "wonderful men in their flying machines," they also observed accidents and even death. Newspaper editorials, feature stories, and comics showed the positive and negative potential of flight.

World War I served as an impetus to the development of air travel in several ways. Initially, planes were viewed only as a means of observing enemy movements, but pilots soon began to understand their potential for offensive maneuvers such as strafing and bombardment. The use of planes in battle necessitated improvements in the strength, speed, and durability of planes. At the same time, as stories of the heroic exploits of such figures as Eddie Rickenbacker were reported in the press, the view of the pilot as romantic hero entered the popular imagination. Following their service in the war, trained pilots returned to participate in air shows, thrilling viewers with their expert flying and death-defying aerial tricks, known as "barnstorming," and offering plane rides.

During the 1920s and 1930s, far-sighted individuals began to seriously examine the possibility of flight as a primary means of transportation in the United States. Entrepreneurs like William Randolph Hearst and Raymond Orteig offered cash awards for crossing the United States and the Atlantic Ocean. Aviators like Calbraith P. Rodgers, who came close to meeting Hearst's requirement to cross the continent in thirty days in 1911, and Charles A. Lindbergh, who successfully traveled from New York to Paris in 1927, responded. Lindbergh became an overnight hero and flew throughout the United States promoting air travel.

As with railroad and highway transportation, it took the power and resources of the federal government to develop aviation. The United States Postal Service established the first airmail service as early as 1918, and airline companies formed to carry the mail and passengers. Federal and state governments established agencies and

passed laws setting safety requirements. Then, in the 1930s, communities began to receive federal financial assistance to build airports as part of the 1930s New Deal. During World War II, the Allies and the Axis powers showed the destructive power of aviation, but the war also showed air travel was a pragmatic way to transport people and supplies.

By the end of World War II, most Americans viewed flying as a safe and efficient form of travel, and the air travel industry began to grow by leaps and bounds. Airlines emphasized comfort by hiring stewardesses and advertising "friendly skies," as federal agencies established flight routes and promoted safety. Aircraft manufacturers made bigger and better planes, and airports were expanded from mere shelters to dramatic and exciting structures, best exemplified by architect Eero Saarinen's TWA terminal in New York and his Dulles International Airport in Washington, D.C. With improved aircraft and reduced fares, flying became the way to go short or long distances, and even those who could not afford to fly would gather in or near airports to watch planes take off and land.

Within two decades, air travel had become central to the lives of increasingly mobile Americans, and the airline industry became one of the pillars of the American economy. Flying became as routine as making a phone call, and while dramatic airline disasters periodically reminded travelers of the risks involved, most agreed with the airlines that air travel was one of the safest means of transportation.

Airplane!

The 1980 film *Airplane!* poked fun at an entire decade of American movie-making and showed movie producers that slapstick films could still be extremely successful at the box office. The movie appeared at the end of a decade that should well have left moviegoers a bit anxious. Disaster and horror films like *The Poseidon Adventure* (1972), *The Towering Inferno* (1974), *Earthquake* (1974), and *Jaws* (1975) schooled viewers in the menaces that lurked in and on the water, high in skyscrapers, and under the earth; and a whole series of *Airport* movies (beginning with *Airport* [1970], followed by sequels *Airport 1975*, *1977*, and *1979*) exploited peoples' fears of being trapped in a metal tube flying high above the earth. *Airplane!* took the fears these movies preyed upon—and the filmmaking gimmicks they employed—and turned them on their head. The result was a movie (and a sequel) rich in humor and dead-on in skewering the pretensions of the serious disaster movie.

The familiar details of air travel in the *Airport* movies became the backdrop for an endless series of spoofs. The actual plot was fairly thin: a plane's pilots become sick and the lone doctor aboard must convince a neurotic ex-fighter pilot to help land the plane. The jokes,

however, were multi-layered (which has led to the movie's attaining a kind of cult status, as fans view the film repeatedly in search of jokes they missed in previous viewings). In one scene, basketball star Kareem Abdul-Jabbar, who plays co-pilot Roger Murdoch, folds himself into the cramped cockpit and tries to ward off the skepticism of a visiting kid who insists that he is a basketball star, while the pilot, Captain Oveur (played with a straight face by Peter Graves), plies the boy with a series of increasingly obscene questions. When the tension created by the plane plummeting toward the earth is at its most intense, writer/directors David Zucker and Jim Abrahams have a nude woman jump in front of the camera. While he prepares to land the plane, Ted Striker (played by Robert Hays), who has been pressed into reluctant duty, confronts his fears and memories of previous flying experiences. Just when his flashbacks become serious, we return to a shot of Hays with fake sweat literally pouring down his face and drenching his clothing. While there is broad physical humor aplenty, some of the film's funniest moments come from the verbal comedy. The dialogue between the crew is filled with word-play—"What's your vector, Victor?" "Over, Oveur," and "Roger, Roger"; every question that can be misunderstood is; and the disembodied voices over the airport loudspeakers begin by offering business-like advice but soon engage in direct, romantic conversation while the airport business proceeds, unaffected. The latter is a fascinating statement about the ability of Americans to tune out such meaningless, background noise.

Earlier slapstick films had focused on the antics of specific characters such as Jerry Lewis or Charlie Chaplin, but *Airplane!* was different. It was a movie lover's movie, for its humor came from its spoofing of a wide range of movies and its skewering of the disaster film genre. It also featured an ensemble cast, which included Leslie Nielsen, Lloyd Bridges, Robert Hays, Julie Hagerty, and Peter Graves, many of whom were not previously known for comedic work. The two *Airplane!* films heralded a revival of the slapstick form, which has included several *Naked Gun* movies, and launched the comedic career of Leslie Nielsen.

Alabama

Country music group Alabama's contribution to country music in the 1980s was one of the most significant milestones on the road to country music's extraordinary rise to prominence in the pop music scene of the 1990s. While various threads of artistic influence ran through country in the 1980s, the most important commercial innovations were the ones that brought it closer to rock and roll—following three decades in which country had often positioned itself as the antithesis of rock and roll, either by holding to traditional instrumentation (fiddles and banjos, de-emphasis on drums) or by moving toward night-club, Las Vegas-style pop music (the Muzak-smooth Nashville sound, the Urban Cowboy fad). Alabama was one of the first major country acts to get its start playing for a college crowd. Most significantly, Alabama was the first pop-styled country "group": the first self-contained unit of singers/musicians/songwriters—along

Randy Owen, the lead singer of Alabama, performs at the 31st Annual Academy of Country Music Awards.

the lines of the Beatles, Rolling Stones, or Beach Boys—to succeed in country music.

Considering that the self-contained group had dominated pop music since the early 1960s, country was late to the table, and it was no accident. Country labels had quite deliberately avoided signing groups, believing that the image of a bunch of young men touring together, smoking marijuana, and smashing up motel rooms would be anathema to the core country audience and the upscale audience that country was trying to cultivate. As Alabama member Jeff Cook put it to Tom Roland, author of *The Billboard Book of Number One Country Hits*, the Nashville establishment felt that "if you were a band, you would have a hit record and then have internal problems and break up."

Alabama natives Randy Owen (1949—), Teddy Gentry (1952—), Jeff Cook (1949—), and drummer Bennett Vartanian formed the band's precursor, a group called Wild Country, in the early 1970s. They moved to the resort community of Myrtle Beach, South Carolina, where an engagement at a local club, the Bowery, extended for eight years. They were a party band, playing marathon sets that sometimes went round the clock. Vartanian left the group in 1976, and the group went through several drummers before settling on transplanted New Englander Mark Herndon (1955—), who had developed a reputation with rock bands around Myrtle Beach.

As the Alabama Band, the group cut some records for small independent labels. A few major labels approached lead singer Owen about signing as a solo act, but he refused to break up the band. Finally, RCA Victor took the chance and signed the group in 1980.

The band's first release, "Tennessee River," hit number one on the country charts, and was followed with two dozen number one hits. During one stretch, Alabama saw twenty-one consecutive releases go to number one, a record that no other act has come close to matching. Alabama won two Grammys and was named Entertainers of the Year three times by the Country Music Association and five times by the Academy of Country Music. In the *People* magazine readers' poll, Alabama three times was named favorite group, any musical style. In 1989, the Academy of Country Music named Alabama Entertainers of the Decade.

Following Alabama's success, pop groups like Exile crossed over to country music, and the self-contained group, from Sawyer Brown to the Kentucky Headhunters to the Mavericks, became a staple of new country.

Alaska-Yukon Exposition (Seattle, 1909)

Held in the University District of Seattle between June 1 and October 16 of 1909, the Alaska-Yukon Exposition attracted more than four million visitors. Housed in a collection of temporary (and a scattering of permanent) structures, the exposition promoted the achievements of American industry and commerce, and comprised a range of displays highlighting agriculture, manufacturing, forestry, and a wide range of other United States businesses. The exposition's principal legacy was its contribution to the development of the University of Washington, adding four permanent buildings and a landscaped campus to an institution which, prior to 1909, had comprised a mere three buildings.

Albert, Marv (1941—)

One of the most distinctive voices in sports broadcasting, Marv Albert prided himself on keeping his own personality subservient to the events he was covering. For most of his three decade career, the dry, sardonic New Yorker managed to hew to that credo. But when a personal scandal rocked his life off its moorings in 1997, the self-effacing Albert found himself the center of attention for all the wrong reasons.

Born Marvin Aufrechtig, Albert attended Syracuse University's highly-regarded broadcasting school. He mentored under legendary New York City sports announcer Marty Glickman and made his initial splash as a radio play-by-play man for the New York Knicks. A generation of New York basketball fans fondly recalls Albert's call of Game Seven of the 1970 NBA (National Basketball Association) Finals, in which an ailing Knick captain Willis Reed valiantly limped onto the court to lead his team to the championship. "Yesssss!"

Albert would bellow whenever a Knicks player sunk an important shot. "And it counts!" he would tack on when a made shot was accompanied by a defensive foul. These calls eventually became his trademarks, prompting a host of copycat signatures from the basketball voices who came after him.

Under Glickman's influence, Albert quickly developed a personal game-calling style that drew upon his New York cynicism. In a deep baritone deadpan, Albert teased and taunted a succession of wacky color commentators. Occasionally he would turn his mockery on himself, in particular for his frenetic work schedule and supposed lack of free time. Albert worked hard to manufacture this image, even titling his autobiography *I'd Love To, But I Have a Game*. This self-made caricature would later come back to haunt Albert when a sex scandal revealed that there was more going on away from the court than anyone could have possibly realized.

In 1979, Albert moved up to the national stage, joining the NBC (National Broadcasting Corporation) network as host of its weekly baseball pre-game show. The announcer's "Albert Achievement Awards," a clip package of wacky sports bloopers that he initially unveiled on local New York newscasts, soon became a periodic feature on NBC's *Late Night With David Letterman*. Like Letterman, Albert occasionally stepped over the line from humorous to nasty. When former Yale University President A. Bartlett Giamatti was named commissioner of major league baseball, Albert japed to St. Louis Cardinal manager Whitey Herzog that there now would be "an opening for you at Yale." "I don't think that's funny, Marv," the dyspeptic Herzog retorted.

Nevertheless, Albert was an enormously well-liked figure within the sports broadcasting community. He appeared comfortable on camera but was known to be painfully shy around people. Sensitive about his ludicrous toupee, Albert once cracked, "As a kid, I made a deal with God. He said, 'Would you like an exciting sports voice or good hair?' And I chose good hair." Bad hair or not, Albert found little standing in his way from a rapid ascent at NBC. He became the network's number two football announcer, and, when the network secured rights to televise the NBA in 1991, the lead voice for its basketball telecasts.

The genial Albert seemed to be on the top of his game. Then, in the spring of 1997, a bombshell erupted. A Virginia woman, Vanessa Perhach, filed charges against Albert for assault and forcible sodomy. She claimed that he had bitten and abused her during a sexual encounter in a Washington-area hotel room. The case went to trial in late summer, with accusations of cross-dressing and bizarre sexual practices serving to sully the sportscaster's spotless reputation. While Perhach's own credibility was destroyed when it came out that she had offered to bribe a potential witness, the public relations damage was done. In order to avoid any more embarrassing revelations, Albert eventually pled guilty to a misdemeanor charge, and received a suspended sentence.

Albert's career appeared to be finished. NBC fired him immediately, and he resigned from his position as New York Knicks play-by-play man rather than face the axe there. Many sports fans declared their unwillingness to watch any telecast of which Marv Albert was a part. Most painful of all, the reclusive Albert became the butt of nightly jokes by a ravenous *Tonight Show* host Jay Leno.

Slowly but surely, however, the humbled broadcaster began to put his life back together. As part of his plea agreement, he agreed to seek professional counseling for his psychosexual problems. He married his fiancée, television sports producer Heather Faulkner, in 1998. By September of that year, Albert was back on the air in New

Marv Albert

York, as host of a nightly cable sports highlight show. The MSG Network also announced that Albert would be returning to the airwaves as the radio voice of the Knicks for the 1998-1999 season.

Albert's professional life, it seemed, had come full circle. He appeared nervous and chastened upon his return to the airwaves, but expressed relief that his career had not been stripped from him along with his dignity. To the question of whether a man can face a maelstrom of criminal charges and humiliating sexual rumors and reclaim a position of prominence, Albert's answer would appear to be "Yessssss!"

Album-Oriented Rock

Radio stations that specialized in rock music recorded during the later 1960s, 1970s, and 1980s were generally labeled Album-Oriented Rock (AOR) stations. The symbiosis between AOR stations and bands such as Deep Purple, Led Zeppelin, and Aerosmith has led many to refer to virtually all 1970s era hard rock bands as AOR as well. When it was first introduced in the late 1960s, the AOR format was only marginally commercial, but by the mid-1970s AOR stations were taking on many of the characteristics of top-40 stations. As the popularity of AOR stations grew, major label record companies exerted increasing influence over AOR playlists around the country, in the process squeezing out competition from independent label competitors. A by-product of this influence peddling was a creeping homogenization of rock music available on radio stations.

The AOR format was happened upon after the Federal Communication Commission (FCC) mandated a change in the way radio stations did their business in 1965. The FCC prohibited stations from

offering the same programming on both AM and FM sides of the dial. This ruling opened the less popular FM side of the dial to a variety of less commercial formats, including jazz and classical. Coincidental with this change in radio programming law was the emergence of the so-called "concept album" among British art rock bands, the Beatles, and Bay Area psychedelic bands. Some of these albums featured songs substantially longer than the three minute time limit traditionally observed by radio station programmers. In areas with massive collegiate populations, especially San Francisco, a few FM stations began playing entire album sides. This approach to radio programming departed significantly from the singles-only AM pop rock format.

In the 1970s, rock album sales accounted for an increasing proportion of record company profits, but the AOR format remained somewhat experimental until technological improvements brought stereophonic capabilities to FM radio. This change attracted top 40 formats to FM and made it far more competitive. As FM rock radio matured, its audience widened and it became apparent to record labels that AOR stations, especially those in large market cities, were effective if not critical marketing media for their products. The growing importance of AOR radio, both to station owners and record companies, worked to narrow the weekly playlists. Station owners, hoping to maintain ratings, copied many top-40 programming strategies and curtailed the number of songs in heavy rotation, keeping many of the obscure bands and esoteric album cuts from ever getting air time.

Record companies sought to boost album sales by manipulating AOR stations' playlist. In order to avoid the recurrence of a 1950s style "payola" scandal, record companies subcontracted the promotion of their records to radio stations via "independent promoters." Through independent promotion, record companies could maintain a facade of legality, even though the means independent promoters employed to secure air time for the labels was clearly outside the bounds of fair access to public airwaves. Not only were station programmers frequently bribed with drugs and money, they were occasionally threatened with bodily harm if they did not comply with the demands of the independent promoters. According to Frederic Dannen, author of *Hit Men*, the secrecy, illegality, and lucrative nature of independent promotion eventually invited the involvement of organized crime syndicates, and the development of a cartel among the leading independent promoters.

In the 1980s, record companies hard hit by the disco crash lost all control over independent promoters. Not only had the costs of independent promotion become an overwhelming burden on the record companies' budgets, they had developed into an inextricable trap. Record companies who refused to pay the exorbitant fees required by members of the promotion cartel were subject to a crippling boycott of their product by stations under the influence of powerful independent promoters.

The effect of independent promotion on AOR formats and the rock music scene in general was a steady narrowing of FM rock fare. Bands on smaller record labels or those with experimental sounds had little chance of ever getting heard on commercial radio. Without some measure of public exposure, rock acts struggled to build audiences. Millions of dollars spent on independent promotion could not ensure increased album sales. There are dozens of examples of records that received heavy air play on FM radio, but failed to sell well at retail, a distinction that earns such records the title of "turntable hit." In the mid-1980s record companies banded together and took steps to reduce their debilitating reliance upon independent promotion.

For better or worse, the AOR format did allow musicians to expand well beyond the strict confines imposed by AM radio. Several important rock anthems of the 1970s, such as Led Zeppelin's "Stairway to Heaven" and Lynyrd Skynyrd's "Freebird," may have had far less success without AOR stations. The influence of AOR programming was not as absolute as it is frequently presupposed. Cynics often fail to recall that several bands, such as the Grateful Dead, Kiss, and later Metallica, managed to build massive audiences and enduring careers without the help of FM radio or independent promotion. The perception that rock music was hopelessly contaminated by crass commercialism drove many fans and musicians to spurn FM rock. This rejection invigorated punk rock and its various offspring, and also encouraged the development of alternative rock programming, especially college radio, which in turn helped propel the careers of bands like R.E.M., Hüsker Dü, and Soundgarden.

Alda, Alan (1936—)

Although his prolific and extremely successful career evolved from acting on stage to writing, directing, and acting in his own films, Alan Alda will forever be best remembered for his inimitable portrayal of Captain Benjamin Franklin "Hawkeye" Pierce in the award-winning TV comedy series *M*A*S*H*, which ran from 1972 to 1983. The most popular pre-*Seinfeld* series in television history, *M*A*S*H* concerned a Korean War medical unit struggling to maintain their humanity—indeed, their very *sanity*—throughout the duration of the war, by relying on humor in the form of constant wisecracking and elaborate practical jokes. Featuring humor that was often more black than conventional, the show proved an intriguingly anachronistic hit during the optimistic 1980s. Alda's Pierce was its jaded Everyman; a compassionate surgeon known for his skills with a knife and the razor sharp wit of his tongue, Hawkeye Pierce—frequently given to intellectual musings on the dehumanizing nature of war—had only disdain for the simplistic and often empty-headed military rules.

Born Alphonso Joseph D'Abruzzo—the son of popular film actor Robert Alda (*Rhapsody in Blue*)—Alan Alda made his stage debut in summer stock at 16. He attended New York's Fordham University, performed in community theater, appeared both off and on Broadway, and did improvisational work with the Second City troupe in New York. This eventually led to his involvement in television's *That Was the Week that Was*. His performance in the play *Purlie Victorious* led to his film acting debut in the screen adaptation *Gone are the Days* in 1963. Then followed a succession of notable film roles such as *Paper Lion* (1968) and Mike Nichols' *Catch-22* (1970).

Though his fledgling film career was sidelined by *M*A*S*H*, during the course of the show's increasingly successful eleven-year run Alda's popularity resulted in a succession of acting awards,

(From left) Alan Alda with David Ogden Stiers and Jamie Farr in a scene from *M*A*S*H*.

including three Emmy awards, six Golden Globes, and five People's Choice Awards as "Favorite Male Television Performer." Simultaneously, his increasing involvement behind the scenes in the creation of the show led to Alda writing and directing episodes, and, in turn, to receiving awards for these efforts as well. Ultimately, Alan Alda became the only person to be honored with Emmys as an actor, writer and director, totaling 28 nominations in all. He has also won two Writer's Guild of America Awards, three Director's Guild Awards, and six Golden Globes from the Hollywood Foreign Press Association.

While on hiatus from the show, Alda also began leveraging his TV popularity into rejuvenating his film career, appearing in the comedies *Same Time Next Year* (1978, for which he received a Golden Globe nomination) and Neil Simon's *California Suite* (1979). Alda also wrote and starred in the well-received *Seduction of Joe Tynan* (1979) about a senator's corruption by the lure of increasing power, and by the wiles of luminous lawyer Meryl Streep. In 1981, Alda expanded his talents—writing, directing, and starring in *Four Seasons*, which proved a critical and financial hit for the middle-aged set, and spawned a short-lived television series. His three subsequent and post-*M*A*S*H* films as writer/director/star—*Sweet Liberty* (1986), *A New Life* (1988), and *Betsy's Wedding* (1990)—have met with mediocre success, leading Alda to continue accepting acting roles. He has frequently worked for Woody Allen—appearing in *Crimes and*

Misdemeanors for which he won the New York Film Critic's Award for best supporting actor, *Manhattan Murder Mystery*, and *Everyone Says I Love You*. Alda even good-naturedly accepted the Razzie Award for "Worst Supporting Actor" for his work in the bomb *Whispers in the Dark* (1992). Alda has also continued to make television and stage appearances; his role in Neil Simon's *Jake's Women* led to a Tony Nomination (and the starring role in the subsequent television adaptation), and the recent *Art*, in which Alda starred on Broadway, won the Tony for Best New Play in 1998.

However, in the late 1990s, Alda also made a transition into unexpected territory as host of the PBS series, *Scientific American Frontiers*, which afforded him the opportunity both to travel the world and to indulge his obsession with the sciences, as he interviews world-renowned scientists from various fields.

An ardent and long-married (to photographer Arlene Weiss) family man, Alda has also been a staunch supporter of feminist causes, campaigning extensively for the passage of the Equal Rights Amendment, which led to his 1976 appointment by Gerald Ford to the National Commission for the Observance of International Women's Year. It was critic Janet Maslin, in her 1988 *New York Times* review of Alda's *A New Life*, who seemed to best summarize Alda's appeal to society: "Alan Alda is an actor, a film maker, and a person, of course, but he's also a state of mind. He's the urge, when one is riding in a

gondola, to get up and start singing with the gondolier. He's the impulse to talk over an important personal problem with an entire roomful of concerned friends. He's the determination to keep looking up, no matter how many pigeons may be flying overhead."

Ali, Muhammad (1942—)

In every generation there emerges a public figure who manages to dramatize the tensions, the aspirations, even the spirit of the epoch, and by so doing, define that era for posterity. Thus F. Scott Fitzgerald, the personification of the heady mixture of genius and new social possibilities played out in a very public manner, defined the Roaring Twenties. It is difficult to define how this process occurs, but when it happens it becomes obvious how ineluctably right the person is, how fated they are to play out the drama of their age; it appears that their ascendance is fated, so necessary that were the figure not existing, he or she would have to be created. Such was the impact of Muhammad Ali. Ali was a new kind of athlete, utterly divorced from the rags-to-riches saga of previous black boxers. By the close of the 1960s, Ali had become one of the most celebrated men on the planet, a hero in Africa, the third world, and in the ghettos of black America. Placing his convictions before his career, Ali became the heavyweight boxing champion of the world, all the while acting as an ambassador for the emerging black power movement. Gifted, idiosyncratic, anomalous—we may never see the likes of him again.

Unlike previous black champions—Joe Louis, Floyd Patterson, Sonny Liston—Ali was anomalous in that he was not a product of poverty and had no dreadful past from which he sought to escape. Born Cassius Clay, in the border South city of Louisville, Kentucky, he was a child of the black middle class. His father, Cassius Clay, Sr., a loquacious man with a propensity for Marcus Garvey-inspired rhetoric, was a frustrated artist who painted signs for a living. For a black man of the time, he was one step removed from the smattering of black professionals who occupied the upper strata of black society. Although Louisville was a segregated city, and young Cassius suffered the slights of Jim Crow, Louisville was not the deep South. Still, the presence of inequity gnawed at the young boy. Behind his personal drive there would always exist the conviction that whatever status he attained would be used to uplift his race.

If it wasn't for the fact that it is true, the story of Ali's introduction to boxing would seem apocryphal. At the tender age of twelve, Clay was the victim of a petty crime: the theft of his new Schwinn bicycle from outside of a convention center. Furious at the loss, Cassius was directed to the basement of the building where he was told a police officer, one Joe Martin, could be found. Martin, a lesser figure in the annals of gym-philosophers, ran a boxing program for the young, and in his spare time produced a show, *Tomorrow's*

Champions, for a local TV station. Martin waited out Clay's threats of what he would do when he found the thief, suggesting the best way to prepare for the impending showdown was to come back to the gym. Clay returned the very next day, and soon the sport became an obsession. While still in his teens he trained like a professional athlete. Even at this tender age Clay possessed a considerable ego, and the mouth to broadcast his convictions. Exulting after his first amateur bout, won in a three round decision, he ecstatically danced around the ring, berating the crowd with claims to his superiority.

From the beginning Martin could see Clay's potential. He was quick on his feet with eyes that never left his opponent, always appraising, searching for an opening. And he was cool under pressure, never letting his emotions carry him away. Never a particularly apt student (he would always have difficulty reading), Clay nonetheless possessed an intuitive genius that expressed itself in his unique boxing style and a flair for promotion. He was already composing the poems that were to become his trademark, celebrating his imminent victory and predicting the round in which his opponent would fall in rhyming couplets. And even at this stage he was attracting vociferous crowds eager to see his notorious lip get buttoned. Clay did not care. Intuitively, he had grasped the essential component of boxing showmanship: *schadenfreude*. After turning pro, Clay would pay a visit to professional wrestler Gorgeous George, a former football player with long, blond tresses and a knack for narcissistic posturing. "A lot of people will pay to see someone shut your mouth," George explained to the young boxer. In the ensuing years, Clay would use parts of George's schtick verbatim, but it was mere refinement to a well-developed sensibility.

Moving up the ranks of amateur boxing, Clay triumphed at the 1960 Rome Olympics, besting his opponents with ease and winning the gold medal in a bout against a Polish coffeehouse manager. Of his Olympic performance A.J. Liebling, boxing aficionado and *New Yorker* magazine scribe, wrote he had "a skittering style, like a pebble scaled over water." Liebling found the agile boxer's style "attractive, but not probative." He could not fathom a fighter who depended so completely on his legs, on his speed and quickness; one who presumed that taking a punch was not a prerequisite to the sport. Other writers, too, took umbrage with Clay's idiosyncratic style, accustomed to heavyweights who waded into their opponents and kept punching until they had reduced their opponents to jelly. But if there was a common denominator in the coverage of Clay's early career, it was a uniform underestimation of his tactical skills. The common assumption was that any fighter with such a big mouth had to be hiding something. "Clay, in fact, was the latest showman in the great American tradition of narcissistic self-promotion," writes David Remnick in his chronicle of Ali's early career, *King of the World*. "A descendant of Davy Crockett and Buffalo Bill by way of the dozens." By the time he had positioned himself for a shot at the title against Sonny Liston, a powerful slugger, and in many ways Clay's antithesis, Clay had refined his provocations to the level of psychological warfare.

Sonny Liston was a street-brawler, a convicted felon with mob affiliations both in and out of the ring (even after beginning his professional career, Liston would work as a strong-arm man on occasion). In his first title fight against Floyd Patterson, Liston had found himself reluctantly playing the role of the heavy, the jungle beast to Patterson's civil rights Negro (the black white hope, as he was called). He beat Patterson like a gong, twice, ending both fights in the second round, and causing much distress to the arbiters of public morality. After winning the championship, Liston had tried to reform

Muhammad Ali (left) fighting Joe Frazier.

his tarnished image, found the media unsympathetic, and subsided into a life of boozing and seedy amusement interrupted occasionally by a challenge to his title.

It was against this backdrop of racial posturing that Clay fought his first championship bout against Liston in 1964. A seven-to-one underdog, no one expected much of the brash, young fighter who had done little to engender sympathy with the sporting press (not especially cordial to begin with, the more conservative among them were already miffed by the presence of Malcolm X in Clay's entourage). His Louisville backers merely hoped their investment would exit the

ring without permanent damage. To unsettle his opponent and heighten interest in the bout, Clay launched a program of psychological warfare. Clay and his entourage appeared at Liston's Denver home early one morning, making a scene on his front lawn until the police escorted them from the premises. When Liston arrived in Miami to begin training, Clay met him airport, where he tried to pick a fight. He would periodically show up at Liston's rented home and hold court on his front lawn. Clay saved his most outrageous performance for the weigh-in, bugging his eyes out and shouting imprecations. "Years later, when this sort of hysteria was understood as a standing joke, the

writers merely rolled their eyes,” writes Remnick, “but no one had ever seen anything like this before. . . . Traditionally, anything but the most stoic behavior meant that a fighter was terrified, which was precisely what Clay wanted Liston to believe.”

An astute judge of character, Clay suspected Liston would train lightly, so sure was he of Clay’s unbalanced condition, but Clay himself was in top shape. His game-plan was to tire out Liston in the first rounds, keeping him moving and avoiding his fearsome left until he could dispatch him. “Round eight to prove I’m great!” he shouted at the weigh-in. At the sparsely attended match, Liston called it quits after the sixth round. Incapable or unwilling to take more abuse, he ended the fight from his stool. “Eat your words!” Clay shouted to the assembled press, and a new era in boxing had begun.

If Clay’s white backers, the cream of Louisville society who had bankrolled him for four years—and it should be mentioned, saved him from a career of servitude to organized crime—thought Clay, having gained the championship, would then settle into the traditional champion’s role—public appearances at shopping malls, charity events, and so forth—they were sorely mistaken. Immediately following the fight, Clay publicly proclaimed his allegiance to Elijah Muhammad’s Nation of Islam, a sect that had caused controversy for its segregationist beliefs and bizarre theology. In a break with the sect’s normative habit of substituting X for their “slave” surname, the religious leader summarily bestowed upon Clay the name Muhammad Ali; loosely translated as meaning a cousin of the prophet who is deserving of great praise. Now his backers not only had a fighter who preferred visiting in the ghetto to meeting celebrities, but also one with a controversial religious affiliation.

In the press, the backlash was immediate and vindictive. True, writers such as Norman Mailer, Gay Talese, and Tom Wolfe were sympathetic, but the majority scorned him, disparaged him, taking his very existence as an affront. For Ali, the championship was a bully pulpit to launch a spirited attack against “the white power structure.” In time, he would drop the more arcane elements of Black Muslim belief (like the African mother-ship circling the earth waiting for the final confrontation between the races), but he would never lose his Muslim faith, merely temper it with his customary humor and lassitude. In the 1960s, he might ape Muhammad’s racist screeds to reporters, but his orthodoxy was such that it allowed Ali to retain the white men in his corner, or his Jewish accountant, who Ali jokingly referred to as “my Jewish brain.”

No one reacted so vehemently to Ali’s public radicalism as Floyd Patterson. After Ali destroyed Liston in the first round of their rematch, Patterson took it as his personal mission to vanquish Ali, to return the crown to the fold of the NAACP, celebrity-endorsed, good Negroes of America and out of the hateful clutches of this Black Muslim upstart. He inveighed against Ali at every opportunity, attacking him in print in a series of articles in *Sports Illustrated* in which he staked his claim to the moral high ground. Ali called Patterson an Uncle Tom, and visited his training camp with a bag of carrots for “The Rabbit.” The fight, already something of a grudge match, assumed all the solemnity of a theological debate.

For Patterson, the match itself was a humiliation. Ali was not content to defeat Patterson: he was determined to humiliate him utterly, and in so doing, his temperate integrationist stance. Ali danced in circles around Patterson, taunting him unmercifully, and then he drew out the match, keeping Patterson on his feet for twelve rounds before the referee finally intervened.

Three months after the Patterson fight, Ali took on an opponent not so easily disposed of: the Federal Government. It began with a draft notice, eliciting from Ali the oft quoted remark: “I ain’t got no quarrel with them Vietcong.” When he scored miserably on an aptitude test—twice and to his great embarrassment; he told reporters: “I said I was the greatest, not the smartest”—Washington changed the law, so Ali alleged, solely in order to draft him. He refused the draft as a conscientious objector, and was summarily stripped of his title and banished from the ring. Many writers speak of this period—from 1967 to 1970—as Ali’s period of exile. It was an exodus from the ring, true, but Ali was hardly out of sight; instead, he was touring the country to speak at Nation of Islam rallies and college campuses and, always, in the black neighborhoods. Ali’s refusal of the draft polarized the country. Scorn was his due in the press, hate-mail filled his mail box, but on the streets and in the colleges he became a hero.

Three years later, in 1970, a Supreme Court decision overturned the adjudication of his draft status, heralding Ali’s return to boxing. But he had lost a valuable three years, possibly the prime of his boxing career. His detractors, sure that age had diminished Ali’s blinding speed, were quick to write him off, but once again they had underestimated his talent. It was true that three years of more or less enforced indolence had slowed Ali down, but his tactical brilliance was unimpaired. And he had learned something that would ultimately prove disastrous to his health: he could take a punch. While his great fights of the 1970s lacked the ideological drama of the bouts of the previous decade, they were in some ways a far greater testament to Ali the boxer, who, divested of his youth, had to resort to winning fights by strategy and cunning.

Though Ali lost his first post-exile fight to Joe Frazier (who had attained the championship in Ali’s absence), many considered it to be the finest fight of his career, and the first in which he truly showed “heart.” Frazier was a good fighter, perhaps the best Ali had yet to fight, and Ali boxed gamely for fifteen rounds, losing in the fifteenth round when a vicious hook felled him (though he recovered sufficiently to end the fight on his feet). In the rematch, Ali beat Frazier in a fight that left the former champion (who had since lost his title to George Foreman) incapacitated after fourteen punishing rounds.

The victory cleared the way for a championship bout with Foreman, a massive boxer who, like Liston, possessed a sullen mien and a prison record. The 1974 fight, dubbed the “Rumble in the Jungle” after its location in Kinshasha, capitol city of Zaire, would prove his most dramatic, memorialized in an Academy Award-winning documentary, *When We Were Kings* (1996). What sort of physical alchemy could Ali, now 32, resort to to overcome Foreman, a boxer six years his junior? True, Foreman was a bruiser, a street-fighter like Liston. True, Ali knew how to handle such a man, but in terms of power and endurance he was outclassed. To compensate, he initiated the sort of verbal taunting used to such great affect on Liston while devising a plan to neutralize his young opponent’s physical advantages: the much-vaunted rope-a-dope defense, which he would later claim was a spur-of-the-moment tactic. For the first rounds of the fight, Ali literally let Forman punch himself to exhaustion, leaning far back in the ropes to deprive Foreman of the opportunity to sneak through his defenses. By the sixth round, Foreman was visibly slowing: in the eighth he was felled with a stunning combination. Ali had once again proved his mastery, and while Foreman slunk back to America, the next morning found Ali in the streets of Kinshasha, glad-handing with the fascinated populace.

Ali would go on to fight some brilliant bouts; a rematch with Frazier which he lost, and at the age of 36, a return to win the championship for the third time from the gangly light-heavyweight, Leon Spinks. But he had continued to fight long after it was prudent to do so, firing his long-time physician, Ferdie Pacheco, after Pacheco had urged him to retire. The result: a career ending in ignominy, as he was unmercifully dissected by Larry Holmes in 1980, and by Trevor Berbick the following year in what would be his last professional bout. The aftermath was a slow slide into debilitating "Parkinsonianism," which robbed Ali of the things he had treasured most: his fluid, bewitching patter and his expressiveness, replaced by tortured speech and a face with all the expressive possibilities of a mask.

It is a measure of the man—as well as the symbiotic relationship Ali had established between himself and his public—that his infirmities did not lead to retirement from public life. A born extrovert, Ali had always been the most public of public figures, popping up unexpectedly in the worst urban blight, effusing about what he would do to improve his people's lot. This one appetite has not been diminished by age. In the late 1980s and 1990s, Ali roamed the world, making paid appearances. Though the accumulated wealth of his career was largely eaten up, it is clear that Ali has not continued his public life out of sheer economic need. Much of the money he makes by signing autographed photos he donates to charity, and those who know him best claim Ali suffers when out of the spotlight.

Ali was always like catnip to writers. Writing about him was no mere exercise in superlatives, it provided an opportunity to grapple with the *zeitgeist*. Whether fully cognizant of the fact or not, Ali was like a metal house bringing down the lightning. He embodied the tumult and excitement of the 1960s, and there is no more fitting symbol for the era than this man who broke all the rules, refusing to be cowed or silenced, and did it all with style. His detractors always thought him a fraud, a peripatetic grandstander devoid of reason, if not rhyme. But they failed to understand Ali's appeal. For what his fans sensed early on was that even at the height of his buffoonery, his egotistical boasting, and his strident radicalism, the man was more than the measure of his talents, he was *genuine*. His love of his people was never a passing fad, and while the years stole his health, his ease of movement, and the banter he had used to such great effect, forcing him to resort to prestidigitation to compensate for the silencing of his marvelous mouth, his integrity remained beyond reproach. In the final judgment, Ali needed the crowds as much as they at one time needed him, not for mere validation, but because they each saw in the other the best in themselves.

Alice

Sitcom television in the 1970s featured a disproportionate number of liberated women, divorced or widowed, with or without children, making it on their own. CBS' blue (and pink) collar *Alice* was no exception, but for the fact of its tremendous success. *Alice* was one of the top 10 shows in most of its nine years on the air.

Alice was based on the 1975 film *Alice Doesn't Live Here Anymore*, which starred Academy Award winner Ellen Burstyn in the title role. The next year, CBS aired *Alice*, starring Linda Lavin as Alice Hyatt, the recent widow and aspiring singer from New Jersey who moves to Phoenix with her precocious 12-year-old son Tommy (Philip McKeon) to start a new life. While looking for singing work, Alice takes a "temporary" job (which lasted from 1976 to 1985) as a waitress at Mel's Diner, the local truck stop owned and operated by Mel Sharples (Vic Tayback, reprising his role from the movie). Mel was gruff, stingy, and famous for his chili. The other waitresses at the diner, at least at first, were Flo (Polly Holliday) and Vera (Beth Howland). Flo was experienced, slightly crude, outspoken and lusty, and became famous for her retort "Kiss my grits!," which could be found on t-shirts throughout the late 1970s. Vera was flighty and none-too-bright; Mel liked to call her "Dingie." The truck stop drew a fraternity of regulars, including Dave "Reuben Kinkaid" Madden.

Diane Ladd had played Flo in the movie, and when Holliday's Flo was spun off in 1980 (in the unsuccessful *Flo*, wherein the titular waitress moves to Houston to open her own restaurant), Ladd joined the sitcom's cast as Belle, a Mississippian who wrote country-western songs and lived near Alice and Tommy in the Phoenix Palms apartment complex. Belle was sort of a Flo clone; in fact, the only difference was the accent and the lack of catch phrase. Belle left after one year, and was replaced by Jolene (Celia Weston), yet another Southern waitress. In 1982, Mel's pushy mother Carrie (Martha "Bigmouth" Raye) joined and almost took over the diner. The fall of 1983 brought love to the hapless Vera, who, after a whirlwind courtship, married cop Elliot Novak (Charles Levin). The following fall Alice got a steady boyfriend, Nicholas Stone (Michael Durrell). Toward the end, things did get a little wacky, as is common for long-lasting shows; in one late episode, Mel purchases a robot to replace the waitresses.

In the last original episode of the series, Mel sold the diner, and despite his reputation for cheapness, gave each of his waitresses a \$5000 bonus. Jolene was planning to quit and open a beauty shop anyway, Vera was pregnant, and Alice was moving to Nashville to sing with a band, finally. But viewers did get to hear Lavin sing every week. She over-enunciated the theme song to *Alice*, "There's a New Girl in Town," written by Alan and Marilyn Bergman and David Shire.

Alice Hyatt was a no-nonsense, tough survivor, and her portrayer spoke out for equal opportunity for women. Lavin won Golden Globes in 1979 and 1980 and was one of the highest paid women on television, making \$85,000 an episode and sending a palpable message to women. The National Commission on Working Women cited

Linda Lavin (left) and Polly Holliday in a scene from the television show *Alice*.

Alice as “the ultimate working woman”; its annual award is now called the “Alice.”

Alien

Despite the success of Stanley Kubrick’s *2001: A Space Odyssey* in 1968, science fiction films were often viewed as juvenile and

escapist. Much of that changed in the late 1970s and the 1980s thanks to a new wave of films which challenged the notions of science fiction film, led by *Alien*, directed by Ridley Scott in 1979. The film was a critical and commercial success, garnering several awards including an Academy award nomination for Best Art Direction, an Oscar for Best Visual Effects, a Saturn Award from the Academy of Science Fiction, Horror, and Fantasy Films for Best Science Fiction Film, a Golden Globe nomination for Best Original Score, and a prestigious Hugo Award for Best Dramatic Presentation. Its adult sensibilities were enhanced by a stellar cast which included Tom Skerrit, Sigourney Weaver, Yaphet Kotto, John Hurt, Veronica Cartwright, and Harry Dean Stanton.

Inspired by *It*, *The Terror From Beyond Space*, *Alien* deftly combined the genres of horror and science fiction to create a thoroughly chilling and suspenseful drama. The slogan used to market the film aptly describes the film’s effect: “In space, no one can hear you scream.” The storyline involved the crew of the *Nostromo*, an interplanetary cargo ship. They answer the distress call of an alien vessel, only to discover a derelict ship with no life forms. At least that

is what they think, until further investigation reveals a number of large eggs. One “hatches” and the emergent life form attaches itself to a crew member. In an effort to save the man’s life, they bring him back aboard their ship, where the creature escapes, grows at an accelerated rate, and continues through the rest of the film hunting the humans one by one. The film is often noted for its progressive politics. The film presented a racially mixed crew, with well-drawn class distinctions. The members of the upper echelon, represented by the science officer Ash, are cold and literally not-human (he is an artificial life form). It is later revealed in the story that the crew is put at risk purposely for the benefit of “the company,” who wants to secure the alien life form for profit ventures. One of the most discussed aspects of the film was the prominence of the female characters, notably that of Ripley, played by Weaver. The film reflects changing gender roles in the culture for it posits Ripley as the hero of the film. She is intelligent, resourceful, and courageous, managing to save herself and destroy the creature.

The success of the film spawned three sequels, which as Thomas Doherty describes, were not so much sequels as extensions, for they continued the original storyline, concentrating on its aftermath. James Cameron, straight off the success of the box-office action film *The Terminator*, directed the second installment, *Aliens*, released in 1986. He continued the Alien tradition of genre blending by adding to the horror and science fiction elements that of the war film and action adventure. Unlike the first film which utilized a slow, creeping pace to enhance suspense, *Aliens* makes use of fast pacing and jumpcuts to enhance tension. Here, Ripley, the only expert on the alien species, volunteers to assist a marine unit assigned to rescue colonists from a planet overrun by the creatures. Again, she proves herself, eventually resting command from the incompetent lieutenant who leads them. She survives the second installment to return in *Alien 3*, directed by David Fincher in 1992. *Alien Resurrection* (*Alien 4*), directed by Jean-Pierre Juenet, was released in 1997.

Alka Seltzer

Alka Seltzer, which bubbles when placed in water, is an over the counter medication containing aspirin, heat-treated sodium bi carbonate, and sodium citrate. Originally created in 1931, it was mistakenly and popularly used to treat hangovers. The product has had a variety of well-known commercial advertisements. The first one introduced the character “Speedy” Alka Seltzer, who was used in 200 commercials between 1954-1964. The other two well received advertisements include a jingle, “Plop, Plop, Fizz, Fizz,” and a slogan, “I can’t believe I ate the whole thing”; both were used in the 1970s and 1980s. By the late 1990s, the medicine was still popular enough to be found on the shelves of various retail stores.

All About Eve

A brilliantly cynical backstage look at life in the theatre, *All About Eve* is a sophisticated movie gem that has become a cult classic since its debut in 1950. With a sparkingly witty script written and directed by Joseph Mankiewicz, *All About Eve* hinges on a consummate Bette Davis performance. Playing aging Broadway star Margo Channing, Davis is perfect as the vain, vulnerable, and vicious older actress, while delivering such oft-quoted epigrams as “Fasten your seat belts, it’s going to be a bumpy night.” When aspiring young actress Eve Harrington, played by Anne Baxter, conspires to take over both Margo Channing’s part and her man, an all-out battle ensues between the two women. Co-starring George Sanders, Celeste Holm, Thelma Ritter, and featuring a very young Marilyn Monroe, *All About Eve* won six Oscars, including Best Picture and Best Director. *All About Eve* is the cinematic epitome of Hollywood wit and sophistication.

All in the Family

All in the Family, with fellow CBS series *The Mary Tyler Moore Show* and *M*A*S*H*, redefined the American situation comedy in the early 1970s. Based on the hit British show *Till Death Us Do Part*, *All in the Family* introduced social realism and controversy, conveyed in frank language, to the American sitcom while retaining the genre’s core domestic family and revisiting its early blue-collar milieu. That generic reconstruction proved to be as popular as it was innovative: It was number one in the Nielsen ratings for its first five full years on the air and ranked out of the Top 20 only once in its 12-year broadcast life. At the same time, it created a long and occasionally vituperative discussion over the propriety of racism, sexism, religious bias, and politics as the situation of a half-hour comedy.

All in the Family was the creation of writer/producer Norman Lear, who purchased the rights to *Till Death Us Do Part* in 1968 after reading of the turmoil the show had provoked in its homeland. Citing the British comedy’s attention to major social issues such as class and race and to internal “generation gap” family conflicts, Lear and his Tandem production company developed two pilot remakes, *Justice for All* and *Those Were the Days*, in 1968-69 for ABC. Concerned about audience tests showing a negative reaction to protagonist Archie Justice, ABC rejected both pilots. Lear’s agents shipped the second pilot to CBS, which was about to reconfigure its schedule to appeal to a younger, more urban demographic. Though sharing

ABC’s concerns about the coarseness of renamed paterfamilias Archie Bunker, CBS programmers were enthusiastic about Lear’s show, now called *All in the Family*, and scheduled its debut for January 12, 1971.

The first episode of *All in the Family* introduced audiences to loudmouth loading-dock worker Archie Bunker (played by Carroll O’Connor), his sweetly dim wife Edith (Jean Stapleton), their rebellious daughter Gloria (Sally Struthers), and her scruffy radical husband Michael Stivic (Rob Reiner), all of whom shared the Bunker domicile at 704 Hauser Street in Queens. After an opening that suggested a sexual interlude between Michael and Gloria far in excess of what sitcoms had previously offered, the audience heard Archie’s rants about race (“If your spics and your spades want their rightful piece of the American dream, let them get out there and work for it!”), religion (“Feinstein, Feinberg—it all comes to the same thing and I know that tribe!”), ethnicity (“What do you know about it, you dumb Polack?”) and the children’s politics (“I knew we had a couple of pinkos in this house, but I didn’t know we had atheists!”). Michael gave back as good as he got, Gloria supported her husband, and Edith forebore the tirades from both sides with a good heart and a calm, if occasionally stupefied, demeanor in what quickly came to be the show’s weekly formula of comedic conflict.

Immediate critical reaction to all of this ranged from wild praise to apocalyptic denunciation, with little in between. Popular reaction, however, was noncommittal at first. The show’s initial ratings were low, and CBS withheld its verdict until late in the season, when slowly rising Nielsen numbers convinced the network to renew it. Summer reruns of the series, along with two Emmys, exponentially increased viewership; by the beginning of the 1971-72 season, *All in the Family* was the most popular show in America. In addition to his “pinko” daughter and son-in-law, Archie’s equally opinionated black neighbor George Jefferson, his wife’s leftist family, his ethnically diverse workplace and his all-too-liberal church became fodder for his conservative cannon. Household saint Edith was herself frequently in the line of Archie’s fire, with his repeated imprecation “Stifle yourself, you dingbat!” becoming a national catch phrase. The social worth of the Bunkers’ battles became the focus of discussions and commentary in forums ranging from *TV Guide* to *The New Yorker* to *Ebony*, where Archie Bunker was the first white man to occupy the cover. Social scientists and communication scholars joined the debate with empirical studies that alternately proved and disproved that *All in the Family*’s treatment of race, class, and bigotry had a malign effect on the show’s viewers and American society.

As the controversy over *All in the Family* raged throughout the 1970s, the series itself went through numerous changes. Michael and Gloria had a son and moved out, first to the Jeffersons’ vacated house next door and then to California. Archie, after a long layoff, left his job on the loading dock and purchased his longtime neighborhood watering hole. And Edith, whose menopause, phlebitis, and attempted rape had been the subjects of various episodes, died of a stroke. With her passing, *All in the Family* in the fall of 1979 took on the new title, *Archie Bunker’s Place*. Edith’s niece Stephanie (Danielle Brisebois), who had moved in with the Bunkers after the Stivics left Queens, kept a modicum of “family” in the show; with Archie’s bar and his cronies there now the focus, however, *Archie Bunker’s Place*, which ran through 1983 under that title, addressed character much more than the social issues and generational bickering that had defined the original.

(From left) Sally Struthers, Rob Reiner, Jean Stapleton, and Carroll O'Connor in a scene from *All in the Family*.

Time has been less kind to *All in the Family* than to its fellow 1970s CBS sitcom originals. Its social realism, like that of Depression-era dramas, is so rooted in its age and presented so broadly that it translates to other places and eras far less successfully than the character-driven *MTM* and the early *M*A*S*H*. Its most lasting breakthrough in content was not a greater concern with political and social issues but a growing obsession with sex as a verbal and visual source of humor. Even Lear's resurrection of three-camera live videotaping, a standard of early television variety shows, which added speed and intensity to the bristling wit of the early episodes, looked cheap and tired by the end of the series. Nonetheless, at its best, *All in the Family* used sharp writing and strong acting to bring a "real" world the genre had never before countenanced into the American situation comedy. If its own legacy is disappointing, the disappointment may speak as much to the world it represented as it does the show itself.

All My Children

From its January 5, 1970, debut, soap opera *All My Children*, with its emphasis on young love and such topical issues as abortion, the Vietnam War, and the environment, attracted college students in unusually high numbers, suddenly expanding the traditional market and changing the focus of the genre forever. The structure of the program has been the traditional battling families concept with the wealthy, dysfunctional Tyler family of Pine Valley pitted against the morally upright but decidedly middle-class Martins. While the stories are mainly romantic and triangular, what makes the show unique is its outright celebration of young lovers and their loves.

Chuck Tyler and Phil Brent were teenagers when their rivalry for the affections of Tara Martin split apart their friendship and pitted the Martins against the Tylers. This conflict drove the series for many years until it was supplanted in 1980 by a romance between Greg Nelson and Jenny Gardner, which was beset by interference from his controlling mother; a devious young flame, Liza; and ultimately Greg's own paralysis. This was followed in succeeding years by a parade of almost unbelievable characters who, in their flamboyance and eccentricity, overcame some rather formulaic and often saccharine story lines. Among them was the matriarch Phoebe Tyler who, in her obsession with social propriety, bullied her family into almost hypocritical submission as they sought to achieve their fantasies out of sight of her all-observing eyes. Another was the gum-chewing Opal Gardner, Jenny's meddling mother. Despite being little more than caricatures rather than characters, they provided the audience with welcome comic relief from the earnestness of the show's young lovers and the stability of its tent-pole characters.

The show's most famous character is the beautiful, spoiled, and vindictive Erica Kane, played with an almost vampy flourish by soap queen Susan Lucci (perennially nominated for an Emmy but, as of the late 1990s, holding the record for most nominations without a win). Erica represents the little, lost, daddy's girl who wants nothing more than her father's love and will stop at nothing to achieve at least some facsimile of it. Although she steamrolls men in her quest for love, she has remained sympathetic even as she wooed and divorced three husbands and a succession of lovers in a reckless attempt to fill the void left by her father's absence and neglect. Much of this is due to Lucci's remarkable portrayal of Erica's inherent vulnerability and story lines that have dealt with rape, abortion, substance abuse, and motherhood. Yet, despite her increasing maturity as a character, Erica has remained compulsively destructive over the years, not only destroying her own happiness but the lives of all of those who come in contact with her.

Much of *All My Children's* success can be attributed to its consistently entertaining and intelligent characterizations and its penchant for presenting a mix of styles with something calculated to please almost everyone. Although this may be somewhat emotionally unsettling within the context of its mingled story lines, it does reflect life as it is, which is anything but neat and tidy. Much of the credit for the show's remarkable constancy over its three-decade run is the fact that it has been almost entirely written by only two head writers—Agnes Nixon and Wisner Washam—and kept many of its original actors, including Lucci, Ruth Warrick (Phoebe), Mary Fickett (Ruth Brent) and Ray MacDonnell (Dr. Joseph Martin).

All Quiet on the Western Front

One of the greatest pacifist statements ever to reach the screen, *All Quiet on the Western Front* follows a group of German youths from their patriotic fervor at the start of World War I in 1914, to the death of the last of their number in 1918. Based on Erich Maria Remarque's like-titled novel, *All Quiet* downplays the political issues that led to World War I and dwells instead on the folly and horror of war in general. Filmed at a cost of \$1.2 million and populated with 2,000 extras, many of them war veterans, *All Quiet* garnered widespread critical acclaim and Academy Awards for Best Picture and Best Director (Lewis Milestone). It also made a star of Lew Ayres, a previously unknown 20 year-old who played Remarque's autobiographical figure of Paul Baumer. A 1990 addition to the National Film Registry, *All Quiet* remains a timely and powerful indictment of war.

Allen, Steve (1921—)

As an actor, talk show host, game show panelist, musician, composer, author, and social commentator, Steve Allen helped define the role of television personality in the early days of the medium. No less a personage than Noel Coward dubbed Allen "the most talented man in America." An encyclopedic knowledge of a variety of subjects combined with a remarkable ability to ad-lib has made him a distinctive presence on American TV sets since the 1950s.

Stephen Valentine Patrick William Allen was born in New York City on December 26, 1921 to vaudeville performers Billy Allen and Belle Montrose. Allen grew up on the vaudeville circuit, attending over a dozen schools in his childhood even as he learned the essence of performing virtually through osmosis. He began his professional career as a disk jockey in 1942 while attending the University of Arizona, and worked in West Coast radio throughout the decade. His first regular TV work was as host of *Songs for Sale* on NBC, beginning in 1951.

In September 1954, Allen was chosen to host NBC's *The Tonight Show*. The brainchild of NBC executive Pat Weaver, *The Tonight Show* was developed as a late-night version of the network's *Today Show*, a morning news and information series. Allen confidently took television to new vistas—outside, for example, where a

Steve Allen

uniformed Allen would randomly stop cars on Manhattan highways. Allen would frequently make elaborate prank phone calls on the air, or read the nonsensical rock lyrics of the era (“Sh-Boom,” “Tutti Frutti”) in a dramatic setting. Allen’s potpourri of guests ranged from Lincoln biographer Carl Sandburg to beat comic Lenny Bruce. Allen even devoted broadcasts to discussions of serious subjects, including organized crime.

After two years on late night television, Allen shifted to a Sunday night variety series on NBC, opposite the then-reigning *Ed Sullivan Show* on CBS. Allen and Sullivan fiercely competed to land top guests. In his most memorable coup, Allen brought Elvis Presley on his show first, where the 21-year-old rock star sang “Hound Dog” to an actual basset hound. Allen’s NBC show lasted until 1960.

The group of comedic sidekicks Allen introduced to a national audience included Tom Poston, Don Knotts, Louis Nye (whose confident greeting, “Hi-ho, Steverino,” became Allen’s nickname), Don Adams, Bill Dana, and Pat Harrington, Jr. His *Tonight Show* announcer, Gene Rayburn, became a popular game show host in the 1970s. Allan Sherman, who would later achieve Top Ten status with such song parodies as “Hello Muddah, Hello Faddah,” originally produced Allen’s 1960s syndicated talk show.

In public and private, Allen exhibited one of the quickest wits in show business. When told that politician Barry Goldwater was half-Jewish, Allen replied, “Too bad it’s not the top half.” Addressing a drug rehabilitation clinic, Allen said he hoped his presence would give “a real shot in the arm” to the organization. As a panelist on the *What’s My Line?* game show, Allen’s question (used to identify a

product manufactured or used by the contestant), “Is it bigger than a breadbox?” entered the national language.

Allen’s irreverent demeanor was a direct influence upon David Letterman; Letterman acknowledged watching Allen’s 1960s television work while a teenager, and many of Allen’s on-air stunts (wearing a suit made of tea bags, and being dunked in a giant cup) found their way onto Letterman’s 1980s series (Letterman once wore a suit of nacho chips, and was lowered into a vat of guacamole).

Allen’s ambitious *Meeting of Minds* series, which he had developed for over 20 years, debuted on PBS in 1977. Actors portraying world and philosophical leaders throughout history—on one panel, for example, Ulysses S. Grant, Karl Marx, Christopher Columbus, and Marie Antoinette—would come together in a forum (hosted by Allen) to discuss great ideas. The innovative series was among the most critically acclaimed in television history, winning numerous awards during its five-year span.

Allen has written over 4,000 songs, more than double Irving Berlin’s output. His best known composition is “The Start of Something Big,” introduced by Steve Lawrence and Eydie Gorme, who were themselves introduced to one another by Allen. Allen also composed several Broadway musical comedy scores, including the 1963 show *Sophie*. His more than 40 books run the gamut from mystery novels to analyses of contemporary comedy and discussions on morality and religion. The sardonic Oscar Levant once remarked, “When I can’t sleep, I read a book by Steve Allen.”

Allen’s best-known movie performance was the title role in the 1956 hit *The Benny Goodman Story*, and he has made cameo appearances in *The Sunshine Boys* (1975) and *The Player* (1992). He also played himself on two episodes of *The Simpsons*, including one in which Bart Simpson’s voice was altered by computer to sound like Allen’s.

While attaining the status of Hollywood elder statesman, he remained an outspoken social and political commentator through the 1990s, and lent his name to anti-smoking and pro-family values crusades. After Bob Hope called Allen “the Adlai Stevenson of comedy,” Allen said he preferred to describe himself as “the Henny Youngman of politics.”

Allen, Woody (1935—)

Woody Allen is as close to an auteur as contemporary popular culture permits. While his style has changed dramatically since the

Woody Allen

release of *Take the Money and Run* (1969), his work has always been distinctively his. Over the last thirty years, he has epitomized the ideal of complete artistic control. His reputation for eclectic casting, neurotic privacy, and the intertwining of his personal and professional lives has made him a recognizable public phenomenon even among people who have never seen one of his films.

Born Allan Stewart Konigsberg, Allen broke into show business while he was still in high school by writing jokes for newspaper columnists. As depicted in *Annie Hall* (1977), Allen grew tired of hearing other comedians do less than justice to his material and took to the Manhattan nightclub circuit. He also appeared as an actor on *Candid Camera*, *That Was the Week That Was*, and *The Tonight Show*.

In 1969, Allen was contracted to write a vehicle for Warren Beatty called *What's New Pussycat?* Though Beatty dropped out of the project, Peter O'Toole replaced him and the film was a moderate financial success. The experience (and the profit) provided Allen with the entrée to his own directorial debut, *Take the Money and Run* (1969). His early films—*Take the Money and Run* and *Bananas*—were retreads of his stand-up routines. They starred Allen and various members of improvisational groups of which he had been a part and were made on very low budgets. In 1972, he made a screen adaptation of his successful play *Play It Again Sam*. The film starred Allen and featured Tony Roberts and Diane Keaton, actors who would come to be known as among the most productive of Allen's stable of regular talent. *Play It Again Sam* was followed by a string of commercially viable, if not blockbuster, slapstick comedies—*Everything You Always Wanted to Know About Sex But Were Afraid to Ask* (1972),

Sleeper (1973), and *Love and Death* (1975)—which established Allen's hapless nebbish as the ideal anti-hero of the 1970s. Interestingly, while Allen is primarily identified as the personification of quasi-intellectual Manhattan, it bears mentioning that of these early features only *Bananas* was situationally linked to New York. In fact, the movie version of *Play It Again Sam* was moved from New York to San Francisco.

In 1977, Allen wrote, directed, and starred (with Keaton and Roberts) in *Annie Hall*. The film was a critical and commercial triumph. It won Oscars for itself, Allen, and Keaton. It was *Annie Hall*—a paean to Manhattan and a thinly veiled autobiography—that cemented Allen in the public mind as the penultimate modern New Yorker. It also established the tone and general themes of most of his later work. In 1978, he directed the dark and overly moody *Interiors*, which was met with mixed reviews and commercial rejection. In 1979, he rebounded with *Manhattan*, shot in black and white and featuring then little known actress Meryl Streep. *Manhattan* was nominated for a Golden Globe Award and three Oscars. It won awards from the National Society of Film Critics and the New York Film Critics' Circle. While it was not as popular with the public as *Annie Hall*, most critics agree that it was a substantially better film.

Refusing to be comfortable with an established style or intimidated by the public rejection of *Interiors*, Allen entered a period of experimentation: *Stardust Memories* (1980) a sarcastic analysis of his relationship to his fans; the technical tour-de-force *Zelig* (1983); *The Purple Rose of Cairo*, a Depression-era serio-comedy in which a character (Jeff Daniels) comes out of the movie screen and romances one of his fans (Mia Farrow); and others. All appealed to Allen's cadre of loyal fans, but none even nearly approached the commercial or critical success of *Annie Hall* or *Manhattan* until the release of *Hannah and Her Sisters* in 1986.

Since then, Allen has produced a steady stream of city-scapes, some provocative like *Another Woman* (1988) and *Deconstructing Harry* (1998), and others that were simply entertaining such as *Manhattan Murder Mystery* (1993) and *Mighty Aphrodite* (1995). All, however, have been sufficiently successful to sustain his reputation as one of the most creative and productive film makers in American history.

Allison, Luther (1939-1997)

Luther Allison was one of the most popular and critically-acclaimed blues guitar players of the 1990s, combining classic west

Luther Allison

side Chicago guitar with rock and soul in a unique style that appealed to the mostly white blues festival audiences. Record company disputes, false starts, and a prolonged residency in Europe kept him from attaining a large popularity in America until late in life, and his untimely death from cancer cut that success short.

Allison built a world-wide reputation with his intensity and stamina, often playing three or four hours at a stretch and leaving audiences decimated. "His urgency and intensity was amazing," long-time band leader James Solberg said in *Living Blues* magazine's tribute to Allison after his death. "I mean, to stand next to a guy that was 57 years old and watch him go for four and a half hours and not stop . . . I've seen teenagers that couldn't keep up with him . . . He just had to get them blues out no matter what."

Allison was born the fourteenth of 15 children on August 17, 1939 in Widener, Arkansas to a family of sharecroppers. His family moved to Chicago in 1951 where his older brother, Ollie, began playing guitar. Allison eventually joined his brother's outfit, the Rolling Stones, as a bass player. By 1957 he had switched to guitar and was fronting his own band in clubs around the west side.

Allison's early years as a front man were heavily influenced by Freddie King, Buddy Guy, Otis Rush, and Magic Sam. Although close in age to Allison, those guitar players had started their careers earlier and served as mentors. He also listened to B.B. King at an early age, and King's influence is perhaps the most prominent in Allison's style. In fact, Allison was perhaps one of the best at emulating King's fluttering vibrato.

Allison's first break came in 1969 when he performed at the Ann Arbor Blues Festival to an audience of mostly white middle-class college students and folk listeners. That performance built Allison's reputation as a fiery, indefatigable performer and one of the hottest new stars in Blues. Allison also released his first album, *Love Me Mama*, on Chicago's Delmark label that same year. Although the album suffered from a lack of original material, it was the best-selling release on Delmark by an artist not already established with a rhythm and blues single.

Partly because of his performance at Ann Arbor, Motown Records signed him to a contract that would produce three albums on the company's Gordy label. *Bad News Is Coming* (1972) and *Luther's Blues* (1974) were excellent blues albums, but the third album *Night Life* (1976) was a critical failure. The album was Allison's first attempt to blend soul and rhythm and blues with blues, but it left his guitar and vocal buried under layers of horns and backup singers.

As the only blues artist signed to Motown, Allison became more and more frustrated with the label's lack of interest and knowledge about how to promote and record him. During this period, however, Allison toured relentlessly around the Midwest, building a base of fans among the region's college towns and continuing to play his unrestrained high-energy brand of blues. After leaving Motown, Allison recorded *Gonna Be a Live One in Here Tonight!* for tiny Rumble Records in 1979. Perfectly capturing his live show at the time, the rare album quickly became a collector's item. Allison eventually became frustrated with the American music business, and spent more and more time touring Europe where he found a warm reception. By 1984, he was living full-time in Paris, France.

According to Solberg, Allison's arrival in Europe was monumental. "They had seen Mississippi Fred McDowell and Mance Lipscomb and all those cats, but a lot of them had never seen electric

blues," he said. "I mean, to stick Luther in front of folks who had only seen an acoustic blues guy was pretty amazing, both good and bad at first. But ultimately I saw Luther turn blues aficionados' dismay into amazement and excitement. On a blues version, it was like when the Beatles hit the United States. It was like rock stardom in a blues sense." Allison's son, Bernard, also became a hit blues guitarist in Europe, often touring with his father and releasing albums under his own name.

Allison recorded nearly a dozen albums on various European labels, blending blues, rock, and soul with varying degrees of success, but he still yearned for success in the United States. By the early 1990s, Allison and his European agent Thomas Ruf returned to America and sought out Memphis producer Jim Gaines, who had previously recorded Carlos Santana and Stevie Ray Vaughan. The album *Soul Fixin' Man* was the result. Allison and Ruf formed their own label, Ruf Records, and released the record in Europe. Chicago's Alligator Records bought the album for release in the United States in 1994.

Allison had finally found the right formula, and the success of that album led to two more: *Blue Streak* (1995) and *Reckless* (1997). He won the W.C. Handy Award for Entertainer of the Year in 1996, 1997, and 1998 and collected 11 additional Handy Awards during those years.

Having conquered the blues world, Allison may have been on the verge of a cross-over breakthrough to mainstream rock similar to Stevie Ray Vaughan or Buddy Guy. But he was cut down at the height of his powers. While touring the midwest, he was diagnosed with lung cancer and metastatic brain tumors on July 10, 1997. He died while undergoing treatment in Madison, Wisconsin.

The Allman Brothers Band

The Allman Brothers Band was America's answer to the British Invasion of the 1960s. The band's improvisational sound served as the basis of country rock through the 1970s and epitomized the cultural awakening of the New South which culminated in Jimmy Carter's presidency in 1976. The Allman Brothers were the first band to successfully combine twin lead guitars and drummers.

Guitarists Duane Allman and Dickey Betts, bass player Berry Oakley and drummers Jaimoe and Butch Trucks joined Duane's

younger brother, organ player, vocalist, and songwriter Gregg in 1969. Duane, one of the greatest slide guitarists in rock history, was killed in a motorcycle accident in October, 1971 and Oakley died in a similar accident a year later. Betts assumed a dominant position in the band, writing and singing the band's biggest hit, "Ramblin' Man" in 1973. Surviving breakups and personnel changes, the band continued into the 1990s, building a devoted following much like The Grateful Dead.

Ally McBeal

The Fox Television series *Ally McBeal*, concerning the lives of employees at a contemporary law firm in Boston, struck a chord with viewers soon after its premier in September of 1997. Focusing on the life of the title character, played by Calista Flockhart, the show provoked a cultural dialogue about its portrayal of young, single career women. Fans enjoyed the updated take on working women as real human beings struggling with insecurities; the character of Ally was called a modern version of 1970s television heroine Mary Tyler Moore. Critics, however, derided the miniskirted characters in *Ally McBeal* as female stereotypes obsessed with getting married and having children. The show also gained notice for its frequent use of computer-enhanced effects, such as exaggerated facial expressions and the dancing baby that haunted Ally as a symbol of her desire for motherhood.

Herb Alpert and the Tijuana Brass

Though a life in music was not Herb Alpert's first choice—he initially attempted an acting career—he eventually became one of the

most influential figures in the history of pop music. Throughout the 1960s, the Tijuana Brass, led by Alpert's trumpet playing, dominated the pop charts with singles including "The Lonely Bull," "A Taste of Honey," and "This Guy's in Love With You." Their unique Latin-influenced sound came to be dubbed "Ameriachi."

Alpert (1935—) was not only one of pop's most successful performers, but also one of its most gifted businessmen. With Jerry Moss he co-founded A&M Records, which later became one of the most prosperous record companies in the world; its successes included the Carpenters, Joe Cocker, and many others. After selling A&M to PolyGram in 1990 for over \$500 million, Alpert and Moss founded a new label, Almo Sounds, whose artists included the punk band Garbage.

Altamont

Stung by accusations of profiteering during their 1969 United States tour, the Rolling Stones announced plans for a free concert in San Francisco at its conclusion. It would be a thank you to their adoring public, and a means to assuage their guilt. Unfortunately, the December 6 concert at Altamont Speedway near Livermore, California, ended in chaos and death. By day's end there would be four dead, four born, and 300,000 bummed-out. Although inadequate preparation was at fault, the Hell's Angels Motorcycle Club, contracted as a security force for 500 dollars worth of beer, rightfully received the lion's share of the blame—there was a film crew at hand to document their abuses from beginning to end. Over time, Altamont has achieved a kind of mythic significance. It epitomized the potential for violence in the counterculture . . . the ugliness lurking behind the bangles and beads. Altamont hailed both the real and metaphorical end to 1960s counterculture.

From its very inception, portents of doom and disaster hung in the air. It was a bad day for a concert, proclaimed astrologists. The Sun, Venus, and Mercury were in Sagittarius; the moon, on the cusp of Libra and Scorpio—very bad omens indeed. Events would soon bear them out. Almost from its inception the free concert was hampered by persistent bad luck. Initially to be held in Golden Gate Park, the San Francisco City Council turned down the permit application at the very last minute. With four days to go, an alternate site was secured; the Sears Point Speedway outside San Francisco. But even as scaffolding, generators, and sound equipment were assembled there, the owners hedged, insisting on an exorbitant bond. The deal quickly fell through. With scarcely 48 hours to go before the already announced concert date, Altamont Speedway owner, Dick Carter, volunteered the use of his property for free, anticipating a raft of favorable publicity for the race track in return. The Rolling Stones were not to be denied their magnanimous gesture.

Four members of the Hell's Angels security at the 1969 Altamont Concert.

A crew of more than 200 volunteers worked through the night to relocate and erect the massive sound and light system. As concert time approached, the organizers were hopeful the day would prove a success. With so little time to prepare, short shrift had been made with food, water, parking, and bathroom facilities, but the organizers hoped that the spirit of togetherness so apparent at Woodstock would manifest itself equally for Altamont. Daybreak arose upon a scene of chaos. Throughout the night, people had been arriving at the site. By morning automobiles ranged along the access road for ten miles; people were forced to stand in line for more than half an hour to make use of the portable toilets and queues some 300 yards long stretched from the water faucets.

As the show began in earnest, hostilities broke out almost immediately. Throughout the first set by Santana, Angels provoked fights, beat the enthusiastic, inebriated audience with pool cues when they ventured too close to the stage, and drove their motorcycles through the crowd with reckless abandon. As Jefferson Airplane began their set, Hell's Angels arranged themselves about the stage, jumping into the crowd to drub perceived trouble-makers, and finally turned on the band itself, knocking out singer Marty Balin when he made efforts to intervene in a particularly brutal melee.

The Angels calmed down briefly under the influence of the mellow country-rock of the Flying Burrito Brothers, but tempers flared once again as Crosby, Stills, Nash, and Young played. As night fell and the temperature dropped, the chilled crowd and the thoroughly soused Angels prepared for the final act.

One and a half hours later, the Stones threaded their way through the backstage crush and took the stage. Mick Jagger, dressed in a satin bat-winged shirt, half red and half black, pranced about like a Satanic jester, capering and dancing through the first number, "Jumpin' Jack Flash," but as the Angels' violent assault on the audience continued,

he was soon reduced to nervously pacing the stage, a worried expression on his face as he implored the combatants to cool down.

At will, the Angels continued their violent forays into the stunned crowd. "Sympathy for the Devil" was interrupted several times by violence, while Jagger and Keith Richards vainly beseeched the Angels. In response, an Angel seized the microphone, yelling at the crowd: "Hey, if you don't cool it, you ain't gonna hear no more music!" Wrote Stanley Booth, a reporter at the concert: "It was like blaming the pigs in a slaughterhouse for bleeding on the floor."

In fits and starts the band continued to play. They were nearing the end of "Under My Thumb" when a whirl of motion erupted at stage left. "Someone is shooting at the stage," an Angel cried. In fact, the gun had been pulled in self-defense by one Meredith Hunter, an 18-year-old black man, who had caught the Angels attention both because of his color and the fact that accompanying him was a pretty blond girl. As Hunter attempted to get closer to the stage, the Angels had chased him back into the crowd, and as they fell on him—with knife and boot and fist—he drew a gun in self defense. He was attacked with a savage fury and once the assault was completed, Angels guarded the body as the boy slowly bled to death, allowing onlookers to carry him away after they were certain he was beyond help. The Stones carried on. Unaware of what had happened—there had already been so much pandemonium—they finished their brief set then fled to a waiting helicopter.

They could not, however, escape the outrage to follow. The recriminations flew thick and fast in the press. *Rolling Stone Magazine* described Altamont as "the product of diabolical egotism, hype, ineptitude, money manipulation, and, at base a fundamental lack of concern for humanity," while Angel president Sonny Barger insisted the Stones had used them as dupes, telling KSAN radio, "I didn't go there to police nothing, when they started messing over our bikes,

they started it. Ain't nobody gonna kick my motorcycle!" Attacked from every direction, Mick Jagger initiated a ten million dollar suit against the owners of Sears Point Speedway in an effort at damage control, alleging breach of contract and fraud. No amount of litigation, however, could mitigate the simple fact that the Stones had presided over a fiasco of such magnitude that had dealt a fatal blow to the peaceful image of the hippie. Remembered as one of the most negative events of the 1960s counterculture, Altamont was, if not the final, the most memorable swan song in its prolonged death throes.

Alternative Country Music

Alternative country, also referred to as "Americana," "Cow-punk," "Y'alternative," "No Depression," and "Insurgent Country," is a catch-all term describing a diverse musical genre that combines forms of traditional country music, such as twang, swing, rockabilly, and bluegrass, with the ethos and sound of punk rock. While a definition of "alt.country" may be difficult to pin down, what it is not remains clear: it is not the "Hot Country" music of commercial Nashville, which is seen as homogenous and lacking a sense of tradition. Gram Parsons, generally considered the godfather of alt.country, noted in 1972 to Frank Murphy, "Yeah, my music is still country—but my feeling is there is no boundary between 'types' of music." His words forecast the diversity of a genre that would follow the trail he had blazed.

As with any genre, the exact origin of alt.country is open to debate. Ben Fong-Torres, Parsons' biographer, has noted, "Parsons wasn't the first to conceive country-rock, but he was perhaps the most passionate about bringing country music into the increasingly rock 'n' roll world of the 1960s." His brief collaboration with the Byrds led to the seminal country-rock album *Sweetheart of the Rodeo* (1968),

which brought together the sounds and attitudes of rock and country. Prophetically, when the Byrds played at the Grand Ole Opry, Parsons substituted his own material for the traditional songs the band had planned to play, angering his band-mates, especially Roger McGuinn. Such an act foreshadows what would become the attitude of alt.country.

Later, Parsons extended his country-rock sound, first with the Flying Burrito Brothers and then as a solo artist on *GP* (1973) and *Grievous Angel* (1974), with then unheard of singer Emmylou Harris providing perfect harmonies. After Parsons' death in 1973, Harris went on to forge her own successful career, keeping his musical memory alive while experimenting in the tradition of her mentor with albums from the bluegrass *Roses in the Snow* to the alternative-influenced *Wrecking Ball*. Harris herself has noted, "I always tried to fight against categories."

The 1970s saw other bands exploring the possibilities of country-rock. The Flatlanders, the Nitty Gritty Dirt Band, New Riders of the Purple Sage, the Grateful Dead, and Asleep at the Wheel all revised traditional country music, while the Eagles and Poco generated a radio-friendly sound that proved commercially successful. Another important voice of the 1970s was that of the Outlaws, a group whose members included Willie Nelson, Waylon Jennings, Kris Kristofferson, and Johnny Cash. These artists left the constrictions of Nashville's "progressive country" to explore music on their own terms.

In the late 1970s and early 1980s, a change in the country-rock aesthetic took place with the arrival of "cow-punk" bands like Jason and the Scorchers, the Long Ryders, Rank and File, and the Mekons. Musicians such as these took Parsons' hybrid one step further by bringing the punk attitude of bands like Hüsker Dü, X, and the Replacements into the mix. Although the melding of these genres had initially seemed impossible, they actually blended beautifully, effectively re-energizing both, as seen on the Scorchers' debut *Reckless Country Soul* (1982) and on albums like the Mekons' *Fear and Whiskey* (1985), which features punk music played with traditional country and bluegrass instruments. Meanwhile, musicians like Joe Ely and Lone Justice, while not punk per se, furthered Parsons' country-rock vision.

The late 1980s and early 1990s saw country-rock becoming increasingly experimental as artists like Steve Earle, Lucinda Williams, Lyle Lovett, k.d. lang, and the Jayhawks emerged. While marginally successful commercially, musicians such as these received critical acclaim and continued to explore the possibilities of country music, each focusing on a different feature of country-rock. From Earle's traditionalism to lang's gender explorations and Lovett's parody, each performer paid tribute to the genre while showing its diversity.

But 1987 marked a watershed year with the emergence of alt.country icons Uncle Tupelo whose debut, *No Depression* (1990), signaled a new era in the genre. Fronted by Jay Farrar and Jeff Tweedy, who loved punk as well as traditional country, the band played Carter Family songs as well as their own rock material. Although the band broke up in 1994, with Farrar and Tweedy pursuing their differing musical tastes, in Son Volt and Wilco, respectively, their mark has been a lasting one.

Since Uncle Tupelo, alt.country has continued to grow and explore new areas. *Billboard's* Chet Flippo suggests four categories that are helpful in classifying this disparate genre, though it is important to bear in mind that such categories are subjective and that

few of these artists confine themselves to one type of music. First are the “Hot-eyed Rockers” who are grounded in punk but respect country’s emotion and musicianship as well as its history. While Flippo places Son Volt and Wilco in this category, bands such as Whiskeytown, the Backsliders, the Bad Livers, and the Bottle Rockets work under a similar ethos. Second are the “Purist/Traditionalists.” BR5-49 fits into this category as do Kelly Willis, Jack Ingram, Robert Earl Keen, the Derailers, Freakwater, Junior Brown, and any number of progressive bluegrass musicians like Laurie Lewis or Béla Fleck. Next are the “Traditionalists,” those who have been in country music for years but whose talents and contributions tend to be ignored by “Hot Country.” This includes artists like Johnny Cash, Waylon Jennings, Willie Nelson, Loretta Lynn, Guy Clark, Merle Haggard, and Don Walser. Many bluegrass performers, for instance Del McCoury and Peter Rowan, also fall into this category. The last of Flippo’s classifications is the “Folkies,” those drawn to the songs of alt.country. Examples here are Townes Van Zandt, Nanci Griffith, Patti Griffin, James McMurtry, Richard Buckner, Gillian Welch, and Rosie Flores.

Alt.country continues to gain momentum. In 1995, Peter Blackstock and Grant Alden began publishing *No Depression: The Alternative Country (Whatever That Is) Bi-Monthly*, named for an Uncle Tupelo cover of a Carter Family original, which serves as the ex-officio magazine of alt.country. Moreover, a number of independent record labels are devoted primarily to alt.country artists; Bloodshot, Watermelon, and Black Dog along with Steve Earle’s E-Squared make the material of lesser-known alt.country artists available.

While alt.country has strong fan bases in Chicago, Raleigh, and Austin in addition to regular music festivals, the Internet has played a tremendous role in its growth. America On-line’s “No Depression” folder generates substantial material and led to the establishment of two central alt.country electronic mailing lists: Postcard and Postcard II. Postcard discusses primarily the work of Uncle Tupelo and its offspring bands, while its companion, Postcard II, was designed to cover other alt.country bands. Both listservs provide a network of support for alt.country music and artists. Clearly, Gram Parsons’ vision continues to be realized.

Alternative Press

Notwithstanding legitimate rivals for the title, most Americans hearing the words “Alternative Press” would probably think of the brash, crude, anti-establishment periodicals of the Vietnam Era (1963-1975). Most often tabloid in format, printed on the cheapest stock available, written with intent to maim, edited like frontline dispatches, and illustrated with “psychedelic,” provocative graphics, these “underground” newspapers and magazines offered themselves as the organs of the national and regional “counter-culture” for which the period is famous—and, by and large, the counter-culture accepted the offer. The epithet “underground,” however, was largely self-assumed and unmerited, since use of the police power of the state to suppress their publication was seldom if ever threatened, let alone exerted. By the time the Viet Cong forces took possession of Saigon (April 30, 1975), the great majority of the underground papers had either ceased publication or transformed themselves—like *Rolling Stone*—into the raffish fringe of the Establishment: the subject matter had not changed, but they had shed the guerilla style of their youth and moved, like their readers, above ground.

Since one of the overreaching goals of the 1960s counter-culture was to cancel all debts to the past, the insider histories of the Alternative Press—most of which appeared in the early 1970s—make no mention of any predecessors older than the end of World War II. But they were certainly not the first journalists to print rude, funny diatribes (or cartoons) against the establishment: the authors of the “Mazarinades” in mid-seventeenth-century France were as outrageous and one-sided in the expression of their disapproval of Cardinal Mazarin as any editorial in the Berkeley *Barb* or *L. A. Free Press* was of President Lyndon Johnson or Draft Board chief General Louis B. Hershey. More directly antecedent to the Alternative Press of the 1960s, the English Puritan pamphleteers of the 1640s were every bit as self-righteously insulting to the Anglican conformists—calling them the “agents of Rome”—as any underground paper of the 1960s calling a Fire Marshal a “fascist” (which is not to say, in either case, that the accusers were always, or even usually, mistaken). The eighteenth and nineteenth centuries abound with similar serials expressing the perspectives and prejudices of a self-conscious, ambitious minority, on its way either to becoming a majority or to disappearing.

In the late nineteenth century, however, the exponential growth of literacy provided the demographic base in Europe and America for the first truly popular press, and men like Lord Northcliffe in England became rich and powerful “press lords” by giving these newly-literate people news on subjects which interested them: sporting events, disasters, success stories, and scandals. In much the same way, those representatives of the Alternative Press of the 1960s who survived and prospered did not do so on the basis of their political reporting or ideological preaching, but on their coverage of matters of what came to be known as “life-style.” The success of such entrepreneurs as Lord Northcliffe and William Randolph Hearst is a perfect paradigm for what happens when the “established” press becomes too narrowly identified with an elite as a new technology becomes available to an emerging majority.

Like so many phenomena identified with the 1960s, the Alternative Press got started during the 1950s—an era now remembered as a

time of up-tight conformism and anti-Communist hysteria—when one puff on a reefer led immediately to more damaging addictions, one artistic impulse signaled infinite secret perversions, and any expressed support for the Bill of Rights was an admission of Communist sympathies. As far as the first waves of the Postwar “Baby Boom” were taught, at home or school, to be exposed as a drug addict, homosexual, or Communist was to be immediately cast into outer darkness, your name never to be spoken again in decent society, your family disgraced and forced to move to another town. All true pleasures were furtive.

Yet the 1950s was also the decade which saw the publication of Alan Ginsberg’s *Howl* (1956), Jack Kerouac’s *On the Road* (1957)—which became a bestseller—and William Burroughs’ *Naked Lunch* (1957); when Chuck Berry, Elvis Presley, Buddy Holly, and the Everly Brothers established rock ‘n’ roll as THE American popular music; when the image of the rebel and misfit—Paul Newman in *The Left-Handed Gun*, Marlon Brando in *The Wild One*, James Dean in *Rebel Without a Cause*—gave attractive physical form to the restless dissatisfaction of middle class American teenagers; and when Aldous Huxley published the results of his experiments with hallucinogenic drugs in *Heaven and Hell* (1954) and *The Doors of Perception* (1956). Moreover, the 1950s witnessed the first significant gains of the Civil Rights movement—the model for all future liberation movements—and the first, largely unnoticed, involvement of the United States in the anti-colonial upheavals in French Indochina.

October 26, 1955 marked the publication of the first issue of the *Village Voice*, written and produced by a group of bohemian intellectuals (Michael Harrington, Norman Mailer, Katherine Anne Porter, Allen Ginsberg, Nat Hentoff, Anaïs Nin, and others) living in the Greenwich Village district of Manhattan—founded, it must be noted, not as an alternative to the *New York Times*, but in reaction to a tame neighborhood paper called *The Villager*. Among the many innovations of the early *Village Voice*, many of which were too mannered to endure, the most important was the total absence of any restrictions on language, either in the use of profanity or in the graphic treatment of taboo subjects. This latter characteristic made a quantum leap in June of 1958, when Paul Krassner—a 26-year-old writer from *Mad Magazine* (itself one of the major influences on the future Alternative Press)—brought out the first issue of *The Realist*. It instantly became the gold standard of satire, sneering irreverence, and the blurring of the line between fact and fiction which would characterize all utterances of the still-embryonic counter-culture.

Thus, by the time John F. Kennedy was elected president in November of 1960, the entire agenda of the Alternative Press had been set, as well as most of its attitude, style, and format. All that was needed to set things in motion was a spark to ignite the passions, and enlist the support, of the enormous Class of 1964. This was not long in coming: the assassination of President Kennedy, the advent of Bob Dylan and the Beatles, the publication of *The Feminine Mystique*, the Stonewall riots, the Gulf of Tonkin Resolution, the hide-bound conservatism of the educational establishment, the first experience with marijuana or LSD, or any combination of the above. Some grain of discontent worked its way inside the shell of middle class complacency, and a pearl of counter-culture began to form. In every large metropolitan area in the United States, these pearls of disaffection strung themselves into communities, usually near colleges or universities. The “Free Speech Movement” in Berkeley, site of Campus

One of the University of California, produced one of the first of the new style of radical communities, which in turn produced one of the first examples of the Alternative Press, the Berkeley *Barb* (first published October 13, 1965), although, in fact, the *L.A. Free Press*—modeled on the *Village Voice*—beat them into print by more than a year (May 25, 1964). On the opposite coast, a dissident group of writers of the *Village Voice* split from that publication to found the *East Village Other* (October 1965).

As the counter-culture began to subdivide into one-issue lobbies—drugs, communal living, sexual preference, racial separatism, radical politics, etc.—each subdivision felt the need for its own periodical soapbox. The *San Francisco Oracle*, founded in 1966, promoted the transformation of society through the use of hallucinogenic drugs; the *Advocate* started to speak on behalf of America’s homosexuals in 1967, though its tame assimilationist line soon provoked more aggressive papers like *Come Out!* (November 1969) and *Free Particle* (September 1969); the *Black Panther* fired its first salvo against the white police state in June of 1967; *Screw* sought to unshackle the American (male) libido, and to challenge the censorship laws, beginning November 29, 1968; and in that same fall of 1968, the ecological-communitarian movement found its voice with the first, massive issue of the *Whole Earth Catalog*. Only *Rolling Stone* moved against the tide of special interest splintering: begun in November of 1967 to address the community formed by the revolution in rock ‘n’ roll, the paper has evolved steadily towards a more “general interest” publication—if the *Village Voice* is the *Christian Science Monitor* of the Alternative Press, *Rolling Stone* is its *Saturday Evening Post*. At some point—one might, for convenience, choose the year 1970—it was no longer valid to speak of “the” counter-culture as if it were one unified social structure; consequently, it became less and less meaningful to speak of “the” Alternative Press.

Technically a part of the Alternative Press, and definitely one of the purest expressions of the counter-culture Zeitgeist, the underground comic book is actually a separate phenomenon. The so-called Underground Press is a spent bullet, but the comic book, old and new, continues to thrive. While university libraries collect and catalogue back issues of the Berkeley *Barb* and the Seattle *Helix*, prosperous establishments all over the United States do a brisk trade in old copies of *Zap* and *Despair* along with the new graphic novels and standard classics of Marvel. And in the almost total absence of representative long prose fictions from the 1960s, R. Crumb’s stories about “Mr. Natural,” “Flakey Foont,” “Projunior,” and “Honeybunch Kaminsky”—not to mention Gilbert Sheldon’s “Fabulous, Furry Freak Brothers” and S. Clay Wilson’s Tales of “The Checkered Demon” and “Captain Pissgums”—remain the most reliable narratives of the period.

Something called an Alternative Press still exists in the late 1990s. They have annual meetings, publish newsletters, and give each other journalism awards. Many of the newspapers so defined still espouse progressive politics, support environmental causes, and celebrate the current popular music scene. But the counter-culture which they were founded to serve—the Woodstock Nation of love-ins, anti-war marches, LSD trips, and hippie communes—have gone the way of the Popular Front and the Dreyfussards to become a discrete historical episode. It remains to be seen whether the most lasting legacy of the Alternative Press, the disabling of any governing system of courtesy or restraint in public discourse, will turn out to have hastened the end of a nightmare or the beginning of one.

Alternative Rock

The popular musical genre called “alternative rock,” immensely popular during the 1980s and 1990s, drew upon the conventions of rock music even while it attempted to distance itself from traditional or “classic” rock. Alternative rockers differentiated themselves from their traditional rock predecessors in part with their call for greater diversity and experimentation in music, and in part with their critique of mainstream society and of major record labels in favor of small independent companies. While alternative rockers produced catchy music geared for mass consumption, their music—with its emphasis on distorted guitars and ambiguous lyrics—wasn’t suited to conventional tastes. Furthermore, alternative rock lyrics were often critical or skeptical of mainstream values.

Alternative rock—which is also referred to as “indie rock,” “college rock,” “post-punk,” “new music,” “power-pop,” and more recently, “grunge”—traces its roots to the 1970s, when new wave and early punk bands experimented with diverse styles in music, dress, and ideology. Alternative rock was also influenced by “alternative music” more generally, which includes such genres as industrial, avant-garde, and experimental music, as well as gothic rock, ska, reggae, and alternative hip-hop. While influenced by these many styles, alternative rock is best understood as residing somewhere between rock and punk rock, and is ambivalent about its desire for mainstream appeal and its rejection of mainstream values.

New wave bands like Blondie, The Talking Heads, Devo, and Adam and the Ants as well as early punk rock bands like Iggy and the Stooges, The Ramones, The Sex Pistols, and The Clash had a major influence on alternative rock. Punk was particularly influential for its radical critique of society and its call for the destruction of conventional musical sensibilities. Alternative rock, however, blended punk attitude and aggression with rock melodies and song structure. The Police, U2, and R.E.M. became immensely popular during the 1980s

with catchy and energetic songs and had a major influence on the development of alternative rock. Indeed, the popularity of such bands as The Police, U2, R.E.M., The GoGos, The B-52s, and Midnight Oil can in some part be explained by their songs, which at 3-4 minutes long, with catchy riffs and steady beats, are well suited for radio play. In contrast, some of the longer and more complicated rock songs of such performers as Eric Clapton and The Who were less accessible and came to be seen as stagnant and old fashioned. Alternative rock bands aimed to reach out to a new generation of youth with high energy, melodic music which spoke to contemporary social issues.

Alternative rock shared much of the punk ideology of non-conformity and the questioning of mainstream values. Yet while punk was notable for its explicit anger, alternative rock offered more subdued critiques and covered a greater range of topics and emotions. Bands like The Jam, The Pixies, and The Lemonheads sang about political issues but also about love and other social relations. Isolation and loneliness were common themes which indicated an ambivalence about modern society. The Smiths, in particular, were known for their overwhelming sense of melancholy. The Replacements, an influential alternative rock band, blended energetic outbursts with subdued elements of folk-rock or jazz. Singing about comical aspects of social life as well as more sincere emotional concerns, lead singer Paul Westerberg was especially known for his self-deprecating sense of humor. As he asked in “I Will Dare,” “How smart are you? How dumb am I?” Another Minneapolis band, Soul Asylum, known for their energetic music and powerful guitar work, was also self-mocking while singing about a variety of social concerns and emotional issues. Sonic Youth and Dinosaur Jr. were particularly important for their noisy guitar work and punk influences. These bands gave rise to what, in the 1990s, would come to be known as “grunge,” which developed most visibly in Seattle with bands like Mudhoney, Nirvana, Soundgarden, and Pearl Jam. Grunge was characterized by a heavy guitar sound which harkened back to the classic rock of Deep Purple, Led Zeppelin, and other bands. Grunge became a major phenomenon in the 1990s as Nirvana, Pearl Jam, and others sold millions of records.

The musicians and fans of alternative rock tended to dress in a manner which was influenced by both punk and mainstream attire. Alternative clothing tended to be less extreme than punk and was not worn to explicitly shock people but was often slovenly and promoted an image of apathy toward conventional dress styles. However, because alternative dress was less radical, it allowed the wearer greater acceptance in mainstream culture, particularly in family, work, and school.

Alternative rock espoused a critical stance toward the music industry and capitalist society in general and shared with punk a “Do It Yourself” emphasis which is critical of major record labels. Many alternative bands, however, began on independent labels and later moved to major labels. Alternative rock bands faced the dilemma of trying to maintain the critical stance of punk while accepting many aspects of mainstream society. Thus, while criticizing conventional society and the rock industry, alternative bands frequently ended up becoming a part of it.

Despite its mass appeal, alternative rock has been critiqued on several grounds. Punks argued that alternative bands “sold out.” Others argued that it alternative was a largely white and male-dominated enterprise. As Eric Weisbard states in the *Spin Alternative*

Record Guide, “[alternative rock] is too indebted to a white American vocalist screaming about his betrayed entitlements over an exquisitely layered squall of guitars, bass and drums.” In this sense, alternative rock, while espousing diversity and originality, became somewhat conventional. Many suggested that the term “alternative” may have outlived its usefulness. Alternative rock gained such popularity in the 1980s and 1990s that its music, style, and ideology were in many ways incorporated into the mainstream.

Altman, Robert (1925—)

Considered to be the most prolific, if not the most influential film maker of the New Hollywood Cinema of the early 1970s, writer/producer/director Robert Altman made 13 films throughout the decade, including the Oscar-nominated hits *M*A*S*H* in 1970 and *Nashville* in 1975. His challenging and often idiosyncratic work dealt with genre, women's issues, male bonding, and institutions, and his movies always met with mixed critical and popular response. As critic Michael Wilmington observed, “In the opinion of some, Altman is one of America's greatest moviemakers, a fountain of creativity and iconoclasm. For others, he is a troublemaker and a guy who won't get with the program: defiant, rebellious and unpleasantly unpredictable.”

This reputation—which has often alienated studios and irritated the public—is largely the result of Altman's unusual style, which he refers to as “controlled chaos.” The epitome of a maverick filmmaker, Altman essentially uses his script as a blueprint from which he freely improvises, tending to value moments of insight, mood, and character revelation over action and plot. Form then follows content, resulting in his trademark tendency to record his improvisations in wide angle shots with casual tracking movements and zooms—sometimes from the perspective of multiple cameras—to capture spontaneous moments. He also has consistently favored the usage of overlapping and often improvised dialogue (which grew more controlled once his Lions Gate studio developed an eight-track sound system that revolutionized film sound). Such treatment results in long and rambling narratives, which connect and communicate only over time through the interweaving of fragments of character—somewhat like a jigsaw puzzle or jazz riffs. As critic Henri Bohar observed of Altman's *Kansas City* (1996), “Altman weaves several stories, and several moods, fleshing out a film script as if it were a score and the actors

Robert Altman

instruments.” While such a style has proven challenging to impatient, narrative-driven audiences, Altman contends, “We are trying to educate and develop our audiences.”

Far older than most of the rising film school-trained directors of the early 1970s, Altman began his film career upon his discharge from the military, making industrials for an independent company in the 1950s. Altman left when Alfred Hitchcock offered him the chance to direct his weekly television show, *Alfred Hitchcock Presents*. Work in series television and the occasional low budget feature (*The Delinquents* in 1957, starring Tom Laughlin, and later the famed *Billy Jack*) continued until he was asked to direct a script turned down by most of Hollywood. It was not only the extensive black humor and anti-war sentiments in *M*A*S*H* that attracted him; Altman knew that this was his opportunity to break into commercial filmmaking. The loosely woven story about Korean War doctors struggling to stay sane through a series of games and practical jokes was both a critical and commercial success—receiving the Grand Prize at Cannes, and Oscar nominations for Best Picture and Best Director—appealing to the more cynical and jaded audiences, who could identify with these characters worn down by years of war and political assassination.

But it was his next film, *Nashville* (1975), that came to be considered Altman's masterpiece. Dubbed a “spiritual disaster movie” by influential critic Robin Wood, this tapestry of 1970s culture

interweaves the institutions of politics and country music as it focuses on the lives of 24 characters seeking celebrity status during a five-day period prior to a presidential rally. *Nashville* was lauded as Best Film by the National Society of Film Critics, the New York Film Critics Circle, and the National Board of Review. Of this work, historian David Cook concluded, Altman “has seen us with our raw nerves exposed at a time in American history when the conflicting demands of community and individual freedom have never been more extreme, and he has become an epic poet of that conflict.”

However, as the 1970s wore on, in the aftermath of the Watergate scandal and the Vietnam War, cynicism gave way to the new optimism of the Bicentennial years, and Altman’s later explorations of bizarre characters who are driven by American values only to suffer confusion, disillusionment, and often complete breakdowns grated on audiences seeking the upbeat in films such as *Rocky* and *Star Wars*. In the wake of the steadily decreasing box office draw of such flops as *Quintet* and *A Perfect Couple* (both 1979), critic Pauline Kael wryly observed, “Altman has reached the point of wearing his failures like medals. He’s creating a mystique of heroism out of emptied theaters.”

However, it was the mediocre box office returns of the big budget live-action cartoon *Popeye* (1980) that finally signaled Altman’s inability to finance future products. He diverted himself by producing opera and stage productions in Europe that were transferred to video (*Come Back to the Five and Dime, Jimmy Dean, Jimmy Dean*, 1982, and *Streamers*, 1984), as well as working in television (*The Dumb Waiter*, 1987; *Tanner 88*, 1988). But in the early 1990s, he returned to form with *The Player*. This critical and financial success was ironically a scathing satirical indictment of the struggles Altman had undergone while working in Hollywood. This led to another well-received tapestry film, *Short Cuts* (1993) based on the short stories of Raymond Carver. Both films won major awards at Cannes and netted Altman Academy Award Nominations for Best Director, and *Short Cuts* also won Best Adapted Screenplay.

In the late 1990s, Altman divided his time between occasional television work (the anthology series *Gun*) and film projects, but continued to struggle with studio anxiety over his unconventional methods.

Amazing Stories

Hugo Gernsback’s pulp *Amazing Stories* virtually established the genre of the science fiction magazine when it was launched in

1926 and, despite frequent ownership and editorial policy changes, the magazine has maintained its position as one of the most prominent purveyors of science fiction throughout the century. *Amazing Stories* either launched or boosted the careers of dozens of sci-fi writers, and it helped create the intimate culture of sci-fi magazines by publishing letter columns, supervising competitions, and encouraging a relationship between readers, writers, and publishers. Still accepting science fiction, fantasy, and horror stories in the late 1990s, *Amazing Stories* was the oldest science fiction magazine in the nation.

Publisher Gernsback emigrated to America from Luxembourg in 1904, and quickly established a business selling dry cell batteries and home radio sets. In order to promote sales he issued a catalogue and then the first radio magazine, *Modern Electrics*, in 1908. In 1911 an issue of that magazine included the first episode of Gernsback’s fiction series “Ralph 124C 41+.” Science fiction became a regular part of Gernsback’s publication, indicating his preference for technological extrapolations of scientific articles. In August 1923, Gernsback experimented with a “scientific fiction” special issue of *Science and Invention*, which carried six stories and speculative articles. In April 1926, he published the first issue of *Amazing Stories*, a magazine of “scientifiction.”

Gernsback defined “scientifiction” and established the character of the magazine through reprints of stories by H. G. Wells, Jules Verne, and Edgar Allan Poe. In his editorials, Gernsback stressed that he felt his readers could be educated by such romances “intermingled with scientific fact and prophetic vision.” Gernsback solicited the participation of fans through the letters column, “Discussions,” which encouraged reviews of fiction. The column published the full names and addresses of the writers, allowing for direct correspondence between readers and the circulation of amateur publications. He also initiated writing competitions, such as a contest that asked readers to supply a story to accompany the December 1926 Frank R. Paul cover illustration.

Amazing Stories and its associate publications, *Amazing Stories Annual* and *Amazing Stories Quarterly*, published work by Edgar Rice Burroughs, Ray Cummings, Abraham Merrit, and Murray Leinster with interplanetary settings. E. E. “Doc” Smith’s serial “The Skylark of Space” began in August of 1928; that same issue featured the first Buck Rogers story, “Armageddon 2419AD,” written by Philip Francis Nowlan. Both Nowlan and Smith were major contributors to the popularity of science fiction through the wide appeal of space opera. Alongside this type of science fiction Gernsback also published the work of David Keller, who was interested in the social implications of scientific extrapolation. *Amazing Stories* also published fantasy, horror, and thriller storylines, including works by H. P. Lovecraft.

Despite the commercial success of *Amazing Stories*, Gernsback’s company, Experimenter Publishing Co., was forced into bankruptcy in 1929. The title to the magazine was sold and continued under the editorship of Gernsback’s assistant, T. O’Connor Sloan. He maintained a strict adherence to scientific fidelity, which included the space opera-serials of J.W. Campbell (before he became the editor of rival *Astounding Science Fiction*), Smith, Edmond Hamilton, and Jack Williamson; Sloan sustained the magazine until it was sold again in 1939. Under the editorship of Ray Palmer the publication policy was relaxed and the magazine accepted a wider range of stories. The magazine was briefly edited by Paul Fairman, but was then taken over by assistant editor Cele Goldsmith in 1958.

Goldsmith re-established the reputation of the magazine by encouraging new writers and creative experimentation. She was particularly interested in fantasy and published Marion Zimmer Bradley's first "Darkover" series. The magazine still included scientific articles, but the fiction became oriented toward the "soft sciences" and the writers Goldsmith discovered include Harlan Ellison, Thomas M. Disch, Roger Zelazny, and Ursula K. Le Guin. These writers later made their reputations in fantasy writing and in the new wave of critical and literary science fiction writing in the 1970s. *Amazing Stories* went into a period of decline after Goldsmith's departure in 1965, producing reprints under a series of writer/editors, until Ted White took over as editor beginning in 1970.

Despite the relative impoverishment of the magazine, White published original fiction and returned the magazine to its original interest in fan culture through a very outspoken editorial column. The magazine's fortunes again declined after White left in 1979, but *Amazing Stories* was reinvigorated in 1987 when it was purchased by TSR Inc., the company that produced the popular game "Dungeons and Dragons." Under TSR and, later, under owner Wizards of the Coast Inc. (another game manufacturer), *Amazing Stories* maintained its hard science fiction outlook, eschewing "sword and sorcery" in favor of science fiction stories from young writers.

American Bandstand

American Bandstand became a powerful symbol of American teenage culture with its nearly four-decade look at the ever-changing tastes of the country's youth. Featuring guest artists who lip-synced to their latest tunes, and a teenage audience whose members danced for the cameras, the show launched a conga line of dance crazes, fashion and hair trends, and sent the latest teen slang expressions echoing from coast to coast.

From its beginning as a local Philadelphia telecast called, simply, *Bandstand* in 1952, to its 1957 national debut as *American Bandstand*, and on throughout its run, the show was known for

treating teenagers with deference. Congenial host Dick Clark did not pontificate or preach; he instead let the kids and the music do the communicating. The antithesis of courageous rock 'n' roll proponents like fiery Alan Freed, Clark has been accused of homogenizing rock 'n' roll. Music historians have pointed out that he had a financial interest in some of the show's acts, but Clark has countered that the show reflected popular taste. Indeed, *American Bandstand* enjoys a reputation not only as a musical and cultural timeline, but as a fondly remembered part of adolescence for many if not most Americans.

Though Clark's name is synonymous with that of *American Bandstand*, the show originated with Philadelphia disc jockey Bob Horn, and the radio show *Bob Horn's Bandstand*. It was in October of 1952 that Horn and his *Bandstand* moved to Philadelphia's WFIL-TV as a live afternoon series. Against a painted canvas backdrop of a record store, the studio audience clustered on pine bleachers to watch lip-syncing artists such as pop singers Joni James and Frankie Laine. The show also featured dance and record-rating segments.

Because the TV studio was in the vicinity of three local high schools, *Bandstand* had no trouble finding an in-house audience. Within three months of its debut, some 5,000 students had applied for "membership" cards. Those who were given cards had to be between the ages of fourteen and eighteen. Gum chewing was prohibited, and there was a dress code. Males could not wear jeans or opened shirts, and were required to have a jacket or sweater with tie; females had to wear dresses or skirts—but not tight skirts. "When you dressed right, you behaved right," believed producer Tony Mammarella.

In retrospect, the show has been criticized for sanitizing its audience. And not just in regard to fashion. Though Philadelphia had a large African American population, it would take years for the show to reflect that segment of the population. Like many programs of the day, *Bandstand* did not officially ban African Americans from the audience; but neither did it issue them membership cards. And though the show became known for featuring the hottest African American artists of the 1950s, many of these artists did pop-style tunes. Additionally, there were early efforts to acquiesce to sponsors, who wanted white cover singers.

It was image-consciousness that led to the dismissal of original host Bob Horn. The *Philadelphia Inquirer*, which owned WFIL, was in the midst of an anti-drunk driving campaign when Horn made headlines with a 1956 drunk driving arrest. As a result, WFIL sought a new host. Enter twenty-six-year-old Dick Clark.

Voted the "Man Most Likely to Sell the Brooklyn Bridge" by his high school classmates, Clark was born November 30, 1929, in Bronxville, New York. He was in his early teens when he realized he wanted a career in radio. While still in high school he worked in the mailroom at a Utica, New York, station where his father was the promotional manager. At Syracuse University he majored in advertising and minored in radio, and was a disc jockey and newscaster for the campus station. Following graduation, he worked at a series of stations including the Syracuse, New York, station, WOLF-AM, where he hosted the country music show, *The WOLF Buckaroos*. After moving into television at Utica's WKTV, he became "Cactus Dick" of the station's country-western show, *Cactus Dick and the Santa Fe Riders*.

He relocated to Philadelphia in 1952 to host WFIL radio's daily easy listening show, *Dick Clark's Caravan of Music*. He also did commercials for WFIL-TV, and watched from the sidelines as

Dick Clark (holding microphone) with Bobby Rydell on *American Bandstand*.

Bandstand became a local hit. Though he was a novice in regard to rock 'n' roll, Clark was a marketing genius who intuitively understood the potential of both the show and the music. As the country's fourth-largest metropolitan city, Philadelphia was a break-out market for performers and their records.

It was on August 5, 1957 that ABC took *Bandstand* national. Debuting on 67 stations across the country, the live daily afternoon show was an instantaneous success. Just weeks into its run, *American Bandstand* was drawing 15,000 letters a week, topping the fan mail for the network's most popular show, *Wyatt Earp*. The success led to a Saturday night spin-off, *The Dick Clark Show*, which ran for two-and-a-half years.

As network television's first show devoted to rock 'n' roll, it became requisite for both established and upcoming performers to put in *American Bandstand* guest appearances. Of the leading rock 'n' roll stars of the 1950s and 1960s, only Elvis Presley and Ricky Nelson did not appear. Those artists who made their national debut on the program included Buddy Holly and the Crickets, Jerry Lee Lewis, Gene Vincent, the Everly Brothers, Jackie Wilson, Johnny Mathis,

Chuck Berry, and the duo of Tom and Jerry—later to be known as Simon and Garfunkel. As an integral force in the rise of the teen idol, *American Bandstand* also propelled Fabian, Frankie Avalon, Bobby Rydell, and other pin-up boys, to prominence.

Singer Gene Pitney once estimated that a single *American Bandstand* appearance could lead to next-day sales of 20,000 to 40,000 records. After nearly giving up on her career, Connie Francis had her first number one hit when Clark touted "Who's Sorry Now?" When Jerry Lee Lewis appeared on the show in April 1958 to perform "Breathless," viewers learned they could own the record by mailing in fifty cents and five wrappers from Beechnut gum, a leading sponsor. Within three days, tens of thousands of gum wrappers were mailed in.

Clark himself was the force behind the 1958 number-one hit "At the Hop." Danny and the Juniors had originally recorded a demo called "Do the Bop," which referred to one of the show's dance fads. Clark suggested that lyrics be changed to "At the Hop." It was also Clark who triggered Chubby Checker's enormous 1960 hit, "The Twist." Credited with revolutionizing popular dance, "The Twist"

was written and first recorded by the raucous rhythm and blues group Hank Ballard and the Midnighters as the flip side to their 1958 tune “Teardrops on Your Letter.” After seeing the dance performed on his show in the summer of 1960, Clark approached the local Cameo Records and suggested a new recording.

The Twist was but one of many dance fads popularized by *American Bandstand*. Others included the Strand, the Stroll, the Duck, the Calypso, the Fly, the Loco-Motion, the Watusi, the Limbo, the Bristol Stomp, the Mashed Potato, the Hully Gully, the Bird, and the Smurf. It wasn’t just the dances that garnered the spotlight; some of the dancing “regulars” became celebrities in their own right, complete with fan mail, their own fan clubs, and coverage in the teen fan magazines. The show’s most popular dance team of Bob Clayton and Justine Carrelli even cut their own record.

The show’s reputation, as well as Clark’s, was briefly jeopardized when the payola scandal broke in November of 1959. By this time, Clark was involved in music publishing, talent management, record pressing, label making, distribution, and more. But, he insisted to a Washington subcommittee that he had never accepted payola for playing or not playing a particular record. He survived the scandal, but ABC made him divest his music-related interests.

During the 1960s, *American Bandstand*’s influence was undermined by societal changes, as well as changes in the music world. Los Angeles, home of surf and car-culture music, had become the new heartbeat of the industry. And so, in February 1964 the Philadelphia fixture relocated to Southern California. No longer live, the show was taped; having lost its daily time slot, it aired on Saturday afternoons.

Oddly, the series failed to capitalize on the British invasion. Meanwhile, as FM radio grew in popularity, the diversity of music types created a conundrum. On a purely practical level, psychedelic songs were not danceable. To enliven the dance floor, *American Bandstand* cranked up the soul music—an irony, considering that it was 1965 before the series had a regular African American dance couple.

In the 1970s, *American Bandstand* exploited a new roll call of teen idols, including Bobby Sherman, David Cassidy, and John Travolta. The series also reached into its vaults for a highly rated twentieth-anniversary late night special. Still later in the decade, the show’s dance floor was revitalized by disco. The following decade saw the abandonment of the dress code. But spandex and plunging necklines, and guests as disparate as Madonna, Jon Bon Jovi, Prince, and the Stray Cats, could not offset changing technology. MTV debuted on August 1, 1981; four years later, it spawned the sister network, VH-1, which was aimed at viewers ages twenty-five to forty-nine, a demographic group who had left *American Bandstand* behind. There was also competition from music-video oriented series, such as NBC’s *Friday Night Videos*. Finally, after thirty-seven years of catering to and reflecting teenage taste, *American Bandstand* came to an end in October 1987. Through syndication, *The New American Bandstand* ran through September 1989.

But the beat goes on. Dick Clark Productions continues to exploit the *American Bandstand* moniker with tie-ins including a chain of theme restaurants. And the show continues in reruns. In fact, VH-1, which contributed to the original show’s demise, has been an outlet for *The Best of American Bandstand*. Befitting a symbol of Americana, the show’s podium, over which Clark used to preside, is on display in the Smithsonian Institution; the show itself was entered into the *Guinness Book of World Records* as TV’s longest-running

variety program. Meanwhile, the theme song, “Bandstand Boogie,” enjoys instant recognition. As does Clark, whose ever-youthful appearance, and association with the series, have won him the appellation, “the world’s oldest living teenager.”

American Girls Series

“We give girls chocolate cake with vitamins” explains Pleasant T. Rowland, the creator of the *American Girls* books, summing up the philosophy behind the bestselling historical fiction series. The 1980s and 1990s have seen a proliferation of series books for girls—the *Sweet Valley High* series, the *Baby-Sitters Club* series, the *American Girls* series—which have sold millions of copies. Pleasant Company’s *American Girls Collection*, a set of 36 books about six girls from different eras in American history, is among the leaders in this popular and profitable field. Preadolescent girls are a powerful demographic in 1990s publishing; girl power, it seems, represents a significant buying power. Series books for girls have frequently been dismissed both because they are popular reading and children’s literature and because they are series books, which have historically been disdained by critics. Such books, however, have been an important and influential (as well as lucrative) genre of children’s literature since the middle of the nineteenth century, with the publication of *Little Women* (1868). Recently, there has been more critical attention paid to girls’ culture as an area for scholarly inquiry and there is no reason that this inquiry should not be extended to girls’ reading habits.

Founded as an alternative to mass market books and toys, The Pleasant Company was launched in 1985 by Pleasant Rowland, a former teacher and textbook author. The company’s stated mission is “to celebrate all that is special about American girls—past and

present—and in doing so, to create a community of American girls.’’ The company has annual revenues in excess of 300 million dollars from the sale of books, dolls, clothing, accessories, and activity kits from both the *American Girls* historical collection and the American Girl contemporary products. Since 1986, Pleasant Company has sold 48 million *American Girl* books, and plans to release an additional 42 titles in 1999. Rowland got the idea for the *American Girls* books after she went shopping for dolls for her two nieces. All she found were ‘‘Barbies that wore spiked heels, drove pink Corvettes, and looked as if they belonged in stripjoints.’’ Rowland wanted to give girls dolls that could teach ‘‘American history, family values, and self-reliance.’’ Ironically, in 1998, Rowland sold Pleasant Company to Mattel, the makers of Barbie.

The *American Girls* book collection is based on the fictional lives of six ethnically diverse nine-year-old girls from different eras in American history: Felicity Merriman, a Williamsburg girl whose life is changed dramatically by the outbreak of the American Revolution; Josephina Montoya, a New Mexican girl of the early 1820s (whose books include a glossary of Spanish words used in the text); Kirsten Larson, an immigrant to the Minnesota frontier in the 1850s; Addy Walker, an African American girl who escapes from slavery in 1864; Samantha Parkington, an orphan who lives with her aunt and uncle in turn-of-the-century New York city; and Molly McIntire, a twentieth century girl whose father serves in England during World War II. Six books have been written about each girl’s experiences, including volumes on family and friends, school, birthdays, Christmases, and summer and winter adventures. Each volume includes a ‘‘Peek into the Past’’ section in which photos, illustrations, and narratives are provided for historical background and context. The entire collection consists of the novel series, dolls and dolls’ clothing, historically accurate replicas of furniture, girls’ clothes, and memorabilia, and craft projects including (for each of the six characters) a cookbook, crafts book, theater kit, and paper dolls and accessories. The 18-inch dolls cost over \$80 each. With all the accessories, including \$80 dresses for actual girls, each collection costs approximately \$1,000.

In 1992 the company launched the *American Girl* magazine, a bimonthly magazine free of advertisements that treats both historical and contemporary issues, which by 1995 had over 500,000 subscribers. The magazine is phenomenally popular—for each issue, the magazine receives over 10,000 pieces of mail, most asking for advice or directed at the help column. The magazine, aimed at 7-12 year old girls, features fiction and nonfiction articles on arts, sports, entertainment, history snippets about girlhood during various periods of American history, original short fiction, and a regular section called ‘‘Grandmother, Mother, and Me’’ which contains paper dolls and cut-out clothes from both past and present. Pleasant Company also began publishing the *American Girl Library*, which emerged from the most popular features of *American Girl* magazine and is completely contemporary. *The American Girl Library* serves as a counterpart to the *American Girls* collection, and includes activity books, fiction, biography, and (most significantly) advice books, such as the bestselling *Help!: An Absolutely Indispensable Guide to Life for Girls*. In recent years, Pleasant Company has also created special events and programs for fans of the series, including The American Girls Fashion Show, Samantha’s Ice Cream Social, and Felicity in Williamsburg: An American Girls Experience.

Like most series books for girls, the plots of the *American Girls* books are somewhat formulaic: the books typically center on moral

quandaries, and the heroine is always exceptionally capable and plucky, helpful and brave. Addy Walker’s story is the most poignant, and it is her books which have received the most attention. The Addy books are historically accurate, which makes for some painful reading: before her family can flee slavery, for example, Addy’s master sells some of her family, and her family is forced to leave her young sister, Esther, in the care of fellow slaves. Addy’s parents’ experience of prejudice in the north, where they are free, also clearly demonstrates to readers that the social effects of racism go beyond legal statutes.

What explains the long-lasting popularity of girls series books? What social values do the books promote? While the messages such books send can offer their readers newfound self respect, the books can also help to perpetuate stereotypes. The *American Girls* books do not hide the fact that they emphasize ‘‘traditional values,’’ and yet ‘‘traditional values’’ are reduced to a rather simplistic vision of the American past as a time when families were better off—when they were more closely-knit, more functional, safer, and most importantly, more likely a place where mothers and daughters spent time together. According to the Pleasant Company catalog, the *American Girls* books and programs have ‘‘nurtured a sense of community among thousands of girls around the country, and in a fast-paced, over-scheduled world have provided a memorable experience that mothers and daughters can share.’’ In fact, the *American Girls Collection* does what much of the genre of historical fiction (especially for children) does . . . it satisfies our need for formula and reaffirms simplistic notions about the past. The popularity of historical fiction has never been based, after all, on the degree to which it reflects an accurate picture of historical eras or events, but is based rather on the degree to which it reaffirms cultural myths. The *American Girls* books, nevertheless, combine education and entertainment. While we may wish for fiction that would complicate, rather than simply corroborate, our understanding of history, these novels serve as an informal, informative introduction to history, which may be more accessible to its readers than more formal or complex treatments of the same historical periods.

Problems in the *American Girls* books are often surmounted too easily, almost as if having a loving family guarantees a good outcome: Samantha’s aunt and uncle decide to keep all of her orphan friends, for example, while Addy’s family is successfully reunited. In addition, several of the novels contain messages of self-effacement. Kristin and Molly, for example, both learn that their concerns are trivial compared to those of other family members. Despite their memorialization of the past, and their cliched moral messages, the *American Girls* books do offer their readers greater independence and a sense of their own potential power by presenting images of independent, resourceful young girls. Simply reading historical fiction featuring girls can give girl readers a sense of pride and self-awareness that they might not acquire from historical fiction featuring boys. As Rowland says, ‘‘I believe very strongly in the importance of gender-specific publishing. And, especially after recent reports that girls are given less attention than boys in the classroom, it is crucial that girls see themselves as significant characters in books—and in history. And it is also important for boys to recognize this, too.’’ Perhaps most importantly, the *American Girls* books present exceptionally gutsy and articulate girls of different classes, races, and cultural backgrounds. Taken as a whole, the series says that what it means to be an American girl is significantly different than the white

upper-middle class Victorian girl we are all familiar with from children's literature.

—Austin Booth

American Gothic

This painting of a stern-visaged, tight-lipped, nineteenth-century country couple posed in front of their pristine farmhouse has become not only one of the most reproduced images in American popular culture, it has also virtually become emblematic of the moral fiber and simple virtues for which America is said to stand. Painted by Grant Wood in 1930, *American Gothic* has been interpreted both as homage to the artist's Midwestern roots and as slyly witty commentary on American "family values." After winning an important prize in 1930, *American Gothic* quickly became, as Robert Hughes notes, "Along with the Mona Lisa and Whistler's Mother . . . one of the three paintings that every American knows. . . . One index of its fame is the number of variations run on it by cartoonists, illustrators, and advertisers. . . . The couple in front of the house have become preppies, yuppies, hippies, Weathermen, pot growers, Ku Klux Klaners, jocks, operagoers, the Johnsons, the Reagans, the Carters, the Fords, the Nixons, the Clintons, and George Wallace with an elderly black lady." In the visual culture of the millennium, *American Gothic* remains the most potent and pervasive symbol of America's heartland mythology, as witnessed by its perpetual permeation into all areas of popular culture.

American Graffiti

The 1973 box office and critical smash *American Graffiti* epitomized the 1950s nostalgia craze, established the device of interweaving multiple stories, inspired such television series as *Happy Days* and *Laverne and Shirley*, and boosted the careers of Richard Dreyfuss, Cindy Williams, Candy Clark and, most notably, the film's co-writer and director, George Lucas. The story takes place in 1962—the proper if not the chronological end of the 1950s—when both the kids and the country were innocent. The evening depicted was a month before the Cuban missile crisis, a year before the assassination of John F. Kennedy, and years before the Vietnam War controversy, hippies, radicals, pot, free love, Nixon, and AIDS (Acquired Immune Deficiency Syndrome). But what makes the film universal is the way Lucas captures the innocence of youth, that

American Gothic by Grant Wood.

ephemeral moment when all options are still open, before irrevocable choices must be made. Everything is still possible, and the sky is the limit.

It is a bit surprising that such a popular and influential film almost did not get made. Lucas' first film, *THX 1138*, was a financial failure, and United Artists rejected the script for *American Graffiti* that Lucas had written with Gloria Katz and Willard Huyck. But Lucas' friend, Francis Ford Coppola, convinced Universal to back the film, on condition Coppola serve as producer and adviser, and with a \$700,000 budget, Universal figured the risk was not great. The movie was shot on location in 28 nights, and the filming was plagued with problems from the outset. On the second night, the entire crew was evicted from the town in which they were shooting, and the assistant cameraman was hospitalized after falling off the camera car and being run over by a trailer. The film came in on time and, after editing, Lucas handed the completed film over to Universal, which was less than thrilled with the finished product. Studio executives were particularly put off by the presence of four central characters whose stories were intertwined. Lucas was furious when the studio cut five minutes from the film before releasing it. But Lucas' vision was vindicated when the film grossed over \$100 million domestically, received five Academy Award nominations, and won the Golden Globe and New York Film Critics' Award. Stephen Farber in *The New York Times* called it "the most important American movie since *Five Easy Pieces*—maybe since *Bonnie and Clyde*."

The story, based on Lucas' own youth in Modesto, California, begins when four friends meet up in the parking lot of Mel's Drive-In,

Ron Howard and Cindy Williams in a scene from the film *American Graffiti*.

a restaurant with roller-skating carhops. The friends are the teenage intellectual Curt (Dreyfuss), the class president Steve (Ron Howard), the nerd Terry “the Toad” (Charles Martin Smith), and the 22-year-old hot rodder John (Paul Le Mat). Three of these characters were based on Lucas himself who began as a nerd, was considered much cooler after winning several racing trophies, and was forced to exercise his intellect after a near-fatal car crash crushed his lungs and ended his racing career; only the class president, Steve, was pure fiction, and the major reason Lucas needed two co-writers. The year of the story may be 1962, but the cars and songs are solidly 1950s, as customized cars driven by ponytailed girls and ducktailed boys tool along the main drag in a mating ritual, with disc jockey Wolfman Jack supplying the tunes. Curt and Steve are due to fly east to college the next morning, but Curt’s second thoughts about leaving the safety of his hometown provide the film’s backbone. Steve is dating Curt’s sister, Laurie (Williams), and she is upset about Steve leaving her behind. When Curt spots a beautiful blonde (Suzanne Somers) in a classic white 1956 T-bird and she mouths the words “I love you,” he wants to follow her. Unfortunately, he is in the back seat of his sister’s

1958 Edsel and cannot convince her to follow the T-bird, and spends the rest of the movie trying to track this vision down. Meanwhile, Steve and Laurie argue about his leaving, Toad can not believe his luck when he picks up a beautiful blonde (Clark), and John’s cruising style is hampered by the presence of the 13-year-old Carol (Mackenzie Phillips) while his hot-rodding reputation is being challenged by Bob Falfa (Harrison Ford). Curt finally visits Wolfman Jack for advice, and the Wolfman convinces him that “this place ain’t exactly the hub of the universe.” When morning comes, Laurie has convinced Steve to stay in town, and they, the Toad, John, and Curt’s parents say goodbye to Curt at the airport. As his plane wings its way eastward, he glances down and notices a lone car also leaving town and also headed east: a classic white 1956 T-bird.

The film may be nostalgic, but it is never sentimental. While films such as *Summer of ’42* specialized in a soft-focus romanticism, Lucas bent over backwards to make sure the film was never pretty. One of the world’s greatest cinematographers, Haskell Wexler, served as supervising cameraman, to capture Lucas’ vision, and the film was shot in grainy Techniscope, in what Lucas called “a sort of

jukebox lighting”—or what film co-editor Marcia Lucas termed “ugly.” Subsequent films and television shows have tried for this hard-edged nostalgia, but even more influential was the device of interweaving story lines, which has become a television staple, used on shows ranging from *Hill Street Blues* to *Northern Exposure* and *ER*. Significantly, Lucas used part of the profits from the film to help finance his next project: *Star Wars*.

American International Pictures

For three decades, from the 1950s to the 1970s, American International Pictures (AIP) supplied America’s drive-ins and movie theatres with cult favorites such as *It Conquered the World*, *I Was a Teenage Werewolf*, *Beach Blanket Bingo*, and *The Pit and the Pendulum*. The studio not only made the movies that the younger generation wanted to see, but it also helped to create the stars of the future. AIP gave directors such as Francis Ford Coppola, Woody Allen, and Martin Scorsese their first jobs, and cast actors such as Jack Nicholson, Robert De Niro, and Peter Fonda in their first movies. Hollywood had always made “B” movies, but no one made them as fast or with as much enthusiastic abandon as AIP. With miniscule budgets, ten or fifteen-day shooting schedules, recycled sets, and churned-out screenplays, AIP changed the way movies were made by creating a demand for a brand new kind of low-budget entertainment; Hollywood would never be the same again.

American International Pictures founder Samuel Z. Arkoff had wanted to be a part of the motion picture industry since boyhood. It took him almost twenty years to fulfill his dream. After serving in World War II, he moved to Los Angeles, where he attended law school on the G.I. Bill. For five years, Arkoff made a living as a minor television and film lawyer. When he met former theatre chain owner, James Nicholson, the two hatched an idea for a production company whose time, they felt, had come.

By the early 1950s, the Golden Age of Hollywood was at an end. During the previous decade, the U.S. Congress had filed an anti-trust suit against the eight major studios. The government’s goal was to check the studios’ monopolistic abuse of power by forcing them to close down their distribution arms, that is, to prevent studios from owning theaters. The case dragged on, but by the end of the 1940s, a consent decree was passed, forcing the studios to divest control of

their theaters. By 1954, the eight major studios no longer owned theaters and the studio system that had sustained Hollywood was gone.

But this was not the only major change to hit Hollywood. Television was wooing viewers away from the big screen. The neighborhood movie houses began shutting down as viewers flocked to the stores to buy television sets. In response, the major studios stopped making “B” pictures, concentrating their efforts instead on mega-productions, musicals, new gimmicks such as 3-D, and wide-angle processes such as CinemaScope and VistaVision, transforming movies into big screen special events that they hoped would lure viewers away from their televisions.

It was at this time that Arkoff and Nicholson spotted a hole in the movie market. They realized that the second-run movie houses and drive-ins were unable to afford these first-run Hollywood extravaganzas, and so were losing their audiences. Arkoff and Nicholson knew that if they could find a way to make first-run movies inexpensively and then supply them to exhibitors at a much lower cost, they would make a huge profit.

In 1954, Arkoff and Nicholson met a young filmmaker named Roger Corman who was looking for a distributor for a low-budget film he was producing, *The Fast and the Furious*, a race car movie starring John Ireland and Dorothy Malone, was just what Arkoff and Nicholson had in mind. They bought the film as part of a four-picture deal with Corman and AIP was born. With Corman as one of their main directors and teenagers their target audience, AIP turned out Westerns, action flicks, prison movies, sci-fi thrillers, and horror films, shamelessly jumping on every cinematic trend. By the late 1950s, with films such as *Invasion of the Saucer-Men*, *Sorority Girl*, and *Machine Gun Kelly*, the company was turning a steady profit.

By the early 1960s, AIP had found their formula and they felt they could start to take a few risks. When Roger Corman approached Arkoff and Nicholson about filming Edgar Allen Poe’s *The Fall of the House of Usher*, the studio signed veteran star Vincent Price to a multi-picture contract, and the critically and financially successful Corman-Price-Poe cycle was born. Realizing that horror movies were in demand, they hired stars from the Golden Age of Horror such as Basil Rathbone, Peter Lorre, and Boris Karloff to appear in their films, fueling a horror renaissance that lasted well into the next decade.

During the 1960s, it seemed as if AIP could do no wrong. When the studio signed Annette Funicello and Frankie Avalon to frolic in the sand in *Beach Party*, they initiated a huge wave of successful beach movies. Hot young stars such as Funicello, Avalon, Jack Nicholson, Peter Fonda, and Nancy Sinatra were brought up in the AIP ranks, and by the early 1970s cutting-edge young directors began flocking to the studio to have their films made. Among these were Martin Scorsese, who directed *Boxcar Bertha*; Brian De Palma, who made *Sisters*; Ivan Reitman, who filmed *Cannibal Girls*; and Oliver Stone, who directed *Seizure*. Even Woody Allen got his first break at AIP, when the studio hired the young stand-up comedian to dub over a Japanese spy film. His *What’s Up, Tiger Lily?* became an instant cult classic.

During the 1970s, AIP branched out into bigger productions with horror classic *The Abominable Dr. Phibes*, blaxploitation film *Foxy Brown*, futuristic thriller *Mad Max* with Mel Gibson, and Brian De Palma’s *Dressed To Kill*. By the time the studio merged with Filmways in 1980, American International Pictures had become an integral part of moviemaking history.

In 1979, the Museum of Modern Art staged a retrospective of AIP's films, an honor about which Arkoff mused, "In the early days of AIP, if anyone had told me that our pictures would be shown in the Museum of Modern Art, I would have been startled. That was the furthest thing from my mind. We did not deliberately make art. We were making economical pictures for our youthful market, but at the same time, I guess we were also doing something unique and evolutionary." Indeed, this unique and evolutionary approach to making movies changed not only the face of American cinema, but also helped to transform American popular culture. As the curators of the film department at MOMA noted, "Not only are [American International's] films rich in their depiction of our culture, but indeed they have played a not insignificant part in it."

American Mercury

For about a decade the *American Mercury* magazine served as an irreverent cultural critic. The magazine's distinctive style came from the iconoclastic nature of its editor, Henry Louis (H. L.) Mencken. Under his leadership, the *Mercury's* vitriolic attacks on mainstream American culture attracted a following among the intelligentsia and provoked controversy as well (censors tried to ban the April, 1926 issue).

The brainchild of publisher Alfred A. Knopf and journalist/social critic H. L. Mencken, the *Mercury* first appeared in 1924, and Mencken soon became the sole editor. The *Mercury* printed work by Charles Beard, W. J. Cash, Clarence Darrow, W. E. B. Du Bois, Emma Goldman, Langston Hughes, Eugene O'Neill, and Upton Sinclair, among others. In 1933, with readership falling off and his own interest in the magazine waning, Mencken relinquished the editorship. By the 1950s, after passing through a succession of owners and editors, the *Mercury* had degenerated into a racist, anti-semitic fringe publication. The magazine folded in 1980.

American Museum of Natural History

New York City's American Museum of Natural History—with its giant dinosaur skeletons and detailed dioramas—is both a primary repository for the scientific discoveries relating to the natural world and a major tourist attraction. Opened in 1869 when the Upper West Side of Manhattan was still on the edge of civilization, the fortress-like Museum later added wings reaching Central Park West and a major planetarium wholly updated in the 1990s. From a few hundred mounted birds and mammals, the museum's collection has grown to include more fossils, mammals, and dinosaurs than any other museum in the world. Critics have charged the museum with being an agent of colonialism and exploitation and have found the statue of President Theodore Roosevelt on horseback flanked by a walking Black and American Indian in front of the principal entrance an apt symbol of their charge. Such criticisms have not minimized the pleasures of the millions of people who visit the museum annually. In *The Catcher in the Rye* J. D. Salinger captured the delight of many visitors when his character Holden Caulfield fondly remembered his regular school visits to the museum, saying "I get very happy when I think about it."

The Amos 'n' Andy Show

During the Great Depression *The Amos 'n' Andy Show* provided comic relief to a nation reeling from rapid deflation and skyrocketing unemployment. The day after the stock market crash of October 29, 1929, the following exchange took place on the Amos 'n' Andy radio show—Andy: "Is you been keepin' yo' eye on de stock market?" Lightnin': "Nosah, I ain't never seed it." Andy: "Well, de stock market crashed!" Lightnin': "Anybody git hurt?" Andy: "Well, 'course, Lightnin', when de stock market crashes, it hurts bizness men. Dat's whut puts de repression on things." Clearly, the show gave down-on-their-luck Americans a cast of characters at whom they could laugh and with whom they could identify. But there was more at stake on the show than economic satire. In its television incarnation in the 1950s and 1960s, the show became a window on changing race relations in America. From 1925 until 1966 *The Amos 'n' Andy Show* dominated several forms of media in America. It was the nation's most popular radio show, the subject of two films, a popular comic strip, and finally a television sitcom with an all-black cast. The show

The cast of the *Amos 'n' Andy* television show: (from left) Spencer Williams, Tim Moore, and Alvin Childress.

perpetuated the stereotypes of blackface minstrelsy, portraying clownish “Coons,” docile and devout “Uncle Toms,” shrewish “Mammies,” and other stock black characters. As a television show it divided the black community. Some blacks thought it was a funny show which provided an excellent opportunity for blacks to work in the entertainment industry, while others—especially the National Association for the Advancement of Colored People (NAACP)—viewed it as an abominable racist burlesque which led all Americans to believe that blacks were unemployable, oafish fools.

The Amos 'n' Andy Show was the brainchild of Freeman Gosden and Charles Correll, two white performers with Southern roots. Gosden's father fought for the confederacy in the Civil War, and Correll was a distant relative of Jefferson Davis. Gosden and Correll met in North Carolina in 1919, and when their radio show, *Sam 'n' Henry*, debuted in Chicago in 1925 they were paid in food instead of cash. The title characters of the show were bumptious Southern blacks who had moved from Alabama to Chicago hoping for a better life. The humor on the show was part malapropistic (black characters creating unintended puns by mispronouncing words) and part derivative from the dim-witted characters' naivete. The show was historically significant because it was the first serialized radio program ever—in other words, it was the first show to have a continuous storyline woven through nightly episodes. As such, it was the pioneer of the soap opera and the television situation comedy.

In 1926 the *Chicago Tribune*, owner of Chicago radio station WGN, signed Gosden and Correll to a two year radio contract. When

that contract ended the duo moved to another station but had to change the names of the title characters because WGN owned the rights to *Sam 'n' Henry*. Gosden and Correll initially considered Jim 'n' Charlie for their new characters' names, but decided on Amos 'n' Andy instead because they thought that “Amos” was a “trusting, simple, and naive” Biblical name while Andy sounded “lazy” and “domineering.” In show number 23 Gosden and Correll came up with the show's trademark, the “Fresh Air Taxicab of America Incorporated.” In 1929 NBC picked up the show and broadcast it to a national radio audience. The show was an instant sensation. It was so popular that it had to be recorded live twice each night so that it could be heard on the West Coast and the East Coast in prime time. It represented a unique approach to comedy because it was not based on one-liners like other comedy shows of the period. Gosden and Correll thought that if they created likeable, interesting characters, their listeners would tune in. The other stars of *The Amos 'n' Andy Show* were Kingfish, a boisterous schemer, Lightnin' a dimwitted foot-shuffling janitor, Calhoun, a bombastic lawyer, Kingfish's shrewish wife Sapphire, and Sapphire's ogreish mother.

The 1930s belonged to *The Amos 'n' Andy Show*. In 1930 they made their first of two feature films, *Check and Double Check*, in which they appeared in blackface. Another film would follow in 1936. In 1931 40 million listeners tuned in each night to their radio show, representing 74 percent of the potential listening audience. The show was so popular that President Calvin Coolidge regularly excused himself from state dinners to listen to the 15 minute nightly broadcast, department stores broadcast the show over their public address systems so that their shoppers could listen to the show as they browsed, and movie theaters actually interrupted feature films in progress so that they could broadcast the radio program live to their audiences. Telephone activity also declined nationally during the 15 minutes during which the show was broadcast, and the sewers in many cities ran dry between 7:00 and 7:15 because listeners did not want to miss a moment of the show. Although the show was very popular among blacks and whites, the 1930s brought the first public protests against it by the NAACP.

In 1943 the NBC radio program was increased from 15 minutes to 30 minutes, but a ratings drop caused Gosden and Correll to revamp the show. When it returned after an eight month hiatus, it was a once-weekly show instead of a nightly show. It had a live audience, an orchestra instead of an organist, and a team of writers to co-write the show with Gosden and Correll. In 1948 CBS lured Gosden and Correll away from NBC by offering them the astounding sum of \$2.5 million.

When the television version of *The Amos 'n' Andy Show* premiered with an all-black cast on June 28, 1951, it was immediately at the center of a firestorm of controversy. The NAACP strongly objected to the show, claiming that it “depicted Negroes in a stereotyped and derogatory manner.” They soon filed a formal law suit against CBS which asserted that the show “strengthened the conclusion among uninformed and prejudiced people that Negroes are inferior, lazy, dumb, and dishonest.” The suit claimed that the show presented every black character as “a clown or a crook,” and argued that it led viewers to believe that all blacks were like the characters on the show. This was a minority position within the black community at large and within the black entertainment community in particular. The few blacks who had made it into show business saw

the show as a positive step because it employed dozens of African Americans in an industry which had been all but off limits to black performers. Several of the show's cast members defended it against the barrage of criticism from the NAACP and the National Urban League.

The star of the short-lived television show was neither Amos nor Andy but George "Kingfish" Stevens, played by Tim Moore. Some have suggested that instead of *The Amos 'n' Andy Show*, the show should have been called "The Adventures of Kingfish." Moore created in Kingfish a complex character—a sympathetic, mischievous protagonist. Amos, played by Alvin Childress, made cameo appearances in most episodes, but had a very minor role. Andy, played by Spencer Williams, Jr., had a more prominent role, but still served primarily as Kingfish's foil. Horace Stewart played the ironically named 'Lightnin', Ernestine Wade played Sapphire, and Jonny Lee played the preachy lawyer Calhoun. Blatz Brewing Co., the sponsor of the television show, pulled out in 1953 under pressure from the NAACP, and later that year the network canceled the show despite its high ratings. It was the first television show ever shown as a rerun (during the summer of 1952), and it ran in syndication until 1966.

Black entertainers and civil rights leaders of the 1960s through the 1990s have disagreed over how the show should be remembered. Comedians Flip Wilson and Redd Foxx watched the show, enjoyed it, and thought it was a harmless comedy. Other black entertainers disagreed. Richard Pryor called the show an "outrage" and Bill Cosby claimed it was "not at all funny." Civil Rights leader and presidential candidate Jesse Jackson has offered one of the most insightful commentaries on the show. He said, "I think the record must show that [*The Amos 'n' Andy Show*] paid the dues that made it possible for those who now play roles with much more dignity." He added that the show "proved that blacks could act" and "proved that blacks could entertain." As demeaning as the television show was in terms of its stereotypical presentations of African Americans, it did give them unprecedented access to the highly segregated world of show business.

Amsterdam, Morey (1908-1996)

Morey Amsterdam brought a vaudeville sensibility into the electronic age. Best known for his role as Buddy Sorrell on *The Dick Van Dyke Show*, Amsterdam was a popular show business veteran before he was cast in the series. He made his mark in acting,

Morey Amsterdam

songwriting, film, and nightclub comedy—where he earned the nickname "The Human Joke Machine" for his ability to come up with a joke on any subject on demand. He wrote gags for presidents and performers, and his admirers included Pope John XXIII and Chicago mob boss Al Capone.

Morey Amsterdam was born in Chicago, Illinois, on December 14, 1908. From the beginning, the arts touched his life. His father was a concert violinist who played for the Chicago Opera and, later, the San Francisco Symphony. Like many vaudeville veterans, Amsterdam began his performing career as a child. His first public performance took place in 1922 when Morey sang as a tenor on a San Francisco radio program. The teenager then joined his piano-playing brother in his vaudeville act. He started out as a cellist, but soon the instrument merely became a prop for his comedy. When his brother left show business, Morey continued on his own. At age 16, he was hired as a regular performer by a nightclub owner named Al "Brown," who had been impressed with Amsterdam's stage act. Brown's real name was Al Capone. A shootout on the club premises inspired Amsterdam to seek greener, and safer, pastures in California.

Amsterdam attended the University of California at Berkeley for a time, but by 1930 he was in New York City, working as a comedy

writer for radio stars Will Rogers and Fanny Brice. He soon realized that he felt at home on the air, where his quick wit and rapid-fire joke delivery, honed in front of live audiences, quickly won over listeners. In 1932 he started writing for *The Al Pierce Gang* radio program. It was on this show he met lifelong friend and future *Dick Van Dyke Show* costar, Rose Marie. He also found time to write jokes for another well-known client—President Franklin D. Roosevelt.

In the late 1930s, Morey Amsterdam continued to expand his creative horizons, serving as lyricist on the films *With Love and Kisses* (1937) and *Career Girl* (1943). His songwriting talents also yielded a number of popular compositions, including “Why Oh Why Did I Ever Leave Wyoming?” and The Andrews Sisters’ “Rum and Coca-Cola.” He wrote the films *The Ghost and the Guest* (1943) and *Bowery Champs* (1944) and provided additional dialogue for *Kid Dynamite* (1943).

In the midst of post-World War II prosperity, television came to America. As with radio, Morey Amsterdam wasted no time taking his place among the pioneers of the new medium. On December 17, 1948, CBS first telecast *The Morey Amsterdam Show* (a radio version, which had premiered six months earlier, continued during the TV series’ run). Morey essentially played himself: His character, a nightclub owner, was a joke-telling cello player. CBS canceled the series after three months. In only one month it was back, this time on the Dumont network, where it remained until its final airing in October of 1950.

Throughout the 1950s, Morey Amsterdam remained visible to TV audiences in a variety of series and guest appearances. He appeared as a panelist on NBC’s *Tag the Gag* in 1951 and *Who Said That?* (on which he had made his first TV appearance in 1948) in 1954. He hosted Dumont’s intergenerational game, *Battle of the Ages*, from September to November of 1952. While his own show was still on CBS, he hosted NBC’s *Broadway Open House* (1950), a precursor to *The Tonight Show*, on Monday and Wednesday nights.

It was Rose Marie who, in 1961, recommended Amsterdam for what would become his most memorable role. She was cast as comedy writer Sally Rogers on *The Dick Van Dyke Show*. The role of co-worker Buddy Sorrel was not yet cast. Rose Marie suggested that series creator Carl Reiner get in touch with her old friend Morey Amsterdam. Knowing Amsterdam’s reputation, Reiner agreed. Amsterdam accepted the offer to audition without hesitation—happy for the opportunity to move from New York City to California, where the show was to be filmed. He quickly landed the role.

The Dick Van Dyke Show broke new ground in the television situation comedy genre. Viewers not only learned what Rob Petrie (Van Dyke) did at the office, they also got to know the people with whom he spent his workdays. These co-workers were fully formed characters, as richly drawn as Rob and his wife Laura (Mary Tyler Moore). The series pioneered the depiction of a “workplace family,” a concept Moore would put to use in her own series in the next decade. Buddy was also one of the first TV characters to openly state a personal fact seldom mentioned on TV at the time: He was Jewish.

The series’ casting and writing were works of genius. As the writers of the fictional “Alan Brady Show,” Van Dyke, Amsterdam, and Rose Marie played off each other perfectly. Amsterdam’s banter with Rose Marie and his fast-paced quips directed at “Brady” producer Mel Cooley (Richard Deacon) quickly became highlights of the show. Buddy Sorrell was an ideal role for him: both were show

business veterans with sharp wits and an arsenal of jokes for any occasion. Amsterdam later declared, “I am Buddy. [He] is not only a comic, but an experienced writer, a fellow who knows timing and funny situations.” In the final episode, the cast learns that Rob’s life is to be adapted for a TV situation comedy that will be scripted by Rob, Buddy, and Sally. The fictional Buddy thus becomes a “real” person adapted into a television character. Just as Morey Amsterdam is Buddy, Buddy becomes, in a sense, Morey Amsterdam.

Amsterdam continued to work throughout the rest of his life, performing in clubs and guest starring on series from *The Partridge Family* (1970, as a comedy writer) to *Caroline in the City* (1996, with Rose Marie). He had just returned from a cabaret tour when he died of a heart attack on October 27, 1996. As Dick Van Dyke remarked, “Probably a hundred thousand jokes in his head went with him.”

Amtrak

Amtrak was created in the early 1970s to rescue America’s failing passenger rail system by bringing it under the control of a single quasi-governmental authority. Trains had been the primary means of intercity travel up to World War II, during which gasoline rationing filled many trains to standing-room-only. But passenger volume rapidly fell once the war was over, the automobile assuming primacy as a symbol of prosperity and mobility, a necessity for commuters in brand-new suburbs inaccessible by rail, and a commodity whose manufacture was central to the postwar industrial boom.

Nevertheless, a number of railroads continued to run passenger trains at a loss so long as they had a robust freight traffic to subsidize them. But by the end of the 1960s competition from truck freight, combined with inept management, spawned numerous bankruptcies (such as the New York Central and Pennsylvania Railroads, which merged to form the Penn Central in a last ditch but unsuccessful effort to avoid insolvency). In 1970, when President Nixon signed the Rail Passenger Service Act creating Amtrak, fewer than 10 percent of intercity travelers were riding the rails, on a total of only 450 scheduled trains a year—and three-quarters of the scheduled trains had discontinuance petitions pending before the Interstate Commerce Commission.

Passengers boarding an Amtrak train.

Many government officials in Washington were skeptical of Amtrak because they saw the new agency as an instance of throwing good money after bad, but the relatively modest appropriation passed by Congress included \$40 million from the federal government plus another \$100 million in guaranteed loans. A number of unprofitable routes were to be eliminated immediately, in return for which private railroads buying into the system would ultimately contribute \$192 million in monthly installments over three years.

On May 1, 1971, Amtrak ran its first trains. At first, these were the same as before, but now run by the original railroads under contract (as some cities' commuter-rail systems, notably Boston's, would continue to be into the 1990s); later, the trains were motley assemblages of aging steam-heated cars in a rainbow of different companies' colors behind engines newly painted with Amtrak's red-white-and-blue arrow logo. An immediate and visible change, however, was in advertising. With such imagery as a frustrated Paul Revere on horseback surrounded by stalled bumper-to-bumper car traffic, and a one-way Boston-New York fare of \$9.90 (and a round trip for just a dime more), Amtrak appealed both to the mind and the wallet.

And to a great extent the strategy worked. Students and young adults on tight budgets found the cheap fares irresistibly attractive, and enjoyed the camaraderie and adventure of train travel, even on antiquated equipment prone to failure (although, to its credit, Amtrak shops in Boston, Wilmington, Delaware, and elsewhere were reconditioning the old equipment as fast as they could) and with only a modest likelihood of on-time arrival. Thanks in large part to rebounding ridership, profitability was soon restored to the Washington-to-Boston corridor, most of which was bought outright from the bankrupt Penn Central in 1976.

Although the mingling of train travelers was arguably a social force for democratization, a second factor in the recovery of the Northeast Corridor was its first-class service. Although parlor cars were nothing new (complete with spacious seats and obliging service staff—mostly black, a holdover from the heyday of the Pullman sleepers), Amtrak sought to attract more affluent customers by introducing its priority Metroliner trains, which cut three-quarters of an hour off the Washington-New York run and whose interiors, reminiscent of airplane cabins, featured headrest-backed seats equipped with folding tray-tables, high-tech stainless-steel chemical toilets,

and even on-board telephones. A fleet for ordinary coach service, with similar styling but no telephones, was gradually introduced to replace the rebuilt "Heritage" cars as well. As the quality of service improved, so did ridership among older citizens, many of whom were attracted both by the nostalgia of train travel and by affordable excursion and senior fares.

Amtrak's first decade saw a race of capital improvements against deteriorating infrastructure, for the earlier railroads had spent little on upkeep as they sank deeper into debt. In the Northeast Corridor, several hundred miles of worn track on deteriorating wooden ties were replaced by long sections of continuous-welded rail bolted to concrete, and roadbeds were regraded to allow higher operating speeds. A daily trip by a prototype turbo-train, the "Yankee Clipper"—the name borrowed from a former Boston and Maine train to Bangor, discontinued in the mid-1950s—was introduced on an experimental basis between Boston and New York for several months in 1975. (However, the turbo trimmed only a half hour off the time of the fastest conventional express run, the "Merchants' Limited," and wobbled alarmingly at its top speed of 90 miles per hour. It was quietly withdrawn from service several months later.)

Meanwhile, Congress was becoming increasingly uneasy about its allocations to Amtrak's budget, since it could not see the analogy between such subsidies and the less visible public underwriting of the competition—the highways and airports—through such self-perpetuating taxation schemes as the Highway Trust Fund. Amtrak managed to beat back challenges to its funding by pledging to become a break-even business by the turn of the century, a deadline subsequently extended to the year 2002.

In 1981, Amtrak declared that its policy would be to set fares "at a level designed to produce the highest possible revenue." Ceasing to try to compete with intercity bus prices, the company eliminated most excursion fares. By 1998, a round trip by train between Boston and New York cost more than twice the fare charged by the principal bus carrier, Greyhound; not surprisingly, many students and the urban poor now shunned the train as prohibitively expensive, so that even as Amtrak crossed the \$1 billion mark in its annual revenues, it had for all practical purposes ceased to be passenger rail for all the people, and was now affordable only by the middle and upper classes.

Amusement Parks

Spatial and temporal enclaves remote from everyday life, amusement parks are among the favorite recreational places of Americans, who imported the concept from Europe, developed it into a major artifact of American popular culture and have successfully re-exported it throughout the world since the 1980s. Amusement parks not only provide an abundance of entertainment to visitors by featuring roller coasters, Ferris wheels, carousels, games, food, and shows, but also have promoted very contested models of ideal future societies and utopian communities, especially since the creation of Disneyland in 1955.

Contemporary amusement parks are the descendants of medieval trade fairs and European pleasure gardens of the late seventeenth and eighteenth centuries. Originally expressing an idyllic Arcadian life within increasingly industrialized urban landscapes, later pleasure gardens displayed additional features such as live entertainment, exotic architecture, impressive lighting, fireworks, dancing, games, and even primitive amusement rides. However, as their popularity grew, they also attracted undesirable guests such as prostitutes, rakes, smugglers, and thieves, and the development of criminal activities caused many of these gardens to close.

At the end of the nineteenth century, the growth of the amusement park industry shifted to the United States, benefiting greatly from the Chicago's Columbian Exposition of 1893, which introduced the key elements of modern amusement parks. The World's Fair unveiled the first Ferris wheel and the exotic enticements of the Midway Plaisance but, more significantly, it pioneered the model of an enclosed, illusory, and temporary utopian world produced by architects, engineers, and planners. Disconnected from its urban and social environment, the White City allowed its visitors to temporarily escape from reality and experience the magic dream of a perfect future relying on technological progress. Following this example, Captain Paul Boynton opened Chutes Park in Chicago in 1894, the first enclosed amusement park charging an admission fee; a solution that allowed for the exclusion of criminal elements. One year later, he opened Sea Lion Park at Coney Island, Brooklyn, New York, which inspired numerous amusement parks in the United States, including the three Great Coney Island parks.

Coney Island embodied the American amusement park tradition from the 1890s until the mid-1950s. In 1875, the completion of the Andrew Culver's Prospect Park and Coney Island Trailway had transformed Coney Island from a traditional seaside resort into a popular playground. Steeplechase Park (1897-1964), Luna Park (1903-1947), and Dreamland (1904-1911) attracted millions of working-class New Yorkers who enjoyed the intense thrills provided by the roller coaster and other mechanical devices, and the fabulous atmosphere of fantasy, sensuality, and chaos created by the extravagant

A typical American amusement park.

architecture, incredible illuminations, and disorienting attractions. Coney Island offered an escape from a mundane existence and a sense of release from the responsibilities of adulthood.

Increasing leisure time and disposable personal income, as well as the development of electric trolley lines in major American cities, initiated a tremendous growth of the amusement park industry over the next three decades. By building amusement parks at the end of trolley lines, trolley magnates stimulated weekend ridership, thus generating additional revenues and maximizing the flat monthly rate charged by the electric light and power companies. The first ‘trolley

parks’ consisted of picnic groves located in a pastoral landscape, but quickly, dance halls, restaurants, games, and a few amusement rides were added for the pleasure and entertainment of the patrons. These amusement parks became immediately successful among all social classes and, by 1920, over 1,800 operated in the United States. Unfortunately, the golden age did not last. In 1998, only twelve trolley parks remained.

The beginning of the 1920s marked the beginning of the dramatic decline of traditional amusement parks. With the new mobility provided by automobiles and the lack of parking facilities at the urban

parks, visitors turned to new activities and attractions such as motion pictures or more independent leisure travel. In addition, Prohibition (of alcohol), some years of bad summer weather, the acquisition of parks by private individuals, the Stock Market Crash of 1929 and the Great Depression caused the closing of numerous parks. By 1939, only 245 amusement parks still remained, struggling to survive. World War II further hurt the industry, but the postwar baby boom and the creation of “kiddielands” allowed for a short resurgence of prosperity. Nevertheless, the radical cultural changes occurring in the 1950s made amusement parks obsolete. The industry could not face the competition from shopping centers and television entertainment, suburbanization of the middle class, intensifying racial tensions, gang conflicts, and urban decay. Most of the traditional amusement parks closed. The modern amusement park would soon appear. The new concept was a fantastic dream of Walt Disney, which cost \$17 million to build.

On July 17, 1955, “Walt Disney’s Magic Kingdom,” more commonly referred to as Disneyland, opened in Anaheim, California. The nation’s first modern theme park was born and would dramatically alter the future of the amusement park industry, despite the skepticism it faced at its beginning. Featuring five separate fantasy worlds—Main Street, U.S.A., Fantasyland, Adventureland, Frontierland, and Tomorrowland—Disneyland attracted nearly four million visitors in 1956 and has maintained its exceptional popularity ever since. Isolated and protected from the intrusion of the real world, Disneyland offers to its visitors the experience of a spotless and idyllic universe without sex, violence, or social problems. The attractions transport them into a romanticized past and future, providing maximum thrill and illusion of danger in a perfectly safe environment. Impeccably planned and engineered down to the smallest detail, the park is a realm of permanent optimism and artificiality, celebrating the American Dream of progress through high technology within a carefully designed and bucolic landscape.

After many failures to copy Disneyland’s successful formula, Six Flags over Texas opened in 1961 and became the first prosperous regional theme park, followed in 1967 by Six Flags over Georgia. Throughout the late 1960s and 1970s, while traditional urban amusement parks continued to close, suffering from decaying urban conditions, large corporations such as Anheuser-Busch, Harcourt Brace Jovanovich, Marriott Corporation, MCA, Inc., and Taft Broadcasting invested in theme parks well connected to the interstate highway system. In 1971, the opening of what would become the world’s biggest tourist attraction, Walt Disney World, opened on 27,500 acres in central Florida. Costing \$250 million, it was the most expensive amusement park of that time. Less than ten years later, in 1982, EPCOT Center opened at Walt Disney World and the permanent world’s fair surpassed \$1 billion. After the fast development of theme parks in the 1970s, the United States faced domestic market saturation and the industry began its international expansion. With the opening of Wonderland in Canada (1981) and Tokyo Disneyland in Japan (1983), theme parks started to successfully conquer the world. Meanwhile, a renewed interest for the older parks permitted some of the traditional amusement parks to survive and expand. In 1987, Kennywood, in Pittsburgh, Pennsylvania, and Playland, in Rye, New York, became the first operating amusement parks to be listed on the National Register of Historic Places.

In 1992 Euro Disneyland, which cost \$4 billion to build, opened near Paris. Jean Cau, cited by Alan Riding, described it as “a horror made of cardboard, plastic, and appalling colors, a construction of hardened chewing gum and idiotic folklore taken straight out of

comic books written for obese Americans.” Though dismissed by French intellectuals and suffering financial losses for the first three years, by 1995 the park showed profits and has become among the most visited attractions in Europe.

In 1993 the Disney Company announced plans for an American history theme park near a Civil War battlefield site in Virginia. Although welcomed by some for the jobs and tax revenues it would create, the plans engendered much criticism. Disney was called a “cultural strip miner” and the project labeled a “Trojan mouse.” Leading historians took out large advertisements in national newspapers asking, “Should Disney pave over our real past to promote a commercial fantasy?” Ultimately, the plan was abandoned.

The intellectual community has endlessly criticized theme parks and particularly the Disney versions. In 1958, novelist Julian Halévy noted about Disneyland: “As in Disney movies, the whole world, the universe, and all man’s striving for dominion over self and nature, have been reduced to a sickening blend of cheap formulas packaged to sell. Romance, Adventure, Fantasy, Science are ballyhooed and marketed: life is bright colored, clean, cute, titillating, safe, mediocre, inoffensive to the lowest common denominator, and somehow poignantly inhuman.” Most criticisms emphasize the inauthentic, controlled and sanitized experience provided by the Disney parks. Totally disconnected from reality, the parks offer a decontextualized, selective, and distorted history, denying any components that could potentially challenge the perfect carefree world they exemplify. Ignoring environmental, political, and social issues, these ersatz of paradise are said to promote an unquestioned belief in consumerism, control through managerial hierarchy, and technologies to solve all the world’s problems, and to supply permanent entertainment to millions of passive visitors pampered by a perpetually smiling and well-mannered staff.

A more critical aspect of theme parks is their heavy reliance on the automobile and airplane as means of access. While mass-transit connection to the urban centers allowed millions of laborers to enjoy the trolley parks, its absence creates a spatially and socially segregated promised land excluding the poor and the lower classes of the population. The customers tend to belong mainly to the middle- and upper-middle classes. Since many visitors are well-educated, it seems difficult to support fully the previous criticisms. Theme park visitors are certainly not completely fooled by the content of the fictitious utopias that they experience, but, for a few hours or days, they can safely forget their age, social status, and duties without feeling silly or guilty. The success of American amusement parks lies in their ability to allow their visitors to temporarily lapse into a second childhood and escape from the stress and responsibilities of the world.

—Catherine C. Galley and Briavel Holcomb

Amway

The Amway Corporation has grown from a two-man company selling all-purpose cleaner to become the largest and best known multi-level or network marketer in the world. Its diverse product line, ranging from personal care items to major appliances, generated sales of over seven billion dollars in 1998 and was sold by nearly one million distributors in 80 countries and territories. In the process, founders Richard M. DeVos and Jay Van Andel have made millionaires of some of their adherents and *Fortune* 400 billionaires of themselves. With the growth of home businesses in late twentieth-century America, Amway has inspired a slew of imitating companies, selling everything from soap to long distance telephone service. Amway, or the American Way Association as it was first called, has also revived interest in the American success story; rags-to-riches financial success based on hard work, individualism, positive thinking, free enterprise, and faith in God and country.

The prosperous years following World War II inspired people to search for their own piece of the American dream. A variant of the 1930s chain-letter craze, pyramid friendship clubs swept the United States in 1949. The clubs encouraged people to make new friends by requiring them to pay one or two dollars to join and then recruit at least two other paying members. The individual at the top of the pyramid hosted a party and received all of the proceeds before dropping out. This "new mass hysteria," as *Life* magazine called it, was popular mostly among the lower middle class but attracted adherents even from the upper class. The pyramid aspect was illegal—a form of gambling—but authorities risked huge public protest if they intervened. Hundreds of irate readers even threatened to cancel their subscriptions to the *Detroit News* when the paper published stories condemning the clubs. That, however, did not stop magazines and movie newsreels from showing images of lucky participants waving fistfuls of cash at pyramid parties. But most of the schemers got nothing more than dreams of instant riches.

Amway co-founders Jay Van Andel (1924—) and Richard DeVos (1926—) met as students at Grand Rapids, Michigan, Christian High School in 1940. An oft-told business deal brought the high school buddies together; DeVos paid Van Andel a quarter each week for rides to and from school in Van Andel's old Ford Model A. The Dutch American DeVos and Van Andel shared the same church, the conservative Christian Reformed, and similar backgrounds, values, and interests. Their families encouraged hard work and both young

men were instructed to develop their own businesses as a means of assuring their financial future. World War II intervened, but the pair reunited after the war and founded their first businesses, a flight school and the first drive-in restaurant in Grand Rapids.

Following an adventure-filled trip to South America by air, sea, and land, the two men searched for a new business opportunity in 1949. The answer appeared—at the height of the pyramid craze—in the form of Nutrilite vitamins and food supplements. Nutrilite had been founded by Carl Rehnborg, a survivor of a Chinese prison camp. Rehnborg returned to the United States convinced of the health benefits of vitamins and nutritional supplements. His company used a different sales technique, multi-level or network marketing, that was similar to but not exactly the same as pyramiding. New distributors paid \$49 for a sales kit, not as a membership fee but for the cost of the kit, and did not have to recruit new distributors or meet sales quotas unless desired. Nutrilite distributors simulated aspects of pyramid friendship clubs. They sold their products door-to-door and person-to-person and were encouraged to follow up sales to make sure customers were using the purchases properly or to ask if they needed more. Satisfied customers often became new distributors of Nutrilite and original distributors received a percentage of new distributors' sales, even if they left the business.

DeVos and Van Andel excelled at network marketing, making \$82,000 their first year and more than \$300,000 in 1950, working out of basement offices in their homes. Over the next ten years, they built one of the most successful Nutrilite distributorships in America. In 1958, a conflict within Nutrilite's management prompted the pair to develop their own organization and product line. The American Way Association was established with the name changed to Amway Corporation the following year. DeVos and Van Andel built their company around another product, a concentrated all-purpose cleaner known as L. O. C., or liquid organic cleaner. Ownership of the company had one additional benefit beyond being a distributor. DeVos and Van Andel now made money on every sale, not just those they or their distributors made.

The new enterprise "took on a life of its own, quickly outgrowing its tiny quarters and outpacing the most optimistic sales expectations of its founders," according to a corporate biography. Operation was moved to a building on the corporation's current site in a suburb of Grand Rapids—Ada, Michigan—in 1960. In 1962, Amway became an international company, opening its first affiliate in Canada. By 1963, sales were 12 times the first-year sales. In its first seven years, Amway had to complete 45 plant expansions just to keep pace with sales growth. By 1965, the company that started with a dozen workers employed 500 and its distributor force had multiplied to 65,000. The original L. O. C. was joined by several distinct product lines with dozens of offerings each. Most of the products were "knock-offs," chemically similar to name brands but sold under the Amway name. A fire in the company's aerosol plant in Ada in 1969 failed to slow growth.

The 1970s were an important decade for the company. Pyramid schemes attracted renewed public attention in 1972 when a South Carolina pitchman named Glenn Turner was convicted of swindling thousands through fraudulent cosmetic and motivational pyramid schemes. The Federal Trade Commission (FTC) accused Amway of similar pyramid tactics in 1975. "They're not in a business, but some sort of quasi-religious, socio-political organization," a FTC lawyer said. The FTC alleged the company failed to disclose its distributor drop-out rate, well over 50 percent, as well. But an administrative law judge disagreed in 1978, arguing that Amway was a "genuine

business opportunity.” The company began a vigorous public relations campaign against pyramid schemes, which was to continue on its corporate web-page through the late 1990s.

Amway expanded its international operations in earnest during the 1970s, adding countries in Europe and Asia. In 1972, Amway purchased Nutrilite Products, the firm that had started Van Andel and DeVos. The firm’s first billion dollar year came in 1980. Amway World Headquarters continued to expand as a new cosmetics plant was opened in Ada. By the end of the 1980s, Amway distributors were operating in 19 countries on five continents, marketing hundreds of Amway-made products in addition to other name brand products sold through a catalog.

Personal computers and corporate downsizing aided to the rise in home businesses during the 1980s and 1990s, benefitting network marketing companies like Amway. Although less than five percent earned more than \$40,000 a year, The Direct Selling Association estimated that 30,000 people became new direct marketing distributors each week in 1997. In an era of increasingly impersonal retailing, customers enjoyed a return to personal salesmanship. “You buy a product at the store and the manager doesn’t call to say, ‘Hey, are you doing OK?’,” one multi-level distributor told the Associated Press in 1997. Amway sales presentations stressed customer service but were blended with testimonials from successful distributors, healthy doses of positive thinking, and pitches to God and patriotism. The company’s literature, including books, videos, and an internet site, was replete with rags-to-riches success stories, much like a Horatio Alger, Jr. novel of a century before. Not everyone, however, succeeded with the company. “I saw a lot of other people making money, [but] things just didn’t click for us,” one former distributor told the Associated Press. Still, the *Wall Street Journal* reported in 1998 that an increasing number of doctors were recruiting patients and other doctors to sell Amway as a means of making up for lost income due to managed health care.

A second generation assumed senior management positions at the privately-held Amway Corporation during the 1990s. A board of directors comprised of DeVos, Van Andel, and eight family members was formed in 1992. Steve A. Van Andel (1955—) and Richard M. DeVos, Jr. (1955—) succeeded their fathers as chairman and president. Meanwhile, in 1998 the elder DeVos and Van Andel had personal fortunes estimated at \$1.5 and \$1.4 billion dollars respectively, and they have used their money to support educational and Christian philanthropy. But, Amway faced new legal problems as well. Beginning in 1982, Procter & Gamble sued various Amway distributors for telling customers that the company encouraged satanism. In 1998, Amway responded by suing Procter & Gamble for distributing “vulgar and misleading statements” about Amway and its executives. The litigation revealed the extent of Procter & Gamble’s concern over Amway’s competition.

The DeVos family attracted media attention toward the end of the twentieth century for their support of the Republican Party and other conservative political causes. Richard M. DeVos, Sr. and his wife gave the most money to Republicans, \$1 million, during the 1996 presidential campaign while encouraging their Amway distributors to donate thousands of additional dollars. Amway put up \$1.3 million to help the party provide its own coverage of the 1996 national convention on conservative evangelist Pat Robertson’s cable television channel—“a public service,” as Richard M. DeVos, Jr. explained. “I have decided . . . to stop taking offense at the suggestion that we are buying influence. Now I simply concede the point. They are right. We do expect some things in return,” DeVos’ wife Betsy wrote in an

article for *Roll Call*. Regardless, or perhaps because of its politics, the “easy money” allure of Amway continued to attract new distributors to the firm. “Amway wasn’t just a soap business,” one ex-school teacher couple related on the company’s web-page in 1999. “People’s lives were changed by it. Now we are living our dream of building an Amway business as a family.”

Anderson, Marian (1897-1977)

Although her magnificent contralto voice and extraordinary musical abilities were recognized early on, Marian Anderson’s American career did not soar until 1939, when she performed on the steps of the Lincoln Memorial in Washington, D.C. At that juncture, her life mission was as much sociological as musical. Not only did she win acceptance for herself and all black performers to appear before unsegregated audiences but she helped initiate the civil rights movement that would flower in the 1960s.

Anderson had no singing instruction until she was seventeen. In 1925, she won a vocal competition in which 300 entrants sought an appearance with the New York Philharmonic in Lewisohn Stadium. Arturo Toscanini heard her in Salzburg, Austria, and declared, “a voice like hers is heard only once in a hundred years.”

Popular belief is that her career nearly foundered again and again because she was black, but that is not true. By early 1939 she earned up to \$2000 a concert and was in great demand. The problems she faced were the segregation of audiences in halls and the insult of sometimes not being able to find decent hotel accommodations

Marian Anderson, singing at the Lincoln Memorial.

because of her color. Her first manager, Arthur Judson, who could not deliver many high-paying dates he promised, suggested that she become a soprano. But she grasped that this was not a viable solution, not only because it evaded the real issue but because such a change could, possibly, seriously affect her vocal cords.

Not at loose ends, but discouraged, Anderson returned to Europe, where she had toured earlier. Between 1930 and 1937, she would appear throughout Western Europe, Eastern Europe (including the Soviet Union), Scandinavia, and Central Europe. After breaking with Judson, Anderson acquired a new manager. Her accompanist, Billy Taylor, bombarded impresario Sol Hurok with letters and copies of her reviews, in the hope that he would become interested in her work. Hurok had built his reputation on publicity feats for his clients. (Some stunts were outrageous, but nearly all of his clients were superb performers.) He had undoubtedly heard about Anderson before Taylor's missives, so his later story about stumbling across a concert she gave in Paris, in 1935, can be dismissed.

What is true is that the concert made a great impression on him, and both he and Anderson agreed to a business relationship that would last until she retired from the stage. When she returned to America in December 1935, Hurok billed her as the "American Colored Contralto," which evidently did not offend her. Under his management, she appeared frequently but still endured the sting of racism even in New

York, where she had to use the servants' entrance when she visited her dentist in Central Park South's exclusive Essex House.

Characteristically, Hurok would claim credit for the event that came to highlight the discrimination toward Anderson and other black artists. He had thought to present her in Washington's Constitution Hall, owned by the ultra-conservative Daughters of the American Revolution (DAR). As he expected, the hall's management duly notified him that Anderson could not appear there because of a "Whites Only" clause in artists' contracts.

Hurok thereupon notified the press about this terrible example of prejudice. After learning the news, a distinguished group of citizens of all races and religions, headed by Mrs. Franklin Delano Roosevelt, agreed to act as sponsors of a free concert Anderson would give on the steps of the Lincoln Memorial, on Easter Sunday, April 9, 1939. Mrs. Roosevelt's husband was in his second term in the White House, and to further emphasize the importance she assigned the event, Mrs. Roosevelt resigned her DAR membership.

An estimated 75,000 people, including Cabinet members and Members of Congress, and about half of whom were black, heard Anderson open the program with "America," continue with an aria from Donizetti's "La Favorita," and, after a few other selections, received an ovation. The crowd, in attempting to congratulate Anderson, threatened to mob her. Police rushed her back inside the

Memorial, where Walter White of the American Association for the Advancement of Colored People had to step to a microphone and make an appeal for calm.

The publicity generated by the event firmly established Anderson's career, not only at home but throughout the world. Racial discrimination in concert halls did not end, but its proponents had been dealt a mighty blow. Beginning after World War II and through the 1950s, Hurok managed tours for Anderson that were even more successful than those of pre-war years. She performed at the inaugurations of Dwight D. Eisenhower and John F. Kennedy and at the White House during their presidencies, as well as before Lyndon B. Johnson. Eventually she performed in over 600 American cities to over six million listeners in more than 1500 auditoriums.

In 1955, at the advanced age of fifty-eight, Anderson was the first black engaged as a permanent member of the Metropolitan Opera. Not only did this pave the way for other black artists to perform with the Met but it marked yet another major step forward in the struggle against racial discrimination.

In addition to opening up opportunities for black artists, Anderson made spirituals an almost mandatory part of the repertoires of all vocalists, black *and* white. It was impossible to hear her rendition of *Sometimes I Feel Like a Motherless Child* and not be deeply moved. Audiences wept openly. Requests to hear more such music followed, wherever she performed.

Although Anderson made many recordings, she far preferred to appear before live audiences. "I have never been able to analyze the qualities that the audience contributes to a performance," she said. "The most important, I think, are sympathy, open-mindedness, expectancy, faith, and a certain support to your effort. I know that my career could not have been what it is without all these things, which have come from many people. The knowledge of the feelings other people have expended on me has kept me going when times were hard."

Anderson, Sherwood (1876-1941)

Although Sherwood Anderson had a relatively brief literary career, publishing his first novel when he was forty years old, he has left an indelible mark on American literature. His critique of modern society and avant-garde prose served as a model for younger writers of the so-called "Lost Generation," who for a time venerated Anderson for his rather dramatic departure from mainstream family and corporate life for one of nonconformity and cultural rebellion. He is considered today one of the most important figures in twentieth century American fiction—one who combined turn-of-the-century realism with an almost poetic introspection into the frailties and uncertainties of modern man.

Such a career seemed unlikely for Anderson initially. Born in Camden, Ohio, in 1876, he came of age in the small Ohio town of Clyde before attending Wittenberg Academy in Springfield, Ohio. As a boy, Anderson was known around town for his dreams of someday shedding his modest surroundings to make a fortune in the business world—not unusual for a boy growing up in the late nineteenth century—but in his case such entrepreneurial spirit earned him the nickname "jobby" among his peers for his willingness to take on any and all types of employment to earn a dollar. In 1900, he put his plans into action by moving to Chicago and taking a job in advertising. He married, began a family, then moved to Elyria, Ohio, to become president of a company specializing in roofing materials.

Yet while Anderson pursued his fortune, his desire to write began to conflict with his career. He had developed an appreciation for letters while in college and considered himself talented enough to become a successful author, but had decided that his business plans were more important. In Chicago, he had in some ways enjoyed the best of both worlds—his work in advertising had allowed him to combine artistic creativity and business acumen; life in Ohio seemed stultifying and colorless in comparison. Over time, his frustration became more than he could bear, and in 1912, at the age of thirty-six, Anderson experienced a mental breakdown which left him wandering the streets of Cleveland in a disoriented state for days. Following this crisis, he left his wife and three children and moved back to Chicago to begin a new life as a writer. With a few manuscripts in hand, he made contact with publisher Floyd Dell, who saw potential in Anderson's writing and introduced him to members of Chicago's literary crowd such as Carl Sandburg and Margaret Anderson.

Dell also gave Anderson his first opportunity to see his writing in print, initially in the literary journal *Little Review* and later in the *Masses*, a radical magazine of which Dell served as an editor. Soon he was publishing short stories and poems in the noted journal *Seven Arts*, published by Waldo Frank, Frank Oppenheim, and Van Wyck Brooks. His first book, *Windy McPherson's Son* (1916), was an autobiographical account of a young man who escapes his empty life in a small Iowa town by moving to the city, makes a fortune as a robber baron, yet continues to yearn for fulfillment in what he views as a sterile and emotionally barren existence. Critics applauded the book for its critical examination of mainstream, corporate America; it was also a precursor to other works of the genre such as Sinclair Lewis's *Main Street*.

With the publication of his first book, Anderson established himself firmly in Chicago's literary scene. However, it was his third book, *Winesburg, Ohio* (1919), that catapulted him into national notoriety. A series of character sketches, most of which appeared in the *Masses* and *Seven Arts*, *Winesburg, Ohio* describes the experiences of individuals in a small midwestern town—"grotesques," as he called them, who base their lives on the existence of exclusive truth yet who live in a world devoid of such. To exacerbate the frustrated lives of his characters, he gave each one a physical or emotional deformity, preventing any of them from having positive relations with the outside world, and making the book both a critique of small town life and the modern age generally. Attracted to writers such as Gertrude Stein, who experimented with unconventional structure and style, Anderson used a disoriented prose to illustrate the precarious lives of his characters.

Critics and writers alike hailed *Winesburg, Ohio* as a pioneering work of American literature, and the book influenced a generation of writers attracted both to Anderson's style and his themes. The novel was the first of several works of fiction which stressed the theme of

society as a “wasteland,” such as works by T. S. Eliot, F. Scott Fitzgerald, and Ernest Hemingway. Fitzgerald and Hemingway, along with William Faulkner, also sought to emulate Anderson’s avant-garde style in their own works. For a short time, a number of young writers looked up to Anderson, whose age and experience, along with his unconventional lifestyle, served as a model for anyone who sought to critique and rebel against the norms of modern society.

Anderson’s popularity proved fleeting, however. He published a few other novels, including *Poor White* (1920) and *The Triumph of the Egg: A Book of Impressions from American Life in Tales and Poems* (1921), but none enjoyed the success of his earlier works. Critics have paid considerable attention to his numerous autobiographical works, most notably *Tar: A Midwest Childhood* (1926) and *A Story Teller’s Story* (1924), for their unconventional methodology. Believing that an individual’s vision of himself, even if rooted in imagination, is more important than verifiable facts, he warned readers that at times he intentionally sacrificed factual accuracy for psychological disclosure, a device which has contributed to considerable confusion regarding his early life. Despite his rather rapid decline in popularity, and also despite the numerous critiques of his works appearing in later years which show that at times his talents were perhaps overrated, Anderson’s influence on younger writers of his time establishes him as a central figure in twentieth-century fiction.

Andretti, Mario (1940—)

Mario Andretti is one of the most outstanding and exciting race car drivers of all time. During a career that began in the late 1950s, Andretti won four National Indy Car Championships, logged more than one hundred career victories, and captured more pole positions than any other driver in history.

Andretti was born in Montona, Italy, on February 28, 1940. His parents were farmers in northern Italy, but were in a displaced persons camp following the Second World War. Shortly before his family immigrated to the United States in 1955, Andretti attended his first auto race, the famous Mille Miglia, a thousand-mile road race through central and southern Italy. The teenager was enthralled by the driving skill of Alberto Ascari, who profoundly impacted his life.

His family settled in Nazareth, Pennsylvania, and Andretti quickly set to work modifying stock cars. He won his first race in 1958 driving a Hudson Hornet. His racing career embraced dirt cars,

midgets, sprint cars, sports cars, Indy cars, Formula One racers, and even dragsters. His versatility is seen in the fact that until 1989, Andretti was the only driver to win both a Formula One World Championship and an Indy Car National Title.

Andretti raced in his first Indianapolis 500 in 1965, and he had so much potential that he was selected “Rookie of the Year.” He won the Indianapolis 500 in 1969. Even though everyone believed this would be the first of many victories at “The Greatest Spectacle in Racing,” Andretti seemed jinxed at Indianapolis. In spite of the fact that he often had the fastest car and was the favorite to win, on race day his car would break down or he would be involved in a wreck that would steal the win from his grasp. In 1981 Andretti lost the race after a controversial ruling. Although he was initially declared the winner of the race, several months later a panel took his victory away because of alleged passing violations. Bobby Unser was declared the victor.

Andretti was more successful at other events. He won the Daytona 500, multiple Sebring 12-hour events, and 12 Formula One Grand Prix races. He was USAC’s Dirt Track champion in 1974 and five years later captured the title of the International Race of Champions. He was recognized as the Driver of the Year in 1967, 1978, and 1984, and even the Driver of the Quarter Century in 1992. He won the Formula One world championship in 1978, and was hailed as Indy Car champion four different years (1965, 1966, 1969, and 1984).

Drivers of his generation evaluated the success of their career by their accomplishments at the Indianapolis 500. Andretti’s name is in the record books at Indianapolis for two accomplishments. He is tied for the distinction of winning the most consecutive pole positions (2) and setting the most one-lap track records (5).

Andretti has two sons, Michael and Jeffrey, who have been successful race car drivers. Mario and Michael were, in fact, the first father-son team at the Indianapolis 500. Andretti’s popularity has resulted in the marketing of various collectibles including trading card sets, model cars, toy racers, and electronic games.

The Andrews Sisters

The Andrews Sisters were the most popular music trio of the 1930s and 1940s. Their public image became synonymous with World War II, due to the popularity of their songs during the war years and because of their tireless devotion to entertaining American troops. Patty, LaVerne, and Maxene Andrews began singing professionally in 1932. They perfected their own style—a strong, clean vocal delivery with lush harmonic blends—but also recorded scores of songs in a wide array of other styles. More popular tunes like “Bei Mir Bist Du Schön,” “Beer Barrel Polka,” and “Boogie Woogie Bugle Boy of Company B” sold millions of records and made them

Mario Andretti

national stars. Their songs were happy in tone, aimed at boosting the morale of the American public. The sisters appeared in a number of wartime movies, and earned a devoted audience in the millions of civilians and soldiers who heard their songs.

Androgyny

The blurring of the sexes has been a mainstay throughout the history of representational art, and popular art of the twentieth century has not broken with this tendency. Whether through consciously manipulated personae or otherwise, countless stars of film, television, and pop music have displayed again and again that the division between masculine and feminine is often a frail one, and in many cases have served to help reverse “natural” standards altogether.

Furthermore, while a number of androgynous figures in the media have sometimes become icons of gay and lesbian fans, many others have traversed the fantasy realms of heterosexual markets, challenging at yet another level the supposedly discrete categories of personal identity.

Of all of its many forms, the most obvious mode of gender-bending in popular culture has been drag. Male and female cross-dressing, however, has often been given unequal weight and meaning. On the one hand, men in women’s clothes have most often been utilized for comic effect, from television comedian Milton Berle in the 1950s, to cartoon rabbit Bugs Bunny, and on to numerous characters on the *In Living Color* program in the 1990s. Females in drag, on the other hand, are rarely used in the same way, and to many connote a coded lesbianism rather than obvious slapstick comedy. German film diva Marlene Dietrich, for example, with the help of photographer Josef von Sternberg, created a seductive self-image wearing men’s suits during the 1930s, gaining immense popularity among lesbian audiences—and shocking some conservative straight viewers. While this discrepancy in drag is probably the result of cultural factors, critics have suggested that popular standards of femininity are often already the result of a kind of everyday “costume,” whereas masculinity is perceived as somehow more “natural” and unaffected. Reversing these roles, then, has markedly different effects.

If self-conscious drag such as Dietrich's can expose common assumptions of the opposition between masculine and feminine in a bold reversal, many other performers have embraced androgyny in the strictest sense by meeting conceptions of both genders in the middle, often with greater cultural reverberations. When American actress Jean Seberg appeared in the 1959 French film *Breathless*, for example, her closely cropped hair and boyish frame stood as a challenge to a culture that measured femininity in long tresses of hair and dramatic body curves. Nevertheless, Seberg became a major influence throughout the 1960s and beyond, ushering in a new type of waifish woman into the popular imagination—for example, actress Mia Farrow and models like Twiggy.

Popular male figures have equally relied upon similar gender play, perhaps most visibly within rock music. Beginning in the late 1960s, for example, much of American and British popular music often seemed to be an unequivocal celebration of androgyny. The "glam" scene, represented by acts like Marc Bolan and T-Rex, Bryan Ferry and Roxy Music, Elton John, and Lou Reed pushed costumed excess to new limits with vinyl pants, feather boas, and makeup of all sorts—to the approval of men and women of multiple orientations. Arguably, the most crucial single glam figure was British singer David Bowie, who adopted an ever changing series of ambiguous stage characters, including Aladdin Sane and Ziggy Stardust, highlighting the theatrical nature of all personae, sexual or otherwise. In the wake of glam came the punk and New Romantic movements in the late 1970s and 1980s, exemplified by groups like the Damned, the Cure, and Siouxsie and the Banshees. Although these two strains were often at odds musically, both were often allied in a project of shocking popular middle-class notions of rugged masculinity. Such shock, however, soon elided into popular faddism, and by the early 1980s a number of musical gender "subversives" such as Adam Ant, Prince, and Boy George nestled in Top 40 charts alongside traditional figures of masculinity.

At the same time that self-consciously androgynous entertainers have often "passed" into the acceptance of mainstream audiences, it has also been common for gender bending to appear to be quite unintentional. A strong example of this can be found in the phenomenon of the so-called "haircut" American heavy metal bands of the 1980s such as Poison, Motley Crue, and Winger. While these acts often espoused lyrics of the most extreme machismo, they often bedecked themselves with "feminine" makeup, heavily hairsprayed coifs, and tight spandex pants—in short, in a style similar to the glam rockers of a decade before. Perhaps even more than a conscious artist like Bowie, such ironies demonstrated in a symptomatic way how the signs of gender identification are anything but obvious or natural. Whether fully intended or not, however, images of androgyny continued to thrive into the 1990s and its musicians, actors, and supermodels, as America questioned the divisions of gender and sexuality more than ever.

The Andy Griffith Show

When Danny Thomas, the well-loved entertainer and benefactor of St. Jude's hospital for children, cast Andy Griffith as the affable slow-talking sheriff in an episode of *The Danny Thomas Show* (1953-65), he had no way of knowing that he was launching a phenomenon that would assume mythical proportions. In that episode, Thomas was given a ticket while traveling through the small town of Mayberry, North Carolina. Sheriff Andy Taylor, who also happened to be the justice of the peace, convinced the big city entertainer that Mayberry was a place to be reckoned with. Almost 40 years later, it still is. The show ran from 1960 to 1968, but by the end of the 1990s, more than five million people a day continued to watch *The Andy Griffith Show* in reruns on 120 television stations.

The genius of *The Andy Griffith Show* evolved from its characters. Each role seemed to be tailor-made for the actor who brought it to life. Mayberry was peopled by characters who were known and liked. The characters did ordinary things, such as making jelly, going to the

Don Knotts (left) and Andy Griffith in a scene from the television program *The Andy Griffith Show*.

movies, singing in the choir, and sitting on the porch on a summer night. No one accused Andy and Barney of commitment phobia even though they left Helen and Thelma hanging for years before marrying them. In point of fact, it took a reunion movie to bring Barney and Thelma Lou to the altar. It was simply accepted that people in small Southern towns behaved this way.

Five-time Emmy winner Don Knotts, as Barney Fife, became one of the most popular characters of all time. His slack jaw and pop-eyed look led to starring roles in several feature films, among them *The Ghost and Mr. Chicken* (1965), *The Incredible Mr. Limpet* (1964), and *The Reluctant Astronaut* (1967). Knotts' comedic timing is without parallel. Little Ronny Howard played Taylor's son, Opie; he grew up to be Ron Howard, played freckle-faced teenager Richie Cunningham (1974-80) on *Happy Days* (1974-84) and later forged a successful career as a director (*Apollo 13* (1995) and *Cocoon* (1985)). Jim Nabors played goofy neighborhood friend and gas station attendant, Gomer Pyle. The success of the Pyle character led to *Gomer Pyle, USMC* (1964-70) in which Pyle joins the Marines and becomes the bane of Sergeant Carter's life. After the demise of *Gomer Pyle, USMC*, Nabors hosted his own variety and talk shows and continued to perform in concerts and clubs. George Lindsey (Gooper) became a regular on *Hee Haw* (1969-86) a hillbilly version of *Laugh-In*. However, it was Andy Griffith who provided the anchor for the show and who proved the glue that held its bumbling but well-meaning characters together. Without Andy, the characters might have been perceived as caricatures. After leaving the show, Griffith launched a second successful television series with *Matlock* (1986-95) playing a shrewd but amiable southern lawyer. He also returned to an old love and recorded two successful gospel albums.

The premise of the show was simple. Episodes would follow the life of Andy Taylor, a sheriff who provided law and order in a small southern town and who was raising his small son with the help of his Aunt Bee and various friends and neighbors. The plots were never complex; they involved the consequences of Opie killing a bird with his B-B gun, or Barney not being allowed to have bullets in his gun, or neighborhood friend Gomer making a "citizen's arrest," or Andy's fighting off the attentions of a mountain girl. The success of the show in the 1960s was understandable, for it poked fun at realistic human foibles. On the other hand, its continued success has been phenomenal. In the 1990s, fans all over the country band together in Andy Griffith Show Rerun Watchers Clubs. On the Internet, a number of web pages have been devoted to the show and its stars. These sites include a virtual Mayberry community. Most surprising of all is the devotion of the Church of Christ in Huntsville, Alabama, who plan their Wednesday night services around watching old episodes of the show and applying its moral lessons to their religious beliefs.

Almost 40 years after its 1960 launching, the stars of *The Andy Griffith Show* have grown up and older. Some of them, including Aunt Bee (Frances Bavier), have died. Yet in the minds of many nostalgic Americans, the town of Mayberry will forever be populated: Andy Taylor will be the sheriff, and his deputy will be Barney Fife. Aunt Bee and her friend Clara will wrangle over who is the best cook. Gomer and Gooper Pyle will continue to run the gas station. Floyd will cut hair on Main Street. Howard Sprague will work at City Hall. Otis will lock himself up after a drunk. Helen and Thelma Lou will wait for Andy and Barney. The Darlings will live in the North Carolina mountains. Whatever the underlying cause of its continued

success, the town of Mayberry and its inhabitants have become part of the American psyche, reminding a jaded public of gentler, friendlier times. It may be true that you cannot go home again, but you can go back to Mayberry again and again.

Andy Hardy

Once one of the most popular boys in America, the Andy Hardy character flourished in a series of MGM family comedies from the late 1930s to the middle 1940s. Mickey Rooney's dynamic portrayal of the character was an important factor in the great success of the movies. The Hardy Family lived in Carvel, the sort of idealized small town that existed only on studio backlots. In addition to Andy, the household consisted of his father, Judge Hardy, his mother, his sister, and his maiden aunt. Millions of movie fans followed Andy from adolescence to young manhood in the years just before and during World War II.

The initial B-movie in the series was titled *A Family Affair*. Released in 1937, it was based on a play by a writer named Aurania Rouverol. Lionel Barrymore was Judge Hardy; Spring Byington played Andy's mother. The film was profitable enough to prompt MGM to produce a sequel. For *You're Only Young Once*, which came out early in 1938, Lewis Stone permanently took over as the judge and Fay Holden assumed the role of Andy's mom. Ann Rutherford joined the company as Andy's girlfriend Polly, a part she'd play in a full dozen of the Hardy films. Three more movies followed in 1938 and in the fourth in the series, *Love Finds Andy Hardy*, Andy's name appeared in a title for the first time. Extremely popular, the Hardy Family pictures were now reportedly grossing three to four times what they'd cost to make. The public liked the Hardys and they especially liked Mickey Rooney. By 1939 he was the number one box office star in the country. In addition to the Hardy films, he'd been appearing in such hits as *Captains Courageous*, *Boys' Town*, and *Babes In Arms*. In the years just before American entry into World War II, the brash, exuberant yet basically decent young man he played on the screen had enormous appeal to audiences.

The movies increasingly concentrated on the problems and perplexities that Andy faced in growing up. Schoolwork, crushes, financing such things as a car of one's own. While Polly remained Andy's one true love, MGM showcased quite a few of its young actresses in the series by having Andy develop a temporary crush. Among those so featured were Judy Garland, Lana Turner, Esther Williams, Kathryn Grayson, and Donna Reed. Early on Andy began

(Counterclockwise from right) Lana Turner, Ann Rutherford, Judy Garland, and Mickey Rooney in a scene from the film *Love Finds Andy Hardy*.

having heart-to-heart talks with his father about whatever happened to be bothering him. These father-and-son chats became an essential set piece in the series and no film was without one. Part judge, part therapist, the senior Hardy was also a good listener and his advice to his son, if sometimes a bit stiff and starchy, was always sound. For all his bounce, impatience, and aggressiveness, Andy was pretty much a traditional, middle-of-the-road kid at heart. He usually followed Judge Hardy's suggestions and, by the end of the movie if not before, came to see the wisdom of them. The whole family was a warm, loving one and the Hardy comedies became a template for many a family sitcom to come.

The fifteenth film in the series, *Love Laughs at Andy Hardy*, came out in 1946. Rooney, then in his middle twenties and just out of the service, was unable to recapture the audience he'd had earlier. The final, and unsuccessful, film was *Andy Hardy Comes Home* in 1958.

Angell, Roger (1920—)

Writer, parodist, and magazine editor Roger Angell is most notable as an analyst of the philosophy and intricacies of professional baseball and its hidden meanings, what it reveals of the American psyche. Several of the titles of Angell's books, which are compilations of his baseball sketches, hint at his involvement with the metaphysical aspects of the game. These include *The Summer Game* (1972); *Five Seasons* (1977); *Late Innings* (1982); *Season Ticket* (1988); *Baseball* (1988); and *Once More around the Park* (1991).

Born and bred in New York City, Angell received a B.A. from Harvard in 1942, spent four years in the U.S. Army Air Force, and became a writer for Curtis Publications in 1946. Angell was senior editor of *Holiday* travel magazine from 1947 to 1958. In 1948, Angell became an editor and general contributor to the *New Yorker*, quite appropriate as his connection to that magazine was almost congenital. His mother, Katharine White, had joined the magazine in 1925, the year it was founded; his stepfather was E. B. White, long associated with that publication. Angell served as the magazine's senior fiction editor and shepherded the works of cultural figures John Updike, Garrison Keillor, and V. S. Pritchett. He also composed parodies, "Talk of the Town" pieces, and, from 1976, the annual rhymed Christmas verse "Greetings, Friends."

Since 1962, Angell's baseball articles have appeared in "The Sporting Scene" column of the *New Yorker*. Others have been published in the *New York Times*. In his quintessential article, "The Interior Stadium," the concluding essay in *The Summer Game*, Angell disclosed many of his conclusions about baseball. Consciously paraphrasing poet William Wordsworth in the opening line—"Sports are too much with us. Late and soon . . ."—like Wordsworth's "spots of time," Angell recalls not just events in the game, but emotions he feels when the events take place on the ballfield. The arrested moments that Angell recalls at will in the inner stadium of his mind focus on individual players and their challenges. Baseball, in his opinion, is so intensely remembered because it is so intensely watched (or listened to) and made personal by the observers.

It is one of Angell's hallmarks that he regards baseball as a test of the character found in solitary men rather than in team dynamics. He also waxes rhapsodic, as do George Will and other baseball literati, over the game's presumed liberation from the constraints of normal time. In baseball, in Angell's estimation, time is measured by outs rather than by clocks.

Angell dwells on the bond between spectator and player, a reciprocal but perhaps not equal relationship. Only baseball with its statistics and fragments of time arguably allows precise reconstruction of events. With such a lofty vision of what essentially is a popular way to spend leisure time, it is not surprising that Angell wrote the introduction to the companion volume to Ken Burns's video paean to the higher nature of the game.

Angelou, Maya (1928—)

American author Maya Angelou is known for her poetry, autobiography, and novels that lyrically articulate the experience of African Americans and give a voice to black pride and heritage. Angelou's works, however, have appealed to all races with their

strong messages of hope and strength. She served as a coordinator for the Southern Christian Leadership Conference in the 1960s and published the first volume of her autobiography, the acclaimed *I Know Why the Caged Bird Sings*, in 1970. Despite her distinguished career, she did not become a major public figure until after her moving delivery of a poem at President Bill Clinton's 1992 inauguration. A performer before her career in letters, Angelou has also written, directed, and starred in a number of television programs and movies.

Animal House

Critics considered *National Lampoon's Animal House* to be cheap, terribly plotted, and in bad taste upon its release in the summer of 1978. Nevertheless, the comedy struck a chord with its public and grossed more than \$90 million in its first year. The movie's success inspired an entirely new genre of teenage "animal comedy" movies and three television network series and started a craze of toga parties on college campuses nationwide. It also launched the movie career of comedian John Belushi.

Despite the lasting influence of the film, many movie studios agreed with the initial critics and passed on the script. John Landis remembers thinking that he was the last person asked to direct, and only then because everyone else had turned it down. As it was, the studio gave him less than \$3 million to make the movie, which afforded him a cast of largely unknown actors and a set that is in real life the University of Oregon campus in Eugene, Oregon.

Based in part on co-writer Chris Miller's college experiences in the 1960s, *Animal House* begins innocently enough with two freshmen seeking to pledge to a fraternity. Set in the early 1960s at fictional Faber College (Miller was quoted as saying that this was the last class to graduate before the Kennedy assassination), the two freshmen discover that they are either too "dweebie" or fat for most of the fraternities except Delta House.

The Delta House fraternity is an image that most college Greek societies have been trying to forget since 1978. Simply put, it is a collection of politically incorrect and incorrigible students whose most intelligent member is averaging less than a 2.0 grade point average. The strait-laced Dean of the school is determined to see Delta evicted from campus and its members expelled. In what is questionably called a plot, the remainder of the movie is a series of skits about the run-ins between the Dean and Delta House. Among these skits are the food fight between Delta and the Dean's cohorts, Belushi's imitation of a zit, and the toga party.

It was Belushi's portrayal of Bluto Blutarsky that was one of the movies most enduring images, virtually typecasting the manic *Saturday Night Live* alumnus as a gross, excessive, drinking party animal

on-screen and off. For most of the movie Bluto speaks in unintelligible grunts, his big monologue coming near the end when he encourages a demoralized Delta House to take its revenge on the Dean. Thus, *Animal House* ends with a Delta-inspired riot at the college's Homecoming Parade. The characters then all head off into the sunset, with captions revealing their eventual fates (Bluto's was to become a Senator).

Teenagers and college students were instantly struck by the movie's anti-establishment message. Of all the figures in the movie, Bluto was the one least cut out to be a Senator. Also, the only role model the students seem to look up to is the English professor who is seen smoking dope. Soon, the antics of Delta House were to be rehashed in such movies as *Police Academy*, *Porky's* and other "animal comedy." Studios sought to reinvent the success of the movie, as well as its financial profits—virtually all of the following movies were made on shoestring budgets but returned large box office receipts. Jeff Kanew, director of *Revenge of the Nerds*, remembers that his studio told him to "Give us an *Animal House*," and he directed a movie complete with food fights and beer-drinking contests.

Over time, however, the teenagers moved on to different fare, and *Animal House* could only be found on cable channels in the 1990s. Greek societies have tried to change the image of the "animal house," though it still comes back to haunt them every time there is a binge drinking related tragedy on a college campus. The stereotypical image of strange, ham-handed initiation rites, sex groupies, and excessive toga parties is still as fresh as in July 1978. The legacy of *Animal House* is best summed up in the names of the Bluto clones that appeared in the television series created to cash in on the movie: Blotto, Gobo, and Zipper.

Animated Films

Animated feature-length films have carved a niche in American culture as a viable and enduring art form. Whether the story concerned the X-rated adventures of Fritz the Cat or the G-rated fairy tales offered up over the course of 60 years by Disney animation, animated films have offered a glimpse into another world that often could not be shown by any other filmmaking means.

Animated feature films comprise what is perhaps the most flexible twentieth-century entertainment medium. From its very beginnings, animation offered possibilities undreamt of with conventional film. Ink and paint on paper (and later cels, for transfer to film) offered a much wider palette than the strict physical realism imposed by the motion picture camera. Animators could create other worlds, superhuman abilities, bizarre creatures, and impossible effects with the stroke of a pen. All of this was possible with televised animation or animated shorts, but the feature film format opens wide the doors of possibility. Film animators have much more time and money to fully

realize their vision, and movie screens provide a vast canvas on which to present their work.

Any serious discussion of popular animated film centers on one name: Walt Disney. Disney's prolific imagination and managerial skills helped shape the company that would completely dominate animation for decades to come. Disney's studio started out with a staff of talented animators who turned out animated shorts featuring soon-to-be-popular characters such as Oswald the Rabbit and Mickey Mouse. Perhaps the most important of Disney's partners was the prolific Ub Iwerks, who was with Disney from the beginning and designed many of the technical innovations that propelled animation ahead (most notably the multiplane camera.)

The first fully animated film was Disney's *Snow White and the Seven Dwarfs*. To be sure, *Snow White* was not an entirely groundbreaking project. Full-length films in a quasi-animated format, usually involving shadow puppets or actual animated puppets, had already been produced with limited success. Prior to *Snow White*, Disney and his stable of animators had many years of success with a wide variety of characters, most notably Mickey Mouse, but never before had a studio gambled on a full-length animated feature. Their risky play was rewarded with critical and financial success; *Snow White*, released at the end of 1937, became the most successful film of 1938, with \$8 million in ticket sales.

Snow White allowed Disney and company to experiment with animation in many new ways, including a larger cast, more character development, comic relief, and high drama; in short, they placed into their animated film all the elements normally associated with a live-action feature film. They also paved the way for the format followed by dozens of future animated films, with such enduring elements as musical interludes, sneering villains, and wacky sidekicks for comic relief.

Snow White also featured a number of technical advances that allowed the animated feature to move beyond the limits that had been imposed by the short format. Animators studied at length the films of live actors going through the motions of the characters in order to best capture realistic human motion. The multiplane camera invented by Iwerks allowed the illusion of depth, and a new effects department added realism to images impossible to accurately draw by hand, such as violent weather and effective shadows.

One gimmick that punctuated animated film from the very beginning was a fascination animators had with combining animation with live action. A decade prior to *Snow White*, Disney's studio had produced 52 "Alice comedies," one-reelers that followed the adventures of a child actress interacting with animated characters. From time to time thereafter, animators made further attempts to combine the two forms, each time pushing the technology further. Disney released *Song of the South* in 1946, featuring life on a southern plantation illustrated by animated stories told by Uncle Remus. The live action/animation marriage reached its zenith in 1988, with the release of *Who Framed Roger Rabbit?* This 1940s-style cartoon noir featured the most realistic combination of live actors with animation seen before or since. No small amount of credit was due to director Robert Zemeckis and animation director Richard Williams, who managed technical feats long thought impossible in human-cartoon interaction.

The Disney studio's place as a dominant force in animation was sealed by the enormous success of its early movies, as was the place of animation in the annals of popular culture. Films such as *Fantasia* (1940), *Pinocchio* (1940), and *Bambi* (1942) further expanded the

financial and artistic horizons Disney had set. Disney went through a variety of phases as the decades progressed. The ethereal, fairy-tale look of *Sleeping Beauty* (1959) gave way to stylized, intentionally exaggerated work in such films as *101 Dalmatians* (1961) and *The Rescuers* (1977). But there was one other very important effect of *Snow White* and those movies that followed: Although there would be many variants and offshoots, feature-length animation was irrevocably cast in the public mind as a medium for children's stories. And as children's stories, animated films for years were perceived as a kind of second-class genre.

After many disappointing years, animated film experienced a tremendous resurgence in 1989, when Disney released the hit *The Little Mermaid*. This adaptation of the Hans Christian Andersen tale kick-started an animation renaissance which was still well underway in the late 1990s. *The Little Mermaid* was an enormous hit, and it provided enough memorable characters and catchy tunes to sell stuffed toys, soundtrack albums, and sing-along videos for years to come. Disney's follow-up to *The Little Mermaid*, 1991's *Beauty and the Beast*, sealed the popular resurgence of animated film. It also earned for animated film the respect of both critics and the public. *Beauty and the Beast* was both a financial and critical success, and was the only animated film to be honored with an Academy Award nomination for Best Picture.

Disney followed this success with 1992's *Aladdin* and the most successful animated film of all time, *The Lion King*, in 1994. With over \$350 million in domestic box office sales and tremendously profitable toys, tie-ins, and various other merchandising efforts, *The Lion King* re-established animation as a force to be reckoned with; putting it on the same level as even the most expensive or lucrative live-action franchises. With 1995's *Toy Story*, the first full-length movie animated completely on computer, Disney positioned itself once again at the top of the technological game. No longer were cartoons limited to what could be done with paint and pen.

Disney's animated films in the 1990s established a format that became nearly universal to films that hoped to emulate the success of Disney's releases. The so-called "Disney formula" included several basic elements: several show-stopping tunes, lovable sidekicks to add comic relief, and a cast of recognizable voice actors. A general theme of all post-*Little Mermaid* Disney animated features—that one's true worth is measured by what's inside rather than what is outside—is also often associated with this formula.

However, Disney was far from a monopoly in the crowded field for motion-picture success, especially in the wake of the enormous profit of *The Lion King*. Over the course of the 1980s and 1990s, one of the most consistent challenges to Disney's dominance came from Don Bluth and Gary Goldman. Bluth, a veteran Disney animator whose work stretched as far back as *Sleeping Beauty*, and Goldman both felt that the Disney studio had strayed from the ideals Walt Disney had exemplified and led a mass exodus of animators from the Disney stables in the early 1980s.

Bluth and Goldman went on to produce a number of successful animated projects, including *The Secret of NIMH* (1982), *An American Tail* (1986), *The Land Before Time* (1988), and the fully-animated video games *Dragon's Lair* and *Space Ace*. Their work met with acclaim and respectable box office—in fact, *The Secret of NIMH* was the most successful non-Disney animated film up until that time, and its \$45-million take outgrossed many contemporary Disney films as well. However, while Bluth and Goldman's work was able to stand on its own and make a profit, Disney's box office dominance was still secure.

But, the rise of Bluth had a galvanizing effect on the animation industry. The success of Bluth's films showed that, even though knocking Disney from its position at the top was unlikely, there was still commercial viability in animated film. Furthermore, Bluth himself stated that he hoped his work would make Disney's improve as well, since competition tends to bring out the best in all parties involved. There might well be truth in his statement, since the success of *The Little Mermaid* and Disney's own renaissance soon followed.

In 1997 and 1998 the playing field for animation was reshuffled. Disney appeared vulnerable to competitors, as recent efforts such as *Pocahontas* (1995) and *Hercules* (1997) had done respectably at the box office, but had not achieved the smash hit status of *The Lion King*. Sensing an opportunity, other studios moved in to claim their piece of the animation pie. Bluth and Goldman signed on with 20th Century Fox to produce animated movies, starting with 1997's *Anastasia*. Several other animated efforts from rival studios, such as *Quest for Camelot* (1998), were released in the late 1990s during what might be accurately titled an animation binge.

Bluth was not the only former Disney man to challenge the giant. Jeffrey Katzenberg, formerly the head of Disney's animation division and the man credited by many with spearheading Disney's renaissance, split with Disney in 1994 to co-found DreamWorks SKG and head up that studio's animation efforts. By 1998, DreamWorks upped the animation ante by releasing two highly acclaimed challengers to Disney's throne: the computer-generated *Antz* (1998) and *The Prince of Egypt* (1998). Katzenberg's gamble paid off; *The Prince of Egypt*, as of early 1999, stands as the most successful non-Disney animated film of all time, with a total domestic take of nearly \$100 million.

Feature-film animation has come a long way since the completely hand-drawn cels of *Snow White*. Even in traditionally animated films, computers are used extensively to enhance color, add depth, and create special effects, often in subtle ways. The brilliantly colored flying carpet in *Aladdin* and the stampede in *The Lion King* would both have been impossible or considerably more difficult without the aid of computers. Completely computer-generated fare such as *Toy Story* (1995) and *Antz* pushed the envelope even further, proving that photo-realistic detail and shading are possible without using a single cel of hand-drawn art.

Creating an animated film is an enormously time-consuming process. Several years of work by hundreds, if not thousands, of staffers goes into producing the hundreds of thousands of frames that make up one ninety-minute animated film. Special effects are even more time-consuming. DreamWorks estimated that 318,000 hours of labor went into creating the parting of the Red Sea in *The Prince of Egypt*.

Animated film's most important place in popular culture is the manner in which it has completely penetrated American society. Feature-length cartoons are considered by parents as one of the last bastions of wholesome family entertainment left in a world that feeds a constant diet of violence, disrespect, and vulgarity to their children. No matter how worried one might be about the general mental health of their children, so the conventional wisdom goes, one can't go wrong by taking them to a cartoon. The stars of animated films quite often become children's role models, favorite characters and imaginary playmates.

In addition, animated films tend to seep into popular culture and become the "official" versions of those stories, often overshadowing the originals. Disney's fairy tales are the best example. For children everywhere (and adults, for that matter), the images of Snow White

and the Seven Dwarfs, Cinderella, Aladdin, and the Little Mermaid that they see on the big screen or television are the immutable canon. This same influence tends to frustrate teachers, parents and scholars when animated films veer too far away from the established story or, especially, historical fact. In 1995, Disney released *Pocahontas*, the animated story of the Indian princess who saved explorer John Smith when he encountered the Indians in the seventeenth century. Disney's version ran far afield of history in many ways, and teachers in many elementary schools prepared "Pocahontas curriculums" that were meant to counteract whatever false ideas about history their impressionable students got after seeing the film.

Disney was not above completely rewriting literature when crafting an animated feature from an established tale. In one famous anecdote, Disney gave one of the story men on *The Jungle Book* (1967) a copy of Rudyard Kipling's original novel and said, "The first thing I want you to do is not to read it." In a similar vein, many Victor Hugo scholars expressed dismay when 1996's *The Hunchback of Notre Dame* strayed wildly from the novel, particularly in its ending.

The economic and cultural impact of animated film extends far beyond what appears on screen. Marketing, merchandising, and other promotional tie-ins are extremely lucrative side deals that go hand-in-hand with feature film animation. At times, the tie-ins can be more profitable than the movies themselves. By the 1990s, when movie marketing had become an irreversible force, animated film characters seemed to be everywhere. During a major marketing push for one animated film or another, it sometimes seemed impossible to walk down the street without being bombarded with one reference or another to the film in question. Toothbrushes, toys, lunchboxes, clothes, pencils, sheets, underwear, books, Broadway plays, and made-for-video sequels all bear the image of whomever happens to be the hot animated character of the moment. Fast food restaurants became part of the act, offering small toys and trinkets as part of value meals to promote the film.

If parents tend to put their complete trust in animated fare to provide wholesome entertainment for their children, then that trust is balanced by the susceptibility of those movies to backlash. It takes very little to set off severe criticism of real or perceived offensiveness in animated films aimed at children. Parents take such subjects very seriously. For example, Disney has been the subject of numerous boycotts and protests for the content of their work. Arab groups strongly protested a lyric in *Aladdin* that read, "where they cut off your hand if they don't like your face/It's barbaric, but hey, it's a home!" That line was excised in video copies of *Aladdin*. At other times Disney has had to fend off allegations of subliminal messages. Rumors at various times accused Disney of inserting the whispered line "all good kids take off your clothes" into *Aladdin* and the word "sex" into several frames of *The Lion King*.

If animated film is usually geared to appeal to the youngest members of society, it is also sometimes intended to appeal to the mature. Ralph Bakshi's *Fritz the Cat* (1972), based on the Robert Crumb comic strip, was the first X-rated animated movie, due to its numerous graphic sex scenes. On a somewhat less excessive level, *Heavy Metal* (1981), based on stories from the erotic science-fiction magazine of the same name, featured fantastic violence and sex to an extent rarely seen in animated film.

Whatever the subject matter, animated film also offered animators the opportunity to make creative statements that were impossible in any other medium. *Heavy Metal*, for example, displayed the vision of that magazine's creators in a far different manner than the limits

allowed by the magazine format. Music and animated films have gone hand-in-hand in a curious marriage for some years now. On occasion, popular musicians have used animated film to illustrate their work with varying success. The late-1960s psychedelic stylings of the Beatles found their perfect niche in the swirling, psychedelic *Yellow Submarine* (1968). On a much different point of the musical compass, *Pink Floyd The Wall* (19) featured numerous animated interludes that illustrated the main character's descent into madness in a way that conventional live-action film couldn't quite capture.

Television animation, an offshoot of the popularity of feature film animation, proved a profitable medium for broadcasters and producers, so it comes as no surprise that a number of successful television animation franchises have made the leap to the big screen, with varying levels of success. 1980s characters such as the Transformers, Go-Bots, and He-Man found modest success in theatrical releases. In the 1990s, *Beavis and Butt-Head Do America* (1996) and *The Rugrats Movie* (1998) proved to be tremendous moneymakers for their producers, ensuring that television would provide fodder for animated film for some time to come.

Animated films have been produced all around the world, although like much foreign film, most of them have not quite made their way into the lexicon of American popular culture. One exception to this is the distinctive look of Japanese animation—"anime." Slick, stylized visions such as the futuristic *Akira* (1988) appealed to animation fans who appreciated the detail found in Disney work but wanted more mature fare.

Animated films have been integral parts of popular culture for over six decades. Many of the classics are still popular with children and adults, and more are being pushed into production every month. With the advent of computer effects and completely computer-generated cartoons spearheading an entirely new kind of animation and freeing up the creative minds of animators to soar to greater heights, the art of animated film is set to launch into another sixty years of success.

Anita Hill-Clarence Thomas Senate Hearings

In the fall of 1991, the nomination of Clarence Thomas as an associate justice of the Supreme Court became the most controversial nomination in all of American judicial history. During the background probe, information surfaced that Anita Hill, a law professor at the University of Oklahoma, had told someone that Thomas had sexually harassed her when she worked as his assistant at the Department of Education in 1981. Joseph Biden, Chair of the Senate Judiciary Committee, which conducts hearings on presidential nominations, chose not to interview Hill and refrained from repeating the allegations to some committee members. When the story became public knowledge, women's groups began to protest, and seven women from the House of Representatives marched to the Senate, demanding entrance to the Senate Chambers and insisting that a hearing into Hill's allegations be conducted. Biden, with what would later prove a serious lapse in judgment, chose to make the hearings public. Americans were, therefore, glued to their television sets for one long weekend, beginning Friday morning, October 11 and ending late Sunday night, October 13, 1991, watching and listening to accusations, denials, and character assassinations. The lives of both Anita Hill and Clarence Thomas would be changed forever. Of even more lasting consequence were the battles that were simultaneously conducted between men and women, and between Democrats and Republicans, which led to an altered political landscape in the United States.

Anita Hill, being sworn in.

From the beginning, President George Bush had been faced with a formidable task in choosing a replacement for Thurgood Marshall, associate justice of the Supreme Court since 1967 and the first African American ever to serve on the Supreme Court, who announced his retirement due to ill health. Marshall had been a pioneer of the Civil Rights movement, arguing such cases as *Brown v. Board of Education of Topeka, Kansas* (1954) before the Supreme Court when he was a young lawyer with the National Association for the Advancement of Colored People's (N.A.A.C.P.) Legal Defense Fund. This case essentially ended segregation in public schools and paved the way for integration in all walks of American life. Appointed by Democratic president Lyndon B. Johnson, Marshall had become one of the most revered Supreme Court Justices in American history. Because Bush was a Republican, his choice of a nominee to replace Marshall was certain to be a Republican; and because of the political climate of the 1980s and early 1990s, Bush's nominee had to be a conservative opposed to abortion rights.

The issue was further complicated by an earlier nomination made by President Ronald Reagan. Robert Bork was a conservative with a long record of judicial decisions, and writings that documented his opinions on almost every issue of concern to both Democrats and Republicans in the Senate; as a result, he was withdrawn as a nominee. Bush's advisors warned him that it would be better to nominate someone with less widely disseminated opinions in order to get the nomination past the Democrat-controlled Senate. Taking all of these things into consideration, Bush chose a little known Republican judge from Savannah, Georgia, to replace Marshall. At the time of his nomination, Clarence Thomas had been a federal judge for only 18 months. Despite his lack of judicial experience, he had served the Republican Party well in the Department of Education and in the Equal Employment Opportunity Commission.

It was this adherence to strict Republican ideology that created a lot of the early controversy surrounding the Thomas nomination. Since the campaign that elected John F. Kennedy president in 1963, black voters have been closely aligned with the Democratic Party. Many black leaders felt that nominating the conservative Thomas was a betrayal of the heritage of Thurgood Marshall. Women's groups were also opposed to Thomas' nomination because of his disdain for programs such as affirmative action, while legal scholars were opposed to Thomas' lack of experience as a judge. Although opposition was substantial, the chances that any of these groups could derail the nomination were slim. However, when it was learned that a black law professor had accused Thomas of sexual harassment, his opponents had a new focal point for protest.

Anita Hill was young, intelligent, attractive, and articulate. Moreover, she was credible when she presented her damaging testimony. She described in painstaking detail how Clarence Thomas had harassed her, repeatedly asking her for dates and frequently bringing graphic details about sexual encounters into the conversation. She stated that he described pornographic movies that he had seen. At a later point in the hearings, Hill's claims were corroborated by her friend, John William Carr, who testified that Hill had told him what was happening during a 1981 telephone conversation. Also waiting in the wings were other women who insisted that Thomas had sexually harassed them or who claimed to have known about the harassment of Hill when it occurred. None of these women were allowed to testify. In a thorough investigation conducted after the hearings were over, Jayne Mayer and Jill Abramson concluded that the preponderance of available evidence suggested that Clarence Thomas lied under oath when he denied harassing Anita Hill.

Clarence Thomas, however, was not without his supporters, either during the hearings or afterward. The Bush White House concocted the strategy that Thomas should claim that opposition to his nomination was racially motivated. Thus, the cries of a “high-tech lynching” were born. The strategy proved successful. Thomas went on to win the vote of the entire Senate by a vote of 52-48, though George Bush was so apprehensive about the nomination that he placed the then vice-president Dan Quayle at the ready to break the tie vote if it became necessary. The Bush strategy was particularly productive among Southern senators, unable to live down their heritage of racial discrimination. Of all Southern senators, only Hal Heflin, a Democrat from Alabama and a member of the Senate Judiciary Committee, voted against the Thomas nomination. Conservative author David Brock conducted his own investigation, concluding that there was no evidence that Hill had told the truth and announcing his support for Thomas.

That two books written about the hearings should draw such opposing conclusions is indicative of the overall reaction to the debacle that was the Clarence Thomas nomination. Generally, women tended to believe Hill and men tended to believe Thomas, and further divisions broke along party lines. Despite the fact that the authors of both books claim objectivity, it is evident that they approached the hearings from opposing contexts. Much of the blame for the ensuing battle of the sexes should be placed on Joseph Biden and the Senate Judiciary Committee. When American women were faced with an all-white, all-male committee conducting hearings into the sexual harassment of women, they were furious that Hill’s charges were never placed in the overall context of how sexual harassment occurs and the subsequent feelings of helplessness and degradation that are common among victims of such harassment.

Furthermore, most scholars agree that the hearings should never have been made public. It was never the intention of the Judiciary Committee to discover the truth of the allegations. Republican members of the committee, such as Orrin Hatch and Alan Simpson, were allowed to grandstand and throw out suggestions that Hill’s character was questionable without ever giving her a chance to answer specific charges. Perhaps the most questionable of the witnesses against Hill was John Doggett, who came on in the early hours of Monday morning, October 14, claiming that Hill was irrational and neurotic on the grounds that she had once asked him why he did not call her after they had gone out on a date.

No one knows whether it was Clarence Thomas or Anita Hill who told the truth in 1991. Most people continue to have their own opinions on the matter, but neither Hill, Thomas, nor the American people were well served by the way that the hearing was conducted. After the hearings, women continued to claim that men just “didn’t get it.” The Year of the Woman was declared in 1992, and a record-breaking number of women entered the two houses of Congress. Public recognition of sexual harassment became prominent, and new ways of dealing with the opposite sex within the workplace began to be mandated by legislatures at all levels. In a landmark decision, the Supreme Court upheld the requirement that employers provide a “non-hostile” working environment for their employees in *Harris v. Forklift Systems* (1993). The year after the Thomas hearings, the number of sexual harassment lawsuits in the United States jumped by 50 percent. Heightened awareness of sexual harassment has been one of the positive byproducts of the hearings, but the bitterness about the hearings did not disappear.

Anita Hill broke her silence about the hearings in her 1997 book *Speaking Truth to Power*. She writes that her life has never been the same since the hearings, and spoke of intimidation that she suffered at the hands of Thomas supporters. By the end of the 1990s, she was no longer teaching at the University of Oklahoma, a job she reportedly loved. A former friend and classmate of Clarence Thomas corroborated Hill’s view of Thomas’s character in a television interview, as did others who knew him. However, the support for Hill was essentially irrelevant once Thomas was confirmed as an associate justice of the Supreme Court.

Juan Williams, author of *The Eyes on the Prize*, said of Thomas that he was a sad, lonely, troubled, and deeply pessimistic public servant. To Williams’ description of Thomas, it should be added that he grew bitter and angry at a system that allowed him to become the butt of jokes and the target of frequent attacks from opponents. His votes on Supreme Court decisions have placed him as a solidly conservative justice, who most often mirrors the decision making of Antonin Scalia, considered by judicial scholars to be the most conservative member of the Supreme Court. His voting record has continued to alienate Thomas from most of the African-American community and has frequently led to protest when he has been invited to lecture around the country. Richard Lacayo of *Time* reported that Thomas told someone in a 1994 interview that he intended to be on the Court for the next 40 years and those who did not like it should simply “get over it.” Lacayo responded that it was not likely that Americans would get over it. The Hill-Thomas hearings have not slid gently into history. On the contrary, the memory of those hearings continues to elicit strong feelings of rage, bafflement, and bitterness. The Senate Judiciary Committee now holds closed hearings, and women now serve on the august body. What constitutes sexual harassment is now public knowledge, but the mistakes made in the fall of 1991 will forever haunt those who remember it.

Anka, Paul (1941—)

With his 1957 number one hit record, “Diana,” about a teenage boy’s unrequited crush on an older girl, 16-year-old singer-songwriter Paul Anka tapped into a collective angst. Catapulted into the ranks of the 1950s post-Elvis Presley teen idols, the Canadian-born Anka was a pervasive presence on the airwaves with songs including “Lonely Boy,” “Put Your Head on My Shoulder,” and “Puppy Love,” the latter about his romance with former Mousketeer, Annette Funicello. With his adenoidal sound, and a self-confidence that belied his years, he was more at home with ballads than rock ‘n’ roll. As a result, he weathered changing tastes to reinvent himself as an in-demand cocktail circuit headliner. His sophistication as a songwriter also grew. Along with hits for Barbra Streisand and Tom Jones, Anka wrote Frank Sinatra’s signature song, “My Way,” and the theme to *The Tonight Show Starring Johnny Carson*.

Anne Frank: *The Diary of a Young Girl*

No single individual has come to represent the six million Jewish victims of the Holocaust more than the Dutch schoolgirl Anne Frank. Through the postwar publication of her diary *Het Achterhuis* (*Anne Frank: The Diary of a Young Girl*), millions of readers around the world came to know one of Hitler’s victims personally and a face was put on an otherwise unfathomable and anonymous horror. Chronicling her life in hiding in Amsterdam from the summer of 1942 to the arrest of her family in August 1944, the diary is considered among the most powerful anti-war documents of the era and has been adapted for both stage and screen. Translated into more than 50 languages, the Diary ranks among the best-selling literary works of the twentieth century and has been praised by ordinary readers, literary critics, and political and humanitarian leaders throughout the world. Discussing its poignancy in the foreword to the first Russian edition of the book, the novelist and poet Ilya Ehrenburg wrote, “One voice speaks for six million—the voice not of a sage or a poet but of an ordinary little girl.”

Anne Frank was born June 12, 1929 to a wealthy Jewish family in Frankfurt, Germany. With the rise to power of Adolf Hitler and the National Socialists in 1933, the Frank family relocated to Amsterdam, where Frank’s father, Otto, a former officer in the German army, established a food preservative business with a combined office and warehouse in a building on the Prinsengracht Canal. Anne Frank attended Montessori school and enjoyed a comfortable life absorbed in the average pursuits of childhood. Following the Nazi occupation of Holland in 1940, a number of restrictions were placed on Jews, and Anne was required to transfer to a Jewish school. Among her friends and classmates she was popular and outgoing and was known as “Miss Chatterbox” because of her incessant talking. On the occasion

of her thirteenth birthday in June 1942, Anne was given a cloth-covered diary and began recording her activities in the form of letters to an imagined friend whom she addressed as “Kitty.” Soon afterward, Anne’s 16 year-old sister, Margot, was summoned to report for transportation to the Westerbork concentration camp, and the family quickly went into hiding, installing themselves in makeshift living quarters arranged by Otto Frank in a “secret annex” at his company headquarters. The Franks were joined by Mr. and Mrs. Van Pelz and their 15 year-old son, Peter. Several months later, Albert Dussel, a dentist, also sought refuge with the group. For more than two years the group lived in the cramped quarters of the secret annex, unable to move around during the day or use bathroom facilities for fear of being discovered by workers in the offices below. Through a small group of protectors they received food and supplies, and at night they listened to war reports on the radio.

Anne and Margot continued their education under the guidance of their father, and Anne documented every facet of their restricted life in her diary, including the strained relations and petty bickering that often characterized interaction among the group. An unknown betrayer alerted police to the Franks’ hiding place, and the secret annex was raided on August 4, 1944. The group was first sent to Westerbork and then was shipped by cattle-car to Auschwitz. Anne Frank died of typhoid fever in Bergen-Belsen concentration camp in March 1945, only two months before the surrender of Germany. She was 15 years old.

After the war, Otto Frank circulated typescript copies of Anne’s Diary, which had been discovered in the aftermath of the police raid on the secret annex in 1944. The book was formally published in 1947 and was translated into English in 1952. While Anne herself wondered in the diary whether anyone would ever be interested in “the unbosomings of a thirteen-year-old schoolgirl,” the Diary quickly became an international sensation, drawing praise for its documentary value as an account of Jewish life in hiding during World War II, but to a greater degree for its lively and perceptive self-portrait of an intelligent and talented writer maturing from child to adult. Its compelling setting offers a consideration of ordinary people facing death in extraordinary circumstances, while revealing Anne’s understanding of universal moral issues and her interest in typical concerns of adolescence, including the difficult relationships of mother and daughter and the teenage yearning for love. After reading the diary many young readers felt compelled to write to Otto Frank and until his death in 1980 he corresponded with young people throughout the world. The immense interest in Anne Frank led to the establishment of several humanitarian foundations and educational centers, including a foundation in Amsterdam that also maintains the secret annex as a historic site open to the public. Summarizing the broad appeal of the Diary, theatrical director Garson Kanin concluded in 1979 that “Among other things, the vision of Anne Frank reminds us that the length of a life does not necessarily reflect its quality . . . [She] remains for us ever a shining star, a radiant presence, who, during her time of terror and humiliation and imprisonment, was able to find it within herself to write in her immortal diary, ‘In spite of everything, I still believe that people are good at heart.’”

Annie

Loosely adapted from Harold Gray's comic strip *Little Orphan Annie*, the musical *Annie* opened on Broadway on April 21, 1977, eventually earning more than \$100 million from its initial run of 2,377 performances and numerous revivals. Director and lyricist Martin Charnin was the guiding force behind this hit, with considerable assistance from composer Charles Strouse and scriptwriter Thomas Meehan. *Annie* also attracted a larger, more diverse crowd beyond Broadway: The cast album sold more than a million copies, the show was adapted into a Hollywood movie in 1982, and merchandise spinoffs included dolls and a line of fashion clothing for girls. Through countless local productions in schools and summer camps, the musical has become part of the fabric of American childhood, with Annie's signature song "Tomorrow" having become a standard.

Annie became a cultural icon through the adroit combination of strands that appealed to different audiences. For the elderly and nostalgic, the musical evoked not just the comic strip but also the simple and pure pre-World War II America of Shirley Temple movies. After the disillusioning eras of Vietnam and Watergate, Americans in the 1970s looked back with fondness to the past—a nostalgia that also fueled the success of *The Sting* (1974) and *Grease* (1972). As columnist Meg Greenfield noted in *Newsweek*, "*Annie* gangs up on you, and you experience the most unexpected sentiments: reassurance, a feeling of well-being, and an agreeable connection with a long-gone world—a life built on assumptions and simplicities you had forgotten about."

For the youngsters in the audience, especially girls, the main attraction was the spunky heroine, a two-fisted orphan who could more than hold her own in a rough world. As film critic Pauline Kael noted, *Annie* was ideal for children "from about four to about eleven . . . how often do they get to see a musical that features a little girl conquering all?" Appealing to the young and old alike, *Annie* became a Broadway success for all ages.

The plot of *Annie* has a folkloric simplicity. The Cinderella-like tale follows Annie, a frizzle-haired and freckled orphan, as she battles the cruel Miss Hannigan, who runs a wretched orphanage right out of Dickens. Searching for her parents, Annie constantly runs away, only to end up back in the clutches of Miss Hannigan. Annie's luck takes a turn for the better when she is temporarily adopted by the billionaire Oliver Warbucks. Although she wins Warbucks' heart, Annie refuses his offer of permanent adoption because she still longs for her natural parents. Warbucks instigates a nationwide search with a hefty reward. Enter Miss Hannigan's low-life brother, Rooster Hannigan and his floozy girlfriend, Lily St. Regis. Working with Miss Hannigan, these two schemers impersonate Annie's parents. Of course, all ends well, and Annie is happily reunited with Warbucks.

The relationship between Annie and Warbucks forms the emotional core of the musical. In explaining the appeal of the show, director Martin Charnin said, "I saw it as the story of two orphans.

One happened to be eleven, the other fifty-two. I wanted to know how they met and fell in love with one another." Annie and Warbucks form an interesting study in contrasts. Warbucks is rich, big, strong, and protective; Annie is poor, small, weak and in need of protection. But Warbucks is cold—he barely notices his attractive assistant Grace Farrell until Annie starts praising her. Annie's warmth and kindness helps humanize Warbucks, just as his strength and power help give stability to her life.

The musical wisely softened the harsh right-wing philosophy of the original strip, where the heroic Daddy Warbucks was a robber-baron munitions manufacturer who battled liberal do-gooders. In the musical, Warbucks is still conservative, but not rigidly so. Indeed, Annie is able to reconcile him to Franklin Roosevelt, helping to inspire the New Deal. This spirit of reconciliation played well in the early days of the Carter administration. Not surprisingly, a special preview performance was given at the White House in 1977.

Annie: The Movie fared less well than the theatrical production. Columbia Pictures paid \$9.5 million for the rights—total costs were \$40 million—and hired the legendary director John Huston, but the movie was an expensive disappointment. It did not make a profit, and earned lukewarm reviews despite a critically acclaimed hammy performance by Carol Burnett as Miss Hannigan. Aileen Quinn made a winning Annie, although she was nearly over-staged by the youngest orphan Molly, sweetly played by Toni Ann Gisondi. As a capitalist with a well-buried heart of gold, Albert Finney was a convincing Warbucks. The production team behind the musical has made a few stabs at a sequel, which have been tried out in regional theatres. *Annie II* (1989) was a flop. "We went over like a wet doughnut," said Charnin. *Annie Warbucks* (1993) was more successful but by decade's end had not yet reached Broadway.

Annie Get Your Gun

Annie Get Your Gun, a popular musical comedy based loosely on the life of the legendary American crack shot and theatrical performer Annie Oakley (1860-1926), opened May 17, 1946 at the Imperial Theater in New York. The show helped complete the postwar transformation of the Broadway musical begun by *Oklahoma!* (1943) and *Carousel* (1945) from lavish and naughty revues to substantive stories with songs integrated into the plot. Although *Annie Get Your Gun* lacked the operatic aspirations and social commentary of the two Rodgers and Hammerstein works, the show boasted an Irving Berlin score that set a record for hit songs (nine). *Annie Get Your Gun* broke no new ground in theatrical tradition, but its color, humor, and enthusiasm have held an irresistible appeal for audiences through the end of the century.

Dorothy and (brother) Herbert Fields specifically wrote their romanticization of Oakley's life as a vehicle for musical comedy star

Ethel Merman performing in *Annie Get Your Gun*.

Ethel Merman (1909-84). The foul-mouthed Merman was no dainty romantic soprano but squarely in the tradition of great chest wallopers who had transfixed Broadway in the early 1900s. *Annie Get Your Gun* demanded that she act as well as sing, and Merman responded by turning in one of Broadway's monumental performances. Her health was as legendary as her arrogance and outspokenness, and when she eventually took a vacation after two years of performing, the show's receipts dropped precipitously, and it almost closed. For Merman, *Annie Get Your Gun* turned out to be an unquestioned personal triumph, consolidating her position as the greatest figure in American musical comedy.

The Fieldses took their idea to the legendary hit-making team of Richard Rodgers and Oscar Hammerstein, II, who agreed to produce it, and added the esteemed Jerome Kern to write the lyrics. When Kern suffered a cerebral hemorrhage and died in November 1945, the producers persuaded Irving Berlin (1888-1989) to replace him. Berlin was initially reluctant to enter the unknown territory of a musical with a plot; he hadn't written a Broadway show in four years, and the theatrical form with which he was most closely associated—the revue—was in terminal decline. Over a weekend in Atlantic City, Berlin tried to write some songs and came back with three to six hit songs (depending on the source). The deal was signed, and Dorothy Fields obligingly agreed to withdraw as lyricist. Berlin finished the bulk of the score within two months, astounding everyone with his extraordinary virtuosity and the speed with which he composed the new songs. To the roster of classics of the musical theater Berlin added “There’s No Business Like Show Business,” “Doin’ What Comes Natur’lly,” “They Say It’s Wonderful,” “You Can’t Get a

Man with a Gun,” “The Girl That I Marry,” “I Got the Sun in the Morning,” “Anything You Can Do,” “My Defenses Are Down,” and “Who Do You Love, I Hope.” The show went into rehearsal in March, and Berlin later called it the easiest show he ever worked on.

In *Annie Get Your Gun*, Annie Oakley’s (Merman) ability as a sharpshooter wins her a job in Buffalo Bill’s (William O’Neal) Wild West show. Her brilliant shooting offends the masculinity of the show’s erstwhile star marksman, handsome baritone Frank Butler (Ray Middleton), and makes a romance between the pair impossible. Butler takes his wounded vanity to a competing vaudeville show, but neither the main characters nor their businesses prosper. A merger is proposed, but the happy ending only arrives when wise old Sitting Bull (Harry Bellaver) gently demonstrates to the naive Oakley that she can easily win the insecure Butler by intentionally losing a shooting competition.

Although critics initially gave *Annie Get Your Gun* mixed reviews, the show was an instant hit, running for three years and 1,147 performances on Broadway, and quickly assuming a place in the pantheon of great post-World War II musicals such as *South Pacific*, *Brigadoon*, *Kiss Me Kate*, *Guys and Dolls*, and *The King and I*. The success of *Annie Get Your Gun* made Irving Berlin a wealthy man and demonstrated the immense potential profitability of postwar Broadway musicals. Berlin’s thirty percent share of the proceeds brought him \$2500 a week, his music company made \$500,000 from selling sheet music of the score, his royalties from the original cast recording exceeded \$100,000, and MGM eventually paid \$650,000 to Berlin and the Fieldses for the movie rights, a record for a musical. *Annie Get Your Gun* profitably toured the United States with Mary Martin as the lead and also proved to be a vast international success.

Although *Annie Get Your Gun* does not lend itself to excessive analysis, the show does capture some of the post-World War II American confusion over gender relations. The war had caused millions of women to enter the work force to replace absent soldiers, and their contributions had undeniably helped the United States win the war. The plot of *Annie Get Your Gun* was charged with subliminal sexual implications, based upon a woman who used her phallic gun with complete mastery. Ultimately, Oakley discovers “you can’t get a man with a gun,” and understands that she must deny her superior talent and throw the shooting match in order to assuage Frank’s fragile ego and win her man. The ending struck a chord with a society which had greatly elevated women’s role both in the world of work and in propaganda during the war, and now was desperately attempting to return to the status quo ante.

The film version (1950) had a troubled history (Judy Garland was fired from the lead role) but eventually earned more than \$8 million. The show was revived on its twentieth anniversary in 1966, for which the seventy-eight-year-old Berlin wrote the fifty-eight-year-old Merman a new song, “An Old Fashioned Wedding.” This showstopper proved to be the last of Berlin’s popular hits. Many of the show’s tunes have fallen out of the popular repertoire, but “There’s No Business Like Show Business” remains a virtual anthem of performers everywhere and has become one of the most recognizable tunes in American popular music.

Annie Hall

Despite its status in many circles as writer/director/star Woody Allen's comedic masterpiece, *Annie Hall* nonetheless will remain to many the film that "stole" the Best Picture Oscar away from the (retrospectively) far more influential *Star Wars*. At the time of their release in 1977, however, although *Star Wars* initiated a new era of upbeat science fiction films, *Annie Hall* was the culmination of America's nearly decade-long struggle to come to terms with the aftermath of political and sexual revolution of the 1960s. The film seemed to give voice to the frustrations of a generation regarding their inability to maintain romance. Surprised by the overwhelming acceptance of the picture, Allen himself commented, "I guess what everybody understood was the impossibility of sustaining relationships, because of entirely irrational elements. . . . Later in life, you don't really know what went wrong."

Annie Hall also represented the peak of America's love affair with stand-up comic turned filmmaker and film star Woody Allen. While he had been performing in films since 1965's *What's New, Pussycat?*, his screen vehicles had consistently been outrageous

fantasies that displaced him in either time or space—though Allen played essentially the same character, a neurotic, intellectual nerdish Everyman struggling to get the girl and avoid violence. But *Annie Hall* changed everything. According to his longtime editor, Ralph Rosenblum, Allen had been struggling to make the transition into maturer, less clownish films about the urban angst regarding love, sex, and romance. Toward this end Allen had initially set out to make a murder mystery entitled *Anhedonia* (the chronic inability to feel pleasure) that would illuminate these problems and would co-star former lover and frequent leading lady Diane Keaton. However, once they began viewing the dailies and establishing some structure to the rambling two-hour-and-twenty-minute narrative, which included extensive flashbacks and comedic asides, Rosenblum finally convinced Allen that the film came to life in the scenes involving the romance with Annie, which were set in the present. The murder mystery plot was thus altered to focus on the romance, becoming, in Rosenblum's words, "A light-headed, devil-may-care Midwestern girl who grew up in a Norman Rockwell painting meets urban Jewish comedian who has enough awareness for both of them and hang-ups to match."

Annie Hall then became the story of their rocky romance, as Alvy Singer (Allen) tells the camera that he and Annie have broken up and that he is "sifting the pieces o' the relationship through my mind and—and examining my life to figure out where did the screw-up come?" The ensuing stream of consciousness exploration of memory and fantasy—somewhat reminiscent of Ingmar Bergman's *Wild Strawberries*—results in Alvy coming to the conclusion, "Relationships . . . You know they're totally irrational and crazy and absurd . . . but uh, I guess we keep goin' through it because, uh, most of us need the eggs," i.e., the fleeting moments of happiness they can bring. But even after these ruminations, he is unable to discern the reasons for his separation from Annie, though filmmaker Allen illuminates very clearly that it is because of Alvy's neuroses and insecurities. As critic Douglas Brode concludes, Alvy presents his own persona as a lost, bewildered man, shell-shocked in the sexual battleground of the mid-1970s; thus, Woody turns *Annie Hall* into a warning against the dangers of the Culture of Narcissism.

Annie Hall was rendered even more compelling due to the extreme autobiographical associations between the characters and Allen's own life. Like Allen, Alvy Singer was born in Brooklyn and grew up during World War II. Professionally their progress is also the same: both began as gag writers, evolved into stand-up comedy, then became playwrights. In terms of relationships, Alvy Singer has been married and divorced twice when he becomes involved with Annie Hall and then breaks up with her. Likewise twice divorced, Allen had a long-term relationship with Diane Keaton—real name Hall—, which also ended. Though Allen maintains that his introduction to Keaton and other factual aspects of their relationship were completely different from Alvy and Annie's, he has acknowledged that the "mildly misanthropic and socially discontent" Alvy and his constant complaints about love and life parallel his own, once telling columnist Alfred Bester, "Sure it's me—but greatly exaggerated . . . my most embarrassing moments." *Annie Hall* seemed to be an autobiographical compendium of all the issues that Allen had always been obsessed with—death, sex, intellect, art, and mostly, himself—but this time without the fantasy elements to distract the viewer from the nakedness of this self-absorption.

According to a *Variety* survey of the ten best movie lists proposed by thirty-two American film reviewers, *Annie Hall* was the most frequently selected film, named on thirty of the lists. Beyond the many awards and acclaim, the popularity of the film also affected

A poster for the film *Annie Hall*.

fashion. Diane Keaton's casual ensembles for *Annie Hall*, which she explained were basically her style and were largely clothes from her own closet, established new fashion trends, which included the appropriation of men's slacks, shirts, and neckties in a loose, unstructured look that paralleled Annie's idiosyncratic look at the world.

Another World

Co-conceived by the prolific Irna Phillips and William Bell, *Another World* premiered on NBC television in 1964, eventually becoming one of Procter & Gamble's (P&G's) most enduring soap operas. Initially envisioned as a spinoff of one of Phillips and P&G's other creations, CBS's *As the World Turns*, *Another World* abandoned this link when CBS opted against airing it.

The introductory narration, "we do not live in this world alone, but in a thousand other worlds," was the signature of *Another World's* early seasons. Set in Bay City, in a Midwestern state later tagged as Illinois, the program focused on the Randolph and Matthews families in the 1960s, as Phillips and Bell offered timely stories involving illegal abortion and LSD. These topics proved too bold for traditional viewers, however, and backstage adjustments led to the hiring of Agnes Nixon, future creator of *All My Children*, who devised "crossovers" in which characters from P&G's veteran soap on CBS, *Guiding Light*, were temporarily imported in the hopes that their fans would follow. The tactic, however, failed to boost *Another World's* numbers.

The 1970s began under the headwriting leadership of Harding Lemay, who would shepherd *Another World* into its heyday. Several characters were extracted to launch a spinoff—*Somerset*. Lemay then broke ranks by having patriarch John Randolph (Michael Ryan) commit adultery, sending wife Pat (Beverly Penberthy) into an alcoholic tailspin. This displeased Irna Phillips, who lamented the loss of a solid, "core" couple. Gradually, the Randolph family was phased out, the farm-grown Frame clan was introduced, and a defining element of class difference marked the show. A triangle involving heroine Alice Matthews (Jacqueline Courtney), husband Steve Frame (George Reinholt), and working-class homewrecker Rachel Davis (Robin Strasser, later Victoria Wyndham) made the show a ratings leader in 1977/1978. Before long, Rachel was redeemed in the love of upper-crusted Mackenzie "Mac" Cory (Douglass Watson), a publishing magnate 25 years her senior. Mac's self-absorbed daughter Iris (Beverlee McKinsey) threatened the union of her father and Rachel, who deepened a trend of inter-class romance and were to become bastions of the soap's pre-eminent "core"

family. Additionally, in 1975, the soap became the first to make 60 minutes, rather than 30, the industry standard. As the 1970s concluded, *Another World* was pressured to focus on its younger generation in order to compete with *General Hospital* and other soaps making inroads into the profitable baby boom audience and displacing it atop the ratings ladder. Lemay resisted these efforts and exited the show in 1979, later publicizing his bittersweet experiences in a memoir entitled *Eight Years in Another World*. The book also recounts Lemay's battles with executives, including one in which Lemay's proposal to introduce a gay character was vetoed.

A musical chairs game of writers penned *Another World* in the 1980s, which began with Iris departing Bay City to anchor yet another spinoff—*Texas*—and Rachel's payoff tryst with a blackmailer. The tale spawned a divorce and Rachel's third child. Mac soon forgave Rachel and adopted the boy, Matthew, who followed in his siblings' footsteps by succumbing to the genre's accelerated aging process and sprouting into a teen overnight. Efforts to replicate the "super couple" phenomenon so efficient in attracting baby boomers to rival soaps evolved. These were spearheaded by a thirty-something, inter-class duo, Donna Love (Anna Stuart) and Michael Hudson (Kale Browne), and another composed of their teenaged daughter Marley (Ellen Wheeler) and Jake McKinnon (Tom Eplin), the ex-beau of Marley's wily, prodigal twin Vicky (also Wheeler). Two nefarious miscreants, Donna's father Reginald Love (John Considine) and ex-husband Carl Hutchins (Charles Keating), and a vixen, Cecile de Poulignac (Susan Keith, later Nancy Frangione), were added, along with dapper attorney Cass Winthrop (Stephen Schnetzer) and flamboyant romance novelist Felicia Gallant (Linda Dano). The latter three established screwball comedy humor as a distinctive trait of the program, and Cass's effort to elude gangsters by cross-dressing as a floozy named Krystal Lake was a first. Similar gender-bending escapades involving Cass, other characters, and other soaps would later re-emerge as a comic convention. The 1980s also featured the "sin stalker" murder mystery to which several actors fell victim, and the first of myriad soap opera AIDS (Acquired Immune Deficiency Syndrome) stories. While influential, these innovations were to little avail, and the show settled near the ratings cellar and suffered another blow—the death of Douglass Watson (Mac)—as the 1990s loomed.

Lack of headwriting and producing consistency continued to plague the soap in the 1990s, as the aftermath of Jake's rape of estranged wife Marley drove the story. Jake's eventual shooting injury at the hands of Paulina (Cali Timmons, later Judi Evans), the daughter Mac Cory never knew he had, dovetailed into his controversial redemption and courtship of Paulina. Vicky, the wicked half of the good twin/evil twin duo now portrayed by future film star Anne Heche and, later, Jensen Buchanan, was blossoming as the "tentpole" heroine. Vicky was saved in the love of true-blue cop Ryan Harrison (Paul Michael Valley), despite the machinations of Ryan's evil half brother, Grant (Mark Pinter). Redemption was also the watchword in the widowed Rachel's reluctant, marriage-bound romance with former nemesis Carl Hutchins and the delightful, screwball comedic pursuit of jaded, forty-something divorcée Donna Love by Rachel's ardent, twenty-something son, Matthew (Matt Crane).

Attempts by NBC to coax *Another World* into imitating the postmodern, youth-orientation of its "demographically correct" cousin, *Days of Our Lives*, were afoot. Producing and headwriting notables Jill Farren Phelps and Michael Malone were fired when they resisted such alterations as restoring Carl's villainy. The violent death of working mother Frankie Frame (Alice Barrett) sparked a viewer revolt. Trend-setting tales, including the Matthew/Donna romance

Cast members from *Another World* in the mid-1960s.

which had laid the groundwork for a similar effort on *Guiding Light*, and a planned white woman/black man liaison involving Felicia, were scuttled. Later, several over-forty stars, including Charles Keating (Carl), were axed, angering Internet fans, who mobilized letter-writing protests. The screwball humor, social relevance, feisty women, and multi-generational focus which had distinguished *Another World* and proven so influential had fallen victim to commercial dictates. Unable to overcome the challenge, the show was cancelled, the final episode airing on June 25, 1999.

Anthony, Piers (1934—)

Piers Anthony Dillingham Jacobs began writing science fiction/fantasy as early as his student years at Goddard College, Vermont (B.A. 1956). In 1967, he published *Chthon*, followed in 1968 by *Omnivore*, *Sos the Rope*, and *The Ring* (with Robert E. Margroff). *Macroscope* (1969) established him as a master of complex characters and cosmic story lines. Since then, Anthony has often published at least three novels annually—one science fiction, one fantasy, and one experimental. In 1977, he published *Cluster* and *A Spell for Chameleon*, each initiating a series. The *Cluster* novels, the three *Planet of Tarot* novels, the *Blue Adept* series, the *Incarnations of*

Immortality sequence, and others allowed Anthony to explore multiple science fictional themes, while the Xanth novels (*A Spell for Chameleon* followed by *Castle Roogna* and *The Source of Magic*, and a continuing series of sequels) have consistently placed him on the bestsellers lists.

Aparicio, Luis (1934—)

Venezuelan Luis Aparicio won more Gold Gloves than any other American League shortstop in the history of baseball. He won every year from 1958 to 1962 and then again in 1964, 1966, 1968 and 1970. He led the American League shortstops in fielding for eight

consecutive seasons and broke a major league record by leading the American League in assists for six straight years.

In addition, Aparicio became the first Hispanic American in professional baseball in the United States to be named “Rookie of the Year.” During his rookie season for Baltimore, Aparicio drove in 56 runs, scored 69 runs, and led the leagues in stolen bases. Aparicio was one of the first Hispanic players to really demonstrate what talent existed south of the border and the potential it had for making big league ball exciting.

Apocalypse Now

Speaking in retrospect about his 1979 film, director Francis Ford Coppola once said, “*Apocalypse Now* is not about Vietnam, it is

Marlon Brando (left) and Martin Sheen in a scene from the film *Apocalypse Now*.

Vietnam.” Coppola was referring to the immense difficulty and hardship he experienced in making the film, but his words are true in another sense as well. *Apocalypse Now* is not an accurate film—it does not depict any actual events that took place during the long history of American involvement in the Vietnam War. It is, however, a true film—it clearly conveys the surreal, absurd, and brutal aspects of the war that were experienced by many who took part in it.

The broad outline of the script is adapted from Joseph Conrad’s bleak 1902 novella *Heart of Darkness*, which concerns nineteenth-century European imperialism in Africa. Screenwriter John Milius transplants the latter two-thirds of Conrad’s tale to Southeast Asia, and gives us the story of Captain Willard (Martin Sheen), United States Army assassin, and his final assignment in Vietnam. “I wanted a mission,” Willard says in voice-over narration, “and, for my sins, they gave me one. When it was over, I’d never want another.”

Willard’s mission is to journey up the Nung River into Cambodia, and there find and kill Colonel Walter Kurtz, a renegade Green Beret officer who has organized a force of Montagnard tribesmen into his own private army, which Kurtz has been using to wage war in his own way, on his own terms. Kurtz’s methods of fighting the Viet Cong are unremittingly savage—according to the General who briefs Willard on his mission: “He’s out there operating without any decent restraint, totally beyond the pale of any acceptable human conduct.”

And so Willard begins his own journey into the heart of darkness, courtesy of a Navy patrol boat and its crew: Chief Phillips (Albert Hall); Clean (Larry Fishburne); Chef (Frederic Forrest); and Lance (Joseph Bottoms). Along the way, Willard and the sailors encounter people and situations that highlight the absurdity of the American approach to the war. This idea is brought in early when Willard remarks after accepting the mission to find and kill Kurtz: “Charging people with murder in this place was like handing out speeding tickets at the Indy 500.”

The absurdity escalates when Willard meets Colonel Kilgore (Robert Duvall), who commands the Airmobile unit that is supposed to escort Willard’s boat to the mouth of the Nung River. Kilgore is bored at the prospect, until he learns that the section of coast where he is supposed to deliver Willard offers excellent currents for surfing. At dawn the next day, Kilgore’s helicopters assault the Viet Cong village that overlooks their objective, wiping out the inhabitants so that Kilgore and his troops can surf—and, incidentally, allowing Willard to continue his mission. The aftermath of the air strike that Kilgore calls in to finish off the village allows Duvall to deliver one of the film’s more famous lines: “I love the smell of napalm in the morning! It smells like . . . victory!”

Later, in a remote American outpost where the boat stops for supplies, Willard and the crew arrive just in time to see a gaudy United Service Organizations (USO) show, replete with a band and go-go dancing Playboy Playmates. This highlights another theme in the film—the Americans do not like the jungle, so they attempt to turn the jungle into America. In Willard’s words: “They tried to make it just like home.” And that, the film seems to say, is why they would lose—you cannot win a jungle war by trying to make the jungle into America. As the boat departs the outpost and its go-go dancers, Willard’s thoughts turn to the enemy: “Charlie didn’t get much USO. He was either dug in too deep or moving too fast. His idea of good R&R [rest and relaxation] was a handful of cold rice, or a little rat meat.” Willard’s parting thought on the spectacle he has just witnessed is: “The war was being run by clowns, who were going to end up giving the whole circus away.”

That quotation evokes another of the film’s themes: the distinction between “clowns” and “warriors.” Most of the United States military people whom Willard encounters can be considered clowns. They commit massive, mindless violence, which is inefficient as well as counterproductive to the stated goal of “winning the hearts and minds of the Vietnamese people.” A warrior, on the other hand, uses violence only when it is necessary, and then does so surgically. His response is precise, controlled, and lethal.

The scene greeting Willard when he arrives at Kurtz’s stronghold is like something out of a nightmare. The bodies of dead Viet Cong are everywhere. A crashed airplane hangs half out of a tree. A pile of human skulls leers from the shore. The Montagnard warriors, their faces painted white, stand silent and ominous as ghosts as they watch Willard’s boat pull in.

And then there is Kurtz himself (Marlon Brando). His ragtag troops clearly consider him a mystic warrior. Willard thinks Kurtz may be insane—but, if so, it is a form of insanity perfectly suited to the kind of war he is fighting. As Willard notes while reading Kurtz’s dossier on the trip upriver, “The Viet Cong knew his name now, and they were scared of him.” Willard is frightened of Kurtz, too. But his fear does not stop him, several nights later, from sneaking into Kurtz’s quarters and hacking him to death with a machete. Willard is able to do this because, he says, Kurtz wished to die: “He wanted someone to take the pain away.”

Twelve years after the release of *Apocalypse Now* came the documentary *Hearts of Darkness* (1991), which chronicles the making of Coppola’s opus. Combining video footage shot by Coppola’s wife Eleanor in 1978, interviews with cast and crew, and scenes left out of the final version of *Apocalypse Now*, the documentary is a fascinating look at the making of a film under the most adverse of conditions.

Apollo Missions

Between July 1969 and December 1972, 12 American astronauts walked upon the lunar surface. Their 240,000 mile journey to the moon began centuries earlier as the first human gazed skyward into the heavens. As the closest celestial body to the Earth, the moon inspired dreams of exploration through masterworks of literature and art. While such visionary dreams became reality with the technological giant known as Project Apollo, the atmosphere of the Cold War precipitated the drive to the moon.

By 1961 the Soviet Union garnered many of the important “firsts” in space—the artificial satellite (Sputnik I), a living creature in space (Sputnik II), and an un-manned lunar landing (Luna II). Space was no longer a vast territory reserved for stargazers and

Neil Armstrong becomes the first man to walk on the moon.

writers of science fiction; it was now at the forefront of national prestige. The race for placing a human into orbit was the next “first” prize. The American public eagerly looked to Cape Canaveral to finally capture the gold, only to once again be outdone by the Soviets with the orbital flight of Yuri Gagarin.

President John F. Kennedy consulted with scientific advisors about what first the United States might secure. On May 25, 1961, the President made a bold proclamation to the world, “I believe that this nation should commit itself of achieving the goal, before this decade is out, of landing a man on the moon and returning him safely to the Earth.” With these words he captured the imagination of the nation and set forth on a project whose size rivaled the bid for an atomic bomb with the Manhattan Project. When Kennedy delivered his speech, the United States had a mere 15 minutes and 22 seconds of space flight under its belt. Such a complicated venture would require billions of dollars and years to develop the systems and machinery.

Apollo was set to debut in 1967 with the orbital flight of its first crew in Apollo 1. On January 27, however, an electrical spark ignited the capsule’s pure oxygen atmosphere ending the lives of astronauts Gus Grissom, Edward White II, and Roger Chaffee. The tragedy showed the first chink in Apollo’s armor. As the political climate had changed in the years since President Kennedy’s pledge, some began to wonder if the billions of dollars needed to fund Apollo were worth it.

The flight of Apollo 8 in December of 1968 resurrected the program, proving the redesigned hardware could deliver the goods by 1969. Astronauts Frank Borman, James Lovell, and William Anders became the first humans to escape the Earth’s gravitational pull and circumnavigate the moon. The desolate and forbidding surface of a lifeless moon made the “blue marble” of Earth seem like a “grand oasis” in the dark void of space. For the first time humans could see their fragile planet in its entirety. Television cameras transmitted the images back to Earth as the crew quoted Genesis on the eve of Christmas. Apollo 8 had been one of the few bright spots in a year filled with domestic political turmoil, riots, war, and assassination.

Apollo 11 was the news event of 1969. Nearly half of the world’s citizens watched Neil Armstrong take his historic first lunar steps on July 20. The images of Armstrong, Buzz Aldrin, and Michael Collins turned into a marketing bonanza. Their likeness graced buttons, towels, glasses, plates, lunchboxes, posters, and charms. Apollo 11 made the cover of magazines ranging from *Time* and *National Geographic* to *TV Guide*.

With the success of Apollo 11, however, came an end to the anxiety within the public raised by Sputnik. The United States had unequivocally regained its national honor with the fulfillment of the lunar pledge. Many Americans now felt it was time to put space aside and concentrate on problems on Earth. Moreover, the necessity to finance a protracted war in Southeast Asia and the social programs of the Great Society led to reductions in NASA (National Aeronautics and Space Administration) budgets.

As big as Apollo 11 was, Apollo 12 was not. It became NASA’s equivalent to a summer rerun on television. The next mission, Apollo 13, would have suffered a similar fate had it not been for its near disaster in space. The explosion of an oxygen tank brought with it the prospect of suffering a loss of life in space, and Apollo once again captured headlines. Apollo 14 had moments of interest for the public—it featured Alan Shepard hitting golf balls for “miles and miles” courtesy of the moon’s reduced gravity. The crews of Apollo 15, 16, and 17, regardless of the scientific value of the missions, became anonymous figures in bulky white suits bouncing around on

the lunar surface. Their activities were relegated to a mere mention on the evening news broadcast.

No great conquest program would supplant Apollo; the political circumstances of the early 1960s no longer prevailed by the decade’s end. Even the original plans for Apollo were trimmed as budgetary constraints forced NASA to cut three of the ten scheduled lunar landings. Ironically, the last flight of Apollo in 1975 was a joint Earth-orbit mission with the Soviet Union, the very menace whose space efforts had given birth to the United States lunar program.

Apollo is not simply a collection of wires, transistors, nuts, and bolts put together by an incredible gathering of scientific minds. Rather, it is a story of great adventure. The missions of Apollo went beyond the redemption of national pride with the planting of the United States flag on the moon. Project Apollo was a victory for all to share, not only Americans.

Apollo Theatre

From 1934 until the present, the Apollo Theatre has been the most important venue for black entertainment in the United States. Located on 125th Street in New York’s black Harlem neighborhood, the Apollo is more than just a venue, it is a cultural institution, a place where African Americans have come-of-age professionally, socially, and politically. As Ahmet Ertegun, chairman of Atlantic Records, noted, “[The Apollo] represented getting out of the limitations of being a black entertainer. If you’re a black entertainer in Charlotte or Mississippi you have great constraints put upon you. But coming to Harlem and the Apollo—Harlem was an expression of the black spirit in America, it was a haven. The Apollo Theatre stood for the greatest—the castle that you reach when you finally make it.”

The changing face of the Apollo—originally built as an Irish music hall, and later the site of a burlesque theatre—in the early twentieth century aptly represented the shifting demographics of the Harlem community itself. Real estate developers, intending to build a suburban paradise for well-off whites, found themselves forced to rent to blacks when the boom cycle went bust in the 1910s. Black

125th Street and the Apollo Theatre, Harlem, New York.

movement within New York City, combined with mass migrations from the southern states, made Harlem the largest black community in America. For African Americans in the 1920s and 1930s, Harlem became the center of the earth, and although its heyday came toward the end of the “Harlem Renaissance,” no cultural establishment was more in vogue than the Apollo.

Of the many shows and performers that have graced Apollo’s stage, none have been as enduring, as popular, or as influential as Ralph Cooper and his Wednesday evening Amateur Nights. In the midst of the worst economic depression in American history, Cooper aimed to restore the vision of the “American dream” to the people of Harlem. As he said at the time, “We can make people a unique offer: With nothing but talent and a lot of heart, you can make it.” Early shows were successful enough to merit live broadcast on WMCA, and radio exposure extended the Apollo’s influence far beyond the boundaries of Harlem. As Cooper later recalled, “You could walk down any street in town and that’s all you heard—and not just in Harlem, but all over New York and most of the country.” The entire nation, in fact, gained its first exposure to such notable talents as

Lionel Hampton, Billie Holiday, Ella Fitzgerald, and more recently, Luther Vandross, Gladys Knight, and Michael Jackson, from the Apollo’s Amateur Night.

Ironically, the breakthrough success that artists like Knight, Donna Summer, and other black entertainers found in the early 1970s spelled doom for “Harlem’s High Spot.” A surge in record royalties led to less touring for major artists, and the Apollo found itself priced out of the market, unable to compete with larger venues like Madison Square Garden and the Lincoln Center. Furthermore, a 1975 gunfight in the Apollo’s upper balcony during a Smokey Robinson concert severely damaged the theatre’s reputation as a safe haven in a dangerous neighborhood. Eventually, the Apollo’s owners were forced to sell the ailing theatre to a church group. After church leaders declared bankruptcy a few years later, however, the theatre was taken over by the Harlem Urban Development Corporation in 1982. In 1983, the Apollo became a National Historic Landmark, securing its future as, arguably, America’s most important theatre.

Apple Computer

Apple Computer was originally founded by Steven Wozniak and Steven Jobs in 1976. Wozniak and Jobs had been friends in high school, and they shared an interest in electronics. They both eventually dropped out of college and worked for electronics companies, Wozniak at Hewlett-Packard and Jobs at Atari. Wozniak, who experimented in computer design, built the prototype for the Apple I in his garage in early 1976. Jobs saw the potential of the Apple I, and he insisted that he and Wozniak try to sell the machine.

The computer world did not take the Apple I very seriously, and it saw limited success. When the Apple II debuted in 1977, things changed dramatically. The first personal computer to include color graphics, the Apple II was an impressive machine. Orders for Apple machines grew rapidly, and with the introduction of the Apple Disk II, an inexpensive machine with an easy-to-use floppy drive, Apple sales further increased.

With the increase in sales came increased company size. By 1980, when the Apple III was released, Apple had several thousand employees. Apple had taken on a number of new investors who opted to take seats on the board of directors. Older, more conservative men, the new directors wanted Apple to become a more traditional corporation, much to the dismay of many of its original employees.

By 1981, a saturated personal computer market forced Apple to lay off employees. In addition, Wozniak was injured in a plane crash. He took a leave of absence from Apple and returned only briefly. Jobs became chairman of Apple computer in March. Although the personal computer market was growing by leaps and bounds, Apple continued to find itself falling behind the market-share curve. When IBM introduced its first PC in late 1981, Jobs realized Apple needed to change direction.

In 1984, Apple released the Macintosh. The Mac, which would become synonymous with Apple, marked a dramatic revolution in the

The Apple IIGS personal computer.

field of personal computing. Although the Mac was not the first computer to use the Graphical User Interface (GUI) system of icons rather than text-line commands, it was the first GUI-based machine mass-marketed to the general public. By allowing computer users to simply point-and-click rather than having to understand a complex and often unintuitive set of typed commands, the Macintosh made it possible for the average person to operate a personal computer.

The advertisement promoting the launch of the Macintosh was equally dramatic. The ad, which aired during halftime of the Super Bowl, depicted a woman with a large hammer attacking a gigantic video screen that broadcast the image of a suit-wearing Big Brother figure to the gathered masses. Marrying a David vs. Goliath theme to imagery from George Orwell's dystopic *1984*, the commercial suggested that the Macintosh was ready to challenge the evil dominance of corporate giant IBM.

In 1985, after a heated and contentious struggle within the board of directors, Steve Jobs left Apple Computer. For the next eight years, Apple appeared to be on a roller-coaster ride, going from Wall Street darling to has-been several times. Beset by internal struggles and several poorly-designed advertising campaigns, Apple watched its share of the computer market dwindle. Microsoft introduced the Windows software for Intel-based computers, which further eroded Apple's market share. Windows, which essentially copied the Macintosh GUI, proved phenomenally successful. With its ease-of-use trump card gone, Apple continued to slide, despite the fact that many believed that Apple offered a superior computer.

By 1996, it appeared Apple was headed for bankruptcy. Quarterly losses continued to pile up, and layoffs continued. To the surprise of most industry insiders, Steve Jobs returned to Apple in July of 1996, and by July of 1997 he was the de facto CEO. Jobs made major changes in the Apple line, focusing on consumer machines rather than high-end workstations. He introduced the G3 processor, which was vastly superior to previous models. In 1998, he brought out the iMac, which was specifically targeted for the average home computer user. Jobs return to Apple cut costs, introduced new technologies, and brought Apple back into the black. Although some of his decisions were controversial, Apple's continued health was the best indicator of his abilities.

Although Apple remains a fairly small player in the consumer computer market, the Macintosh's superior graphics and sound capabilities have given it a dominant position in several high-end markets, notably desktop publishing, high-end graphics work (such as movie special effects), and music production. The Macintosh slogan "Think Different" became a mantra for many Mac users. Macintosh consistently has one of the highest brand loyalty ratings, and hardcore Mac users (sometimes called MacEvangelists) constantly preach the superiority of the Macintosh over other computer platforms.

Although the marketing skills of Apple are often suspect, the innovative thinking at Apple is peerless in the computer industry. The Apple GUI became the standard by which all other operating systems are evaluated, and the similarities between the Apple GUI and Windows is unmistakable. Apple was the first company to offer plug-and-play expansion, allowing computer users to configure new hardware using software alone. Plug-and-play has since become an industry standard across all major operating systems. Although the handwriting recognition software of the original Apple Newton was poorly designed, it laid the groundwork for the multitude of hand-held Personal Digital Assistants (PDAs) such as the Palm Pilot. These

innovations, along with many others, will keep Apple at the forefront of personal computing for the foreseeable future.

Arbuckle, Fatty (1887-1933)

In the annals of film history, no celebrity better illustrates the fragility of stardom than Roscoe "Fatty" Arbuckle. In 1919, Arbuckle was one of the most successful comedians in silent film. Two years later, accused of the rape and murder of a young actress, Arbuckle instantly became a national symbol of sin. An outraged public boycotted Arbuckle films, tore down movie posters, and demanded his conviction. For Arbuckle, who was found innocent in 1922, the scandal meant the end of a career. For the movie industry, it meant the beginning of self-censorship. And for many Americans, it represented the loss of a dream: as disappointed fans quickly learned, stars were very different from the heroes they portrayed on screen.

In his movies, Arbuckle typically portrayed a bumbling yet well-meaning hero who saved the day by pie-throwing, back-flipping, and generally outwitting his opponent. In spite of his bulky, 250-pound frame, Arbuckle proved to be an able acrobat—a skill he had perfected during his days in vaudeville. Abandoned by his father at the age of 12, Arbuckle earned his living performing in small-town theaters and later, in the Pantages theater circuit. After nearly 15 years on stage, though, in 1913 Arbuckle found himself out of a job, the victim of declining public interest in vaudeville. Almost by chance, Arbuckle wandered into Mack Sennett's Keystone film studio, where he was given the nickname "Fatty" and put to work. During his three years at Keystone, Arbuckle starred in the popular *Fatty and Mabel* series with actress Mabel Normand, and gained a reputation as a slapstick comedian. By 1917, when Arbuckle left Keystone to run his own production company, Comique, under the supervision of Joseph Schenck, he had become a nationally-known star.

At Comique, Arbuckle directed some of his most acclaimed comedies: *Butcher Boy* (1917), *Out West* (1918), and *Back Stage* (1919), which starred friend and fellow comedian Buster Keaton. In 1919, lured by a million dollar a year contract, Arbuckle agreed to star in six feature films for Paramount and began an intense schedule of shooting and rehearsals. But Paramount ultimately proved to be a disappointment. Dismayed by his lack of creative control and his frenetic schedule, Arbuckle went to San Francisco for a vacation in September 1921. On September 5, Arbuckle hosted a party in his room at the St. Francis Hotel—a wild affair complete with jazz, Hollywood starlets, and bootleg gin. Four days later, one of the actresses who had been at the party, 27-year-old Virginia Rappe, died of acute peritonitis, an inflammation of the lining of the abdomen that

Fatty Arbuckle

was allegedly caused by “an extreme amount of external force.” Suspicion fell on Arbuckle, who was accused of raping Virginia and causing her death. Arbuckle was charged with murder and detained in San Francisco.

Meanwhile, news of the Arbuckle scandal sent shockwaves throughout the country. Theater owners withdrew Arbuckle films, and preachers gave sermons on Arbuckle and the evils of Hollywood. Paramount suspended Arbuckle’s contract, and Will Hays—the “czar” of the movie industry, who had been hired to clean up Hollywood’s image in the wake of the scandal— forbade Arbuckle from acting in any films. In the eyes of the public, Arbuckle was guilty as charged. But Arbuckle’s trials told a different story. After two mistrials, Arbuckle was declared innocent in March 1922. This decision, however, meant little to moviegoers, who continued to speak out against Arbuckle in spite of his acquittal. In December 1922, Hays lifted the ban on Arbuckle, but it was too late: Arbuckle’s career as an actor had been ruined.

Even though strong public opinion prevented Arbuckle from appearing on screen, Arbuckle managed to find work behind the camera, and between 1925 to 1932 directed several comedies under the pseudonym William Goodrich (“Will B. Good”). By 1932, though, bitter memories of the scandal had faded, and several of Arbuckle’s friends published an article in *Motion Picture* magazine

begging the public for forgiveness and demanding Arbuckle’s return to the screen. Later that year, Jack Warner hired Arbuckle to star in six short films, but soon after the films were released, Arbuckle died on June 30, 1933, at the age of 46. Arbuckle, who had never recovered from the stress and shock of the scandal, spent his last years wrestling with alcoholism and depression. Although the official cause of Arbuckle’s death was heart failure, Buster Keaton said that he died of a broken heart.

The Fatty Arbuckle scandal, though, was more than a personal tragedy. Motion pictures—and the concept of the movie “star”—were still new in the early 1920s, and the Arbuckle scandal gave movie fans a rude wake-up call. For the first time, Americans saw the dark side of stardom. Drunk with fame and wealth, actors could abuse their power and commit horrible crimes—indeed, as many social reformers had claimed, Hollywood might be a breeding ground for debauchery. In the face of this threat, the movie industry established a series of codes controlling the conduct of actors and the content of films, which culminated in the Production Code of the 1930s. The industry hoped to project an image of wholesomeness, but in the wake of the Arbuckle scandal, the public remained unconvinced. Although American audiences still continued to be entranced by the Hollywood “dream factory,” they would never put their faith in movie stars in the way they had before 1921.

Archie Comics

Archie has been a highly successful teenager for close to 60 years. He began life humbly, created by cartoonist Bob Montana and writer Vic Bloom, as a backup feature for the MLJ company’s *Pep Comics* #22 in the winter of 1941. At that point, *Pep Comics* was inhabited predominantly by serious heroes, such as the Shield, a superpatriot, and the Hangman, a vindictive costumed crime-fighter. The redheaded, freckled Archie Andrews, along with his two girlfriends, the blonde Betty and the brunette Veronica, and his pal Jughead, gradually became the stars of the comic book and within a few years ousted all of the heroes. MLJ, who had been publishing a string of comic books, changed its name to Archie Comics Publications early in 1946.

The public had discovered teenagers a few years earlier, and fictional youths were flourishing in all the media. There was Henry Aldrich on the radio, Andy Hardy in the movies, and Junior Miss on Broadway. The quintessential media teen of the 1940s, clean-cut and bumbling, Archie has remained true to that stereotype throughout his

long run in the comics. He came upon the scene with the full requisite of essential props—two sympathetic but perplexed parents, a jalopy, a spinster school teacher in the person of Miss Grundy, and an easily exasperated principal named Mr. Weatherbee.

Archie Andrews pretty much ignored involvement with sex, drugs, and delinquency as several generations of kid readers read him and then outgrew him. His biggest appeal has probably always been not to teenagers themselves but to the millions of preteens who accept him as a valid representative of the adolescent world.

Archie quickly began to branch out. He and the gang from Riverdale High were added to the lineup of *Jackpot Comics* soon after his debut in *Pep Comics* and, in the winter of 1942, MLJ introduced *Archie Comics*. An *Archie* radio show took to the air in 1943, settling into a Saturday morning slot on NBC. The newspaper strip was started in 1946, first syndicated by McClure and then King Features. Bob Montana, returning from the service, drew the strip. In his absence, several other cartoonists had turned out the increasing amount of *Archie Comics* material. Among them were Harry Sahle, Bill Vigoda, and Al Fagaly.

Archie reached television in the late 1960s as an animated cartoon character. The first show was called simply *The Archie Show*, and that was followed by such variations as *Archie's Funhouse* and *Archie's TV Funnies*. Later attempts at a live action version of life in Riverdale did not prove successful.

Over the years there have been several dozen different comic book titles devoted exclusively to Archie and his gang. These include *Archie's Mad House*, *Archie's Girls*, *Betty and Veronica*, *Archie's Joke Book*, *Archie's Pal*, *Jughead*, *Little Archie*, *Archie's Christmas Stocking*, and *Archie's Double Digest*. The spin-offs have included *Josie and the Pussycats* and George Gladir's *Sabrina the Teenage Witch*. The chief Archie artist for many years was Dan DeCarlo and his associates have included Tom Moore, George Frese, and Bob Bolling.

Arden, Elizabeth (1878-1966)

Elizabeth Arden symbolizes exorbitance and luxury in the multi-billion dollar beauty industry. Born Florence Nightingale Graham, Elizabeth Arden was a self-made woman of steely determination. She started her business on New York's Fifth Avenue in 1910. Responding to women's desires for both well-being and beauty, she offered cosmetics and treatments for home application as well as salon pamperings at her famous Red Door salons and her Maine Chance retreat. While Arden always respected the laboratory matrix of beauty treatments—offering a selection of more than 300 varieties of creams and cosmetics—Arden added essential grace notes to her products. She replaced medicinal aromas with floral scents; she created elegant, systematic packaging; and she opened luxurious and artistic treatment venues, which contrasted strongly with the hospital-like austerity of other beauty-culture clinics. In the 1960 presidential election, Jacqueline Kennedy, responding to allegations of her extravagance, retorted

that Pat Nixon shopped at Elizabeth Arden. Arden's business sold for \$40 million after her death in 1966.

Argosy

Born as a struggling weekly for adolescents in 1882, *Argosy* became the first adult magazine to rely exclusively on fiction for its content and the first to be printed on rough, pulpwood paper. "The story is worth more than the paper it is printed on," it was once said of *Argosy*, and thus was born the "pulp magazine." Between 1896 and its demise in 1979, *Argosy* introduced or helped inspire pulp fiction writers such as Edgar Rice Burroughs, Jack London, Dashiell Hammett, H. P. Lovecraft, Raymond Chandler, E. E. "Doc" Smith, Mickey Spillane, Earl Stanley Gardner, Zane Grey, and Elmore Leonard, and helped familiarize millions of readers with the detective, science fiction, and western writing genres.

Publisher Frank Munsey arrived in New York from Maine in 1882 with \$40 in his pocket. Ten months later, he helped found *Golden Argosy: Freightened with Treasures for Boys and Girls*. Among the publication's early offerings were stories by the popular self-success advocate Horatio Alger, Jr., but the diminutive weekly fared poorly in the face of overwhelming competition from like juvenile publications "of high moral tone." Munsey gradually shifted the content to more adult topics, dropping any reference to children in the magazine in 1886 and shortening the title to *Argosy* in 1888. A year later, Munsey started another publication, what would become the highly profitable *Munsey's Magazine*, and *Argosy* languished as a weak imitation.

Munsey made two critical changes to rescue *Argosy* in 1896. First, he switched to cheap, smelly, ragged-edged pulpwood paper, made from and often sporting recovered wood scraps, as a way to reduce costs. More importantly, he began publishing serial fiction exclusively, emphasizing adventure, action, mystery, and melodrama in exotic or dangerous locations. No love stories, no drawings or photographs for many years, just "hard-boiled" language and coarse, often gloomy settings that appealed to teenage boys and men. Circulation doubled, peaking at around 500,000 in 1907.

Munsey paid only slightly more for his stories than his paper. One author recalled that \$500 was the top price for serial fiction, a fraction of what authors could make at other publications. *Argosy* featured prolific serial fictionists such as Frederick Van Rensselaer Deay, the creator of the Nick Carter detective series, William MacLeod Raine, Albert Payson Terhune, Louis Joseph Vance, and Ellis Parker Butler. It also published the writings of younger, undiscovered authors such as James Branch Cabell, Charles G. D. Roberts, Susan Glaspell, Mary Roberts Rinehart, a young Upton Sinclair, and William Sydney Porter (before he became known as O. Henry). Beginning in 1910, Munsey began merging *Argosy* with a variety of weaker competitors, a practice Munsey called "cleaning up the field." The new combination featured stories by authors such as Frank Condon,

Courtney Ryley, Octavus Roy Cohen, P. G. Wodehouse, Luke Short, Van Wyck Mason, C. S. Forester, and Max Brand.

Munsey died in 1925 and ordered that his \$20,000,000 magazine empire, including *Argosy*, be broken up and sold, but not before *Argosy* and the pulps had become a dominant force in American popular culture, making characters such as Tarzan, Zorro, the Shadow, Sam Spade, and the Phantom Detective household names. It was purchased by William T. Dewart, but the Depression and declining interest in pulp fiction reduced circulation to 40,000 by 1940. Renamed *New Argosy* in 1942, it was temporarily banned from the mails for "obscurity." Two months later it was sold to Popular Publications, Inc. Under the supervision of Henry Steeger, *Argosy* abandoned its all-fiction format and began featuring news and war articles. Influenced by the success of newly founded men's magazine *Esquire*, the renamed *Argosy—The Complete Men's Magazine* became a "slick," with four-color layouts, quality fiction, and adventure, sports, crime, science, and humor stories.

One of the most popular features was the "Court of Last Resort." Written by Erle Stanley Gardner, the creator of attorney Perry Mason, the "court" presented the cases of men considered unjustly convicted of crimes. The feature helped free, pardon, commute, or parole at least 15 persons. Gardner was assisted by a criminologist, lie detector expert, detective, prison psychologist, and one-time FBI investigator.

The reformulated *Argosy* succeeded for a time. As Steeger explained to *Newsweek* in 1954, "After the Second World War 15 million veterans were no longer content to accept the whimsy and phoniness of fiction." By 1953, it had a circulation of 1,250,000 and charged over \$5,000 for a single full-color page advertisement. An *Argosy* editor described an average reader to *Writer* magazine in 1965 as "factory-bound, desk-bound, work-bound, forced by economics and society to abandon his innate maleness and individuality to become a cog in the corporate machine."

But more explicit competitors such as *Playboy* and *Penthouse*, a shifting sense of male identity, and the prevalence of television doomed men's magazines such as *Argosy*. Popular Publications, Inc. was dissolved in 1972 with the retirement of Henry Steeger. *Argosy* and other titles were purchased by Joel Frieman and Blazing Publications, Inc., but *Argosy* was forced to cease publication in the face of postal rate increases in 1979 even though it still had a circulation of over one million. The magazine's title resurfaced when Blazing Publications changed its name to Argosy Communications, Inc., in 1988, and Frieman has retained copyrights and republished the writings of authors such as Burroughs, John Carroll Daly, Gardner, Rex Stout, and Ray Bradbury. In addition, the spirit of pulp magazines like *Argosy* survives in the twentieth-century invention of the comic book, with fewer words and more images but still printed on cheap, pulpwood paper.

Arizona Highways

Recognized by its splashy color photographs displaying Arizona's scenic wonders, *Arizona Highways* is the best known and most widely circulated state-owned magazine. Founded in 1925 with a starting circulation of 1,000 issues, *Arizona Highways* evolved from a drab engineering pamphlet laced with ugly, black-and-white construction advertisements to a full-color, advertisement-free, photographic essay promoting Arizona. Today, with subscribers in all fifty states and 120 foreign countries, it is the state's visual ambassador and an international proselytizer of the romanticized Southwest.

Arizona Highways was one of twenty-three state-published magazines that began with the expressed purpose of promoting the construction of new and better roads. Arizona, like many Western states, saw tourism as an important economic resource, but did not have the roads necessary to take advantage of America's dependable new automobiles and increased leisure time. This good-roads movement, which swept the country during the late nineteenth and early twentieth centuries, wrested power from the railroads and helped to democratize travel. The movement reached its peak in Arizona during the 1930s when the federal government began funding large transportation projects as part of President Franklin Delano Roosevelt's larger plan to help steer the country out of the Great Depression. The New Deal brought *Arizona Highways* the road construction it requested and gave the magazine a new cause in tourism.

The Great Depression shrank advertisers' budgets, forcing several Arizona-based travel magazines to either cease publishing or transform their missions. *Arizona Highways*, which survived because it received a regular state subsidy, was then able to aggressively pursue the wide-open tourist market. In 1939, the magazine's sixth editor, Raymond Carlson, stopped selling advertising in order to improve the magazine's visual appeal and avoid competition for advertising dollars with other Arizona-based publications. Carlson, also the magazine's philosophical architect, edited the magazine from 1938 to 1971 and is given most of the credit for the magazine's success. His folksy demeanor, home-spun superlatives, and zealous use of scenic color photography transformed the magazine into Arizona's postcard to the world.

The invention of Kodachrome in 1936 significantly advanced color photography and allowed *Arizona Highways* to better exploit the state's scenic wonders. The magazine's photographically driven editorial content emphasizes the natural beauty of the Grand Canyon, saguaro cactus, desert flora, and the state's other readily recognized symbols like the monoliths of Monument Valley, made famous by

many appearances in John Ford's Western films, and the Painted Desert. In December 1946, *Arizona Highways* led the nation in the use of color photography and published the first all-color issue of a nationally circulated consumer magazine. The all-color format became standard for all issues starting in January of 1986.

In the 1940s, continuing in the tradition of Charles Lummis's California-based *Land of Sunshine* magazine and the Santa Fe Railroad's turn-of-the-century advertising campaigns, *Arizona Highways* began portraying a romanticized view of Arizona's natural beauty, climate, open land, Native American cultures, and Old West history. The Anglo-American pioneers—cowboys, ranchers, miners, and military figures—were portrayed as strong and fiercely independent, Hispanics were descendants of gallant explorers and brave frontier settlers, and Native Americans represented nobility, simplicity, and freedom. In addition to these sympathetic and sentimental portrayals, the magazine included the masterpieces of Western artists Ted DeGrazia, Frederic Remington, and Lon Megargee; the writing of Joseph Wood Krutch, Frank Waters, and Tony Hillerman; the photography of Ansel Adams, Joseph and David Muench, and Barry Goldwater; the architecture of Frank Lloyd Wright, Mary Colter, and Paolo Soleri; and the creations of Native American artists Fred Kabotie, Harrison Begay, and Allan Houser.

Undoubtedly the magazine's romanticization of the Southwest also benefited from the popularity of Western films, television and radio network programs, and pulp fiction. In fact, the mass media's portrayal of the West blurred the distinction between the mythic West and the real West in the American mind. Carlson's agrarian philosophy worked well with this blurred West because it enabled the increasingly industrial nation to, in the words of historian Gerald Nash, "escape from this new civilization, even while partaking of its material and other benefits and comforts." Although many readers do visit Arizona, much of the magazine's appeal outside the state is the reassurance it gives readers that the West—a place of opportunity and open land—still exists. The magazine's cultural influence as a symbol of this American identity was so powerful in 1965, during the height of the Cold War, that *Arizona Highways* was labeled subversive literature by the Soviet Union and banned there because it was "clearly intended to conduct hostile propaganda among the Soviet people."

The magazine's circulation reached a high of over 600,000 in the 1970s, but increased subscription rates (brought on by higher labor, postage, and paper costs) and competition from other magazines caused the circulation to drop to nearly 400,000 by the late 1990s. Even so, *Arizona Highways* has become a self-supporting operation that no longer requires state appropriations. The magazine accomplished this by marketing related products—books, calendars, cards, maps, and clothing—through bi-annual catalogs which account for approximately 40 percent of total revenue. To remain competitive and increase circulation, *Arizona Highways* maintains a delicate balance between satisfying the editorial appetites of its current subscribers, most of whom are over sixty, while pursuing a new generation of younger readers through more active magazine departments and the internet.

—Brad Melton

Arledge, Boone (1931—)

Visionary producer Boone Arledge was instrumental in transforming network-televized sports and news into profitable ventures. Joining *ABC Sports* in 1960, he revolutionized broadcasts with his use of instant replay and slow motion, and his humanistic production sense brought the shows *Wide World of Sports*, *Monday Night Football*, and announcer Howard Cosell to national consciousness. A widely acclaimed and award winning broadcast of the terrorized 1972 Munich Olympics stirred wider ambitions, and in 1976 Arledge became president of *ABC News*. He soon pioneered ratings-savvy breakthroughs such as *Nightline* (1980) and the first television news magazine, *20/20* (1978). News, however, soon moved from being merely profitable to being profit-driven. Arledge was swallowed by the corporate establishment. Ted Turner's 24-hour *Cable News Network (CNN)* became the standard for network news coverage, and soon ABC was bought by Capital Cities Inc., which also owns the successful 24-hour sports network *ESPN*. Arledge stepped down in 1998.

Armani, Giorgio (1934—)

Milanese fashion designer Giorgio Armani did for menswear in 1974 what Chanel did sixty years before for women's tailoring: he dramatically softened menswear tailoring, eliminating stuffing and rigidity. The power of Armani styling comes from a non-traditional masculinity of soft silhouettes and earth colors in slack elegance. His 1980s "power suit" (padded shoulders, dropped lapels, two buttons, wide trousers, and low closure) and its 1990s successor (natural shoulders, three buttons, high closure, narrow trousers, and extended jacket length) defined prestige menswear. Armani is the first fashion designer to focus primarily on menswear, though he has designed womenswear since 1975. In the 1990s, Armani remained chiefly identified with expensive suits but produced numerous lines. Armani's popularity in America can be traced to Richard Gere's wardrobe in *American Gigolo* (1980).

Armed Forces Radio Service

During World War II American radio made three key contributions to the war effort: news broadcasts supporting U.S. involvement in the war, propaganda beamed at Nazi-occupied Europe, and entertainment and news broadcasts to American troops around the world via the Armed Forces Radio Service (AFRS). Since 1930, the airwaves had been dominated by the entertainment-oriented programming of the three major American networks, CBS, ABC, and NBC. With the AFRS a new type of network emerged, one historian Erik Barnouw describes as “global and without precedent.”

In the pre-television era radio was considered such an integral part of American life that a concentrated effort was made to continue providing it to American troops in both the European and the Pacific theatres. Thus the Armed Forces Radio Service was born and commenced broadcasting in the first years of America’s intervention in World War II. At the beginning of 1943 AFRS had 21 outlets, but by the end of the same year that number had grown to over 300. It was heard in 47 countries, and every week each outlet received over 40 hours of recorded programming by plane from the United States; additional material (such as news, sports, and special events coverage) was relayed by short-wave. (The very first programs for troops had actually gone out direct by short-wave in 1942 when AFRS began broadcasting on a limited scale). First leasing time on foreign (and mostly government run) stations, AFRS programming moved into high gear with the creation of its own “American expeditionary stations,” the first set-up in Casablanca in March of 1943, with stations in Oran, Tunis, Sicily, and Naples soon following. By 1945 over 800 outlets were getting the weekly shipments of AFRS programs.

The nerve center of Armed Forces Radio was at 6011 Santa Monica Boulevard in Los Angeles. Its uniformed staff included Army and Navy personnel as well as civilians. Its commandant, Colonel Thomas H. A. Lewis, had been vice-president of a Hollywood advertising agency, and was also married to actress Loretta Young, a combination which assured AFRS access to major Hollywood talent. Also on the staff were Sergeants Jerome Lawrence and Robert E. Lee, who would later co-write *Auntie Mame*, *Inherit the Wind*, and other Broadway successes.

Ultimately the AFRS produced forty-three programs (14 hours) itself, and aired another thirty-six hours of U.S. network radio shows with all commercials deleted. The excising of commercial advertising was a particular AFRS innovation. Historian Susan Smulyan writes in *Selling Radio*: “The radio industry had worked since the 1920s to make broadcast advertising seem natural and reassuringly ‘American,’ but the stark contrast between wartime realities and radio merchandising appeals revealed that advertising was neither wholly accepted yet nor considered particularly patriotic.” While dependent on the major networks for its most popular programs, the AFRS nonetheless still deleted all commercial references and advertising from its broadcasts. Programs such as the “Camel Caravan” became “Comedy Caravan,” and the “Chase and Sanborn Hour” became simply “Charlie McCarthy.”

A technical innovation pioneered by the AFRS was pre-recorded programming. During its early history radio had prided itself on its

live broadcasts and shied away from developing recorded shows. But the ability to pre-record had obvious advantages, among them the capacity to select the best performances and “takes,” and to delete controversial and time-sensitive material. Recorded shows were also cheaper to produce and gave everyone involved a flexibility and control impossible in live broadcasting.

Because recording tape had not yet been developed, the process involved the manipulation of a series of vinyl and glass discs similar to very large 78 rpm records. The final vinylite discs (which were the copies of the shows then shipped around the world) were pressed from a master disc which in turn had been edited from two duplicate glass disc copies of shows recorded off of live network radio. As Barnouw comments: “The process involved new techniques” requiring considerable skill on the part of the engineer/editor since it necessitated “dropping a playing needle into the right spot on the right groove at the right moment. Editing-on-disc, scarcely tried before the war, became a highly developed specialty at AFRS.”

The AFRS show “Command Performance” was the first to be pre-recorded, and it proved that the technology existed to edit programs and re-broadcast them from disc copies. Smulyan speculated that it may have been Bing Crosby’s experience on “Command Performance” that motivated him to demand a transcription clause in his 1946 contact with ABC, enabling him to record his shows in Los Angeles and ship them to ABC in New York for later broadcasting. In the late 1940s and early 1950s the phrase “Brought to you by transcription” became a familiar tag line at the conclusion of many network radio shows, the by-then standard procedure having been developed and perfected by AFRS. To this day some of the large and unwieldy 16-inch vinylite transcription discs from the World War II Armed Forces Radio Service occasionally turn up in the flea markets of southern California.

Today called Armed Forces Radio and Television Service, the AFRS continued to air pre-recorded radio shows in years following World War II. But by the early 1960s conventional radio had changed with the times, and the AFRS changed as well, both now emphasizing recorded popular music of the day aired by disc-jockey personalities. The story of one of the more off-beat army DJs, Adrian Cronauer, and his controversial AFRS programming in Southeast Asia during the Vietnam conflict is portrayed in the 1987 film *Good Morning Vietnam*.

Armory Show

In 1913, the International Exhibition of Modern Art of 1913, popularly known as the Armory Show, brought modern art to America. The most highly publicized American cultural event of all time,

the exhibition changed the face of art in the United States. As the media rained scorn, derision, fear, praise, hope, and simple curiosity on the Armory Show, the American public looked on modernism for the first time and went home to think about what they had seen. America would never be the same.

In 1911, sixteen young New York artists who had studied in Europe formed the Association of American Painters and Sculptors (AAPS). Their goal was to challenge the stranglehold of such mainstream art organizations as the National Academy of Design, a conservative group who held the first and last word on American art and American taste. Having been exposed to the avant-garde art being produced in Europe by the Impressionists, the Post-Impressionists, the Fauves, the Expressionists, the Cubists, and the Futurists, the members of the AAPS were fed up with the stodginess of the American art world. They hoped to foment artistic revolution, and their means of accomplishing this was to show the New York art world what modern art was all about.

To this end, they conceived the idea of putting on an exhibit of modern art and decided to rent out the 69th Regimental Headquarters of the New York National Guard, an armory built in case of worker unrest. They brought in some 1,300 pieces of art, arranged chronologically, beginning with a miniature by Goya, two small drawings by Ingres, and a Delacroix. But these were sedate compared to the Cézannes, Van Goghs, Picassos, Matisses, and Duchamps, which would spark public outcry when the show opened.

Indeed, the show succeeded beyond the wildest dreams of its organizers. As Robert Hughes has written in *American Visions: The Epic History of Art in America*, “No single exhibition before or since has had such a traumatic, stimulating, and disorienting effect on American art and its public. It shook the bag, reshuffled the deck, and changed the visual culture in ways that its American organizers could not have been expected to predict.”

When the Armory Show opened on February 17, 1913, four thousand people lined up to get in. There was a media frenzy in which the exhibit was both decried as “the harbinger of universal anarchy” as well as praised for turning the New York art world on its ear and drawing record crowds for a cultural event. The detractors focused mainly on Matisse and the Cubists. Marcel Duchamps’ *Nude Descending a Staircase* drew particular umbrage. As Hughes has written, “It became the star freak of the Armory Show—its bearded lady, its dog-faced boy. People compared it to an explosion in a shingle factory, an earthquake on the subway. . . . As a picture, *Nude Descending a Staircase* is neither poor nor great. . . . Its fame today is the fossil of the huge notoriety it acquired as a puzzle picture in 1913. It is, quite literally, famous for being famous—an icon of a now desiccated scandal. It is lodged in history because it embodied the belief that the new work of art, the revolutionary work of art, has to be scorned and stoned like a prophet by the uncomprehending crowd.”

The Armory Show shook the New York, and thus the American, art world to its very foundation. Some saw modern art as pathological and deranged and resolutely held out against change. But for many, particularly young artists and collectors who had not seen anything other than academic European art, it opened their eyes to the possibilities of the modern. Many cite the Armory Show as the beginning of the Modern Age in America. After a six-week run in New York, the show traveled to Chicago and Boston. In total, about three hundred thousand people bought tickets to the show, three hundred thousand

people who then slowly began to turn their sights toward Europe, toward modernism, and toward the inevitable change that would transform popular culture in America during the twentieth century.

Armstrong, Henry (1912-1988)

One of the best boxers in the history of the ring, Henry Armstrong was the first fighter to hold world titles in three weight classes simultaneously. Born Henry Jackson in Columbus, Mississippi, Armstrong began fighting in 1929. Eight years later he won the world featherweight title from Petey Sarron. A year later he won the lightweight and welterweight titles. Also known as “Hammerin’ Hank” because of his many knockouts, Armstrong was considered one of the best fighters in the world during this period. He successfully defended his welterweight title 19 times (still a record) and is fourth on the list for consecutive defenses of a title. After he retired in 1945

Henry Armstrong

he was inducted into the International Boxing Hall of Fame. His career included 150 wins (100 KOs), 21 losses, and 9 draws.

Armstrong, Louis (1901-1971)

Daniel Louis Armstrong—trumpeter and singer—was one of the most important musicians in jazz and in twentieth-century music, achieving seemingly insurmountable odds given his humble origins. Armstrong proved himself as the first vital jazz soloist and one of jazz's most creative innovators, winning worldwide appeal and achieving commercial success. Armstrong helped to transform the traditional New Orleans jazz style—based on collective improvisation—to jazz featuring a star solo, thereby elevating jazz to a

sophisticated form of music. Clearly a versatile musician, he was an active participant in a number of jazz styles, including the New Orleans style of the 1910s, the Chicago style of the 1920s, the New York style in the 1930s, and the jazz of the wider world in the 1950s. Armstrong was one of the first blacks seen in feature-length films; in total he appeared in nearly 50. In addition to a sponsored radio show, the United States State Department and private organizations sponsored international tours of his music and performances, earning him the nickname “Ambassador Satch.”

For many years, July 4, 1900 was cited as Armstrong's birth date, but the discovery of his baptismal records confirm that his real birth date was August 4, 1901. His birthplace of New Orleans was a haven for all kinds of music, from French Opera to the blues. He grew up in the “Back o’ Town” section near the red-light district, and therefore heard and absorbed the rags, marches, and blues that were the precursors to early jazz. Because his family was so impoverished—he barely had enough to eat and wore rags as a child—Armstrong often sang on the street as a kid. His father, a laborer, abandoned the family when he was young and his mother was, at best, an irresponsible single parent who left the young Armstrong and his sister in the care of relatives. In addition to singing on the streets, Armstrong sang in a Barbershop quartet, providing an excellent opportunity for him to train his ear.

Louis Armstrong

As a teenager, Armstrong found himself in trouble for general delinquency and had to spend more than two years at the Home for Colored Waifs. He eventually found an outlet in the school band, first taking up the tambourine and later the cornet under his teacher Peter Davis. Armstrong mastered the school's repertoire of marches and rags, and eventually became the leader of the Home's brass band that frequently played for picnics and parades. Upon his release, Armstrong decided that he wanted to become a musician. Not owning a horn did not deter him. He played his first job at a honky-tonk in Storyville's red-light district; he used a borrowed horn and performed blues and other songs from his limited repertoire. When not playing his regular job, Armstrong would frequent clubs and listen to various musicians playing the blues.

Cornetist and bandleader Joe "King" Oliver was impressed with Armstrong and took him under his wing. When Oliver left for Chicago in 1918, Armstrong took his place as cornetist in the band led by Kid Ory. In the same year, he married a prostitute, but the relationship soon ending in divorce. He continued to work in clubs with established bands, and on the side formed his own group. Pianist and bandleader Fate Marable then hired Armstrong to work on the riverboats, and the job provided him with the opportunity to improve his musicianship. During this period, a melophone player named David Jones taught Armstrong to read music. By 1922, he was invited to join King Oliver as second cornetist in Chicago at the Lincoln Gardens. The Oliver job showcased the young Armstrong's prowess as a virtuoso improviser who would "swing" at the slightest provocation. In 1924, Armstrong married pianist Lil Hardin and, upon her insistence, moved to New York where he joined the Fletcher Henderson Orchestra. His solos and improvisation drew the attention of New York musicians, but by 1925 he returned to Chicago where he joined the Erskine Tate "symphonic jazz" Orchestra and, subsequently, Carroll Dickerson's Orchestra. He was now billed as "Louis Armstrong, world's greatest trumpet player." With his popularity soaring, in 1929 Armstrong joined the hit show *Hot Chocolates*, where he sang "Ain't Misbehavin'." Significantly, Armstrong had become a sensation appreciated by both black and white audiences. It was a pivotal point in his career.

Armstrong could have easily chosen to pursue a career leading a jazz group, but instead, he opted for broadening his commercial appeal by singing popular tunes and becoming a showman. His decision was, perhaps, influenced by his childhood, but managers Tommy Rockwell and Joe Glaser also played an important role in the direction of his career. Many critics assert that Armstrong's musical legacy stopped in the year 1936, when, as the noted jazz critic Leonard Feather observed: "The greater his impact on the public, the less important were his musical settings and the less durable his musical contributions."

In 1925, Armstrong began to record under the name Louis Armstrong and His Hot Five. These recordings, which can be placed into four categories, had a profound influence on jazz, and are regarded as one of the most momentous recordings in the music of the twentieth century. The first category of the Hot Five recordings are in the New Orleans style, but Armstrong's scatting on "Heebie Jeebies" set a precedent for the scat style of singing. The second category was recorded with the enlargement of the quintet to include a tuba and drums, issued under the name of Louis Armstrong and His Hot Seven; "Potato Head Blues" is considered stellar in this group. The third category consisted of the group returning to the original Hot Five band with the extraordinary "Struttin' with some Barbecue," and the highly regarded "Hotter than that." The fourth category

included Earl Hines as pianist. The recordings in this category are considered by many critics as Armstrong's greatest. Including gems such as "Weather Bird," "West End Blues," and "Don't Jive Me," they were made in 1928 and reflect Armstrong's break with the New Orleans style. Hines possessed a facile technique and an inventive mind, the result of which were improvisations where the right hand of the piano mimicked the trumpet in octaves; the trademark gave rise to the term "trumpet style" piano. Armstrong and Hines complimented each other, feeding, inspiring, and spurring one another to create sheer musical excellence.

Armstrong's big band group of recordings represent him as a bandleader, solo variety attraction, and jester. In this format, he largely abandoned the jazz repertoire in favor of popular songs vis à vis the blues and original compositions. A majority of the bands he fronted, including Luis Russell and Les Hite, fell short of his musical genius.

Armstrong signaled his return to the New Orleans style with the All Stars in 1947. The sextet made their debut in August 1947 after his appearance in the mediocre film *New Orleans*. The music was superb and seemed to placate the critics. The All Stars featured trombonist Jack Teagarden, clarinetist Barney Bigard, pianist Dick Cary, drummer Sid Catlett, and bassist Arvell Shaw, although the group's personnel continually changed. This smaller group was an instant success and became the permanent format that Armstrong guided until his death; together they recorded the highly acclaimed *Autobiography* sessions.

As early as 1932 Armstrong toured Europe, playing at the London Palladium. This was the first of many trips taken for concerts and television appearances. The transformation from musician to entertainer had taken full effect. "You Rascal You," among other novelty songs, were audience favorites. Ella Fitzgerald, Oscar Peterson, and the Dukes of Dixieland were among the diverse stylists who recorded with Armstrong.

The excruciating touring demands that began in the 1930s would eventually take their toll on Armstrong. He had already experienced intermittent problems with his health and shortly after playing a date with the All Stars at the Waldorf Astoria in New York, Armstrong suffered a heart attack. He remained in intensive care for more than a month and returned home, where he died in his sleep on May 6, 1971.

A musical legend, Armstrong's style was characterized by a terminal vibrato, an exceptional ability to swing playing notes around the beat, and an uncanny appreciation for pauses and stops which showcased his virtuoso technique. He used dramatic devices to capture the attention of audiences, including sliding or ripping into notes, either ending a phrase or tune on a high note. His ebullient personality showed through his music, and his style was dictated by a *savoir faire* that was embraced by his fans throughout the world.

Army-McCarthy Hearings

In the 1950s Joseph McCarthy, a Republican senator from Appleton, Wisconsin, waged a years-long battle against subversive conduct in the United States and against the Communists whom he believed to be hiding in all walks of American life—particularly in government, Hollywood, and academia. McCarthy's unsubstantiated claims led to upheaval, the destruction of careers, and to a concentrated attack on the freedoms guaranteed to Americans in the First Amendment of the Constitution. Despite attempts by conservative scholars to reinstate McCarthy's tarnished reputation, no one has proved that he ever identified an actual subversive. Nowhere were his bullying tactics more obvious than when he accused the United States Army of harboring Communists. The hearings on these activities and McCarthy's belligerent behavior were broadcast on network television in 1957.

Specifically, McCarthy targeted an army dentist who was in the process of being voluntarily discharged due to the illness of his wife and daughter. Irving Peress, who had been drafted under the McCarthy-supported Doctors and Dentists Draft Act, had checked "Federal Constitutional Privilege" instead of "Yes" or "No" when he signed the required Loyalty Oath. This was all that McCarthy needed to launch an attack against the dentist and the United States Army.

In a broader sense, McCarthy was responding to information in a letter that was later proved to be false. The letter named 34 scientists, engineers, and technicians at Fort Monmouth as subversives. In his history of the hearings, John G. Adams, a major player in the debacle and lawyer for the army, maintains that McCarthy was mad at the army for refusing to give special treatment to David Schine, a wealthy member of McCarthy's staff who had been drafted. At any rate, 26 of the 34 accused subversives were cleared by a loyalty board, and the other eight convictions were ultimately overturned by the courts. The Loyalty Board, made up of high-ranking officers and well-respected civilians, quickly became the target of McCarthy's ire. He demanded the right to question them. The army, determined to protect the Board's identity and its own reputation, refused. While President Dwight Eisenhower had been elected on the wave of anti-Communism fueled by McCarthy, the two were poles apart ideologically. When McCarthy went after the army, Eisenhower refused to remain on the sidelines.

Backed by the White House, the army belatedly stood up to McCarthy and refused to offer their officers as lambs to McCarthy's slaughter. Robert T. Stevens, Secretary of the Army, issued a press release stating that he had advised Brigadier General Ralph W. Zwicker of Camp Kilmer not to appear before the senator's committee. As part of the attack on the army, McCarthy, with his typical outrageousness, had accused Zwicker of being unfit to wear the army uniform and of having the brains of a five year-old, and he demanded his immediate dismissal. McCarthy ignored the fact that it was Zwicker who reported the allegedly subversive Peress. When a transcript from the closed hearings was leaked to the press and published by the *New York Times*, McCarthy's supporters—including several prestigious newspapers—began to back away.

Eisenhower used the diary of army lawyer John G. Adams to illuminate the extent of McCarthy's out-of-control behavior, including the fact that Roy Cohn, McCarthy's committee counsel, was being subsidized by the wealthy Schine. Reporter Joseph Alsop, who had secretly seen the diary in its entirety before it was commandeered by the White House, joined his brother in releasing additional information indicating that McCarthy was very much under the influence of Cohn, who had promised to end the attack on the army if Schine were given the requested special treatment. McCarthy then counterattacked, providing additional information to challenge the integrity of the army.

McCarthy's nemesis proved to be Joseph Nye, Chief Counsel for the army. With admirable skill, Nye led McCarthy into exhibiting his true arrogance and vindictiveness. Beforehand, McCarthy had agreed not to attack Fred Fisher, a young lawyer who had withdrawn from working with Nye on the case because he had once belonged to a Communist-front group known as the "Lawyer's Guild." When McCarthy reneged, Nye counterattacked: "Little did I dream you could be so reckless and so cruel as to do an injury to that lad . . . Let us not assassinate this lad further, Senator. You have done enough. Have you no sense of decency, sir, at long last? Have you left no sense of decency?"

It was a fitting epitaph for the horror that was the political career of Senator Joseph McCarthy. His lack of decency was evident, and he was subsequently censured by the United States Senate. In 1998, Godfrey Sperling, a reporter who dogged McCarthy's footsteps during the 1950s, responded to the newly developed efforts to reinstate McCarthy's reputation: "The Joe McCarthy I covered was a man who, at best, had overreached his capacity, he simply wasn't all that bright. At worst, he was a shifty politician who didn't mind using lies or guesses to try to destroy others." While the individuals attacked by McCarthy were often weak, the institution of the United States Army was not—it survived his attacks. Yet the Army-McCarthy hearings demonstrated the dangers inherent in politicians with too much power, too few controls, and the ability to manipulate a gullible public.

Arnaz, Desi (1917-1986)

A famed Afro-Cuban music band leader and minor movie star, Desi Arnaz rose from nightclub performer to television magnate during the golden years of black-and-white television. Born Desiderio Alberto Arnaz y de Acha III on March 2, 1917, in Santiago, Cuba, to a

Lucille Ball and Desi Arnaz.

wealthy family. Arnaz accompanied his father into political exile in Miami when the family's fortune was destroyed and his father became persona non grata under the Fulgencia Batista regime. At the age of seventeen, Arnaz's musical talent was discovered by renowned band leader Xavier Cugat, and by 1937 he was leading his own band in Miami Beach. Arnaz began to make a name for himself as a band leader, drummer, and singer in New York City and Miami Beach nightclubs when Afro-Cuban music was making its first and largest impact on American popular music of the late 1930s and early 1940s.

It was in 1940 that he married the love of his life, Lucille Ball, who would later be cast as his on-screen wife in *I Love Lucy*. Ball had served as his co-star in the movie *Too Many Girls*, which was Arnaz's screen debut; the movie was the screen version of the Lorenz Hart and Richard Rogers Broadway hit of the same name, in which Arnaz had made his stage acting debut. His skyrocketing career was temporarily delayed by service in the Army during World War II. When he returned to Hollywood after his discharge from the service, Arnaz found that his heavy accent and Hispanic looks not only limited his opportunities but kept him type cast.

It was Arnaz's particular genius that converted the typecasting into an asset, and he was able to construct a television persona based not only on a comic version of the Latin Lover, but also on his success as a singer and rumba band leader. Mass popularity was finally achieved when, in 1952, Arnaz became the first Hispanic star on television with his pioneering what became the longest running sitcom in history: *I Love Lucy*. Eventually lasting nine years, Arnaz and Lucille Ball modified the Latin Lover and Dumb Blonde stereotypes to capture the attention of television audiences, who were also engaged by the slightly titillating undercurrent of a mixed marriage between an Anglo and an Hispanic who played and sang Afro-Cuban music, while banging on an African-derived conga drum and backed up by musicians of mixed racial features. The formula of pairing a WASP and a minority or outcast has since been duplicated repeatedly on television to this date through such programs as *Chico and the Man*, *Who's the Boss?*, and *The Nanny*, and others.

His business acumen had already been revealed when in 1948 he and Ball founded Desilu Productions to consolidate their various stage, screen, and radio activities. Under Arnaz's direction Desilu

Productions grew into a major television studio. In 1960, Arnaz and Ball divorced; their son and daughter followed in their parents' acting footsteps, but never achieved the success of their parents. Included among Desi Arnaz's films are *Too Many Girls* (1940), *Father Takes a Wife* (1941), *The Navy Comes Through* (1942), *Bataan* (1943), *Cuban Pete* (1946), *Holiday in Havana* (1949), *The Long Trailer* (1954), and *Forever Darling* (1956). *I Love Lucy* can still be seen in black-and-white re-runs in many parts of the United States. In 1976, Arnaz published his own rather picaresque and acerbic autobiography, *A Book*, detailing his rise to fame and riches and proclaiming his undying love for Lucille Ball. Arnaz died on December 2, 1986.

Arrow Collar Man

The advertising icon of the Cluett, Peabody & Company's line of Arrow shirts from 1905 to 1930 was the era's symbol for the ideal athletic, austere, confident American man. He was the somewhat eroticized male counterpart to Charles Dana Gibson's equally emblematic and elegant all-American woman. No less a cultural spokesman than Theodore Roosevelt considered him to be a superb portrait of "the common man," although admittedly an Anglo-Saxon version of it that suited the times. This Arrow Collar Man was the inspiration of J(oseph) C(hristian) Leyendecker (1874-1951), the foremost American magazine illustrator of the first four decades of the twentieth century.

Born in Germany but emigrating at age eight with his parents, Leyendecker was trained at the Art Institute of Chicago and in Paris. He worked on advertising campaigns for Kuppenheimer suits as well as other products and did cover art for *Collier's* and the *Saturday Evening Post*. In that last role, he was the direct predecessor and a major influence on a near-contemporary illustrator, Norman Rockwell, who idolized his work.

The Arrow Man ads sold more than 400 styles of detachable shirt collars with images of an insouciant, aquiline-nosed young man, often depicted in vigorous stances or with the jaunty prop of a pipe. Leyendecker's figures were characterized by their glistening, polished appearance, indicating a healthy athletic glow. After World War I, when soldiers learned the practicality of attached collars, Leyendecker switched to doing ads for Arrow's new line of shirts.

The generic Arrow Collar Man received more fan mail in the 1920s (sent to corporate headquarters) than Rudolph Valentino or any other male film star of the era. In 1920, approximately seventeen thousand love letters arrived a week, and there was a Broadway play about him as well as a surfeit of popular songs and poems.

Leyendecker sometimes used future film stars such as John Barrymore, Fredric March, Brian Donlevy, Jack Mulhall, and his good friend Neil Hamilton as models. A perfectionist in his craft, Leyendecker always preferred to work from live figures rather than

from photographs, as Rockwell and others sometimes did. But the illustrator's first, most important, and enduring muse for the Arrow ads was Charles Beach. After a meeting in 1901, Beach became Leyendecker's companion, housemate, and business manager for close to fifty years, a personal and professional relationship ended only by Leyendecker's death at his estate in New Rochelle, New York.

The Arrow contract, as well as those with other clothiers, ended soon after the onset of the Great Depression. The image of the ruddy-complexioned, sophisticated young man, however, did not soon fade in the popular mind. A teasing ad in the *Saturday Evening Post* on February 18, 1939, queried, "Whatever Became of the 'Arrow Collar Man'?. . . Though he passed from our advertising some years ago, he is still very much with us. . . . [Today's man dressed in an Arrow shirt] is just as much an embodiment of smartness as that gleaming Adonis was in his heyday."

Perhaps his era had passed, for the Arrow Man had reflected the education, position, breeding, and even ennui that figured so prominently in the novels of F. Scott Fitzgerald during the previous decade. Leyendecker continued with his magazine illustrations, but a change in the editorial board at the *Saturday Evening Post* in the late 1930s resulted in his gradual fall from grace. Leyendecker's last cover for that publication appeared on January 2, 1943. The mantle then rested permanently upon Norman Rockwell, who fittingly served as one of the pallbearers at Leyendecker's funeral fewer than ten years later.

Arthur, Bea (1923—)

With her tall, rangy frame and distinctive, husky voice, actress Bea Arthur has never been anyone's idea of a starlet. However, using her dry humor and impeccable comic timing coupled with an exceptional comfort with her body, she has created some of the most memorable strong female characters on television, in film, and on the musical stage.

Arthur was born Bernice Frankel in New York City and grew up, the daughter of department store owners, in Cambridge, Massachusetts. Her first attempts on the stage as a torch singer failed when, as she said, "Audiences laughed when I sang about throwing myself in the river because my man got away." Her imposing height and deep voice suited her better for comedy, she decided, and she honed her skills doing sketch comedy at resorts in the Poconos. In 1954 she got her first big break when she landed a role off-Broadway playing opposite Lotte Lenya in *The Threepenny Opera*. Audiences loved her, and throughout her career she has looked back fondly on the role that started her successful career: "Of everything I've done, that was the most meaningful. Which is like the first time I felt, I'm here, I can do it."

Arthur continued to "do it," wowing audiences with her comedic skill as well as song and dance. She originated the role of Yente the matchmaker in *Fiddler on the Roof* on Broadway, and she won a

Bea Arthur

Tony playing Angela Lansbury's "bosom buddy" Vera Charles in *Mame*. She reprised the role in the film version (1974), this time opposite comedy legend Lucille Ball. Her other films include *Lovers and Other Strangers* (1970) and *The Floating Lightbulb*.

But it is on television that Arthur has created her most enduring characters. In the early 1970s, she guest-starred on Norman Lear's groundbreaking situation comedy *All in the Family*, playing Edith's abrasively opinionated cousin, Maude. Maude was so popular with viewers that she was spun off into her own Lear series. Finding a welcoming groove in the early years of women's liberation, *Maude* remained on the air for a six-year run, winning an Emmy for Arthur for her portrayal of a strong woman who took no guff from anyone. Tired of the "yes, dear" stereotype of sitcom wives, 1970s audiences welcomed a woman who spoke her mind, felt deeply, and did not look like a young model. In her fifties, Arthur, with her graying hair, big body, and gravelly voice, was the perfect embodiment for the no-nonsense, middle-aged woman, genuine and believable, as she dealt with the controversial issues the show brought up. Even hot potato issues were tackled head-on, such as when an unexpected midlife pregnancy forces Maude to have an abortion, a move that more modern situation comedies were too timid to repeat.

After *Maude*, Arthur made an unsuccessful sitcom attempt with the dismal *Amanda's*, which only lasted ten episodes, but in 1985, she

struck another cultural nerve with the hit *Golden Girls*. An ensemble piece grouping Arthur with Estelle Getty, Rue McClanahan (a co-star from *Maude*), and Betty White, *Golden Girls* was an extremely successful situation comedy about the adventures of a household of older women. The show had a long first run and widely syndicated reruns. All of the stars won Emmys, including two for Arthur, who played Dorothy Sbornak, a divorcee who cares for her elderly mother (Getty).

Arthur, herself divorced in the 1970s after thirty years of marriage, has brought her own experiences to the characters that she has added to the American lexicon. In spite of her exceptional success, she is a deeply shy and serious person who avoids talk shows and personal interviews. Though she does not define herself as political or spiritual, she calls herself a humanitarian and is active in AIDS support work and animal rights. She once sent a single yellow rose to each of the 237 congresspeople who voted to end a \$2 million subsidy to the mink industry. In perhaps the ultimate test of her humanitarian principles, she assisted in her elderly mother's suicide.

Arthur has become somewhat of a cult figure in the 1990s. The satirical attention is partially inspired by the movie *Airheads* (1994) in which screwball terrorists take over a radio station, demanding, among other outrageous requests, naked pictures of Bea Arthur. Bumper stickers with the catch phrase "Bea Arthur—Be Naked" and

a cocktail called Bea Arthur's Underpants, a questionable combination of such ingredients as Mountain Dew, vodka, and beer, are some of the results of Arthur's cult status.

Arthurian Legend

The name of King Arthur resounds with images of knightly romance, courtly love, and mystical magic. Arthur, Lancelot, Guinevere, Galahad, and Merlin all carry meanings reflecting the enduring themes of adultery, saintliness, and mysterious wisdom from the Arthurian legend, which can truly be described as a living legend. The popularity of the tales of King Arthur, the Knights of the Round Table, Avalon, Camelot, and the Holy Grail is at a height unrivaled after more than 1,500 years of history. By the 1990s the legend had appeared as the theme of countless novels, short stories, films, television serials and programs, comics, and games.

Some recent writers have attempted to explain why there should be such a popular fascination with the reworkings of so familiar a story. Much of the enchantment of Arthur as hero has come from writers' ability to shift his shape in accordance with the mood of the age. C.S. Lewis noted this ability, and compared the legend to a cathedral that has taken many centuries and many builders to create:

I am thinking of a great cathedral, where Saxon, Norman, Gothic, Renaissance, and Georgian elements all co-exist, and all grow together into something strange and admirable which none of its successive builders intended or foresaw.

In a general view of this "cathedral" as it has evolved into today, one can see several characteristics of the legend immediately: it focuses on King Arthur, a noble and heroic person about whom are gathered the greatest of knights and ladies; who has had a mysterious beginning and an even more mysterious ending; whose childhood mentor and foremost adviser in the early days of his reign is the enchanter Merlin; and who has a sister, son, wife, and friend that betray him in some fashion, leading to his eventual downfall at a great battle, the last of many he has fought during his life. Quests are also common, especially for the Grail, which (if it appears) is always the supreme quest.

Probably one of the most familiar and successful modern tales of King Arthur is Mark Twain's *A Connecticut Yankee in King Arthur's Court* (1889). At first poorly received, this novel has since established itself as one of the classics of American literature. Twain's characteristic combination of fantasy and fun, observation and satire, confronts the customs of chivalric Arthurian times with those of the New World. In it, Hank Morgan travels back in time and soon gains power through his advanced technology. In the end, Hank is revealed to be as ignorant and bestial as the society he finds himself in.

In recent times, however, the legend appears most frequently in mass market science fiction and fantasy novels, especially the latter. Since the publication of T.H. White's *The Sword in the Stone* (1938), it has appeared as the theme in some of the most popular novels, including Mary Stewart's *The Crystal Cave* (1970), Marion Zimmer Bradley's *The Mists of Avalon* (1982), and Stephen R. Lawhead's *Pendragon Cycle* (1987-1999). For the most part, the fantasy tales retell the story of Arthur and his knights as handed down through the centuries. They also build on the twist of magic that defines modern fantasy. Merlin, therefore, the enigmatic sorcerer, becomes the focus of most of the novels, particularly Stewart's and Lawhead's.

Due to Merlin's popularity, he has also appeared as the main character of some recent television serials, including the 1998 *Merlin*. Sam Neill is cast as Merlin, son of the evil Queen Mab. He tries to deny his heritage of magic, but is eventually forced to use it to destroy Mab and her world, making way for the modern world. This has been one of the most popular mini-series broadcasts on network television since *Roots* (1977) even though Arthur and his knights are barely seen in this story.

In the movies, however, Merlin fades into the background, with Hollywood focusing more on Arthur and the knights and ladies of his court. The first Arthurian film was the 1904 *Parsifal* from the Edison Company. It was soon followed by other silent features, including the first of twelve film and television adaptations of Twain's *Connecticut Yankee*. With the advent of talking pictures, the Arthurian tale was told in music as well as sound. After World War II and with the arrival of Cinemascope, the Arthurian tale was also told in full color. Most of the early movies (including the 1953 *The Knights of the Round Table*, *Prince Valiant*, and *The Black Knight*), however, were reminiscent of the western genre in vogue at that time.

In the 1960s two adaptations of T.H. White's tales, *Camelot* (1967) and Disney's *The Sword in the Stone* (1965), brought the legend to the attention of young and old alike. Disney's movie introduces Mad Madame Mim as Merlin's nemesis and spends a great deal of time focusing on their battles, while *Camelot*, an adaptation of the Lerner and Lowe Broadway musical, focuses on the love triangle between Arthur, Lancelot, and Guinevere. This was also the theme of the later movie, *First Knight* (1995). However, Britain's Monty Python comedy troupe made their first foray onto the movie screen with the spoof *Monty Python and the Holy Grail* (1975). This movie not only satirized all movie adaptations of the Arthurian tale, but took a swipe at virtually every medieval movie produced by Hollywood until that time.

It is Twain's novel, however, that has produced some of the best and worst of the movie adaptations. Fox's 1931 version, with Will Rogers and Myrna Loy, was so successful it was re-released in 1936. Paramount's 1949 version, with Bing Crosby, was the most faithful to Twain's novel, but was hampered by the fact that each scene seemed to be a build up to a song from Crosby. Disney entered the fray with its own unique live-action adaptations, including the 1979 *Unidentified Flying Oddball* and 1995's *A Kid in King Arthur's Court*. Bugs Bunny also got the opportunity to joust with the Black Knight in the short cartoon *A Connecticut Rabbit in King Arthur's Court* (1978), complete with the obligatory "What's up Doc?"

The traditional Arthurian legend has appeared as the main theme or as an integral part of the plot of some recent successful Hollywood movies, including 1981's *Excalibur*, 1989's *Indiana Jones and the Last Crusade*, 1991's *The Fisher King*, and 1998's animated feature *The Quest for Camelot*. While the Arthurian legend has not always

been at the fore of these movies, merely being used as a convenient vehicle, its presence confirms the currency and popularity of Arthur and his knights.

The legend has not remained fixed to films and books. Other places where the legend appears include the New Orleans Arthurians' Ball held at Arthur's Winter Palace, where Merlin uses his magic wand to tap a lady in attendance as Arthur's new queen, and the Arthurian experience of Camelot in Las Vegas. Also, in the academic field, an International Arthurian Society was founded in 1949 and is currently made up of branches scattered all over the world. Its main focus is the scholarly dissemination of works on the Arthurian world, and the North American Branch now sponsors a highly respected academic journal, *Arthuriana*.

Throughout its long history the Arthurian legend has been at the fore of emerging technologies: Caxton's printing press (the first in England), for example, published the definitive Arthurian tale, Thomas Mallory's *Le Morte D'Arthur*. Today the new technology is the Internet and the World Wide Web. Arthurian scholars of all calibers have adapted to this new forum, producing some top web sites for the use of scholars and other interested parties alike. One site, for example, *The Camelot Project*, makes available a database of Arthurian texts, images, bibliographies, and basic information. The site can be found at: <http://www.lib.rochester.edu/camelot/cphome.stm>.

The legend has been a staple of the fantasy role playing games from the late 1970s onward. In higher level modules of the popular *Dungeons and Dragons* game, characters from the legend appear. Shari and Sam Lewis created the "Pillars of Clinschor" module (1983) for the game, where the adventurers had to seize a castle from Arthurian arch-villainess Morgan Le Fay. With the rise of computer games, the Arthurian game has entered a new dimension of role-playing and graphical user interfaces. The Monty Python troupe, for example, released their *Monty Python and the Holy Grail* multimedia game in the mid 1990s, where the player takes Arthur on his quest through scenes from the movie in search of the Grail and an out-take.

The legend's prominence in comic books cannot be underrated either, given that it forms the backdrop of *Prince Valiant*, one of the longest running comic strips in America (1937-). Creator Hal Foster brought the exiled Valiant to Arthur's court, where he eventually earned a place at the Round Table. *Prince Valiant* itself has engendered a movie (1953), games, and novels. Another major comic to deal with Arthur had him returning to Britain to save the country from invading space aliens (*Camelot 3000*, 1982-1985). The success of these comics have seen some imitations, most poorer than their originals, but in some instances even these comics have remained very faithful to the legend.

The popular fascination is not limited to the various fictionalizations of Arthur. Major works have been devoted to the search for the man that became the legend. People are curious as to who he really was, when he lived, and what battles he conclusively fought. Archaeological and historical chronicles of Britain have been subjected to as much scrutiny as the literary in search of the elusive historical Arthur. A recent examination notes that this interest in Arthur's historicity is as intense as the interest in his knightly accomplishments. Yet, the search for the historical Arthur has yet to yield an uncontroversial candidate; those that do make the short list appear in cable documentaries, biographies, and debatable scholarly studies.

Finally, the image of Camelot itself, a place of vibrant culture, was appropriated to describe the Kennedy years, inviting comparison

between the once and future king and the premature end of the Kennedy Administration.

King Arthur and the Arthurian Legend are inextricably a part of popular culture and imagination. At the turn of a new millennium, the once and future king is alive and well, just as he was at the turn of the last, a living legend that will continue to amaze, thrill, and educate.

See Prince

As the World Turns

Four-and-a-half decades after its April 2, 1956, debut, top-rated daytime soap opera *As the World Turns* keeps spinning along. Created by Ina Phillips, whose other soaps include *The Guiding Light*, *Another World*, *Days of Our Lives* and *Love Is a Many-Splendored Thing*, *As the World Turns* debuted on CBS the same day as *The Edge of Night* (which played on CBS through 1975 before moving to ABC for nine years), and the two were television's first thirty-minute-long soap operas, up from the fifteen minutes of previous soaps.

The show is set in the generic Midwestern burg of Oakdale, a veritable Peyton Place whose inhabitants are forever immersed in sin and scandal, conquest and confession, deceit and desire. Originally, the plot lines spotlighted two dissimilar yet inexorably intertwined families: the middle-income Hughes and the ambitious Lowell clans, each consisting of married couples and offspring. One of the first plot

threads involved law partners Jim Lowell and Chris Hughes, with Edith, the sister of Chris, becoming involved in an affair with married Jim. The Lowells eventually were written out of the show; however, a number of characters with the Hughes surname have lingered in the story lines. Over the years, the plots have been neck-deep in additional extramarital liaisons along with divorces, child custody cases, car crashes, blood diseases, and fatal falls down stairs—not to mention murders. The dilemmas facing characters in the late 1990s—“Will Emily confront her stalker?” “Is David the guilty party?” “Will Denise develop a passion for Ben?”—are variations on the same impasses and emotional crises facing characters decades earlier.

In some cases, five, seven, and nine actors have played the same *As the World Turns* characters. However, one performer has become synonymous with the show: soap opera queen Eileen Fulton, who has been a regular since 1960. Fulton’s role is the conniving, oft-married Lisa. Beginning as simply “Lisa Miller,” over the years her name has been expanded to “Lisa Miller Hughes Eldridge Shea Colman McColl Mitchell Grimaldi Chedwy.” Don MacLaughlin, who played Chris Hughes, was the original cast member who remained longest on the show. He was an *As the World Turns* regular for just more than three decades until his death in 1986.

Of the endless actors who have had roles on *As the World Turns*, some already had won celebrity but had long been out of the prime-time spotlight. Gloria DeHaven appeared on the show in 1966 and 1967 as “Sara Fuller.” Margaret Hamilton was “Miss Peterson” in 1971. Zsa Zsa Gabor played “Lydia Marlowe” in 1981. Abe Vigoda was “Joe Kravitz” in 1985. Claire Bloom was “Orlena Grimaldi” from 1993 through 1995. Robert Vaughn appeared as “Rick Hamlin” in 1995. Valerie Perrine came on board as “Dolores Pierce” in 1998. Other regulars were movie stars/television stars/celebrities-to-be who were honing their acting skills while earning a paycheck. James Earl Jones played “Dr. Jerry Turner” in 1966. Richard Thomas was “Tom Hughes” in 1966 and 1967. Swoosie Kurtz played “Ellie Bradley” in 1971. Dana Delany was “Hayley Wilson Hollister” in 1981. Meg Ryan played “Betsy Stewart Montgomery Andropoulos” between 1982 and 1984. Marisa Tomei was “Marcy Thompson Cushing” from 1983 through 1988. Julianne Moore played “Frannie/Sabrina Hughes” from 1985 through 1988. Parker Posey was “Tess Shelby” in 1991 and 1992.

As the World Turns was the top-rated daytime soap from its inception through the 1960s. Its success even generated a brief nighttime spin-off, *Our Private World*, which aired on CBS between May and September 1965. In the early 1970s, however, the ratings began to decline. On December 1, 1975, the show expanded to one hour, with little increase in viewership, but the ratings never descended to the point where cancellation became an option—and the show was celebrated enough for Carol Burnett to toy with its title in her classic soap opera parody *As the Stomach Turns*. From the 1980s on, the *As the World Turns* audience remained steady and solid, with its ratings keeping it in daytime television’s upper echelon. Over the years, the show has been nominated for various Writers Guild of America, *Soap Opera Digest*, and Emmy awards. In 1986-87, it garnered its first Emmy as “Outstanding Drama Series.”

Ashcan School

The Ashcan School was the first art movement of the new century in America, and its first specifically modern style. Active in the first two decades of the twentieth century, Ashcan artists opposed the formality of conservative American art by painting urban subjects in a gritty, realistic manner. They gave form to the tough, optimistic, socially conscious outlook associated with Theodore Roosevelt’s time. The Ashcan School artists shared a similar muckraking spirit with contemporary social reformers. Their exuberant and romantic sense of democracy had earlier been expressed in the poetry of Walt Whitman.

At a time before the camera had not yet replaced the hand-drawn sketch, four Philadelphia artist-reporters—William Glackens, John Sloan, George Luks, and Everett Shinn—gathered around the artist Robert Henri (1865-1929), first in his Walnut Street studio, then later in New York. Henri painted portraits in heavy, dark brown brushstrokes in a manner reminiscent of the Dutch painter Frans Hals. He taught at the New York School of Art between 1902 and 1912 where some of his students included the Ashcan artists George Bellows, Stuart Davis, and Edward Hopper. The artists exhibited together only once, as “The Eight”—a term now synonymous with the Ashcan School—at the Macbeth Gallery in New York City in 1908. They had formally banded together when the National Academy of Design refused to show their works.

Better thought of as New York Realists, the Ashcan artists were fascinated by the lifestyles of the inhabitants of the Lower East Side and Greenwich Village, and of New York and the urban experience in general. Conservative critics objected to their choice of subjects. Nightclubs, immigrants, sporting events, and alleys were not considered appropriate subjects for high art. It was in this spirit that the art critic and historian Holger Cahill first used the term “Ashcan School” . . . ashcan meaning garbage can . . . in a 1934 book about recent art.

John Sloan (1871-1951), the most renowned Ashcan artist, made images of city streets, Greenwich Village backyards, and somewhat voyeuristic views of women of the city. His most well known painting, but one which is not entirely typical of his art, is *The Wake of the Ferry II* (1907, The Phillips Collection, Washington, D.C.). The dull blues and greens of the ship’s deck and the steely water introduced an element of melancholy in what millions of commuters experienced daily on the Staten Island Ferry. Sloan’s art sometimes reflected his socialist leanings, but never at the expense of a warm humanity. Although he made etchings for the left wing periodical *The Masses*, he refused to inject his art with “socialist propaganda,” as he once said.

The reputation of George Luks (1867-1933) rests on the machismo and bluster of his art and of his own personality. “Guts! Guts! Life! Life! That’s my technique!” he claimed. He had been an amateur actor—which undoubtedly helped him in his pose as a bohemian

An example from the Ashcan School: Reginald Marsh's *Bread Line*.

artist—and had drawn comic strips in the 1890s before meeting Henri at the Pennsylvania Academy of the Fine Arts. His *Hester Street* (1905, The Brooklyn Museum) shows Jewish immigrants on the Lower East Side in an earnest, unстереotypical manner.

George Bellows (1882-1925) was probably the most purely talented of the group, and made many of the most interesting Ashcan paintings of the urban environment. An athletic, outgoing personality, Bellows' most well known paintings involve boxing matches. Composed of fleshy brushstrokes, *Stag at Sharkey's* (1909, Cleveland Museum of Art) shows a barely legal "club" where drinkers watched amateur sluggers. Bellows was also an accomplished printmaker and made more than 200 lithographs during his career.

Much of the art of the Ashcan School has the quality of illustration. Their heroes included Rembrandt and Francisco Goya, as well as realists such as Honoré Daumier, Edouard Manet, and the American Winslow Homer. But not all the Ashcan artists drew their inspiration from city streets. The paintings of William Glackens (1870-1938) and Everett Shinn (1876-1953) often deal with the world of popular entertainment and fashionable nightlife. Glackens' elegant *Chez Mouquin* (1905, Art Institute of Chicago), shows one of the favorite haunts of the Ashcan artists. Maurice Prendergast (1859-1924) painted park visitors in a patchy, decorative style. Ernest Lawson (1873-1939) used a hazy, Impressionist technique to paint scenes of New York and the Harlem River. The traditional nude female figures of Arthur B. Davies (1862-1928) seem to owe little to Ashcan art.

The Ashcan School was not a coherent school nor did the artists ever paint ashcans. They expanded the range of subjects for American artists and brought a new vigor to the handling of paint. Their identity as tough observers of the city, unimpressed by contemporary French art, changed the way American artists thought of themselves. They demonstrated that artists who stood apart from the traditional art

establishment could attain popular acceptance. Among their contributions was their promotion of jury-less shows which gave artists the right to exhibit with whomever they chose. This spirit of independence was felt in the famous 1913 Armory Show in which some of the organizers were Ashcan artists.

Ashe, Arthur (1943-1993)

Tennis great and social activist Arthur Ashe is memorialized on a famous avenue of his hometown of Richmond, Virginia, by a bronze statue that shows him wielding a tennis racquet in one hand and a book in the other. Children sit at his feet, looking up at him for inspiration. Though the statue represents a storm of controversy, with everyone from racist white Virginians to Ashe's own wife Jeanne

calling it inappropriate, it also represents an effort to capture what it was that Arthur Ashe gave to the society in which he lived.

Born well before the days of integration in Richmond, the heart of the segregated south, Ashe learned first-hand the pain caused by racism. He was turned away from the Richmond City Tennis Tournament in 1955 because of his race, and by 1961 he left the south, seeking a wider range of opportunities. He found them at UCLA (University of California, Los Angeles), where he was the first African American on the Davis Cup team, and then proceeded to a series of "firsts." In 1968, he was the first (and only) African American man to win the United States Open; in 1975 he was the first (and only) African American man to win the men's singles title at Wimbledon. He won 46 other titles during his tennis career, paving the way for other people of color in a sport that still remains largely the domain of white players.

Ashe was a distinguished, if not brilliant tennis player, but it was his performance off the court that ensured his place in history. Like many African Americans raised before integration, Ashe felt that a calm and dignified refusal to give in to oppression was more effective than a radical fight. His moderate politics prompted fellow tennis professional, white woman Billie Jean King, to quip, "I'm blacker

than Arthur is." But Ashe felt his responsibility as a successful African American man keenly. He wrote a three volume *History of the American Black Athlete*, which included an analysis of racism in American sports, and he sponsored and mentored many disadvantaged young African American athletes himself. He also took his fight against racism out into the world. When he was refused entry to a tennis tournament in apartheid South Africa in 1970, Ashe fought hard to be allowed to enter that intensely segregated country. Once there he saw for himself the conditions of Blacks under apartheid, and the quiet moderate became a freedom fighter, even getting arrested at anti-apartheid demonstrations.

In 1979 Ashe was pushed down the path to his most unwilling contribution to his times. He had a heart attack, which ended his tennis career and eventually led, in 1983, to bypass surgery. During surgery, he received blood transfusions, and it is believed those transfusions passed the AIDS (Acquired Immune Deficiency Syndrome) virus into his blood. Even after he discovered he had AIDS, the intensely private Ashe had no intention of going public with the information. When the tabloid newspaper *USA Today* discovered the news, however, Ashe had little choice but to make the announcement himself. He was angry at being forced to make his personal life public, but, as he did in every

Arthur Ashe

aspect of his life, he turned his personal experience into public service. He became an activist in the fight against AIDS, which he said did not compare to racism as a challenge in his life. It is perhaps indicative of the stigma attached to the disease that Ashe's AIDS is never mentioned without the hastily added disclaimer that he probably contracted it through a blood transfusion. He was a widely respected public figure, however, and his presence in the public eye as a person with AIDS helped to de-stigmatize the disease.

Arthur Ashe died of AIDS-related pneumonia in 1993, but his legacy is durable and widespread. A tennis academy in Soweto, South Africa, bears his name, as does a stadium in Queens and a Junior Athlete of the Year program for elementary schools. He helped found the Association of Tennis Professionals, the first player's union. And, only a short time before his death, he was arrested at a demonstration, this time protesting the United States Haitian immigration policy. He was a role model at a time when African Americans desperately needed successful role models. He was a disciplined moderate who was not afraid to take a radical stand.

The statue of Ashe which stands on Monument Avenue in Richmond is, perhaps, a good symbol of the crossroads where Ashe stood in life. The fame of Monument Avenue comes from its long parade of statues of heroes of the Confederacy. Racist whites felt Ashe's statue did not belong there. Proud African Americans, the descendants of slavery, felt that Ashe's statue did not belong there. Ashe's wife Jeanne insists that Ashe himself would have preferred the statue to stand outside an African American Sports Hall of Fame he wished to found. But willingly or not, the statue, like the man, stands in a controversial place in history, in a very public place, where children look up at it.

Asimov, Isaac (1920-1992)

Scientist and science fiction writer Isaac Asimov made his reputation in both fields with his prolific writings and his interest in the popularization of science. Asimov published over three hundred books and a considerable number of short stories, essays, and columns. He is considered to be a founding figure in the field of science fiction in his rejection of the space-adventure formula in favor of a more directly scientific, social, and political approach. He established several central conventions for the genre, including robotics and the idea of a galactic empire. Asimov was also extremely influential through his nonfiction writings, producing popular introductory texts and textbooks in biochemistry.

Isaac Asimov

Asimov was born in Petrovichi, Russia, on January 2, 1920, and moved to America with his family when he was three years old. He first discovered science fiction through the magazines sold in his father's candy store, and in 1938 he began writing for publication. He sold his story "Marooned Off Vesta" to *Amazing Stories* the following year, when he was an undergraduate at Columbia University. That same year, he sold his story "Trends" to John W. Campbell, Jr., editor of *Astounding Science Fiction*, and it was through his creative relationship with Campbell that Asimov developed an interest in the social aspects of science fiction.

Campbell's editorial policy allowed Asimov to pursue his interest in science fiction as a literature that could respond to problems arising in his contemporary period. In "Half-Breed" (1941), for example, he discussed racism, and in "The Martian Way," he voiced his opposition to McCarthyism. Asimov's marked ambivalence about the activities of the scientific community is a major characteristic of his writing. Later novels examined the issue of scientific responsibility and the power struggles within the scientific community. Asimov himself was a member of the Futurians, a New York science-fiction group which existed from 1938 to 1945 and was notable for its radical politics and belief that science fiction fans should be forward-looking and help shape the future with their positive and progressive ideas.

Asimov spent the Second World War years at the U.S. Naval Air Experimental Station as a research scientist in the company of fellow science-fiction writers L. Sprague de Camp and Robert Heinlein. He made a name for himself as a writer in 1941 with the publication of "Nightfall," which is frequently anthologized as an example of good science fiction and continues to top readers' polls as their favorite

science fiction story. During this period, Asimov also started work on the series of stories that would be brought together as the “Foundation Trilogy” and published as the novels *Foundation* (1951), *Foundation and Empire* (1952), and *Second Foundation* (1953). Asimov has stated that their inception came from reading Gibbon’s *Decline and Fall of the Roman Empire*.

Asimov’s other significant series comprises his robot stories, collected in *I, Robot* (1950), *The Rest of the Robots* (1964), and further collections in the 1980s. Two novels—*The Caves of Steel* (1954) and *The Naked Sun* (1956)—bring together a detective and his robotic partner, fusing Asimov’s interest in mystery with his interest in science fiction. He also wrote several stories about the science fiction detective Wendell Worth during the same period. It is the third story of the robot series, “Liar!” (1941), that introduced “The Three Laws of Robotics,” a formulation that has had a profound effect upon the genre.

In 1948 Asimov received his doctorate in biochemistry and a year later took up a position with the Boston University School of Medicine as an associate professor. He remained there until 1958 when he resigned the post in order to concentrate on his writing career. He remained influential in the sci-fi genre by contributing a monthly science column to *The Magazine of Science Fiction and Fantasy* for the next thirty years, but his aim during this period was to produce popular and accessible science writing. During the 1950s he had published juvenile fiction for the same purpose under the pseudonym of Paul French. In 1960 he published *The Intelligent Man’s Guide to Science*, which has gone through several editions and is now known as *Asimov’s New Guide to Science*. In the interest of popular science he also produced a novelization in 1966 of the film *Fantastic Voyage*. However, he also wrote in vastly different fields and published *Asimov’s Guide to the Bible* in 1968 and *Asimov’s Guide to Shakespeare* in 1970.

Asimov returned to science-fiction writing in 1972 with the publication of *The Gods Themselves*, a novel that was awarded both the Hugo and Nebula Awards. In this later stage of his career Asimov produced other novels connected with the “Foundation” and “Robot” series, but he also published novels with new planetary settings, such as *Nemesis* in 1989. His influence continued with his collections of Hugo Award winners and the launch of *Isaac Asimov Science Fiction Magazine* in 1977. Overall his contribution lies in his thought-provoking attitude to science and its place in human society. Asimov helped transform immediate postwar science fiction from the space formula of the 1930s into a more intellectually challenging and responsible fiction. He died of heart and kidney failure on April 6, 1992.

Asner, Ed (1929—)

Ed Asner is an award winning actor who holds the distinction of accomplishing one of the most extraordinary transitions in television programming history: he took his character Lou Grant—the gruff, hard drinking, but lovable boss of the newsroom at WJM TV Minneapolis on the *Mary Tyler Moore Show*, a half-hour situation comedy—to the city editorship of the *Los Angeles Tribune*, on the one hour drama *Lou Grant*. Lou Grant’s 12-year career on two successful, but very different, television shows established Asner as a major presence in American popular culture.

Yitzak Edward Asner was born on November 15, 1929 in Kansas City, Kansas. After high school, he attended the University of Chicago, where he appeared in student dramatic productions and firmly decided upon a life in the theater. After graduation and two years in the army, he found work in Chicago as a member of the

Ed Asner

Playwrights' Theater Club. He then headed for New York to try his luck on Broadway.

His success on Broadway was middling at best. He appeared in *Face of a Hero* with Jack Lemmon, and in a number of off-Broadway productions, as well as several New York and American Shakespeare Festivals in the late 1950s. In 1961, he packed up his family and moved to Hollywood. His first film was the Elvis Presley vehicle *Kid Galahad*, a remake of the 1937 Edward G. Robinson/Bette Davis/Humphrey Bogart film. Following this were featured roles in such films as *The Satan Bug* (1965), *El Dorado* (1965), and *Change of Habit* (1969), Elvis Presley's last film. He also performed guest appearances in numerous television series, and he had a continuing role as a crusading reporter on the short-lived Richard Crenna series, *Slattery's People*.

In early 1969, Moore and Dick Van Dyke, stars of television's *The Dick Van Dyke Show* (1961-1966), appeared in a reunion special on CBS that did so well in the ratings that the network offered Moore the opportunity to come up with a series. Together with her husband, Grant Tinker, and writers James L. Brooks and Allan Burns, she created *The Mary Tyler Moore Show*, one of the happiest and most successful marriages of writing and ensemble casting in the history of American television. The program was first telecast on September 19, 1970 and centered around Mary Richards, an unmarried, independent 30-year-old woman who was determined to succeed on her own. She became the assistant producer in the newsroom at fictional WJM-TV in Minneapolis. Asner was cast as Lou Grant, the gruff and abrupt but sentimental boss of the somewhat wacky newsroom crew and their inept news anchor, Ted Baxter, played by Ted Knight. Lou Grant constantly struggled to maintain a higher than mediocre level of standards in the newsroom, while he coped with his personal problems and the problems created by the interaction of the members of the newsroom crew. His blustery, realistic approach to the job, and his comedic resort to the ever-present bottle in his desk drawer to vent his frustration and mask his vulnerability, nicely balanced Mary Richards' more idealistic, openly vulnerable central character.

Asner was a perennial nominee for Emmy awards for the role, receiving the Best Supporting Actor awards in 1971, 1972, and 1975. When the show ended its spectacular run in 1977, Asner was given the opportunity to continue the role of Lou Grant in an hour-long drama series that MTM Productions, Moore and Tinker's production company, was working up. In the last episode of *The Mary Tyler Moore Show*, station WJM was sold and the entire newsroom crew was fired except, ironically, Ted Baxter. Lou Grant, out of a job, went to Los Angeles to look up an old Army buddy, Charlie Hume, who, it turned out, was managing editor of the *Los Angeles Tribune*. Lou was hired as city editor. The series was called simply *Lou Grant* and it presented weekly plots of current social and political issues torn from the headlines and presented with high production values. It emphasized the crusading zeal of the characters to stamp out evil, the conflicts and aspirations of the reporters, the infighting among the editors, and the relationship between Grant and the publisher Mrs. Pynchon, played by Nancy Marchand. The program succeeded because of Asner's steady and dominating portrayal of the show's central character, who represented a high standard of professional ethics and morals, and who was often in conflict with the stubborn and autocratic Mrs. Pynchon. Asner was again nominated for Emmy awards, winning the award in 1978 and 1980 as Best Actor in a Series.

In 1982, CBS suddenly canceled *Lou Grant*, ostensibly for declining ratings, but Asner and other commentators insist that the show was canceled for political reasons. He was a leading figure in

the actor's strike of 1980 and was elected president of the Screen Actors' Guild in 1981, a post he held until 1985. He also was an outspoken advocate of liberal causes and a charter member of Medical Aid for El Salvador, an organization at odds with the Reagan Administration's policies in Central America. This created controversy and led to political pressure on CBS to rein in the *Lou Grant* show which, to many observers, was becoming an organ for Asner's liberal causes. "We were still a prestigious show. [The controversy] created demonstrations outside CBS and all that. It was 1982, the height of Reagan power," he would recall later in an interview on Canadian radio. "I think it was in the hands of William Paley to make the decision to cancel it."

Following *Lou Grant*, Asner has done roles in *Off the Rack* (1985) and *Thunder Alley* (1994-1995). With Bette Midler, he played a wonderfully subdued role as Papa in the made for television rendition of *Gypsy* (1993). In addition to the five Emmies noted above, he won Best Actor awards for the CBS miniseries *Rich Man, Poor Man* (1976) and *Roots* (1977), a total of seven Emmy awards on 15 nominations. In addition, he holds five Golden Globe Awards and two Critics Circle Awards.

Astaire, Fred (1899-1987), and Ginger Rogers (1911-1995)

Fred Astaire and Ginger Rogers were the greatest dance team in the history of American movies. In the course of developing their partnership and dancing before the movie camera they revolutionized the Hollywood musical comedy in the 1930s. Though their partnership only lasted for six years and nine films between 1933 and 1939, with a tenth film as an encore ten years later, they definitively set the standards by which dancing in the movies would be judged for a long time to come. Although they both had independent careers before and after their partnership, neither ever matched the popularity or the artistic success of their dancing partnership.

The dancing of Astaire and Rogers created a style that brought together dance movements from vaudeville, ballroom dancing, tap dancing, soft shoe, and even ballet. Ballroom dancing provided the basic framework—every film had at least one ballroom number. But tap dancing provided a consistent rhythmic base for Astaire and Rogers, while Astaire's ballet training helped to integrate the upper body and leaps into their dancing. Because Astaire was the more accomplished and experienced dancer—Rogers deferred to him and imitated him—they were able to achieve a flawless harmony. "He gives her class and she gives him sex," commented Katherine Hepburn. Astaire and Rogers developed their characters through the

drive to dance that they exhibited and the obstacles, spatial distances, and social complications they had to surmount in order to dance. "Dancing isn't the euphemism for sex; in Astaire-Rogers films it is much better," wrote critic Leo Braudy. In their performances, Fred Astaire and Ginger Rogers suggested that dance is the perfect form of movement because it allows the self to achieve a harmonious balance between the greatest freedom and the most energy.

Astaire was born in Omaha, Nebraska in 1899. By the age of seven he was already touring the vaudeville circuit and made a successful transition to a dancing career on Broadway with his sister Adele in 1917. After Adele married and retired from the stage in 1932, Astaire's career seemed at a standstill. Despite the verdict on a screen test—"Can't act. Slightly bald. Can dance a little"—he made his first film appearance in *Dancing Lady* (1933) opposite Joan Crawford. Rogers, born in 1911 in Independence, Missouri, made her performing debut as a dancer in vaudeville—under the tutelage of her ambitious "stage" mother—at age 14. She first performed on Broadway in the musical *Top Speed* in 1929, and two years later headed out to Hollywood. She was under contract to RKO where she began her legendary partnership with Fred Astaire.

When sound came to film during the late 1920s, Hollywood studios rushed to make musicals. This created vast opportunities for musical comedy veterans like Astaire and Rogers. From the very beginning Astaire envisioned a new approach to filmed dancing and, together with Rogers, he exemplified a dramatic change in the cinematic possibilities of dance. Initially, the clumsiness of early cameras and sound equipment dictated straight-on shots of musical dance numbers from a single camera. These straight-on shots were

Fred Astaire and Ginger Rogers

broken by cutaways which would focus on someone watching the dance, then on the dancer's feet, next to someone watching, then back again to the dancer's face, concluding—finally—with another full-on shot. Thus, dances were never shown (or even filmed) in their entirety. Because of this, Busby Berkeley's big production numbers featured very little dancing and only large groups of dancers moving in precise geometric patterns.

Astaire's second movie, *Flying Down to Rio* (1933), was a glorious accident. It brought him together with Ginger Rogers. It also brought together two other members of the team that helped make Fred Astaire and Ginger Rogers the greatest dance partnership in American movies—Hermes Pan who became Astaire's steady choreographic assistant, and Hal Borne, Astaire's rehearsal pianist and musical arranger. Before *Flying Down to Rio*, no one had ever seen an entire dance number on the screen. Starting with the famous "Carioca" number, Astaire and Pan began insisting that numbers should be shot from beginning to end without cutaways. Pan later related that when the movie was previewed "something happened that had never happened before at a movie." After the "Carioca" number, the audience "applauded like crazy."

The success of *Flying Down to Rio* and the forging of Astaire and Rogers' partnership established a set of formulas which they thoroughly exhausted over the course of their partnership. In their first six films, as Arlene Croce has noted, they alternated between playing the lead romantic roles and the couple who are the sidekicks to the romantic leads. Their second film, *The Gay Divorcee* (1934), was based on Astaire's big Broadway hit before he decided to go to Hollywood. It provides the basic shape of those movies in which Astaire and Rogers are the romantic leads—boy wants to dance with girl, girl does not want to dance with boy, boy tricks girl into dancing with him, she loves it, but she needs to iron out the complications. They consummate their courtship with a dance. Most Astaire and Rogers movies also played around with social class—there is always a contrast between top hats, tails, and evening gowns, and even their vernacular dance forms aimed at a democratic egalitarianism. These films were made in the middle of the Great Depression when movies about glamorous upper class people often served as a form of escape. Dancing is shown both as entertainment and an activity that unites people from different classes.

The standard complaint about Astaire and Rogers movies are that they do not have enough dancing. Amazingly, most of their movies have only about ten minutes of dancing out of roughly 100 minutes of running time. There are usually four to seven musical numbers in each film, although not all of them are dance numbers. On the average, a single dance takes approximately three minutes. Certainly, no one would ever watch most of those movies if they were not vehicles for the dancing of Fred Astaire and Ginger Rogers. That these movies find viewers on the basis of no more than ten or 12 minutes of dancing suggests the deep and continuing pleasure that their performances give.

Each movie assembled several different types of dance numbers including romantic duets, big ballroom numbers, Broadway show spectacles, challenge dances, and comic and novelty numbers. In the best of the movies the song and dance numbers are integrated into the plot—*Top Hat* (1935), *Swing Time* (1936), *Shall We Dance* (1937). The centerpiece of most movies was the romantic duet. The incomparable "Night and Day" in *The Gay Divorcee* was the emotional turning point of the movie's plot. Other romantic duets like "Cheek to Cheek" in *Top Hat* and "Waltz" in *Swing Time*, are among the great romantic dance performances in movies. Some of the movies tried to

replicate the success of the big ballroom number in *Rio* and the popularity of “Carioca” as a dance fad. Each movie also included an original variation on the different types of dances showcased in them. For example, “Let’s Call the Whole Thing Off” in *Shall We Dance* included Astaire and Rogers dancing the entire routine on roller skates. “Pick Yourself Up” from *Swing Time* shows them using dance as an example of physical comedy: Astaire stumbles, falls, trips, and otherwise pretends he can not dance in order to flirt with Rogers, who teaches ballroom dancing. Another familiar genre is the “challenge” dance where Astaire does a step, Rogers imitates it, he does another, and then she tops it. Challenge dances usually played out Rogers’ resistance to Astaire.

Shall We Dance (1937) has music and lyrics by George and Ira Gershwin including such well known songs as “They All Laughed,” “Let’s Call the Whole Thing Off,” “They Can’t Take that Away From Me,” and “Shall We Dance.” The movie stages an encounter between high art and popular forms of self-expression, ballet and tap dancing, and seriousness and fun. Astaire plays the Great Petrov, star of the Russian ballet, whose real name is Pete Peters, from Philadelphia. The film opens with Petrov’s manager surprising him in the midst of tap dancing. The manager is horrified: “The Great Petrov doesn’t dance for fun,” he exclaims. Ballet is a serious business to which the artist must devote his full time, the manager explains. *Shall We Dance* mocks ballet and European culture, and offers up instead popular American dance forms. The encounter is first staged when Astaire and Rogers dance to “They All Laughed,” another example of a challenge duet. Astaire begins with ballet-like steps while Rogers, feeling left out, stands still. She lightly snubs him by starting to tap. He responds with tap-like ballet, and then, at last, goes into straight tap dancing. Only then do they successfully dance together.

Fred Astaire and Ginger Rogers had long careers after they had ceased dancing together. Rogers went on to expand her range. She was an excellent comedienne, and in 1940 won an Oscar for her dramatic role in *Kitty Foyle*. Astaire appeared in over 40 movies, and unlike Rogers, he continued to dance. Among his later partners were Rita Hayworth, Eleanor Powell, and Cyd Charisse. No other partnership, however, produced work of the artistic quality that he was able to achieve with Rogers. The dancing partnership of Fred Astaire and Ginger Rogers promised a kind of happiness in which two individuals are able to successfully combine freedom and fun.

Astounding Science Fiction

Spanning three incarnations since 1930, this is perhaps the most influential magazine in the history of the genre. Begun as *Astounding Stories* between 1930-1938, it published lurid pulp fare and launched E. E. Smith’s *Lensmen* series. A name change to *Astounding Science Fiction* established a new direction for both the magazine and the genre under editor John W. Campbell, Jr. Between 1938-1960,

Campbell militated for plausible scientific extrapolation and straightforward prose. His editorship catalyzed the careers of Isaac Asimov and Robert Heinlein, among others. It also introduced the controversial dianetic theories of L. Ron Hubbard in May 1950. Emphasizing hardware-orientated stories that eschewed literary experimentation—what has come to be labeled “hard science fiction”—the magazine became *Analog* and remained under Campbell’s guidance until his death in 1971. Such classics as Frank Herbert’s *Dune* and Anne McCaffrey’s *Dragonflight* initially appeared in *Analog*. It remains a fixture of the genre today.

Astrology

Astrology, the practice of predicting mundane events based upon the configuration and alignment of the planets and stars, has ancient origins. In the latter half of the twentieth century, however, the so-called “oldest science” has enjoyed renewed popularity due, in large part, to public fascination with “New Age” mysticism.

The origins of astrology lie with the ancient Babylonians, a nomadic people who readily accepted the idea that divine energy was manifested in the movements of the sun and planets. Gradually, this concept expanded and the relative positions of the planets—both in relation to each other and to fixed stars—became tied to the idea of omens; that is, if an event occurred while the planets were in a particular position, the recurrence of that position heralded a recurrence of the same sort of event. Soon, the planets became associated with almost every aspect of human life. They were linked to the emotions and to parts of the body, such that astrology played a significant part in medicine up to late medieval times. Not only was the position of the planet to be considered, but also the sign of the zodiac it was occupying, as it was believed possible to foretell the destiny of an individual by calculating which star was in the ascendant at the time of his or her birth.

Astrology later became popular with the Egyptians, Greeks, and Romans. Romans emperors, for instance, had court astrologers advise them on such matters as the timing of coronations and the prospects of possible heirs. The advent of Christianity, though, stifled the fledgling science—early Christians refused to tolerate the practice’s alleged pagan mysticism. Astrology, as a result, became nearly extinct in the West between the sixth and twelfth centuries. It survived only in the Middle East, where Islamic scholars continued to practice the art. The Crusades brought astrology back to Europe, where it managed to co-exist with a more tolerant Christianity for nearly four centuries. Along with alchemy, astrology became an accepted science, and its doctrines pervaded some of the most popular writings of the time, including Chaucer’s *Canterbury Tales*.

The massive growth of scientific astronomy paralleled an explosive decline in the fortunes of astrology in the sixteenth century. The discoveries by sixteenth-century astronomers Galileo Galilei and Nicolaus Copernicus sapped the foundations of astrology, as the idea of an earth-centered universe became completely untenable. In addition, in the Age of Empiricism the failure of astrologers to produce

experimental evidence boded poorly for popular and intellectual support. By 1900, a French encyclopedia would accurately describe astrology as a vanishing cult with no young adherents. During the eighteenth century and much of the nineteenth century, a degraded astrology survived only in popular almanacs and amongst amateur and fraudulent practitioners.

In the late nineteenth and early twentieth centuries, however, astrology experienced a rebirth, in large part assisted by wider literacy and contemporary interest in popular psychology, Eastern thought, and the occult. Practitioners refined their art to focus on spiritual, therapeutic, and psychological goals, to the point that the emphasis on prediction almost entirely diminished amongst serious astrologers. Modern audiences, increasingly disillusioned with and distrustful of the order imposed by institutions and governments, found themselves drawn to astrology's promise to explain the self and the world. Modern astrology has come to represent a social support system of sorts, posited somewhere between religion and psychotherapy.

Astrology built its modern audience through daily horoscopes published in magazines and newspapers throughout the world. Horoscopes—charts of the heavens—show the relative positions of the sun, moon, and planets as well as the ascendant and mid-heaven signs of the zodiac at a specific moment in time. The first newspaper astrology columns appeared in the 1930s and focused on the lives of celebrities. Later, the columns directed their advice to the general public, enjoining readers to meet broad emotional goals such as "learning to compromise" and "controlling temper," all in accordance with the alignment of celestial bodies on a given day.

Astrology remained on the margins of society for much of the twentieth century, appealing to lower classes as well as to the uneducated segments of society. But the practice received a major boon when White House sources revealed that First Lady Nancy Reagan regularly consulted with an astrologer. According to reports, the First Lady altered her husband's schedules according to advice from Joan Quigley, a noted California astrologer. Quigley claimed, among other feats, to have convinced the First Lady and her husband to re-schedule the presidential debates with Jimmy Carter in 1980 to coincide with "Aquarius rising," a sign favorable to Reagan. Quigley also allegedly helped to maintain the president's popularity by arranging for executive decisions to coincide with astrologically propitious moments. "I was the Teflon in what came to be known as the 'Teflon Presidency,'" she later boasted. At the same time, famed philosopher and psychologist Carl Jung became an outspoken adherent of astrological doctrines. Jung became convinced in the validity of astrology after comparing the birth signs of happily married and divorced couples; he allegedly found that those most favorably matched in astrological terms were more likely to enjoy marital bliss. French mathematician Michael Gauquelin likewise converted to astrology's teachings after claiming to have discovered a discernible correspondence between certain astrological signs and the professions of a large number of Frenchmen whose birth-times had been accurately recorded.

The existence of such prominent believers brought astrology into the mainstream of American society. A 1992 study revealed that nearly 25 percent of Americans believed in astrology. For the first time, most believers came from middle income brackets and had some college education. By the late 1990s, more than 10,000 astrologers practiced their art in the United States, and more than 90 percent of newspapers published horoscopes in daily form. According to reports, Americans of the 1990s spent more than \$200 million per annum consulting with astrologers. Moreover, infomercials hawking

the talents of various astrologers and diviners pervaded television networks, and the burgeoning market for astrology-related services and products resulted in the proliferation of astrology shops and stores throughout the country. Astrology also had entrenched itself in late twentieth century American vocabulary and popular culture. The question "What's your sign?" had become an accepted as well as quite widely used "pick-up" line by the end of the twentieth century.

Still, while astrology gained mainstream acceptance, it remained a discredited belief in scientific circles. Most scientists attacked the notion that the pattern of light from stars billions of miles away could influence the temperament of individuals on Earth. As a source of popular belief, scientists pointed to what they called the "Barnum effect," named after the hugely-successful nineteenth century entertainer and hoax perpetrator P.T. Barnum. Skeptics located the transcendent source of astrology's appeal in the tendency of men and women to accept imprecise and widely applicable statements as being specific to them. Barnum manipulated this tendency in the nineteenth century to make millions; scientists of the late twentieth century charged astrologers with doing the same to the masses of their time. American scientists also were vexed by, and perhaps a little jealous of, the popularity of the alleged pseudo-science. By the end of the twentieth century, there were ten times more astrologers in the United States than astronomers, and newspapers provided far more coverage of astrology-related matters than any of the breakthrough astronomical findings of the Hubble Space Telescope.

AT&T

The American Telephone and Telegraph company—better known as AT&T—and the telephone are virtually synonymous. Both the company and invention which made it famous hold lofty positions in American history. AT&T was the largest corporation in the world for much of the twentieth century, employing over one million people. At the time of its court-mandated breakup in 1984, the company's assets totaled \$155 billion, more than General Motors, Mobil, and Exxon combined. The telephone's impact is harder to calculate, but it played a major role in the rise of the modern corporation, served as a symbol of American ingenuity and power, and continues to connect people worldwide.

The parent company of the Bell System, commonly referred to as "Ma Bell," AT&T was a government-regulated monopoly for much of its existence. Federal and state officials allowed AT&T to have monopolistic control over the nation's telephone industry because the corporation pledged to provide universal phone service at a reasonable cost. The regulated system worked, especially when comparing the telephone system in the United States to others around

the world. It wasn't until the early 1980s that the dawn of a new information age, political maneuverings, and long-distance competition teamed to breakup the Bell System.

Alexander Graham Bell invented the telephone in 1876 and founded the Bell Telephone Company a year later, which would eventually become AT&T. In the early years, after waging patent battles and squeezing out its competition, the company symbolized corporate greed, poor quality, and terrible customer service. But in the early twentieth century, under the leadership of financier J.P. Morgan and Theodore Vail, AT&T became a model for the modern corporation.

Vail revitalized the phone giant, which had over 3 million telephones in service his first year. Within a decade, Vail turned a company with low morale, poor customer service, and a horrible reputation into a model of success. Vail increased AT&T's commitment to research and development, which ultimately led to the formation of Bell Labs in 1925, one of the world's foremost scientific laboratories. Vail also centralized management and rededicated the company to customer service. AT&T's management training program served as a breeding ground for quality leaders. People who left the company then spread the AT&T management philosophy to firms nationwide long before MBA programs were fashionable.

Through its Western Electric subsidiary, AT&T formed alliances with companies around the globe to manufacture telephone equipment. By 1914, AT&T had offices in Antwerp, London, Berlin, Milan, Paris, Tokyo, Buenos Aires, and many other cities. Thus, AT&T was an early leader in developing a global community. The company has always been a leader in opening foreign markets, noted by its recent move into China and long history in East Asia, South America, and Europe.

AT&T's scientific innovations, through Bell Labs (now the independent Lucent Technologies), provided an exhaustive list of inventions. In addition to the company's important work spreading phone service across the nation and then around the world, Bell Labs invented the transistor, which replaced vacuum tubes, in 1948. Widely regarded as one of the most important inventions of the twentieth century, the transistor won Bell Labs the Nobel Prize in 1956. AT&T's research and development lab was also instrumental in developing cellular wireless technology (1947), the computer modem (1957), communications satellites (1962), and commercial ISDN long-distance network services (1988). The electronic switching systems AT&T installed in 1965 after years of research permitted a vast increase in phone traffic and paved the way for the Information Age. These advances in switching technology allow the internet to exist today.

AT&T also played a role in the growth of the U.S. military-industrial complex, dating back to World War I when it expanded domestic military communications and installed telephone lines in France. Western Electric and Bell Labs completed projects for the military throughout World War II. AT&T made important advances in radar technology, which later became the chief means of transmitting long-distance phone calls and television signals after the war. In the 1950s and 1960s, AT&T worked on satellite communications and launched its first in 1962.

Culturally, AT&T's impact has been immense. By the early 1900s, the telephone was already considered an indispensable part of life for most individuals and businesses. The telephone connected rural and farm areas with growing cities and urban centers. AT&T also created the distinction between local and long-distance phone calls, which has become a staple of modern telecommunications. The separation between the two markets facilitated to the rise of the

regional Bell Companies, the "Baby Bells," and ultimately to the breakup of the parent company.

AT&T has also figured in the creation of several cultural icons. The Yellow Pages, more widely-read than the Bible, were developed to help customers use their phones more often and more effectively. AT&T began the use of the telephone as a service tool. Initially, the phone served as a means to get weather and time reports. Today, one can receive almost any information over the phone, from sports scores and soap opera updates to movie listings and bank information. The ubiquitous image of teenagers on the phone in movies and television mirrored the real life development in the 1950s when disposable income and a population explosion made phones readily available for teens to use.

AT&T continues to influence popular culture. The company spent a reported \$1 billion in marketing and advertising in 1996 and \$650 million in 1997. Although the company continues to reduce its marketing budget, the AT&T brand retains its strength. When asked if they would choose AT&T to be their local phone carrier, the majority say yes. The company's national campaigns are routinely treated as news stories. A more ominous connection the public makes with the AT&T name is corporate downsizing. Throughout the early 1990s, the phone giant seemed to announce layoffs of 10 to 20 thousand employees on a regular basis.

With over 2 million shareholders, AT&T is the most widely held stock in the world. Thus, the company's fortunes continue to have an impact on people everywhere. It is a corporate giant that produces major headlines with every significant action.

The A-Team

The *A-Team* television series capitalized on the flamboyant personality of Mr. T, a well-known wrestler and bodyguard to the stars. A kind-hearted tough guy with a dramatic mohawk hairstyle and gaudy jewelry, Mr. T helped win the show a strong fan following and reversed NBC's ratings tailspin in 1983. *The A-Team* saved NBC from critic Tony Schwartz's earlier prediction that the network would "die, or shrink severely, within the next decade."

Veteran producer Stephen J. Cannell created this mid-season replacement series as an action adventure comedy. The members of the *A-Team* were soldiers of fortune running from the government. Cannell shaped the show around the real-life personality of Mr. T as the character Sergeant Bosco "Bad Attitude" Baracus. The show's four-year run produced the catch-phrase "I love it when a plan comes together," uttered by George Peppard's character, Colonel John "Hannibal" Smith, at the end of an episode, as well as a change in the dress of some of Mr. T's fans.

Athletic Model Guild

Bob Mizer (1922-1992) was the driving force behind the Athletic Model Guild (AMG), a photography studio founded in Los Angeles in 1944, and the magazine *Physique Pictorial*, which published AMG pictures. AMG produced images of nearly nude muscular men; their publication in *Physique Pictorial* was ostensibly for artists and "physical culture enthusiasts," but attained currency primarily with gay men. Before the birth of gay rights, *Physique Pictorial* and the AMG enabled the dissemination of homoerotic images; the magazine also contained idealized, sexualized drawings of macho men by such artists as George Quaintance, Spartacus, and Tom of Finland. The influence of Mizer's presentation of the male body as a beautiful sexual object can be seen in the photography of Robert Mapplethorpe, Bruce Weber, and Herb Ritts.

Atkins, Chet (1924—)

Nashville's emergence as the center of country music recording in the late 1950s, and the development of the unique Nashville sound, helped to revive the industry at a time when country was losing ground to rock 'n' roll. Chet Atkins, who became a permanent fixture at the Grand Ole Opry as a talented and technically precise guitarist, was one of the pioneers of Nashville's new sound. He is also recognized as one of the more influential figures in the history of country music recording, having been responsible for both the discovery and development of many prominent country stars.

Atkins was born in 1924 in Luttrell, Tennessee, a small Appalachian town tucked away in the state's eastern corner. His half-brother Jim, a talented guitarist who played in the Les Paul Trio in the 1930s, served as a role model for Chet, who began playing the guitar at a young age. In the early stages of his career, Atkins worked as a guitarist for local radio stations in the region and played as a backup for several recording artists, including the Carter family. In the late 1940s, Steve Sholes, who worked for RCA in New York, noticed Atkins' talents and hired him to record his own songs. His first single, in which he was the featured vocalist, met with little success, but other early instrumental recordings, such as "Canned Heat" and "Country Gentleman," found receptive audiences. His intricate style of play established Atkins as one of the more technically gifted guitarists in the industry.

Chet Atkins

Atkins the musician, however, soon gave way to Atkins the producer. His administrative skills equaled his musical ones, prompting Sholes to give Atkins increasing responsibilities in RCA's studios. By the late 1950s, he was head of operations for the Nashville offices. He soon discovered his first hit artist, Don Gibson, whose singles "Oh Lonesome Me" and "I Can't Stop Loving You," both of which Atkins produced, enjoyed immediate success. Atkins then began to bring in an assortment of artists, with diverse and innovative styles, into the studio, marking the beginnings of the Nashville sound. In the late 1950s he was named Vice President at RCA, and continued to produce recordings for some of Nashville's most popular stars. Hank Snow, Elvis Presley, Jim Reeves, Charlie Pride, and Jerry Reed are only a few of the many artists whose careers were enhanced by Atkins' production talents. Atkins has also released many of his own albums, and continues to appear regularly on Nashville's Grand Ole Opry.

Atkins' legacy is in some ways controversial, a fact that he himself has admitted. As an innovator, Atkins changed the face of country music considerably, bringing in new instrumentation such as strings and horns, giving country music a richer and more technically complicated style. As his own music was influenced by a variety of styles, including jazz, pop, and classical, Atkins brought such diversity to bear on the industry, giving rise to crossover artists who were comfortable in front of country, rock, or pop audiences. Such changes, while broadening the audience for country music, also set into motion changes which have caused some within the industry to bemoan the loss of country's proper roots. Regardless of the meanings behind country music's development over the past decades, Chet Atkins undoubtedly has had an enormous impact on both the music and the industry.

Atlantic City

Called the "City by the Sea," the "Queen of Resorts," or "The World's Favorite Playground," Atlantic City, New Jersey, was the most celebrated family entertainment resort in the United States from the 1880s until World War II. Theodore Roosevelt once claimed that "A man would not be a good American citizen if he did not know of Atlantic City." After falling into decline for almost thirty years, since 1978 Atlantic City has become a center for legalized casino gambling and is once again one of America's most popular destinations, with over 37 million visitors in 1997. Famous for its Boardwalk, amusement piers, and street names, which were the basis of the original Monopoly board game, Atlantic City is also an important convention center and the home of the Miss America Pageant, which has been held there since its origin in 1921 and continues to be one of the most popular television spectaculars.

Located on Absecon Island along the New Jersey seashore, sixty miles southeast of Philadelphia, Atlantic City's development started in 1852 when civil engineer Richard Osborne and prominent local physician Dr. Jonathan Pitney persuaded some investors to bring the railroad to the island, thus forming the Camden-Atlantic Railroad Company. The first train to Atlantic City arrived on July 1, 1854, after a two-and-a-half-hour trip from Camden. Subsequently, flows of tourists followed, and the national aspirations already present in the street nomenclature established by Samuel Richards began to become reality. After the Civil War, the popularity of the wide avenues parallel to the ocean, named after the world's great bodies of water, and the perpendicular streets running east to west and named after the States, expanded and gained international fame, drawing guests from all over the world.

Between 1875 and 1910, Atlantic City boomed. Growing from around 250 inhabitants in 1855 and 2,000 in 1875, the population reached 27,000 residents by the census of 1900 and almost 50,000 in 1910. With inexpensive train access and, within a couple of years, a declining travelling time to Philadelphia from 90 to 50 minutes, daily round trips became very attractive to lower-middle-class urban dwellers. Consequently, hordes of transient visitors flocked to the resort, especially on sunny Sundays. As Atlantic City grew, massive and grandiose hotels like the United States, the Traymore, the glamorous Shellburne, or the fantastic Marlborough-Blenheim, as well as smaller boardinghouses sprang up all over the city. Atlantic City's hotels not only met the demand for accommodations, but they also provided popular entertainment such as dances, concerts, billiards, and roller-skating. By 1888, Atlantic City counted over five hundreds hotels and boardinghouses. They constituted the heart of the town.

In 1870, in order to allow tourists to enjoy walking along the ocean without the inconvenience of rugged nature, the City Council—encouraged by the railroad companies—built the nation's first boardwalk, an 8 foot wide wood structure, which, over the years, would become "the" place to be seen and the social and economic spine of the town. Enlarged successively to 14, 20, and 24 feet in 1880, 1884, and 1890, respectively, the fifth boardwalk of 1896 was a 40-foot wide steel-framed wooden esplanade extending about four miles long, packed with hotels, restaurants, and shops offering souvenirs, photographic portraits, refreshments, and saltwater taffy—a candy that was invented here in 1883. Tourists quickly discovered the pleasure of engaging in recreational shopping, a new phenomenon that would become an institutionalized feature of American culture.

The Boardwalk was an open stage upon which strollers could participate in a permanent great show. As its popularity increased, Colonel George W. Howard constructed the world's first ocean amusement pier in 1882, a 650-foot long structure located off the boardwalk, into the Atlantic Ocean. In the following years, many developers and advertisers re-used his brilliant idea and amusement piers started to spring up along the boardwalk. Some of the most well known and successful ones were Ocean Pier (1891), Steel Pier (1898) named also "The Show Place of the Nation," Million Dollar Pier (1906), Steeplechase Pier (1908) and the Garden Pier (1912). They provided plenty of varied attractions and almost continuous entertainment from band concerts, light operas and musicals, dance contests, vaudeville shows, spectacles led by performers like W.C. Fields, Frank Sinatra, or the escape artist Harry Houdini, to the high-diving horse at Steel Pier, the inauguration of the Miss America Pageant, Dr. Couney's premature infant exhibit, merry-go-rounds, Ferris wheels, roller coasters, sand "sculptures," and other amusements in endless variety to please everyone's taste.

In this pre-Disneyland era, Atlantic City had converted itself into an urban amusement park for visitors, a glamorous fairyland of grandiose display, and a kingdom of flashy architecture and perpetual pleasure. Atlantic City was a cultural symbol. A product of the lower-middle-class urban masses that constituted the largest part of its patrons and sources of revenues, the city reflected their tastes and aspirations. For many of its visitors, Atlantic City was a dream that had come true, a city from the tales of the Arabian nights, heaven on earth, or the eighth wonder of the world—all this despite its omnipresent commercial atmosphere, aggressive advertising campaigns, and strong emphasis on financial profits.

Until World War II, Atlantic City's future seemed bright, but the post-war development of commercial air travel ended its heyday. As tourists from the Northeast United States increasingly flew to Florida and the Caribbean for their vacation, the city declined and became a decaying shadow of its former self. The city's population fell from 64,000 in 1940 to 37,000 in 1990. In 1989, the median income of the city was \$12,017 compared with a New Jersey statewide median of \$18,870. With the passage of the casino gambling referendum in 1976 and since the opening of the first casino in May 1978, Atlantic City has struggled to revive its economy and undergo a renewal and a revitalization process. Twenty years later, the city boasts thirteen casinos offering 24-hour non-stop action and is now recognized worldwide as a gaming mecca. Nevertheless, even though the Boardwalk and the waterfront have been restored and made prosperous, many neighborhoods of Atlantic City continue to suffer from urban blight and the role of gambling in urban revitalization is still being debated.

Atlantic Monthly

Despite its low circulation and budget, the *Atlantic Monthly* magazine has maintained a strong influence in American culture by publishing many of the most prominent authors and cultural authorities and maintaining its status as one of the nation's leading general-interest monthlies. It began the twentieth century as America's foremost elite literary magazine, and although it has embraced a

wider readership and broadened its scope to focus on political and social issues, it is still known as a magazine for intellectual and highly cultivated readers. Throughout its history, the *Atlantic Monthly* has attempted to reconcile its distrust of the masses, or the "mob," to whom it has not wanted to pander, with its need to appeal to a broad spectrum of readers in order to stay financially afloat. It has made the compromise by positioning itself as the setter of standards and the interpreter of culture for well-informed readers aspiring to ascend to the ranks of the cultural elite.

When the *Atlantic Monthly* was founded in 1857, it quickly became known all over the country as the organ of America's burgeoning high literature. Although it was subtitled "A Magazine of Literature, Art and Politics," it was primarily as a literary magazine that it made its mark. In its first issue (November 1857), it declared itself to be "the exponent of . . . the American idea," but nineteenth century readers associated the magazine with New England and a select group of elite writers. Ralph Waldo Emerson, Henry Wadsworth Longfellow, Nathaniel Hawthorne, William Dean Howells, and Henry James were among its staple contributors. The magazine also published the works of America's leading female writers, such as Harriet Beecher Stowe and Sarah Orne Jewett, and prominent African American writers like Charles Chesnut. But at the turn of the twentieth century, the *Atlantic Monthly* was instrumental in establishing the American literary canon, which consisted of only its foremost white male contributors. It therefore became associated with a selective, elite vision of American literature rather than a more democratic, diversified literature that had, for a while, seemed possible in its pages.

As the twentieth century dawned, the *Atlantic Monthly* was known as a conservative, even reactionary magazine that defensively tried to promote the values of a by-gone elitist literary and cultural tradition in the face of social upheavals like immigration and the birth of a consumer mass culture. Throughout its history, the *Atlantic Monthly* has attempted to maintain the cultural authority it achieved in the nineteenth century, but it has had a hard time doing so in competition with a widely-diversified literary market. Although its circulation was never large, reaching a height of 50,000 in the 1860s, it declined steadily through the rest of the century. In the early 1900s, while magazines like the popular *Saturday Evening Post* reached circulations of two million, the *Atlantic Monthly* dipped to 7,000. Drastic measures were needed. In an age when illustrations moved magazines, the *Atlantic Monthly* steadfastly refused to appeal to readers with pictures, fearing the blurring of boundaries between itself and the new cadre of mass-market magazines like the *Saturday Evening Post* and *Collier's*. So instead of illustrating its pages, it began to disentangle itself somewhat from its New England literary roots and broaden its appeal by fostering young, up-and-coming writers and by publishing more thought-provoking, general-interest essays.

The *Atlantic Monthly's* strategy for maintaining its influence has been to lead the nation's discussions of politics, literature, and the arts, publishing the writings of leading thinkers and writers. It has prided itself on the discovery of new talents, publishing some of the first works by Ernest Hemingway, Philip Roth, Eudora Welty, Louise Erdrich, James Dickey, Joyce Carol Oates, and Bobbie Ann Mason. Because of its limited funds, editors have gone in search of unestablished writers, becoming the maker of many writers' careers. In addition to its strong fiction department, the *Atlantic Monthly* has been the mouthpiece of influential thinkers like Theodore Roosevelt, John Muir, Woodrow Wilson, W. E. B. DuBois, and Albert Einstein. It has also been a stage for some of the twentieth century's most prominent debates, publishing scathing analyses of the defects of Wall Street in

1928, a defense of Sacco and Vinzetti shortly before they were sentenced to death in 1927, critiques of the use of the atom bomb, and what would become Martin Luther King's "Letter from a Birmingham Jail" in 1963.

In the twentieth century, the *Atlantic Monthly* has steadily progressed from an elitist magazine in which, as its editor Bliss Perry argued in 1902, "The ideal reading mood . . . is that of well-bred people listening to the after-dinner conversation in public," to a populist magazine that wishes to serve "as the nation's dining-room table," in the words of its managing editor, Cullen Murphy, in 1994. As America has grown more democratic in its cultural life, the *Atlantic Monthly* has responded in order to survive. In 1947, for example, the *Atlantic Monthly* joined the rest of America's magazine in printing illustrations. In its attempt to stay afloat, the magazine has made a few compromises while maintaining its status as a cultural authority by helping to shape Americans' tastes and views. This formula for success has paid off in steadily increasing circulation. In 1994, the magazine's circulation topped 500,000, indicating that it is still a strong presence in the magazine market and in American culture. As Murphy defensively declares, "One thing that the *Atlantic Monthly* is not is an antiquarian enterprise, a museum piece."

Atlantic Records

Founded in 1947 by Herb Abrahamson and Ahmet Ertegun, Atlantic Records went on to become one of the most successful independent record companies in the history of music by challenging the economic dominance and musical hegemony of the major record labels in the 1950s. Ertegun and Abrahamson were music lovers who wanted to record the blues and gospel music that was ignored by the major labels. Their taste in rhythm and blues music just happened to coincide with the growing appetite for these records by white teenagers and their parents. Atlantic signed many rhythm and blues artists (such as Big Joe Turner) who made important contributions to what was later called rock 'n' roll.

In the 1960s Atlantic broadened its base in African American music, especially soul music, and made it accessible to the larger white mainstream audience. Its leading record producer—Jerry Wexler—moved many sessions to Muscle Shoals, Alabama where he produced a string of hits for singers such as Aretha Franklin and Wilson Pickett. In 1967 Warner Brothers took over the label.

Atlas, Charles (1893-1972)

Born Angelo Siciliano in 1893, Charles Atlas went on to become one of the iconic cultural symbols of the twentieth century, influencing generations of men to embrace the ideal of muscular masculinity. Through his popular mail-order courses, advertised in comic books and boys' magazines, Atlas outlined his method to transform oneself from scrawny to brawny and, in doing so, become "a real man."

Shrouded in advertising lore, the biography of Charles Atlas must be viewed with a certain amount of skepticism. According to the muscleman's promotional literature, in 1903 the young Angelo Siciliano, newly arrived in the United States, was a puny, ninety-seven-pound weakling and a favorite target of neighborhood bullies and, on occasion, family members. Swearing "never [to] allow any man on this earth to hurt me again," Siciliano set about building his body with a variety of training apparatuses. Despite his best efforts, however, Siciliano proved unable to increase his muscular size to the proportions he desired until a trip to Brooklyn's Prospect Park Zoo yielded an exercise epiphany which would change his life.

Charles Atlas

While at the zoo, Siciliano watched lions and tigers and marveled at their muscularity. It was at this time that he first theorized the principles of “Dynamic Tension.” Noting that the animals had no exercise equipment with which to build muscles, Siciliano determined that they must be working “one muscle against the other.” He began experimenting with the principles of what would later become known as isometric exercise and within a year had perfected his system of apparatus-free exercise and, allegedly, doubled his body weight.

With his very own muscle-building system, Siciliano adopted the name Charles Atlas to evoke a classical image of muscularity and began performing feats of strength. While showcasing his musculature on a Coney Island, New York, boardwalk, Atlas was discovered by a sculptor who introduced him to the art world. The young bodybuilder became renowned for his well-muscled physique and served as the body model for numerous sculptures including the statue of Alexander Hamilton in front of the United States Treasury building and that of George Washington on the Washington Square Arch in New York City.

In 1921, Atlas received the title of “World’s Most Perfectly Developed Man,” having triumphed at a prestigious bodybuilding competition hosted by physical culture advocate and publisher Bernarr MacFadden. To capitalize on his growing fame, Atlas co-wrote and sold a manual that explained his isometric principles and various sporting pursuits, and offered general nutritional and health information and “inspirational” passages such as, “Don’t dilly dally!” and “Get Up!” Despite his best efforts, Atlas’ mail-order business struggled until 1928, when he teamed-up with Charles Roman, a young graduate of New York University’s business school. Roman’s advertising acumen and flair for ad copy helped transform Atlas from a mere muscleman into an international star.

Roman concocted a simple but effective advertising campaign centered around a cartoon titled, “The Insult Which Made a Man Out of Mac.” The short sketch featured a somewhat trite but highly effective sketch in which a bully kicks sand in the face of a scrawny youth (Mac) in front of the weakling’s girlfriend. This action prompts the frail Mac to follow Atlas’ course and vanquish the bully, thus winning the respect of his sweetheart. Soon spindly youths everywhere were seeking Atlas’ remedy for the neighborhood ruffian. This basic appeal, which blended together violence and stereotypical masculinity, propelled the physical culturalist to great financial success and increased celebrity. Although his cartoon advertising yielded impressive results, Atlas refused to rest on his laurels and continued to engage in strength-related publicity stunts such as pulling train cars and bending iron bars for years to come. He retired to Florida, after selling Charles Atlas Ltd. to Roman, where he continued to showcase his still imposing, although markedly less chiseled, physique. In 1972, Atlas died of a heart attack at the age of 79.

After his death, Charles Atlas Ltd. continued to sell the original Dynamic Tension program using Atlas’ trademark cartoons and black-and-white photographs of the muscleman in his prime. While still featured in traditional publications geared for boys and young men, Charles Atlas also took to cyberspace, where his courses and an expanded product line are sold via the Internet.

Atlas’ trademark program, combining calisthenics and isometric exercises, once well ahead of its time in the field of exercise science, has long since fallen out of favor with the weightlifting and bodybuilding community. A full range of motion exercises involving free-weights or exercise machines have taken precedence over Atlas’

exercises. While considered somewhat archaic, Atlas’ exercises often did, and still can, deliver muscular results designed to drive away bullies and stop sand from being kicked in one’s face.

Auerbach, Red (1917—)

Boston Celtics coach Arnold “Red” Auerbach led his team to nine National Basketball Association championships, including an unprecedented eight consecutive wins (1959-1966) during the Celtics’ run of eleven championships in thirteen years (1957-1969)—compare that to the Chicago Bulls’ six out of eight streak in the 1990s—and introduced coaching innovations that became widespread in the NBA. One of the most enduring images in NBA history is that of Auerbach lighting a victory cigar on the team’s bench once another Celtics’ victory was safely in hand.

The son of Russian immigrants who settled in Brooklyn, New York, Auerbach devoted himself at an early age to basketball. He excelled as a high school player, eventually being named Second Team, All-Brooklyn during his senior year at Eastern District High School. After attending Seth Low Junior College in New York for two years, Auerbach earned a basketball scholarship to George Washington University in Washington, D.C. As a junior college transfer, Auerbach was joining a highly successful team at George Washington and had to fight, sometimes literally, for playing time. As he recounts in *On and Off the Court*, he asked himself “How the hell was I supposed to break in? The answer was defense. I was all over them like a blanket, hounding them every step, shutting them off every chance I got. Naturally, they didn’t like that, so one thing led to another and before you knew it, fists were flying.”

Auerbach’s service in the navy during World War II helped him gain his first professional coaching job. In 1946, the Basketball Association of America, a forerunner of today’s NBA, was formed, consisting of eleven teams. According to Celtics historian Joe Fitzgerald in *That Championship Feeling*, because there was no provision for drafting players for the league’s first season, each team had to come up with its own players. Auerbach, a “brash young kid” of twenty-nine, talked the owner of the Washington Capitols into hiring him as coach by convincing him that he could put together a team of former servicemen he knew.

In 1950, after brief stints coaching the BAA's Washington Capitols and the Tri-City Hawks, thirty-two-year-old Auerbach arrived in Boston, a team which had made the playoffs only once in its first four seasons and enjoyed little popularity in contrast to the city's beloved baseball Red Sox and hockey Bruins. At the same time, Boston acquired guard Bob Cousy, a local legend who had played college basketball at Holy Cross in Worcester, Massachusetts. Cousy, with Auerbach's encouragement, was known for his spectacular passing and "fast breaking" style. During Auerbach's first six seasons, due primarily to Cousy's efforts, the Celtics led the league in scoring every year but never won a championship.

It was the acquisition of center Bill Russell in 1956 which provided Auerbach's Celtics with what they had been missing: defense. Combining Russell's rebounding and shot-blocking with Cousy's offense, the Celtics won their first NBA championship in the 1956-1957 season, defeating the St. Louis Hawks in a decisive double overtime game to clinch the title. The Celtics failed to defend their championship the following season, losing in the finals to the same St. Louis team they had defeated the previous year, but began their eight-year, championship streak in 1959. Although Auerbach was just forty-seven years old in 1966, he decided to retire from coaching, as he felt worn out from the pressures of keeping his team at such a high level of performance over a long period of time.

As a coach, Auerbach made a number of innovations which were keys to the Celtics' immense success. Auerbach was one of the first to utilize so-called "role" players, meaning players who specialized in one or two aspects of the game, filling gaps which were essential to the team's success. Because of this philosophy, Auerbach put little stock in statistics, caring more about how well a player fit into his concept of what it took to ensure victory than about how many points he scored. Another of Auerbach's innovations was the use of the so-called "Sixth Man," which referred to a highly skilled reserve player who would come off the bench late in the first quarter of a game and provide a spark with instant scoring. The use of such players became so widespread that the NBA now offers an award to the player considered to be the best Sixth Man in the league. Finally, Auerbach had an uncanny ability to acquire players who were nearing the ends of their careers with other teams or had achieved bad reputations and use them to contribute to Boston championships. Cousy summed up Auerbach's coaching philosophy in *Cousy on the Celtic Mystique*: "With Red it was, What does it take to win? Find the talent, get them in shape, keep them motivated, and don't get fancy."

Auerbach's departure from coaching in 1966 did not, however, spell the end of his contribution to Boston's success. As the team's general manager, he made a number of farsighted deals which contributed to seven subsequent Boston championships between the late 1960s and mid-1980s. Perhaps his most celebrated move was his decision in 1978 to draft forward Larry Bird after his junior year in college, meaning that the Celtics had exclusive rights to the player after the completion of his senior season. Bird became one of the greatest players in NBA history, leading the Celtics to NBA championships in 1981, 1984, and 1986. Auerbach was elected to the Basketball Hall of Fame in 1968.

Aunt Jemima

The advertising image of Aunt Jemima was born at the 1893 World Columbian Exhibition in Chicago, Illinois, with ex-slave Nancy Green's promotion of inventor Charles Rutt's pancake mix. More than an American corporate icon, Aunt Jemima not only advertises the great American breakfast, but also conveys a stereotype of blackness and embodies the haunting legacy of the racial past. As a white construction of black identity, Aunt Jemima represents an easygoing, nostalgic and non-threatening domesticated character highly reminiscent of Mammy in *Gone with the Wind*. Despite a corporate image makeover in the early 1980s, which involved slimmer features and the loss of the servitude-signifying bandanna, the trademark "Aunt Jemima" continues to invoke memories of slavery and segregation and reminds us of the persistence of racial prejudice.

Automobile

The first inventors to build automobiles lived in Europe, but the United States rapidly coopted their inventions to become the world's preeminent car culture. Over the course of the twentieth century, Americans completely reorganized the country's built environment to accommodate a technological system of universal car ownership, an extensive network of high quality roads, and a well developed automobile service industry. By mid-century, automobiles had become the country's primary mode of transportation, replacing horses, railroads, and urban mass transit systems. At the same time, automobiles became objects of cultural disagreement, praise, humor, symbolism, status, and innumerable hopes and fears. More than providing a way to move around, over the course of the twentieth century automobiles became a central defining characteristic of American culture.

From the 1890s forward, designers of horseless carriages spent a great deal of time in their backyard workshops building the experimental prototypes that introduced the country to automobiles. Some produced high-quality electric, gasoline, and steam-powered vehicles; others struggled simply to make their machines work. While the

The advertising representation of “Aunt Jemima.”

inventors tinkered, advocates raised their voices to promote the novel contraptions, employing the era’s colorful rhetoric to hail the potential of the new machines. Design breakthroughs soon made cars more reliable, and a proliferating number of manufacturers—usually little more than parts assemblers—took advantage of the low start-up costs characterizing the early industry and opened their doors for business. Publicity stunts to popularize automobiles such as races, long-distance reliability tours, and auto shows became more and more common, and manufacturers found a ready and enthusiastic market among Americans who could afford the high price tags, most of whom were members of the urban elite.

Boosters in the 1890s were particularly enthusiastic about pointing out the many advantages automobiles offered compared to horses, the primary mode of quick local transportation for most of the nineteenth century. Automobiles did not bite, kick, or scare, a number of writers pointed out, while more sober commentators provided detailed cost comparisons between cars and horses, invariably concluding that car owners would enjoy long-term savings. Other pundits described the potential uses of the automobile in utopian terms. In rural areas, automobiles would eliminate the isolation that plagued farm life and draw cities and countryside closer together. In urban areas, cars would solve growing traffic problems, replacing a hodgepodge of horses, trolleys, pushcarts, and pedestrians with smaller

individual conveyances. Since they were more mobile and easier to handle than trolleys or horse-drawn wagons, cars would decrease traffic fatalities. Since they could take advantage of back streets instead of following fixed rails, automobiles would free suburban homeowners from the trolley lines. Finally, by replacing horses, automobiles would eliminate the health and smell problems posed by the large quantities of manure and urine that coated city streets every day. According to boosters writing in the popular press, then, automobiles appeared to be a true Godsend.

Not everyone saw cars or the growing number of motorists in such a favorable light, especially since only urban elites and rural professionals such as doctors could afford automobiles for many years after they became commercially available. Farmers in particular complained about urban joyriders who scared their horses, tore up their roads, sprinkled their crops in dust, and picnicked in their fields. “Nothing has spread the socialist feeling in this country more than the automobile,” Woodrow Wilson announced in 1906. “To the countryman they are a picture of the arrogance of wealth, with all its independence and carelessness.”

Though Wilson was attuned to real rural- and class-based discontent about car use at the turn of the century, automobiles did not remain toys of the wealthy for long because a growing number of manufacturers began to produce cheap cars intended for a mass

market. Ransom Olds produced the first widely popular and inexpensive model, his “curved dash” Oldsmobile, of which he made over 12,000 between 1901 and 1904. His small, lightweight, reliable runabout took such a hold of the public’s imagination that a composer commemorated it in a popular song, “In My Merry Oldsmobile”:

Come away with me, Lucille,
 In my merry Oldsmobile,
 Over the road of life we’ll fly,
 Autobubbling you and I,
 To the church we’ll swiftly steal,
 And our wedding bells will peal,
 You can go as far as you like with me,
 In our merry Oldsmobile.

As much success as the Oldsmobile enjoyed, it took Henry Ford, a manufacturer from Dearborn, Michigan, to seize the idea of mass production and use it to change the face of the automobile industry. The Ford Model T—alternately dubbed the “Tin Lizzie” and the “flivver” by an enthusiastic public—first became available in 1908. The car coupled a simple, durable design and new manufacturing methods, which kept it relatively inexpensive at \$850. After years of development, experimentation, and falling prices, the Ford Company launched the world’s first fully automated assembly line in 1914. Between 1909 and 1926, the Model T averaged nearly forty-three percent of the automobile industry’s total output. As a result of its assembly-line construction, the car’s price dropped steadily to a low of \$290 on the eve of its withdrawal from the market in 1927. The company also set new standards for the industry by announcing in 1914 that it would more than double its workers’ minimum wages to an unprecedented five dollars per day. Over the course of the Model T’s production run, the Ford Company combined assembly-line manufacturing, high wages, aggressive mass-marketing techniques, and an innovative branch assembly system to make and sell over fifteen million cars. As a result, Henry Ford became something of a folk hero, particularly in grass-roots America, while the car so well-suited to the poor roads of rural America became the subject of its own popular genre of jokes and stories. In 1929, the journalist Charles Merz called the Model T “the log cabin of the motor age.” It was an apt description, for more first-time buyers bought Model T’s than any other type, making it the car that ushered most Americans into the automobile era.

Between 1908 and 1920, as automobiles became affordable to a greater percentage of Americans, farmers quickly abandoned their prejudices against the newfangled machines and embraced them as utilitarian tools that expanded the possibilities of rural life. The diffusion of cars among rural residents had a significant effect on farm families, still forty percent of the United States population in 1920. Because automobiles increased the realistic distance one could travel in a day—and unlike horses did not get so tired after long trips that they were unable to work the next day—cars allowed farmers to make more frequent trips to see neighbors and visit town. In addition, rural Americans found a number of uses for the versatile, tough machines on farms themselves, hauling supplies, moving quickly around the farm, and using the engine to power other farm machinery.

As car sales soared before 1920, the movement for good roads gained momentum and became a priority for many state legislatures. Rural roads had fallen into a bad state of neglect since the advent of the railroads, but early “Good Roads” reformers nevertheless met stiff opposition to their proposed plans for improvement. Farmers

argued that expensive road improvement programs would cost local citizens too much in taxes, and that good roads would benefit urban motorists much more than the rural residents footing the bill. Reformers had to wage fierce political battles to overcome rural opposition, and succeeded only after convincing state legislatures to finance improvements entirely with state funds, completely removing road maintenance from local control. Resistance was not limited to rural areas, however. Even within cities, many working-class neighborhoods opposed the attempts of Good Roads advocates to convert streets into arteries for traffic, preferring instead to protect the more traditional function of neighborhood streets as social spaces for public gatherings and recreation. In addition, special interest groups such as street-car monopolies and political machines fought to maintain their control over the streets. Only after the victory of other Progressive Era municipal reformers did road engineers succeed in bringing their values of efficiency and expertise to city street system management.

In the 1920s, car prices dropped, designs improved, roads became more drivable, and automobiles increasingly seemed to provide the key to innumerable advantages of modern life. To many people, cars embodied freedom, progress, and social status all at the same time. Not only could car owners enjoy the exhilaration of speeding down open roads, but they also had the power to choose their own travel routes, departure times, and passengers. Outdoor “autocamping” became a popular family pastime, and an entire tourist industry designed to feed, house, and entertain motorists sprang up almost overnight. Even advertising adapted to a public traveling thirty miles per hour, led by the innovative Burma Shave campaign that spread its jingles over consecutive roadside billboards. One set informed motorists that “IF YOU DON’T KNOW / WHOSE SIGNS / THESE ARE / YOU CAN’T HAVE / DRIVEN VERY FAR / BURMA SHAVE.” In a variety of ways, then, automobile engines provided much of the roar of the Roaring Twenties, and stood next to the flapper, the flask, and the Charleston as a quintessential symbol of the time.

As an icon of the New Era, the automobile also symbolized the negative aspects of modern life to those who lamented the crumbling of Victorian standards of morality, family, and propriety. Ministers bewailed the institution of the “Sunday Drive,” the growing tendency of their flocks to skip church on pretty days to motor across the countryside. Law enforcement officials and members of the press expressed frustration over the growing number of criminals who used getaway cars to flee from the police. Even social critics who tended to approve of the passing of Victorian values noted that the rapid diffusion of automobiles in the 1920s created a number of unanticipated problems. Rather than solving traffic problems, widespread car ownership increased the number of vehicles on the road—and lining the curbs—which made traffic worse than ever before. Parking problems became so acute in many cities that humorist Will Rogers joked in 1924 that “Politics ain’t worrying this Country one tenth as much as Parking Space.” Building expensive new roads to alleviate congestion paradoxically increased it by encouraging people to use them more frequently. Individual automobiles seemed to be a great idea, but people increasingly began to see that too many cars could frustrate their ability to realize the automobile’s promises of freedom, mobility, and easy escape.

Despite these problems and a small group of naysayers, American popular culture adopted the automobile with alacrity. Tin Pan Alley artists published hundreds of automobile-related songs, with titles like “Get A Horse,” “Otto, You Ought to Take Me in Your Auto,” and “In Our Little Love Mobile.” Broadway and vaudeville

An example of the early automobile assembly line.

shows both adopted cars as comic props, a tradition the Keystone Kops carried over into the movie industry. Gangster films in particular relied on cars for high-speed chases and shoot-outs, but even films without automobile-centered plots used cars as symbols of social hierarchy: Model T's immediately signaled humble origins, while limousines indicated wealth. In *Babbitt* (1922), Sinclair Lewis noted that "a family's motor indicated its social rank as precisely as the grades of the peerage determined the rank of an English family," and in the eyes of Nick Carraway, the narrator of F. Scott Fitzgerald's *The Great Gatsby* (1925), Gatsby's Rolls-Royce represented the "fresh, green breast of the new world." Parents worried that teenagers used automobiles as mobile bedrooms, a growing number of women declared their independence by taking the wheel, and sociologists Robert and Helen Lynd declared that automobiles had become "an accepted essential of normal living" during the 1920s.

After the stock market crashed in 1929, automobiles remained important cultural symbols. Throughout the Great Depression, cars reminded people of the prosperity that they had lost. On the other hand, widespread car ownership among people without homes or jobs

called attention to the country's comparatively high standard of living; in the United States, it seemed, poverty did not preclude automobile ownership. Countless families traveled around the country by car in search of work, rationing money to pay for gasoline even before buying food. Dorothea Lange's photography and John Steinbeck's *The Grapes of Wrath* (1939) immortalized these migrants, who became for many the symbolic essence of the decade's economic ills. Automobiles had become such a permanent fixture in American life when the Depression hit that even in its pit, when the automobile industry's production had fallen to below a quarter of its 1929 figures, car registrations remained at over ninety percent of their 1929 number. Even before the Depression began most Americans had thoroughly modified their lifestyles to take advantage of what automobiles had to offer, and they refused to let a weak economy deprive them of their cars. Tellingly, steady automobile use through the 1930s provided an uninterrupted flow of income from gasoline taxes, which the country used to build roads at an unprecedented rate.

The thousands of miles of paved highway built during the Depression hint at one of the most profound developments of the first

half of the twentieth century: the extensive modification and rearrangement of the country's built environment to accommodate widespread automobile use. In urban areas, general car ownership undermined the centralizing influence of the railroads. Because businesses could unload railroad freight into motorized trucks instead of horse-drawn wagons, which significantly reduced their short-haul transportation costs, proximity to railroad depots became much less important. At the same time, growing traffic problems in urban cores along with a more mobile buying public made relocating to less congested areas with better parking for their customers an increasingly attractive option for small-volume businesses.

Although cities continued to expand, Americans used their cars to move in ever-growing numbers to the suburbs. As early as the 1920s suburban growth had begun to rival that of cities, but only after World War II did American suburbs come into their own. Beginning in the mid-1940s, huge real estate developers took advantage of new technology, federally insured home loans, and low energy costs to respond to the acute housing shortage that returning GIs, the baby boom, and pent-up demand from the Depression had created. Developers purchased large land holdings on the border of cities, bulldozed everything to facilitate new standardized construction techniques, and rebuilt the landscape from the ground up. Roads and cars, of course, were essential components of the suburban developers' visions. So were large yards (which provided the social spaces for suburbanites that streets had once supplied for urban residents) and convenient local shopping centers (with plenty of parking). Even the design of American houses changed to accommodate automobiles, with more and more architects including carports or integrated garages as standard features on new homes.

In rural America, the least direct but most far-reaching effects of widespread car ownership came as rural institutions underwent a spatial reorganization in response to the increased mobility and range of the rural population. In the first decade or so of the century, religious, educational, commercial, medical, and even mail services consolidated, enabling them to take advantage of centralized distribution and economies of scale. For most rural Americans, the centralization of institutions meant that by mid-century access to motorized transportation had become a prerequisite for taking advantage of many rural services.

At about the same time suburban growth exploded in the mid-1940s, road engineers began to focus on developing the potential of automobiles for long-distance travel. For the first several decades of the century, long-distance travelers by automobile had to rely on detailed maps and confusing road signs to navigate their courses. In the 1920s, limited-access roads without stop lights or intersections at grade became popular in some parts of the country, but most people judged these scenic, carefully landscaped "parkways" according to their recreational value rather than their ability to move large numbers of people quickly and efficiently. By 1939, however, designers like Norman Bel Geddes began to stress the need for more efficient road planning, as his "Futurama" exhibit at the New York World's Fair demonstrated. Over five million people saw his model city, the most popular display at the exhibition, which featured elevated freeways and high-speed traffic coursing through its center. Impressed, many states followed the lead of Pennsylvania, which in 1940 opened 360 miles of high-speed toll road with gentle grades and no traffic lights. By 1943, a variety of automobile-related interest groups joined together to form the American Road Builders Association, which began lobbying for a comprehensive national system of new super-highways. Then in 1954, President Dwight Eisenhower appointed a

committee to examine the issue of increasing federal road aid—headed by a member of the General Motors board of directors. Two years later, Eisenhower signed the Interstate Highway Act, committing the federal government to provide ninety percent of the cost of a 41,000-mile highway system, the largest peacetime construction project in history.

The new interstates transformed the ability of the nation's road system to accommodate high-speed long-distance travel. As a result, the heavy trucking industry's share of interstate deliveries rose from about fifteen percent of the national total in 1950 to almost twenty-five percent by the end of the decade, a trend which accelerated the decentralization of industry that had started before the war. Suburbs sprang up even farther away from city limits, and Americans soon began to travel more miles on interstates than any other type of road. The new highways also encouraged the development of roadside businesses that serviced highway travelers. A uniform highway culture of drive-in restaurants, gas stations, and huge regional shopping malls soon developed, all of it advertised on large roadside billboards. Industries designed to serve motorists expanded, with the motel industry in particular growing in lock-step with the interstates, taking advantage of the same increase in family vacations that caused visits to national parks to double over the course of the 1950s.

While car designers in the 1950s subordinated all other considerations to style and comfort, engineers focused on boosting acceleration and maximum speed. With eager enthusiasm, Americans embraced the large, gas-guzzling, chrome-detailed, tail-finned automobiles that Detroit produced. Teens in particular developed an entire subculture with automobiles at the center. Cruising the local strip, hanging out at drive-in restaurants, drag-racing, and attending drive-in movies all became standard nationwide pastimes.

Yet trouble brewed beneath the surface of the 1950s car culture, and in the 1960s and 1970s a number of emerging problems drove home several negative unanticipated consequences of universal car ownership. Safety concerns, for example, became increasingly important in the mid-1960s since annual automobile-related deaths had increased from roughly 30,000 to 50,000 between 1945 and 1965. Environmental damage, too, became an issue for many Americans, who focused on problems like air pollution, oil spills, the tendency of heavy automobile tourism to destroy scenic areas, and the damaging effects of new road construction on places ranging from urban neighborhoods to national wilderness preserves.

In both cases, concerned citizens turned to the government to regulate the automobile industry after less coercive attempts to address problems failed. In 1965, Ralph Nader's *Unsafe at Any Speed* galvanized popular concern over motor vehicle safety. Congress responded in 1966 with the National Traffic and Motor Vehicle Safety Act, which required a number of safety features on all models beginning in 1968, despite auto industry protests that regulations would be expensive and ineffective. Within two years of the implementation of the law, the ratio of deaths to miles driven had declined steeply, injuring Americans' trust in the good faith efforts of industry to respond to consumer concerns without active regulation. Similarly, since repeated requests to manufacturers throughout the 1950s to reduce emissions had failed, California required all new cars from 1966 on to have emissions-reducing technology. Other states followed suit, discounting the car industry's claims that once again solutions would be slow to develop, expensive, and difficult to implement.

The most significant example of cultural backlash against the problems of widespread dependence on automobiles came during and after the Arab oil embargo of 1973, when the price of crude oil increased over 130 percent in less than three months. Around the country, lines of cars snaked out of gas stations, where pump prices had doubled nearly overnight. Recriminations and accusations about why the country had become so dependent on foreign oil flew back and forth—but the major result was that American manufacturers steadily lost market share after 1973 to small foreign imports that provided greater fuel-efficiency, cheaper prices, and lower emissions than Detroit models. Domestic full- and mid-size automobiles, once the undisputed champions of the United States, lost a substantial portion of their market share through the 1970s. By 1980, small cars comprised over 60 percent of all sales within the country.

The widespread cultural discontent with dependence on cars lasted only as long as the high gasoline prices. Rather than making changes that would decrease reliance on automobiles, the country addressed new problems as they arose with complex technological and regulatory fixes. Oil prices eventually fell to pre-embargo lows in the 1980s, and by the late 1990s cheap fuel helped reverse the decades-long trend toward smaller cars. Large sport utility vehicles with lower fuel efficiency became increasingly popular, and somewhat ironically relied heavily on “back-to-nature” themes in their marketing strategies. Despite substantial advances in quality and responsiveness to consumers, American manufacturers never regained their dominance of the immediate postwar years. At the end of the twentieth century, however, the American car culture itself continued to be a central characteristic distinguishing the United States from most other countries around the world.

Autry, Gene (1907-1998)

Famous as the original “Singing Cowboy,” Gene Autry rode the range in the tradition of Tom Mix—clean living, honest, and innocent. He established the singing cowboy stereotype (continued by Roy Rogers, who inherited Autry’s sobriquet): that of the heroic horseman who could handle a guitar or a gun with equal aplomb. A star of film, radio, and television, Autry was probably best known for his trademark song, “Back in the Saddle Again,” as well as for many more of the over 250 songs he wrote in his lifetime.

Born in Texas, Autry moved to Oklahoma as a teenager, and began working as a telegrapher for the railroad after high school. While with the railroad, he began composing and performing with Jimmy Scott, with whom he co-wrote his first hit, “That Silver-Haired Daddy of Mine,” which sold half a million copies in 1929 (a record for the period). The same year, he auditioned for the Victor Recording Company in New York City but was told he needed more experience. He returned to Tulsa and began singing on a local radio program, earning the nickname “Oklahoma’s Yodeling Cowboy.” Columbia Records signed him to a contract in 1930 and sent him to Chicago to sing on various radio programs, including the *Farm and Home Hour* and the *National Barn Dance*. He recorded a variety of songs during the 1930s, such as “A Gangster’s Warning,” “My Old Pal of Yesterday,” and even the labor song “The Death of Mother Jones.”

In 1934, Autry began appearing in films as a “tuneful cow-puncher” and made numerous highly successful pictures with his

Gene Autry

horse, Champion, before he retired from the film industry in the 1950s. His debut film was *In Old Santa Fe*, in which he made only a brief singing appearance, but reaction to his performance was favorable and it got him a lead role in the 13-part serial *Phantom Empire*. His first starring role in a feature film followed with *Tumblin' Tumbleweeds* (1935), and he became not only Republic Pictures' reigning king of "B" Westerns, but the only Western star to be featured on the list of top ten Hollywood moneymakers between 1938 and 1942. Autry's pictures are notable for the smooth integration of the songs into the plots, helping to move the action along. Some of his films were even built around particular songs, among them *Tumblin' Tumbleweeds*, *The Singing Cowboy* (1937), *Melody Ranch* (1940) and *Back in the Saddle* (1941).

After serving as a technical sergeant in the Army Air Corps during World War II, Autry returned to Hollywood to make more films. From film, Autry made the transition into both radio and television programming. He hosted the *Melody Ranch* show on radio (and later on television), and he was involved with numerous successful television series, including *The Gene Autry Show* (1950-56) and *The Adventures of Champion* (1955-56). A masterful merchandiser, he developed a lucrative and hugely successful lines of clothes, comic books, children's books, and toys, while at the same time managing and touring with his own rodeo company. In addition to his country songs, Autry wrote numerous other popular songs, including "Frosty the Snowman," "Peter Cottontail," and, most famously, the enduring "Rudolph the Red-Nosed Reindeer." Thanks to his financial success, Autry was able to buy the California Angels baseball team and served as a vice president of the American Baseball League for many years.

Like Tom Mix before him, Autry's public image stressed strong morals and honesty, and fueled the romantic image of the American cowboy. His ten-point "Cowboy Code" featured such sincere advice as "The Cowboy must never shoot first, hit a smaller man, or take unfair advantage"; "He must not advocate or possess racially or religiously intolerant ideas"; "He must neither drink nor smoke"; and "The Cowboy is a patriot." Gene Autry was elected to the Country Music Hall of Fame 1969, 29 years before his death at the age of 91.

Avalon, Frankie (1939—)

During the late 1950s, as record producers and promoters rushed to capitalize on the potent youth market, they aggressively sought out clean-cut young males to mold into singing stars. Seeking to fill a void that had been created in part by the absence of Elvis Presley, who was then a G.I. stationed in Germany, they purposely toned down the controversial aspects of the new musical form, rock 'n' roll. Unlike

Frankie Avalon and Annette Funicello

Presley, who emoted a powerful sexuality, the manufactured teen idols elicited a friendly, non-threatening demeanor. The engaging Frankie Avalon, whose skinniness prompted comparisons to an earlier generation's teen idol, Frank Sinatra, perfectly filled that bill. As he once explained, "I was one of those guys who there was a possibility of dating . . . I had a certain innocence."

A native of South Philadelphia, Francis Thomas Avallone was just eleven when he talked his father into buying him a thirty-five-dollar pawn shop trumpet (after seeing the 1950 Kirk Douglas movie, *Young Man with a Horn*). Avalon went on to appear in local talent shows, including the program *TV Teen Club*. The show's host, Paul Whiteman, christened him "Frankie Avalon."

A meeting with singer Al Martino led to an introduction to a New York talent scout, who in turn arranged an audition with Jackie Gleason. After appearing on Gleason's TV show, additional national shows followed, as did a contract with an RCA subsidiary label. For his first two records—the instrumentals "Trumpet Sorrento" and "Trumpet Tarantella"—the performer was billed as "11-year-old Frankie Avalon." He was twelve when he became the trumpet player for the South Philadelphia group, Rocco and the Saints, which also included Bobby Rydell on drums. As a member of the Saints, Avalon

performed at local clubs, on local television, and even toured Atlantic City. The talented trumpeter also sometimes doubled as the group's singer. As a result of one such performance he caught the attention of Bob Marcucci and Peter De Angelis, owners of Chancellor Records. In 1958 Avalon signed a contract with their label, and went on to be managed by Marcucci, who also handled Fabian.

Though his first two Chancellor records were unsuccessful, Avalon enjoyed a hit with his third effort, "Dede Dinah," which he performed while pinching his nose for a nasal inflection. Though the record went gold, it was with the 1959 "Venus" that Avalon enjoyed his biggest success. Recorded after nine takes, and released three days later, it sold more than a million copies in less than one week.

Along with other heartthrobs of the day, Avalon became a frequent guest artist on *American Bandstand*. And like his teen idol brethren, including Philadelphia friends Fabian and Rydell, he headed to Hollywood where he was given co-starring roles alongside respected veterans. In *Guns of the Timberland* he shared the screen with Alan Ladd; in *The Alamo* he joined an all-star cast, led by John Wayne.

In the early 1960s, Avalon used his affable, clean-cut image to clever effect as the star and a producer of the *Beach Party* movies, in which he was sometimes romantically teamed with another former 1950s icon and close friend Annette Funicello. Made by the youth-oriented American International Pictures, the movies were filmed in less than two weeks, on shoestring budgets, and featured a melange of robust young performers, musical numbers, surfing, drag racing, and innocuous comedy. Despite the preponderance of bikini-clad starlets, the overall effect was one of wholesome, fun-loving youth. But in fact, the young people of the decade were on the verge of a counter-culture revolution. When it happened, Avalon, like many others who got their start in the 1950s, was passé.

He attempted to change his image by appearing in low-budget exploitation movies such as the 1970 *Horror House*. But despite his rebellion at what he once called "that damn teen idol thing," it was precisely that reputation that propelled his comeback. In the 1976 movie version of *Grease*, which celebrates the 1950s, Avalon seemingly emerges from heaven to dispense advice in the stand-out musical number, "Beauty School Dropout." Avalon's cameo appearance generated so much attention that he went on to record a disco-version of "Venus." He further capitalized on his early image with the 1987 movie, *Back to the Beach*, in which he was reunited with Funicello.

Avalon, who is the father of eight and a grandfather, has also capitalized on his still-youthful looks to market a line of beauty and health care products on the Home Shopping Network. In addition, he performs in the concert tour "The Golden Boys of Rock 'n' Roll," in which he and Fabian and Rydell star.

Avedon, Richard (1923—)

Richard Avedon added new depth to fashion photography beginning in 1945. His fashion photographs—in *Harper's Bazaar*, 1945-66, and in *Vogue*, 1966-90—were distinctive in expressing both motion and emotion. Avedon imparted the animation of streets, narrative, and energy to the garment. His most famous fashion image, *Dovima with Elephants* (1955), is an unabashed beauty-and-the-beast study in sexuality. By the 1950s, Avedon also made memorable non-fashion images, including a 1957 portrait of the Duke and Duchess of Windsor in vacant melancholy, 1960s heroic studies of Rudolf Nureyev dancing nude, and 1960s epics of the civil rights movement and mental patients at East Louisiana State Hospital. Although Avedon's photographs moved away from fashion toward the topical, social, and character-revealing, the common theme of all his photography has been emotion, always aggressive and frequently shocking.

The Avengers

The Avengers (which appeared on ABC from 1961 to 1969) has the distinction of being the most popular British television series to run on an American commercial network, and was the first such series to do so in prime time. Sophisticated, tongue-in-cheek, but never camp or silly, *The Avengers* was also one of the first and best of the soon-to-be-popular television spy series, and varied in tone from crime melodrama to outright science fiction. Every episode starred John Steed (Patrick Macnee), an urbane British intelligence agent who heads a mysterious elite squad known as the Avengers, so named for their propensity to right wrongs.

The first four seasons of the show were not run in the United States, but were videotaped and aired only in Britain. The series began as a follow-up to *Police Surgeon* (1960), which starred Ian Hendry as a doctor who helped the police solve mysteries. Sydney Newman, the head of programming at ABC-TV in England, wanted to feature Hendry in a new series that would pair him as Dr. David Keel with a secret agent, John Steed, in a fight against crime.

Patrick Macnee had had a successful acting career in Canada and Hollywood, but when he returned to England, he was unable to find work as an actor. An old friend got him a position as an associate producer on *The Valiant Years* (1960-63) about Winston Churchill, and Macnee soon found himself producing the entire show. He planned on remaining a producer when he was asked to star in *The Avengers* (on which he initially received second billing) and asked for a ridiculously high salary, expecting the producers to reject it. When they didn't, Steed was born.

Though he initially used a gun, Macnee quickly altered the character, which he saw as a combination of the Scarlet Pimpernel, his father, Ralph Richardson, and his C.O. in the Navy. As the series went on, Steed appeared more and more as a well-dressed, upper crust fop with more than a soupçon of charm, dash, and derring-do. Apart from

his fighting skills, with the third season his chief weapon became his umbrella, which he used variously as a camera, a gas projector, a sword case, and a tape recorder.

After two seasons, Hendry bowed out and Honor Blackman was hired to be Steed's first female sidekick, anthropologist Cathy Gale, whom Blackman modeled after *Life* magazine photographer Margaret Bourke-White with a dash of Margaret Mead. Initially, Gale was given a pistol which could be hidden in her make-up kit or under her skirt, but it was eventually decided this was too unwieldy. Miniature swords and daggers were briefly tried when Leonard White urged that Blackman take up judo seriously and arranged for her to be trained by Douglas Robinson.

The action-oriented series required that Blackman have at least one fight scene in every episode, and Blackman soon became adept at judo. White wanted Cathy to be pure, a woman who fought bad guys because she cared so much about right and justice, as a contrast to Steed's wicked, devilish, and saucy nature. Blackman added to the character by dressing her in leather simply because she needed clothes that would not rip during the fight scenes (at the beginning of the series, she once ripped her trousers in close-up). Because the only thing that went with leather pants were leather boots, she was given calf-length black boots and inadvertently started a kinky fashion trend. (In fact, Macnee and Blackman released a single celebrating "Kinky Boots" on Decca in 1964).

However, after two years, Blackman likewise decided to call it quits to concentrate on her movie career (she had just been cast as Pussy Galore in *Goldfinger* [1964]). The surprised producers searched frantically for a replacement, at first choosing Elizabeth Shepherd, but after filming one-and-a-half episodes she was replaced by Diana Rigg, who played Mrs. Emma Peel (named after the phrase "M Appeal" for "Man Appeal," which was something the character was expected to have). Rigg and Macnee proved to have tremendous chemistry and charm together, with their sexual relationship largely left flirtatious and ambiguous. Rigg, like Blackman, played a tough, capable female fighter who possessed both high intelligence and tremendous sex appeal. Her outlandish costumes (designed by John Bates) for the episodes "A Touch of Brimstone" and "Honey for the Prince" were especially daring (and in fact, ABC refused to air these and three other episodes of the British series, considering them too racy, though they later appeared in syndication).

The two years with Diana Rigg are universally considered the best in the series, which ABC in the United States agreed to pick up provided the episodes were shot on film. Albert Fennell now produced the series and served as its guiding light, with writers Brian Clemens and Philip Levene writing the majority and the best of the episodes. These new shows became more science-fiction oriented, with plots about power-mad scientists bent on ruling the world, giant man-eating plants from outer space, cybermen, androids and robots, machines that created torrential rains, personalities switching bodies, people being miniaturized, and brainwashing. The fourth season and all subsequent episodes were filmed in color.

Commented Clemens about the series, "We admitted to only one class—and that was the upper. Because we were a fantasy, we have not shown policemen or coloured men. And you have not seen anything as common as blood. We have no social conscience at all." Clemens also emphasized the Britishness of the series rather than trying to adapt it to American tastes, feeling that helped give the show a unique distinction.

Rigg called it quits after two seasons, and she also joined the Bond series, having the distinction of playing Mrs. James Bond in *On*

Her Majesty's Secret Service (1969). The series limped on for a final season with Steed's new partner Tara King (played by Linda Thorson), also known as Agent 69, who always carried a brick in her purse. The last season also introduced us to Mother (Patrick Newell), Steed's handicapped boss, and his Amazonian secretary Rhonda (Rhonda Parker). The running gag for the season was that Mother's office would continually turn up in the most unlikely of places and the plots were most often far-fetched, secret-agent style plots.

The series later spawned a stageplay, *The Avengers on Stage*, starring Simon Oates and Sue Lloyd in 1971, a South African radio series, a series of novel adventures, a spin-off series, *The New Avengers* (starring Macnee, Gareth Hunt, and Joanna Lumley) in 1976, and finally a 1998 big-budgeted theatrical version starring Ralph Fiennes as John Steed and Uma Thurman as Emma Peel. The latter was greeted with universally derisive reviews and was considered a debacle of the first order as it served to remind everyone how imitators had failed to capture the charm, wit, escapism, and appeal of the original series, which has long been regarded as a television classic.

Avery, Tex (1908-1980)

Tex Avery, one of the most important and influential American animators, produced dozens of cartoon masterpieces primarily for the Warner Brothers and Metro-Goldwyn-Meyer (MGM) studios from the 1930s to the 1950s. Frenetic action, perfect comedic timing, and a never-ending stream of sight gags characterize his short, animated films. He is credited with providing the most definitive characterization of Bugs Bunny and creating such classic cartoon figures as Droopy, Chilly Willy, Screwy Squirrel, and Red Hot Riding Hood. Avery was most intrigued by the limitless possibilities of animation and filled his work with chase sequences, comic violence, and unbelievable situations that could not be produced in any other medium. Avery's manic style was best described by author Joe Adamson when he stated, "Avery's films will roll along harmlessly enough, with an interesting situation treated in a more or less funny way. Then, all of a sudden, one of the characters will lose a leg and hop all over the place trying to find it again."

Born Frederick Bean Avery on February 26, 1908, in Taylor, Texas, a direct descendant of the infamous Judge Roy Bean, Avery hoped to turn his boyhood interest in illustration into a profession when he attended the Chicago Art Institute. After several failed attempts to launch a syndicated comic strip, he moved to California and took a job in Walter Lanz's animation studio. Avery's talent as an

animator led him to join the Warner Brothers studio in 1935. There, he became a leading member of a unit including now legendary animators Chuck Jones and Bob Clampett. From their dilapidated headquarters on the studio lot, which they dubbed the Termite Terrace, the young artists set about creating a new cartoon sensibility which was more adult, absurd, and filled with slapstick. Avery and his crew's characters were more irreverent than those of their Disney competitors and the cartoons themselves were marked by direct addresses to the audience, split screen effects, and abrupt changes in pacing. Avery also insisted that their films acquire a more satiric tone so as to comment on contemporary popular culture. An early example of this satire is found in *I Love to Singa* (1936), which features "Owl Jolson" in a take-off of *The Jazz Singer*. Avery constantly reminded his viewers of the illusionary nature of animation. Unlike Disney, which was known for its spectacle, Avery's Warner Brothers films highlight their unreality. This abundant self-reflexivity is considered an early example of animated postmodernism.

Avery's talent also extended into the area of characterization. He, along with Jones and Clampett, refined an existing character named Porky Pig and transformed him into the first popular Looney Tunes character of the 1930s. In a 1937 cartoon called *Porky's Duck Hunt* he introduced Daffy Duck, who became so popular that he soon earned his own cartoon series. Avery's greatest contribution to animation, however, was his development of Bugs Bunny. A crazy rabbit character had appeared in several Warner cartoons beginning in 1938, but with few of the later Bugs personality traits. Animation historians regard Avery's 1940 cartoon *A Wild Hare* as the moment Bugs Bunny was introduced to America. Avery had eliminated the earlier rabbit's cuteness and craziness and, instead, fashioned an intelligent, streetwise, deliberate character. It was also in this cartoon that Avery bestowed upon Bugs a line from his Texas childhood—"What's up, doc?"—that would become the character's catchphrase. Avery's style became so important to the studio and imitated by his colleagues that he became known as the "Father of Warner Bros. Cartoons."

Despite all his success at Warner Brothers, Avery's most creative period is considered to be his time producing MGM cartoons from 1942 to 1954. In these films he dealt less with characterization and concentrated on zany gags. This fast-paced humor was developed to accommodate Avery's desire to fit as many comic moments as possible into his animated shorts. The MGM films feature nondescript cats and dogs in a surreal world where anything can, and does, happen. The 1947 cartoon *King-Size Canary* is regarded as Avery's masterpiece and reveals the lunacy of his later work. The film features a cat, mouse, dog, and canary each swallowing portions of "Jumbo-Gro." The animals chase each other and grow to enormous heights. Finally, the cat and mouse grow to twice the earth's size and are unable to continue the cartoon. They announce that the show is over and simply wave to the audience. Avery once again revealed the absurdities inherent to the cartoon universe.

In 1954, Avery left MGM and began a career in commercial animation. He directed cartoon advertisements for Kool-Aid, Pepsodent, and also produced the controversial Frito Bandito spots. Indeed, his animation has been enjoyed for more than half a century due to its unique blend of absurdity, quick humor, and fine characterization. He inspired his peers and generations of later animators to move their art form away from the saccharine style embodied by Disney. He revealed that animation is truly limitless. Because of his ability to create cartoons with an adult sophistication mixed with intelligent

and outlandish humor, he has often been characterized as a "Walt Disney who has read Kafka."

Avon

American cosmetic and gift company Avon Products, Inc. is known for its eye-catching, digest-sized catalogs shimmering with fresh-faced models wearing reasonably priced makeup and advertising costume jewelry, colognes, and an array of other items. Their goods are backed by a satisfaction guarantee and delivered by a friendly face, usually female, who earns or supplements an income by the commission received. Avon's retail concept, symbolized by the direct-sales "Avon lady," is a cherished part of American culture, and now, a recognized addition to countries around the globe as well. In the 1990s, Avon was the world's top direct-sales cosmetics firm, with a total work force of 2.6 million in over 130 countries, producing sales of \$4.8 billion (\$1.7 billion in the United States alone). Ninety percent of American women have purchased Avon products in their lifetime, most likely because of the convenience, price, and quality, but perhaps also due to the history of female fraternity and empowerment that Avon promotes. The company's overwhelmingly female employee base and tradition of visiting customers in their homes allowed women control of their own earnings long before it was widely accepted.

Avon was founded in 1886, and Mrs. P.F.E. Albee of Winchester, New Hampshire, originated the idea of going door-to-door to push her wares. The company offered a money-back guarantee on their products and the salespeople nurtured relationships with customers, minimizing the need for advertising. The company prospered with their pleasant, neighborly image and low-cost, dependable products. However, in the 1970s and 1980s Avon's fortunes declined when a number of unsavvy business moves hurt sales and provoked an exodus of salespeople. At that time, the company also suffered from its outdated approach: Women were no longer waiting at home for the doorbell to ring; they were at work all day. In 1993, Avon began boosting morale and incentives for salespeople, then updated its image, and in 1998 launched a \$30 million advertising campaign. The company recruited a bevy of new representatives who would sell in offices and other business settings, and they focused on a more desirable product line. In addition, Avon reached out overseas, prompting women in South American, Russia, Eastern Europe, and China to sign up as salespeople. In fact, the number of Avon representatives in Brazil—478,000—is more than twice that of Brazil's army, with 200,000 soldiers. Avon's strategies sharply increased profits and swelled its stock.

Though the cherished but politically incorrect term "Avon lady" is not quite accurate—two percent of the force is male—the company still primarily consists of women selling cosmetics to female friends, family members, neighbors, and coworkers, with 98 percent of its revenue coming from direct sales. Avon used the slogan

Dan Aykroyd (center) with Jane Curtin (left) and Laraine Newman (right) in the popular Conehead skit on *Saturday Night Live*.

“Avon calling!” accompanied by a “ding-dong” doorbell noise when it was known mainly for reaching clients at home before the rise of women in the work force. However, the company in 1996 sold about 50 percent of its goods in the workplace, and branched out to offer a more extensive line of gifts for time-constrained working women. Although Avon has traditionally carried skin care and other hygiene products as well as cologne and jewelry for women, men, and children, in the 1990s it expanded its selection greatly to become a convenient way to shop for knick-knacks, toys, clothing and lingerie, books, and videos.

Though management ranks were off-limits to women until roughly the 1980s, Avon has quickly risen to become known for its respected record in the area of female promotions. In 1997, however, some were rankled when Christina Gold, president of North American operations, was slighted for a promotion to CEO in favor of an outside male candidate. She later resigned. Despite this incident, *Working Woman* magazine still called Avon one of the top female-friendly firms in 1998 due to its largely female employee base and number of corporate women officers. Overall, only three percent of top executives at Fortune 500 companies in 1997 were women. At Avon, on the other hand, over 30 percent of corporate officers are women, and four of the eleven members of the board of directors are women. Avon also has a good record of promoting women, with more

women in management slots—86 percent—than any other Fortune 500 firm. The company is also heavily involved in supporting research for breast cancer.

Aykroyd, Dan (1952—)

Actor and writer Dan Aykroyd achieved stardom as a member of the original *Saturday Night Live* (SNL) “Not Ready for Prime Time Players.” During his tenure on SNL, he created some of the show’s

classic skits and impersonations. He also memorably teamed up with SNL's John Belushi to perform as Elwood "On a Mission from God" Blues, one half of the "The Blues Brothers" band. Aykroyd is one of the busiest actors on screen. Since SNL, Aykroyd has appeared in more than twenty movies, including *Ghostbusters* (1984), which he also wrote, *Driving Miss Daisy* (1989), and two movies based on the SNL act, *The Blues Brothers* (1980) and *Blues Brothers 2000* (1998). He also stars, as an ex-biker priest, in the TV sitcom *Soul Man*, and fronts a successful syndicated series, *Psi Factors*. Additionally, he is

also a highly productive writer, continuing to pen some of Hollywood's most successful comedies.

—John J. Doherty

B

“B” Movies

A “B” movie, according to industry lore, is a movie in which the sets shake when an actor slams the door. Although it has come to mean any low-budget feature that appeals to the broadest possible audience, the term “B” movies was first applied to movies of the 1930s and 1940s that were made quickly, cheaply, in black-and-white, usually without notable stars, and usually with a running time between 60 and 80 minutes, in order to fill out the second half of a double feature. During the Great Depression, the movie business was one of the few businesses earning profits, and many distributors competed for the patronage of increasingly frugal moviegoers by offering them more for their money: two films for the price of one, plus cartoons, a newsreel, and several trailers. The practice began in 1932, and by the end of 1935, 85 percent of the theaters in the United States were playing double features. Some suggest the “B” stands for “bread and butter,” others suggest “block-booking,” but most likely “B” was chosen simply to distinguish these films from the main, or “A,” features. At first only “Poverty Row” studios, such as Republic, Monogram, Majestic, and Mayfair, produced “B” movies, but soon all the major studios were producing their own “B”’s in order to fill the increased demand. In the 1940s, with moviegoers seeking escapism from a world at war, theater attendance reached an all-time high; of 120 million Americans, 90 million were attending a film every week, and many theaters changed their fare two or three times weekly. During this time, the business of “B” moviemaking reached its artistic and commercial apex, with Universal, Warner Brothers, Twentieth-Century Fox, Columbia, RKO, and Paramount all heavily involved in production. For the first half of the 1940s, Universal alone was producing a “B” movie a week. In 1942, a number of “B” units were set up at RKO, with Val Lewton assigned to head one of them. According to his contract, Lewton was limited to horror films with budgets not to exceed \$150,000, to be shot in three weeks or less, with an average running time of 70 minutes—but within these confines, Lewton produced such classics as *Cat People*, *Curse of the Cat People*, *The Seventh Victim*, and *Isle of the Dead*. A common practice for “B” directors was to shoot their films on the abandoned sets of “A” films, and *Cat People* (which cost \$134,000 and grossed over \$3 million) was shot on the abandoned set of Orson Welles’ second film, *The Magnificent Ambersons*.

What separates “A”’s from “B”’s has little to do with genre and everything to do with budget. Film noir, Westerns, straight detective stories, comedies, and other genres had their “A” and “B” versions—*The Maltese Falcon* was an “A” while *The House of Fear* was a “B.” At the studios making both “A”’s and “B”’s, specific film units were budgeted certain limited amounts to quickly produce films generally too short to be feature films. But just because these films were being churned out doesn’t mean that some of them weren’t even better received by audiences than the big-budget, high-minded “A” features. Some are now considered classics. *Detour* (1945) has become a cult noir favorite, and *The Wolf Man* (1941) is one of the best horror films ever made. The award-winning *The Biscuit Eater* (1940) was distinguished by its location in Albany, Georgia, deep in the South’s hunting country, with Disney producing its “A” version 32 years later. Successful “A”’s often inspired sequels or spinoffs that

might be “A”’s or “B”’s. *King Kong* and *Dead End* were “A” films, while *Son of Kong* and the series of *Dead End Kids* films spun off from *Dead End* were all “B”’s. *Frankenstein* was an “A,” but then so were *The Bride of Frankenstein* and *Son of Frankenstein*. It all boiled down to the film’s budget, length, stars and, ultimately, whether audiences saw the film first or second during an evening out. Because the “B”’s were not expected to draw people into theaters—that was the job of the “A”’s—these films were able to experiment with subjects and themes deemed too much of a gamble for “A” films; *Thunderhoof* showed sympathetic Indians, *Bewitched* involved multiple personality disorder, and *The Seventh Victim* touched on Satan worship. Technicians were forced to improvise with lighting, sets, and camera angles in order to save money, and the more successful of these experiments carried over into “A” films.

Many “B”’s were parts of series. More than simple sequels, these were more like the James Bond series or a television series of later decades. In the 1980s and 1990s, a successful film might have two or three sequels but a single old-time “B” movie series might include up to 30 or 40 films. Besides the *Dead End Kids* series (which begat the *Bowery Boys* and *East Side Kids* series), there were *Sherlock Holmes*, *Dick Tracy*, *Charlie Chan*, *Mr. Moto*, *Mr. Wong*, *Boston Blackie*, *Michael Shayne*, *The Whistler*, *The Saint*, *The Falcon*, *The Lone Wolf*, *Tarzan*, *Jungle Jim*, the *Mexican Spitfire* and *Blondie*, to name but a few. The *Sherlock Holmes* series produced a number of classic films, and many film buffs still consider Basil Rathbone and Nigel Bruce the definitive *Holmes* and *Watson*. The *Holmes* series took an odd turn after the start of World War II, with the turn-of-the-century supersleuth and his loyal assistant suddenly working for the Allies against the Nazis. A few of the series, such as the *Crime Doctor* films, were based on successful radio shows, while most came from books or were sequels or spinoffs from successful “A” films. For example, *Ma and Pa Kettle* first appeared as minor rustic characters in the “A” hit *The Egg and I* before being spun off into their own series.

Most of the studios used the “B”’s as a farm team, where future actors, actresses, writers, and directors could get their start and hone their craft before moving up to the majors. Frequently, young actors who were on their way up worked with older actors, who, no longer finding roles in “A” movies, were on their way down. John Wayne, Susan Hayward, and Peter Lorre appeared in a number of “B” films. Director Robert Wise’s first film was the aforementioned *Curse of the Cat People*, though he is better known for *The Day the Earth Stood Still*, *The Sand Pebbles*, *The Sound of Music*, and *West Side Story*. “B” director Fred Zinneman went on to direct *High Noon*, *From Here to Eternity*, and *A Man for All Seasons*. Other noted directors beginning in “B”’s include Mark Robson (who later directed *Von Ryan’s Express*), Edward Dmytryk (*The Caine Mutiny*) and Anthony Mann (*El Cid*).

In the mid-1940s, theater attendance started waning, and Universal was hit quite hard. In a November 1946 shake-up, the studio attempted to turn things around by shutting down all of its “B” film units and announcing that, henceforth, it would be making only prestige pictures. What ultimately put an end to the “B”’s, however, was the Justice Department and the U.S. Supreme Court. On May 3, 1948, in *U.S. v. Paramount Pictures* (334 U.S. 131), the high court

found that Paramount, Columbia, United Artists, Universal, Loew's, and others had violated antitrust laws by engaging in price-fixing conspiracies, block-booking and blindselling, and by owning many of the theater chains where the films were shown, thereby stifling competition. "It is clear, so far as the five major studios are concerned, that the aim of the conspiracy was exclusionary, i.e., that it was designed to strengthen their hold on the exhibition field," wrote Justice William O. Douglas. The studios agreed to sell off their total of 1,400 movie theaters, though it took them a few years to do so. With theater owners then acting independently and free to negotiate, an exhibitor could beat the competition by showing two "A"s, so the market for "B"s quickly dried up. The days of guaranteed distribution were over, though with television coming around the corner, it is doubtful the "B" industry would have lasted much longer in any case.

Once the "B" market dried up, there were still moviemakers with limited budgets who carried on the grand tradition of guerrilla filmmaking. Purists would not use the term "B" film to describe their output; in fact, most purists strenuously object when the term is used for anything other than the "second feature" short films of the 1930s and 1940s. These new low-budget films were usually exploitive of current social issues, from teenage rebellion (*The Wild Angels*) to drugs (*The Trip*) to sexual liberation (*The Supervixens*) to black power (*Shaft*). The name Roger Corman has become synonymous with this type of film. The book *The "B" Directors* refers to Corman as "probably the most important director of 'B' films," yet Corman may be one of those purists who objects to the use of the term "B" movies being applied to his work. In a 1973 interview reprinted in *Kings of the Bs*, Corman said, "I'd say I don't make B movies and nobody makes B movies anymore. The changing patterns of distribution, and the cost of color film specifically, has just about eliminated the B movie. The amount of money paid for a second feature is so small that if you're paying for color-release prints, you can't get it back. You can't get your negative costs back distributing your film as a B or supporting feature." Corman said every film is made in an attempt to make it to the top half of the bill, with those that fail going to the bottom half. He admitted that the first one or two films he made were "B"s—though film historians who aren't purists still consider him the King of the "B"s. With the widespread popularity of drive-ins in the 1950s and 1960s, many of his films not only appeared as second features, but as third or fourth features.

Working as a writer/producer/director for American International Pictures, Allied Artists, and other studios in the 1950s and 1960s, Corman's output was phenomenal; between 1955 and 1970, he directed 48 features, including such classics as *The House of Usher*, *The Pit and the Pendulum*, *The Premature Burial*, *The Wild Angels*, and *The Trip*. Nearly all of these films were directed on minuscule budgets at breakneck speed; his *The Little Shop of Horrors* was completed in two and a half days. In 1970, he began his own company, New World Pictures, which not only produced "B" films and served as a training ground for younger filmmakers, but also distributed both "A" and "B" films. Corman produced one of Martin Scorsese's first films, *Boxcar Bertha*, one of Francis Ford Coppola's first films, *Dementia 13*, and Peter Bogdanovich's first film, *Targets*. Jack Nicholson appeared in *The Little Shop of Horrors* and scripted *The Trip*, and while filming *The Trip*, Corman allowed actors Peter Fonda and Dennis Hopper to direct some second unit sequences, just before they went off to make *Easy Rider*, another low-budget classic. James (Titanic) Cameron began his film career at New World, and Jonathan Demme's first two films were New World's

Caged Heat and *Crazy Mama*. Demme showed his appreciation to Corman by giving him acting roles in *Silence of the Lambs* and *Philadelphia*, just as Coppola gave Corman a role in *The Godfather: Part II*. According to Corman, after a couple of decades in Hollywood, a veteran filmmaker who is any good will have moved onto bigger budget films; if he is still working in "B"s, the best you can expect from him is a competent "B." "And what I've always looked for is the "B" picture, the exploitation picture, that is better than that, that has some spark that will lift it out of its bracket," Corman said, explaining why he liked employing younger filmmakers. When he allowed Ron Howard to direct his first feature, *Grand Theft Auto*, for New World, Corman told the young director, "If you do a good job for me on this picture, you will never work for me again." A 1973 *Los Angeles Times* article suggested that Corman was doing more for young filmmakers than the entire American Film Institute.

While it may be easy to dismiss the "B"s of the 1930s and 1940s or Roger Corman's films as popular trash, even trash itself has undergone a significant reappraisal in recent years. In her seminal essay "Trash, Art, and the Movies," film critic Pauline Kael said, "Because of the photographic nature of the medium and the cheap admission prices, movies took their impetus not from the desiccated imitation European high culture, but from the peep show, the Wild West show, the music hall, the comic strip—from what was coarse and common." She argued that, while many universities may view film as a respectable art form, "It's the feeling of freedom from respectability we have always enjoyed at the movies that is carried to an extreme by American International Pictures and the Clint Eastwood Italian Westerns; they are stripped of cultural values. Trash doesn't belong to the academic tradition, and that's part of the *fun* of trash—that you know (or *should* know) that you don't have to take it seriously, that it was never meant to be any more than frivolous and trifling and entertaining." While the "A" film units were busy making noble, message films based on uplifting stage successes or prize-winning novels, the "B" film units were cranking out films that were meant to be enjoyed—and what's wrong with enjoyment? Isn't enjoyment exactly why we started going to movies in the first place, not to be preached to but to get away from all the preaching, to enjoy the clever plot twist or intriguing character or thrilling car chase or scary monster? Over time, trash may develop in the moviegoer a taste for art, and taking pleasure in trash may be intellectually indefensible but, as Kael argues, "Why should pleasure need justification?" Acclaimed writer-director Quentin Tarantino had his biggest success with *Pulp Fiction*, the title of which refers to the literary equivalent of "B" movies: less respectable fiction printed on cheap paper, sold for a dime, and containing a heady mix of violence, black humor, criminals swept along by fate, familiar scenarios with unexpected twists, and postmodern irony. Most of the film covers the same ground as some of Corman's films, and as Tarantino has said of Corman, "He's the most. That's all there is to say. I've been a fan of his films since I was a kid."

Just as importantly, "B" movies, and particularly Corman, demonstrated to a whole new generation of filmmakers that films could be made quickly and cheaply. In fact, with so many studios being run by greedy corporations looking for the next mass-appeal blockbuster, the independent filmmaker may be one of the last refuges of true cinema art. Films like *Reservoir Dogs*, *Blood Simple*, and *El Mariachi* owe a lot to "B" films for their subject matter, but they owe perhaps even more to "B"s for proving that such films can be made. Other films, such as *sex, lies and videotape*, *In the Company*

of *Men, Pi, Ruby in Paradise*, and *Welcome to the Dollhouse*, may address subjects that make them more “arty” than your typical potboiler, but perhaps they never would have been made if Corman and the other “B” moviemakers hadn’t proven that guerrilla filmmaking was still alive and well in the waning years of the twentieth century.

Babar

Perhaps the best known elephant in the world, Babar was born in France in 1931. He was first seen in a children’s book titled *Histoire de Babar*, written and illustrated by painter and first-time author Jean de Brunhoff. It told the story of a young elephant, orphaned when a hunter killed his mother, who traveled to Paris. Babar became a well-dressed gentleman and took to walking on his hind legs, wearing a green suit and a bowler hat. By the end of the book he had married Celeste and was king of an imaginary African country. Jean de Brunhoff died in 1937 and after the Second World War his eldest son, Laurent, resumed the series. He drew and wrote in a manner close to that of his father. In addition to Babar and his queen, the books feature the couple’s four children as well as the Old Lady and Zephir the monkey. The books feature a solid family structure, strong female characters, and lessons on the choices children must make to become decent people.

Published in America as *The Story of Babar*, the story became a hit and served as a foundation for an impressive quantity of books, toys, and merchandise. Beginning in the 1980s, the creation of several Babar children’s videos bolstered the character’s popularity. The Canadian animation studio, Nelvana, produced a popular television cartoon show that continued to be popular into the 1990s. Kent State University in Ohio houses an large archive of Babar materials.

Baby Boomers

“For many a family, now that prosperity seems to be here, there’s a baby just around the corner.” This is how the April 2, 1941 issue of *Business Week* described the upcoming demographic phenomenon that would come to be known as the “baby boom.” Between the years of 1946 and 1964, 78 million babies were born in the United States alone, and other countries also experienced their own baby booms following World War II. The baby-boom generation was the largest generation yet born on the planet. Other generations had received nicknames, such as the “lost generation” of the 1920s, but it took the label-obsessed media of the late twentieth century combined with the sheer size of the post-World War II generation to give the name “baby boomers” its impact.

Since those born at the end of the baby boom (1964) could, in fact, be the children of those born at the beginning (1946), many consider the younger baby boomers part of a different generation. Some of those born after 1960 call themselves “thirteeners” instead, referring to the thirteenth generation since the founding of the United States.

Variouly called the “now generation,” the “love generation,” and the “me generation” among other names, the baby boomers have molded and shaped society at every phase, simply by moving through it *en masse*. Demographers frequently describe the baby boomers’ effect on society by comparing it to a python swallowing a pig. In the same way that peristalsis causes the huge lump to move down the body of the snake, the huge demographic lump of baby boomers has been squeezed through its societal phases. First it was the maternity wards in hospitals that were overcrowded, as mothers came in unprecedented numbers to give birth the “scientific” way. Then, in the 1950s, swollen school enrollment caused overcrowding, resulting in the construction of new schools. The 1950s and 1960s also saw the institutions of juvenile justice filled to capacity, as the term “juvenile delinquent” was coined for those who had a hard time fitting into the social mold. By the 1960s and 1970s, it was the colleges that were overfilled, with twice the number of students entering higher education as the previous generation. In the 1970s and 1980s, the job markets began to be glutted, as the young work force flooded out of colleges, and by the 1990s housing prices were pushed up as millions of baby boomers approaching middle age began to think of settling down and purchasing a house.

Giving a unified identity to any generational group is largely an over-simplified media construct, and, as with most American media constructs, the baby boomer stereotype refers almost exclusively to white middle-class members of the generation. Poor baby boomers and baby boomers of color will, in all likelihood, not recognize themselves in the media picture of the indulged suburban kid-turned college radical-turned spendthrift yuppie, but it is not only the white and the affluent who have shaped their generation. The revolutionary vision and radical politics that are most closely associated with young baby boomers have their roots in the civil rights movement and even in the street gangs of poor urban youth of the 1950s. In addition, the African American and Latino music that emerged during the boomer’s formative years continued to influence pop music at the end of the century. Even though their lives may be vastly different, it cannot be

denied that members of a generation share certain formative experiences. The baby boomers' shared experiences began with its parental generation.

Raised during the privation of the Great Depression of the 1930s, the parents of the baby boomers learned to be conservative and thrifty and to value security. Because parents were unwilling or unable to bring children into such economic uncertainty, U.S. birth rates had dropped during the depression from 22.4 births per thousand in 1924 to just 16.7 by 1936. Experts and media of the time, fearful of the consequences of an ever-decreasing birth rate, encouraged procreation by pointing out the evils of a child-poor society, some even blaming the rise of Hitler on the declining birth rate.

Beginning as early as 1941, with war on the horizon, the birth rates began to rise. The first four months of 1941 boasted 20,000 more births than the same four months of the previous year. The uncertainties of war prompted many young couples to seize the moment and attempt to create a future by marrying and having children quickly. Those who postponed children because of the war were quick to start families once the war was over. In 1942, 2,700,000 babies had been born, more than any year since 1921. By 1947 the number had leaped to 3,600,000 and it stayed high until 1965, when birth rates finally began to slow. The arrival of "the Pill," a reliable oral contraceptive, plus changing attitudes about family size and population control combined to cause the mid-1960s decline in birth rates.

Following the enormous disruptions caused by World War II, the forces of government and business were anxious to get society back to "normal." A campaign to remove women from the work force and send them back to the home was an integral part of this normalization. Women without husbands and poor women continued to work, but working women were widely stigmatized. During the war, working mothers received support, such as on-site daycare, but by the 1950s the idea of a working mother was unconventional to say the least. Sparked by the postwar prosperity, a building boom was underway. Acres of housing developments outside the cities went perfectly with the new American image of the family—Mom, Dad, and the kids, happily ensconced in their new house in the suburbs. Many white middle-class baby boomers grew up in the suburbs, leaving the inner cities to the poor and people of color.

Suburban life in the 1950s and early 1960s is almost always stereotyped as dull, conventional, and secure. In many ways, these stereotypes contain truth, and some of the roots of the baby boomers' later rebellion lay in both the secure predictability of suburban life and the hypocrisy of the myth of the perfect family. While baby boomers and their nuclear families gathered around the television to watch familial mythology such as *Father Knows Best*, quite another kind of dynamic might have been played out within the family itself. The suburban houses, separated from each other by neat, green lawns, contained families which were also isolated from each other by the privacy which was mandated by the mores of the time. Within many of these families physical, sexual, and emotional abuse occurred; mothers were stifled and angry; fathers were overworked and frustrated. Communication was not encouraged, especially with outsiders, so the baby boomers of the suburbs, prosperous and privileged, grew up with explosive secrets seething just beneath the surface of a shiny facade.

The peace and prosperity of the 1950s and early 1960s also contained another paradox. The atomic bombs that the United States dropped on the Japanese cities of Hiroshima and Nagasaki had opened the door to a new age—the possibility of nuclear annihilation. The baby boomers had inherited another first—they were the first generation to know that humankind possessed the power to destroy

itself. Coupled with the simmering tension of the cold war between the United States and the Union of Soviet Socialist Republics, nuclear war seemed a very real threat to the children of the 1950s. Bomb shelters were built, and schools carried out atomic bomb drills where students learned to hide from nuclear attacks by crawling under their desks. It was not the security of the 1950s, but the juxtaposition of the facade of security with preparation for unimaginable destruction that sowed the seeds of the baby boomers' later revolt. It was a revolt against racism and war, a revolt against conventionality and safety. But most of all, perhaps, it was a revolt against hypocrisy.

While World War II had brought death to thousands of Americans in the military and prosperity to many on the homefront, it had also brought unprecedented opportunity to African Americans. Having worked next to whites in the defense industries, serving next to whites in the armed forces, and having gone abroad and experienced more open societies, American blacks found it difficult to return to their allotted place at the bottom of American society, especially in the segregated South. When the civil rights movement began in the 1950s and 1960s, it attracted young baby boomers, both black and white, to work for justice for African Americans. As the movement began to build, many young white college students came south to participate.

Almost simultaneously, another movement was beginning to build. Though the U.S. government had been sending military advisors and some troops since 1961 to preside over its interests in South Vietnam, it wasn't until 1964 that the war was escalated with bombings and large troop deployments. The war in Vietnam did not inspire the same overwhelming popular support as World War II. As the conflict escalated, and as the brutal realities of war were shown on the nightly television news, opposition to the war also escalated. In 1965, the first large march against the Vietnam war drew an estimated 25,000 protesters in New York City. Within two years, similar protests were drawing hundreds of thousands of people. Though there were war protesters of all ages, it was the baby boomers who were of draft age, and many did not want to go to a distant country few had heard of, to fight in an undeclared war over a vague principle. Draft cards were burned and draft offices were taken over to protest forced conscription. Students held demonstrations and took over buildings at their own colleges to draw attention to the unjustness of the war.

Soon, organizations like Students for a Democratic Society began to broaden the focus of protest. Radicals pointed to the Vietnam war as merely one example of a U.S. policy of racism and imperialism, and called for no less than a revolution as the solution. Militancy became a strong voice in the civil rights movement as well, as organizations like the Black Panthers replaced the call for "equal rights" with a cry of "Black power!" For a number of turbulent years, armed struggle in the United States appeared to be a real possibility.

The other side of militant protest was to be found in the hippie counterculture, who protested the war from a pacifist stand and whose battle cry was "make love not war." Culminating in the "summer of love" and the Woodstock Music Festival of 1969, the hippies' espoused free love and the use of mind expanding drugs as the path to revolution. Many hippies, or "freaks" as they often called themselves, began to search for new forms of spiritual practice, rejecting the hypocrisy they found in traditional religions in favor of "new age" spirituality such as astrology and paganism. Some dropped out of mainstream society, moving to the country and creating communes where they attempted to transcend materialistic values and hierarchical power structures.

Impelled by the general spirit of questioning the oppressive status quo, women began to question their own second-class status in the greater society and even within progressive movements. As they joined together in consciousness raising groups to share previously unspoken grievances, they launched the women's liberation movement. At almost the same moment, homosexuals, tired of accepting the stigma surrounding their lifestyle, began to fight for gay liberation. Together, the black, women's, and gay liberation movements began to change the face of American society. The movements questioned gender roles, the form of the family, and the value priorities that had been handed down from the previous generation.

The music of the 1960s and 1970s is one of the baby boomers' most enduring contributions to American culture. Whether it is the earthy blues-influenced rock 'n' roll of the 1950s, the "Motown beat" soul music of the 1960s, or the rebellious folk-rock and drug-culture acid rock of the late 1960s, the music of the era is still considered *the* classic pop music. Though aging hippies and radicals may be horrified to hear the Beatles' "Revolution" or Janis Joplin's "Mercedes Benz" used as commercial jingles, the usage proves how thoroughly those rebellious years have been assimilated into American society.

If rock 'n' roll, soul, and protest music was the soundtrack of the baby-boom generation, television was its baby-sitter. From the idealized *Leave It to Beaver* families of the 1950s and early 1960s, to the in-your-face realism of the Norman Lear sitcoms of the late 1960s and 1970s, boomers spent much of their youth glued to the medium that was born almost when they were. Many of them would spend much of their adulthood trying to overcome the sense of inadequacy created when no family they would ever be a part of could live up to the fantasies they had watched on television as children. Later, shows like "thirtysomething" would make a realistic attempt to broach some of the issues facing baby boomers as they began the passage into middle age. Nostalgia for boomers' lost youth began almost before they had left it, and shows like *The Wonder Years* allowed boomers and their children to revisit a slightly less sanitized version of nuclear family life in the 1960s suburbs than the sitcoms of the time had offered.

Controversy and innovation came to television as it came to every aspect of American life in the late 1960s and 1970s. *The Smothers Brothers*, *All in the Family*, and the like fought constant battles with censors over political content as well as strong language. The fast-paced visual humor of *Laugh-In* pre-dated the rapid-fire video techniques of 1980s music videos.

Though not as much of a movie-addicted generation as either their pre-television parents or their VCR-oriented children, baby boomers did stand in long lines, when they were children, to watch the latest Walt Disney fantasies, and went as teenagers to the films of teenage rebellion like *Rebel without a Cause* and *West Side Story*. Nostalgia is also a mainstay of the movies made to appeal to grown up baby boomers. *The Big Chill* was a baby boomer favorite, with its bittersweet picture of young adults looking back on their glory days, and movies like *Back to the Future* and *Peggy Sue Got Married* played on every adult's fantasy of reliving the years of youth with the wisdom of hindsight. The fantastic success of the *Star Wars* trilogy, in the late 1970s and early 1980s, was due not only to the millions of children who flocked to see the films, but to their special appeal to baby boomers, combining as they did, new age spirituality with a childlike fantasy adventure.

Baby boomers are stereotyped as eternal Peter Pans, refusing to grow up. As time passed, and baby boomers passed out of youth into

their thirties, they had to learn to assimilate the enormous upheaval that had accompanied their coming of age. Government crackdowns and a more savvy media, which learned to control which images were presented to the public, took much of the steam out of the radical movements. While many radicals remained on the left and continued to work for social change, other baby boomers slipped back into the more conventional societal roles that were waiting for them. The college-educated upper-middle-class boomers found lucrative jobs and an economic boom waiting. They were still affected by the revolution in social mores, which left a legacy of greater opportunity for women and an unprecedented acceptance of divorce. They developed an extravagant lifestyle, which many considered self-indulgent, and which prompted the press to dub them "yuppies," for "young, upwardly mobile professionals."

The yuppies were the perfect backlash to the gentle "flower children" hippies and the angry militants who preceded them as baby boomer stereotypes. Seeming to care for nothing except their own pleasure, the yuppies were portrayed in the press as bribe-eating, Perrier-drinking, BMW-driving snobs, obsessed with their own inner processes. Again, wealthy young boomers were not acting much differently than wealthy young professionals had ever acted—their crime was that there were so *many* of them. Society feared the effect of so many hungry young job hunters, just as later it came to fear the effects of so many house hunters, and, as the economic boom went flat, many workers were laid off.

This fear continues to follow the baby boomers, as dire predictions precede their retirement. The press is full of articles recounting the anger of the younger generation, the so-called "baby busters," who fear they will be saddled with the care of the gigantic lump of boomers as they are squeezed through the tail end of the python. The "greedy geezers" as the press has dubbed them, are expected to cause a number of problems, including a stock market crash, as retiring boomers cash in their investments.

The aging of the baby boomers is sure to be well-documented by the boomers themselves. Spawned by a generation that kept silent on most personal matters, the baby boomers have broken that silence about almost everything. Following them through each stage of their lives have been consciousness raising groups, support groups, therapies, exposes, radio, television talk shows, and self-help books. Having grown up with the negative effects of secrecy, baby boomers want to share everything they experience. Beginning with childhood abuse and continuing through intimate relationships, childbearing, menopause, aging and death, the baby boomers' drive for introspection and communication has brought the light of open discussion to many previously taboo subjects. In literature as well, from Holden Caulfield's rants against "phoniness" in J.D. Salinger's *Catcher in the Rye*, to Sylvia Plath's "confessional" poetry, the trend has been toward exposure of the most inner self. It is perhaps the solidarity created by this communication about shared experiences that has enabled the many social changes that have occurred during the lives of the baby-boom generation.

Throughout their lives, baby boomers have refused to acquiesce to the say-so of authority figures, choosing instead to seek alternative choices, often looking back to pre-technological or non-western solutions. One example of this is the boomer exploration of medical care. Where their parents were much more likely to follow doctors' orders without question, baby boomers have sought more control over their health care, experimenting with treatments non-traditional for Americans, such as naturopathy, homeopathy and acupuncture. The

boomer preference for herbal cures over prescription drugs has resulted in national marketing for herbs that once would have only been available in specialty stores, promising help with everything from memory loss to weight loss.

Though the media invented and popularized the term “baby boomer,” the media itself has always had a love-hate relationship with the generation. While the entertainment industry has been forced by the law of supply and demand to pander to baby boomers in their prime spending years, there has never been a shortage of media pundits attempting to put the boomers in their place, whether with ridicule of their youthful principles or accusations of greed and self-absorption. In reality, all of society has been absorbed by the baby-boom generation’s passage through it. Once the agents for tremendous social change, the boomers are now the establishment as the new millennium begins. The first baby boomer president, Bill Clinton, was elected in 1992. The generation that invented the catch phrase, “Don’t trust anyone over thirty,” will be well into its fifties by the year 2000. It may take many more generations before the real impact and contributions of the post-World War II baby boom will be understood and assimilated into American culture.

—Tina Gianoulis

Babyface (1959—)

The significant position Rhythm and Blues (R&B) held in the mainstream pop charts of the late 1980s can be exemplified in the meteoric rise of singer/songwriter/producer Kenneth “Babyface” Edmonds. He is responsible for numerous gold- and platinum-selling artists, including Toni Braxton and TLC, and hit singles, such as Boyz II Men’s two record-breaking songs “End of the Road” and “I’ll Make Love to You.” The winner of over 40 Billboard, BMI, Soul Train Music and Grammy awards, Babyface has become the master of heartbreak and love songs. He has pushed the visibility of music producers to new levels, illustrated by his phenomenally successful *Waiting to Exhale* soundtrack. His company, LaFace Records, moved Atlanta to the center of R&B music, and has expanded to multimedia productions, beginning with the film *Soul Food*. Babyface personifies the changing possibilities in masculinity for black men, the other side of rap’s rage.

—Andrew Spieldenner

Bacall, Lauren (1924—)

Hollywood icon Lauren Bacall defined sex appeal with a single look and became an instant movie legend. As a starstruck New York teenager, Bacall was discovered by *Harper’s Bazaar* editor Diana Vreeland and featured on the cover at nineteen. When she was brought out to Hollywood to star opposite Humphrey Bogart in *To Have and Have Not*, the twenty-year-old was so nervous while filming that she physically shook. She found that the only way to hold her head still was to tuck her chin down almost to her chest and then look up at her co-star. “The Look” became Bacall’s trademark, and Bogie and Bacall became Hollywood’s quintessential couple, both on and off the screen. The pair filmed two more classics, *Key Largo* and *The Big Sleep*, and also raised a family. After Bogart died of cancer in 1957, Bacall was linked with Frank Sinatra before marrying actor Jason Robards. In the 1960s and 1970s, Bacall returned to her Broadway roots, and won two Tony awards. The personification of Hollywood glamour and New York guts, Lauren Bacall remains a peerless pop culture heroine.

Bach, Richard (1936—)

Richard Bach, a pilot and aviation writer, achieved success as a new age author with the publication of *Jonathan Livingston Seagull*, a novel that Bach maintains was the result of two separate visionary experiences over a period of eight years. Bach's simple allegory with spiritual and philosophical overtones received little critical recognition but captured the mood of the 1970s, becoming popular with a wide range of readers, from members of the drug culture to mainstream Christian denominations.

Jonathan Livingston Seagull (1970) deals with the new age theme of transformation. It is the story of a spirited bird who by trial and error learns to fly for grace and speed, not merely for food and survival. When he returns to his flock with the message that they can become creatures of excellence, he is banished for his irresponsibility. He flies alone until he meets two radiant gulls who teach him to achieve perfect flight by transcending the limits of time and space. Jonathan returns to the flock, gathering disciples to spread the idea of perfection. With a small edition of only 7,500 copies and minimal promotion, the book's popularity spread by word of mouth, and within two years sold over one million copies, heading the New York Times Bestseller List for ten months. In 1973 a Paramount film version, with real seagulls trained by Ray Berwick and music by Neil Diamond, opened to mostly negative reviews.

Bach has been inundated with questions about the book's underlying metaphysical philosophy. Ray Bradbury called it "a great Rorschach test that you read your own mystical principles into." Buddhists felt that the story of the seagull, progressing through different stages of being in his quest for perfect flight, epitomized the spirit of Buddhism, while some Catholic priests interpreted the book as an example of the sin of pride. Many have turned to the novel for inspiration, and passages have been used for important occasions such as weddings, funerals, and graduations. Bach continues to insist that he merely recorded the book from his visions and is not the author. He emphasizes that his usual writing style is more descriptive and ornate and that he personally disapproves of Jonathan's decision to return to his flock.

A direct descendant of Johann Sebastian Bach, Richard David Bach was born in Oak Park, Illinois, to Roland Bach, a former United States Army Chaplain, and Ruth (Shaw) Bach. While attending Long Beach State College in California, he took flying lessons, igniting his lifelong passion for aviation. From 1956-1959 he served in the United States Air Force and earned his pilot wings. In the 1960s he directed the Antique Airplane Association and also worked as a charter pilot, flight instructor, and barnstormer in the Midwest, where he offered plane rides for three dollars a person. During this period, he worked as a free-lance writer, selling articles to *Flying, Soaring, Air Facts*, and other magazines. He also wrote three books about flying which were

Stranger to the Ground (1963), *Biplane* (1966), and *Nothing by Chance* (1969).

Since *Jonathan Livingston Seagull*, he has continued to share his philosophies on life, relationships, and reincarnation in six different books. *Gift of Wings* (1974) is a collection of inspirational essays, most with some connection to flying. The 1977 book *Illusions: The Adventures of a Reluctant Messiah*, which received an American Book Award nomination in 1980, deals with Bach's encounter with Shimode, a self-proclaimed Messiah. *There's No Such Place as Far Away* (1979) tells the story of a child who learns about the meaning of life from an encounter with a hummingbird, owl, eagle, hawk, and seagull on the way to a birthday party. The autobiographical book *The Bridge Across Forever* (1984) discusses the need to find a soul mate and describes Bach's real-life relationship with actress Leslie Parrish, whom he married in 1977. *One* (1988) and *Running from Safety: An Adventure of the Spirit* (1995) use flashbacks to express Bach's philosophies. In *One*, Bach and his wife Leslie fly from Los Angeles to Santa Monica and find themselves traveling through time, discovering the effects of their past decisions both on themselves and others. In *Running from Safety*, Bach is transformed into a nine-year-old boy named Dickie, a representation of his inner child. In 1998, Bach opened a new channel of communication with his followers through his own internet web site where he shares his thoughts and answers questions.

Back to the Future

In the fast-paced comedy *Back to the Future*, Marty McFly (Michael J. Fox) is transported backwards in time to 1955 in a time machine invented by his friend Doc Brown (Christopher Lloyd). He accidentally interrupts the first meeting of his parents (Lea Thompson and Crispin Glover), creating a paradox that endangers his existence. The task of playing Cupid to his parents is complicated because his future mother develops a crush on him. Critics were impressed by this Oedipal theme, and audiences responded to the common fantasy of discovering what one's parents were like as teens. *Back to the Future* (1985) was followed by two sequels—*Back to the Future Part II* (1989) and *Back to the Future Part III* (1990)—and an animated TV series (1991-1993).

—Christian L. Pyle

The Bad News Bears

A fictional children's baseball team, the Bad News Bears, was the focus of three films and a CBS Television series between 1976 and

Michael J. Fox (left) and Christopher Lloyd in a scene from *Back to the Future*.

1979. The first of these films, *The Bad News Bears* (Paramount, 1976), struck an unexpected chord in both children and adults and became a hugely popular and profitable box-office hit. Although vulgar, raucous, and without intrinsic worth, *The Bad News Bears* became culturally significant in the 1970s, thanks to the unmistakable broadside it delivered against the values of American suburbia, and the connection it forged between adult and child audiences. In juxtaposing children and adults, slapstick comedy, and social commentary, the film demonstrated that it was possible to address adult themes through entertainment ostensibly designed for, and made with, children.

Directed by Michael Ritchie from a screenplay by Bill Lancaster (son of actor Burt), the plot of *The Bad News Bears* was simple enough. A local politician concerned with rehabilitating a junior baseball team composed of losers, misfits, and ethnic minorities, persuades beer-guzzling ex-pro Morris Buttermaker (Walter Matthau), now reduced to cleaning pools for a living, to take on the task of coaching the team. After a disastrous first game under Buttermaker's tenure, he recruits an ace pitcher—a girl named Amanda Whurlitzer—and a home-run hitting delinquent named Kelly Leak, whose combined skills carry the team to the championship game. During the game, Buttermaker realizes that he has come to embrace the win-at-all-costs philosophy that he had once despised in Little League coaches, and allows a group of substitute Bears to play the final inning. The team fails to win, but their efforts bring a worthwhile sense of achievement and self-affirmation to the players, which is celebrated at the film's ending.

Benefiting from the expertise of Matthau's Buttermaker, the star presence of Tatum O'Neal, and a string of good one-liners, the film emerged as one of the top grossers of the year, although it was initially attacked in certain quarters for the use of bad language and risqué behavior of its juvenile protagonists. Little League president Peter McGovern wrote a letter to Paramount protesting the use of foul language as a misrepresentation of Little League baseball. However, most adults appreciated the kids' sarcastic wisdom in criticizing the adults' destructive obsession with winning a ball game, and applauded the movie and its message. Furthermore, the inclusion of Jewish, African American, Chicano, and female players on the Bears, and the team's exclusion from the elite WASP-dominated North Valley League, hinted at the racism and bigotry that lay beneath the surface of comfortable suburbia. For their part, children loved the Bears' incorrigible incompetence and their ability to lampoon adults through physical comedy and crude wit. Ultimately, the film and the team criticized an adult world willing to sacrifice ideals, fair play, and even the happiness of its own children to win a game.

Paramount—and the original idea—fell victim to the law of diminishing returns that afflicts most sequels when, hoping to cash in on the financial success of the first film, they hastily made and released two more Bears movies. *The Bad News Bears in Breaking Training* (1977) and *The Bad News Bears Go to Japan* (1978) offered increased doses of sentimentality in place of a message, dimwitted plots, and an unpalatable escalation of the cruder elements and bad language of the original. Without even the benefit of Matthau (*Breaking Training* offered William Devane, as a last-minute to-the-rescue coach; *Japan* Tony Curtis as a con-man promoter), the sequels degenerated into vacuous teen fare for the summer season, alienating the adult support won by the original. Vincent Canby of the *New York Times*, reviewing the third Bears film, summed up the problem in dismissing it as “a demonstration of the kind of desperation experienced by people trying to make something out of a voyage to nowhere.”

By 1979, the *Bad News Bears* could no longer fill movie theaters but CBS nevertheless attempted to exploit the team's remaining popularity in a Saturday morning series called *The Bad News Bears*. Based on the first film but featuring a new cast, the show presented Morris Buttermaker as the reluctant coach of the Hoover Junior High Bears. Most episodes centered on Amanda Whurlitzer's attempts to reinvigorate a romantic relationship between Buttermaker and her mother. The series abandoned Buttermaker's use of alcohol, the Bears' swearing, and any attempt at social commentary, and failed to revitalize the team for future outings.

—Steven T. Sheehan

Baez, Joan (1941—)

Folk singer and icon of 1960s flower-children, Joan Baez sang anthems and ballads that gave voice to the frustrations and longing of the Vietnam War and Civil Rights years. Baez was seen as a Madonna with a guitar, a virginal mother of a new folk movement. As much a political activist as a musician, Baez founded the Institute for the Study of Nonviolence in Carmel Valley, California. Music and politics have gone hand-in-hand for Baez throughout her long career.

Joan Chandos Baez was born on January 9, 1941, in Staten Island, New York, to Scottish-American Joan Bridge Baez and

Walter Matthau (left) and Tatum O'Neal in a scene from *The Bad News Bears*.

Mexican-American Albert Baez. She was the second of three daughters in this multi-ethnic, politically liberal, Quaker family. Her father was a physicist who, on principle, turned down a well-paying military job to work as a professor. The family moved around a great deal, living in several towns in New York and California, and this nomadic childhood was hard for Joan. While at junior high in Redlands, California, she experienced racial prejudice because of her dark skin and Mexican heritage. Most of the other Mexicans in the area were migrant workers and were largely disdained by the rest of the population. This experience caused her to feel alone and scared, but also became one of the sources for her emerging artistic voice.

In 1958, she and her family moved to Boston, where her father took a teaching job at M.I.T. and Joan entered Boston University as a theater major. She hated school and eventually quit, but at about the same time discovered a love for the coffee-house scene. Her father had taken her to Tulla's Coffee Grinder, and from that first visit she knew she had found her niche. The folk music and intellectual atmosphere appealed to her, and she enjoyed its crowd as well. By the age of 19, after playing several Tuesday nights for \$10 a show at Club

47 in Harvard Square, she was discovered by singer Bob Gibson and asked to play with him at the 1959 Newport Folk Festival.

Baez released her eponymous debut in 1960 on the Vanguard label and toured to support it. The following year Vanguard released *Joan Baez—Volume 2*, and in 1962, *Joan Baez in Concert*. All of these first three albums earned Gold Record status. She toured campuses, refusing to play at any segregated venues, and rapidly gained star status. As the civil rights movement and the Vietnam War took center stage in American politics, the views expressed in her music became more strident. Her increasing presence earned her a place on the cover of *Time* in November 1962. Between 1962 and 1964 she headlined festivals, concert tours, and rallies in Washington, D.C., notably Martin Luther King's "March on Washington" in 1963, where she sang "We Shall Overcome." Baez was generally considered queen of the folk scene, with Bob Dylan as king.

Famous for her commitment to nonviolence, inspired both by her Quaker faith and her readings of Ghandi, Baez went to jail twice in 1968 for protesting the draft. That year, she also married antiwar activist David Harris. She played the Woodstock festival while

Joan Baez

pregnant with her only son, Gabriel, the following year. Divorced in 1972, the couple had spent most of their marriage apart from each other, either in jail, on concert tour, or protesting.

While her albums had sold well, Baez didn't have a top-ten hit on the singles chart until 1971, when she hit with a cover of The Band's "The Night They Drove Old Dixie Down." Her interest in nonviolence never waning, Baez visited Hanoi on a musical tour in 1972, and recorded her experience on 1973 album, *Where Are You Now, My Son?* A total of 18 of her albums were released in the 1970s. The bestseller among these was the 1975 album, *Diamonds and Rust*. The album contained some of the first songs penned by Baez, and more of a rock attitude as well.

In the 1980s, Baez continued her interest in social and political causes, including disarmament, anti-apartheid, prisoners of conscience, and hunger. Her appearance at Live Aid was said to have given the proceedings a certain authority and authenticity: her long career as a folk singer and activist was well-known and respected, even by younger generations. In the 1990s Baez continued to make music, releasing *Play Me Backwards* in 1992. The album featured Baez's performances of songs by Janis Ian and Mary-Chapin Carpenter. She performed a year later in war-torn Sarajevo. "The only thing people have left is morale," Baez said of her audiences there.

Baez's influence continues, and can be heard in the melodies of contemporary singer-songwriter female performers like Tracy Chapman, Suzanne Vega, the Indigo Girls, and Jewel. In 1998, the Martin Guitar Company produced a limited edition Joan Baez guitar with a facsimile of a note scribbled on the inside soundboard of Joan's own guitar. The note, written by a repairman in the 1970s, read, "Too bad

you are a Communist!" Perhaps a more fitting quote would have been Baez's own comment: "Action is the antidote to despair."

Bagels

Round, with a hole in the middle, the bagel is made with high gluten flour and is boiled before it is baked creating a crispy outer crust and a chewy inside. Brought to the United States by Jewish immigrants from Eastern Europe during the 1900s-1920s, the bagel has become a popular food. From 1960-1990, consumption of bagels has skyrocketed throughout the United States with the invention of mass marketed frozen bagels and the addition of flavors such as blueberry. Bagel purists, however, insist that they are best when eaten fresh and plain.

Baker, Josephine (1906-1975)

On stage, Josephine Baker epitomized the flamboyant and risqué entertainment of the Jazz Age. Her overtly erotic *danse sauvage*, her exotic costumes of feathers and bananas, and her ability to replicate the rhythms of jazz through contortions of her body made the young African American dancer one of the most original and controversial performers of the 1920s. From her Parisian debut in 1925, Baker rocked middle-class sensibilities and helped usher in a new era in popular culture. In the words of newspaperwoman and cultural critic Janet Flanner, Baker's "magnificent dark body, a new model to the French, proved for the first time that black was beautiful." Off stage, Baker's decadent antics and uncanny ability to market herself helped to transform her into one of the first popular celebrities to build an international, mass appeal which cut across classes and cultures.

For a woman who would end her life with one of the most recognized faces in the world, Baker's beginnings were inauspicious. She was born Josephine Freda McDonald in the slums of St. Louis, Missouri, on June 3, 1906 and, according to her own accounts, grew up "sleeping in cardboard shelters and scavenging for food in garbage cans." She left home at the age of thirteen, married and divorced, and went to work as a waitress. By sixteen she had joined the Jones Family Band and was scraping out an income as part of a minor act in black vaudeville. Her ungainly appearance and dark skin made her a comic figure. Even after her New York debut as a chorus girl in *Shuffle Along*, a popular musical review, Baker's talents remained unrecognized. The young dancer's career changed dramatically when she accompanied *La Revue Nègre* to France in 1925. In New York, her ebony features had earned her the contempt of audiences partial to light-skinned blacks; in Paris, her self-styled "exotic" beauty made her an instant sensation. Her *danse sauvage*, sensual and frenetic, both shocked and charmed Parisian audiences. She grew increasingly daring when she earned lead billing at the Folies-Bergère and performed her exotic jazz dances seminude to popular acclaim. Her antics soon attracted the attention of such artistic luminaries as Pablo Picasso and Man Ray. In a Western Europe recovering from the disruptions of the First World War, Baker's untamed style came to embody for many observers the pure and primitive beauty of the non-Western world.

Baker thrived on the controversy surrounding her routine. She coveted the appreciation of her numerous fans and, in an effort to promote herself, adopted many of the mass-market tactics that soon became the hallmarks of most popular celebrities. She encouraged the dissemination of her image through such products as Josephine Baker dolls and hired a press agent to answer her fan mail. She also exposed her private life to the public, writing one of the first tell-all biographies; she invited reporters into her home to photograph her with her "pet" tiger and to admire her performing daily chores in her stage costumes. The line between Baker the performer and Baker the private individual soon blurred—increasing her popularity and creating an international Josephine Baker cult of appreciation. In the early 1930s, Baker embarked on a second career as a singer and actress. Her films, *Zou-Zou* and *Princess Tam-Tam*, proved mildly successful. Yet by 1935 the Josephine Baker craze in Europe had come to an end and the twenty-nine year old dancer returned to the United States to attempt to repeat in New York what she had done in Paris. She flopped miserably. Her *danse sauvage* found no place in depression-era America and white audiences proved to be overtly hostile to a black woman of Baker's sophistication and flamboyance. She returned to France, retired to the countryside, and exited public life. She became a French citizen in 1937.

The second half of Baker's life was defined both by personal misfortune and public service. She engaged in espionage work for the French Resistance during World War II, then entered the Civil Rights crusade, and finally devoted herself to the plight of impoverished children. She adopted twelve orphans of different ethnic backgrounds and gained some public attention in her later years as the matron of her "Rainbow Tribe." At the same time, Baker's personal intrigues continued to cloud her reputation. She exhausted four marriages and offered public praise for right-wing dictators Juan Perón and Benito Mussolini. What little support she had in the American media collapsed in 1951 after a public feud with columnist Walter Winchell. In 1973, financial difficulties forced her to return to the stage. She died in Paris on April 12, 1975.

Few performers can claim to be more "of an age" than Josephine Baker. Her star, rising so rapidly during the 1920s and then collapsing in the wake of World War II, paralleled the emergence of the wild, free-spirited culture of the Jazz Age. Her self-promotion tactics made her one of the first popular celebrities; these tactics were later copied by such international figures as Charles Lindbergh, Charlie Chaplin, and Marlene Dietrich. Yet it was Baker's ability to tap into the pulsing undercurrents of 1920s culture that made her a sensation. Picasso once said that Baker possessed "a smile to end all smiles"; it should be added, to her credit, that she knew how to use it.

Baker, Ray Stannard (1870-1946)

Ray Stannard Baker became both a leading muckraking journalist of the Progressive era and an acclaimed writer of nonfiction books and pastoral prose. A native of Michigan, he worked as a reporter for the *Chicago Record* from 1892 to 1897 and joined the staff of the innovative and popular *McClure's* magazine in 1898. His influential articles, including "The Right to Work" (1903) and "The Railroads on Trial" (1905-1906), helped make the magazine the nation's foremost muckraking journal. Known for his fair-mindedness, Baker exposed both union and corporate malfeasance. In 1906 he helped form the *American Magazine*, also devoted to progressive causes, and co-edited it until 1916. From 1906 to 1942, under the pseudonym of David Grayson, Baker wrote an extremely popular series of novels celebrating the rural life. He was awarded a Pulitzer Prize in 1940 for his eight-volume biography of Woodrow Wilson.

Bakker, Jim (1940—), and Tammy Faye (1942—)

Husband and wife televangelist team Jim and Tammy Faye Bakker became a prominent part of American popular culture in the late 1980s when their vast PTL ministry was hit by scandal and accounts of fraud. The Bakker affair—and the activities of other TV preachers in the news at the time—inspired a popular reaction against TV preachers, and, fairly or unfairly, the Bakkers were seen as the embodiment of eighties materialist excess and Elmer Gantry-like religious hypocrisy. A country song by Ray Stevens summed up the popular feeling with the title “Would Jesus Wear a Rolex on His Television Show?”

Raised in Michigan, Jim Bakker received religious training at North Central Bible College in Minneapolis. There he met fellow student Tammy Faye LaValley, who, like Bakker, was raised in the

Pentecostal tradition. The two were married and traveled the country as itinerant evangelists until 1965, when they went to work for Virginia television preacher (and 1988 presidential candidate) Pat Robertson, on whose station Jim Bakker established *The 700 Club*. (Robertson continued this show after Bakker left.)

After leaving Robertson’s operation in 1972, the Bakkers started a new TV program, *The PTL Club*, on the Trinity Broadcasting Network in California. In 1974, after a quarrel with the network, the Bakkers moved to Charlotte, North Carolina, to broadcast the show on their own. Jim Bakker established a Christian theme park south of Charlotte called Heritage USA, which attracted fundamentalist Christians who came to pray and to enjoy themselves. There was a water slide as well as several shops selling Christian tapes, records, books, and action figures. *The PTL Club* was broadcast from Heritage USA to what became a large national audience.

“PTL” could stand for “Praise the Lord” or “People That Love”: Bakker established many People That Love Centers where the poor could get free clothes, food, and furniture. To some of the Bakkers’ detractors, however, “PTL” stood for “Pass the Loot,” an allusion to the Bakkers’ frequent and often lachrymose fund-raising appeals on the air and to their lavish lifestyle (including, it was later disclosed, an air-conditioned doghouse for their dog). Describing a visit he made in 1987, journalist P. J. O’Rourke said that being at

Jim and Tammy Faye Bakker

Heritage USA “was like being in the First Church of Christ Hanging Out at the Mall.”

In 1979, the Federal Communications Commission began an investigation of PTL for questionable fund-raising tactics. In 1982, the FCC decided to take no further action in the case, provided that PTL sold its single TV station. This did not stop PTL from broadcasting on cable TV or from buying TV time on other stations, so the FCC action had no significant effect on PTL’s operations. In 1986, the year before everything fell apart, PTL was raising \$10 million a month, according to a subsequent audit.

A virtual tsunami of scandal hit the PTL ministry in 1987. Thanks in part to the efforts of an anti-Bakker preacher named Jimmy Swaggart and of the *Charlotte Observer* newspaper (which won a Pulitzer Prize for its coverage of the Bakker matter), a lurid scandal was uncovered at PTL. In 1980, Jim Bakker had a tryst with a church secretary named Jessica Hahn. PTL later gave money to Hahn in what looked like a payoff. In the wake of this revelation, Bakker turned PTL over to Jerry Falwell, a nationally known TV evangelist and political figure. Bakker later claimed that the handover was only meant to be temporary. Falwell denied this and took full control of PTL. PTL soon filed for bankruptcy; it ultimately was taken over by a group of Malaysian Christians.

This was only the beginning. The Pentecostal Assemblies of God, which had ordained Bakker, defrocked him. The IRS retroactively revoked PTL’s tax exemption, ordering the payment of back taxes and penalties. In December of 1988, Jim Bakker was indicted by a federal grand jury on several counts of fraud and conspiracy. These charges centered around Bakker’s promotion of an arrangement by which viewers who contributed a certain amount of money to PTL would be given “partnerships” entitling them to stay for free at Heritage USA. According to the prosecution, Bakker had lied to his TV viewers by understating the number of partnerships he had sold, that he had overbooked the hotels where the partners were supposed to stay during their visits, and that he had diverted partners’ money into general PTL expenses (including the Hahn payoff) after promising that the money would be used to complete one of the hotels where the partners would stay. The jury convicted Bakker, who went to prison from 1989 to 1994. In a civil case brought by disgruntled partners, Bakker was found liable for common law fraud in 1990. Another civil jury, however, found in Bakker’s favor in 1996 in a claim of securities fraud.

Meanwhile, Bakker foe Jimmy Swaggart was caught in a sex scandal, and evangelist Oral Roberts said that he would die unless his viewers sent him enough money.

While her husband was in prison, Tammy Faye tried to continue his ministry, but she finally divorced him and married Roe Messner, a contractor for church-building projects who had done much of the work at Heritage USA. She briefly had a talk show on the Fox network. Roe Messner was convicted of bankruptcy fraud in 1996.

Balanchine, George (1904-1983)

The greatest choreographer of the twentieth century, George Balanchine transformed and modernized the classic tradition of Russian ballet. A graduate of the imperial St. Petersburg ballet academy, he left Russia in 1924 and soon became the resident choreographer for Diaghilev’s Ballet Russes. Brought to the U.S. by the wealthy young impresario, Lincoln Kirstein, in 1933, together they founded the School of American Ballet and later, in 1948, the New York City Ballet. Until 1948 Balanchine choreographed a number of successful Broadway musicals and Hollywood movies. Eschewing traditional ballet story lines, Balanchine created a series of unprecedented masterpieces, his “black and white” ballets—so called because the dancers wear only their practice clothes—*Apollo* (Stravinsky), *Agon* (Stravinsky), *Concerto Barocco* (Bach), *The Four Temperaments* (Hindemith), and *Symphony in Three Movements* (Stravinsky). They share the stage with rousing and colorful dances based on folk and popular music like *Stars and Stripes* (John Philip Sousa), *Western Symphony*, and *Who Cares?* (Gershwin).

Baldwin, James (1924-1987)

James Baldwin’s impact on the American consciousness was twofold: as an author, his accounts of his experiences struck a cord with his readers; as an activist, his vision and abilities helped fuel the Civil Rights Movement. A gifted writer, he began his career immersed in artistic expression for the pleasure it offered. By the 1960s, however, he began to pen influential political essays, and by the end of his life he had evolved into one of the twentieth century’s most politically charged writers decrying racism in all of its ugly forms.

Born in Harlem to a single mother who was a factory worker, James Baldwin was the first of nine children. Soon after his birth his mother married a clergyman, David Baldwin, who influenced the young James and encouraged him to read and write. He began his career as a storefront preacher while still in his adolescence. In 1942, after graduating from high school, he moved to New Jersey to begin working on the railroads. In *Notes of a Native Son* he described his experiences working as well as the deterioration and death of his stepfather, who was buried on the young Baldwin’s nineteenth birthday. In 1944 he moved back to New York and settled in Greenwich Village where he met Richard Wright and began to work on his first novel, *In My Father’s House*. In the late 1940s he wrote for *The Nation*, *The New Leader*, and *Partisan Review*. In 1948, disgusted with race relations in the United States, he moved to Paris where he

George Balanchine (center), working with a dancer.

lived, on and off, for the rest of his life. In 1953, he finished his most important novel, *Go Tell It on the Mountain*, a semi-autobiographical account of his youth. Baldwin received a Guggenheim Fellowship in 1954 and the following year published *Giovanni's Room*. He is also the author of several plays, including *The Amen Corner* and *Blues for Mr. Charlie*.

During the 1960s, Baldwin returned to the United States and became politically active in the Civil Rights Movement. In 1961, his essay collection *Nobody Knows My Name* won him numerous recognitions and awards. In 1963 he published *The Fire Next Time*, a book-length essay that lifted him into international fame and recognition. This work represents such a watershed event in his life that many scholars divide his career between “before” and “after” the publication of *The Fire Next Time*.

Before 1963, Baldwin had embraced an “art for art’s sake” philosophy and was critical of writers like Richard Wright for their politically-charged works. He did not believe that writers needed to use their writing as a protest tool. After 1963 and the publication of his long essay, however, he became militant in his political activism and

as a gay-rights activist. He passionately criticized the Vietnam War, and accused Richard Nixon and J. Edgar Hoover of plotting the genocide of all people of color. Comparing the Civil Rights Movement to the independence movements in Africa and Asia, he drew the attention of the Kennedys. Robert Kennedy requested his advice on how to deal with the Birmingham, Alabama riots and tried to intimidate him by getting his dossier from Hoover.

In 1968, Baldwin published *Tell Me How Long the Train’s Been Gone*, an account of American racism, bitter and incisive. *No Name in the Street* (1972) predicted the downfall of Euro-centrism and observed that only a revolution could solve the problem of American racism. In 1985, he published *The Evidence of Things Not Seen*, an analysis of the Atlanta child murders of 1979 and 1980.

During the last decade of his life Baldwin taught at the University of Massachusetts at Amherst and at Hampshire College, commuting between the United States and France. He died in 1987 at his home in St. Paul de Vence, France.

Ball, Lucille (1911-1989)

Almost fifty years after *I Love Lucy* first aired on television, the image of "Lucy" is still omnipresent in U.S. culture. In movies, on television, and emblazoned on various merchandise such as lunchboxes, dolls, piggybanks, and calendars, the zany redhead with the elastic face is an industrial and cultural institution. But beyond simply an image, Lucille Ball was, without a doubt, the first woman of television and the most adored American female comic of the twentieth century. However, the comedienne's struggling years as a model, dancer, and "B" movie actress are often forgotten in the light of her international fame that came at the age of 40.

As a 15-year-old Ball left her family in upstate New York to study acting in Manhattan. Although she acquired skills in acting, dancing, and modeling, she did not find any real success until she landed a job as a chorus girl in Eddie Cantor's 1933 film *Roman Scandals*. A talented and beautiful woman with a slim body and large blue eyes, Ball's star potential was recognized by a number of studios. Goldwyn was the first to sign her as a contract player after her turn in Cantor's film. Disappointed by the bit parts with little to no dialogue offered by Goldwyn, Ball soon left for RKO where her 1937 performance in *Stage Door* with Katherine Hepburn attracted the attention of studio heads. Consequently over the next few years, Ball won significant roles in films such as *Go Chase Yourself* (1938), *Too Many Girls* (1940), and *The Big Street* (1942), carving out a small career for herself in "B" pictures. She also found her future husband, Desi Arnaz, during her time in Hollywood when she starred alongside him in the film *Too Many Girls* (1940). Yet, by the mid-1940s, after switching studios once again (this time to MGM), it became apparent to both Ball and her studio that she did not fit the mold of a popular musical star or romantic leading lady. So, the platinum blonde glamour girl began the process of remaking herself into a feisty red-headed comedienne.

In 1948, Ball was cast as Liz Cooper, a high society housewife on CBS radio's situation comedy *My Favorite Husband*—a role that would help form the basis of her "Lucy" character. The show attracted a significant following and CBS offered Ball the opportunity to star in a television version of the program in 1950. But, concerned with what damage the new job might do to her already tenuous marriage, Ball insisted that Arnaz be cast as her on-screen husband. Network executives initially balked at the idea claiming that Arnaz lacked the talent and other qualities necessary to television stardom. However, after Ball rejected CBS's offer and took her and Arnaz's act on the vaudeville circuit to critical acclaim, the network finally backed down agreeing to sign the couple to play Lucy and Ricky Ricardo. But, Arnaz and Ball were able to finagle not only contracts as co-stars, but they also procured ownership of the programs after their initial airing. The unexpectedly large profits that came from the show's syndication, foreign rights, and re-runs enabled the couple to

James Baldwin

form their own production company, Desilu, which eventually produced such hit shows as *Our Miss Brooks*, *The Dick Van Dyke Show*, and *The Untouchables*.

On October 15, 1951 *I Love Lucy* was broadcast for the first time. The show focused primarily on the antics of Lucy, a frustrated housewife longing to break into show business and her husband Ricky, a moderately successful Cuban bandleader. Supported by co-stars William Frawley and Vivian Vance, playing the Ricardo's best friends and neighbors, along with the talents of *My Favorite Husband* writers Jess Oppenheimer, Carroll Carroll, and Madelyn Pugh, Ball and Arnaz's program quickly topped the ratings. Much of *I Love Lucy*'s success was credited to Ball's incredible timing and endlessly fascinating physical finesse. Able to project both the glamour of a former film star as well as the goofy incompetence of an ordinary (albeit zany) housewife, Ball proved that vaudeville routines could be incorporated into a domestic setting and that a female comedian could be both feminine and aggressively physical. She accomplished this, at least in part, by choreographing every move of her slapstick performances and accumulating a series of goofy facial expressions that were eventually cataloged by the writings staff under such cues as "light bulb," "puddling up," "small rabbit," and "foiled again."

Lucille Ball

In the spring of 1952, *I Love Lucy* set a rating record of 71.8 when Ball's real-life cesarean delivery of her and Arnaz's son occurred on the same day as the on-air birth of Lucy Ricardo's "little Ricky." Expertly exploiting the viewer's conflation of Ball and Arnaz's private life with that of the Ricardo's, the couple managed to achieve television super stardom through the event and appeared on the covers of *Time*, *Life*, and *Look* with their son and daughter (Lucille Arnaz was born in 1951) over the next year. But, not all the press attention was positive. Accused of being a communist in 1953, Ball was one of the only film or television stars to survive the machinations of the HUAC investigations. Explaining that she registered as a communist in 1936 in order to please her ailing socialist grandfather, she claimed that she was never actually a supporter of the communist party. Thousands of fans wrote to Ball giving her their support and the committee eventually backed down announcing that they had no real evidence of her affiliation with the party. The crisis passed quickly and Lucy remained the most popular comedienne of the 1950s.

After divorcing Arnaz in 1960 and buying out his share of Desilu, Ball became the first woman to control her own television production studio. During the 1960s she produced and starred in *The Lucy-Desi Comedy Hour*, *The Lucy Show*, and *Here's Lucy*. By the mid-1970s she had begun to appear in television specials and made-for-television movies, and by 1985 had garnered critical praise for her portrayal of a homeless woman in the drama *Stone Pillow*. But it was her brilliantly silly, mayhem-making Lucy character that lingered in the minds (and merchandise) of generations of television audiences even after her death in 1989.

Ballard, Hank (1936—)

Hank Ballard's distinctive tenor voice and knack for writing catchy, blues-flavored pop songs made him one of the living legends of rock 'n' roll, even as his notoriously earthy lyrics made him one of its most controversial figures. Born in Detroit on November 18, 1936, Ballard was orphaned at an early age. He was sent to Bessemer, Alabama, to live with relatives, and during these years he acquired his initial singing experience, performing gospel songs in church. This gospel edge would later characterize some of Ballard's best work, including the hit ballad "Teardrops on Your Letter."

Ballard returned to Detroit at age 15 to work on the Ford Motor Company assembly line. Inspired by rhythm and blues singers like the Dominoes' Clyde McPhatter, Ballard also joined a doo-wop outfit called the Royals. Although the Royals had already established themselves as a reasonably successful group, scoring a minor hit on Federal Records with their version of Johnny Otis' "Every Beat of My Heart," it was their acquisition of Ballard that would define their future style and sound. The group's next recording, a Ballard original entitled "Get It," was released in late 1953, and received as much attention for its "quite erotic" lyrics as it did for its musical qualities.

In early 1954, Federal Records acquired another, better known Rhythm and Blues group called the Five Royales, who had already produced a string of hits on the Apollo label. In an effort to avoid confusion, Federal president Syd Nathan changed the name of Ballard's group to the Midnighters (later Hank Ballard and the Midnighters). The newly-christened Midnighters subsequently produced their most important and influential song, "Work With Me Annie." With its raunchy, double-entendre lyrics, including lines like "Annie, please don't cheat/Give me all my meat," the hit single helped to fuel a firestorm of controversy over explicit lyrics (*Variety* magazine columnist Abel Green referred to them as "leer-ics" in a string of editorials). Enjoying their newfound popularity, the Midnighters, in the tradition established by country musicians, cut several "answers" to their hit, including "Annie Had a Baby" and later "Annie's Aunt Fannie." Other groups joined in the act, with the El Dorados producing "Annie's Answer" for the Vee Jay label, while the Platters mined similar terrain with "Maggie Doesn't Work Here Anymore." Eventually, the entire "Annie" series, along with two dozen other "erotic" Rhythm and Blues songs, was banned from radio airwaves virtually nationwide.

Hank Ballard

A few years later, Ballard matched new lyrics to a melody that he had first used on a Midnighters flop entitled “Is Your Love for Real?”, and produced “The Twist.” Dissatisfied with Federal’s management of the group, Ballard took his new song to Vee-Jay Records, and later to King Records, which finally released it as the B-side of the ballad “Teardrops on Your Letter.” American Bandstand host Dick Clark liked the tune enough to finance a rerecording by Ernest Evans (a.k.a Chubby Checker), who took the tune to the top of the pop charts not once but twice, in 1960 and 1962. Checker’s version emulated Ballard’s to such a degree that Ballard, upon first hearing it, believed it was his own.

The Midnighters continued to experience chart action; at one point in 1960, they had three singles on the pop chart simultaneously. In 1961, however, Ballard elected to pursue a career as a solo act, and the Midnighters disbanded. Thereafter, Ballard found very little success, although he made the Rhythm and Blues charts in 1968 and 1972 with “How You Gonna Get Respect (If You Haven’t Cut Your Process Yet)?” and “From the Love Side,” respectively. After a long break from performing, Ballard formed a new “Midnighters” group in the mid-1980s and resumed his career. He also made special appearances with well known rock and blues artists, including guitarist Stevie Ray Vaughan, who in 1985 covered Ballard’s “Look at Little Sister” on his critically-acclaimed album *Soul to Soul*. Ballard was among the first inductees into the Rock ‘n’ Roll Hall of Fame in 1990. In 1993, he released a “comeback” album entitled *Naked in the Rain*.

Ballet

Classical ballet is a form of theatrical entertainment that originated among the aristocracy of the sixteenth and seventeenth century royal court of France. In its original form it was performed by trained dancers as well as by members of the court themselves. The stories told in the ballet performances were usually based on mythical or allegorical themes. They contained no dialogue, but instead relied on pantomime to convey character, plot, and action. From its earliest days, ballets incorporated lavish costumes, scenery, and music. Although ballet dance performance often incorporated courtly ballroom dances, and even folk dances, it was organized around five basic dance positions—feet and arms rotated outward from the body with limbs extended. These positions maximize the visibility of the dancer’s movements to the audience and thus serve as the grammar of ballet’s language of communication.

The foundations of ballet were firmly established when King Louis XIV created a special dancing academy in order to train dancers for the court’s ballets. That school continues to operate today as the school of the Paris Opera Ballet. During the nineteenth century French-trained ballet masters and dancers established vigorous dance companies and schools in Copenhagen and St. Petersburg. During this time Russia’s Imperial ballet attracted several of the century’s most talented ballet masters. The last of them, and the greatest, was Marius Petipa, who created the great classic works that define the Russian ballet tradition: *Le Cosaire*, *Don Quixote*, *La Bayadere*, *Swan Lake*, *Sleeping Beauty*, and *Raymonda*. All of these works are still in the repertory of ballet companies at the end of the twentieth-century, more than one hundred years later. Almost all of the great ballet companies of the late twentieth century are descended from the Imperial Russian ballet.

Serge Diaghilev’s Ballets Russes, which employed many dancers and teachers trained at the Imperial Ballet and exiled by the Russian revolution, was absolutely key to the transformation of ballet from a court-sponsored elite entertainment into a commercially viable art form with a popular following. Diaghilev and his company forged a synthesis of modern art and music that revolutionized ballet in the twentieth century. Diaghilev mounted modernist spectacles using music and scenic design by the most important modern composers and artists: Igor Stravinsky, Claude Debussy, Maurice Ravel, Eric Satie, Serge Prokofiev, Pablo Picasso, Giorgio de Chirico, Joan Miro, Juan Gris, Georges Braque, and George Rouault. Among the company’s brilliant dancers was Vaslav Nijinsky, probably one of greatest male dancers of century, but also an original choreographer. In ballets like *L’Après-midi d’un faune* and *Jeux*, with music by Debussy, and *Le Sacre du Printemps*, with music by Stravinsky, Nijinsky created radical works that broke with the Russian tradition of Petipa and which relied upon an unorthodox movement vocabulary and a shallow stage space. The world famous 1912 premiere of Stravinsky’s *Le Sacre du Printemps*, choreographed by Nijinsky, provoked a riot

Ballet stars Michael Shannon and Olga Suvorova perform a pas-de-deux from *Corsair* by A. Adan.

among its stuffy bourgeois audience and is considered one of the great events marking the arrival of modernist art.

The United States had no classic ballet tradition of its own. Instead, many strains of vernacular and ethnic dances flourished, such as square dances which were adapted from English folk dances. There were also many vigorous forms of social dancing, particularly the styles of dancing which emerged from jazz and black communities, such as jitterbug and swing. Popular theatrical entertainment and vaudeville also drew on vernacular forms like tap dancing. One new form of theatrical dance that emerged around the turn of the century was modern dance, inspired by Isadora Duncan and developed by dancers and choreographers Ruth Denis, Ted Shawn, and Martha Graham. It has remained a vital theatrical dance tradition up until the present with Paul Taylor, Twyla Tharp, and Mark Morris among its most noted contemporary practitioners.

The New York appearance in 1916 of Diaghilev's Ballets Russes marks the most important step towards the popularization of ballet in the United States. Two of the greatest dancers of the early twentieth century—Vaslav Nijinsky and Anna Pavlova—danced in the United States during those years. Nothing much of import occurred until 1933, when Lincoln Kirstein, a wealthy young admirer of ballet who was visiting Paris, invited George Balanchine to come to the United States and help establish ballet there. Balanchine accepted Kirstein's invitation only if they established "first, a school." Their School of American Ballet opened in 1934. Kirstein and Balanchine's School was an important link in the popularization of ballet in the United States. In 1913 Willa Cather had lamented that

"we have had no dancers because we had no schools." European dancers—among them some of the greatest of their era, such as Fanny Essler—had been coming to the United States since the early nineteenth century. Many of them settled down to privately teach young American girls, because ballet at the time was centered primarily on the ballerina. However no one had a greater influence than the great Russian ballerina, Anna Pavlova, and her partner, Mikhail Mordkin, who starting in 1910 spent 15 years performing and teaching ballet in almost every corner of the country. The appeal of ballet and its cultural prestige had been consolidated by New York's rapturous response in 1916 to Diaghilev's Ballet Russes. In 1933 the founding of the School of American Ballet with its network of scouts, scouring small-town and regional ballet classes, created the foundations for the development of native-born American dancers.

Beginning in 1935 Kirstein and Balanchine went on to form the first of the many unsuccessful companies that eventually solidified into a stable company in 1948 as the New York City Ballet. Meanwhile another group, led by Richard Pleasant and Lucia Chase, was also trying to establish a permanent ballet company; they succeeded in 1939 by setting up the American Ballet Theatre (ABT). Since the 1930s these two companies have dominated ballet in the United States. Both companies employed many of the Russian dancers, choreographers, and teachers displaced by revolution and world war. American Ballet Theater has a long tradition of performing the great romantic ballets—such as *Swan Lake*, *Giselle*, and *Sleeping Beauty*—created for the European audiences of the late nineteenth century. George Balanchine's New York City Ballet, on the other hand, was almost exclusively the showcase for his original work, which rejected the narrative conventions of romantic ballet for a modern approach that emphasized musicality, speed, and a deep stage space.

During the 1970s ballet and modern dance in the United States were the beneficiaries of a wave of popularity which resulted in many new dance companies being founded in cities and communities throughout the country. The same period was also marked by the increasing amount of crossover activity between modern dance and ballet on the part of choreographers and dancers. Although the dance boom (and the funding that supported it) has partially receded both ballet and modern dance remain a vital form of cultural activity and popular entertainment.

Bambaataa, Afrika (1960—)

A Bronx, New York-based disc jockey (DJ) in the mid-1970s and the creator of a few popular hip-hop songs in the early 1980s, Afrika Bambaataa is one of the most important figures in the development of hip-hop music. Born April 10, 1960, Bambaataa developed a following in the mid-1970s by DJ-ing at events that led to

the evolution of hip-hop music as it is known today. At these events, dancers developed a unique style of dancing called breakdancing, the rhythmic vocal style called rapping was cultivated, and DJs such as Bambaataa, Kool DJ Herc, and Grandmaster Flash demonstrated how turntables could be used as a musical instrument. In 1982, Bambaataa had a big hit in the *Billboard* Black charts with his single “Planet Rock.”

The Band

“They brought us in touch with the place where we all had to live,” Greil Marcus wrote in *Mystery Train*. Thirty years after The Band’s first appearance on the international music-scene toward the

The Band

end of the 1960s, Marcus’ words still ring true. More than that of any other group, The Band’s work represents America at its sincerest, the diversity of its musical heritage, the vividness of its culture, and the lasting attraction of its history. Marcus noted that “against the instant America of the sixties they looked for the traditions that made new things not only possible, but valuable; against a flight from roots they set a sense of place. Against the pop scene, all flux and novelty, they set themselves: a band with years behind it, and meant to last.” Last they certainly did.

Having started off as backing musicians (The Hawks) to rockabilly veteran Ronnie Hawkins, Rick Danko (1943—), Garth Hudson (1937—), Levon Helm (1942—), Richard Manuel (1944–1986), and Jaime ‘Robbie’ Robertson (1944—) played their first gigs in 1964 as an independent group called Levon and the Hawks. As this group they recorded a couple of singles that went largely unnoticed. Chance came their way though, when they met with Albert Grossman, Bob Dylan’s manager at the time. Grossman felt that Levon and the Hawks might well be the backing group Dylan was on the look-out for after his legendary first electric appearance at the Newport Folk Festival in 1965. After having met and played with him, the group joined Dylan in 1966 for a tour that took them through the United States, and later to Australia and England.

Back in the States in the summer of 1966, they moved to the area around Woodstock—without Levon Helm, though, who had left the tour after two months. There, in Saugerties, New York, they rented a big pink house (appropriately named ‘Big Pink’), in the basement of which they recorded well over a hundred songs with Dylan, who at the time was recovering from a serious motorcycle accident. Some twenty of these songs were later released on *The Basement Tapes* (1975). The sessions in the basement of ‘Big Pink’ must have made clear to Robertson, Danko, Hudson and Manuel that their musical talents and the originality of their sound were considerable enough to enable them to make it without Dylan. After Albert Grossman cut them a record deal with Capitol, Levon Helm returned to the group and together they recorded *Music from Big Pink*, still one of the all-time great debuts in the history of popular music. Upon the album’s release in August 1968, both the critics and the public realized that something unique had come their way. *Music from Big Pink* confirmed the uniqueness of the group’s sound—a highly individual blend of the most varied brands of American popular music: gospel, country, rhythm and blues, rockabilly, New Orleans jazz, etc. But it also set the themes which The Band (for this was what they had finally decided on as a name) would explore in albums to come.

Most of the songs on the album, three of which were written by Dylan, are set in the rural South. They belong to a tradition long gone, yet the revival of which the members of The Band considered to be beneficial to a country that yearned for a change but did not really know where to look for it. The songs of The Band should not be taken as nostalgic pleas for the past, for the simpler things in life or for values long lost and gone. The characters in the songs of *Music from Big Pink* and later albums are in no way successful romantic heroes who have truly found themselves. They are flesh-and-blood people, loners, burdened with guilt, and torn up by love and heartache.

Compared to most albums to come out of the wave of psychedelic rock at the end of the 1960s, the music of The Band was anything but typical of its era. It is a pleasant irony, therefore, that The Band’s records have aged so easily, while those of contemporaries like Jefferson Airplane or Country Joe and the Fish already sounded dated a couple of years after their release. From the beginning, the music of

The Band—an idiosyncratic combination of several voices (Manuel, Danko, Helm), Robbie Robertson's guitar, the drums of Levon Helm, and the organ of musical wizard Garth Hudson—is full of seeming contradictions that somehow blend into a harmonious whole. The music is playful yet serious, soulful yet deliberate, traditional yet rebellious, harmonic yet syncopated.

The group's second album, *The Band* (1969), is generally rated as better than its predecessor, representing The Band at its best. The record shows that the group found their idiom, both lyrically and musically. From this album Robertson emerged as the most prominent member of the group; not only did he write most of the songs, but also he also looked after The Band's financial interests. There can be little doubt that at the time The Band was both at its artistic and commercial zenith. In 1970 they made it to the cover of *Time* magazine and gave their first public performances. The latter soon made clear, however, that the group was at its best in the recording studio.

The title-track of The Band's third album, *Stage Fright* (1970), may be taken as a comment on the problems some members of the group had with performing live. The record was a new artistic success, though, very much like its follow-up, *Cahoots* (1971) which featured both Van Morrison and Allen Toussaint. The latter was also present on *Rock of Ages*, a double album which contains live versions of the Band's greatest songs. The next two years, 1972 and 1973 were all in all lost years for The Band. Life on the road and world-wide success began to take their toll. They recorded *Moondog Matinee*, a collection of all-time favorites from the years when they were touring with Ronnie Hawkins. The record has mainly to be seen as an attempt to mask a collective lack of inspiration, partly brought on by an equally collective over-consumption of alcohol and drugs. Then followed a large tour with Dylan (1973-1974), the recording of *Northern Lights, Southern Cross* (1975)—which contains some of the best Band-songs in years—and their legendary farewell performance in the Winterland Arena, San Francisco, on Thanksgiving 1976. The event is known as *The Last Waltz*: it features friends and colleagues like Ronnie Hawkins, Muddy Waters, Neil Young, Van Morrison, Joni Mitchell and, of course, Dylan. (The film-version, by Martin Scorsese, remains one of the best rock-movies ever made.)

After *The Last Waltz*, the members of The Band went their separate ways: some of them made solo-records (Robertson most notably), others starred in movies (Helm). In 1983 The Band reunited, without Robertson however. Since the self-inflicted death of Richard Manuel in 1986, the three remaining members of the original Band have recorded two albums on which they were joined by two new musicians. While it is obvious that the magic of the early years is gone forever, we are lucky that the music of The Band is still with us.

Bara, Theda (1885?-1955)

Silent screen legend Theda Bara is synonymous with the term "vamp," a wicked woman of exotic sexual appeal who lures men into her web only to ruin them. Bara incarnated that type with her first film, *A Fool There Was* (1915), which attributed to her the famous line, "Kiss me, my fool." With that movie, her name changed from Theodosia to Theda, from Goodman to Bara (chosen as an anagram of Arab), and her star persona was launched. Considered the first movie star, Bara's biography and appearance were entirely manufactured by the studio. Publicized as having been born to a French actress beneath Egypt's Sphinx, the Cincinnati-native wore heavy eye make-up and risqué costumes, the most infamous, a snakeskin-coiled bra. She was the precursor to the femme fatale of 1940s film noir, and careers as diverse as those of Marilyn Monroe, Marlene Dietrich, and Madonna link back to Bara's.

Baraka, Amiri (1934—)

Writer Amiri Baraka founded the 1960s Black Arts Movement, transforming white, liberal aesthetics into black nationalist poetics and politics. In 1967, he converted to Islam and changed his name from Leroi Jones to Amiri Baraka. His career can be divided in three stages: beatnik/bohemian (1957-1964), black nationalism (1965-1974), and Marxist revolutionary (1974-present). In 1960 he travelled to Cuba with a group of black artists. As a result, he grew disillusioned with the bohemian/beatnik atmosphere of Greenwich Village and began seeing the necessity of art as a political tool. The play *Dutchman* (1964) brought him into the public limelight, a one-act play about Clay, a young, black, educated man who, while riding the New York subway, is murdered by a beautiful white woman symbolizing white society. No American writer has been more committed to social justice than Amiri Baraka. He is dedicated to bringing the voices of black America into the fiber of his writings.

Barbecue

Although the true source of barbecue is vague, its origin is most likely in the Southern region of the United States. A highly popular

food and important community and family ritual, various regions and interests have attempted to lay claim to what has become an industry throughout the country. One theory states that the word “barbecue” is a derivative of the West Indian term “barbacoa,” which entails the slow-cooking of meat over hot coals. While most Americans view a “barbecue” as any type of outdoor cooking over flames, purists, as well as regional and ethnic food experts, agree that real barbecue is a particular style of cooking meat, usually outdoors, with some kind of wood or charcoal burning apparatus. While pork is the only acceptable barbecue meat in many areas of the south, beef, fish, and even lamb are used in many other areas of the United States. Needless to say, barbecue of some variety is found in almost every culture of the world that cooks meat.

Techniques for judging good barbecue include a highly defended personal taste and the particular tradition of an area. Common to most barbecue are flavorings which adhere to the meat, slowly seeping into it; at the same time, the heat breaks down the fatty substances that might make meat tough and reduces it to tender morsels filled with flavor. Different types of woods—hickory and mesquite among them—are frequently used by amateur barbecue enthusiasts as an addendum to charcoal. Wood chips, however, will not really contribute any specific flavor to meat prepared over charcoal flames. The true beauty of the barbecue is when slow cooking turns what were once cheap, tough cuts of meat—like the brisket and ribs—into a tender and succulent meal.

Barbecue began, and still remains, at the center of many family and social gatherings. From “pig roasts” and “pig pulls” to the backyard barbecue of the suburbs, people have long gathered around the cooking of meat outdoors. Additionally, church and political barbecues are still a vital tradition in many parts of the South. Unlike most food related gatherings that take place indoors, men have traditionally been at the center of the cooking activity. The “pit men” who tended the fires of outdoor barbecue pits evolved into the weekend suburban husband attempting to reach culinary perfection though the outdoor grilling of chicken, steak, hamburgers, and hot dogs.

Despite the disappearance of many locally owned restaurants throughout the country due to the popularity of chain stores and franchises, regional varieties of barbecue can still be found in the late 1990s; pork ribs, for example, are more likely to be found in the Southern states and beef ribs and brisket dominates in states like Missouri and Texas. The popularization of traditional regional foods in the United States has contributed to the widespread availability of many previously isolated foods. Just as bagels, muffins, and cappuccino have become widely available; ribs, brisket, smoked sausages, and other varieties of barbecue can be found in most urban areas throughout the United States. Barbecue has clearly become more popular through franchises and chain restaurants which attempt to serve versions of ribs, pork loin, and brisket. But finding an “authentic” barbecue shack—where a recipe and technique for smoking has been developed over generations and handed down from father to son—requires consulting a variety of local sources in a particular area, and asking around town for a place where the local “flavor” has not been co-opted by the mass market.

Barber, Red (1908-1992)

Walter Lanier “Red” Barber was a pioneer in sports broadcasting on both radio and television. In 1934 Barber was hired by Larry MacPhail of the Cincinnati Reds to be their first play-by-play announcer. He was also a pioneer in college and professional football broadcasting. In Cincinnati Barber broadcast the first major league night game, and in 1935 he broadcast his first World Series.

Barber followed MacPhail to Brooklyn, and there he pioneered baseball on radio in New York. He was at the microphone for the first televised major league baseball game in 1939, and he was with the Dodgers when Jackie Robinson came to Brooklyn in 1947. In 1954 Barber moved to Yankee Stadium where he remained until 1966. He made the radio call of Roger Maris’s sixty-first home run.

Barber retired to Tallahassee, Florida, where he wrote seven books, and began a second career as commentator on National Public Radio’s Morning Edition in 1981. His popular Friday morning conversations with host Bob Edwards covered a wide range of topics, from his garden, to sports, to the foibles of humanity.

Barbershop Quartets

Barbershop quartets, a type of music group fashionable in early twentieth-century America, had a dramatic influence on American popular music styles. The sweet, close harmony of the quartets, the arrangement of voice parts, and their improvisational nature were all influences in the development of doo-wop (already heavily improvisational in form) as well as pre-rock group singing, close-harmony rock groups of the 1950s and 1960s like the Beach Boys and the teenaged “girl groups,” and in the later development of background groups and their vocal arrangements.

A barbershop quartet is any four-person vocal music group that performs a cappella, without instrumental accompaniment—the popular American music of the late nineteenth and early twentieth centuries. Each member of the quartet sings a particular voice part. One person in the group is considered the lead and sings the melody around which

A barbershop quartet, performing at the Buckeye Invitational in Ohio.

the other members base their harmonies. The tenor sings a harmony placed above the melody, while the bass sings the lowest harmony below the melody line. The baritone completes the chord structure by singing a harmony either below the melody but above the bass line, or above the melody but below the tenor line. The three voices singing in support of the lead traditionally sing one complete chord for every note in the melody, though there is, in this mode of singing, a wide array of styles and arrangement patterns.

The barbershop style of singing has its roots in an old American pastime known as “woodshedding,” in which one person would lead a group in song by taking up the melody of a popular tune, and the rest of the group would then improvise harmonies to that melody. Before the appearance of television, barbershops were important meeting places for men in America. Unlike bars and taverns, barbershops were well respected in each community and provided a social forum for men of all ages. Grandfathers, married, and single men, as well as their little sons, could gather together and tell jokes or discuss everything from politics and war to sports, women, or religion. Most barbershops had a radio, and the term “barbershop singing” is said to have originally referred to the way in which customers would improvise or “woodshed” harmonies to whatever popular song might be playing on the radio as they waited their turns for a haircut or shave. The term is also said to refer to the barber himself, who—in earlier European culture—also had a musical role in the community. Musical training was not needed, and very often not present in the men who sang in this improvisational way. All that was required was a lead who had a memory for the words and melodies of the day, and at least the three supporting vocal parts, which were picked up or developed “off the ear” by listening to the lead.

During the 1920s and 1930s there was a major decline in the popularity of this kind of community singing. Much of the music in those decades was relegated either to the church or to the many clubs

and bars that had opened up since the end of Prohibition. In 1938, lawyer O. C. Cash of Tulsa, Oklahoma, and his friend banker Rupert Hall decided to create a social organization whose sole purpose was to maintain the tradition of barbershop singing as a unifying and fun recreation. From its inception, the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, most commonly referred to by its initials SPEBSQSA, had a nostalgic function. Founders Cash and Hall felt the encouragement of barbershop quartets might bring back to American culture some sense of the “normalcy” that they felt America was losing in the mid-twentieth century. The image of sweet nostalgia is one that remained with the organization and with barbershop quartets through the end of the twentieth century.

SPEBSQSA, Inc., began as an informal quartet. Community support and renewed popularity led to the formation of more quartets, and eventually SPEBSQSA became a national, then international, organization, sponsoring competitions around the world. Printed sheet music was rarely used in the original groups but was later brought in as the organization expanded and became involved in activities that were more choral and not strictly focused on the traditional quartet. Many professional musicians looked down on barbershop because of its informality and emphasis on improvisation, yet that opinion began to change, too, as barbershop developed its own codified technique and the appearance of barbershop groups—both quartets and full choruses—increased. For much of its history, the barbershop quartet had been exclusively male. However, SPEBSQSA, Inc., began to include women, and in 1945 a barbershop group exclusively for women called the Sweet Adelines was formed. Like SPEBSQSA, the Sweet Adelines became international in scope, and by the 1950s both groups had spawned a number of branch organizations and related musical groups, with membership numbers in the tens of thousands. Collectively, these groups were responsible

for achieving SPEBSQSA's founding goal, which was to preserve the music of the late nineteenth and early twentieth centuries. Because of their enthusiasm and pursuit of the craft, barbershop maintained its presence in American popular culture through decades of musical and social change, long outliving other popular entertainments of its age.

As a whole, barbershop quartets remained a hobby. Although some groups were able to make money, most could never make enough from performances to pursue it full-time or to consider it a career. A few groups were able to find national success and financial reward—the Buffalo Bills are perhaps the most famous of these professional groups. Their appearance in the 1962 movie musical *The Music Man* (which had been a successful Broadway stage musical four years earlier) gave them a permanent place in entertainment history but also led to a surge in barbershop popularity.

Barbie

Barbie, the 11-½ inch, full-figured plastic doll from Mattel, Inc., is among the most popular toys ever invented; by 1998 Mattel estimated that the average American girl between the ages of 3 and 11 owned ten Barbie dolls. Precisely because it is so popular, the Barbie doll has become more than just a toy: it has become a central figure in American debates about women's relationship to fashion, their independence in the workplace, their dependence on men, and their body image. Satirized by musicians and comedians, criticized by feminist scholars, and embraced by young children throughout the world, the Barbie doll exists both as a physical toy and an image of femininity. The physical attributes of the doll—its shape and its beauty—along with the myriad costumes and props available to it have been tied to some of the most fundamental questions about what makes a woman successful and what are the appropriate roles for women in American society.

The Barbie doll's creator, Ruth Handler, was inspired when she noticed her daughter creating imaginative teenage or adult lives for her paper dolls. Handler investigated whether there was an opportunity to produce a doll in the likeness of an adult for the toy market. She was well positioned to do so, for she and her husband Elliot ran Mattel, Inc., which they had founded with Harold Matson in 1945 to manufacture plastic picture frames. By the end of World War II, Mattel had found its niche in toy manufacturing with the Ukedoodle, a plastic ukelele. When Handler introduced her idea, many of her colleagues were skeptical. She kept the idea in the back of her mind, however. During a trip to Switzerland, Ruth encountered the Lilli doll and realized that she had found the kind of toy she had hoped to produce at Mattel.

Created in 1952, the Lilli doll was based on a comic character from the German publication *Bild Zeitung* and was an 11½ inch, platinum-ponytailed, heavily made-up, full-figured doll, with high heels for feet. The Lilli doll had not been intended for children, but as an adult toy complete with tight sweaters and racy lingerie. Ruth Handler was not interested in the history of the doll's marketing, but rather in the doll's adult shape. Unable to produce a similar doll in the

United States cost effectively, Mattel soon discovered a manufacturing source in Japan.

The Barbie doll was introduced at a unique time in history: a time when the luxury of fashionable attire had become available to more women, when roles for women were beginning to change dramatically, when the term "teenager" had emerged as a definition of the distinct period between childhood and adult life, and when teenagers had been embraced by television and movie producers as a viable target market. Mattel capitalized on these trends in American culture when it introduced the Barbie doll in 1959 as a teenage fashion model.

As a fashion toy, the Barbie doll seemed especially well suited to the era in which it was introduced. When Christian Dior introduced his New Look in 1947, he changed women's fashion from the utilitarian style demanded by shortages during World War II to an extravagant style that celebrated the voluptuousness of the female form. With the dramatic change in styles, high fashion soon gained popular interest. By the early 1950s, designers had broadened their clientele by licensing designs to department stores. In addition, beauty and fashion were featured on the first nationally televised Miss America Pageant in 1954. The Barbie doll, with its fashionable accessories, was one of the first dolls to present young girls with an opportunity to participate in the emerging world of fashion. Meticulously crafted outfits that mimicked the most desirable fashions of the time could be purchased for the doll. By 1961, the Barbie doll had become the best-selling fashion doll of all time.

Just as the fashions for the Barbie doll were new to the toy market, so was the age of the doll. Mattel's decision to market the Barbie doll as a teenager in 1959 made sense when juxtaposed against themes resonating in popular culture. Teenagers were just emerging as a distinct and interesting social group, as evidenced by the attention directed toward them. At least eight movies with the word "teenage" in the title were released between 1956 and 1961, including *Teenage Rebel* (1956), *Teenage Bad Girl* (1957), *Teenagers from Outer Space* (1959), and *Teenage Millionaire* (1961). During these same years, the Little Miss America pageant debuted, *Teenbeat* magazine began publication for a teenage readership, and teen idols like Fabian and Frankie Avalon made youthful audiences swoon. The Barbie doll fit well into the emerging social scene made popular by such trends. Marketed without parents, the Barbie doll allowed children to imagine the teenage world as independent from the adult world of family. Though by 1961, Barbie did have a little sister in the Skipper doll, the role of a sibling did not impose any limiting family responsibilities on the Barbie doll. Early on, the Barbie doll could be a prom date for the Ken doll (introduced in 1961 after much consumer demand) or outfitted for a sock hop. Unlike real teenagers though, the Barbie doll possessed a fully developed figure.

Though the teenage identity for the Barbie doll has persisted in some of Mattel's marketing into the late 1990s, shortly after the doll's introduction Mattel also marketed the doll as a young adult capable of pursuing a career. Indeed, Handler had imagined a three-dimensional doll that children could use to imagine their grown-up lives. The Barbie doll did not portray traditional young adulthood, however. Introduced during a period when most women stayed home to raise families, Mattel offered extravagant wedding dresses for the Barbie doll, but never marketed the Ken doll as a spouse. Children were left to choose the marital status of the doll. With no set family responsibilities, the Barbie doll was the first doll to allow young girls to imagine an unrestricted, single adult life. Mattel soon marketed Barbie as a nurse, an airline stewardess, and a graduate. The career choices for the doll captured a developing trend in American culture:

The “Generation” dolls in the Barbie line, 1999.

the increase in female independence. As career opportunities for women broadened in the 1960s and 1970s, the Barbie doll fit well into the flux of American society. Within a decade of the doll’s introduction, the career costumes available to the Barbie doll multiplied rapidly, faster at first than actual opportunities for women. The Barbie doll could be an astronaut (1965), a surgeon (1973), an Olympic athlete (1975), a veterinarian, a reporter, a doctor (1985), a UNICEF Ambassador (1989), a marine corps sergeant, presidential candidate (1992), a police officer (1993), and paleontologist (1997), to name a few.

As women embraced their new freedoms in the workplace, they also began to fear the effects of these freedoms on the family and femininity in general. Concerns about how a woman could balance the demands of a career and family became some of the most hotly debated topics in American society. Women’s roles in popular television shows illustrated the debates. The stay-at-home mothers found in the characters of Harriet Nelson (*The Adventures of Ozzie and Harriet*, 1952-1966) and June Cleaver (*Leave It to Beaver*, 1957-1963) were replaced in the 1970s by the career women represented by Mary Tyler Moore and Rhoda. The 1980s featured the single mother

Murphy Brown, and the 1990s presented the successful lawyer Ally McBeal, a character who spent much of her time considering how difficult women’s choices about career and family really are. Articles discussing the benefits of devoting oneself to a family or balancing a satisfying career with child rearing abounded in magazines like *Working Mother*, *Parenting*, and *Parents*.

In addition, as women grappled with their new roles in society, they began to question the role of physical beauty in their lives. In the 1950s, “the commodification of one’s look became the basis of success,” according to author Wini Breines in *Young, White and Miserable: Growing Up Female in the Fifties*. But by the 1960s and early 1970s, the basis of success was no longer beauty. During these decades, women began to enter (and finish) college in greater numbers. As these educated women pursued careers outside the home and postponed marriage and childbirth they began to challenge the role of conventional beauty in a woman’s life: some burned their bras, others discarded their makeup, others stopped shaving their legs, and others began to wear pants to work. With the triumph of feminism, America no longer had a set ideal of beauty.

The Barbie doll had become was the doll of choice for little girls to use to imagine their own lives as adults. Just as critics worried about whether toy guns or the violence in popular television shows would make children violent, they began to wonder if (and how) the now ubiquitous Barbie doll influenced children's ideas about womanhood. The doll's characteristics mirrored many aspects of the debates about modern womanhood—it could have any career a child imagined, it could remain single or marry, and it was conventionally beautiful.

Regarding the Barbie doll as a toy to envision an adult life, young mothers, struggling to balance careers and parenthood, wondered if the independent Barbie doll oversimplified the choices available to young women. Without family ties, the doll seemed to deny girls practice at the difficult balancing act their mothers attempted daily. But supporters of the Barbie doll reasoned that just as children could decide whether the Barbie doll would "marry" they could also decide whether the Barbie doll would "have children." That Mattel did not define the doll as a mother or spouse was a gift of imaginative freedom for girls.

As women began to rethink the role of beauty in their lives some became conflicted about how a modern woman should shape or adorn herself to be attractive to the opposite sex and worried that if women obsessed over their looks they would neglect their minds. The Barbie doll, with its attractive face, silky hair, shapely body, and myriad beauty accessories, came under attack as promoting an obsession with "good" looks. Unlike the doll's family ties and career, children could not change the doll's physical attributes. Critics of the doll used the term "Barbie" to describe a beautiful but empty-headed woman. The former *Baywatch* actress Pamela Lee Anderson personified the struggle women had with regard to beauty and intellect. Anderson, who had dyed her hair blond and enhanced her breasts, resembled a living Barbie doll during her rise to fame. After achieving some success, she made news in 1999 when she removed her breast implants in order to be taken more seriously, according to some sources. Similarly, in the popular television show *Ally McBeal*, the character Georgia, with her shapely body and flowing blond hair, becomes so frustrated by people referring to her as "Barbie" that she cuts off her hair. Despite the negative connotation of the term "Barbie," some women find the type of beauty represented by the Barbie doll a source of female power and advocate the use of female beauty as an essential tool for success. Some have gone to extremes; a woman named Cindy Jackson, for instance, has had more than 20 operations and has spent approximately \$55,000 to mold herself into the image of the Barbie doll. Regardless of the critics' arguments or the extreme cases, however, the number of articles in women and teen's magazines dedicated to beauty issues attest to the continuing cultural obsession with physical beauty.

For many, beauty and fashion are indelibly linked. With regard to fashion, the Barbie doll has been consistently in style. From the first Barbie dolls, Mattel took care to dress them in detailed, fashionable attire. In the early years, Barbie doll fashions reflected French designs, but as fashion trends shifted to other areas, the attire for the Barbie doll mimicked the changes. In the early 1970s, for example, the Barbie doll wore Mod clothes akin to those popularized by fashion model Twiggy. And throughout the years, gowns and glamorous accessories for gala events have always been available to the Barbie doll. Some observers note that the fashions of the Barbie doll trace fashion trends perfectly since 1959. While critics complain about the

use of waifish runway models who do not represent "average" female bodies, they also complain about the Barbie doll's size. Some have criticized the dimensions of the Barbie doll as portraying an unattainable ideal of the female shape. Various magazines have reported the dimensions the Barbie doll would have if she were life-sized (39-18-33) and have noted that a real woman with Barbie doll dimensions would be unable to menstruate. Charlotte Johnson, the Barbie doll's first dress designer, explained to M.G. Lord in *Forever Barbie* that the doll was not intended to reflect a female figure realistically, but rather to portray a flattering shape underneath fashionable clothes. According to Lord, Johnson "understood scale: When you put human-scale fabric on an object that is one-sixth human size, a multi-layered cloth waistband is going to protrude like a truck tire around a human tummy. . . . Because fabric of a proportionally diminished gauge could not be woven on existing looms, something else had to be pared down—and that something was Barbie's figure."

Despite the practical reasons for the dimensions of the Barbie doll, the unrealistic dimensions of the doll have brought the strongest criticism regarding the doll's encouragement of an obsession with weight and looks. In one instance, the Barbie doll's accessories supported the criticism. The 1965 "Slumber Party" outfit for the Barbie doll came complete with a bathroom scale set to 110 pounds and a book titled *How to Lose Weight* containing the advice: "Don't Eat." The Ken doll accessories, on the other hand, included a pastry and a glass of milk. Convinced of the ill effects of playthings with negative images on children, Cathy Meredig of High Self Esteem Toys developed a more realistically proportioned doll in 1991. She believed that "if we have enough children playing with a responsibly proportioned doll that we can raise a generation of girls that feels comfortable with the way they look," according to the *Washington Post*. Her "Happy To Be Me" doll, which looked frumpy and had uneven hair plugs, did not sell well, however. The Barbie doll was introduced with a modified figure in 1999.

Throughout the years, the Barbie doll has had several competitors, but none have been able to compete with the glamour or the comprehensiveness offered by the Barbie doll and its accessories. The Barbie doll offers children an imaginary world of individual success and, as witnessed by the pink aisle in most toy stores, an amazing array of props to fulfill children's fantasies. By the early 1980s, the Barbie doll also offered these "opportunities" to many diverse ethnicities, becoming available in a variety of ethnic and racial varieties. Although sometimes criticized for promoting excessive consumerism, the Barbie doll and its plethora of accessories offer more choices for children to play out their own fantasies than any other toy on the market.

While some wish to blame the Barbie doll for encouraging young girls to criticize their own physical attributes, to fashion themselves as "Boy Toys," or to shop excessively, others see the doll as a blank slate on which children can create their own realities. For many the Barbie doll dramatizes the conflicting but abundant possibilities for women. And perhaps because there are so many possibilities for women at the end of the twentieth century, the Barbie doll—fueled by Mattel's "Be Anything" campaign—continues to be popular. By the end of the twentieth century, Mattel sold the doll in more than 150 countries and, according to the company, two Barbie dolls are sold worldwide every second.

Barker, Clive (1952—)

For much of the 1980s, it was impossible to pick up any of Clive Barker's books without encountering on the cover this blurb from fright-master Stephen King: "I have seen the future of the horror genre, and his name is Clive Barker." Barker's more recent work, however, does not usually feature the King quotation, and this fact seems to represent his publisher's recognition that Barker has moved beyond the horror genre to become one of the modern masters of fantasy.

Clive Barker grew up in Liverpool, England,—not far from Penny Lane, celebrated in song by his fellow Liverpudlians, the Beatles. He studied literature and philosophy at the University of Liverpool and moved to London after graduation. Barker's first literary efforts took the form of plays which he wrote, directed, and produced, all on the shoestring budget that he was able to scrounge up for the small theater company he had formed. Several of his plays, with titles like *The History of the Devil* and *Frankenstein in Love*, display the fascination with fantasy and the macabre that would become hallmarks of his prose fiction.

While writing plays for public consumption, Barker was also crafting short stories and novellas that he circulated only among his friends. By the 1980s, however, he had concluded that some of his prose efforts might be marketable. He soon found a publisher for what would become known as the *Books of Blood*—six volumes of stories that were published in the United Kingdom during 1984–1985 and in the United States the following year. The collections sold poorly at first but gradually attracted a cult following among those who enjoy horror writing that does not flinch from the most gruesome of details. Barker is no hack writer who depends on mere shock value to sell

books; even his early work shows a talent for imagery, characterization, and story construction. But it must also be acknowledged that Barker's writing from this period contains graphic depictions of sex, violence, and cruelty that are intense even by the standards of modern horror fiction.

Barker's next work was a novel, *The Damnation Game* (1985), in which an ex-convict is hired as a bodyguard for a reclusive millionaire, only to learn that his employer is not in fear for his life, but his immortal soul—and with good reason. The book reached the *New York Times* Bestseller List in its first week of American publication.

Barker's subsequent novels also enjoyed strong sales in both Europe and the United States. His next book—*Weaveworld* (1987)—began Barker's transition from horror to fantasy, although some graphic scenes were still present in the story. It concerns a man who falls into a magic carpet, only to discover that it contains an entire secret world populated by people with magical powers that are both wondrous and frightening. This was followed in 1989 by *The Great and Secret Show*, which features an epic struggle to control the "Art," the greatest power in the Universe—the power of magic. Next was *Imajica* (1990), which reinterprets the Biblical story of creation in terms of a battle between four great powers for dominion over a fifth. Then came *The Thief of Always* (1992), a book for children about an enchanted house where a boy's every wish is granted, although the place turns out to be not quite as idyllic as it at first seemed.

Everville: The Second Book of the Art, which appeared in 1994, is a sequel to *The Great and Secret Show*. The book is essentially a quest story, with the action alternating between our world and a fantasy parallel universe. In *Sacrament* (1996), Barker's protagonist encounters a diabolical villain who can cause whole species to become extinct. The ideas of extinction, loss, and the inevitable passage of time combine like musical notes to form a melancholy chord that echoes throughout the book. The 1998 novel *Galilee: A Romance* represents Barker's greatest departure yet from the grand guignol style of his earlier work. The story involves a centuries-long feud between two formidable families, the Gearys and the Barbarossas. The advertised romance element is certainly present, although leavened by generous helpings of fantasy, conspiracy, and unconventional sexual escapades.

In addition to his work for the stage and the printed page, Barker has also manifested his abilities in other forms of media. He is a talented illustrator, heavily influenced by the work of the Spanish painter Goya. He has provided the cover art for several of his novels and has also published a book of his art entitled *Clive Barker: Illustrator*. In 1996, a collection of his paintings was the subject of a successful one-man exhibition at the Bess Culter Gallery in New York City. Barker has also written stories for several comic books, including the Marvel Comics series *Razorline*.

Barker's work is also well known to fans of horror movies. In the mid-1980s, he penned screenplays based on two of his stories, "Underworld" and "Rawhead Rex," both of which were made into low-budget films. Barker was so dissatisfied with the final products that he was determined to have creative control over the next film based on his work. That turned out to be *Hellraiser*, derived from Barker's novella *The Hellbound Heart*. Barker served as both writer and director for this production, and the 1987 film quickly gained a reputation for depictions of violence and torture as graphic and unsettling as anything that Barker portrayed in the *Books of Blood*. The film spawned three sequels, although Barker's role in each was increasingly limited. He also directed two other films based on his

stories: *Nightbreed* (1990) and *Lord of Illusions* (1995). Another Barker story, “The Forbidden,” was made into the 1992 film *Candyman*, directed by Bernard Ross, with Barker serving as Executive Producer. A sequel, *Candyman 2: Farewell to the Flesh*, was released in 1995, but Barker’s involvement in the film was minimal.

Barker’s company, Seraphim Productions, now coordinates all aspects of its founder’s prodigious creative output—from novels to films, plays, CD-ROMs, comic books, and paintings. The term “Renaissance man” is much overused these days, but in Clive Barker’s case it just might be an understatement.

Barkley, Charles (1963—)

Basketball player Charles Barkley was known for his outspoken and aggressive behavior on and off the court. In the early 1980s, he attracted national attention when he played for Auburn University. Dubbed the “Round Mound of Rebound” because he weighed almost 300 pounds and stood 6’4”, Barkley slimmed down for the 1984 NBA draft. Playing for the Philadelphia 76ers, Phoenix Suns, and Houston Rockets, Barkley was an Olympic gold medalist on the Dream Team in 1992 and 1996. A superstar player, he endorsed his line of shoes (while fighting Godzilla in one Nike advertisement) and hosted *Saturday Night Live* which featured him playing a mean game of one-on-one with PBS star Barney. He made cameo appearances in such movies as *Space Jam* (1996). The comic book series *Charles Barkley and the Referee Murders* depicted his antagonism toward officials. Known as Sir Charles, the entertaining and charismatic Barkley stressed he was not a role model. Egotistically stating, “I’m the ninth wonder of the world,” Barkley often provided controversial sound bites for the press because of his temperamental and opinionated outbursts.

Barney and Friends

Barney, a huggable six-foot-four-inch talking purple dinosaur, starred in a daily half-hour children’s television program that premiered April 6, 1992, on PBS. In 1988, the character’s creator, Sheryl Leach, had grown dissatisfied with the selection of home videos on the market to amuse her young son. She wrote scripts for a children’s video featuring a stuffed bear that came to life but changed the central character to a dinosaur, capitalizing on the renewed interest among children. Leach produced three “Barney and the Backyard Gang” videos and marketed them through day-care centers and video stores.

A PBS executive saw the videos and in 1991 secured a grant from the Corporation for Public Broadcasting to produce thirty episodes of the series. The PBS series was entitled *Barney and Friends* and featured Barney (played by David Joyner, voiced by Bob West), his younger dinosaur sidekick Baby Bop (Jeff Ayers, voiced by Carol Farabee), and a gaggle of children representing the country’s major ethnic groups (Caucasian, African American, Asian-American, Native American, Indian, etc.). The young members of this politically correct sampling of American culture could make a small stuffed (and eminently marketable) dinosaur come to life as Barney. The group would dance, sing songs, and learn valuable lessons about getting along with each other in work and play. *Barney and Friends’* signature song, “I Love You,” took the tune of “This Old Man” and substituted lyrics remarkable for nothing if not their catchiness: children nationwide were soon singing “I love you / you love me / we’re a happy family” and spreading Barney’s feel-good message throughout the land.

Such popularity with the television-watching preschool demographic made *Barney and Friends* vulnerable to critical attacks that suggested the show was nothing but “an infomercial for a stuffed animal.” The four million Barney home videos and \$300 million in other Barney merchandise that sold within one year after its PBS premiere confirmed that “Barney” was a media force to be reckoned with. On April 24, 1994, NBC aired Barney’s first foray into commercial television, with a prime-time special entitled “Bedtime with Barney: Imagination Island.”

The ubiquity of Barney, Barney’s songs, and Barney-related paraphernalia caused a backlash on late-night television and radio talk shows, in stand-up comedy acts, and on world wide web sites. Speculations that Barney was Evil incarnate, for instance, or lists describing 101 ways to kill the fuzzy purple dinosaur were not uncommon. Thinly-disguised likenesses of Barney became targets of crude, sometimes physically violent attacks on stage and screen. But Barney’s commercial success did not flag. Indeed, the critical backlash may have contributed to the high profile Barney maintained in American cultural (and fiscal) consciousness throughout the 1990s. *Forbes* magazine ranked Barney as the third richest Hollywood entertainer for the years 1993 and 1994, behind director Steven Spielberg and talk show host cum media phenom Oprah Winfrey. In 1998 Barney became a bonafide Hollywood fixture when he and his pals leapt onto the big screen in the feature-length *Barney’s Great Adventure*.

Barney Miller

Through the 1970s and 1980s there were many police shows on television. Most were action shows full of car chases and shootouts, or shows dealing with the serious dramas of contemporary society. *Barney Miller* was different. From 1975 to 1982, this situation comedy presented the human stories of the detectives and officers of the 12th Precinct in New York (Greenwich Village Area) as well as the stories of the criminals and victims that they dealt with. Though it had its share of serious topics, it managed to let its characters develop and grow and let us laugh at the results. The main action was restricted to the detectives' office and the small connected office of Captain

Hal Linden (foreground) with the cast of *Barney Miller*.

Barney Miller on the upper floor of an old police building. The show's set was sparse, limited to the detectives' old desks, a holding cell, a coffee maker, and a restroom.

The 12th Precinct detectives' office was comprised of a diverse group of mostly men: Capt. Barney Miller (Hal Linden), Philip Fish (Abe Vigoda), Stan Wojciehowicz (Max Gail), Ron Harris (Ron Glass), Arthur Dietrich (Steve Landesburg), Chano Amengule (Gregory Sierra), Nick Yemana (Jack Soo), Inspector Frank Luger (James Gregory), and Officer Carl Levitt (Ron Carey). Several episodes included temporary women detectives (one played by Linda Lavin, who would soon move on to *Alice*), but the show focused predominantly on male police. The characters changed somewhat after the first few seasons, as the show focused exclusively on the office and away from any other storyline (originally the story was to be about the office and home life of the captain, but this aspect was phased out). Chano left, as did Fish, to be replaced by Dietrich. Jack Soo died during the series, and his character was not replaced.

Barney Miller was notable for other reasons as well. Critics Harry Castleman and Walter J. Podrazik explained that "Real-life police departments have praised *Barney Miller* as being one of the most realistic cop shows around. The detectives rarely draw their guns, and spend more time in conversation, paperwork, and resolving minor neighborhood squabbles than in blowing away some Mr. Big drug king." After the first season, *Barney Miller* rarely depicted anything outside of the squad room. Any action that did take place did so out of the audience's sight. For example, viewers learned about the crimes, the disagreements, and the ensuing action second-hand from the police detectives and other characters.

In contrast to other police shows of its time, *Barney Miller* showed viewers the more mundane aspects of its detectives' work lives, including their bad habits, passions, and their likes and dislikes, all with one of the finest ensemble casts of working people in television. Detective Harris developed and wrote a novel, "Blood on the Badge," over the years, and viewers learned about Fish's wife but almost never saw her. Viewers came to know about Wojo's personal life and Barney's divorce, but never saw them outside of the office.

For the most part, laughs came from the dialogue and watching the characters' responses to specific situations. Topical issues of the day, from women's rights, to gay rights, and nuclear weapons, were also addressed in humorous contexts. Many episodes dealt with the work life of the police, including questions from Internal Affairs, problems with promotions, and on-going troubles with an old building. Most stories, however, dealt with small crime and the day-to-day work of policing.

Barney Miller's lasting legacy might be the shows that developed following its gritty working ensemble mold (*Night Court*, for example), or the effect it had on future police shows, such as *Hill Street Blues*, *NYPD Blue*, and *Homicide*. In fact, NBC Chief Brandon Tartikoff presented his concept for *Hill Street Blues* to Steven Bochco as "*Barney Miller* outdoors." With 170 episodes to *Hill Street*'s 146, *Barney Miller* may have had a lasting impact all on its own.

Barry, Dave (1947—)

Dave Barry, a bestselling author and a syndicated humor columnist based in Miami, is a significant player in the great American tradition of humor writing. Like Finley Peter Dunne, social satire is a mainstay of Barry's work—e.g., on the limitations of free speech: “[Y]ou can't shout 'FIRE!' in a crowded theater. Even if there *is* a fire, you can't shout it. A union worker has to shout it.” Like Mark Twain, Barry explores the posibilities of life in the mid- to late twentieth century: describing the “grim” looks of a group of rich people in an ad, Barry remarks: “[It is] as if they have just received the tragic news that one of their key polo ponies had injured itself trampling a servant to death and would be unavailable for an important match.” And like Will Rogers, Barry provides commentary on the issues of the day—Barry's description of Will Rogers in his book *Dave Barry Slept Here* reads: Rogers “used to do an act where he'd twirl a lasso and absolutely slay his audiences with such wry observations as ‘The only thing I know is what I read in the papers.’ Ha-ha! Get it? Neither do we. Must have been something he did with the lasso.”

Barry grew up in Armonk, New York. He is self-consciously a member of the Baby Boom generation. In *Dave Barry Turns 40*, the author has this to say about his generation's musical tastes: “[W]e actually like to think we're still With It. Whereas in fact we are nowhere near It. The light leaving from It right now will not reach us for several years.” Barry's father, David W. Barry, was a Presbyterian minister who worked in New York's inner city. In a serious column written after his father's death, Barry later wrote that “[t]hey were always asking [Barry's father] to be on those shows to talk about Harlem and the South Bronx, because back then he was the only white man they could find who seemed to know anything about it.”

Barry graduated from New York's Pleasantville High School in 1965. In his yearbook photograph, according to Barry many years later, he looked like a “solemn little Junior Certified Public Accountant wearing glasses styled by Mister Bob's House of Soviet Eyewear.” He then went on to Haverford College, where he earned a degree in English in 1969. Having been declared a conscientious war objector, Barry performed alternative service by working for the Episcopal Church in New York. Barry has remained fairly consistent in his antiwar views. In 1992, he declared himself a candidate for President on a platform which included an interesting method of conducting foreign policy without war. Foreign affairs “would be handled via

[an] entity called The Department of A Couple of Guys Names Victor.” Instead of invading Panama and causing “a whole lot of innocent people [to] get hurt,” Barry would say to his foreign-affairs team, “‘Victors, I have this feeling that something unfortunate might happen to Manuel Noriega, you know what I mean?’ And, mysteriously, something would.”

Barry got a job in 1971 writing for the *Daily Local News* in West Chester, Pennsylvania. After a stint with the Associated Press in Pennsylvania, in 1975 he went to work for the consulting firm Burger Associates teaching effective business writing (“This could be why we got so far behind Japan,” he later speculated). During this time, he started a humor column in the *Daily Local News*. After his work became popular, he was hired by the *Miami Herald*, although he did not move to Miami until 1986. He also produced some spoofs on self-help books, such as *Homes and Other Black Holes*. These books were to be followed by collections of Barry's columns, as well as original works with titles like *Dave Barry Slept Here: A Sort of History of the United States*, and *Dave Barry's Guide to Guys*.

Barry was also honored with a television series, called *Dave's World* and based on two of his books, which ran from 1993 to 1997 on CBS before being canceled. The Barry character in the series was played by Harry Anderson, the judge on *Night Court*. “Lest you think I have ‘sold out’ as an artist,” Barry reassured his readers while *Dave's World* was still on the air, “let me stress that I have retained total creative control over the show, in the sense that, when they send me a check, I can legally spend it however I want.” The show's cancellation did not effect Barry's writing, and he continued to amuse his readers, offering refreshing views on American life.

Barry, Lynda (1956—)

Lynda Barry was one of a new breed of artists and writers who brought underground comics to the light of day with her biting funny strip *Ernie Pook's Comeek*, first printed in 1980 in the *Chicago Reader* alternative newsweekly, and the acclaimed novel and play *The Good Times are Killing Me*, published in 1988. The crudely-drawn *Ernie Pook's Comeek* details the antics of a group of misfit adolescents, centering on the hapless Marlys Mullen, who gives a voice to sociocultural issues through the eyes of a young girl. It appeared in more than 60 newspapers in the 1990s. *The Good Times are Killing Me*, set in the 1960s, tackles race relations and other topics as understood by children. Barry's sharp wit and wry commentary is often compared to that of her college friend Matt Groening, creator of the *Life in Hell* comic and *The Simpsons* television show, who helped propel her career.

Barrymore, John (1882-1942)

John Barrymore, who appeared in over 40 plays, 60 films, and 100 radio shows during his forty-year career, was perhaps the most influential and idolized actor of his day. The best known of America's "Royal Family" of actors, the handsome and athletic Barrymore was renowned for his ability to flesh out underwritten roles with his charismatic charm and commanding presence. He reached new artistic heights with title-role performances in theatrical productions of *Richard III* (1920) and *Hamlet* (1922-25) before answering Hollywood's call to play romantic parts on screen. Though Barrymore brought these new figures to life with his customary ardor, his favorite roles were quite different: characters who required physical or psychological distortion, or both. Essentially a character actor trapped in a leading man's body, Barrymore wanted to prove to the world that he was much more than just "the Great Profile."

Born on February 14 or 15, 1882, in Philadelphia, Barrymore was the third of three children born to professional actors Maurice Barrymore and Georgiana Drew Barrymore. His parents, frequently on the road, shunted him off to numerous boarding schools, where he quickly developed a reputation for wildness. An early punishment—a detention in an empty classroom—happened to lead to what he believed would be his life's calling; he discovered a large book illustrated by Gustav Doré and was so enthralled by the images that he decided to become an artist himself.

Barrymore pursued art training in England during the late 1890s and then returned to America in 1900 to become a cartoonist for the *New York Evening Journal*. Family members had other ideas about his career, however; his father insisted that he accompany him in a vaudeville sketch in early 1901 and, later that year, his sister Ethel convinced him to appear as a last-minute replacement in one of her

plays. Fired from the *Evening Journal* in 1902, he soon joined a theatrical company in Chicago headed by a distant relative.

Though Barrymore's stage work at this time was hardly memorable, several theater magnates could see comic potential in the young actor. Producer Charles Frohman cast Barrymore in his first Broadway play, the comedy *Glad of It*, in 1903. The following year, William Collier recruited Barrymore to appear in *The Dictator*, a gunboat-diplomacy farce. *The Dictator* became a major hit, with many reviewers citing Barrymore's all-too-believable performance as a drunken telegraph operator.

Other stage triumphs quickly followed. Barrymore played his first serious role, the dying Dr. Rank, in a Boston staging of *A Doll's House* in January 1907, and later that year he received fine reviews for his first leading role: Tony Allen in the hit comedy *The Boys of Company "B."* Barrymore scored a major success with *A Stubborn Cinderella* (1908-09) and peaked as a comic actor the next season in his longest running play, *The Fortune Hunter*.

Barrymore's ensuing stage work generated little enthusiasm among critics and audiences, but he scored with a series of slapstick movies produced from 1913 to 1916, beginning with *An American Citizen*. He longed to be regarded as a serious actor, however, and soon earned his credentials in a 1916 production of the John Galsworthy drama *Justice*. Other acclaimed performances followed: *Peter Ibbetson* in 1917, *Redemption* in 1918, and *The Jest* in 1919. Barrymore then raised his acting to another level by taking on two Shakespearean roles, Richard III and Hamlet, during the early 1920s. Critics and audiences were stunned by the power and passion of his work.

Aware of Barrymore's emerging marquee value, the Warner Bros. studio signed him to appear in *Beau Brummel* (1924), his first film made in California. After returning to *Hamlet* for a highly successful London run, Barrymore settled in Hollywood in 1926 for a long career in the movies. He appeared in nine more films for Warner Bros. (including *Don Juan* [1926], the first feature film with a synchronized soundtrack) before signing on with MGM for such movies as *Grand Hotel* (1932) opposite Greta Garbo and *Rasputin and the Empress* (1932) with his siblings Ethel and Lionel. He also offered memorable performances in David Selznick's *State's Attorney* (1932), *A Bill of Divorcement* (1932), and *Topaze* (1933) before returning to MGM for several more films. A journeyman actor from 1933, Barrymore turned in some of his finest film work ever in such vehicles as Universal's *Counsellor-at-Law* (1933) and Columbia's *Twentieth Century* (1934).

Despite these achievements, Barrymore found movie work increasingly elusive. His alcoholism and frequently failing memory were among the biggest open secrets in Hollywood, and the studios were now hesitant to work with him. MGM signed him back at a highly reduced salary to appear as Mercutio in *Romeo and Juliet* (1936), his only Shakespearean feature film, but few screen successes followed. He returned to the stage for one last fling—*My Dear Children*, a 1939 trifle about an aging ham and his daughters—and followed it up with several lamentable films. The worst was also his last: *Playmates* (1941), which featured him as an alcoholic, Shakespearean has-been named "John Barrymore."

Barrymore's radio broadcasts represented the few high points of his career from the mid-1930s onward. Building on a 1937 series of "Streamlined Shakespeare" radio plays, he appeared more than seventy times on Rudy Vallee's *Sealtest Show* beginning in October 1940. His comic and dramatic performances were well-received, and he remained associated with the Vallee program up to his death on May 29, 1942 in Los Angeles.

Theater critic Harold Clurman once suggested that John Barrymore “had everything an actor should ideally possess: physical beauty, a magnificent voice, intelligence, humor, sex appeal, grace and, to boot, a quotient of the demonic—truly the prince of players. There was unfortunately also a vein of self-destructiveness in him.” In retrospect, the ignoble aspects of Barrymore’s life—an extravagantly wasteful lifestyle, alcoholic binges, four failed marriages, numerous affairs, self-parodying performances—only contributed to his larger-than-life status. Though Barrymore the man passed on decades ago, Barrymore the myth has lost little of its power to captivate.

Barton, Bruce (1886-1967)

Advertising man, religious writer, and United States Congressman, the name of Bruce Barton is synonymous with the advertising firm of Batten, Barton, Durstine, and Osborne, the agency Barton helped found in 1919. The firm’s clients, including U.S. Steel, General Electric, General Motors, and Dunlop, were among the most powerful businesses of the American 1920s. Barton is best remembered for his bestselling book *The Man Nobody Knows* (1925), a conduct manual for American businessmen whose subtitle proclaimed itself “a discovery of the real Jesus.”

The son of a prominent Congregational Minister, Barton was in the vanguard of the new advertising culture of the 1920s. In a period where the shift into a “mass” consumption economy had spawned a new service and leisure economy, advertising became an industry in its own right and led the way in reshaping the traditional Protestant morality of Victorian America into something more suited to the dictates of a modern consumer economy. Of those engaged in such work Barton was the most renowned. Orthodox Protestant values emphasized hard work, innate human sinfulness, and the evils of self-indulgence and idleness. These were not values that could be easily accommodated within a new commercial world which promoted the free play of conspicuous personal consumption and the selling of leisure. In a string of books and articles published across the decade Barton examined what he claimed were the New Testament origins of monopoly capitalism, arguing that the repression of desire, and the failure of the individual to pursue personal self-fulfillment (in private acts of consumption), were the greatest of all sins. His most famous book, *The Man Nobody Knows*, turned the life of Jesus into a template for the new commercial practices of the 1920s, citing the parables (“the most powerful advertisements of all time”) alongside the insights of Henry Ford and J.P. Morgan. By making Jesus like a

Bruce Barton

businessman, Barton made businessmen like Jesus. This reassuring message sat easily with the colossal extension of the market into all areas of American life during the 1920s, and *The Man Nobody Knows* itself sold 750,000 copies in its first two years. A follow up, *The Book Nobody Knows* (1926), and two subsequent studies in the same idiom, *The Man of Galilee* (1928), and *On the Up and Up* (1929), failed to sell in the same quantities.

Barton’s writing can also be considered alongside the popularizing of psychoanalysis which took place in the 1920s, an explosion of interest in “feel good,” “self help” publishing which stressed the power of the individual mind over material circumstances. Again, this “feel good” message sold well in a time of rapid economic transformation and subsequent collapse in the 1930s, and the cultural historian Ann Douglas has numbered *The Man Nobody Knows* in a lineage which runs from Emile Coue’s *Self-Mastery Through Conscious Auto-Suggestion* (1923), through Walter Pitkin’s *Life Begins at Forty* (1932), to Dale Carnegie’s *How to Win Friends and Influence People* (1936).

In the 1930s Barton launched a brief political career, running for Congress successfully in 1936, before returning to Batten, Barton, Durstine, and Osborne in 1940. He remained chairman of the firm until his retirement in 1961.

Baryshnikov, Mikhail (1948—)

One of the greatest ballet dancers of the twentieth century, Baryshnikov overcame initial expectations that his stocky build, short height, and boyish demeanor precluded him from performing the romantic roles in ballets like *Giselle* and *Sleeping Beauty*. After leaving the Soviet Union in 1973, however, Baryshnikov joined the American Ballet Theater (ABT) and became its most celebrated performer. Throughout his career, Baryshnikov has striven to explore

Mikhail Baryshnikov

new choreography. One major achievement was the collaboration with choreographer Tywla Tharp, who created for him, among other works, the incredibly popular *Push Comes to Shove*. He left ABT to work with the great Russian-born choreographer George Balanchine at the New York City Ballet. Baryshnikov soon returned to ABT as its artistic director where he eliminated its over-reliance on internationally famous guest soloists, developed new repertory, and sought to promote soloists and lead dancers already a part of ABT. His charisma, spectacular dancing, and tempestuous love life contributed greatly to the popularity of ballet in the United States.

—Jeffrey Escoffier

Baseball

Originally an early nineteenth century variation of a venerable English game, baseball, by the late twentieth century, had developed into America's "national pastime," a game so indelibly entwined with American culture and society that diplomat Jacques Barzun once remarked, "Whoever wants to know the heart and mind of America had better learn baseball."

Baseball lore places the origins of baseball in Cooperstown, a small town in upstate New York, where Abner Doubleday, a West Point cadet and Civil War hero, allegedly invented the bat-and-ball game in 1839. In reality, the sport was neither new nor indigenous. The game that ultimately developed into modern baseball was in fact a modified version of rounders, an English sport imported to the colonies prior to the American Revolution. Early forms of baseball were remarkably similar to rounders. Both games involved contending teams equipped with a ball as well as a bat with which to hit the ball. In addition, both baseball and rounders required the use of a level playing field with stations or bases to which the players advanced in their attempts to score.

Baseball quickly evolved from the sandlot play of children to the organized sport of adults. In 1845, a group of clerks, storekeepers, brokers, and assorted gentlemen of New York City, under the direction of bank clerk Alexander Joy Cartwright, founded the first baseball club in the United States—the New York Knickerbockers, which played its games at Elysian Fields in Hoboken, New Jersey. The club was more a social association than an athletic one, providing opportunities to play baseball, as well as hosting suppers, formal balls, and other festivities. Individuals could become members only through election. By the 1850s, a number of clubs patterned on the Knickerbocker model appeared throughout the Northeast and in some areas of the Midwest and Far West.

The need for codified orderly play had prompted clubs such as the Knickerbockers to draft rules for the fledgling sport. In 1857, a National Association of Baseball Players formed to unite the disparate styles of play throughout the country into a universal code of rules. Initially, the National Association attracted only New York clubs, and so the popular "Knickerbocker" style of baseball predominated. This version of the sport represented a decided evolution from rounders and resembled modern baseball in form. While no umpire as yet called balls or strikes in the Knickerbocker game, a

A baseball game between the New York Yankees and the Boston Red Sox.

batter was retired when he swung at and missed three pitches. The Knickerbocker rules limited a team at-bat to only three outs, and replaced “plugging,” a painful practice by which a fielder could retire a base runner by hitting him with a thrown ball, with “tagging,” simply touching a base runner with the ball. Within four years of its founding, the National Association came to include clubs in New Haven, Detroit, Philadelphia, Baltimore, and Washington, D.C. These clubs, for the most part, renounced their local variations on the sport and took up the “Knickerbocker” style of play.

After the Civil War, the “fraternal” club game took a decidedly commercial turn. Rather than relying exclusively on club membership to finance their teams, clubs began to earn money by charging admission to games. In order to maximize gate fees, clubs inclined away from friendly games played among club members, and turned more and more to external contests against clubs in other regions. At the same time, to guarantee fan interest, clubs felt increasing pressure to field the most highly skilled players. They began to recruit members based on talent, and, for the first time, offered financial remuneration to prospective players. In 1869, the Cincinnati Red

Stockings fielded an entire team of salaried players—the first professional baseball squad in American history.

As more clubs turned professional, a league structure emerged to organize competition. In 1871, ten teams formed the National Association of Professional Baseball Players, a loose confederation designed to provide a system for naming a national championship team. The National League, formed five years later, superseded this alliance, offering a circuit comprised of premier clubs based in Boston, Hartford, Philadelphia, New York, St. Louis, Chicago, Cincinnati, and Louisville. A host of competing leagues arose, among them the International League and the Northwestern League, but it was not until 1903 that the National League recognized the eight-team American League as its equal. Beginning that year, the two leagues concluded their schedules with the World Series, a post-season play-off between the two leagues.

Despite the game’s increased commercialization, baseball, in the early years of the twentieth century, developed into the American national game. Players such as Ty Cobb and Walter Johnson as well as managers like Connie Mack and John McGraw approached the

game in a scientific manner, utilizing various strategies and tactics to win ball games; in the process, they brought to the game a maturity and complexity that increased the sport's drama. The construction of great ballparks of concrete and steel and the game's continuing power to bind communities and neighborhoods together behind their team further solidified the coming of age of professional baseball. Baseball had achieved a new institutional prominence in American life. Boys grew up reading baseball fiction and dreaming of becoming diamond heroes themselves one day. The World Series itself became a sort of national holiday, and United States chief executives, beginning with William Howard Taft in 1910, ritualized the commencement of each new season with the ceremonial throwing of the first ball.

The appeal of the game had much to do with what many considered its uniquely American origins. "It's our game—that's the chief fact in connection with it: America's game," exclaimed poet Walt Whitman. Baseball, he wrote, "has the snap, go, fling of the American atmosphere—belongs as much to our institutions, fits into them as significantly, as our constitutions, laws: is just as important in the sum total of our historic life." To preserve this patriotic image, baseball administrators such as Albert Spalding and A.G. Mills vehemently dismissed any claims that baseball had evolved from rounders. In 1905, Mills headed a commission to investigate the origins of baseball. The group found that baseball was uniquely American and bore no traceable connection with rounders, "or any other foreign sport." Mills traced the game's genesis to Abner Doubleday in Cooperstown—a sketchy claim, to be sure, as Mills' only evidence rested on the recollections of a boyhood friend of Doubleday who ended his days in an institution for the criminally insane. Still, Doubleday was a war hero and a man of impeccable character, and so the commission canonized the late New Yorker as the founder of baseball, later consecrating ground in his native Cooperstown for the purpose of establishing the sport's Hall of Fame.

Baseball's revered image took a severe hit in 1920, when eight Chicago White Sox were found to have conspired with gamblers in fixing the 1919 World Series. The incident horrified fans of the sport and created distrust and disappointment with the behavior of ballplayers idolized throughout the nation. A young boy, perched outside the courtroom where the players' case was heard, summed up the feelings of a nation when he approached "Shoeless" Joe Jackson, one of the accused players, and said tearfully, "Say it ain't so, Joe." The eight players were later banned from the sport by baseball commissioner Kenesaw "Mountain" Landis, but the damage to the sport's reputation had already been done.

Baseball successfully weathered the storm created by the "Black Sox" scandal, as it came to be known, thanks in large part to the emergence of a new hero who brought the public focus back to the playing field, capturing the American imagination and generating excitement of mythic proportions. In the 1920s, George Herman "Babe" Ruth—aptly nicknamed the "Sultan of Swat"—established himself as the colossal demigod of sports. With his landmark home runs and charismatic personality, Ruth triggered a renewed interest in baseball. While playing for the New York Yankees, Ruth established single-season as well as career records for home runs. Ruth's extravagant lifestyle and Paul Bunyan-like appearance made him a national curiosity, while his flair for drama, which included promising and delivering home runs for sick children in hospitals, elevated him to heroic proportions in the public eye. In mythologizing the sport, Ruth restored and even escalated the sanctity of the "national pastime" that had been diminished by the "Black Sox" scandal. Along with Ty Cobb, Honus Wagner, Christy Mathewson, and Walter Johnson, Ruth

gained immortality as a charter member of the Baseball Hall of Fame, opened in 1939.

By the 1940s, the heroes of the game came to represent an even more diverse body of the population. Substantial numbers of Italians, Poles, and Jews inhabited major league rosters, and a host of these Eastern Europeans became some of the game's biggest stars. Hank Greenberg and Joe DiMaggio, among many other children of immigrants, became national celebrities for their on-field exploits. In this respect, baseball served an important socializing function. As the *Sporting News* boasted, "The Mick, the Sheeney, the Wop, the Dutch and the Chink, the Cuban, the Indian, the Jap, or so the so-called Anglo-Saxon—his nationality is never a matter of moment if he can pitch, or hit, or field." During World War II, when teams were depleted by the war effort, even women became part of baseball history, as female leagues were established to satisfy the public's hunger for the sport. Still, the baseball-as-melting-pot image had one glaring omission. A "gentleman's agreement" dating back to the National Association excluded African Americans from playing alongside whites in professional baseball. Various so-called Negro Leagues had formed in the early twentieth century to satisfy the longings of African Americans to play the game, and a number of players such as Josh Gibson and Satchel Paige posted accomplishments that rivaled those of white major leaguers. Still, for all their talent, these players remained barred from major league baseball. In 1947, Brooklyn Dodgers general manager Brach Rickey signed Jackie Robinson to a major league contract, ostensibly to end segregation in baseball but also to capitalize on a burgeoning African American population newly migrated to the cities of the North. When Robinson played, blacks across the nation were glued to their radios, cheering him on as a symbol of their own hopes. Robinson was immensely unpopular with many white fans and players, but his performance on the field convinced other clubs of the correctness of Rickey's decision, and, by 1959, every team in baseball had been integrated.

The popularity of baseball reached an all-time high in the 1950s. A new generation of stars, among them Mickey Mantle, Ted Williams, and Willie Mays, joined Babe Ruth in the pantheon of American greats. Teams such as the Brooklyn Dodgers, affectionately known as "Dem Bums," won their way into the hearts of baseball fans with their play as well as with indelible personalities such as "Pee Wee" Reese, "Preacher" Roe, and Duke Snider. Baseball cards, small collectible photographs with player statistics on their flip sides, became a full-fledged industry, with companies such as Topps and Bowman capitalizing on boyhood idolatry of their favorite players. And Yogi Berra, catcher for the New York Yankees, single-handedly expanded baseball's already-sizable contribution to American speech with such head-scratching baseball idioms as "It ain't over 'til it's over." By the end of the twentieth century, Berra's witticisms had come to occupy an indelible place in the American lexicon.

The 1950s witnessed baseball at the height of its popularity and influence in American culture, but the decade also represented the end of an era in a sport relatively unchanged since its early days. Continuing financial success, buoyed especially by rising income from television and radio rights, led to club movement and league expansion. In 1953, the Boston Braves transferred its franchise to Milwaukee, and, five years later, the New York Giants and Brooklyn Dodgers moved to California, becoming the San Francisco Giants and the Los Angeles Dodgers, respectively. Later, new franchises would emerge in Houston and Montreal. The location of the ballparks in

areas geared toward suburban audiences destroyed many urban community ties to baseball forged over the course of a century.

Players also gained unprecedented power in the latter half of the twentieth century and, with it, astronomical salaries that did much to dampen public enthusiasm for their heroes. In 1976, pitchers Andy Messersmith and Dave McNally challenged the long-established reserve clause, which owners had, for more than a century, used to bind players to teams for the duration of their careers. Arbitrator Peter Seitz effectively demolished the clause, ushering in the era of free agency. For the first time in baseball history, players could peddle their wares on the open market, and, as a result, salaries skyrocketed. In 1976, the Boston Red Sox made history by signing Bill Campbell, baseball's first free agent, to a four-year, \$1 million dollar contract. The average annual salary rose from \$41,000 in 1974 to \$1,000,000 in 1992. In 1998, pitcher Kevin Brown signed the first \$100 million contract in sport history, averaging over \$13 million per annum. Free agency, by encouraging the constant movement of players from team to team, also did much to sever the long-term identification of players with particular teams and cities, thus further weakening community bonds with baseball.

Polls consistently revealed that fans resented the overpayment of players, but still they continued to attend big-league games en masse. Major league attendance records were broken six times in the 1985 through 1991 seasons. The players' strike of 1994 dramatically reversed this tide of goodwill. The players' rejection of a salary cap proposed by owners resulted in a 234-day labor stoppage during the 1994 season, with the cancellation of 921 regular-season games as well as the World Series. The strike, which ended early in the 1995 season, disrupted state and city economies and disappointed millions of fans. As a result, the 1995 season saw an unprecedented decline in attendance. The concurrent rise of basketball as a major spectator sport in the late 1990s also damaged the drawing power of baseball.

Stellar team performances as well as a number of stunning individual achievements in the latter half of the 1990s brought fans back to ballparks across the country in record numbers. The Atlanta Braves, with their remarkable seven divisional titles in the decade, reminded many of the glory days of baseball, when the New York Yankees and St. Louis Cardinals registered the word "dynasty" in the sport's lexicon. Similarly, the Yankees delivered one of the finest performances by a team in baseball history, logging 114 victories in 1998 and winning the World Series handily. On the players' end, Cal Ripken Jr., in eclipsing Lou Gehrig's mark of 2,130 consecutive games played, brought important positive press to baseball in the wake of its 1994 players' strike. Ripken's fortitude and passion for the game was a welcome relief to fans disillusioned by the image of selfish players concerned primarily with monetary returns. Similarly, Baltimore's Mark McGwire returned the focus of fans to the playing field with his assault on Roger Maris' single-season mark for home runs in 1998. McGwire's record-setting 70 round-trippers that season captured the nation's attention in a Ruth-ian fashion and did much to restore the mythos and romance of the sport, much as the Sultan of Swat's accomplishments had done in the 1920s.

Though professional baseball has had its moments of honor and of ignominy, perhaps the real legacy of the glory days of baseball is still to be found on community playing fields. Baseball is not only beloved as a spectator sport, but is still often the first team game played by both sexes in peewee and little leagues. While modern mothers may shudder to imagine their children imitating the tobacco-chewing ballplayers they see on television, there is an undeniable

thrill at the little leaguer's first home run that harks back to the most truly electrifying quality of baseball—that moment when skill meets desire, enabling the ordinary person to perform magnificent feats.

—Scott Tribble

Baseball Cards

Bought and traded by the youth of America who wanted to see their favorite players and exchange the cards with other young fans, baseball cards were a symbol of bubble gum hero worship and youthful innocence during the first three-quarters of the twentieth century. Serious collectibles only since about 1975, baseball card collecting has turned into a multimillion-dollar business, a transformation to commercial and financial enterprise.

The first baseball cards were a far cry from the high-tech, colorful prints of today. The Old Judge Company issued the first series of cards in 1887. They were distributed in cigarette packages and consisted of player photographs mounted on stiff cardboard. Those "Old Judges," produced until 1890, are treasured parts of many current collections. Included in those sets was one of the most valuable cards in the history of collecting—the Honus Wagner baseball card. According to legend, Wagner, a nonsmoker, was irate when he discovered his picture being used to promote smoking. As a result, he ordered his likeness removed from the set. Today, it appears there are no more than twenty-five Wagner cards in existence, each worth nearly one hundred thousand dollars.

By the 1920s, tobacco companies had given way to gum and confectionery enterprises as the prime distributors of baseball cards. Goudey Gum Company, a leading baseball card manufacturer, issued sets of baseball cards from 1933 to 1941. Goudey's attractive designs, with full-color line drawings on thick card stock, greatly influenced other cards issued during that era. Some of the most attractive and collectible cards were released in the two decades preceding World War II.

The war brought an abrupt end to the manufacture and collection of baseball cards because of the serious shortages of paper and rubber. Production was renewed in 1948 when the Bowman Gum Company issued a set of black-and-white prints with one card and one slab of gum in every penny pack. That same year, the Leaf Company of Chicago issued a set of colorized picture cards with bubble gum. Then in 1951, Topps Gum Company began issuing cards and became the undisputed leader in the manufacture of baseball cards, dominating

Dizzy Dean's 1934 baseball card.

the market for the next three decades. The Topps 1952 series set the standard for baseball cards by printing individual statistics, personal information, team logos, and large, clear, color pictures. There were continuing legal squabbles over who held the rights to players' pictures. With competition fierce during the 1950s, Topps finally bought out the Bowman Company.

It was not until the mid-1970s that the card collecting business began in earnest. One card collector stated that in 1972, there were only about ten card dealers in the New York area who would meet on Friday nights. No money ever changed hands—it was strictly trading. But several years later, the hobby began to grow. As more and more people began buying old cards, probably as a link to their youth, prices rose, and small trading meetings turned into major baseball card conventions at hotels and conference centers. By the end of the twentieth century, there are baseball card conventions, shows, and flea markets in nearly all major cities.

In the 1980s, various court decisions paved the way for other companies to challenge Topps's virtual monopoly. Fleer, Donruss, and Upper Deck issued attractive and colorful cards during the 1980s, although bubble gum was discarded as part of that package. In the 1990s, other companies followed: Leaf, Studio, Ultra, Stadium Club, Bowman, and Pinnacle. With competition fierce, these companies began offering "inserts" or special cards that would be issued as

limited editions in order to keep their prices high for collectors. However, these special sets began driving many single-player collectors out of the hobby. Average prices of cards were rising to unprecedented heights while the number of cards per pack was dropping.

Basie, Count (1904-1984)

One of the most imitated piano players, Count Basie brought a minimalist, subtle style to his powerful work at the keyboard and was the driving force behind a star-studded band that influenced the course of jazz during the big band era of the late 1930s and early 1940s. Its style of interspersing the Count's intricately timed piano chords with blasting ensemble passages and explosive solos made it one of the most admired of big bands for more than 30 years.

By sheer accident, Basie came under the influence of the Kansas City jazz style, the essence of which was "relaxation." Franklin Driggs writes that the "Southwestern style" had "intense drive and yet was relaxed." Notes might be played "just before or just after" the beat while the rhythm flowed on evenly. These are characteristics any listener to Basie's "One O'Clock Jump" would understand. At age 24, Basie was stranded in Kansas City when a vaudeville act he accompanied disbanded. Born William James Basie in Red Bank, New Jersey, he had become interested in jazz and ragtime in the New York area and had studied briefly with Fats Waller. Adrift in Kansas City, he played background to silent movies and then spent a year with Walter Page's Blue Devils, a band that included blues singer Jimmy Rushing, whose career would merge with the Count's.

The Blue Devils disbanded in 1929, and Basie and some of the other members joined bandleader Bennie Moten, who had recorded his Kansas City-style jazz on Okeh Records. After Moten died in 1935, Basie took the best of his jazzmen and started a band of his own. Basie gradually upgraded the quality of his personnel, and when jazz critic John Hammond happened to hear the band on a Kansas City radio station, he persuaded Basie to bring the band to New York in

Count Basie

1936. He recorded his first sides for Decca in January, 1937, and within a year the band's fame was becoming international.

There were a number of distinctive qualities about the Basie band other than the Count's unique piano style. The rhythm section—featuring Jo Jones, drums, Walter Page, bass, and Freddie Greene, guitar—was widely admired for its lightness, precision, and relaxed swing. Jimmy Rushing's alternatively virile and sensitive style of blues singing on such band numbers as “Sent for You Yesterday (Here You Come Today)” and “Goin’ to Chicago” were longstanding hits. The Count recruited a bandstand-full of outstanding side men, whose solo improvisations took the band to ever higher plateaus. They included Lester Young and Herschel Evans on tenor sax, Earl Warren on alto, Buck Clayton and Harry Edison on trumpets, and Benny Morton and Dickie Wells on trombone. The band's chief arranger was Eddie Durham, but various members of the band made contributions to so-called “head” arrangements, which were informally worked out as a group and then memorized.

The soul of Count Basie's music was the blues, played in a style described by Stanley Dance as “slow and moody, rocking at an easy dancing pace, or jumping at passionate up-tempo.” Most of the band's greatest successes have been blues based, including “One

O’Clock Jump” and numbers featuring the vocals of Jimmy Rushing. Woody Herman, whose first band was known as “The Band That Plays the Blues,” was strongly influenced by the Basie sound.

In the 1950s, Basie and his band toured Europe frequently, with great success. During his second tour of Britain, in the fall of 1957, his became the first American band to play a command performance for the Queen. He set another precedent that fall by playing 13 weeks at the roof ballroom of the Waldorf-Astoria Hotel as the first African American jazz orchestra to play that prestigious venue.

During his long tenure at the head of a band that appealed to a wide variety of fans—both the jazz buffs and the uninitiated—swing music was becoming increasingly complex, rhythmically and harmonically, but Basie had no interest in the be-bop craze. George Simon writes that the Basie band “continued to blow and boom in the same sort of simple, swinging, straight-ahead groove in which it has slid out of Kansas City in the mid-1930s.” He adds that the Count “displayed an uncanny sense of just how far to go in tempo, in volume, and in harmonic complexity.”

Stanley Dance summed it up when he wrote in 1980 about the importance of Basie's “influence upon the whole course of jazz. By

keeping it simple and sincere, and swinging at all times, his music provided a guiding light in the chaos of the past two decades.”

Basketball

The sport of basketball was invented at the close of the nineteenth century. By the end of the twentieth century, only soccer surpassed it as the world's most popular sport, as top basketball players from the United States were among the most recognized people on Earth.

Basketball was invented in late 1891 by Dr. James A. Naismith, physical education director at the Young Men's Christian Association (YMCA) in Springfield, Massachusetts. The YMCA students were tiring of standard calisthenics and demanded a new, team sport to be played indoors between the end of football season in autumn and the start of baseball season in the spring. Naismith hit upon the idea of two teams of players maneuvering a ball across a gymnasium towards a set target. He obtained a pair of peach baskets—he originally wanted to use boxes—and nailed them on beams on either end of the gym. The first game ever played resulted in a 1-0 score, with one William R. Chase scoring the lone point with a soccer ball; Naismith and his players quickly realized that the new sport had potential.

Naismith resisted efforts to name his invention “Naismithball,” preferring “basket ball” instead. He wrote an article describing the sport in his YMCA's magazine in early 1892, and YMCAs across the country and around the world picked up on the sport during the 1890s. By 1895 Naismith had set up standard rules: five players on each team, with successful shots counting two points each. Eventually, players who were fouled by opponents would be able to make “free throws,” counting one point each, shooting a short distance from the basket.

Within weeks of Naismith's first game, women athletes in Springfield were also playing basketball, and the first intercollegiate college basketball game, in fact, was between the Stanford women's team and the University of California women's squad in April 1895. Within a year the University of Chicago beat the University of Iowa, 15-12, in the first men's college basketball game. By the first decade of the twentieth century, many colleges were fielding men's and women's basketball teams. Men's college basketball exploded in popularity during the 1930s, with heavily promoted doubleheaders at New York's Madison Square Garden featuring the top teams in the country before packed audiences.

The first successful professional basketball team was the Original Celtics, which were formed in New York before World War I. The team of New Yorkers generally won 90 percent of their games against

amateur and town teams, and had a record of 204 wins against only 11 defeats in the 1922-1923 season. In 1927, white promoter Abe Saperstein started the Harlem Globetrotters, a barnstorming basketball team made up of blacks (when most college and pro teams had no African American players). They became best known for their irreverent on-court antics and their theme song, the jazz standard “Sweet Georgia Brown.”

The scores of basketball games prior to the 1940s seem shockingly low today, as teams rarely scored more than 40 points a game. It was customary in early basketball for players to shoot the ball with both hands. Once the one-hand jump shot, popularized by Stanford star Hank Lusietti, gained acceptance in 1940, players were more confident in taking shots, and scoring began to increase.

Professional basketball leagues began and folded many times in basketball's infancy. By the end of World War II, there were two leagues competing for top college prospects, the National Basketball League and the Basketball Association of America. The two leagues merged in 1949, forming the National Basketball Association (NBA). The NBA's first star was the first great basketball tall-man, George Mikan. Improbable as it seems now, players over six feet in height were once considered to make bad basketball players, seen as ungainly and uncoordinated. The 6' 10" Mikan, who had starred as a collegian for DePaul University, erased this stereotype single-handedly, winning five NBA scoring titles as his Minneapolis (later Los Angeles) Lakers won four NBA championships. In a poll of sportswriters in 1950, Mikan was named “Mr. Basketball” for the first 50 years of the twentieth century.

As Mikan starred in the professional ranks, college basketball was shaken to the core by revelations of corruption. In 1951 the New York district attorney's office found that players at many of the top schools had agreed to play less than their best—to “shave points”—in exchange for gambler's money. The accused players frequently met gamblers during summers while working and playing basketball in New York's glamorous Catskills resort areas. Players from the City College of New York, which had won both the National Invitational Tournament and the NCAA (National Collegiate Athletic Association) basketball finals in 1951, were implicated, as were stars from Long Island University, coached by popular author Clair Bee. The image of top players testifying to grand juries would stain college basketball for the rest of the decade.

Basketball had been marked by stalling tactics, where one team would possess the ball for minutes at a time without shooting or scoring. In 1954, the NBA adopted a shot clock, requiring that a team shoot the ball within 24 seconds of gaining possession (College basketball would wait until 1985 before mandating a similar shot clock). This one rule resulted in an outburst of scoring, which helped push professional basketball attendance up in the 1950s. Fans of the era flocked to see the Boston Celtics. Led first by guard Bob Cousy, and later by center Bill Russell, the Celtics won eight straight NBA titles from 1959 through 1966. Their arch-nemesis was center Wilt Chamberlain of the Philadelphia Warriors and 76ers. The most dominant scorer in NBA history, Chamberlain averaged 50 points for the 1961-1962 season, including his memorable performance on March 2, 1962, where he scored 100 points. Chamberlain outperformed Bill Russell during Boston-Philadelphia matchups, but the Celtics almost inevitably won the titles.

As the Celtics were the NBA's dynasty in the 1960s, so were the UCLA (University of California, Los Angeles) Bruins college basketball's team to beat in the 1960s and 1970s. Coached by the soft-spoken, understated John Wooden, the UCLA Bruins won nine

NCAA tournament titles in one ten-year span, including seven straight from 1967 to 1973. Wooden's talent during this time included guards Walt Hazzard and Gail Goodrich, and centers Lew Alcindor (who would change his name to Kareem Abdul-Jabbar) and Bill Walton. During one stretch encompassing three seasons, UCLA won an improbable 88 consecutive games, an NCAA record.

The NBA found a new rival in 1967, with the creation of the American Basketball Association (ABA). The new league adopted a red, white, and blue basketball and established a line some 20 feet from the basket, beyond which a field goal counted for three points. The three-point line and the colored ball made the ABA something of a laughingstock to basketball traditionalists, and ABA attendance and media coverage indeed lagged behind the NBA's. But by the early 1970s, the ABA had successfully signed several top college picks from under the NBA's nose, and its top attraction was Julius Erving of the Virginia Squires and New York Nets. Erving, nicknamed "Dr. J," turned the slam-dunk into an art form, hanging in the air indefinitely, virtually at will. Erving was definitely the hottest young basketball talent in either league. In 1976 the NBA agreed to a merger, and four ABA teams joined the NBA. Erving signed a \$6 million contract with Philadelphia. In the first All-Star game after the merger, five of the 10 NBA All-Star players had ABA roots.

The merger, however, was not enough to stem the NBA's declining attendance and fan interest. People were not only not following professional basketball in the 1970s, they seemed actively hostile to it. The perception of pro basketball as being dominated by black athletes, some felt, prevented the sport from commanding television revenue and advertising endorsements. According to one disputed report in the late 1970s, fully three-quarters of NBA players were addicted to drugs. Once again, the NBA found its salvation in the college ranks. In 1979 Michigan State, with star guard Earvin "Magic" Johnson, defeated Indiana State, and star forward Larry Bird, for the NCAA basketball title. The game drew a record television audience, and helped popularize the NCAA basketball tournament, later known as "March Madness." The tournament eventually included 64 teams each season, with underdog, "Cinderella" teams such as North Carolina State in 1983 and Villanova in 1985 emerging to win the championship. By the 1990s, the tournament spawned hundreds of millions of dollars in office pools and Vegas gambling, as cities vied to host the "Final Four," where the four remaining teams would compete in the semifinals and championship game. Even the official start of college basketball practice in the fall became a commercialized ritual, as schools hosted "Midnight Madness" events, inviting fans to count the minutes until midnight of the first sanctioned day college teams could practice.

In the fall of 1979 Bird had joined the Boston Celtics and Johnson the Los Angeles Lakers. Johnson led the Lakers to the 1980 NBA title, playing every position in the deciding championship game and scoring 42 points. Bird and Johnson would usher in a new era in the NBA—Bird, with his tactical defense and Johnson with his exuberant offense (the Lakers' offensive strategy would be called "Showtime"). The Celtics and Lakers won eight NBA titles in the 1980s, as Bird and Johnson reprised their 1979 NCAA performance by going head-to-head in three NBA finals.

The success of the NBA created by Bird and Johnson during the 1980s rose to an even greater level during the 1990s, due in no small measure to Michael Jordan. The guard joined the Chicago Bulls in 1984, having played three seasons at the University of North Carolina; as a collegian, Jordan had been on an NCAA championship team

and the 1984 gold medal United States Olympic squad. Jordan immediately established himself as a marquee NBA player in his first seasons, scoring a playoff record 63 points in one 1986 post-season game. His dunks surpassed even Erving's in their artistry, and Jordan developed a remarkable inside game to complement that. Slowly, a great Bulls team formed around him, and Jordan led the Bulls to three straight NBA titles in 1991-1993. Jordan then abruptly left basketball for 16 months to pursue a major league baseball career. A chagrined Jordan returned to the Bulls in February 1995, and in his final three complete seasons the Bulls won three more consecutive championships. The 1996 Bulls team went 72-10 in the regular season, and many experts consider this team, led by Jordan, Scottie Pippen, Dennis Rodman, and Toni Kukoc, to be the finest in NBA history. Jordan retired for good after the 1997-1998 season; his last shot in the NBA, in the closing seconds of the deciding championship game against Utah in June 1998, was the winning basket. Jordan's announcement of his retirement in January 1999 received media coverage usually reserved for presidential impeachments and state funerals.

Though the United States had been the birthplace of basketball, by the end of the twentieth century America had to recognize the emergence of international talent. The Summer Olympics introduced basketball as a medal sport in 1936, and the United States won gold medals in its first seven Olympics, winning 63 consecutive games before losing the 1972 Munich gold medal game, 50-49, to the Soviet Union on a controversial referee's call. After the United States lost in the 1988 Olympics, the International Olympic Committee changed its rules to allow the United States to assemble a team made up not of amateurs, but of NBA stars. The "Dream Team" for the 1992 Barcelona Games was, some insisted, the greatest all-star team ever, in any sport. The squad featured Larry Bird, Magic Johnson (who had retired from the NBA in 1991 after testing positive for the HIV virus), Michael Jordan, Charles Barkley, Patrick Ewing, Karl Malone, and David Robinson. The United States team crushed its opponents, frequently by margins of 50 points a game. Many of the Dream Team opponents eagerly waited, after being defeated, to get the American stars' autographs and pictures. The 1992 squad easily won a gold medal, as did a professional United States team in the 1996 Atlanta Olympics (whose stars included Grant Hill, Scottie Pippen, and Shaquille O'Neal).

The 1990s also saw an explosion of interest of women's basketball, on professional as well as collegiate levels. Many credit this popularity with the enforcement of Title IX, a 1971 federal statute requiring high schools and colleges to fund women's sports programs on an equal basis with men's. The top college team of the time was Tennessee, which won three straight women's NCAA titles in 1996-1998, narrowly missing a fourth in 1999. In 1996, a women's professional league, the American Basketball League (ABL) was inaugurated, followed a year later by the Women's National Basketball Association (WNBA), an offshoot of the NBA. The ABL folded in 1999, but the WNBA, which held its season during the summertime, showed genuine promise; its stars included Rebecca Lobo of the New York Liberty (she had starred at the University of Connecticut) and Cynthia Cooper of the Houston Comets, which won the first two WNBA championships. Women's basketball was characterized less by dunks and flamboyant moves, and more by fundamental offense and defense. John Wooden, for one, said he generally preferred watching women's basketball to men's. College and pro women's games were known, in fact, for having a strong male fan base, as well as entire families in attendance.

As the twentieth century closed, the NBA proved it was no longer immune to the pressures of American professional sports. As major league baseball and the National Football League had suffered through lengthy and devastating strikes during the 1980s and 1990s, the NBA had its first-ever work stoppage in the fall of 1998. NBA team owners locked players out in October, declaring the collective bargaining agreement with the player's union null and void. At issue was the league salary cap; each team had been previously allowed to exceed the cap for one player (in Chicago's case, for Michael Jordan), but the owners wanted to abolish this exception. The players steadfastly refused, and the first half of the 1998-1999 season was lost. Both sides reached an agreement in early 1999, and the regular season began three months late, on February 6. To the surprise of players and owners alike, the NBA lockout garnered little attention from the fans.

Basketball slowly entered other elements of American popular culture during the latter part of the twentieth century. "Rabbit" Angstrom, the middle-aged hero of four John Updike novels, had been a star basketball player in high school. Jason Miller's Pulitzer-Prize winning play *That Championship Season* (1972) reunited disillusioned, bitter ex-jocks on the anniversary of their state high school title victory. One of the most acclaimed documentaries of the 1990s, *Hoop Dreams* (1994), tracked two talented Chicago ghetto basketball players through their four years of high school, each with an eye towards a college scholarship and an NBA career. Novelist John Edgar Wideman, who had played basketball at the University of Pennsylvania during the 1960s, often used the game metaphorically in his award-winning fiction (his daughter Jamila was a star player at Stanford, and later the WNBA). Wideman's teammate at Oxford University while on a Rhodes Scholarship was Bill Bradley, who played for Princeton, and later had a Hall of Fame professional career with the Knicks. Bradley served three terms in the United States Senate, and wrote a bestselling book defining basketball's qualities (*Values of the Game*) as he prepared a presidential campaign for the year 2000.

Bathhouses

In many cultures, bathing in communal bathhouses has been an important social and even religious ritual. In Japan it is the *senzo*, among Yiddish-speaking Jews, the *shvitz*, and in the Arab world the *hammam*, all of them centers for socializing across class lines, providing relief from culturally imposed modesty, and a place to get luxuriously clean. By the early 1900s, New York City had built and maintained a network of public bathhouses—many of them resembling Roman temples—in immigrant neighborhoods. Because they are traditionally segregated by gender, bathhouses have also long been associated with same-sex eroticism. It is in this capacity that they have gained most of their notoriety in American culture. Though the increasing availability of indoor plumbing in private houses decreased the need for public baths, the bathhouse remained a mainstay of American gay male culture until the advent of the AIDS epidemic in the mid-1980s. One of the most prominent of these venues was the Club Baths chain, a nationwide members-only network that permitted access to facilities across the country. Most of the Club bathhouses offered clean but spartan accommodations (a cubicle with a mattress pad or locker for personal items, and a fresh towel) for about \$10 for an eight-hour stay.

Even before the reconstruction of a "gay" identity from the 1960s, the baths had achieved some degree of fame as male-only enclaves: witness the depiction in films of businessmen, spies, or gangsters meeting in a Turkish bath, protected only by a towel around the waist. The Turkish baths of yore were part social club, part night club, and part sex club. They often had areas called "orgy rooms" where immediate and anonymous sex was available. The decade of the 1970s, after the beginning of gay liberation, was the "golden age" of the gay bathhouse. Gay male culture became chic, and these gathering places became celebrity "hot spots." The most famous of them was the Continental Baths on Manhattan's Upper West Side, where Bette Midler launched her career singing to an audience of towel-clad men. In the intoxicating years that followed the Stonewall riots of 1969, gay men reveled in their new visibility, with bathhouses emerging as carnal theme parks that became self-contained fantasy worlds for erotic play, though it is not clear how many of the patrons identified themselves as "gay," since the focus was on "men having sex with men," not on socially constructed identities. It was not uncommon for bathhouse patrons to include married "straight" men taking a break from domestic obligations in orgy rooms packed full of writhing bodies, or in private rooms for individual encounters. Gay or straight, customers hoped to find in the baths a passport to intense male pleasure in an environment that fairly throbbed with Dionysian energy. One large bathhouse in San Francisco boasted that it could serve up to eight hundred customers at a time. The St. Marks Baths in New York's East Village attracted customers from around the world with its sleek, modernistic facilities that were a far cry from the dumpy barracks of earlier decades, like the Everard Baths farther uptown, once the site of a church. The Beacon Baths in midtown Manhattan adjoined a cloistered convent, and it has long been rumored that the bathhouse once borrowed fresh towels from the nuns when its supply ran short.

The AIDS epidemic, which claimed gay men as some of its earliest victims, caused many public health officials and frightened patrons to recommend the bathhouses be closed, though others feared that such a move would only force sexual activity underground, beyond the reach of counseling, besides erasing the gains of gay liberation and leading to the repressive eradication of gay culture. The owners of the baths fought the closures, but most of them were shuttered by 1985. By the 1990s, gay baths had re-emerged in many large cities. Some have returned in the guise of the shadowy venues of pre-liberation days; others have re-opened as private sex clubs, taking great precautions to educate customers and enforce rules of safe sex by such means as installing video surveillance cameras and hiring “lifeguards” to monitor sexual activity.

Batman

Batman is one of the most popular and important characters created for comic books. In the entire pantheon of comic-book superheroes, only Superman and Spider-Man rival him in significance. Among the handful of comic-book characters who have transcended the market limitations of the comic-book medium, Batman has truly become an American cultural icon and an international marketing industry in and of himself.

Batman was born out of DC editor Vincent Sullivan’s desire to create a costumed character to exploit the recent success of DC’s first superhero, Superman. Taking inspiration from various Hollywood adventure, horror, and gangster movies, cartoonist Bob Kane prepared a design for a masked crime-fighter in the costume of a bat in 1939. He then consulted with writer Bill Finger, who contributed to the vigilante concept ideas derived from pulp magazines. The resulting character was thus visually and thematically a synthesis of the most lurid and bizarre representations of popular culture available to a 1930s mass audience. It was a concept seemingly destined for either the trashcan or comic-book immortality.

Like Superman, Batman wore a costume, maintained a secret identity, and battled the scourge of crime and injustice. But to anyone who read the comic books, the differences between the two leading superheroes were more striking than the similarities. Unlike Superman, Batman possessed no superhuman powers, relying instead upon his own wits, technical skills, and fighting prowess. Batman’s motives were initially obscure, but after a half-dozen issues readers learned the disturbing origins of his crime-fighting crusade. As a child, Bruce Wayne had witnessed the brutal murder of his mother

Adam West as Batman.

and father. Traumatized but determined to avenge his parents’ death, Wayne used the fortune inherited from his father to assemble an arsenal of crime-fighting gadgets while training his body and mind to the pinnacle of human perfection. One night when Wayne sits contemplating an appropriate persona that will strike fear into the hearts of criminals, a bat flies through the window. He takes it as an omen and declares, “I shall become a bat!”

Kane and Finger originally cast Batman as a vigilante pursued by the police even as he preyed upon criminals. Prowling the night, lurking in the shadows, and wearing a frightening costume with a hooded cowl and a flowing Dracula-like cape, Batman often looked more like a villain than a hero. In his earliest episodes, he even carried a gun and sometimes killed his opponents. The immediate popularity of his comic books testified to the recurring appeal of a crime-fighter who appropriates the tactics of criminals and operates free of legal constraints. As Batman himself once put it, “If you can’t beat [criminals] ‘inside’ the law, you must beat them ‘outside’ it—and that’s where I come in!”

Batman’s early adventures were among the most genuinely atmospheric in comic-book history. He waged a grim war against crime in a netherworld of gloomy castles, fog-bound wharves, and the dimly lit alleys of Gotham City—an urban landscape that seemed perpetually enshrouded in night. Bob Kane was one of the first comic-book artists to experiment—however crudely—with unusual angle shots, distorted perspectives, and heavy shadows to create a disturbing mood of claustrophobia and madness. These early classic issues also rank among the most graphically violent of their time. Murder, brutality, and bloodshed were commonplace therein until 1941, when

DC responded to public criticism by instituting a new code of standards to “clean up” its comic books. As a result Batman’s adventures gradually moved out of the shadows and became more conventional superhero adventure stories.

The addition of Batman’s teenage sidekick Robin also served to lighten the mood of the series. Kane and Finger introduced Robin, who, according to Kane, was named after Robin Hood, in the April 1940 issue of *Detective Comic*. They hoped that the character would open up more creative possibilities (by giving Batman someone to talk to) and provide a point of identification for young readers. Like Bruce Wayne, who adopts the orphaned youth and trains him in the ways of crime fighting, young Dick Grayson witnessed the murder of his parents.

Robin has been a figure of some controversy. Many believed that the brightly-colored costumed teenager was obnoxious and detracted too much from the premise of Batman as an obsessed and solitary avenger. Oftentimes it seemed that Robin’s principle role was to be captured and await rescue by Batman. In his influential 1954 polemic against comic books, *Seduction of the Innocent*, Dr. Frederick Wertham even charged that the strange relationship between Batman and Robin was rife with homosexual implications. Nevertheless, the longevity and consistent commercial success of the Batman and Robin team from the 1940s to the 1960s suggested that the concept of the “Dynamic Duo” was popular with most readers.

Much of Batman’s popularity over the decades must be attributed to his supporting cast of villains—arguably the cleverest and most memorable rogues gallery in comic books. Ludicrous caricatures based upon single motifs, villains like Cat Woman, Two-Face, the Penguin, and the Riddler were perfect adversaries for the equally ludicrous Batman. Without question, however, the most inspired and most popular of Batman’s villains has always been the Joker. With his white face, green hair, purple suit, and perpetual leering grin, the homicidal Joker is the personification of sheer lunacy, at once delightful and horrifying. The laughing Joker was also the ideal archenemy for the stoic and rather humorless Batman, often upstaging the hero in his own comic book.

After years of strong sales, Batman’s share of the comic-book market began to decline in the early 1960s. Facing stiff competition from the hip new antihero superheroes of Marvel Comics (Spider-Man, the Hulk, the Fantastic Four), Batman and his peers at DC epitomized the comic-book “Establishment” at a time when anti-establishment trends were predominating throughout youth culture.

In 1966, however, Batman’s sales received a strong boost from a new source—television. That year the ABC television network launched the prime-time live-action series *Batman*. The campy program was part of a widespread trend whereby American popular culture made fun of itself. The *Batman* show ridiculed every aspect of the comic-book series from the impossible nobility of Batman and Robin (portrayed respectively by actors Adam West and Burt Ward, who both overacted—one would hope—deliberately) to the bewildering array of improbable gadgets (bat-shark repellent), to comic-book sound effects (Pow! Bam! Zowie!?). For a couple of years the show was a phenomenal hit. Film and television celebrities like César Romero (the Joker), Burgess Meredith (the Penguin), and Julie Newmar (Cat Woman) clamored to appear on the show, which sparked a boom in sales of toys, t-shirts, and other licensed bat-merchandise. Sales of Batman’s comic book also increased dramatically for several years. But the show’s lasting impact on the comic book was arguably a harmful one. For by making the entire Batman

concept out to be a big joke, the show’s producers seemed to be making fun of the hero’s many fans who took his adventures seriously. At a time when ambitious young comic-book creators were trying to tap into an older audience, the *Batman* show firmly reinforced the popular perception that comic books were strictly for children and morons.

New generations of writers and artists understood this dilemma and worked to rescue Batman from the perils of his own multi-media success. Writer Dennis O’Neil and artist Neal Adams produced a series of stylish and very serious stories that did much to restore Batman to his original conception as a nocturnal avenger. These efforts did not reverse Batman’s declining sales throughout the 1970s—a bad time for comic-book sales generally—but they gave the comic book a grittier and more mature tone that subsequent creators would expand upon.

In the 1980s and 1990s writers have explored the darker implications of Batman as a vigilante seemingly on the brink of insanity. In a 1986 “graphic novel” (the trendy term given to “serious” comic books—with serious prices) titled *Bat Man: The Dark Knight Returns*, writer Frank Miller cast the hero as a slightly mad middle-aged fascist out to violently purge a dystopian future Gotham City gutted by moral decay. The success of *The Dark Knight Returns* sparked a major revival in the character’s popularity. A series of graphic novels and comic-book limited-series, including *Batman: Year One* (1987), *Batman: the Killing Joke* (1988), and *Batman: Arkham Asylum* (1989), delved into the most gothic, violent, and disturbing qualities of the Batman mythos and proved especially popular with contemporary comic-book fans.

More importantly in terms of public exposure and profits were the much-hyped series of major motion picture releases produced by DC Comics’ parent company Warner Brothers featuring characters from the Batman comic book. Director Tim Burton’s *Batman* with Michael Keaton in the title role and Jack Nicholson as the Joker was the most successful both commercially and critically. But three sequels to date have all generated impressive box office receipts, video sales, and licensing revenue while introducing DC’s superhero to new generations of comic-book readers. Also in the 1990s, a syndicated *Batman* animated series produced by the Fox network has managed the delicate task—never really achieved by the live-action films—of broadening the character’s media exposure while remaining true to the qualities of the Batman comic books.

Batman is one of the few original comic-book characters to have generated more popular interest and revenue from exposure in media other than comic books. But Batman is first and foremost a product of comic books, and it is in this medium where he has been most influential. The whole multitude of costumed avengers driven to strike fear into the hearts of evil-doers owe much to Bob Kane and Bill Finger’s Batman—the original comic-book caped crusader.

Baum, L. Frank (1856-1919)

With *The Wonderful Wizard of Oz* (1900), L. Frank Baum created a new kind of plain-language fairy tale, purely American, modern, industrial, and for the most part non-violent. He said in his introduction that the book “was written solely to please children of today. It aspires to being a modernized fairy tale, in which the wonderment and joy are retained and the heart-aches and nightmares are left out.” *The Wizard of Oz*—“Wonderful” was dropped in later printings—became an institution for generations of children. Reinforced by the 1939 MGM film, the story and its messages quickly became a part of American culture. The belief that the power to fulfill your deepest desires lie within yourself, that good friends can help you get where you are going, and that not all Wizards are for real has offered many comfort through turbulent times.

The hero of the story—young Dorothy of Kansas, an orphan who lives with her Aunt Em and Uncle Henry—is a plucky and resourceful American girl. Yanked by a cyclone into Oz, she accidentally kills the Wicked Witch of the East and is given the witch’s silver (changed to ruby in the 1939 movie) shoes. In hope of getting home again, Dorothy, with her little dog Toto, sets off down the Yellow Brick Road—to the Emerald City, of course—to ask the Wizard for help. Along the way, she meets the Scarecrow in search of a brain, the Tin Woodman who desires a heart, and the Cowardly Lion who is after courage. Following the storyline of most mythical quests, the friends encounter numerous adventures and must overcome great obstacles before realizing their destiny. The Wizard turns out to be a humbug, but after Dorothy destroys the Wicked Witch of the West by melting her with a bucket of water, he provides her friends with symbols of what they already have proven they possess. The book ends with Dorothy clicking her silver shoes together and being magically transported home, where her aunt and uncle have been awaiting her return.

In the *Wizard of Oz* series, Baum left out the dark, scary underbelly of the original Grimm fairy tales and created a world where people do not die and everyone is happy. He also incorporated twentieth-century technology into the books, and used recognizable characters and objects from American life such as axle grease, chinaware, scarecrows, and patchwork quilts. Although Baum poked gentle fun at some aspects of American life—such as the “humbug” nature of government—*The Wizard of Oz* goes directly to biting satire. Dorothy is a girl from the midwest (typical American) who meets up with a brainless scarecrow (farmers), a tin man with no heart (industry), a cowardly lion (politicians), and a flashy but ultimately powerless wizard (technology). It presents an American Utopia where no one dies, people work half the day and play half the day, and is a place where everyone is kind to one another. Ray Bradbury referred to the story as “what we hope to be.”

Lyman Frank Baum was born on May 15, 1856 in Chittenango, New York. His childhood, by all accounts, was happy, marred only by

a minor heart condition. For his fourteenth birthday, his father gave him a printing press, with which young Frank published a neighborhood newspaper. His 1882 marriage to Maud Gage, daughter of women’s rights leader Matilda Joslyn Gage, was also a happy one; Frank played the role of jovial optimist, and Maud was the disciplinarian of their four sons.

Baum worked as an actor, store owner, newspaper editor, reporter, and traveling salesman. In 1897, he found a publisher for his children’s book *Mother Goose in Prose*, and from then on was a full-time writer. Baum teamed up with illustrator W. W. Denslow to produce *Father Goose, His Book* in 1899 and then *The Wonderful Wizard of Oz* in 1900. The book, splashed with color on almost every page, sold out its first edition of 10,000 copies in two weeks. Over four million copies were sold before 1956, when the copyright expired. Since then, millions more copies have been sold in regular, abridged, Golden, pop-up, and supermarket versions.

In 1902, Baum helped produce a hit musical version of his book, which ran until 1911, at which point the Baums moved to a new Hollywood home, “Ozcot.” In spite of failing health, he continued to write children’s books, producing nearly 70 titles under his own name and seven pseudonyms including, as Edith Van Dyne, the popular *Aunt Jane’s Nieces* series. Inundated with letters from children asking for more about Dorothy and Oz, Baum authored 14 Oz books altogether, each appearing annually in December. After Baum’s death, the series was taken over by Ruth Plumly Thompson; others have since continued the series.

The books spawned a one-reel film version in 1910, a feature-length black and white film in 1925, a radio show in the 1930s sponsored by Jell-O, and, in 1939, the classic MGM movie starring Judy Garland, which guaranteed *The Wizard of Oz’s* immortality. Beginning in 1956, the film was shown on television each year, bringing the story to generations of children and permanently ingraining it into American culture.

Bay, Mel (1913-1997)

Founder of Mel Bay Publications, Melbourne E. Bay was the most successful author and publisher of guitar method books in the late twentieth century. Born in Missouri, Bay became a popular self-taught guitarist and banjo player in the region. He established himself

as a music teacher in St. Louis, and in 1947 began to write and publish guitar method materials; eventually he added instructions for playing other instruments, and by the 1990s his corporation also produced instructional videos.

Bay's books sold by the millions, and their quality earned Bay many awards and honors. Among others, Bay received the Lifetime Achievement Awards from the American Federation of Musicians and the Guitar Foundation of America, as well as a Certificate of Merit from the St. Louis Music Educators Association. St. Louis also celebrated Mel Bay Day on October 25, 1996. He died on May 14, 1997, at the age of 84.

Bay of Pigs Invasion

President John F. Kennedy's sanctioning of the Bay of Pigs operation had a significant impact on contemporary popular perceptions of his administration. For the majority, Kennedy's actions proved that he was willing to actively confront the perceived "communist threat" in Central and South America. However, his action also disillusioned student radicals who had supported Kennedy during his election campaign and accelerated the politicization of student protest in the United States.

In the early hours of April 17, 1961, a force consisting of 1400 Cuban exiles landed at the Bay of Pigs, Cuba, in an attempt to overthrow the revolutionary government headed by Fidel Castro. From the beginning, this "invasion" was marred by poor planning and poor execution. The force, which had been secretly trained and armed in Guatemala by the United States Central Intelligence Agency (CIA), was too large to engage in effective covert operations, yet too small to realistically challenge Castro in a military confrontation without additional support from the United States. Most significantly, the popular uprising upon which the invasion plan had been predicated did not occur. After three days of fighting, the insurgent force, which was running short of ammunition and other supplies, had been effectively subdued by Castro's forces. In a futile effort to avoid capture, the insurgents dispersed into the Zapata swamp and along the coast. Cuban forces quickly rounded up 1,189 prisoners, while a few escaped to waiting U.S. ships; 114 were killed.

Although the Bay of Pigs operation had initially been intended to be carried out in a manner that would allow America to deny involvement, it was readily apparent that the United States government was largely responsible for the invasion. Months before the Bay of Pigs operation commenced, American newspapers ran stories which revealed the supposedly covert training operations both in Miami and Guatemala. Consequently, when the invasion began, the official cover story that it was a spontaneous insurrection led by defecting Cuban forces was quickly discredited. Revelations concerning the United States' role in the attack served to weaken its

stature in Latin America and significantly undermined its foreign policy position. After the collapse of the operation, a *New York Times* columnist commented that the invasion made the United States look like "fools to our friends, rascals to our enemies, and incompetents to the rest." However, domestic political protest was allayed by President John F. Kennedy who, although he had been in office for less than one hundred days, assumed full responsibility for the fiasco. According to Kennedy biographer Theodore C. Sorensen, Kennedy's decisive action avoided uncontrolled leaks and eliminated the possibility of partisan investigations.

The operation which resulted in the Bay of Pigs disaster had initially been conceived in January 1960 under the Eisenhower Administration. Originally, this operation was envisioned as constituting the covert landing of a small, highly-trained force that would engage in guerrilla activities in order to facilitate a popular uprising. Over the ensuing fifteen months, the CIA systematically increased the scale of the proposed operation. According to both Sorensen and biographer Arthur M. Schlesinger, Kennedy, upon assuming office, had little choice but to approve the continuance of the operation. Its importance had been stressed by former president Dwight D. Eisenhower, it was supported by the Joint Chiefs of Staff, and by influential advisors such as John Foster Dulles. Further, as noted historian John L. Gaddis argued in *Now We Know: Rethinking Cold War History* (1997), Kennedy believed that "underlying historical forces gave Marxism-Leninism the advantage in the 'third world'" and viewed Cuba as a clear example of the threat that Communism posed in Latin America. As a result, Kennedy was predisposed to take action against Castro. Unfortunately, due to inaccurate and ineffective communication between planning and operational personnel, the significant changes that had been instituted within the operation were not sufficiently emphasized to Kennedy. Consequently, according to Sorensen, Kennedy "had in fact approved a plan bearing little resemblance to what he thought he had approved." Leaders of the Cuban exiles were given the impression that they would receive direct military support once they had established a beach head, and an underlying assumption of CIA planning was that the United States would inevitably intervene. However, Kennedy steadfastly refused to sanction overt military involvement.

The impact of the Bay of Pigs invasion on American public opinion was sharply divided. According to Thomas C. Reeves, Kennedy's public support of and sympathy for the Cuban exiles rallied the public in support of their "firm, courageous, self-critical, and compassionate chief executive." A poll conducted in early May indicated sixty-five percent support for Kennedy and his actions. Conversely, the Bay of Pigs invasion also served to spark student protests. Initially, students had been enchanted by Kennedy's vision of a transformed American society and by the idealism embodied by programs such as the Peace Corps. However, students, particularly those within the New Left, were disillusioned by Kennedy's involvement with the invasion. On the day of the landings, 1,000 students held a protest rally at Berkeley, and on April 22, 2,000 students demonstrated in San Francisco's Union Square. This disillusionment spawned a distrust of the Kennedy Administration and undoubtedly accelerated the political divisions that developed within American society during the 1960s.

Internationally, the Bay of Pigs invasion provided Castro with evidence of what he characterized as American imperialism, and this enabled him to consolidate his position within Cuba. Ultimately, the invasion drove Castro toward a closer alliance with the Soviet Union

and significantly increased both regional and global political tensions. The failure of the invasion also convinced Soviet leader Nikita Khrushchev that Kennedy was weak and indecisive. This impression undoubtedly contributed to Khrushchev's decision to place nuclear missiles in Cuba and to the confrontation that developed during the Cuban Missile Crisis (1962). However, sympathetic biographers have argued that "failure in Cuba in 1961 contributed to success in Cuba in 1962," because the experience forced Kennedy to break with his military advisors and, consequently, enabled him to avoid a military clash with the Soviet Union.

Baywatch

Though dismissed by its critics with such disparagements as "Body watch" and "Babe watch," David Hasselhoff's *Baywatch* became the most popular television show in the world during the mid-1990s. Notorious for its risqué bathing suits, the show depicted the Los Angeles County Beach Patrol as it braved dangerous surf and emotional riptides to save lives and loves. The show ran briefly on NBC during 1989-1990 before being canceled but became, in its new incarnation, one of the few shows in TV history not only to exonerate itself in a post-network afterlife but to actually become a mega-hit.

Baywatch began with David Hasselhoff as Mitch Buchannon, a veteran career lifeguard recently promoted to lieutenant; Parker Stevenson as Craig Pomeroy, a successful lawyer who continued to moonlight as a lifeguard; and a supporting cast of sun-bronzed characters who adopted life at the beach for reasons of their own. In its original incarnation, *Baywatch* finished in seventy-fourth place in the Nielsen ratings among 111 series to air on the three major networks. At the same time, it ranked as the number-one U.S. import in both Germany and Great Britain, where viewers perceived it to be a

glimpse of what America was all about in a format that was at once wordless and instantly translatable to any culture in the world—beautiful people in a beautiful environment.

In 1990, after being canceled by the network, *Baywatch* star Hasselhoff and three of the show's other producers recognized its international potential and decided to invest their own money in the show. They cut production costs from \$1.3 million per episode to \$850,000, and marketed it to independent stations. In syndication, the show generated more than one billion viewers between 1994 and 1996 in more than one hundred countries around the world.

"We wanted to create a dramatic series that allows our lead characters to become involved with interesting and unusual people and situations," said executive producer Michael Berk. "Lifeguards are frequently involved in life and death situations and, as a part of their daily routine, come into contact with thousands of people from diverse walks of life." This format allows the lifeguards to interact with an amazing number of robbers, murderers, international drug runners, runaway teens, and rapists who seemingly stalk L.A.'s beaches between daring rescues, shark attacks, and boat sinkings. All of this is blended with the predictable love stories and plenty of exposed skin. Indeed, the show's opening, depicting the physically perfect male and female lifeguards running on the beach, has become one of the most satirized motifs on television.

Surprisingly, however, the soap-opera-type stories have allowed the characters to grow from episode to episode and have created some interesting dimensions for the show's regulars. Hasselhoff's character, Mitch, comes off a nasty divorce and custody battle for his son and begins to date again. "He's a guy about my age," says Hasselhoff (forty), "divorced, with a kid. With many years as a lifeguard under his belt, he's promoted to lieutenant and must take on a more supervisory role. But, he has mixed emotions. He is no longer one of the guys and must assume the role of an authority figure, while at home, as a newly divorced parent, he has to learn to cope with the responsibilities of a single father."

The other characters on the show have been significantly younger, with the average cast member being in his or her twenties. Each succeeding season has brought new cast members to the series as older characters drifted off, died in accidents, married, and otherwise moved on as the stars who played them became famous enough to move into other acting ventures. Pamela Anderson Lee, the former "Tool Time" girl" on *Home Improvement*, left *Baywatch* after becoming an international sex symbol and garnered a movie contract, only to be replaced by a succession of similarly endowed sun-drenched California blondes.

The reasons for the show's phenomenal success are varied. Many critics have argued that the sex appeal of the lifeguards in their scanty beach attire has been the primary reason for viewers (particularly young males) to tune in. *Baywatch* has, in fact, created its share of sex symbols with Hasselhoff, Lee, and, more recently, Yasmine Bleeth and Carmen Electra achieving international celebrity on tabloid covers and calendars. There is also the appeal of the beach itself and the California lifestyle—a sun-and-surf image that offers an escape from the grim reality of people's daily existence. Some say there is a more fundamental appeal that is as old as television itself: *Baywatch* is a family ensemble no less than *The Waltons*, *Little House on the Prairie* or *Dr. Quinn, Medicine Woman*. Hasselhoff's Mitch is the father figure for the group of lifeguards, while his female counterpart, Lt. Stephanie Holden (Alexandra Paul), serves as a surrogate mother for the beach people who wander in and out of each

The women of *Baywatch*.

episode (until the Holden character's death during the seventh season). The supporting cast of lifeguards are the quirky and quarreling siblings who ultimately must be rescued from their various escapades by Hasselhoff's character. Then there is Mitch's own son, Hobie, a thirteen-year-old who gets into his own adventures and who is just beginning to get to know his father. The two-part ending of the 1997-98 season featured Mitch's marriage to Neely Capshaw (Gena Lee Nolen).

In an effort to attract the whole family rather than its earlier self-professed teenager demographic, *Baywatch* gradually escalated the level of its story lines to include depictions of social ills, acceptance of aging and death, and a number of ethical and moral dilemmas. "What has happened," said Hasselhoff, "is that while people were making so many jokes about us, we became a real show."

Bazooka Joe

Gum manufacturers commonly used gimmicks, like sports trading cards, to help boost sales. Topps Chewing Gum, Inc., which began producing Bazooka bubble gum in 1947, included comics with its small chunk of pink bubble gum. The gum took its name from the unplayable musical instrument, which American comedian Bob Burns made from two gas pipes and a whiskey funnel, called a "bazooka."

The comic, featuring Joe, a blonde kid with an eye patch, and his gang, debuted in 1953. In the crowded chewing gum market of the 1950s, Topps used the comic to distinguish Bazooka from other brands. The jokes produced more groaning than laughter, and included a fortune. Collectors of the comics redeemed them for prizes, such as bracelets, harmonicas, and sunglasses. In the 1990s, Joe's popularity fell, and the strip was modernized in response to market studies in which kids said they wanted characters who were "more hip."

The Beach Boys

As long as bleach-blond beach bums ride the waves and lonely geeks fantasize of romance, the Beach Boys will blare from car radios into America's psyche. Emerging from Southern California in the early 1960s, the Beach Boys became the quintessential American teen band, their innocent songs of youthful longing, lust, and liberation coming to define the very essence of white, suburban teenage life. At the same time, they mythologized that life through the sun-kissed prism of Southern California's palm trees, beaches, and hot rods, much like the civic boosters and Hollywood moguls who preceded them. From 1962 to 1966, the Beach Boys joined Phil Spector and Berry Gordy as the most influential shapers of the American Top 40. But like the California myth itself, the Beach Boys' sunny dreams were tempered by an underlying darkness, born of their tempestuous personal and professional lives. That darkness sometimes fueled the group's greatest work. It also produced tragedy for the band's

members, especially resident genius Brian Wilson, and by the 1980s the band collapsed into self-parody.

The nucleus of the Beach Boys was the Wilson family, which lived in a simple bungalow in the Los Angeles suburb of Hawthorne. At home, brothers Brian (1942—), Dennis (1944-1983), and Carl (1946-1998) were introduced to music by their temperamental father, Murry Wilson, whose rare displays of affection were usually accompanied by the purchase of musical instruments, records, or lessons. Although each son adopted his father's love of music, it was the eldest, Brian Wilson, who embraced it with passion. His two earliest childhood memories were central to his musical evolution and future career. As a toddler, Brian remembered requesting George Gershwin's "Rhapsody in Blue" whenever he visited his grandmother's home. He also remembered his father slapping him at the age of three; he blamed the loss of hearing in his right ear in grade school on the incident. Brian was left unable to hear music in stereo for the rest of his life.

As the Wilsons entered high school, they absorbed the music and culture which would later fuel the Beach Boys. In addition to his classical training at school, Brian loved vocal groups (especially the close-harmony style of the Four Freshmen) and the complex ballads of Broadway and Tin Pan Alley. But the Wilsons—even the reclusive Brian—were also immersed in the teenage culture of suburban

The Beach Boys

America: hot rods, go-karts, drive-ins, and, most importantly, rock 'n' roll. They listened to Bill Haley and Elvis Presley and above all Chuck Berry, whom guitarist Carl Wilson idolized. By high school the boys were playing and writing songs together.

In 1961, the group expanded beyond Carl's improving guitar, Brian's accomplished bass, and Dennis' primitive drums. The Wilsons' cousin Mike Love (1941—), a star high school athlete with an excellent voice, joined on vocals. Brian's friend from school, Al Jardine (1942—), rounded out the band after aborting a folk-singing career. With that, America's most famous suburban garage band was born, at first hardly able to play but hungry for the money and fame that might follow a hit record.

Their sound came first, mixing the guitar of Chuck Berry and backbeat of rhythm and blues with Brian's beloved vocal harmonies. But they knew they lacked an angle, some theme to define the band's image. They found that angle one day when Dennis Wilson, sitting on the beach, got the idea to do a song about surfing. By the early 1960s, the surf craze in Southern California had already spawned the "surf music" of artists like Dick Dale and the Del-Tones, based around the crashing guitar sounds intended to mimic the sound of waves. Surf music, however, was just beginning to enter the national consciousness. With prodding, Dennis convinced Brian that there was lyrical and musical potential in the surf scene, and in September of 1961 they recorded "Surfin'" as the Pendletons, a play on the name of Dale's band and in honor of the Pendleton shirts favored by beach bums. By December, the single had climbed the national charts, and the band renamed itself the Beach Boys.

In 1962 Capitol Records signed them, and over the next three years the Beach Boys became a hit machine, churning out nine Top 40 albums and 15 Top 40 singles, ten of which entered the top ten. In songs like "Surfin' U.S.A.," "Little Deuce Coupe," and "Fun, Fun, Fun" the group turned Southern California's youthful subculture into a teenage fantasy for the rest of America and the world. A baby boom generation hitting adolescence found exuberant symbols of their cultural independence from adults in the band's hot rods and surfboards. The songs, however, articulated a tempered rebellion in acts like driving too fast or staying out too late, while avoiding the stronger sexual and racial suggestiveness of predecessors like Presley or successors like the Rolling Stones. In their all-American slacks and short-sleeve striped shirts, the Beach Boys were equally welcome in teen hangouts and suburban America's living rooms.

By 1963, the Beach Boys emerged as international stars and established their place in America's cultural life. But tensions between the band's chief songwriter, Brian Wilson, and the band's fan-base emerged just as quickly. Wilson was uninterested in his audience, driven instead to compete obsessively for pop preeminence against his competitors, especially Phil Spector and later the Beatles. To make matters worse, Wilson was a shy introvert, more interested in songwriting and record production than the limelight and the stage. He retreated into the studio, abandoning the proven style of his earliest hits for Spector's wall-of-sound sophistication on songs like "Don't Worry Baby" and "I Get Around." At the same time, Wilson's personal melancholia increasingly entered his songwriting, most notably on the monumental ballad "In My Room." Together, these changes altered the Beach Boys' public persona. "I Get Around" was a number one single in 1964, but "Don't Worry Baby," arguably the most creative song Wilson had yet written, stalled ominously at number 24. And "In My Room," while unquestionably about teenagers, deserted innocent fun for painful longing. It also topped out at number 23. The Beach Boys were growing up, and

so was their audience. Unlike Wilson, however, the post-teen boomers already longed nostalgically for the past and struggled to engage the band's changes.

The audience was also turning elsewhere. The emergence of the Beatles in 1964 shook the foundations of the Beach Boys camp. Suddenly supplanted at the top of the pop charts, the rest of the band pushed Brian Wilson toward more recognizably "Beach Boys" songs, which he wisely rebuffed considering rock 'n' roll's rapid evolution during the mid-1960s. In addition, the entire band began living out the adolescent fantasies they had heretofore only sung about. Only now, as rich young adults, those fantasies meshed with the emerging counter-culture, mysticism, and heavy drug use of the late-1960s Southern Californian music scene. With the rest of the band tuning out, Wilson's Beatles obsession and drug abuse accelerated, Beach Boys albums grew more experimental, and Wilson suffered a nervous breakdown.

For two years after Wilson's breakdown, the Beach Boys' music miraculously remained as strong as ever. "Help Me, Rhonda" and "California Girls" (both 1965) were smash hits, and the live album *The Beach Boys Party!* proved the band retained some of its boyish charm. But no Beach Boys fan—or even the Beach Boys themselves—could have been prepared for Brian Wilson's unveiling of *Pet Sounds* (1966), a tremendous album with a legacy that far outshines its initial success. Completed by Brian Wilson and lyricist Tony Asher, with only vocal help from the other Beach Boys, *Pet Sounds* was Brian Wilson's most ambitious work, a dispiriting album about a young man facing adulthood and the pain of failed relationships. It also reflected the transformation of Southern California's youth culture from innocence to introspection—and excess—as the baby boomers got older. Moreover, *Pet Sounds'* lush pastiche pushed the boundaries of rock so far that no less than Paul McCartney hailed it as his favorite album ever and claimed it inspired the Beatles to produce *Sgt. Pepper's Lonely Hearts Club Band*. In subsequent decades, some critics would hail *Pet Sounds* as the greatest rock album ever made, and it cemented the Beach Boys' place in the pantheon of popular music. At the time, however, critics in the United States had already dismissed the band, and their fans, accustomed to beach-party ditties, failed to understand the album. Although two singles—"Sloop John B" and "Wouldn't It Be Nice"—entered the top ten, sales of the album fell below expectations.

Disappointed and increasingly disoriented, Wilson was determined to top himself again, and set to work on what would become the most famous still-born in rock history, *Smile* (1967). Intended to supplant *Pet Sounds* in grandeur, the *Smile* sessions instead collapsed as Wilson, fried on LSD, delusional, and abandoned by the rest of the group, was unable to finish the album. Fragments emerged over the years, on other albums and bootlegs, that suggested the germ of a great album. All that survived in completed form at the time, however, was one single, the brilliant number one hit "Good Vibrations," which *Smile* engineer Chuck Britz said took three months to produce and "was [Brian Wilson's] whole life's performance in one track."

If Britz was right then Wilson's timing could not have been better, for short on the heels of the failed *Smile* sessions came the release of *Sgt. Pepper*. As if he knew that his time had passed, Wilson, like his idol Spector, withdrew except for occasional Beach Boys collaborations, lost in a world of bad drugs and worse friends until the 1990s.

The Beach Boys carried on, occasionally producing decent albums like *Wild Honey* (1967), at least one more classic song,

Brian's 1971 "'Til I Die," but their days as a cultural and commercial powerhouse were behind them. In 1974, with the release of the greatest-hits package *Endless Summer*, the band finally succumbed to the wishes of its fans (and at least some of its members), who preferred celebrating their mythic land of teenage innocence the Beach Boys had so fabulously fabricated in their early years. The album shot to number one, spending 155 weeks on *Billboard's* Hot 100, and the quintessential American teen band now remade itself as the quintessential American oldies act. They traveled the country well into the 1990s with beach party-styled concerts, performing their standards thousands of times. In 1983, Interior Secretary James Watt denied them permission to play their annual July 4 concert in Washington, D.C. to maintain a more "family-oriented" show. Miraculously, they scored one more number one single with "Kokomo," a kitschy 1988 track intended to play on their nostalgic image. Along the way, they endured countless drug addictions, staff changes, inter-group lawsuits over song credits, and two deaths—Dennis Wilson in a 1981 drowning and Carl Wilson of cancer in 1998.

That some of the Beach Boys' early music perhaps sounds ordinary 30 years later owes something to the group's descent into self-parody. But it also reflects the degree to which their music infiltrated American culture. No artists better articulated California's mythic allure or adolescence's tortured energy. And when that allure and energy was lost, their music paved the road for the journeys later musicians—from the Doors to the Eagles and Hole—would take into the dark side of the Californian, and American, dream.

Beach, Rex (1877-1949)

"Big hairy stories about big hairy men" is how one critic described the work of one of the early twentieth century's most prolific and successful popular writers, Rex Beach. He developed a devoted following among the reading public which remained loyal to his works into the mid-1930s. In addition, he led the way for later authors to reap greater profits by exploiting other media outlets for their works, thus defining what the twentieth-century author of popular literature became by mid-century—an independent entrepreneur.

Rex Ellingwood Beach was born in Atwater, Michigan, in 1877. At age twelve his family packed their belongings and sailed by raft down the Mississippi and across the Gulf of Mexico to Florida, where they took up residence on homesteaded land. Beach attended Rollins College at Winter Park but left shortly before graduation to move to Chicago. He read law in an older brother's law office and took one or

two law courses, but he never finished a law program. Afflicted with gold fever after reading of the vast gold discoveries in the far north, Beach headed for Alaska in 1897 to seek his fortune. He found little gold. Instead he discovered wealth of a different kind, a mine of stories and colorful characters and situations that he developed into best selling popular literature.

In the summer of 1900, Beach witnessed a bold attempt by North Dakota political boss Alexander McKenzie to steal gold from the placer mines at Nome, Alaska. When the scheme failed, McKenzie and his cronies were arrested. Beach transformed the events into a series of muckraking articles, "The Looting of Alaska," for *Appleton's Century* magazine in 1905. From this series came his first novel, *The Spoilers*. He added some fictional characters to the events at Nome, and the resulting novel, published in 1905, made the best-seller list in 1906. Later that year he transformed the novel into a play, which ran for two-week runs in Chicago and New York before it was sent out on the road for several years. In 1914 Beach contracted with the Selig Corporation to release the film version of *The Spoilers* for 25 percent of the gross profits, a unique arrangement for its time. On four subsequent occasions, in 1923, 1930, 1942, and 1955, Beach or his estate leased the rights to *The Spoilers* to film companies for the same financial arrangement. Beach published a total of twenty novels and seventy short stories and novelettes. He authorized thirty-two film adaptations of his work. In addition to *The Spoilers*, *The Barrier* was filmed three times; five of his novels were filmed twice; and fourteen of his novels and stories were each filmed once.

Writing in the school of realism, his novels and stories were works of romantic, frontier adventure aimed at young men. Plots involved ordinary hard-working citizens forced to confront the forces of nature and corruption. They overcame their adversaries by means of violence, loyalty to the cause and to each other, and heroic action. Rarely did these citizens rely on government agencies for assistance, in keeping with Beach's philosophy of rugged individualism.

From 1911 to 1918 Beach was president of the Author's League. In this capacity he constantly exhorted authors to put film clauses into their publishing contracts and to transform their writings into drama and screenplays. Most refused, believing that the cinema was a low art form that degraded their artistic endeavors. The only exception was Edna Ferber, who also demanded a percentage of the profits for filming her works. On the occasions that novels and short stories were adapted, the one-time payments that authors received to film their works were small, varying greatly from film company to film company. In frustration, Beach resigned the position in 1918 and concentrated on writing until the mid-1930s.

From his wandering search for gold and stories in Alaska to his unique film clause in his contract with Harper Brothers to his pioneering lease arrangement with film corporations, he established precedents that others would follow years later and that define popular authors after mid-century. He not only had an innate sense of what people would read, but also, ever alert to other potential media markets, he knew what people would pay to see as thrilling entertainment on stage and on film. Above all, Beach had a formidable passion for financial success. He viewed his mind as a creative factory producing a marketable product. Writing involved raw material, production, and sales. The end result was profit.

Not content with his literary and entertainment achievements, Beach used his profits to buy a seven-thousand-acre estate in Florida where he became a successful cattle rancher in the 1930s. He wrote articles about the nutritional value of growing crops in mineral-rich

Rex Beach

soils. He bought an additional two thousand acres at Avon Park and grew gladioli and Easter lilies at substantial profit. In the 1940s he developed and wrote more than forty episodes of an unproduced radio series based on his autobiography, *Personal Exposures*.

Beach sold everything he wrote, except for the radio series and an unfinished novel that he was writing at the time of his death. He and his wife, Edith Greta Crater, divided their time between a New York penthouse and their 250-acre estate in Sebring, Florida. His wife, whom he had met in Alaska and married in 1907, died in 1947 after a lengthy illness. On the morning of December 7, 1949, saddened by his wife's death, nearly blind, and devastated by the pain and other effects of throat cancer, Rex Beach ended his life with a pistol shot to the head. He was seventy-two.

—James R. Belpedio

Beanie Babies

In 1993 Ty Corporation released Flash the Dolphin, Patti the Platypus, Splash the Orca, Spot the Dog, Legs the Frog, Squealer the Pig, Cubbie the Bear, Chocolate the Moose, and Pinchers the Lobster. These small plush beanbag toys called Beanie Babies retailed for about five dollars. By 1997, there were over 181 varieties of Beanie Babies, and most of the original nine were worth more than \$50.

The interest Beanie Babies sparked in so many kids, parents, and collectors stems from their reflection of the consumer aesthetic of the 1990s. Ty Corporation built a cachet for each Beanie Baby by portraying itself as one of the "little guys" in the toy industry. It limited stores to only 36 of each Beanie Baby per month and initially refused to sell to chain or outlet toy stores. Ty Corporation guarded its strategy fiercely, cutting off future supplies to stores that sold the plush animals at a mark-up. The company's efforts kept Beanie Babies affordable to almost all, but increased their aftermarket value. The result of Ty's strategy strengthened Beanie Babies' celebration of the individual. Each baby is assigned a name, a birthday, and an accompanying poem, all found on the small heart-shaped Ty tag, the sign of an authentic Beanie Baby.

Some regard the market frenzy around Beanie Babies as ridiculous, but others see it as a benign introduction to capitalism for many

young investors. The babies are portable, easily saved for investment purposes, and offer a chance for friendly competition between collectors. Judging a Beanie Baby's current value can be a hands-on lesson in supply and demand for the young collector. The value of Babies increases when varieties are "retired" or produced in limited numbers; and when custom Beanie Babies are released for sporting events, to commemorate the flags of certain countries, and to immortalize celebrities like Jerry Garcia (see Garcia bear) and Princess Diana (see Princess bear). In addition, Babies with defects or odd materials are highly sought-after. Because it is never clear how many of a new animal will be produced or when they might be retired, hobby collectors and Beanie Baby speculators periodically swarm stores reported to be "connected."

The market demand for Beanie Babies has grown without television advertising. Babies were listed as one of the most sought-after Christmas toys by several stores during the 1990s. Beanie Babies are traded, bought, and sold at hundreds of spots on the Internet, and those new to the hobby can buy guidebooks like the *1998 Beanie Baby Handbook*, which lists probable prices for the year 2008.

The *Handbook* speculates that Quacker, a yellow duck with no wings, may be worth as much as \$6,000 by that time.

Beanie Babies have worked their way into the mainstream consciousness through a regular media diet of Beanie Baby hysteria and hoax stories. Many local news programs would feature a story about how to differentiate between a real Beanie Baby and a fake. By the end of the decade, almost every American would see the sign, "Beanie Babies Here!" appear in the window of a local card or flower shop. Established firmly in the same collectible tradition as Hot Wheels cars and Cabbage Patch dolls, Beanie Babies draw children into the world of capitalist competition, investment, and financial risk. Their simple, attainable nature has gained them a permanent place in the pantheon of American toys.

The Beastie Boys

In 1986 the Beastie Boys took the popular music world by storm with their debut album *License To Ill* and the single "Fight For Your Right (To Party)." The album was co-produced with fledgling hip-hop label Def Jam producer Rick Rubin. *License to Ill* became the fastest selling debut album in Columbia Records' history, going platinum within two months, and becoming the first rap album to reach number one on the charts.

Critics derided the Beastie Boys as one-hit wonder material, and as New York "white-boy rappers" who were leeching off African American street music forms known as "rap" and hip-hop, both of which were in their early stages of development. *Licensed To Ill* also relied heavily on a new technique called "sampling." Sampling is the act of lifting all or part of the music from another artist's song. This

sample is then used to record a new song with the same music, often without credit or payment. Sampling, as it was originally practiced, was condemned as stealing by most critics and musicians. The technique was so new in the mid-1980s that there were no rules to regulate such "borrowing." Artist credit and payment terms for use of a sample, however, eventually became the record industry standard.

Michael Diamond ("Mike D"), bassist Adam Yauch ("MCA," also known as Nathaniel Hornblower), guitarist John Berry, and drummer Kate Schellenbach formed the first version of The Beastie Boys in New York City in 1981. They were a hardcore punk style band and recorded the EP *Polywog Stew* on a local independent label. Eventually, Berry and Schellenbach quit. In 1983 Adam Horovitz ("Ad-Rock") joined Mike D and MCA to form the core of the Beastie Boys. Other musicians have been added to the onstage mix and toured with the Beastie Boys throughout their career, but it is this trio that is the creative and musical force behind the band.

It was at this time that Rick Rubin, a New York University student and Def Jam's record label entrepreneur, took notice of the Beastie Boys' rap inspired underground single hit "Cookie Puss." Rubin and the Boys then recorded "Rock Hard" for Def Jam in 1985. Later that year the Beastie Boys received enough attention from a

The Beastie Boys, from left: Adam Yauch (MCA), Adam Horovitz (King Ad-Rock), and Mike Diamond (Mike D) at the MTV video awards.

soundtrack cut, “She’s On It,” to earn an opening spot on Madonna’s “Like A Virgin” tour, and then they went on tour with Run D.M.C.

In 1986 *License To Ill* was released, and despite their commercial success, the Beastie Boys were derided as sophomoric, sexist, and just plain dumb. After a long tour to promote *License To Ill*, the Beastie Boys left Def Jam for Capitol Records. The Beastie Boys moved to Los Angeles, took a break, and then began to examine their sound and style. They now had the task of following up their incredible success with a new album. They worked with a new production team known as the Dust Brothers, and in 1989 the Beastie Boys released *Paul’s Boutique*. The album was critically acclaimed, but completely different from *License To Ill* and sold under a million copies.

After two more albums with Capitol Records, *Check Your Head* in 1992 and *Some Old Bullshit* in 1994, the Beastie Boys launched their own record label called Grand Royal. Their first Grand Royal release came in 1994. *Ill Communication* spawned the single “Sabotage,” and the group toured with the yearly Lollapalooza alternative festival that summer.

Adam Yauch’s conversion to Buddhism and his ties to the Dalai Lama then prompted the Beastie Boys to organize the Tibetan Freedom Festival in the summer of 1996. Popular artists continue to donate their performances in order to raise money for the Miarepa Fund, a charity that supports “universal compassion through music” and has been active in the fight for Tibetan independence.

In 1998 the Beastie Boys released *Hello Nasty*. In the midst of personal business and charity efforts, the Beastie Boys have continued to push the cutting edge of hip-hop and they have gained a respected place in the alternative music scene of the 1990s.

Beat Generation

The Beat Generation, or “Beats,” is a term used to describe the vanguard of a movement that swept through American culture after World War II as a counterweight to the suburban conformity and organization-man model that dominated the period, especially during the Eisenhower years (1953-1961), when Cold War tension was adding a unparalleled uptightness to American life. The term “Beat Generation” was apparently coined by Jack Kerouac, whose 1957 picaresque novel *On the Road* is considered a kind of manifesto for the movement. In 1952, John Clellon Holmes wrote in the *New York Times Magazine*: “It was John Kerouac . . . who several years ago . . . said ‘You know, this is really a beat generation . . . More than the feeling of weariness, it implies the feeling of having been used, of being raw.’” Holmes used the term in his 1952 novel *Go*, with obvious references to New York’s bohemian scene. The claim, advanced in some circles, that Kerouac intended “beat” to be related to “beatific” or “beatitude” is now considered spurious by etymologists, though *Beatitude* was the name of a San Francisco magazine published by poet Allen Ginsberg and others whose folding

in 1960 is regarded as the final chapter in that city’s Beat movement (generally known as the San Francisco Renaissance).

Kerouac penned a dictionary definition of his own that characterized Beats as espousing “mystical detachment and relaxation of social and sexual tensions,” terms that clearly include those at the literary epicenter of the Beat movement, such as Allen Ginsberg, Gregory Corso, John Clellon Holmes, William Burroughs, Neal Cassady, and Herbert Huncke, the latter an alienated denizen of Times Square who served as an important guide to the nascent movement. Each of these figures embodied creative brilliance with various combinations of psychotic episodes, unconventional sexuality, or antisocial traits. Later additions included Lawrence Ferlinghetti, Diane di Prima, and many others. They, along with the writers who were drawn to the experimental Black Mountain College in North Carolina—or, like the expatriate Burroughs, to drug-soaked residency in Tangiers—carried forward an essentially Blakean and Whitmanian vision that welcomed spontaneity, surrealism, and a certain degree of decadence in poetic expression and personal behavior. In the 1950s, this put them in opposition to the prevailing currents of literary modernism on the model of T. S. Eliot, Marianne Moore, and the middlebrow poetry of Robert Frost and Carl Sandburg. Poetry, like Ginsberg’s “Howl” or Corso’s Gasoline series, was the favored genre of expression and the “3-Ms”—marijuana, morphine, and mescaline—were the drugs of choice.

William Carlos Williams enthusiastically took on the role of unofficial mentor to the East-Coast Beat poets after meeting Allen Ginsberg, and Kenneth Rexroth has been described as the “godfather of the Beats” for acting as catalyst to the famous reading at the Six Gallery in San Francisco, where on October 13, 1955, Ginsberg offered his first highly dramatic performance-recital of “Howl.” Nearby was Lawrence Ferlinghetti’s City Lights Bookstore, which served as both shrine and paperback publisher for the literature of the Beat movement through its familiar black-and-white “Pocket Poet” series. Following the reading, Lawrence Ferlinghetti approached Ginsberg and convinced him to publish a chapbook of “Howl” through City Lights Press in San Francisco. In 1957, *Howl and Other Poems* was seized by customs officials, and Ferlinghetti was tried on charges of obscenity. The trial brought great notoriety and worldwide recognition to the message of Beat poetry, and the book’s sales skyrocketed after the charges were dropped.

In general terms, the Beat poets were leftist in political orientation and committed to the preservation of the planet and the human species. Their literature speaks out against injustice, apathy, consumerism, and war. Despite such generalizations, however, at an individual level the poets are very difficult to classify. A highly diverse group, their political and spiritual views varied to extremes: Jack Kerouac and Gregory Corso, for example, supported the war in Vietnam; Allen Ginsberg was a Jewish radical and anarchist; and Philip Whalen was ordained a Zen priest. The difficulty of pinning down the essence of the Beat poets is part of their allure. The Beats earned their defiant image in part through the controversial themes in their work, which included celebration of the erotic, sexual freedom, exploration of Eastern thought, and the use of psychedelic substances. Fred McDarrah’s *Time* magazine article offers evidence of how they were unkindly characterized in mainstream media: “The bearded, sandaled beat likes to be with his own kind, to riffle through his quarterlies, write craggy poetry, paint crusty pictures and pursue his never ending quest for the ultimate in sex and protest.” Such condescending judgments only served to fuel the fascination with the Beat image among younger people.

Though the most well-known of the Beat poets are white males, the movement was not exclusively so. In contrast with many other literary movements, the Beats were tolerant of diversity and counted many women and poets of color among their ranks. Such poets as Ted Joans, Amiri Baraka (Leroi Jones), and Bob Kaufman were recognized by their peers for the importance of their work. The women of the Beat Generation, including Diane di Prima, Joanne Kyger, Anne Waldman, and many others, were as present if not as visible as the men. As Brenda Knight remarked, “the women of the Beat Generation, with rare exception, escaped the eye of the camera; they stayed underground, writing. They were instrumental in the literary legacy of the Beat Generation, however, and continue to be some of its most prolific writers.”

Though many readers have been attracted to the work of the Beats by their cultural image, Anne Waldman contends that their durability stems from their varied and kaleidoscopic use of language. Beat poets abandoned traditional forms, syntax, and vocabulary in order to incorporate new rhythms, hip streetwise slang, and inventive imagery into their work. In her introduction to *The Beat Book*, Waldman describes this style as “candid American speech rhythms, jazz rhythms, boxcar rhythms, industrial rhythms, rhapsody, skillful cut-up juxtapositions, and an expansiveness that mirrors the primordial chaos. . . . This is writing that thumbs its nose at self-serving complacency.” Though their style constituted a break from traditional forms, the Beats always acknowledged the contributions of their precursors. Poets of the early twentieth century such as William Carlos Williams and the imagists H.D. and Ezra Pound paved the way for them by loosening the constraints around poetic language.

When Kerouac and Holmes published articles in the 1950s using the term “Beat generation” to describe their cultural milieu, it was picked up by the mainstream media and solidified in popular culture. “Beat” in popular parlance meant being broke, exhausted, having no place to sleep, being streetwise, being hip. At a deeper level, as John Clellon Holmes wrote in his 1952 article, “beat . . . involves a sort of nakedness of mind, and, ultimately, of soul; a feeling of being reduced to the bedrock of consciousness.” With increased usage of the term in the media, “Beat” came to signify the literary and political expression of the artists of the 1940s and 1950s.

The term “beatnik” has thus been rather generously applied to describe any devotee of the 1950s angst-ridden countercultural lifestyle, ranging from serious Beat intellectuals like Jack Kerouac, William Burroughs, and Allen Ginsberg to the more “cool cat” bongo-drumming pot-smoking denizens of coffee houses—males in beards and females in leotards—who “dug it” in such far flung bohemian outposts as New York’s Greenwich Village and Venice, California. Strictly speaking, “beatnik” was a term invented by the popular press only toward the end of the decade, after the launch of the Russian Sputnik satellite in the fall of 1957 spawned a host of “-nik” words in popular lingo on the model of already existing Yiddish slang words like nudnik. Herb Caen, a columnist for the *San Francisco Chronicle*, coined the term “beatnik” in an article he wrote for the paper on April 2, 1958, though the Oxford English Dictionary records the first use of the word in a *Daily Express* article that July 23, describing San Francisco as “the home and the haunt of America’s Beat generation . . . the Beatniks—or new barbarians.”

Whatever its origins, it is clear that during 1958, the word “beatnik” suddenly began appearing in magazines and newspapers around the world as a catchall phrase to cover most forms of urban, intellectual eccentrics, sometimes used in tandem with the dismissive

“sicknik.” It is also clear that few average Americans came into contact with self-avowing beatniks except by reading about them under the “Manners and Morals” heading in *Time* magazine or, more likely, through the rather stereotypical character of Maynard G. Krebs, who appeared on the CBS series *The Many Loves of Dobie Gillis* from 1959 to 1963. Krebs was described by Charles Panati in his 1991 book *Panati’s Parade of Fads, Follies, and Manias* as a figure who “dressed shabbily, shunned work, and prefaced his every remark with the word like. “ A decade earlier, however, a poetry-spouting proto-beatnik character named Waldo Benny had appeared regularly on *The Life of Riley* television sitcom, though he was never named as such.

Arguably the most definitive study of beatniks and the Beat Movement is Steven Watson’s 1995 book *The Birth of the Beat Generation: Visionaries, Rebels, and Hipsters*, in which he describes the Beats as exemplifying “a pivotal paradigm in twentieth-century American literature, finding the highest spirituality among the marginal and the dispossessed, establishing the links between art and pathology, and seeking truth in visions, dreams, and other nonrational states.” Watson and other cultural historians see the Beats as cultural antecedents to later countercultural groups that included Ken Kesey’s Merry Pranksters and hippies in the 1960s and punks in the 1970s. Reflecting on his own earlier participation in the Beat Movement, Robert Creeley wrote in the afterword of the 1998 paperback version of Watson’s book that being Beat was “a way of thinking the world, of opening into it, and it finally melds with all that cares about life, no matter it will seem at times to be bent on its own destruction,” and closed with the lines by Walt Whitman used as the motto for “Howl!”: “Unscrew the locks from the doors!/Unscrew the doors themselves from their jambs!”

—Edward Moran and Caitlin L. Gannon

The Beatles

Emerging out of the Liverpool, England, rock scene of the 1950s, the Beatles became the most successful and best known band of the twentieth century. In 1956, a Liverpool local named John Lennon formed the Quarrymen. At one of their first performances, John met another guitarist, Paul McCartney. The two hit it off immediately: Paul was impressed by John's energetic performance, and John was impressed that Paul knew how to tune a guitar, knew more than three chords, and could memorize lyrics. John and Paul developed a close friendship based on their enthusiasm for rock'n'roll, their ambition to go "to the toppermost of the poppermost," and a creative rivalry which drove them to constant improvement and experimentation. The pair soon recruited Paul's friend George Harrison to play lead guitar and nabbed a friend of John's, Stu Sutcliffe, to play the bass (though he did not know how). The Quarrymen, eventually renamed the Beatles, developed a local reputation for their rousing, exuberant performances and the appeal of their vocals. John and Paul were both excellent singers; Paul had a phenomenal range and versatility, while John had an uncanny ability to convey emotion through his voice. The sweetness and clarity of Paul's voice was ideal for tender love songs, while John specialized in larynx-wrenching rockers like "Twist and Shout." Their voices complemented each

other perfectly, both in unison and in harmony, and each enriched his own style by imitating the other. The inexplicable alchemy of their voices is one of the most appealing features of the Beatles' music.

In 1960 the band members recruited drummer Pete Best for a four-month engagement in Hamburg, Germany, where they perfected their stage act. In 1961, Sutcliffe quit the band, and Paul took up the bass, eager to distinguish himself from the other two guitarists. The Beatles procured a manager, Brian Epstein, who shared their conviction that they would become "bigger than Elvis." After many attempts to get a recording contract, they secured an audition with producer George Martin in July, 1962. Martin, who liked their performance and was charmed by their humor and group chemistry, offered the Beatles a contract, but requested that they abandon Pete Best for studio work, whom he found musically unsuitable to the group chemistry. The Beatles gladly consented, and recruited Ringo Starr, whom they had befriended in Hamburg. Their first single—"Love Me Do" (released October, 1962)—reached number 17 on the British charts. Their next single, "Please Please Me" (January, 1963), hit number one. Delighted with their success, they recorded their first album, *Please Please Me* (March, 1963), and it too reached the top of the charts.

In those days, rock albums were made to cash in on the success of a hit single, and were padded with filler material, usually covers of

The Beatles, from left: John Lennon, Ringo Starr, George Harrison, and Paul McCartney.

other people's songs. If the artists had any more decent material, it was saved for the next single. However, the Beatles included eight Lennon-McCartney originals, along with six cover songs from their stage repertoire on their debut album. This generosity marked the beginning of the album as the primary forum of rock music, displacing the single, and setting a new standard of quality and originality. *Please Please Me* may sound less impressive today, but it was far superior to the average rock album of 1963. The opening track, "I Saw Her Standing There," was a revelation, a rousing, energetic rocker teeming with hormonal energy. (Released in America as *Introducing the Beatles*, the album didn't sell well.)

Their third single, "From Me To You" (April, 1963), also hit number one in England, but it was their fourth, "She Loves You" (August, 1963), which brought "Beatlemania"—the name given to the wild form of excitement which the Beatles elicited from their fans—to a fever pitch around the world. Most of the Beatles' lyrics during this period were inane—the "yeah yeah yeah" of "She Loves You" being perhaps the silliest—but when delivered with the Beatles' delirious enthusiasm, they worked. Real Beatlemania seems to have begun in late 1963 (the term was coined in a London paper's concert review in October). Their second album, *With the Beatles* (November, 1963), was similar to the first, with six cover songs and eight originals. The American release of "She Loves You" in January 1964 ignited Beatlemania there, and the group's first appearance on the *Ed Sullivan Show* on February 9, 1964, was viewed by an estimated 73 million people.

The phenomenon of Beatlemania wasn't just a matter of screaming girls; the madness took many forms. A music critic for the *London Times* declared the Beatles "the greatest composers since Beethoven," and another detected "Aeolian cadences" in "Not a Second Time," though none of the Beatles knew what these were. Beatlemania often seemed divorced from the music itself: everything from dolls to dinner trays bore the likeness of the Fab Four, who had by now become the most recognized faces in the world. Grown businessmen would wear Beatlesque "moptop" wigs to work on Wall Street. Soon the franchise led to film with *A Hard Day's Night*, a comedy which spotlighted the Beatles' charm and humor as much as their music. The soundtrack—released in July, 1964—was the best album of the Beatles' early phase. Side one contained the songs from the movie, and side two provided six more hits. It was their first album of all original material, an unheard of accomplishment in rock music. Unfortunately, Capitol Records ripped off American fans by including only the songs from the movie on their version of the soundtrack, and filled the rest of the album with instrumental versions of those same songs. The Beatles' popularity was so great at this point that American fans were willing to pay full price for albums that barely lasted a half hour. The first seven British albums were diluted into ten American albums by offering ten songs each instead of the usual thirteen or fourteen. (The situation was not rectified until the advent of the CD, when the British versions were finally released in America.)

The group's fourth album, *Beatles For Sale* (December, 1964), reverted to the earlier formula of original songs mixed with covers. It was the weakest album of their career to date, but was still better than most pop albums of 1964, and hit number one. The album is important for John's improved lyrical efforts, beginning what he later called his "Dylan period." The Beatles had met Bob Dylan earlier that year, and he had introduced them to marijuana. John was impressed by Dylan's lyrics and decided to improve his own. The first tentative effort was the introspective "I'm a Loser." *Help!* (August 1965)—the soundtrack for their second movie—introduced the folkish "You've

Got to Hide Your Love Away" and Paul's acoustic "I've Just Seen a Face." *Help!* was also important for its expanded instrumentation, including flute and electric piano.

As the Beatles grew as composers, they became more receptive to producer Martin's sophistication. Martin had studied music theory, composition, and orchestration, and encouraged the Beatles to "think symphonically." A breakthrough in their collaboration with Martin came with "Yesterday." Paul had written it two years before, but had held it back since the song was incongruous with the band's sound and image. By 1965, the Beatles and the world were ready, and Paul's lovely guitar/vocal composition, graced with Martin's string arrangement, dazzled both Beatlemaniacs and their parents with its beauty and sophistication, and became one of the most popular songs in the world.

Their craftsmanship and experimentation reached new heights on *Rubber Soul*, one of their greatest albums. They returned to the all-original format of *A Hard Day's Night* (henceforth all of their albums featured entirely original material, with the exception of *Let It Be*, which included the sailor's ditty, "Maggie Mae"). John dabbled in social commentary with "Nowhere Man," a critique of conformity reminiscent of Dylan's "Ballad of a Thin Man." But John's song avoided Dylanesque superciliousness through his empathy with the character. John began to master understatement and poetic suggestion in the enigmatic "Norwegian Wood." This was also the first song to feature George's sitar. George had discovered the sitar while filming *Help!* and had been turned on to Indian music by the Byrds. The Byrds contributed to the artistry of *Rubber Soul* by providing the Beatles with serious competition on their own debut album earlier that year. Hailed as the American Beatles, the Byrds were the only American band who attained a comparable level of craftsmanship and commercial appeal without simply imitating the Beatles. Before then, the Beatles' only serious competitors were the Rolling Stones. Soon competitors would rise all around the Beatles like rivals to the throne. But the Beatles kept ahead, constantly growing and expanding, experimenting with fuzz bass, harmonium, and various recording effects. The most impressive thing about *Rubber Soul* was that such innovation and sophistication were achieved without any loss of the exuberance and inspiration that electrified their earlier albums. It was an impressive union of pop enthusiasm and artistic perfection. Few would have guessed that the Beatles could surpass such a triumph—but they did.

Their next album, *Revolver* (August, 1966), is widely regarded as the Beatles' masterpiece, and some consider it the greatest album ever made, featuring fourteen flawless compositions. George's "Taxman" was the hardest rock song on the album, featuring a blistering, eastern-sounding guitar solo reminiscent of the Yardbirds' "Heart Full of Soul" and the Byrds' "Eight Miles High." But George's masterpiece was "Love You To." He had previously used the sitar to add an exotic coloring to songs, but here he built the entire composition around the sitar, and expressed his growing immersion in Eastern spirituality. John was even spacier in the acid-drenched "She Said She Said" and "Tomorrow Never Knows," full of backwards-recorded guitar, tape loops, and countless studio effects to enhance the mind-boggling lyrics. John, George, and Ringo had experimented with LSD by this time, and John and George were tripping regularly and importing their visions into their music. (Paul did not sample LSD until February 1967). Paul's experiments were more conventional, but equally rewarding. He followed up the achievement of "Yesterday" with the beautiful "Eleanor Rigby." The poignant lyrics marked the beginning of Paul's knack for creating

vivid character portraits in a few deft verses. “Here, There, and Everywhere” was another beauty, containing the sweetest vocal of Paul’s career, and the bright, bouncing melody of “Good Day Sunshine” showed Paul’s increasing sophistication on the bass. *Revolver* set a new standard in rock music, and became the masterpiece against which all subsequent albums were measured.

The achievement of *Revolver* was due partially to the Beatles’ decision to stop performing concerts after the current tour, which would free their music from the restrictions of live performability. They played their last concert on August 29, 1966, without playing any songs from the new album. Exhausted, they withdrew from public life, took a brief break, then began work on a new album. The silence between *Revolver* and *Sgt. Pepper’s Lonely Hearts Club Band* lasted ten months—the longest interval between albums thus far, but ended with a stunning single, “Strawberry Fields Forever.” “Penny Lane,” which revealed the growing individuality of the composers’ styles. John was visionary, introspective, and cryptic in “Strawberry Fields Forever;” while Paul was sentimental, suburban, and witty in “Penny Lane.” John was abstract, questioning his role in the human riddle; Paul was concrete, using odd little details to bring his characters to life. The two songs complemented each other perfectly, and hinted at the variegated brilliance of the album to come.

Sergeant Pepper’s Lonely Heart’s Club Band (June, 1967) has been hailed as the quintessential album of the sixties, and especially of the famous Summer of Love of 1967. It was the most esoteric and ambitious work ever attempted. To enumerate its charms, innovations, and influence would fill volumes, but special mention must be made of “A Day in the Life,” one of the last great Lennon-McCartney collaborations, and one of the most hauntingly beautiful songs of their careers. Weaving together the story of a wealthy heir who dies in a car crash, an estimate of potholes in Blackburn, Lancashire, and a vignette of a young man on his way to work, the song is an ironic montage of the quotidian and the universal, sleeping and waking, complacency and consciousness, establishment and counterculture, and an orgasmic union of high and low art, all rolled into one five-minute, three-second song.

Although “A Day in the Life” is the highlight of a bold, brilliant, stunning album, *Sgt. Pepper* is probably not the Beatles’ greatest work, and has not aged as well as *Revolver*. If *Revolver* is a 14-course meal which delights, satisfies, and nourishes, *Sgt. Pepper* is an extravagant dessert for surfeited guests—overrich, decadent, fattening. Lavish and baroque, it did not maintain the energetic, youthful exuberance that shines through the complexities of *Revolver*. Many will agree with Martin’s judgment that *Revolver* is the Beatles’ best album, while *Sgt. Pepper* is their most significant work. It was also the last truly influential work by the Beatles. Although they continued to evolve and experiment, they would no longer monopolize centerstage, for 1967 saw a trend toward instrumental virtuosity and improvisation led by Cream and Jimi Hendrix.

The Beatles’ next project, *Magical Mystery Tour* (December, 1967), coasted along on the plateau established by *Sgt. Pepper*. *Magical Mystery Tour* was a pointless film following the Beatles on a bus trip around England. Paul got the idea from the Merry Pranksters, a counterculture group traveling across America. The film was a flop, and the Beatles’ first real failure. The soundtrack featured a mix of good and mediocre songs, but some recent singles gathered onto side two strengthened the album.

In 1968 the Beatles went to India to study meditation with Maharishi Mahesh Yogi, during which they learned of Epstein’s death from an overdose of sleeping pills. Eventually disenchanted

with the Maharishi, the Beatles returned with a potpourri of songs. They proposed to release a double album to accommodate the abundance. Martin was unimpressed with the material however, and recommended releasing a potent single album like *Revolver*. But the rivalry among the band members was so intense that all four Beatles favored the double album to get their songs included. The result was one of the Beatles’ strangest albums, *The Beatles* (November, 1968). The blank white cover and simple title reflected the minimalist nature of much of the material, which had been composed on acoustic guitars in India. Most of the 30 songs were individual efforts, often sung and played solo. McCartney played every instrument on some of his songs. The bewildering array of styles seemed like a history (or perhaps a parody) of western music.

Yellow Submarine was a cartoon made to fulfill the Beatles’ film contract with United Artists (although *Let It Be* would actually fulfill this obligation a year later). The Beatles were not interested in the project, and contributed several older, unused songs to the soundtrack. The cartoon was entertaining, but the album *Yellow Submarine* (January, 1969) is the biggest ripoff of the Beatles’ catalog, featuring only four original songs. Side two was padded with Martin’s orchestral soundtrack. Still, Lennon’s great rock song “Hey Bulldog” makes the album a must-have.

These odd albums of the late 1960s marked the beginning of the end of the Beatles. Musically, their individual styles were drifting apart, but the real sources of strife were more mundane. First, they had difficulty in agreeing on a manager to replace Epstein. Secondly, John had become smitten with avant-garde artist Yoko Ono, and insisted on bringing her into the Abbey Road Studios with him. Paul, too, had married and the creative core of the group began to feel the need to have a family life. This caused tension because as a band the Beatles had always been an inviolable unit, forbidding outsiders to intrude upon their creative process. But John had invited Yoko to recording sessions simply because he wanted to be constantly by her side. The tensions mounted so high that Ringo and George each briefly quit the band. These ill-feelings persisted on their next project, another McCartney-driven plan to film the Beatles, this time while at work in the studio. The documentary of their creative process (released the following year as *Let It Be*) was all the more awkward because of the tensions within the band. Martin became fed up with their bickering and quit, and the “Get Back” project was indefinitely canned.

Eventually Paul persuaded Martin to return, and the Beatles produced *Abbey Road* (September, 1969), one of their best-selling and all-time favorite albums. They once again aimed to “get back” to rock’n’roll, and recovered the enthusiasm and spontaneity of their pre-Pepper period, producing a solid performance that stood up to *Revolver*. George outdid himself with two of the greatest compositions of his career, “Something” and “Here Comes the Sun.” The main attraction of the album was the suite of interconnected songs on side two, culminating in the Beatles’ only released jam session, a raunchy guitar stomp between Paul, George, and John. It was a brilliant ending to a brilliant album. Unfortunately, it was also the end of the Beatles as well, for the band broke up in June, 1970, due to insurmountable conflicts. Producer Phil Spector was summoned to salvage the “Get Back” project. He added lavish strings and horns to the patched-together recordings, and it was released as *Let It Be* (May, 1970) along with a film of the same name. Somewhat of an anticlimax after the perfection of *Abbey Road*, and marred by Spector’s suffocating production, it was nevertheless a fine collection of songs, made all the more poignant by alternating moods of regret and resignation in Paul’s songs, “Two of Us” and “Let It Be.”

Her Majesty the Queen inducted the Beatles as Members of the British Order on October 26, 1965. This was not only the climax of Beatlemania, but a symbolic moment in history, bridging the realms of high and low culture. The other great honor of the Beatles' career was the invitation to appear on the world's first global broadcast, on June 25, 1967. The Beatles wrote "All You Need Is Love" for the occasion, and played it live for an estimated 350 million viewers. It is remarkable that they were allowed to represent England for the world when Paul had announced a week earlier that he had taken LSD, the BBC had recently banned radio play of "A Day in the Life," and the whole world was scouring *Sgt. Pepper* for subversive messages. These two honors reveal the Beatles as unifiers, not dividers. One of their greatest achievements was to resonate across boundaries and appeal to multiple generations and classes, to represent the counter-culture while winning the respect of the establishment. Although they started as tough, leatherclad teddy boys, they achieved much more by working within the mainstream, creating rather than tearing down, combining meticulous skill with daring innovation. This was achieved by a blessed union: the reckless irreverence of John Lennon and the diplomacy, dedication, and craftsmanship of Paul McCartney.

Beatty, Warren (1937—)

One of the most extraordinarily handsome screen actors of his generation, Warren Beatty proved remarkably sparing in exploiting his image. That image has tended to seem contradictory, often puzzling, to commentators and critics, but there is universal agreement that no subsequent disappointments in Beatty's work could obscure his achievement in portraying the impotent, crippled, trigger-happy Clyde Barrow, at once inept, ruthless, and curiously touching, in *Bonnie and Clyde* (1967).

Brilliantly directed and photographed, with meticulous attention paid to historical accuracy, *Bonnie and Clyde* was a watershed in the then thirty-year-old Beatty's career, for it was he who masterminded the entire project, from buying the script to hiring director Arthur Penn and choosing the cast. The superb production values and style of the film which, in its fearless and poetic use of bloodshed, made it both influential and highly controversial, stamped Warren Beatty as a producer of flair and intelligence, and his evident ambitions might account for the discomforting and enigmatic sense of detachment that has robbed several of his performances of conviction.

Born Henry Warren Beatty in Richmond, Virginia, Beatty is the younger brother of dancer and actress Shirley MacLaine. He acted in

Warren Beatty

amateur productions staged by his mother, who was a drama coach, during childhood and later studied at Northwestern University and with Stella Adler. A slow progression via television in New York and a stock company took him to Broadway for the first and last time in William Inge's *A Loss of Roses*, where Beatty was seen by director Elia Kazan. Beatty made his Hollywood debut opposite Natalie Wood in Kazan's *Splendor in the Grass* (1961), a somber, archetypically 1960s examination of teenage sexual angst and confusion, in which the actor gave a suitably moody performance and mesmerized audiences with his brooding good looks.

For the next six years Beatty gave variable (but never bad) performances in a crop of films that ranged from the interesting through the inconsequential to the bad. Interesting were *The Roman Spring of Mrs. Stone* (1961), in which, despite a bizarre attempt at an Italian accent, he smoldered convincingly as the gigolo providing illusory comfort to Vivien Leigh; and Robert Rossen's *Lilith* (1964) with Beatty excellent as a therapist dangerously in love with a mental patient. The inconsequential included *Promise Her Anything* (1966), a romantic comedy set in Greenwich Village and costarring Leslie Caron. His reputation as a Don Juan was already in danger of outstripping his reputation as a star, and when Caron left her husband, the distinguished British theater director Peter Hall, he cited Beatty as co-respondent in the ensuing divorce.

Arthur Penn's *Mickey One* (1965), a pretentious failure, did nothing for Beatty, and neither did the comedy-thriller *Kaleidoscope* the same year. Next came *Bonnie and Clyde* followed by the first of several absences from the screen that punctuated his career over the next thirty-five years. His reappearance as a compulsive gambler in *The Only Game in Town* (1970), a film with no merit, was a severe disappointment and indicated a surprising lack of judgment, redeemed by his mature performance as another kind of gambler in the Old West in Robert Altman's imaginative evocation of frontier town life, *McCabe and Mrs. Miller* (1971). Julie Christie was his costar and his new headline-catching romance. In 1974 Beatty was perfectly cast as the lone investigative journalist at the center of Alan J. Pakula's compelling conspiracy thriller, *The Parallax View*, after which he turned producer again (and cowrote) for *Shampoo* (1975). A mildly satirical tale of a hairdresser who services more than his clients' coiffures, it was a good vehicle for Beatty's dazzling smile and sexual charisma, and it netted a fortune at the box office. After joining Jack Nicholson in *The Fortune*—awful—the same year, Beatty disappeared again.

He returned in 1978 with *Heaven Can Wait*, a surprisingly well-received and profitable remake of *Here Comes Mr. Jordan* (1941) that earned four Oscar nominations. Beatty coproduced, cowrote with Elaine May, and codirected (his first attempt) with Buck Henry, and won the Golden Globe for best actor in a comedy before another three-year absence. This time he came back with *Reds* (1981), the high-profile undertaking that brought him serious international recognition. A sprawling, ambitious epic running more than three-and-a-half hours, *Reds* recounted the political activities of American Marxist John Reed (Beatty) in Manhattan and Moscow, and Reed's love affair with Louise Bryant (Diane Keaton, the star's new off-screen love). The film, in which real-life characters appeared as themselves to bear witness to events, was better in its parts than in its sum, but there was no doubting Beatty's seriousness of purpose as producer, cowriter, director, and star. If his ambition had appeared to overreach itself, he was nonetheless rewarded with both the Golden Globe and Oscar for best director, Oscars for cinematographer Vittorio Storaro and supporting actress Maureen Stapleton, and an impressive number of other honors. He was thenceforth to be regarded as a heavyweight, and his future projects were eagerly anticipated.

These expectations remained unfulfilled for seventeen years, during which Beatty made only four films. The motive for making the \$50 million catastrophe *Ishtar* (1987) has remained inexplicable, while *Dick Tracy* (1990), in which he directed himself as the comic-book hero, displayed an undiminished sense of style but failed to ignite. *Bugsy* (1991), about the notorious Bugsy Siegel, was slick and entertaining although both star and film lacked the necessary edge, but Beatty found true love at last with his costar Annette Bening and married her. It could only have been his desire to find a romantic vehicle for both of them that led him to such a failure of judgment as *Love Affair* (1994), a redundant and poor remake of a 1939 classic, already wonderfully remade by its creator, Leo McCarey, as *An Affair to Remember* (1957).

Four years later came *Bulworth* (1998), a striking political satire that reflected his own long-standing personal involvement with politics and a canny sense of commercialism in purveying a liberal message through a welter of bigotry. By then happily settled as a husband and father, Warren Beatty at last demonstrated that the faith of his admirers had not been misplaced.

Beau Geste

Beau Geste, the best selling 1924 adventure novel by Percival Christopher Wren, has provided venerable screenplay fodder for successive generations of Hollywood filmmakers. First adapted in a silent version in 1926 with Ronald Colman in the title role, the property was most memorably executed by director William Wellman in 1939. Gary Cooper starred as Michael "Beau" Geste, one of three noble brothers who join the French Foreign Legion after being wrongly implicated in a jewel theft. An Academy Award nomination went to Brian Donlevy for his role as a villainous sergeant. A forgettable third version appeared in 1966.

Beauty Queens

From America's Favorite Pre-Teen to Miss Nude World, America offers a plethora of beauty contests and competitions for females, and the occasional male, to be crowned a beauty queen. In *American Beauty*, Lois Banner suggests that beauty queens illustrate the American ideals of social mobility and democracy: anyone can be a pageant winner and better herself, since anyone can enter a contest. Additionally, there is always another chance to win because new queens are crowned every year.

Beauty queens are chosen for every conceivable reason. Their role is to represent pageant sponsors as an icon and a spokesperson. Queens represent commodities like Miss Cotton; products like Miss Hawaiian Tropic [suntan lotion]; ethnic identity such as Miss Polish America; festivals and fairs such as the Tournament of Roses queen; sports like Miss Rodeo America; and geographic regions such as Miss Palm Springs, Miss Camden County, Miss Utah-USA, Mrs. America, and Miss World, among others. While the best known contests are for young women, there are competitions for almost everyone from grandmothers to babies. Specialized contests include Ms. Senior, Miss Large Lovely Lady, and Miss Beautiful Back. Although not as numerous, men's contests garner entrants of different ages also. Males can choose from the conventional masculine contests like the International Prince Pageant or drag contests such as Miss Camp America.

Two beauty queens, c. 1959.

Early twentieth-century beauty queens were often referred to as bathing beauties. Their outdoor contests were held in Venice, California, Miami Beach, Florida, and Galveston, Texas, and other beach resorts as early as 1905. The contests were usually one of many competitions including comic contests for men dressed like women and contests for children. Early contenders were actresses and showgirls as well as amateurs in their teens. Without a hierarchy of lower contests, as there is today, to winnow down the number of participants (there could be over 300 entrants), sponsors regularly disqualified contestants for misrepresenting their marital status and the region they hailed from. Early contests in the United States invited foreign contestants, like Miss France, to vie for Queen of the Pageant or Beauty Queen of the Universe. Among these competitions is the most long-lived contest, the Miss America Pageant, which began in Atlantic City, New Jersey in 1921.

The presentation of ethnic queens began as early as Miss America, whose court included Miss Indian America (who did not compete). Early ethnic contests include the Nisei Week Japanese Festival, which started in Los Angeles in 1935, and Miss Sepia for African American women, which began as early as 1944.

Beauty pageants and beauty queens have not always been popular. Until the late 1940s, when Miss America gained respect because the winners sold war bonds and won college scholarships, beauty queens were not generally well thought of by the majority of Americans. One congressman around 1915 wanted to create a federal law banning beauty contests. At the time, women who exhibited their bodies or wore makeup were considered daring, if not suspect. Other early protesters were religious and women's groups who issued

decrees about how contests exploited young women for the profit of the organizers who, in almost all cases, were men. By the 1950s beauty pageants had become status quo.

Since the 1960s protesters have become more theatrical in showing how the contests objectify women. The Women's Liberation Front crowned a sheep as Miss America as part of an all day demonstration in 1968. Students elected a cow as homecoming queen at one college in the 1970s. In the 1980s protesters at a Miss California contest wore costumes of baloney, skirt steak, and hot dogs.

As beauty competitions gained respect, the ideal American girl became engraved in the American psyche. By the 1950s, when the Miss Universe contest began, the beauty queen was at her pinnacle: a stereotypically pretty, talented, politically conservative, WASP young woman who was more focused on marriage than a career. The contests floated through the 1960s until the Women's Liberation Movement made contestants and sponsors reflect on their values. By the 1970s a career and self-fulfillment were added to the qualities of a beauty queen. Well-known contests like Miss America and Miss USA also were slowly being racially integrated. By the 1980s and 1990s many African American women had won national titles in mixed competitions. Contestants with disabilities that did not affect their appearance, such as hearing impairment, were also not uncommon. In fact, conquering an impediment such as diabetes or sexual abuse was seen as a competition asset.

A service industry has grown up around pageantry, the term used to describe the beauty contest phenomenon, supplying clothing, cosmetic surgery, photography, music, jewelry, awards, makeup, instructional books and videos, and personal trainers. While early models and actor contestants may have had an edge on the amateurs because of experience performing, almost all modern beauty contestants train intensely to win. They take lessons on speaking, walking, applying makeup and hairdressing, as well as studying current events.

The prizes beauty queens win have not changed much since the 1920s. Among these are public exposure, crowns, cash, savings bonds, fur coats, jewelry, complete wardrobes, cosmetics, automobiles, and opportunities to model or act for television and film. Scholarships, a relatively new prize, were introduced in the 1940s by the Miss America Pageant. Since then, national beauty queens have spent a year on the road—selling war bonds, appearing at shopping center and sport event openings, and speaking to government, educational, and civic organizations such as the National Parent Teacher Association or American Lung Association, among other duties. State, national, and international winners like Miss USA, Miss Universe, and Miss Arkansas make paid appearances for their pageant and sponsors. National and international winners can earn over \$200,000 during their year.

Beavers, Louise (1902-1962)

Louise Beavers, whose first film role was as a slave in the silent version of *Uncle Tom's Cabin* (1927), was cast as the happily devoted black servant during most of her career. However, she broke out of that type of role in *Imitation of Life* (1934) in her moving portrayal of the heartsick Aunt Delilah, whose light-skinned daughter denied her mother to "pass" as white. Even after this critically praised performance, Beavers returned to the limited servant-type character roles available to black actors during this period.

Beavers later moved to television and replaced Ethel Waters as the star of *Beulah* (1950-1953), the managing maid to the inept Hendersons, during its final season. The series gave Beavers star billing. However, she tired of the pace and stereotypical role and left the series while it was still popular.

Beavis and Butthead

MTV's breakthrough hit of the 1990s, *Beavis and Butthead*, grew out of a series of animated shorts. Each half-hour episode chronicled the title characters' hormone-driven adventures while offering their commentary on popular music videos. Beavis and Butthead were almost universally-recognized pop icons by the time their run on MTV ended in 1997. They helped to usher in a new genre of irreverent television comedy and symbolized for many critics the decay of the American mind in the days of Generation X.

Those viewing "Frog Baseball," Beavis and Butthead's premiere installment on MTV's animation showcase *Liquid TV*, might have judged the cartoon—in which the duo does indeed play our national pastime with a frog as the ball—nothing more than a demented teenage doodle. But creator Mike Judge's simplistically-rendered protagonists struck some chord with MTV's young audience, and more episodes were featured. Beavis and Butthead's appearance on the 1992 Video Music Awards marked a coming-out of sorts, and Judge and his creations were offered a weekly spot on the

cable network in 1993. Including videos layered with the boys' comments from the couch was the network's idea. *The Beavis and Butthead Experience*, an album featuring the two heroes collaborating with several of their favorite artists, was released late in 1993. Beavis and Butthead were guests several times on *Late Night with David Letterman* and were a featured act at the 1994 Super Bowl halftime show. Judge's cartoon creations were becoming important Hollywood personalities in an age that demanded celebrities who could wield power in several media. The culmination of this process was the release of their 1996 movie, *Beavis and Butthead Do America*, in which they embark on a cross-country quest for their lost television.

Beavis and Butthead's rise to stardom was not without its wrinkles. The show was sued in late 1993, while their popularity surged, by an Ohio mother who claimed Beavis's repeated maniacal calls of "Fire! Fire!" had encouraged her son to set a fire in their trailer home that claimed the life of his older sister. As part of the settlement, all references to fire have been edited from old and new episodes of the show. Judge and MTV parted ways amicably in 1997, after 220 episodes. Judge continued creating animated shows for adults. Beavis and Butthead, despite their best efforts to do nothing, had irrevocably altered the fields of animation, comedy, and teen culture as a whole. Taboos had been broken. Crudity had soared to new heights.

On the surface, *Beavis and Butthead* is a celebration of the frustrated male adolescent sex drive. Butthead, the dominant member of the team, is described in his own *Beavis and Butthead Ensucklopedia* as "... pretty cool. He hangs out a lot and watches TV. Or else he cruises for chicks... he just keeps changing the channels, and when a hot chick comes on he'll check out her thingies." Butthead's off-center whipping boy Beavis is, in comparison, "... a poet, a storyteller, a wuss, a fartknocker, a dillweed, a doorstep and a paper weight." The show established and maintained its fan base with storylines about escape (from the law, social norms, or teenage boredom) and desire (for women, recognition, or some new stimulus). Judge's vignettes, peppered with Beavis' nerdy snicker and Butthead's brain dead "Huh. Huh-huh," left no subject as sacred, from God and school to death itself. They destroyed public and private property, dodged responsibilities, let the world wash through the television and over them on their threadbare couch, and bragged about their fantasies of exploiting women. Critics and would-be censors were quick to point to the show as evidence of the current generation's desensitization to modern social issues and general dumbing-down. Beavis and Butthead, many said, were evidence enough that the current crop of kids were not ready to take over. "I hate words," snorts Beavis while a music video flashes superimposed phrases on the screen. "Words suck. If I wanted to read, I'd go to school."

But Beavis and Butthead's innocent absorption of America's mass media and their simultaneous applause and ridicule of popular culture spoke to "Gen X" on some level. And deep in their observations were occasional gems of world-weary wisdom. "The future sucks," insists Beavis in one episode, "change it!" Butthead replies, "I'm pretty cool Beavis, but I cannot change the future."

The Bee Gees

The Australian Brothers Gibb, Barry and twins Robin and Maurice (1949—), are one of the most successful, versatile, enduring recording groups in the world. Their trademark close harmonies, along with their remarkable songwriting abilities and talent for creating distinctive melodies, have earned them dozens of top 40 hits, including six consecutive number ones from 1977-79. Because of their involvement with the soundtrack to *Saturday Night Fever*, they are primarily artistically associated with late-1970s disco excesses. However, they released their first widely available record in 1967, and began a string of hits in several genres: pop, psychedelic, country, R&B, and soul. Though they still regularly top the charts in other parts of the world, they have not had major chart success in the United States since 1983. In 1997, the Bee Gees were inducted into the Rock 'n' Roll Hall of Fame.

Beer

Given Americans' love of beer, one might be tempted to call it America's drink. In truth it is the world's drink. Originating in ancient Babylon, and passed on in various regional variations for thousands of years, beer is made in virtually every country in the world. Throughout Europe, but especially in Germany, Czechoslovakia, and the United Kingdom, the public house or alehouse serving locally-brewed beer has been an institution for hundreds of years. In Belgium, Trappist monks have been producing their distinctive beers since the eleventh century. But it wasn't until the twentieth century that beer was subjected to the peculiar modernizing effects of American mass culture. Mass-produced, packaged, and advertised everywhere, American lager beer in its various similar-tasting brands—Budweiser, Miller, Strohs, Coors, Pabst, etc.—became the drink of the masses. In 1995, American brewers produced 185 million barrels of beer, 176 million of which were consumed in the United States. The vast majority of the beer produced in the United States—over 95 percent—is produced by the major brewers, Anheuser-Busch, Miller, Strohs, Heileman, Coors, and Pabst. However, craft brewers have kept ancient brewing traditions alive and in the 1990s offer their microbrews to a growing number of beer drinkers looking for an alternative to mass-produced fare.

It is no exaggeration to say that beer came to America with the first colonists. Indeed, there is evidence that suggests that one of the main reasons the Mayflower stopped at Plymouth Rock in 1620 was that they were running out of beer. Had they made it to New Amsterdam they might have replenished their stock with ales made by the Dutch settlers who had been brewing beer there since 1612. The first commercial brewery opened in New Amsterdam in 1632 and as the colonies expanded many a small community boasted of a local brewer. But the failure of colonists to grow quality barley (a key ingredient in beer) and the easy availability of imported English beer

slowed the development of an indigenous brewing industry. As tensions between the colonies and England increased in the eighteenth century, beer became one of a number of British goods that were no longer wanted by colonists eager to declare their independence. By 1770, George Washington and Patrick Henry were among the many revolutionaries who called for a boycott of English beer and promoted the growth of domestic brewing. Some of the first legislation passed by the fledgling United States limited the taxes on beer to encourage such growth. Thomas Jefferson and Benjamin Franklin both supported a plan to create a state-supported national brewery (the plan came to naught.)

The nineteenth century saw a tremendous growth in brewing in America. Immigrants from the "beer belt" countries of Europe—Ireland, Germany, Poland, Czechoslovakia, and The Netherlands—brought their brewing knowledge and love of beer to many American communities, and by 1840 there were over 140 breweries operating in the United States. In that same year America was introduced to lager beer by a Bavarian brewer named Johann Wagner. Little did he know that he had introduced the future of American brewing. Prior to 1840, the beers produced in America were all ales, defined by their use of a top-fermenting yeast and aged and served at room temperature. Lagers—which used a bottom-fermenting yeast and required cold storage—tended to be mellower, smoother, and cleaner tasting, and they soon found an audience, especially when Bohemian brewers developed the Pilsner style, the lightest, clearest lager made. Milwaukee, Wisconsin—with its proximity to grain producers, its supply of fresh water, and its large German population—soon became the capital of American brewing. The Pabst, Schlitz, and Miller Brewing companies all trace their roots to nineteenth-century Milwaukee. In fact, Schlitz claimed for many years to the "beer that made Milwaukee famous."

Milwaukee was not alone in embracing beer, especially lager beer. By 1873 there were over 4,131 breweries operating in the United States and they produced nine million barrels of beer, according to Bill Yenne in *Beers of North America*. Most of the twentieth century's major brewers got their start in the late nineteenth-century boom in American brewing, including Anheuser-Busch (founded in 1852), the Miller Brewing Company (1850), the Stroh Brewery Company (1850), the G. Heileman Brewing Company (1858), the Adolph Coors Company (1873), and the Pabst Brewing Company (1844). Adolphus Busch, who some hail as the first genius in American brewing, dreamed of creating the first national beer, and by the 1870s the conditions were right to begin making his dream a reality. Backed by a huge brewery, refrigerated storehouses and rail cars, and a new process allowing the pasteurization of beer, Busch introduced his new beer, called Budweiser, in 1876. But the majority of the brewers were still small operations providing beer for local markets. It would take industrialization, Prohibition, and post-World War II consolidation to create the monolithic brewers that dominated the twentieth century.

At the dawn of the twentieth century several factors were reshaping the American brewing industry. First, large regional brands grew in size and productive capacity and began to squeeze competitors out of the market. New bottling technologies allowed these brewers to package and ship beer to ever-larger regions. Such brewers were aided by new legislation that prohibited the brewing and bottling of beer on the same premises, thus ending the tradition of the local brewhouse. "The shipping of bottled beer," notes Philip Van Munching in *Beer Blast: The Inside Story of the Brewing Industry's Bizarre Battles for Your Money*, "created the first real emphasis on brand identification, since shipping meant labeling, and labeling meant

A bartender pours a beer at the Copper Tank Brew Pub in Austin, Texas.

imagery.” All these factors helped big brewers get bigger while small brewers left the industry. By 1910 the number of breweries had decreased to 1,568, though they produced 53 million barrels of beer a year. With fewer breweries producing more beer, the stage was set for the next century of American brewing. There was only one problem: numbers of Americans supported placing restrictions on alcohol consumption and they soon found the political clout to get their way.

For a number of years nativist Protestants, alarmed by the social disorder brought to the United States by the surge of immigrants from eastern and southern Europe, had been pressing for laws restricting the sale of alcohol, hoping that such laws would return social order to their communities. Fueled by anti-German (and thus anti-brewing) sentiment sparked by Germany’s role in World War I, such groups as the National Prohibition Party, the Woman’s Christian Temperance Union, and the Anti-Saloon League succeeded in pressing for legislation and a Constitutional Amendment banning the “manufacture, sale, or transportation of intoxicating liquors.” The Volstead Enforcement Act, which went into effect on January 18, 1920, made the brewing of beer punishable under the law. “What had been a normal commercial activity one day,” writes Penne, “was a criminal act the next.” Small and medium-sized breweries across the nation closed their doors, and the big brewers turned their vast productive capacity to producing near beer (with names like Vivo, Famo, Luxo, Hoppy,

Pablo, and Yip) and other non-alcoholic beverages. As a method of social control, Prohibition—as the period came to be known—failed miserably: American drinkers still drank, but now they got their booze from illicit “speakeasies” and “bootleggers,” which were overwhelmingly controlled by organized crime interests. Crime increased dramatically during Prohibition (or at least anti-Prohibition interests made it seem so) and the politicians who were against Prohibition, energized by the political realignment caused by the start of the Great Depression and the election of Franklin D. Roosevelt, repealed Prohibition by December of 1933.

The effects of Prohibition on the brewing industry were dramatic. Only 400 of the country’s 1,568 breweries survived Prohibition, and half of these failed during the Depression that gripped the country throughout the 1930s. The big breweries survived, and in the years to come they would claim an ever-increasing dominance in the American beer market. Big brewers were aided in 1935 by the introduction of canned beer. Though brewers first put beer in tin or steel cans, Coors introduced the aluminum can in 1959 and it was quickly adopted by the entire brewing industry. More and more, beer was a mass-produced product that could be purchased in any grocery store, rather than a craft-brewed local product purchased at a local alehouse. But American brewing did not rebound immediately upon repeal of Prohibition. The economic troubles of the 1930s put a damper on

production; in 1940, American brewers produced only 53 million barrels of beer, “well below the pre-Prohibition peak of 66 million barrels,” according to Yenne. It would take World War II and the post-war boom to spark a real resurgence in American brewing.

As World War II drew increasing numbers of American men off to foreign bases, military leaders wisely decided to permit the sale of beer on military bases. Brewers obliged by allocating 15 percent of their production for the troops and, according to Yenne, “young men with long-standing loyalties to hometown brews were exposed to national brands,” thus creating loyalty to these brands that they carried home. Brewers also took advantage of an expanding American economy to increase their output to 80 million barrels annually by 1945.

The story of post-War American brewing can be summed up in two words: nationalization and consolidation. Anheuser-Busch, Schlitz, and Pabst set out to make their beers national brands by building breweries in every region of the United States. In the years between 1946 and 1951, each of these brewers began to produce beer for the New York market—once dominated by Ballantine, Rheingold, and Schaefer—from newly-opened breweries. Soon they built breweries, giant breweries, on the West Coast and in the South. By 1976 Anheuser-Busch alone had opened 16 new breweries in locations throughout the United States. The other major brewers followed suit, but no one could keep up with Anheuser-Busch. By 1957 the company was selling more beer than any brewer in the United States, a position it has not relinquished since.

Nationalization was followed by consolidation, as the major brewers began acquiring smaller brewers at an astonishing pace and either marketing or burying their brands. According to Van Munching, “In the sixties and seventies following the American beer business was like going to a ball game. To keep track of the players, you needed a scorecard.” G. Heileman of Wisconsin purchased smaller regional brewers of beers like Old Style, Blatz, Rainier, and Lone Star; Washington brewer Olympia bought Hamm’s, but was in turn bought by Pabst. But the biggest buy came when tobacco giant Philip Morris purchased the Miller Brewing Company in 1970. Backed by Philip Morris’s deep pockets, Miller suddenly joined the ranks of the country’s major brewers. Van Munching claims that the purchase of Miller “signaled the end of an era in the brewing industry: the end of skirmishes fought on a strictly regional scale, often with different contestants in each of the regions. Now, one battlefield was brought into sharp focus . . . the whole U.S. of A.” From 1970 on, the major national brewers battled fiercely for market share with a sophisticated arsenal of advertising, promotions, brand diffusion, and bluster.

In a market in which the major brands had little difference in taste, the biggest tool the brewers had to increase market share was advertising. The first brewer to turn its full attention to the promotion of its product on a national scale was Miller, which in the early 1970s began an unprecedented push into the sports marketplace. Miller advertised its brands on every televised sporting event it could get its hands on, from auto racing to football. While it pitched its flagship brand, Miller High Life, with the slogans “If you’ve got the time, we’ve got the beer” and the tag line “Miller Time,” Miller attracted the most attention with its ads for the relatively new Lite Beer from Miller that featured drinkers arguing whether the beer “Tastes Great” or was “Less Filling.” For a time, Miller dominated the available air time, purchasing nearly 70 percent of network television sports beer advertising. But Anheuser-Busch wasn’t about to let

Miller outdo them, and they soon joined in the battle with Miller to dominate the airwaves, first purchasing local television air time and later outbidding Miller for national programs. With their classy Budweiser Clydesdales, “This Bud’s for You,” and the “Bud Man,” Budweiser managed to retain their leading market share. Between them, Anheuser-Busch and Miller owned American television beer advertising, at least until the others could catch up.

Both Budweiser and Miller devoted significant resources to sponsoring sporting teams and events in an effort to get their name before as many beer drinkers as possible. Budweiser sponsored the Miss Budweiser hydroplane beginning in 1962, and beginning in the early 1980s regularly fielded racing teams on the NASCAR, NHRA, and CART racing circuits. Moreover, Budweiser sponsored major boxing events—including some of the classic championship fights of the 1980s—and in the late 1990s paired with a number of sportsmen’s and conservation organizations, including Ducks Unlimited and the Nature Conservancy. For its part, Miller sponsored awards for National Football League players of the week and year, funded CART, NASCAR, and drag racing teams, and in the late 1990s started construction on a new baseball stadium, called Miller Park, for the aptly named Milwaukee Brewers. Miller has also put considerable resources into funding for the arts, both in Milwaukee, where it has sponsored annual ballet productions, and in other cities throughout the country. These brewers—and many others—also put their name on so many t-shirts, hats, banners, and gadgets that beer names sometimes seemed to be everywhere in American culture.

When American brewers couldn’t expand their market share through advertising, they tried to do so by introducing new products. The first such “new” beer was light beer. The Rheingold brewery introduced the first low-calorie beer, Gablinger’s, in 1967, but the taste was, according to Van Munching, so “spectacularly awful” that it never caught on. Miller acquired the rights to a beer called Meister Brau Lite in 1972 when it purchased the Meister Brau brewery in Chicago, and they soon renamed the beer and introduced it the same year as Lite Beer from Miller. Offered to drinkers worried about their protruding beer bellies, and to women who didn’t want such a heavy beer, Lite Beer was an immediate success and eventually helped Miller overtake Schlitz as the number two brewer in the country. Not surprisingly, it spawned imitators. Anheuser-Busch soon marketed Natural Light and Bud Light; Coors offered Coors Light; Stroh’s peddled Old Milwaukee Light. There was even an imported light beer, Amstel Light.

Light beer was an undoubted success: by 1990, the renamed Miller Lite led sales in the category with 19.9 million barrels, followed by Bud Light (11.8 million barrels) and Coors Light (11.6 million barrels). Following the success of light beer, beermakers looked for other similar line extensions to help boost sales. Anheuser-Busch introduced LA (which stood for “low alcohol”) and others followed—with Schaefer LA, Blatz LA, Rainier LA, etc; the segment soon died. In 1985, Miller achieved some success with a cold-filtered, nonpasteurized beer they called Miller Genuine Draft, or MGD; Anheuser-Busch followed them into the market with several imitators, the most flagrant being Michelob Golden Draft (also MGD), with a similar bottle, label, and advertising campaign. Anheuser-Busch created the dry beer segment when it introduced Michelob Dry, followed shortly by Bud Dry. Their advertising slogan—“Why ask why? Try Bud Dry”—begged a real question: Why drink a dry beer? Consumers could think of no good reason, and the beers soon disappeared from the market. Perhaps, thought brewers, an ice beer would be better. Following Canadian brewer Molson Canada, Miller

introduced Molson Ice in the United States in 1993; they were, once again, followed by many imitators and, once again, the category slowly fizzled after a brief period of popularity.

Though the attempts of American brewers to create new beer categories appeared to be a comedy of errors, there was reason behind their madness. Simply put, the market for their beers had grown stagnant and the same brewers were competing for a market that was no longer growing substantially. Many brewers sought to expand by peddling wine coolers or alternative beverages, such as Coors's Zima Clearmalt; most hastened their efforts to sell their beer in the international market. Anheuser-Busch, for example, began to market its beer in more than 60 countries worldwide. Still, the question was if American drinkers weren't drinking the "new" beers produced by the major brewers, what were they drinking? In the simplest terms, the answer was that more and more Americans were drinking "old" beers—carefully crafted ales and lagers with far more taste and body than anything brewed by the "big boys." Beginning in the late 1970s, the so-called "microbrew revolution" proved to be the energizing force in the American beer market.

American capitalism has proved extremely adept at producing and marketing vast numbers of mass-produced goods, and American brewers are quintessential capitalists. But with mass production comes a flattening of distinctions, a tendency to produce, in this case, beers that all taste the same. Beginning in the late 1970s and accelerating in the 1980s, American consumers began to express a real interest in products with distinction—in gourmet coffee (witness the birth of Starbucks and other gourmet coffee chains), in good cars (thus rising sales of BMW, Mercedes, and Japanese luxury brands Lexus and Acura), and in fine clothes (witness the rise of designers Ralph Lauren and Calvin Klein). The changing taste of American beer drinkers was first expressed as a preference for imported beers, which surged in sales in the late 1970s. But true beer connoisseurs soon turned to beer brewed closer to home. In 1977 the New Albion brewing company in Sonoma, California, offered the first American "microbrew," the name given to beer brewed in small batches. The first major microbrewer, the Sierra Nevada Brewing Company of Chico, California, opened in 1981, and was followed into the market by a succession of breweries first in the West and then throughout the country.

One of the first microbrewers to enter the national market was the contract-brewing Boston Beer Company, producers of the Samuel Adams Boston Lager and other beers, but for the most part the microbrew revolution was not about following the path of the big breweries into national marketing, but rather about producing high quality ales for the local market. In small- and medium-sized markets around the country, American beer drinkers were rediscovering the richness and variety of the brewer's art. In the microbrewing capital of the United States, the Pacific Northwest, alehouses can boast of carrying dozens of beers brewed within a day's drive. At places like Fred's Rivertown Alehouse in Snohomish, Washington, a group called the Cask Club even joined in the revival of one of the oldest brewing traditions—cask-conditioned or "real" ales.

Though the microbrew revolution wasn't big—craft-brewed beers only accounted for 2.1 percent of the domestic beer market in 1995—it exerted a great influence on the major brewers. Most of the big brewers responded to the challenge posed by microbrewers by marketing slightly richer, slightly better beers with "authentic" looking labels. Miller marketed beers under the label Plank Road Brewery and Michelob promoted its dark and amber beers. Miller

responded most ingeniously by claiming in advertisements that it was "time for a good old macrobrew," brewed in one of their "vats the size of Rhode Island." Meanwhile microbreweries, brewpubs, and regional specialty brewers kept opening; by 1995 there were 1,034 such breweries in the United States, heralding a return to the abundance of breweries that existed at the turn of the century, and a dramatic rise from the 60 breweries in existence in 1980.

It comes as no surprise that a drink as popular as beer should play a role in American entertainment. Beer could have been credited as a character on the long-running sitcom *Cheers* (1982-1993), which featured a group of men who felt most at home sitting in a Boston bar with a beer in their hands; the biggest beer drinker, Norm, perfected humorous ways of asking for his beer, and once called out "Give me a bucket of beer and a snorkel." Milwaukee's fictional Schotz Brewery employed the lead characters in the 1970s sitcom *Laverne and Shirley* (1976-1983). When Archie Bunker of *All in the Family* (1971-1979) left his union job he opened a bar—Archie's Place—that served beer to working class men. The characters on the *Drew Carey Show* (1995—) brewed and marketed a concoction they called Buzz Beer, and signed a professional wrestler to do celebrity endorsements. Homer Simpson, the father on the animated series *The Simpsons* (1989—) swore his allegiance to the locally-brewed Duff Beer. (The show's producer, Twentieth Century-Fox, sued the South Australian Brewing Company when it tried to market a beer under the same name). Movies have not provided so hospitable a home to beer, though the 1983 movie *Strange Brew* followed the exploits of beer drinking Canadians Bob and Doug McKenzie as they got a job at the Elsinore Brewery.

In the 1990s, with more beers than ever to choose from, Americans still turned with amazing frequency to the major brands Budweiser, Miller, and Coors. Such brands offered not only a familiar, uniform taste, but were accompanied by a corresponding set of images and icons produced by sophisticated marketing machines. Drinkers of the major brands found their beer on billboards, race cars, television ads, store displays, and t-shirts everywhere they looked; by drinking a Bud, for example, they joined a community unique to late-twentieth-century mass culture—a community of consumers. But for those who wished to tap into the age old tradition of brewing, an increasing number of brewers offered more authentic fare.

Beiderbecke, Bix (1903-1931)

Leon Bismarck "Bix" Beiderbecke is one of the few white musicians to have influenced important black musicians. Considered one of the all-time great jazz artists, he was admired by Louis Armstrong, who always mentioned Beiderbecke as his favorite trumpet player. Beiderbecke actually played cornet, which was also Armstrong's first trumpet-like instrument.

Remarkably, Beiderbecke did not hear a jazz record until he was 14. The music of the Original Dixieland Jazz Band became his inspiration, and he copied the cornet solos verbatim. However, he resisted any formal musical instruction, and fingered the cornet in an unorthodox fashion that enabled him to solo with incredible speed. In common with many jazz musicians of his day, Beiderbecke never learned to read music very well, either. Rather, he relied upon his

Bix Beiderbecke

great ear for music. Despite his apparent talent, his parents sought to discourage his musical pursuits. They sent him to Wake Forest Academy, a military school near Chicago, in the hopes that its strict discipline would quell his interest in jazz.

Their ploy did not work. Beiderbecke managed to get himself expelled for cutting classes and soon turned to music full-time, coming to fame in the 1920s. In 1923, he joined the Wolverines and recorded with them in 1924. He soon left the Wolverines to join Jean Goldkette's Orchestra, but lost the job because of his inability to read music well. In 1926, he joined Frankie Trambauer's group and recorded his piano composition "In a Mist." In concert with his time, Beiderbecke lived the life of a "romantic" artist, drinking to excess and living for his art. Both made him a legend among his contemporaries. His tone on the cornet was gorgeous, very different from Armstrong's assertive brassy tone. It became a model for a number of later horn players, including Bunny Berrigan, Harry James, Fats Navarro, Clifford Brown, and Miles Davis, among others.

Beiderbecke recorded extensively with Eddie Lang, guitar, and Frankie Trambauer, C-Melody sax. He managed to improve his music reading enough to work with Jean Goldkette again, and later joined Paul Whiteman's Orchestra, the most popular group of his day. In 1929, Beiderbecke returned to Davenport, Iowa, to recuperate from the ill-effects of his hard drinking. Whiteman treated Beiderbecke well, paying him his full salary and offering to take him back when he was well. Beiderbecke never fully recovered. He made a few records with Hoagy Carmichael before his death in 1931 of lobar pneumonia and edema of the brain. Beiderbecke's romantic life and death inspired Dorothy Baker's book, *Young Man with a Horn*, as well as the movie of the same name. The Bix Beiderbecke Memorial Jazz Festival continues in Davenport, Iowa. It is billed as Iowa's Number One Attraction.

Belafonte, Harry (1927—)

Singer, actor, and activist Harry Belafonte with his "Jamaica Farewell" launched the calypso sound in American popular music and through his performances popularized folk songs of the world to American audiences. As an actor, Belafonte tore down walls of discrimination for other minority actors, and as an activist, profoundly influenced by the late Dr. Martin Luther King, Jr., he fought for the civil rights of Africans and African Americans for decades. A popular matinee idol since the 1950s, Belafonte achieved his greatest popularity as a singer. His "Banana Boat (Day-O)" shot to number five on

Harry Belafonte

the *Billboard* pop singles chart in 1957. His *Calypso* album released in 1956 was certified gold in 1963 and the 1959 album *Belafonte at Carnegie Hall* certified gold in 1961. Belafonte was the first African American television producer and the first African American to win an Emmy Award.

Born on March 1, 1927, in New York City, Harold George Belafonte, Jr. was the son of Caribbean immigrants. His mother, Melvine Love Belafonte, was from Jamaica and his father, Harold George Belafonte, Sr., was from Martinique. In 1935, after his father left the family, Belafonte and his mother moved to her native Jamaica where Belafonte spent five years attending school and assimilating the local music. In 1940, he returned to the public schools of New York but in 1944, at the age of seventeen, dropped out to enter the U.S. Navy for a two-year stint. In 1948, Belafonte married Julie Robinson, a dancer.

After seeing a production of the American Negro Theater, Belafonte knew he wanted to become an actor. He attended the Dramatic Workshop of the New School for Social Research, studying under the direction of Erwin Piscator. As a class project, he had to sing an original composition entitled "Recognition" and after his performance drew the attention of Monte Kay who later became his agent. Since few acting opportunities opened and Belafonte needed to support his family, Kay offered him a singing engagement at the Royal Roost, a jazz night club in New York. After attracting favorable reviews, Belafonte established himself as a creditable jazz and popular singer. But by 1950, feeling that he could not continue singing popular music with a sincere conviction, he abruptly switched

to folk songs and began independently studying, researching, and adapting folk songs to his repertoire. His folk singing debut in 1951 at the Village Vanguard in New York's Greenwich Village was a smashing success. Belafonte subsequently opened a restaurant catering to patrons who appreciated folk singing, but it closed in three years because it was not commercially viable.

Belafonte recorded for Jubilee Records in 1949 and signed with RCA Victor records in 1956 with his first hit, "Banana Boat (Day-O)," issued in 1957. He soon launched the calypso craze. While Belafonte was not a true calypsonian, i.e., one who had grown up absorbing the tradition, he was instead an innovator and took traditional calypso and other folk songs, dramatizing, adapting, and imitating the authentic prototypes, melding them into polished and consummate musical performances. He was called the "King of Calypso," and capitalized on the tastes of the American and European markets. His "Jamaica Farewell," "Matilda, Matilda," and "Banana Boat (Day-O)" are classics. Guitarist Millard Thomas became his accompanist. Belafonte also sang Negro spirituals and work songs, and European folk songs in addition to other folk songs of the world on recordings and in live concerts. While his hits had stopped by the 1970s, his attraction as a concert artist continued. He recorded with such well-known artists as Bob Dylan, Lena Horne, Miriam Makeba, and Odetta. Belafonte was responsible for bringing South African trumpeter and bandleader Hugh Masekela and other South African artists to the United States. In 1988, the acclaimed album *Paradise in Gazankulu* was banned in South Africa because of its depiction of the horrors of apartheid.

Belafonte took singing roles in the theatrical production *Almanac* in 1953 and opportunities for acting opened up. His first film was *The Bright Road* (1953) with Dorothy Dandridge. In 1954, he played the role of Joe in *Carmen Jones*, an adaptation of Bizet's *Carmen* that became one of the first all-black movie box-office successes. He starred in *Island in the Sun* in 1957 and *Odds Against Tomorrow* in 1959. In the 1970s, his film credits included *Buck and the Preacher* (1972) and *Uptown Saturday Night* (1974). Belafonte also appeared in numerous television specials and starred in videos and films documenting music, including *Don't Stop the Carnival* in 1991, *White Man's Burden* in 1995, and *Kansas City* in 1996.

As a student in Jamaica, Belafonte observed the effects of colonialism and the political oppression that Jamaicans suffered. He committed himself to a number of humanitarian causes including civil rights, world hunger, the arts, and children's rights. The ideas of W. E. B. DuBois, Paul Robeson, and Dr. Martin Luther King, Jr. exerted powerful influences on Belafonte. He participated in marches with Dr. King and in 1985 helped organize as well as perform on "We Are the World," a Grammy Award-winning recording project to raise money to alleviate hunger in Africa. Due to his civil rights work, he was selected as a board member of the Southern Christian Leadership Conference and also served as chair of the memorial fund named after Dr. King.

Belafonte continues to inspire audiences through his songs and his passion for racial justice has remained indomitable. He is one of the leading artists who has broken down barriers for people of color, made enormous contributions to black music as a singer and producer, and succeeded in achieving rights for oppressed people. His music, after more than forty years, still sounds fresh and engaging. Belafonte's genius lies in his ability to sway an audience to his point of view. His

charisma, voice, and acting abilities enable him to make any song his own while at the same time keeping his audience spellbound. Selected songs from his repertoire will remain classics for generations to come.

—Willie Collins

The Bell Telephone Hour

Every Monday night for 18 years, from April 29, 1940, America was treated to *The Bell Telephone Hour*, a musical feast broadcast by NBC Radio. Featuring the 57-piece Bell Telephone Orchestra, directed by Donald Voorhees, who composed their theme, “The Bell Waltz,” the program brought the best in musical entertainment across a broad spectrum, in a format that made for easy and popular listening. Vocalists James Melton and Francia White performed with the orchestra until April 27, 1942, when the program initiated its “Great Soloists” tradition, showcasing individual artists of distinction. Among the many “greats” were opera stars Helen Traubel, Marion Anderson, and Ezio Pinza, concert pianists Jose Iturbi and Robert Casadesu, leading artists in jazz such as Benny Goodman, top Broadway stars such as Mary Martin, and popular crooners, including Bing Crosby.

NBC took *The Bell Telephone Hour* off the air in 1958, but revived it for television from October 9, 1959, with Donald Voorhees and the Orchestra still in place. Always stylish and elegant in presentation, the small-screen version ran for 10 years, offering the same eclectic mix as the radio original for eight of them. The visual medium allowed the inclusion of dance, and viewers were treated to appearances by ballet idol Rudolf Nureyev and veteran tap-dancer Ray Bolger, among others. On April 29, 1960, the program memorably brought Gilbert and Sullivan’s operetta, *The Mikado*, to television with a cast led by soprano Helen Traubel as Katisha and comedian Groucho Marx as the Lord High Executioner.

In 1966, however, the show abandoned its established format in favor of documentary films. Subjects included such established performers as pianist Van Cliburn, conductor Zubin Mehta, and jazz man Duke Ellington, but the program lasted only two more years, ending a chapter in broadcasting history on April 26, 1968.

Two women modeling bellbottoms.

Bellbottoms

Bellbottomed trousers, named for the bell-shaped cut of the cuffs, have been worn by sea-farers since the 17th century. While sailors prefer the cut because the wide bottoms of the trousers make them easy to roll up for deck-swabbing duty, young people bought the trousers from navy surplus stores in the 1960s because the fabric was cheap and durable. Bellbottoms flattered the slim, unisex figure in vogue during the late 1960s and 1970s, and soon designers were turning out high-price versions of the navy classic. In the 1990s, the revival of 1970s fashion has seen the return of bellbottoms, especially as jeans.

Belushi, John (1949-1982)

The name John Belushi conjures images of sword-wielding Samurai, cheeseburger-cooking Greek chefs, mashed-potato spewing

human zits, and Ray Ban wearing ex-cons on a “mission from God.” But his short life is also a popular metaphor for drug abuse and wild excess. His acting and comedy, undeniably energetic and highly creative, are overshadowed by his death, a tabloid cliché revisited every time another Hollywood star overdoses on drugs or alcohol.

In part, this sad legacy is influenced by Bob Woodward’s clinical and unflattering biography, *Wired* (1984), in which Belushi is described as an insecure man who turns to cocaine and heroin to bolster his self-esteem. Woodward concluded that Belushi’s extremes in personality were a representation of the 1970s and the drug-obsessed entertainment industry of the time. Yet this legacy is also inspired in part by Belushi’s own stage, television, and movie personae, best exemplified in popular myth by his portrayal of the anti-establishment, hedonistic fraternity bum Bluto Blutarisky of *National Lampoon’s Animal House* (1978). The dean’s admonition that “fat, drunk, and stupid is no way to go through life” can be seen as an unbidden warning to Belushi.

Belushi first came to public notice as a member of Chicago’s Second City comedy troupe. Led by Del Close, Second City used improvisational skits to entertain the audiences. While he later credited Close for teaching him how to be a part of an ensemble, Belushi’s intense energy and raucous attitude soon began pushing the bounds of the troupe’s comedy. In spite of Close’s insistence that they were all a team, local reviews soon made it clear that Belushi was the “star” of the show. This soon earned him the notice of Tony Hendra, producer-director of the forthcoming *National Lampoon Magazine’s* musical satire *Lemmings*. Belushi fascinated Hendra, and he offered him the role of the manic emcee that instigates the mass suicide of the audience in *Lemmings*.

At that time, *National Lampoon Magazine* was at the forefront of alternative comedy, the borderline humor that mocked religion, sex, illness, and even death. *Lemmings* was envisioned as an off-Broadway send-up of the Woodstock concert that would showcase the magazine’s brand of humor. For Belushi, it was a marriage made in heaven. The show got rave reviews, its original six-week run being extended for ten months. In reviews, Belushi was singled out for particular praise, his performance outshining the rest of the cast, including newcomer Chevy Chase. He tied himself more closely with National Lampoon by working as a writer, director, and actor of the *National Lampoon Radio Hour*.

In the spring of 1975 Lorne Michaels asked Belushi to join the regular cast of a new show he was preparing for NBC television. Envisioned as a show to appeal to the 18-to-34 audience, *Saturday Night Live* (SNL) was broadcast live from the NBC studios in New York. The live aspect gave these younger audiences a sense of adventure, of never knowing what was going to happen next. The cast, which also included Chevy Chase, Dan Aykroyd, and others, billed themselves as the “Not Ready for Prime Time Players,” and set about redefining American television comedy in the irreverent image of Britain’s *Monty Python’s Flying Circus*.

Belushi was at first overshadowed by Chase, whose suave sophistication appealed to the viewers. He initially came to the audience’s attention as a manic weatherman sitting next to Chase’s deadpan “Weekly Update” anchorman, ending with his catchphrase “But nooooooooooooo!” When Chase departed for Hollywood at the end of the first season, Belushi became the viewers’ new favorite. His most memorable SNL performances included the lunatic weatherman, a Samurai warrior with a short fuse and a long sword, the resentful leader of a band of killer bees, Joe Crocker, and a Greek chef

that would cook only cheeseburgers. He cultivated the image of “bad boy” both on and off screen: a picture of the third season SNL cast has a grim looking Belushi standing to one side, eyes covered with sun glasses, cigarette in hand, with Gilda Radner’s arm draped over his shoulder. While some of the others tried to affect a similar look (especially Aykroyd), only Belushi seemed to truly exude attitude.

Like Chase, Belushi was also looking to advance his career in Hollywood. He began his movie career with a bit part in Jack Nicholson’s poorly received comedy-western *Goin’ South* (1978). Months before it was released, however, his second movie project was in the theaters and thrilling audiences. Returning to National Lampoon, he was cast as the gross undergraduate Bluto Blutarisky in John Landis’ *National Lampoon’s Animal House* (1978).

Based in part on co-writer Chris Miller’s college experiences in the 1960s, *Animal House* begins innocently enough with two freshmen seeking to pledge to the Delta House fraternity, a collection of politically incorrect and incorrigible students whose most intelligent member is averaging less than a 2.0 grade point average. The strait-laced dean of the school is determined to see Delta evicted from campus and its members expelled. The remainder of the movie is a series of skits about the run-ins between the dean and Delta House. Among these skits is Belushi’s potato-spewing imitation of a zit.

Bluto drank excessively, lived only to party, disrupted the campus, and urinated on the shoes of unsuspecting freshmen. It is Belushi’s portrayal of Bluto that is one of the movie’s most enduring images, virtually typecasting him as a gross, excessive, drinking party animal. For most of the movie his character speaks in grunts, his big monologue coming near the end when he encourages a demoralized Delta House to take its revenge on the dean: “What? Over? Did you say ‘over’? Nothing is over until we decide it is! Was it over when the Germans [sic] bombed Pearl Harbor? Hell no!” The movie ends with a Delta-inspired riot at the college’s Homecoming Parade. The characters then all head off into the sunset, with captions revealing their eventual fates (Bluto’s was to become a senator).

John Belushi as the Samurai Warrior dry cleaner on *Saturday Night Live*.

The movie was vintage National Lampoon, and moviegoers loved it. It became the biggest earner of the year, critics attributing much of its success to Belushi. He wasn't so fortunate with his next movie, the romantic comedy *Old Boyfriends* (1979). To the public, Belushi was Bluto and the Samurai, and they had difficulty relating to him in a romantic role. As Wild Bill Kelso, in Steven Spielberg's flop *1941* (1979), Belushi played another character much like Bluto, this time in goggles and chewing on a stubby cigar.

During this time, Aykroyd and Belushi were cooperating on writing sketches for SNL, their partnership based on friendship and common interests. During a road trip they discovered a common love of blues music, and they returned to New York with an idea to develop a warm-up act for SNL, the Blues Brothers. Studio audiences were enthusiastic, and the actors convinced the producers to put the Blues Brothers on the telecast. The reaction was phenomenal. The Blues Brothers soon followed up their television success with a best-selling album (*Briefcase Full of Blues*), a hit single ("Soul Man") and a promotional tour. To Belushi, this was a dream come true: a rock band on tour with a best-selling record. The two stars decided it was time to quit television and concentrate on their movie and music careers.

Aykroyd, meanwhile, had teamed up with John Landis to bring the band to the big screen. The script they came up with began with Jake Blues (Belushi) being released from Joliet State Penitentiary and returning with his brother Elwood (Aykroyd) to the orphanage where they were raised. Learning it is to close unless they can get \$5,000, the brothers decide to put their band back together. The first part of the movie concerns their attempts to find the rest of the band, while the second half involves the band's efforts to raise the money. Throughout, however, the brothers get involved in many car chases, destroying a mall in one scene and many of the Chicago Police Department's cars in another.

The Blues Brothers opened in 1980 to a mixed reception. The film was mainly criticized for the excess of car chases, but this is a part of the cult status *The Blues Brothers* achieved. The *Animal House* audience loved it, seeing the return of the Belushi they had missed in his other movies. While his character was not Bluto, it was the familiar back-flipping, blues-howling Joliet Jake from SNL. The opening scenes of the film further reinforced Belushi's bad-boy image, as his character is released from jail, promptly to go on the run from the police. Most critics, however, thought it was terrible, and one went so far as to criticize Landis for keeping Belushi's eyes covered for most of the movie with Jake's trademark Ray Bans.

Belushi had already moved on to his first dramatic role as reporter Ernie Souchak in *Continental Divide* (1981). He received good reviews, most of them expressing some surprise that he could do a dramatic role. The public, however, wanted still more of Bluto and Joliet Jake. *Continental Divide* barely broke even. He then returned to comedy, working on *Neighbors* (1981) with Aykroyd. The movie was a critical and box office disaster, in no small part due to the director's idea of having the partners switch roles, with Belushi playing the straight man to Aykroyd's quirky neighbor. The experience convinced Belushi that he needed more control of his movie projects, so he began working on a revision of the script for his next role in a movie called *Noble Rot*. He envisioned the role as a return to the Bluto character that his audience was demanding. However, by this time he was taking heroin. He died of a drug overdose before completing *Noble Rot*.

Sixteen years after his death (almost to the day) *National Enquirer* gave him the centerpiece of its story on unsolved Hollywood mysteries (March 3, 1998), rehashing conspiracy theories

surrounding his death. His death had raised some questions, leading his widow, writer Judy Jacklin Belushi, to approach Woodward to investigate it. The result was *Wired*, more of an examination of Belushi's descent into drugs than a balanced portrait of the actor's life. Later, Belushi's family and friends were incensed when the book was made into a movie, which *Rolling Stone* called a "pathetic travesty" and an "insult" to his memory. In response to the book and the movie Jacklin published her own autobiography, *Samurai Widow* (1990), which Harold Ramis described as the perfect antidote to *Wired*. During the 1990s, a new generation discovered the actor and comedian that was John Belushi, while leaving his older fans wondering about what could have been. As one biography noted, Belushi helped to develop and make popular an energetic, creative form of improvisational comedy that continued to entertain audiences.

Ben Casey

The medical drama *Ben Casey* premiered in October 1961 and soon became the most popular program on ABC. It featured Vince Edwards as the intensely handsome young neurosurgeon at a large metropolitan hospital. The wise Dr. Zorba, who was played by veteran actor Sam Jaffe, mentored him in his efforts to combat disease and the medical establishment. The younger physician's brooding, almost grim, manner echoed the show's tensely realistic tone. The series often confronted controversial subjects and was praised for accurately presenting medical ethics and dilemmas. Each episode began with a voice intoning the words "Man. Woman. Birth. Death. Infinity" as the camera focused on a hand writing the symbols for the words, thus dramatically announcing the somber subject matter of the show. The series ended in 1966. Contemporary viewers have come to associate *Ben Casey* with other medical programs like *Dr. Kildare* and *Marcus Welby, M.D.* in that they all tended to project the image of the "perfect doctor."

Bench, Johnny (1947—)

Known as the popular catcher for the Cincinnati Reds during the 1970s, Johnny Bench set a standard of success as perhaps the finest at his position in modern Major League baseball. Bench first gained national attention by winning the National League MVP (Most Valuable Player) award in 1970 and 1972, recording ten straight Gold Gloves, and helping Cincinnati's "Big Red Machine" to World Series victories in 1975 and 1976. Bench revolutionized his position by popularizing a one-handed catching method that gave him greater mobility with his throwing arm. After retiring from baseball, Bench remained in the public spotlight through television appearances, golf outings, and broadcasting. He is President of Johnny Bench Enterprises and won an Emmy for a program called *The Baseball Bunch*. His success and popularity led to his induction into the Baseball Hall of Fame in 1989.

Benchley, Robert (1889-1945)

In his relatively short life Benchley managed to enjoy careers as a humorist, theater critic, newspaper columnist, screenwriter, radio performer and movie actor. His writing appeared in such magazines as the old *Life* and *The New Yorker* and his pieces were collected in several books with outlandish titles. Among the film directors he worked with were Alfred Hitchcock, Rene Clair, and Billy Wilder. Benchley won an Academy Award for one of the comedy shorts he wrote and starred in. Benchley was also a member in good standing of the Algonquin Circle in Manhattan and a longtime resident of the Garden of Allah in Hollywood. Talent runs in the Benchley family—his grandson wrote *Jaws*, and both his son, Nathaniel, and his grandson, Peter, became writers.

A genuinely funny man, it was his wit and humor that allowed Benchley to make his way through the world and assured him his assorted jobs. He was born in Worcester, Massachusetts and attended Harvard. His first humor was written for *The Lampoon*. Settling in New York, he got a staff job on *Vanity Fair* where his co-workers included Robert E. Sherwood and Dorothy Parker. Later in the 1920s he was hired by *Life*, which was a humor magazine in those days. He wrote a great many pieces and also did the theater column. He later said that one of the things he liked best in the world was "that 10 minutes at the theater before the curtain goes up, I always feel the way I did when I was a kid around Christmas time."

The 1920s was a busy decade on Broadway and Benchley was in attendance on the opening nights of such shows as *Funny Face*, *Show Boat*, *Dracula*, *Strange Interlude*, and *What Price Glory?* In May of 1922, *Abie's Irish Rose* opened and Benchley dismissed Anne Nichols' play as the worst in town, saying that its obvious Irish and Jewish jokes must have dated back to the 1890s. Much to his surprise, the play was a massive hit and ran for five years. Each week for *Life* he had to make up a Confidential Guide with a capsule review of every play then on Broadway. That meant he had to write something about

Abie's Irish Rose each and every week during its run of 2,327 performances. At first he would simply note "Something awful" or "Among the season's worst," but then he grew more inventive and said such things as "People laugh at this every night, which explains why democracy can never be a success," "Come on, now! A joke's a joke," and "No worse than a bad cold."

At the same time that he was reviewing plays, Benchley was also collecting his humor pieces in books. The gifted Gluyas Williams, an old school chum from Harvard, provided the illustrations. In addition to parodies, spoofs, and out and out nonsense pieces, some in the vein of his idol Stephen Leacock, he also wrote a great many small essays about himself, taking a left-handed and slightly baffled approach to life. Only on a shelf of books by Robert Benchley is it possible to find such titles as *My Ten Years in a Quandary and How They Grew*, *No Poems, or, Around the World Backwards and Sideways*, and *From Bed To Worse, or, Comforting Thoughts About the Bison*.

Benchley gradually drifted into the movies. He appeared in over two dozen feature length films, including *Foreign Correspondent* (for which he also wrote some of the dialogue), *I Married A Witch*, *The Major and the Minor* (where he delivered the line about "getting out of those wet clothes and into a dry martini"), *Take A Letter, Darling*, and *The Road to Utopia*. He also made nearly 50 short films. His first one, *The Treasurer's Report*, was done in 1928 for Fox. The shorts most often took the form of deadpan lectures, giving advice on such topics as how to read, how to take a vacation, and how to train a dog. *How To Sleep*, done for Metro-Goldwyn-Meyer in the mid-1930s, won him an Academy Award. Once in an ad in *Variety* he listed himself as specializing in "Society Drunk" roles.

When he was working in Hollywood, Benchley most often resided in a bungalow at the Garden of Allah, which was the favorite lodging place of visiting actors, writers, and "hangers-on." The Garden was torn down decades ago to make way for a bank. At one time the bank had a display of relics of the old hotel and among them was one of Benchley's liquor bills.

Ben-Hur

As a novel, a play, two silent films, and a wide screen spectacular, Lew Wallace's *Ben-Hur: A Tale of the Christ* set the standard for the religious epic, inaugurating an amazing series of firsts in American popular culture. Published in 1880, the novel tells the story of Judah Ben-Hur, a young, aristocratic Jew, and his encounter with Jesus of Nazareth. The book begins with the Messiah's birth and then moves ahead 30 years to Ben-Hur's reunion with his boyhood friend, Messala, now a Roman officer. The latter's contempt for Jews, however, ends their friendship. When the Roman governor's life is threatened, Messala blames Ben-Hur, unjustly condemning him to the galleys and imprisoning Ben-Hur's mother and sister. As pirates attack Ben-Hur's ship, he manages to escape. Returning to Judea, he

Charlton Heston in the chariot race from the 1959 film *Ben-Hur*.

searches for his family and also raises a militia for the Messiah. Meeting Messala again, Ben-Hur beats him in a dramatic chariot race during which the Roman is crippled. Discovering that his mother and sister are now lepers, Ben-Hur searches for Jesus, hoping for a miraculous cure. They finally meet on the road to Calvary. Jesus refuses his offer of military assistance, but cures his family. Converted to Christianity, Ben-Hur resolves to help fellow Christians in Rome suffering persecution.

The book moved slowly at first, selling only some 2,800 copies in its first seven months. Eventually, word of mouth spread across America, particularly through schools and clubs. By 1889, 400,000 copies had been sold, outstripping *Uncle Tom's Cabin*, but falling just short of the Bible. Sales swelled to 1,000,000 by 1911, with translations appearing in German, French, Spanish, Swedish, Turkish, and Arabic, among other languages. A braille edition also was available. For many Americans, *Ben-Hur* was an example of edifying reading, the first work of fiction often allowed on their bookshelves. It was also the first book featured in the *Sears Catalogue*.

Wallace, a retired Union general from Indiana and one-time governor of the Territory of New Mexico, was quickly besieged with offers to dramatize his work. In 1899 he settled on a production adapted by William Young of Chicago, directed by Joseph Brooks, and featuring later cowboy film star William S. Hart as Messala. *Ben-Hur* ran on Broadway for 24 weeks and was, according to the *New*

York Clipper, a “triumphant success,” generating “enormous business” and “record-breaking attendance.” It continued to tour nationally and abroad for some 20 years, making it the first play seen by many Americans. *Ben-Hur* set precedents both for an author’s control over rights to his/her work (rejecting one offer, Wallace declared, “The savages who sell things of civilized value for glass beads live further West than Indiana”) and for control over the adaptation of material. Wallace insisted, for example, that no actor would portray Christ. Instead, the Messiah was represented by a 25,000-candle-power shaft of light. Similarly spectacular effects—such as a wave machine for the naval battle and, for the chariot race, actual horses and chariots running on a treadmill before a moving panorama of the arena—set the standard for later epic films.

A 1907 film version, produced two years after Wallace’s death and without the copyright holders’ authorization, set a different kind of precedent. The Wallace estate sued the film’s producers for breach of copyright, receiving a \$25,000 settlement. The case marked the first recognition of an author’s rights in film adaptations.

In 1922, two years after the play’s last tour, the Goldwyn company purchased the film rights to *Ben-Hur*. Shooting began in Italy in 1923, inaugurating two years of difficulties, accidents, and eventually—after the merger of Goldwyn into MGM (Metro-Goldwyn-Meyer)—a move back to Hollywood. Additional recastings (including Ramon Navarro as Ben-Hur) and a change of director helped

skyrocket the production's budget to \$4,000,000. With its trials and tribulations, then, this *Ben-Hur* helped set another pattern for later epic films. More positively, on the other hand, its thrilling chariot race changed the face of filmmaking. Following in the tracks of the stage play, its considerable expenditure of money and horses made this sequence a brilliant tour-de-force that established the lavish production values now associated with the Hollywood epic. Although audiences flocked to *Ben-Hur* after its premiere in 1925 and critics praised the film (more for its "grandeur," however, than its story), MGM was unable to recoup its \$4,000,000 investment. As a result, the studio imposed the block booking system on its other productions, another precedent. While not a financial success, however, the film still proved so popular that MGM was able to release it again in 1931, adding music and sound effects for the sound era.

In 1959, a decade that saw the resurgence of epic productions, MGM remade *Ben-Hur* for the wide screen, using state of the art Panavision techniques and stereophonic sound. Directed by William Wyler and starring Charlton Heston as Ben-Hur, this film again features a spectacular, thundering chariot race that took four months to rehearse and three months to produce. The sequence nearly overshadowed the rest of the movie, leading some to dub *Ben-Hur* "Christ and a horse-race." The film was a box office and critical success, earning \$40,000,000 in its first year and garnering 11 Academy Awards. Enjoying tremendous popularity and continuing *Ben-Hur's* tradition of establishing precedents, it was broadcast uncut on network television in 1971, earning the highest ratings at that time for any film. It has been rebroadcast and re-released in theaters several times since then.

Few works can claim to have made the same impact as has Wallace's *Ben-Hur*. As a novel and a play, it offered many people their first entry into the worlds of fiction and drama. In its various film adaptations, it elevated Hollywood's production values and defined the genre of the religious epic. It also established many legal precedents for stage and screen adaptations. The key to its enduring popularity, however, is that it provided audiences around the world with an exciting spectacle that combined piety and faith.

Benneton

Italy-based clothier Benneton is best known for its "shock" advertising campaigns, many of which have sparked significant controversy in many regions of the globe. In their 1990s campaign, "Sufferings of Our Earth," the fashion designer's ads showed among other things a dying AIDS victim, a dead Bosnian soldier, an oil

smearing sea bird, and an overcrowded refugee ship. A series of ads in 1998 featured autistic and Down's syndrome kids modeling their clothing. The company operates some 7,000 stores in over 120 countries and had \$2 billion in revenues in 1997. In addition to apparel, Benneton also markets a wide range of products from racing cars to sunglasses and condoms.

Bennett, Tony (1926—)

Through perseverance, professionalism, and impeccable musical taste, Tony Bennett has emerged in the era of MTV as the senior statesman of the American popular song. Born Anthony Dominick

Tony Bennett

Benedetto in Queens, New York, Bennett joined the Italian-American *bel canto* tradition represented by such singers as Frank Sinatra and Vic Damone. In fact, Sinatra often publicly referred to Bennett as his favorite singer, a validation that undoubtedly means as much as a handful of gold records and Grammy awards combined.

Bennett's musical career started slowly. After serving in the armed forces in the final months of World War II, he studied vocal technique under the GI Bill and supported himself with a variety of jobs, including, according to some sources, a stint as a singing waiter. His first break occurred when he came in second to Rosemary Clooney on the network television show *Arthur Godfrey's Talent Scouts* in 1950. This exposure led to an introduction to Bob Hope, who helped Bennett to land an engagement in one of New York's premier clubs. Later that year, Mitch Miller signed Bennett as a recording artist for Columbia Records, and in 1951 he was named male vocalist of the year by *Cashbox* magazine.

Always attracted to jazz as well as pop styling, Bennett teamed up with some of the top musicians of the day, which gave him the freedom to choose songs that were more to his taste than the hit-oriented recording business normally allowed. Numerous records during the mid and late 1950s show Bennett at his best, singing jazz-inflected standards like "These Foolish Things" and "Blues in the Night."

Nevertheless, Bennett experienced a long hitless period in the early 1960s. It was during this time that the singer and his longtime arranger and accompanist Ralph Sharon played a gig at the Fairmont Hotel in San Francisco, where Bennett sang a new song by little-known writers George Cory and Douglass Cross for the first time. That song, "I Left My Heart in San Francisco," changed the course of Bennett's career, earning him a sustained place on the charts in both the United States and Great Britain. It also brought Bennett two Grammy awards, for record of the year and best male vocal performance.

With his new public image, Bennett moved from supper clubs to the concert stage, giving a landmark recorded performance at Carnegie Hall. In the mid-1960s, he had hits with such singles as "The Good Life," "A Taste of Honey," and "Fly Me to the Moon." Soon after that, however, Bennett, like other interpreters of American pop standards by Arlen, Gershwin, and Porter, began to suffer from the record companies' stubborn commitment to rock and roll. Bennett was not interested in singing songs he did not love, although he did compromise on a 1970 album titled *Tony Bennett Sings the Great Hits of Today*, which included such songs as "MacArthur Park," "Eleanor Rigby," and "Little Green Apples." More to his taste were two albums made on the Improv label with the great jazz pianist Bill Evans in 1975 and 1977. Bennett also appeared with Evans at the Newport Jazz Festival and at Carnegie Hall.

In 1979, Bennett's son Danny, a former rock guitarist, took over his management, with a combination of shrewd marketing and musical acuity that helped his father bridge the gap between the old and new pop scene. It was this teaming that eventually led to the MTV video and album *Tony Bennett Unplugged* in 1994. In an era when smooth and mellow lounge music was reborn and martinis were once again the official cocktail, the album was a huge hit. Always generous to his younger colleagues—just as another generation of entertainers had been generous to him—Bennett gave high praise to k.d. lang, who joined him for a duet of "Moonglow," and to Elvis Costello, who harmonized on "They Can't Take That Away from Me."

In addition to his singing career, Bennett is a serious painter in oils, watercolors, and pastels. His work has been exhibited widely,

and he claims David Hockney as a major influence. A graduate of New York's High School of Industrial Art, Bennett often paints familiar New York scenes, such as yellow cabs racing down a broad avenue and Sunday bicyclers in Central Park, capturing the milieu in which he lived, sang, and observed.

The Benny Hill Show

English comic Benny Hill became an international celebrity with his schoolboy brand of lecherous, burlesque humor. Bringing the tradition of the British vaudeville to television in 1955, the pudgy Hill hosted comedy series for the BBC and Thames Television over a period of thirty-four years. Featuring slapstick and sight gags, *The Benny Hill Show* always had a sexual energy, bursting with plenty of double-entendres and leggy starlets. The show was edited for worldwide syndication and became a cult phenomenon in the United States beginning in 1979. American audiences quickly identified Red Skelton as a main source of inspiration (Hill borrowed Skelton's closing line, "Good night, God bless"); but there was little sentimentality in the ribaldry of Hill's characters. Hill was always criticized for his sexist obsessions, and his series in England was finally cancelled in 1989 because of complaints from the moral right and the politically correct left. Hill died three years later, and, although English audiences voted him "Funniest Man in the World" several times, he thought he never received the critical recognition he deserved. But to many, Hill was a genuine comic auteur, writing all his material and supervising every randy shot for his show that was enjoyed in over one hundred countries.

Benny, Jack (1894-1974)

Jack Benny is one of America's most venerated entertainers of the twentieth century. For over 50 years the nation identified with the

Jack Benny

persona that Benny created on the vaudeville circuit, sustained on radio, and successfully transferred to television. Few performers have lasted so long without any significant drop in popularity.

The character that Benny created exemplified the foibles of the American Everyman. Benny realized early on that “if you want the laughs you have to put something in a ridiculous light, even yourself.” Benny was not a gifted clown or a sparkling wit, so he and his writers crafted a well-rounded persona with the weaknesses and imperfections of his audience. The Benny alter ego was penny-pinching, vain, anxious, and never willing to admit his true age (he was always 39 years old). Endless jokes were woven around these shortcomings, with Benny always the object of ridicule. Although the character had no identifiable ethnic or religious heritage, Americans had a deep affection for this insecure, sometimes petulant, creation.

The comedian was born Benjamin Kubelsky in Waukegan, Illinois on February 14, 1894, and began performing in vaudeville as a violinist. Still a teenager, he discovered the public responded to his jokes and wrong notes. Achieving moderate success on the New York stage, Benny first appeared on radio in 1929 and began a NBC radio series in 1932. Two years later, he was one of the medium’s most popular entertainers. In 1935 he moved operations to Hollywood, and Jell-O became a trusted sponsor.

Benny found his character worked better as part of a group and helped to pioneer “gang” comedy. His wife, Sadie Marks, appeared as a sometimes girl friend, Mary Livingstone, and assumed the character’s name as her own. Eddie Anderson portrayed Benny’s personal valet, Rochester, and was hailed as radio’s first black star.

Although there were stereotypical elements to Rochester’s characterization, a genuine bond grew between Benny and his employee that transcended race. Don Wilson as the rotund announcer, Phil Harris as the boozy bandleader, and Dennis Day as the boy singer rounded out the stable of regulars “playing themselves.”

Radio listeners delighted in Benny’s recurring gags and show business feuds as well as such catchphrases as “Well!” and “Now cut that out!” Mel Blanc was popular as the voice of Carmichael, the bear that lived in the basement; the exasperated violin teacher, Professor LeBlanc; and the bellowing railroad announcer (“Anaheim, Azusa, and Cucamonga!”). Frank Nelson returned again and again as the unctuous clerk who harassed customers by squawking “Yeeeessss!” Benny is best remembered for his “Your money or your life?” routine, in which a burglar demands a difficult answer from the stingy comedian. After a long pause with the laughter building, Benny delivered his classic line, “I’m thinking it over.” To Benny, timing was everything.

The cast frequently spoofed western serials with the skit “Buck Benny Rides Again.” The parody was made into a movie in 1940. Benny made his first film appearance in the *Hollywood Revue of 1929*, but his radio stardom paved the way for substantial roles. Among his notable movie vehicles, Benny appeared as a vain actor in Ernst Lubitsch’s classic, *To Be or Not to Be* (1942); a confirmed city-dweller in *George Washington Slept Here* (1942); and an avenging angel in Raoul Walsh’s comedy, *The Horn Blows at Midnight* (1945).

In 1948 Benny took greater control of his career. He formed a production company to produce his radio series and generate more money for himself. William Paley also lured him to the CBS network. Although his vaudeville compatriots, Ed Wynn and Milton Berle, had become television stars in the late 1940s, Benny warmed slowly to the possibilities of the visual medium. Beginning with his first special, performed live in October 1950, Benny tried to approximate the radio series as closely as possible, retaining his cast and adapting appropriate scripts. Benny was also careful not to overexpose himself. Until 1953, *The Jack Benny Show* was a series of irregular specials on CBS; then, for seven years, it ran every other week on Sunday nights, his regular evening on radio. Beginning in 1960, the program aired every week, switching to Tuesday and Friday during its five year run.

Benny brought to television a defined, identifiable character forged during his stage and radio years. His persona was perfectly suited for the requirements of the small screen. Benny underlined his characterization with subtle gestures and facial expressions. The stare, which signaled Benny’s pained exasperation, became his visual signature. Like the pause in radio, Benny’s stare allowed the audience to participate in the joke.

The Benny program combined elements of the variety show and the situation comedy. As host, Benny, always in character, opened the proceedings with a monologue before the curtain. The bulk of each program was Benny performing with his regulars in a sketch that further played off his all-too-human frailties. Guest stars were also invited to play themselves in Benny’s fictional world. Since the format was a known quantity, many movie stars made their television comedy debut on the Benny program, including Barbara Stanwyck, Marilyn Monroe, Gary Cooper, and James Stewart.

Throughout the 1950s and 1960s, Benny’s writers kept his persona fresh and vital to a new generation of viewers. They crafted sketches around such television personalities as Dick Clark, Ernie

Kovacs, and Jack Webb. Benny also stayed eternally young by donning a wig and playing guitar on occasion. When his weekly series ended in 1965, he returned to comedy specials. Whether playing violin with Isaac Stern or impersonating a surfer in a routine with the Beach Boys, Jack Benny was able to bridge audiences of different ages and tastes.

Jack Benny was a comedian's comedian. His sense of understated style and exquisite delivery shaped a generation of entertainers from Johnny Carson to Kelsey Grammer. He was also a national institution. Although the public knew in reality that he was a kind and generous person, they wanted to believe the worst. Jack Benny held up a mirror to America's failings and pretensions. As his friend Bob Hope said in farewell after his death in 1974, "For Jack was more than an escape from life. He was life—a life that enriched his profession, his friends, his millions of fans, his family, his country."

Candice Bergen

Bergen, Candice (1946—)

Candice Bergen may be the only female television star to be known and loved as a curmudgeon. Most noted curmudgeons are male, like Lou Grant of *The Mary Tyler Moore Show*, Archie Bunker of *All in the Family*, Homer Simpson from *The Simpsons*, and Oscar the Grouch from *Sesame Street*. Bergen's alter-ego, Murphy Brown, on the other hand, is the queen of curmudgeons. Despite her manly traits, Murphy has gone down in history as the only television curmudgeon to be criticized by the vice president of the United States and to be used as an argument in a national debate on family values. Her willingness to challenge traditional female roles and issues revolving around what is perceived as "decency," have, willingly or not, made her one of the twentieth century's most political actresses.

Murphy Brown, created by Diane English, was a female reporter who learned to operate in a man's world. She adopted what are generally considered male characteristics: intelligence, aggressiveness, ambitiousness, and perseverance. It has been suggested that reporter Linda Ellerbee was the specific role model for Bergen's character, but only Bergen herself could have made Murphy Brown so lovable through a decade of the weekly series of the same name, covering almost every political topic with satiric wit.

Candice Bergen grew up in an elite section of Beverly Hills playing with the children of Walt Disney, Judy Garland, Gloria

Swanson, Jimmy Stewart, and other Hollywood notables. Her beauty was inherited from her mother, Frances Western, a former model who received national attention as the Ipana girl from a toothpaste advertisement. Her talent came from her father, ventriloquist Edgar Bergen. In her autobiography, *Knock Wood*, Bergen tells of being jealous of her father's famous sidekick, marionette Charlie McCarthy, and of spending years of her life trying to make her father proud.

Noted for her outstanding beauty, Candice Bergen was not always taken seriously as an individual. Nonetheless, by the time she accepted the role of Murphy Brown Bergen was well respected as an international photojournalist and as a writer. She had also starred in a number of high-profile films, most notably, Mary McCarthy's *The Group*, in which she played the distant and lovely lesbian Lakey. Bergen also received critical acclaim as the ex-wife of Burt Reynolds in the romantic comedy *Starting Over*.

At the age of 33 Bergen met the famed French director Louis Malle. Friends say they were destined to meet and to fall in love. The pair maintained a bi-continental marriage until his death in 1995, leaving Bergen to raise their daughter Chloe. After Malle's death, Bergen devoted her time exclusively to Chloe and to her television show. By all accounts, the cast of *Murphy Brown* was close and Bergen said in interviews that Faith Ford (who played Corky Sherwood) had been particularly comforting during her mourning over the

death of her husband. This personal closeness gave the cast a professional camaraderie that was evident to audiences.

In 1988, *Murphy Brown* introduced the cast of *F.Y.I.*, a fictional news show. Murphy Brown (Candice Bergen), Frank Fontana (Joe Regalbutto), Jim Dial (Charles Kimbrough), and Corky Sherwood (Faith Ford) shared anchor duties on air and traded wisecracks and friendship off the air. They were joined by producer Miles Silverberg (Grant Shaud), artist and handyman Eldin (Robert Pastorelli), and barkeeper Phil (Pat Corley). In 1996, Lily Tomlin replaced Shaud as the producer. Plot lines ranged from grocery shopping and consciousness raising, to romance, divorce, and the White House cat, Socks. The two most notable story lines involved unwed motherhood and breast cancer. During its tenure, *Murphy Brown* won 18 Emmys, five of them for its star. Bergen then withdrew her name from competition.

In 1992, Murphy Brown, a fictional character on a television show, became pregnant. After much soul searching, she decided to raise her baby without a father. In May of that election year, Vice President Dan Quayle stated in a speech (allegedly against the advice of his handlers): "It doesn't help matters when prime time television has Murphy Brown—a character who supposedly epitomizes today's intelligent, highly paid professional woman—mocking the importance of fathers by bearing a child alone and calling it just another 'lifestyle choice.'" The media was delighted, and the debate was on.

In the fall of 1992, Bergen and Diane English (who had offered to debate Quayle on the issue) had their say when Murphy responded to the vice president on *F.Y.I.* by gently reminding him that families come in all shapes and sizes. She then chided Quayle by agreeing that there were serious problems in American society and suggested that the vice president could blame the media, Congress, or an administration that had been in power for 12 years . . . or, he could blame her. The episode ended with the dumping of 1,000 pounds of potatoes in Quayle's driveway, a reference to an occasion when Quayle misspelled the word as a judge in an elementary speech contest. The episode won the Emmy for Best Comedy of 1992.

The final season of *Murphy Brown* (1997-1998) ended on a more solemn note. Murphy discovered that she had breast cancer. Throughout the season, real cancer survivors and medical advisors helped to deliver the message that cancer was serious business and that there was hope for recovery. An episode devoted to the medicinal use of marijuana demonstrated the strong bond among the cast and proved that the show could still arouse controversy. The final episode of the season was filled with emotional farewells and celebrated guest stars, including Bette Midler as the last in a long line of Murphy's secretaries, Julia Roberts, and George Clooney. God, in the person of Alan King, also made an appearance, as did Robert Pastorelli (Eldin) and Pat Corley (Phil), both of whom had left the series years before to pursue other interests.

Various media reports have indicated that Candice Bergen may become a commentator for *60 Minutes*. With her experience as a photojournalist and with her ten years on *F.Y.I.*, Bergen is imminently qualified to engage in a serious debate of national issues.

—Elizabeth Purdy

Bergen, Edgar (1903-1978)

Chicago-born Edgar Bergen put himself through college as a part-time ventriloquist with a doll he had acquired while in high school. It was to his relationship with this doll, the cheeky, monocled toff Charlie McCarthy, that Edgar Bergen owed his fame and a special Oscar. Edgar and Charlie played the vaudeville circuit, then became popular radio performers in the medium's hey-day. They made several appearances in movies, beginning with *The Goldwyn Follies* (1938) and including *Charlie McCarthy Detective* (1939), while television further increased their visibility. They periodically had other puppets in tow, most famously Mortimer ("How did you get to be so dumb?") Snerd. The father of actress Candice Bergen, Edgar, sans Charlie, played a few minor roles in films, but it is for his influence on the art of puppetry that he is remembered. Muppet creator Jim Henson acknowledged his debt to Bergen's skills, and it was in *The Muppet Movie* (1979) that he made his last appearance. Bergen bequeathed Charlie McCarthy to the Smithsonian Institute.

Bergman, Ingmar (1918—)

Swedish director Ingmar Bergman's name is virtually synonymous with the sort of intellectual European films that most critics love to praise—but that many moviegoers love to hate. His complex explorations of sweeping topics like loneliness, spiritual faith, love, and death have been closely imitated, but also parodied for their overt reliance on symbol and metaphor, for their philosophical dialogue, and for their arguably opaque dreamlike qualities. Famous Bergman images reappear throughout the spectrum of popular culture, images like that of Death, scythe in hand, leading a line of dancing victims through an open field, the figures silhouetted against the sky. Bergman began his prolific career in Stockholm during the 1930s. He directed theater and eventually radio and television dramas. His catalogue of over fifty films includes classics like *The Seventh Seal* (1956), *Wild Strawberries* (1957), *Through a Glass Darkly* (1960), and *Fanny and Alexander* (1983).

Bergman, Ingrid (1915-1982)

A star in Swedish, French, German, Italian, and British films before emigrating to the United States to star in *Intermezzo* in 1939, Ingrid Bergman, with her Nordic freshness and vitality, coupled with her beauty and intelligence, quickly became the ideal of American womanhood and one of Hollywood's most popular stars. A love affair with Italian director Roberto Rossellini during the filming of *Stromboli* in 1950 created a scandal that forced her to return to Europe, but she made a successful Hollywood comeback in 1956, winning her second Academy Award for the title role in *Anastasia*.

Born in Stockholm to a tragedy-prone family, she suffered at age two the death of her mother. Her father died when she was twelve, a few months before the spinster aunt who had raised her also died. She was sent to live with her uncle and later used her inheritance to study acting at the Royal Dramatic Theatre in Stockholm. With the encouragement of her friend Dr. Peter Lindstrom, who became her first husband in 1937, she turned to the cinema, playing a hotel maid in her

Ingrid Bergman

debut film *Monkbrogreven* (1934). The turning point in her career came in 1937, when the Swedish director Gustaf Molander chose her as the lead in the romantic drama *Intermezzo*, about a famous violinist who has an adulterous affair with a young pianist.

When David Selznick saw a print of Bergman in the Swedish film, he was unimpressed, but he was persuaded by Katharine Brown, his story-buyer, that the proposed American remake of *Intermezzo* would only be successful with Ingrid in the role of the pianist. He signed her to a contract for the one film, with an option for seven years. When *Intermezzo, A Love Story*, also starring Leslie Howard, was released in 1939, Hollywood saw an actress who was completely natural in style as well as lack of makeup. Film critic James Agee wrote that "Miss Bergman not only bears a startling resemblance to an imaginable human being; she really knows how to act, in a blend of poetic grace with quiet realism." Selznick exercised his option for the extended contract and recalled her from Sweden.

While waiting for Selznick to develop roles for her, Bergman played on Broadway in *Liliom* and was loaned out to MGM for two dramatic roles, as the governess in love with Warner Baxter in *Adam Had Four Sons* (1941) and as Robert Montgomery's ill-fated wife in *Dr. Jekyll and Mr. Hyde* (1941). MGM offered her the role of the ingenue in the latter film, but Bergman, always willing to take chances, begged for the role of the floozy and exchanged parts with Lana Turner. Theodore Strauss, writing in the *New York Times*, praised Bergman's "shining talent" in making something of a small part. He added that Turner and the rest of the cast moved "like well-behaved puppets."

In 1942 Warner Brothers, desperate for a continental heroine after being turned down by Hedy Lamarr, borrowed Bergman from Selznick to play opposite Humphrey Bogart in *Casablanca* (1942). The role made Bergman a surefire box-office star and led to her appearing opposite Gary Cooper the following year in Hemingway's *For Whom the Bell Tolls* (1943). Selznick's Swedish import was now in demand for major roles by several studios, and in 1944 MGM signed her for her Academy Award winning role as the manipulated wife in *Gaslight*. Her talent and popularity attracted Alfred Hitchcock, who gave her leads in two of his finest suspense thrillers, *Spellbound* (1945) and *Notorious* (1946). Then occurred a succession of ill-chosen parts, along with a shocking scandal, and the film *Notorious* became her last successful film for a decade.

Her affair with Roberto Rossellini, which erupted during the shooting of *Stromboli* on location in Italy in 1950, resulted in the birth of a daughter and a barrage of international criticism. Although she married Rossellini as soon as possible after her divorce, her fans, and particularly those in America, were unwilling to forgive her. *Stromboli* was boycotted by most of the movie-going public. Rossellini directed her in *Europa '51* in 1952, with the same dismal response.

In 1957 the Fox studios offered her \$200,000 for the title role in *Anastasia*. She agreed to the terms, the film was shot in Britain, and it became a world-wide hit, earning Ingrid her second Oscar as well as the forgiveness of her fans. In 1958 two more films shot in Britain were released with great success: *Indiscreet*, with Cary Grant, and *The Inn of the Sixth Happiness*, based on the true story of a missionary in China. She continued to make films in Europe, but most of them received no bookings in the United States. Columbia lured her back to Hollywood for a two-picture deal, however, and she made the popular *Cactus Flower* (1969), co-starring Walter Matthau, and *A Walk in the*

Spring Rain (1970) with Anthony Quinn. Her last role was that of Golda Meir, the Israeli prime minister, in a drama made for television, *A Woman Called Golda* (1981). She made her home in France for the last 32 years of her life and died in London on August 29, 1982.

Berkeley, Busby (1895-1976)

The premier dance director of 1930s Hollywood musicals, Busby Berkeley created outrageously fantastical production numbers

Busby Berkeley with actress Connie Russell.

featuring synchronized hordes of beautiful women moving in kaleidoscopic patterns that took audiences on surreal journeys away from the blues of their Depression-era realities. Berkeley took the spectacle traditions of popular American stage entertainments and the pulchritudinous aesthetic of the Ziegfeld Follies and extended them through cinematic techniques. His groundbreaking dance sequences revolutionized the way musicals were filmed by demonstrating how the camera could be used to liberate the directorial imagination from the constraints of theatrical realism. The distinctive look of his dancing screen geometries influenced the visual aesthetic of films, animation, television commercials, and music videos throughout the twentieth century. The term “busby berkeley” appears in the *American The-saurus of Slang*, defined as “any elaborate dance number.”

Born William Berkeley Enos on November 29, 1895, to a theatrical family in Los Angeles, Berkeley began choreographing while serving in the army. Stationed in France in 1917, Berkeley designed complex parade drills for his battalion, honing his abilities to move multitudes of bodies rhythmically through cunning configurations. After the war, Berkeley worked as an actor and, by 1921, had begun directing plays and musicals. Though he had no dance training, Berkeley soon became known for staging innovative, well-ordered movement sequences for Broadway revues and musicals, including the 1927 hit *A Connecticut Yankee*.

In 1930, Samuel Goldwyn brought Berkeley to Hollywood. Before embarking on his first assignment, directing the dance numbers for the film musical *Whoopie!*, Berkeley visited neighboring sets to learn how the camera was used. The pre-Berkeley approach to filming musicals was akin to documenting a theatrical production. Four stationary cameras were positioned to capture the performance from a variety of angles. The various shots were creatively combined during the editing process. Berkeley chose, instead, to use only one camera, which he moved around the set, thereby allowing his filming, rather than the editing, to dictate the flow of his numbers. Though a few attempts had been made earlier to film dance sequences from points of view other than that of a proscenium stage, it was Berkeley who fully and most inventively exploited the variety of possible camera placements and movements. Berkeley’s work is characterized by plenty of panning and high overhead shots that sometimes necessitated cutting a hole in the studio ceiling and eventually resulted in his building a monorail for his camera’s travels.

In 1932 Berkeley began a seven-year affiliation with Warner Bros. where he created the bulk of his most remarkable dance sequences for films such as *Gold Diggers of 1933* and *Dames* (1934). His first film there, *42nd Street* (1933), rescued the studio from bankruptcy and rejuvenated the film musical at a time when the genre’s popularity had waned.

Berkeley’s numbers had little to do with the text or story line of the films. His dances were often voyeuristic and contained undeniable sexual symbolism. Censors were hard-pressed to challenge their naughtiness, however, because the eroticism was in abstract forms—shapes that resembled giant zippers unzipping, long straight bodies diving into circles of women swimming below, or a row of huge rising bananas. No individual dancer ever did anything that could be interpreted as a sexual act.

In Berkeley’s dance numbers there is very little actual dancing. It is the camera that executes the most interesting choreography. Berkeley was unconcerned with dance as physical expression and preferred

to focus his creative efforts on cinematic tricks. The simple moves and tap dancing in Berkeley's routines were taught to the dancers by his assistants. Berkeley was not interested in the talents of solo dancers, but in how he could use numerous bodies to form magnificent designs.

In 1939, when Warner Bros. lost interest in producing big musicals, Berkeley went to MGM where he continued to create his signature-style dance sequences for films such as *Lady Be Good* (1941). He was also given the opportunity to both choreograph and direct three Mickey Rooney-Judy Garland vehicles, *Babes in Arms* (1939), *Strike Up the Band* (1940), and *Babes on Broadway* (1941). By the mid-1940s, Berkeley-esque movie musicals—those with flimsy plots interrupted by abstract movement sequences—were on their way out in favor of musicals in which the songs and dances were integrated with the drama. The demand for Berkeley's work gradually diminished. He retired in 1954 but returned to create numbers for the 1962 circus extravaganza, *Jumbo*.

By 1970, though the public had long tired of gigantic film musicals, there developed a resurgence of interest in Berkeley's work, seen as camp yet appreciated within the period's wave of 1930s nostalgia. Berkeley was interviewed extensively during this period, while his films were shown on late-night television and in numerous retrospectives. The 1971 revival of *No, No, Nanette* reintroduced Broadway audiences to old-style, large-scale, tap-dance routines reminiscent of Berkeley's heyday. Though he made no artistic contribution to this production, he was hired as an advisor, as it was thought Berkeley's name would boost ticket sales.

While Berkeley's work was light entertainment, his personality had a dark side, evidence of which can be found in aspects of his films as well as in his unsuccessful suicide attempts, his inability to maintain relationships (having been married six times), and his excessive drinking: in 1935 Berkeley was tried for the murders of three victims of his intoxicated driving. Some of Berkeley's dances indicate an obsession with the death of young women, including his favorite sequence—"Lullaby of Broadway" from *Gold Diggers of 1935*—which ends with a woman jumping to her death from atop a skyscraper.

On March 14, 1976, Berkeley died at his home in California. Though his oeuvre is an indelible part of the popular entertainment culture of the 1930s—as he so brilliantly satisfied Americans' escapist needs during one of the country's bleakest eras—his bewitching, dream-like realms peopled by abstract forms made of objectified women intrigue and influence each generation of spectators and visual artists that revisits his films.

Berle, Milton (1908—)

Milton Berle, a former vaudevillian, film actor, and radio comedian, was television's first real star. Credited with selling over a million television sets during his first years hosting the weekly Tuesday night NBC program *Texaco Star Theatre*, Berle became post war America's beloved "Uncle Miltie." Since *Texaco Star Theatre* first aired in 1948, only a year after the three major networks first began broadcasting programming on the new medium, much of Berle's urban audience was watching television in communal environs—in neighbors' homes, in taverns, and in community centers. A 1949 editorial in *Variety* magazine heralded the performer for his impact on the lives of city viewers: "When, single handedly, you can drive the taxis off the streets of New York between 8 and 9 on a Tuesday night; reconstruct neighborhood patterns so that stores shut down Tuesday nights instead of Wednesdays, and inject a showmanship in programming so that video could compete favorably with the more established show biz media—then you rate the accolade of 'Mr. Television.'"

Yet, the brash, aggressive, ethnic, and urban vaudeville style that made him such a incredible phenomenon during television's early years were, ironically, the very traits that lead to his professional decline in the mid-1950s. As television disseminated into suburban and rural areas, forever altering audience demographics, viewers turned away from Berle's broad and bawdy antics and towards the middle-class sensibilities of domestic sitcoms such as *I Love Lucy* and

Milton Berle

The Adventures of Ozzie and Harriet. Nevertheless, his infusion of vaudeville-style humor would impact the form and functions of television comedy for decades.

Born in Harlem in 1908, Berle (whose birth name was Mendel Berlinger) was the second youngest of Moses and Sarah (later changed to Sandra) Berlinger's five children. His father, a shopkeeper, was often sick and unable to work. His mother tried to bring in money working as a store detective, but it was a very young Milton who became the real breadwinner of the family. After winning a Charlie Chaplin imitation contest at the age of five, Sarah became convinced that her son had an innate comedic talent. As his manager, she got him work in Biograph-produced silent films, performing alongside the likes of Pearl White (in the famous *Perils of Pauline* serial), Mary Pickford, and Charlie Chaplin. He then performed in a number of traveling vaudeville "kid acts" and made his first appearance on Broadway in a 1920 production of *Floradora*. For four years Berle was teamed with Elizabeth Kennedy in a highly successful boy-girl comedy act on the Keith-Albee circuit. But, after Kennedy left to their act to get married, Berle, who was sixteen, found he had grown too tall to continue performing in kid acts. It was at this point that he developed his city-slicker, wise-cracking, physically frenetic, adult stage personality. His new act included a bit of soft-shoe, some pratfalls, one-liners, impersonations of comedians such as Eddie Cantor, and, occasionally, a drag performance. By the late 1920s, he had become a vaudeville headliner and master of ceremonies, often breaking attendance records at venues such as the famous Palace Theatre in Manhattan.

As Berle garnered praise for his comic timing and style many of his fellow comedians complained loudly and bitterly about his penchant for "stealing" material. Berle countered such accusations with his firm belief that jokes were public property and by incorporating his reputation as the "Thief of Bad Gags" into his on-stage persona. But ironically, just as the comedian's star was rising in the early 1930s, vaudeville entered a slump from which it would never recover. While performing in nightclubs and in Broadway shows, Berle tried his hand in radio. Yet, unlike other former vaudevillians such as Jack Benny and Eddie Cantor who found national stardom on the medium, Berle was never a success on radio—even though he starred in over six different programs. This was due, in large part, to Berle's reliance on physical humor and visual cues instead of scripted jokes and funny scenarios.

After failing in radio, Berle attempted to parlay his visual talents into a movie career. Beginning with RKO's *New Faces of 1937*, the comedian completed nine features in six years. Yet, most of them were "B" pictures and none of them attracted significant numbers at the box office. Although film allowed Berle to employ the essential physical cues of his humor, the medium proved too constricting for him as there was no audience interaction nor was there any room for ad-libbing or spontaneous pratfalls, elements essential to his performance style. Instead of seeing the ways in which his comedy was simply unsuited to the aesthetic characteristics of radio and film, the comedian (as well as many radio and Hollywood executives) began to question his appeal to a mass audience. So, Berle returned to what he knew best—working in front of a live audience in nightclubs and legitimate theaters.

In the spring of 1948, Berle was approached by Kudner, Texaco's advertising agency, to appear as a rotating host on their new television

program. Although the agency had tried out other top comedy names such as Henny Youngman, Morey Amsterdam, and Jack Carter during their trial spring and summer, it was Berle that was chosen as the permanent host of the program for the following fall. It was the comedian, not the producers, who crafted the format and content on the show, as, at least for the first year on air, Berle was the program's sole writer and controlled every aspect of the production including lighting and choreography. His program and persona were an immediate hit with a primarily urban audience accustomed to the limited offerings of wrestling, roller derbys, news, and quiz programs. The vaudeville-inspired format of *Texaco Star Theatre*, although popular on radio, had not yet made it onto television, and Berle's innovative and flamboyant style proved irresistible. His aggressive emphasis on the physical aspects of comedy, slick vaudeville routines, ability to ad-lib, expressive gestures, and quick tongue made him an enormous success in an industry looking to highlight visuality and immediacy. What came to be known as the "Berle craze" not only brought major profits to NBC and Texaco, it also set off a proliferation of similar variety shows on television. Berle was rewarded for this with an unprecedented 30 year contract with NBC guaranteeing him \$200,000 a year.

Berle became infamous with post war audiences for his drag routines, impersonations, and his constant joking references to his mother. Berle's relationship with Sarah was a key element in his on- and off-stage persona. Almost every article written about Berle during his years on television included at least one reference to the loving, but perhaps over-bearing, stage mother. Although reinforcing a long-standing cultural stereotype of the relationship between Jewish mothers and their sons, Berle's constant references to his mother helped domesticate his image. Often criticized for his inclusion of sexual innuendoes, ethnic jokes, and other material best suited to an adult nightclub audience, Berle, his sponsor, and NBC needed to ensure Texaco's appeal to a family audience. Although Sarah Berle helped remind the public of Berle's familial origins, his own troubled relationship with his first wife dancer Joyce Matthews threatened to taint his image as a wholesome family man. After adopting a child with Berle and then divorcing him twice, Matthews attempted suicide in the home of theatrical producer Billy Rose, her married lover. This scandal, along with rumors of Berle's own extramarital affairs, left him with a questionable reputation in an age when morality and duty to one's family was considered a man's utmost responsibility.

Just as his personal life was under scrutiny, so was his professional life. His popularity with audiences was beginning to wane in the early 1950s and a new style of comedy was on the horizon threatening to usurp his standing as television's most prominent face. In the fall of 1952, after the program's ratings began to drop and Berle was hospitalized for exhaustion, the producers of *Texaco* tried to revamp the program's format by placing Berle within a situational context and introducing a regular cast of characters. This move, however, did not save the show and Texaco dropped their sponsorship at the end of that season. Berle acquired a new sponsor and continued his program as *The Buick-Berle Show* for two more seasons until it to was taken off the air.

Although starring in *The Milton Berle Show* for one season in 1955 and appearing on various television programs and specials in the late 1950s and early 1960s, Berle never regained his once impenetrable hold on the American television audience. Eventually renegotiating his contract with NBC in 1965 to allow him to perform on other networks, Berle made quite a few guest appearances on both comedy and dramatic programs. In addition, he appeared in a number of films

including *The Muppet Movie* in 1979 and Woody Allen's *Broadway Danny Rose* in 1984. Since then, he has been honored with numerous professional awards and in the late 1990s published his own magazine *Milton* with his third wife Lorna. Exploiting the nostalgia for the accouterments of a 1950s lifestyle, the magazine tried, with limited success, to revive Berle's persona for a new generation with the motto "we drink, we smoke, we gamble."

Berlin, Irving (1888-1989)

Irving Berlin's popular music served as a social barometer for much of the twentieth century: it marched to war with soldiers, offered hope and inspiration to a nation in bleak times, and rejoiced in the good things embodied in the American way of life. It also provided anthems for American culture in such standards as "White Christmas," "Easter Parade," "God Bless America," and "There's No Business Like Show Business."

Born Israel Baline on May 11, 1888, in Temun, Siberia, Berlin fled with his family to America to escape the Russian persecution of Jews. They arrived in New York in 1893, settling in Manhattan's Lower East Side. Compelled by poverty to work rather than attending school, Berlin made money by singing on streetcorners and later secured a job as a singing waiter at the Pelham Cafe. During this time, he also began writing songs of his own, and in 1907 he published "Marie from Sunny Italy," signing the work I. Berlin and thereby establishing the pseudonym under which he would become so well known.

Berlin continued his involvement in the burgeoning music industry as a young man, initially working at odd jobs in the neighborhood that was becoming known as Tin Pan Alley and eventually securing a job as a lyricist for the music-publishing firm of Waterson & Snyder. In 1911, his "Alexander's Ragtime Band" became a huge hit and immediately earned him the title "King of Tin Pan Alley." Entirely self-taught as a musician, Berlin developed a unique musical style by playing only on the black keys. Most of his early songs were therefore written in the key of F-sharp, but, by using a transposing keyboard, Berlin was able to compose in various keys.

By the 1920s, Berlin had become one of the most successful songwriters in the country, despite his lack of formal training.

Opening the Music Box Theater with Joseph N. Schenck and Sam Harris in 1921, Berlin began to stage his own revues and musical comedies. When the Great Depression hit in 1929, Berlin, like many others, lost his fortune. His misfortunes did not last long, and he returned to the theater with the show, *Face the Music* (1932). Berlin received his greatest accolades for the Broadway musical, *Annie Get Your Gun* (1946), starring Ethel Merman, which introduced the undeclared anthem of show business, "There's No Business Like Show Business."

Established on the Broadway stage, Berlin's took his musical talents to Hollywood, writing the scores for such hit musical films as *Top Hat* (1935) and *Holiday Inn* (1942). One song from *Holiday Inn*, "White Christmas," remains even today the best-selling song ever recorded. Written during World War II, the song's great appeal lay in part in its evocation of an earlier, happier time, enhanced greatly by Bing Crosby's mellow, wistful delivery.

Berlin's songs have also served as a rallying cry for the nation during two world wars. While serving in the army in World War I, Berlin wrote patriotic songs for the show *Yip, Yip Yaphank* (1918), and in 1942 he wrote *This Is the Army*. The proceeds from performances of the latter totalled over ten million dollars, and were donated to the Army Relief Fund. Berlin's most famous patriotic work remains the song, "God Bless America," written initially during World War I but sung in public for the first time by Kate Smith for an Armistice Day celebration in 1938.

Berlin also wrote some of the most popular love ballads of the century. "When I Lost You" was written in honor of his first wife, who died within the first year of their marriage, and some of his most poignant songs, including the hauntingly beautiful "What'll I Do," "Always," and "Remember" were written for his second wife, the heiress Ellin Mackay.

Berlin died on September 22, 1989 in New York City. His long, remarkable life seemed to illustrate that the American Dream was achievable for anyone who had a vision. He had received awards ranging from an Oscar to a Gold Medal ordered by President Dwight D. Eisenhower. He had become an icon of American popular music, rich and successful, and had helped shape the evolution of that genre through his use and adaptation of a variety of styles, despite a lack of education and formal training. Many of his songs had become an integral part of the tapestry of American life, accompanying representative scenes ranging from the idealized world of elegant dances by Fred Astaire and Ginger Rogers to the humble family fireside Christmas. It was his role as the spokesman of the American people as a collective whole—his ability to give voice to their fears, regrets, and hopes in a most compelling way—that constituted his great contribution to popular culture of the century.

Irving Berlin

Bernhard, Sandra (1955—)

Sandra Bernhard's unique appeal derives, in part, from her resistance to categorization. This Flint, Michigan, native is a comedienne, pop singer, social satirist, and provocateur, often all at the same time. Her talents—wry humor, offbeat looks, earthy ease in front of an audience, and powerful singing voice—recall the cabaret and Broadway-nurtured divahood of Barbra Streisand and Bette Midler;

but while Bernhard has the magnetism of a superstar, she has found difficulty reaching that peak, insofar as a star is a commodity who can open a movie, carry a TV show, or sell millions of albums. She has fashioned a career from the occasional film (*Hudson Hawk*, 1991) or TV appearance (*Roseanne*, *Late Night with David Letterman*); humorous memoirs (*Confessions of a Pretty Lady*); a dance album (*I'm Your Woman*); and most notably, her acclaimed one-woman stage shows, *Without You I'm Nothing* (a film version followed in 1990) and 1998's *I'm Still Here . . . Damn It!* To her fans throughout the

Sandra Bernhard

1980s and 1990s, Bernhard has been both glamour-girl and truth-teller; her voice a magical siren's call from the surly fringes of mainstream success.

The King of Comedy (1989), the Martin Scorsese film which introduced Bernhard to the world, encapsulates the entertainer's contradictions and special allure. In this dark comedy, Robert DeNiro and Bernhard play a pair of star-struck eccentrics who hatch a bizarre plot to kidnap the object of their fantasies, a Johnny Carson-like talk-show host (Jerry Lewis). As Masha, Bernhard plays her deranged obsessive compellingly, triumphing as the one bright spot in this rather sour film, which is widely regarded as one of Scorsese's lesser efforts. In it she displays an outsize personality, hilarious comic delivery, and an undeniable presence, yet instead of offering her a career in films, Hollywood didn't seem to know what to make of Bernhard's strange gifts (in much the same way that Midler suffered a dry spell after her stunning debut in *The Rose* [1979]), and a mainstream movie career failed to materialize. In the 1990s Bernhard accepted roles in low-budget independent films such as *Inside Monkey Zetterland* (1993) and *Dallas Doll* (1995). Television gained her a wider audience, as with her 1992 HBO special *Sandra After Dark*.

The performer and the character share the same problem: both are unnerving in that they expose America's neurotic preoccupation with celebrity. As Justin Wyatt writes, "Bernhard's film debut as the

maniacal Masha . . . offers a paradigm for the development of her subsequent career." Bernhard and Masha are not synonymous, yet they intersect at crucial points: having seized the spotlight by playing a gangling, fervent girl with stardust in her eyes, Bernhard has assumed a persona that rests on a love/hate relationship with fame. Having portrayed a fanatic who, in skimpy underwear, takes off down a Manhattan street after a star, in her later stage acts Bernhard's bid for stardom included facing down her audience in pasties or diaphanous get-ups. Finally, after putting her illustrious costar and director to shame in *The King of Comedy* as a novice actress, by the late 1990s Bernhard had become a skilled cult satirist accused of having greater talents than her world-famous targets.

Onstage, Bernhard is often physically revealed, yet protected emotionally within a cocoon of irony. Her humor relies on an exploration of the magical process of star-making, and her own thirst for this kind of success is just more fodder for her brand of satire. She both covets fame and mocks it. As *New Yorker* critic Nancy Franklin observes, "It has always been hard to tell where her sharp-tongued commentary on celebrity narcissism ends and her sharp-tongued narcissistic celebrity begins." Bernhard's references to figures in the entertainment world are trenchant but rarely hateful. When she sets her sights on various personalities, from Madonna to Courtney Love to Stevie Nicks, one finds it difficult to separate the envy from the disapproval, the derision from the adoration, as when she offers her doting audience the seemingly off-hand remark (in *I'm Still Here*): "Tonight, I have you and you and you. And I don't mean in a Diana Ross kind of way." She takes Mariah Carey to task for her using blackness as a commercial pose, and (in *Without You I'm Nothing*) gently mocks her idol Streisand, for singing the incongruous lyric to "Stoney End": "I was born from love and my poor mama worked the mines." Bernhard casts a doubtful look: "She worked in the mines? The diamond mines, maybe."

At times one finds it hard to identify her sly anecdotes as entirely fictional, or as liberal embellishments rooted in a kernel of truth. Even the seemingly genuine details about palling around with Liza Minnelli or sharing a domestic scene with Madonna and her baby are delivered in quotation marks, which is why Bernhard's art is camp in the truest sense; if "the essence of camp," according to Susan Sontag, "is its love of the unnatural: of artifice and exaggeration," then Bernhard must qualify as its high priestess. But there's a catch: she enjoys the facade almost as much as she enjoys stripping it away.

A few critics find this ambiguity trying, but many more applaud her ability to negotiate this tightrope successfully. Just as a female impersonator's act is comprised of both homage and parody (the artifice is simultaneously celebration and critique), Bernhard's take on fame carries a similarly ambivalent message, its pleasure deriving from its irresolution. For stardom, this absurdly artificial construct inspires in the performer deep affection as well as ridicule. She succeeds in transforming a caustic commentary on fame into a kind of fame itself, massaging a simulacrum of stardom into bona fide notoriety. The very tenuousness of her status functions as an asset—indeed, the basis—for what *New York Times* critic Peter Marks called her "mouth-watering after-dinner vitriol," as he recommended her show to anyone "who's fantasized about taking a trip to the dark side of *People* magazine."

—Drew Limsky

Bernstein, Leonard (1918-1990)

After his sensational 1943 debut with the New York Philharmonic, conductor Leonard Bernstein overnight became an American folk hero with a mythic hold on audiences. His rags-to-riches story particularly appealed to a nation emerging from the Depression and learning about the Holocaust.

Raised in a Hasidic home, Bernstein attended Harvard and seemed the quintessential Jewish artist struggling against obscurity

Leonard Bernstein

and prejudice. His compositions for the musical theater, such as *West Side Story*, became classics, and his classical compositions became welcome additions to orchestral repertoires. He was hailed by mass audiences for demonstrating that it was possible to treasure the old while welcoming the new.

Lenny, as Bernstein was popularly known, turned frequent television appearances into "Watch Mr. Wizard" episodes to explain classical music. College teachers claimed that he was not an original thinker and that many of his statements were oversweeping. Nonetheless, untold hundreds of thousands of admirers would continue to revere him, long after his death.

Berra, Yogi (1925—)

Lawrence "Yogi" Berra is one of the most loved figures of the sporting world. The star catcher for the great New York Yankee baseball teams of the mid-twentieth century, he has built a legacy as a dispenser of basic wisdom worthy of his nickname.

Born to Italian immigrants in the "Dago Hill" neighborhood of St. Louis, Missouri, Berra acquired his moniker as childhood friends remarked that he walked like a "yogi" snake charmer they had seen in a movie. He grew up idolizing future Hall of Fame outfielder Joe "Ducky" Medwick of the St. Louis Cardinals, and as a teenager left school to play baseball with his friend Joe Garagiola. Cardinals General Manager Branch Rickey signed Garagiola for \$500, but did not think Yogi was worth the money. A scout for the New York Yankees did, however, and Yogi started playing catcher in their farm system, until he turned 18 and the navy intervened.

After participating in D-Day and other landings, Berra returned to the United States and the Yankee farm club. He was noticed and promoted to the Yankees in 1946 after manager Mel Ott of the rival New York Giants offered to buy his contract for \$50,000. At the time, Yankees general manager Larry McPhail said of Yogi's unique stature that he looked like "the bottom man on an unemployed acrobatic team." Jaded Yankee veterans and the New York press were soon amused to no end by his love for comic books, movies, and ice cream, and knack for making the classic comments that would come to be known as "Berra-isms" or "Yogi-isms." One of the first came in 1947 when a Yogi Berra Night was held in his honor. Berra took the microphone and stated, "I want to thank all those who made this night necessary."

Many more sayings were to follow over the years. He described his new house thusly: "It's got nothing but rooms." When asked why the Yankees lost the 1960 World Series to the Pittsburgh Pirates, Yogi answered, "We made too many wrong mistakes" (a quote later appropriated by George Bush in a televised debate). Asked what time it is, he replied, "Do you mean now?" Some sayings simply transcended context, zen-fashion: "You see a lot just by observing." "If the world was perfect, it wouldn't be." "When you get to a fork in the road, take it." After a time interviewers began making up their

Yogi Berra (right) blocking home plate.

own quotes and floating them as “Yogi-isms.” Stand-up comedians and late-night talk show hosts followed soon after.

A sensitive man, Yogi often seemed genuinely hurt by willful misquotes and jokes about his appearance and intelligence, but his serene nature triumphed in the end. He was also a determined competitor who could silence critics with clutch performances. In 1947, he would hit the first pinch-hit home run in World Series history as the Yankees beat the Brooklyn Dodgers. When Casey Stengel, a character in his own right, became the Yankee manager in 1949, Yogi gained a valuable ally and soon developed into the best catcher of the time, along with Dodger Roy Campanella. He would go on to set World Series records for games played and Series won, as well as leading in hits, doubles, and placing second behind Mickey Mantle in home runs and runs-batted-in (RBIs). Later, as a manager himself, he would lead the Yankees in 1964 and the New York Mets in 1973 to the World Series. Yogi was elected to the Baseball Hall of Fame in 1972.

Managing the Yankees again in 1985, he would be fired after standing up to tyrannical Yankee owner George Steinbrenner, an achievement some would liken to a World Series in itself. After not speaking for 14 years, a period during which Berra would not visit Yankee Stadium even when his plaque was erected in centerfield, the

pair would suddenly reconcile in early 1999. As Yogi had said about the 1973 Mets pennant drive, “It ain’t over ’til it’s over.”

—C. Kenyon Silvey

Berry, Chuck (1926—)

Singer, songwriter, and guitarist Charles Edward Anderson Berry, better known as Chuck Berry, epitomized 1950s rock 'n' roll through his songs, music, and dance. “If you tried to give rock 'n' roll another name, you might call it ‘Chuck Berry,’” commented John Lennon, one of the many artists influenced by Berry’s groundbreaking

works—others included the Rolling Stones and the Beach Boys. A consummate showman with an electrifying stage style, he originated such classic songs as “School Days,” in which he proclaimed “hail, hail, rock and roll” and “long live rock and roll”; and “Rock and Roll Music,” in which he sang: “It’s gotta be rock and roll music, if you want to dance with me.” Berry was the first black rock ’n’ roll artist to cross the tracks and draw a significant white audience to his music. His career was sidetracked, however, with his arrest and imprisonment on morals charges in 1959.

Berry captured the exuberant teenage spirit of the 1950s in his music. In the early part of that decade, the precursors of white rock ’n’ roll and the purveyors of black rhythm and blues lived on opposite sides of the tracks, with the music of each being played on small radio stations for their respective audiences. Berry combined black rhythm and blues, white country music, jazz, and boogie woogie into his style, and his music and lyrics became the catalyst for the music of the Rolling Stones, Beatles, and Beach Boys. His composition “Nadine” was a mirror of the later style of the Rolling Stones. Berry’s “Sweet Little Sixteen” was adapted as “Surfin’ USA” by the Beach Boys, becoming a million dollar single.

Berry was born on October 18, 1926 in St. Louis, Missouri. (Some sources attribute San Jose, California as his place of birth based on false information he originally gave his longtime secretary for a biographical sketch.) As a teenager, Berry was interested in photography and poetry, until he began performing. He came from a good home with a loving mother and father but strayed from his home training, first encountering the juvenile-justice system for a bungled armed robbery, serving two years in reform school. Upon his release in 1947, Berry returned home and began work at General Motors while taking up hair dressing and cosmetology. By 1950, he was married with two children and had formed a trio with pianist Johnny Johnson and drummer Ebby Harding. Their group played at the Cosmopolitan Club in East St. Louis, Illinois, gaining a considerable reputation in the surrounding area. He also studied and honed his guitar technique with a local jazz guitarist named Ira Harris. The trio played for a largely black audience, but with the drop of a cowboy hat, Berry could switch to country and hillbilly tunes.

Berry traveled to Chicago in 1955, visiting bands and inquiring about recording. Muddy Waters suggested that he contact Leonard Chess, president of Chess records. A week later, Berry was back in Chicago with a demo and subsequently recorded “Maybellene” (originally called “Ida Mae”) which rose to the number one spot on the R&B chart and number five on the pop chart. Almost instantaneously, Berry had risen from relative regional obscurity to being a national celebrity with this crossover hit. From 1955 to 1960, Berry enjoyed a run of several R&B top-20 entries with several of the songs crossing over to the pop top-10. “Thirty Days,” “Roll Over Beethoven,” “Too Much Monkey Business,” “School Days,” “Rock and Roll Music,” “Sweet Little Sixteen,” “Johnny B. Goode,” and “Almost Grown” were not only commercial successes but well written, engaging songs that would stand the test of time and become classics.

Berry’s musical influences were diverse. Latin rhythms are heard in “Brown-Eyed Handsome Man” and in “Rock and Roll Music”; black folk-narrative styles in “Too Much Monkey Business”; polka and the Italian vernacular in “Anthony Boy”; the black folk-sermon and congregational singing style in “You Can’t Catch Me”; blues à la John Lee Hooker in “Round and Round”; and country music in “Thirty Days.” Instrumentally, his slide and single string work was influenced by Carl Hogan, guitarist in Louis Jordan’s

Chuck Berry

Tympany Five combo; and by jazz guitarist Charlie Christian and blues guitarist Aaron “T-Bone” Walker, whose penchant for repeating the same note for emphasis influenced Berry. Nat “King” Cole influenced Berry’s early vocal style, and Charles Brown’s influence is evident in “Wee Wee Hours.” Berry makes extensive use of the 12-bar blues form. He occasionally departs from the blues form with compositions such as “Brown-Eyed Handsome Man,” “Thirty Days,” “Havana Moon,” “You Can’t Catch Me,” “Too Pooped to Pop,” and “Sweet Little Sixteen.” Berry makes extensive use of stop time as in “Sweet Little Sixteen,” creating a tension and release effect.

Berry was a featured performer on Alan Freed’s radio programs and stage shows and appeared in the films *Go Johnny Go*, *Mister Rock and Roll*, *Rock, Rock, Rock*, and *Jazz on a Summer’s Day*. He also appeared on Dick Clark’s *American Bandstand*. Berry toured as a headliner on bills with artists such as Carl Perkins, Bill Haley and the Comets, and Little Richard, among others.

His recording success turned Berry into a wealthy businessman and club owner, and a developer of his own amusement park. His quick rise to fame and his robust appetite for women of all races caused resentment among some whites. In 1959 he allegedly transported a fourteen-year-old Spanish-speaking Apache prostitute across state lines to work as a hat checker in his night club outside of St. Louis. Berry fired her and she protested. A brazenly bigoted first trial

ensued and was dismissed, but in the second trial, Berry was convicted and sent to prison, serving two years of a three-year sentence. This experience left him extremely embittered, with his marriage ruined. While he survived financially, he became inward, distrustful, and suspicious of people.

By the time Berry was released in 1964, the British Invasion with the Beatles and Rolling Stones was in full force; both groups included Berry's songs on their albums. He continued to tour, often with pickup bands. In 1966, he left Chess Records to record for Mercury, an association that did not yield any best sellers. He returned to Chess in 1971 and had his first gold record with "My Ding-a-Ling," a whimsical, double entendre-filled adaptation of Dave Bartholomew's "Toy Bell." In 1972, Berry appeared as a featured attraction in Las Vegas hotels. By 1979, he had run afoul with the law again and was sentenced to four months and one thousand hours of community service for income tax evasion.

During his incarceration in Lompoc, California, he began work on *Chuck Berry: the Autobiography*, a book that made extensive use of wordplay, giving insight into his life, romances, comebacks, and context for his songs. For his sixtieth birthday celebration, in 1986, a concert was staged in conjunction with a documentary filming of *Chuck Berry: Hail, Hail, Rock and Roll* by producer Taylor Hackford. The film featured an all-star cast of rock and R&B artists, including Keith Richards of the Rolling Stones as musical director, plus Eric Clapton, Linda Ronstadt, Robert Cray, Etta James, and Julian Lennon.

In 1986, Berry was inducted into the Rock 'n' Roll Hall of Fame. His importance as a songwriter, guitarist, singer, innovator and ambassador of that genre remains unquestioned. To paraphrase one of his lines in "Roll Over Beethoven," Berry's heart beats rhythm and his soul keeps on singin' the blues.

The Best Years of Our Lives

A 1946 film that perfectly captures the bittersweet sense of post-World War II American society, *The Best Years of Our Lives* examines three war veterans as they adjust to new stateside roles. Former sergeant Al Stephenson (Fredric March), disillusioned with his banking career, develops a drinking problem but learns to control it with the support of his wife Milly (Myrna Loy) and adult daughter Peggy (Teresa Wright). Fred Derry (Dana Andrews), one-time soda jerk and bombardier, finds that his wartime skills are now useless and eventually leaves his self-centered wife Marie (Virginia Mayo) for Peggy. Homer Parrish (Harold Russell), an ex-sailor who lost his hands in a shipboard accident, learns to deal with the rudeness of well-meaning civilians and shapes a new life with his fiancée Wilma (Cathy O'Donnell). A much-honored film (it won eight Oscars,

including Best Picture), *Best Years* is a beautiful, simple, and eloquent evocation of postwar America.

Bestsellers

As a group bestsellers conjure an image of lowbrow literature, of escapist fiction—bodice rippers, multi-generation epics, courtroom melodramas, and beach novels. Although books of all sorts, including nonfiction, cartoon anthologies, and genuine literature routinely make the bestseller lists in America, bestsellers have always been dismissed as popular reading. In *80 Years of Best Sellers* authors Alice Payne Hackett and James Henry Burke assert that, "Best-selling books are not always the best in a critical sense, but they do offer what the reading public wants," and the truth is that bestseller status is more often associated with Danielle Steele than Sinclair Lewis, even though both have published best-selling novels.

Tracking and reporting the best-selling books in America officially began in 1895. Publishing of all sorts experienced a boom in the 1890s for a variety of reasons, including cheaper paper, substantial improvements in the printing press, a high literacy rate, better public education systems, and an increase in book stores and public libraries. Popular tastes were also shifting from educational books and other nonfiction to works of fiction; an 1893 survey of public libraries showed that the most frequently borrowed books were novels, which at that time were largely historical fiction with overtones of adventure, e.g. *The Last of the Mohicans*, *Lorna Doone*, *The House of the Seven Gables*. The first list of best-selling novels in America appeared in a literary magazine titled *The Bookman* in 1895. The best-selling novel that year was *Beside the Bonnie Brier Bush* by one Ian Maclaren. Although the phrase "best seller" was not used by *The Bookman* at this time; it seems to have been coined about a decade later by *Publishers Weekly* in an interview with a successful book dealer. Bookman referred to the novels on its first list as being sold "in order of demand" and started referring to "Best Selling Books" in 1897. *Publishers Weekly* began to run its own list of bestsellers in 1912, by which time the term was in general usage. The first several bestseller lists were dominated by European novels, with an average of only two or three American novels per year. While many European authors were undoubtedly popular with American readers and European settings were more glamorous, the primary reason that there were few highly successful American novelists was U.S. copyright law, which prior to 1891 had made it far less expensive to publish books written by Europeans than by Americans.

The existence of bestseller lists had an immediate effect on American publishers, who began to devise ways to promote their novels and ensure them bestseller status. The novel *The Honorable Peter Stirling*, written by Paul Leceister Ford and published in 1897, was selling very poorly until its publisher spread rumors that the book was based on President Grover Cleveland; the book saw a drastic increase in readership and 228,000 copies were sold that year. The 1904 novel *The Masquerade* was the first book to be published without an author credit; speculation as to who “anonymous” might be—it was novelist Katherine Cecil Thurston—increased public awareness of the novel and it was one of the top ten sellers of its year. The gimmick of publishing an anonymous book was used repeatedly throughout the century; the success of *Primary Colors* in 1996 indicates that it has remained an effective marketing device.

Two significant literary genres made their first appearances on the list in 1902. Owen Wister’s *The Virginian*—which became a genuine publishing phenomenon over time, remaining continuously in print for over thirty years—was at the height of its success in 1902. Booksellers were ordering one thousand copies per day. *The Virginian* created a market for western novels; western fiction became a staple of the list when Zane Grey’s *The Lone Star Ranger* was published in 1915 and the western audience has never truly disappeared. Arthur Conan Doyle’s *The Hound of the Baskervilles* was not just the first Sherlock Holmes book to achieve bestseller status but was the first work of detective fiction to do so as well. The first American suspense novelist to reach the year’s top ten list was Mary Roberts Rinehart in 1909. Not all turn of the century bestsellers were escapist fiction, Upton Sinclair’s *The Jungle*, the famous muckraking exposé of the American meat packing industry, became a bestseller in 1906.

When *Publishers Weekly* began publishing its own list of bestsellers in 1912, it separated nonfiction from fiction. A third category, simply titled “war books,” was added for the duration of World War I. Books about the European conflict sold extremely well and appear to have created a larger market for nonfiction reading in general, since sales of nonfiction books increased in post-World War I America. A similar increase occurred after World War II, when self-help books began to appear regularly on the bestseller lists. Emily Post’s *Etiquette*, first published in 1923, demonstrated that a nonfiction bestseller can be recognized as a definitive reference source and remain in print almost indefinitely.

Since the 1910s, bestseller status has been determined in the same way. Several publications, most notably *Publishers Weekly* and more recently the *New York Times Book Review*, publish weekly lists of the ten best-selling fiction and nonfiction books in America. The lists originally referred only to cloth, or hardbound, books; separate lists for paperbacks were added in the 1960s. Information is gathered from book stores around the United States, so the list of bestsellers does refer to books sold, not just books distributed (as was the case with the record industry for decades). Because most books stay on the list for multiple weeks, approximately forty-five to fifty books reach either list per year. The method of determining which books are bestsellers has been criticized. The lists reflect what is selling well at any given week, so that a book that sold slowly but steadily, such as *The Betty Crocker Cookbook*, which is one of the highest selling books of all time, might never appear on a bestseller list. Likewise, it is possible for an author to sell millions of books during a career without ever having one be designated a bestseller. Most of the sales figures are gathered from larger book stores so that smaller stores, which frequently have more literary clientele, have little input into the lists. Substantial advance publicity from a publisher can almost

certainly boost sales for a week or two, creating an artificial bestseller. Finally, book club editions are not taken into account when compiling the lists; the Book of the Month Club and the Literary Guild, founded in 1926 and 1928 respectively, have accounted for a large percentage of book sales each year, as have many other book clubs and mail order sources, all without being included in the bestseller statistics. Still, the bestseller lists remain a fairly accurate barometer of what America is reading at any given time.

Even by the 1920s, certain patterns were beginning to emerge on the lists. There was the phenomenon known as “repeaters”—authors who could be counted on to produce one best-selling book after another. Edna Ferber in the 1930s, Mickey Spillane in the 1950s, Harold Robbins in the 1960s, and John Grisham in the 1990s were all repeaters whose publishers knew that practically anything they wrote would become a bestseller. John O’Hara took the concept of repeating to its extreme; not only did he write a bestseller every year or two for most of his career but his publisher, Random House, always released the book on the same date, Christmas Eve, to build a steady market. “Repeaters” are important to publishers, who need certain and dependable sales successes, so the practice of paying large advances to such authors is common and widespread. In contrast to the repeaters, some authors have only one or two bestsellers and never produce another. This phenomenon can be hard to explain. Some authors only produce one novel: Margaret Mitchell never wrote another after the enormous success of *Gone with the Wind*; Ross Lockridge committed suicide shortly after the publication of *Raintree County*. But others try to repeat their earlier successes and fail, so that while someone like Kathleen Winsor may write many books during her lifetime, only *Forever Amber* is successful. Bestsellers are very attuned to popular taste; an author has to be strongly in synch with national attitudes and concerns to produce a bestseller. After a few years have passed, author and society might not be so connected. Another phenomenon may affect both repeaters and authors of solitary bestsellers: fame for best-selling writers and their books can be remarkably short-lived. For every Daphne du Maurier, well remembered years after her death, there is a George Barr McCutcheon; for every *Peyton Place* there is a *Green Dolphin Street*. Decades ago Rex Beach and Fannie Hurst were household names, each with multiple bestsellers; someday Dean Koontz and Jackie Collins might have lapsed into obscurity. Again, this might be attributed to the popular nature of the bestseller; best-selling novels are frequently so topical and timely that they tend to become dated more rapidly than other fiction. They are rarely reprinted after the initial burst of popularity is over and slip easily from the public memory. Of course, on some occasions when the novel remains well known the author might not, so that everybody has heard of *Topper* but no one remembers Thorne Smith and everybody is familiar with *A Tree Grows in Brooklyn* while few recall it was written by Betty Smith.

Specific genres of books are more likely to become bestsellers and since the beginning of the bestseller lists, certain categories have dominated. Among the most common bestseller types are the historical novel, the *roman à clef*, the exposé novel, and the thriller.

The first best American bestsellers were long romantic novels that provided escapist reading to their audiences while appearing to be at least slightly educational; all were set in the past and most were set in Europe. Gradually American settings began to dominate, particularly the American frontier, but the historical novel has remained an extremely popular type of fiction and has changed relatively little since its earliest appearance. There is usually some romance at the

core, with complications that keep it from being resolved for hundreds of pages. The novel is often built around a significant historical event; the Civil War has been an especially popular setting. Great attention is given to detail and many historical novelists spend years researching an era before writing about it. Some variations of the historical novel would include the multi-generational saga, which follows a family for several decades and generations, such as Edna Ferber's *Cimarron*; the religious epic, such as Charles Sheldon's *In His Steps*, a fictionalized life of Christ that introduced the phrase "What would Jesus do?"; and the historical adventure, as seen in much of Kenneth Roberts's many fictional accounts of westward expansion.

Literally "book with a key," the roman à clef is a work of fiction that is obviously based on real people; the "key" is determining who was the inspiration for the novel. Obviously, for the book to be successful it has to be easy for the reader to guess who it is supposed to be about; it takes no great deductive ability to realize, for example, that the presidential widow in Jacqueline Susann's *Dolores* is based on Jacqueline Onassis. Harold Robbins is the most successful author of the roman à clef, having written about Harold Hughes (*The Carpetbaggers*), Lana Turner (*Where Love Has Gone*), and Hugh Hefner (*Dreams Die First*), among others. More literary examples of the roman à clef include two genuine bestsellers, Sinclair Lewis's *Elmer Gantry*, based on Billy Sunday and Aimee Semple McPherson; and Robert Penn Warren's fictionalized account of Huey Long, *All the King's Men*.

The exposé novel examines a major American institution and purports to tell readers exactly how it works; of course, these novels always contain copious amounts of sex and intrigue no matter how dull their subject matter might appear. Arthur Hailey's *Airport*, for example, presents a romantic triangle between a pilot, his wife, and his pregnant mistress (one of his flight attendants); a bomb on board the plane; and an emergency landing in a snowstorm. Hailey is the recognized leader of the exposé novel, having also written *Wheels*, *Hotel*, and *The Moneychangers*, among others. Some exposé novels have the added attraction of being written by someone who actually worked within the industry, giving them an insider's view which they presumably pass along to their readers. Joseph Wambaugh, the police officer turned author is perhaps the best known of these. It has become fairly common to hire a celebrity to use their name on an exposé novel, which is then written in collaboration with a more professional author, as was done with Ilie Nastase's *The Net* and model Nina Blanchard's *The Look*.

Ever since *The Hound of the Baskervilles*, mysteries and suspense novels of some sort have been common on the list. It was not until the publication of John LeCarre's *The Spy Who Came in from the Cold* in 1964, however, that publishers recognized thrillers as a popular fiction form. Thrillers can be distinguished from mysteries by the fact that there is no puzzle to solve; the appeal of the novel lies in waiting to see what will happen to the characters. Crime novels like those of Elmore Leonard (*Get Shorty*) are frequently categorized as thrillers, but so are courtroom novels like John Grisham's *The Firm* and Scott Turow's *Above Suspicion*; technology based works like Tom Clancy's *The Hunt for Red October*; Lawrence Sanders's (*The First Deadly Kiss*) and Thomas Harris's (*Silence of the Lambs*) dissections of serial murder; and war novels like Len Deighton's *Bomber*.

Beginning in the 1970s there were fewer privately owned publishing houses; many have merged and some have been bought buy larger conglomerates. Bestsellers are now seen as part of a

corporation's synergy; that is, a best-selling novel is part of a package that includes movie and/or television adaptations. Television in particular has proven an avid customer for adaptation rights; as fewer bestsellers are made into motion pictures, the television medium, which can provide longer running times that presumably allow more faithful adaptations, has produced hundreds of made for television movies and mini-series from best-selling novels. Television's interest in the bestseller can be traced to ABC's highly regarded production of Irwin Shaw's *Rich Man, Poor Man* in 1976. Given the variety of businesses that may now be contained under one corporate umbrella, it is not uncommon for one conglomerate to publish a book in hardcover, publish the paperback edition as well, and then produce the film or television adaptation. In fact, many publishing houses take such a possibility into consideration when reviewing manuscripts.

The most popular works within any society would not necessarily be its best; nevertheless, the reading habits of the American public say much about its culture. If Irving Wallace, Mario Puzo, Janet Daly, and Leon Uris are not the greatest authors of the twentieth century, they have still provided millions of readers with a great deal of pleasure. The best-selling novel might better be evaluated not as a work of literature but as a significant cultural byproduct, an artifact that reveals to subsequent generations the hopes and concerns of the past.

Better Homes and Gardens

Taking on a snazzy new style, establishing its own website, and accentuating the acronym *BH&G* can not alter entirely the role that *Better Homes and Gardens* has played in constructing American ideals of domesticity, home life, and gender roles throughout the twentieth century. In 1913, Edwin T. Meredith introduced the idea of a new magazine within an advertisement contained in his magazine, *Successful Farming*. The small, discreet ad titled "Cash Prizes for Letters about Gardening" also made a simple request of readers: "Why not send fifty cents for a year's subscription to 'Garden, Fruit and Home' at the same time?" In truth no such magazine yet existed; nor would it be published until 1922. Meredith began publishing *Fruit, Garden and Home* before altering the name in 1924 to *Better Homes and Gardens*. By facilitating the dialogue that has constructed the ideal of housing, *Better Homes and Garden* helped to define exactly where home and life come together in the American experience.

The impermanence of American life, of course, befuddled many observers from the nation's outset. Alexis de Tocqueville wrote in the 1830s that "in the United States a man builds a house in which to spend his old age and he sells it before the roof is on. . . ." A great deal of interest and attention was paid by upper and upper-middle-class

Americans in the later 1800s to create traditions for civility, taste, and permanence—literally, to construct cultural ideals. One of the earliest “taste makers,” Andrew Jackson Downing, introduced many Americans to landscape architecture and gardening through his writings. The periodical that he edited, *The Horticulturalist*, helped to initiate an American tradition of popular magazines and journals helping to perfect designs of the prototypical American home.

Similarly, an entire genre of magazines would appeal directly to women of privilege, most of whom were not employed. From 1840 through the end of the nineteenth century, *Godey's Lady's Book* defined the habits, ideals, and aspirations of many Victorian women. Such general interest magazines helped to define the era, but had more to do with constructing femininity than with the American home. Magazines such as *Better Homes and Gardens* helped to merge the women's magazine with practical publications specifically concerned with home design. This bond, of course, would shape the role of the modern “housewife” into that of the domestic manager. The ideal that emerges from this union is referred to by many scholars as the “Cult of Domesticity,” which helps make *BH&G* one of the most popular magazines in America throughout the twentieth century.

BH&G helped define a national dialogue on home life through a combination of informative articles, basic cooking techniques, and contests that helped to rally the interest of readers. The first home plan design contest was first published in 1923 and, most importantly, the “Cook's Round Table” that began in 1926 would become the longest-running reader-driven contest in publishing history. This would later become part of *BH&G's* test kitchen and what became known as “Prize Tested Recipes.” *BH&G* experimentation is attributed with introducing the American palate to tossed salad (1938) and barbecue cooking (1941) among many innovations. Published throughout World War II, the magazine even altered its recipes to cope with shortages of eggs, butter, and other foods.

These contests and recipes, however, were only a portion of the new domestic stress that *BH&G* fostered in the American public. The ideal of home ownership that can be found in the ideas of Thomas Jefferson and others began in the pages of the magazine in 1932 with the introduction of the *BH&G* building plan service. The marketing of building plans had taken place since the late 1800s; however, *BH&G's* service grew out of new governmental initiatives. Following data that revealed that only 46 percent of Americans owned homes in the 1920s, Secretary of Commerce Herbert Hoover's “Own Your Home” campaign combined with efforts by the Bureau of Standards to stimulate home building while also modernizing American building practices. Better Homes in America, Inc. fulfilled Hoover's goal of voluntary cooperation between government and private enterprise for the public good. Formed in 1922, the organization soon had branches in over 500 communities.

Such groups worked with *BH&G* to permanently alter American ideas of domesticity. By 1930 there were 7,279 Better Homes committees across the country. During national Better Homes Week (usually the last week in April), each local committee sponsored home-improvement contests, prizes for the most convenient kitchen, demonstrations of construction and remodeling techniques, and lectures on how good homes build character. The demonstration house was the highlight of the week. Most communities built a single model residence, with donated materials and labor. Obviously, a national institution had been created and the private sector, through *Better Homes and Gardens*, would be responsible for perpetuating the jump start that the federal government had offered to systematizing and organizing American home design and construction.

BH&G and the Better Homes movement in general provided the essential conduit through which the dynamic changes in building could be channeled. While much of this movement was intended for the homeowner who was building his own house, the organization would also be instrumental in the evolving business organization of home development. Specifically, land developers who were constructing vast housing tracts would work with Better Homes to establish the guidelines that would form the standard suburban home. Each constituency had a stake in establishing “Safe Guards Against Incongruity.” At times the Better Homes forum would also be complicit in discussing the social organization of the evolving housing development, which would often restrict race and ethnicity through restrictive covenants and deed restrictions. *BH&G* would not be complicit in such restrictions, however, it would become active in the sales end of housing. After first considering a line of related restaurants, hotels, and insurance companies in 1965, Meredith launched Better Homes and Gardens Real Estate Service in 1975. It has grown to be one of the nation's largest real estate services.

In order to make certain of this continued popularity, the magazine's logo was lent to popular instructional books for many home improvement tasks as well as to cookbooks as early as 1930. This, however, was only the beginning of the better home informational empire: by the late 1990s a television network and many hours of programming and videos would offer techniques and pointers on home design, repair, as well as on cooking and personal relations. The magazine's involvement in homemaking reminds one of aggressive, corporate expansion that attempts to dominate every facet of an endeavor. In this case, homemaking truly has become an industry of such massive scale and scope. *BH&G* continued to influence American home life from finding a home, redecorating it, maintaining it, and, finally, to selling it at the end of the twentieth century.

Betty Boop

Betty Boop, the first major female animated screen star, epitomized the irresistible flapper in a series of more than one hundred highly successful cartoons in the 1930s. From her debut as a minor character in the 1930 *Talkartoons* short feature “Dizzy Dishes,” she quickly became the most popular character created for the Fleischer Studio, a serious animation rival to Walt Disney. Unlike Disney's *Silly Symphonies*, which emphasized fine, life-like drawings and innocent themes, the Fleischer films featuring Betty Boop were characterized by their loose, metamorphic style and more adult situations designed to appeal to the grown members of the movie-going audience. According to animation historian Charles Solomon, Betty Boop “was the archetypal flapper, the speakeasy Girl Scout

Betty Boop's depiction in balloon form in the Macy's Thanksgiving Day Parade in New York City.

with a heart of gold—already something of an anachronism in 1930.” Although her appearance rooted her to the Jazz Age, Betty Boop’s popularity remained high throughout the decade of the Great Depression, as she was animation’s first fully developed and liberated female character.

For a character that would come to personify overt female sexuality, the original version of Betty Boop created by animator Grim Natwick was a somewhat grotesque amalgamation of human and dog features. In her first screen appearance she was cast as a nightclub singer attempting to win the affection of then-Fleischer star, Bimbo, an anthropomorphized dog. Subsequent appearances reveal her gradual evolution into a fully human form. Her “French doll” figure was modeled after Mae West’s, and she featured a distinctive spit curl hairdo and a singing style inspired by popular chanteuse Helen Kane (“the Boop Boop a-Doop Girl”). Miss Kane, however, was outraged by the animated character and claimed in a 1934 lawsuit that the Fleischers had limited her earning potential by stealing her distinctive singing style. Although Betty Boop certainly is a caricature of Kane, the singer lost in her claim against the Fleischers after it was proven that a black entertainer named Baby Esther had first popularized the phrase “boop-oop-a-doop” years earlier. Actress Mae Questel provided Betty’s high-pitched New York twang for all of the character’s screen appearances, beginning in 1931.

Betty’s growing popularity prompted the Fleischers to promote their new female sensation to main character status and relegate the formerly top-billed Bimbo to the supporting role of Betty’s constant admirer. Betty’s femininity was repeatedly highlighted throughout her cartoon adventures, as her legs, busty frame, and frilly undies were displayed for the audience. Her personality was that of an innocent vamp who was not above lifting her skirt, standing in provocative poses, and batting her long eyelashes to achieve her goals. The series was also filled with humorous double entendres for adults that would generally pass over the heads of Betty’s younger fans. For all the sexual antics, however, Betty often displayed proto-feminist qualities. She was generally portrayed as a career girl, who had to fight off the advances of lecherous male characters. The issue of sexual harassment in the workplace is most strongly presented in 1932’s “Boop-Oop-A-Doop,” where she confronts a lewd ringmaster who demands her affection so that she may return to her job at a circus. By the cartoon’s end she firmly proclaims, “He couldn’t take my boop-oop-a-doop away!” The Fleischers even had Betty enter the male-dominated world of politics in *Betty Boop for President* (1932).

One of the most popular features of the Betty Boop cartoon series were her encounters with many of the most popular entertainment figures of the 1930s. At various times Cab Calloway, Lillian Roth, Ethel Merman, and Rudy Vallee all found themselves singing and dancing with the cartoon star. These appearances were designed to promote the recordings of the stars on the Paramount label, which also distributed the Betty Boop series. To further capitalize on the animated star’s success, Betty Boop soon appeared on hundreds of products and toys. In 1935 King Features syndicated *Betty Boop* as a Sunday comic strip, which toned down the character’s sexuality.

Betty Boop remained a popular character until the mid-1930s, when she fell victim to Will Hays and the Hollywood Production Code. The censor demanded Betty no longer be presented in her trademark short skirts and low tops. There were even claims that her “romantic relationship” with the dog Bimbo was immoral. The Fleischers responded by placing Betty in a more domestic setting and surrounding her with a more wholesome cast, including an eccentric inventor named Grampy and a little puppy called Pudgy. In several of these later cartoons Pudgy, not Betty, is the primary character. Ironically, a dog character reduced Betty’s role in the same manner she had replaced Bimbo years earlier. The final Betty Boop cartoon, *Yip, Yip, Yippy!*, appeared in 1939. However, Betty’s racy flapper persona had vanished sometime earlier and had been replaced by a long-skirted homemaker.

Betty Boop sat dormant until the mid-1970s when her cartoons began playing on television and in revival houses. Her increased visibility led to a resurgence of Betty merchandise in the 1980s and 1990s. In 1988, Betty made a brief appearance in the feature film *Who Framed Roger Rabbit?*, where she complained of her lack of acting jobs since cartoons went to color. Today, Betty Boop, remains a potent symbol of the Jazz Age and is considered a pioneer achievement in the development of female animated characters.

Betty Crocker

Betty Crocker, an invented identity whose face adorns the packaging of more than 200 food products manufactured by General Mills, is one of the most recognized icons in American brand-name marketing. Together with the trademarked red spoon logo, the Betty Crocker brand name is found on many cake mixes and dessert products, main courses like Hamburger Helper and scalloped potatoes, and snacks like microwave popcorn and chewy fruit items. The Betty Crocker brand name accounts for over \$1.5 billion each year, which is nearly thirty percent of annual sales for General Mills.

The name originated in 1921 when Washburn Crosby Company, as General Mills was then known, sponsored a jigsaw-puzzle contest and found that the entrants, mostly women, wanted more information about baking. The two most significant factors behind the creation of the Betty Crocker name, according to a General Mills document, “were the philosophy and doctrine of sincere, helpful, home service and the belief that the company’s Home Service contract with homemakers should be personalized and feminized.”

The choice of “Betty Crocker” as a name for General Mills Home Services Activities is attributable to then advertising manager, James A. Quint. “Betty” was considered a friendly nickname while “Crocker” was used as a tribute to retired company director and secretary, William Crocker. The name suggests a particular lifestyle involving a woman who is a traditional, suburban, all-American mother and who takes special care in her cooking and of her family. Although the face was altered slightly over the years from a more matronly to a younger image, the familiar face still reinforces a strong visual image over several generations. To many, Betty Crocker reminds them of childhood memories of Mom baking in the kitchen or an idealized childhood including that nurturing image.

Betty Crocker has over the years created a trustworthy reputation as the First Lady of Food. She receives millions of letters and phone calls and is listed as the author of several bestselling cook books. Her weekly advice column appears in more than 700 newspapers throughout the United States, and in the 1990s she acquired her own website, which includes recipes from ingredients provided by users as well as personalized weekly menu plans and household tips.

The Betty Crocker name has been affiliated with food products since 1947. Her pioneering cake mix was called Ginger Cake, which has now evolved into Gingerbread Cake and Cookie Mix. Since then, the name has been licensed to several types of food products as well as to a line of cooking utensils, small appliances, and kitchen clocks. In the 1990s, General Mills leveraged this brand in the cereal market by introducing Betty Crocker Cinnamon Streusel and Dutch Apple cereals, with packaging primarily designed to attract dessert lovers.

Even as Betty Crocker strides into the new millennium, she continues to leverage her past history by successfully practicing the art of retro-marketing. Betty’s Baby Boomer constituents have lately inquired about “nostalgia foods” such as “Snickerdoodles,” “Pink Azalea cake,” and “Chicken A la King,” to name a few. In 1998, General Mills published a facsimile edition of the original *Betty Crocker’s Picture Cook Book*, first published in 1950.

Beulah

The first television network series to star an African American, *Beulah* ran on ABC from October 3, 1950 until September 22, 1953. The comic black maid had her beginnings on the 1940s radio series *Fibber McGee and Molly* where she was originally played by a white male actor. The African American Oscar winner, Hattie McDaniel, took over the role when *Beulah* was spun off onto her own radio show. The popular series then moved to the fledgling television medium with a new black actress playing *Beulah*, the noted singer, stage, and screen performer Ethel Waters. Waters left the series after two years and was briefly replaced by McDaniel. Illness forced her to leave the series, and another black actress famous for playing maids, Louise Beavers, took the role in the show’s last season. The series followed the gently comic adventures of *Beulah*, her marriage-resistant male friend, Bill, the Henderson family whom *Beulah* served, and *Beulah*’s feather-brained friend, also a black maid, Oriole (played first by Butterfly McQueen, then Ruby Dandridge). Debuting a year before the more famous black comedy *Amos ’n’ Andy*, *Beulah* did not generate the other series’ enormous controversy, despite the stereotyped representations of black servants whose lives revolve around their white superiors. In 1951, however, when the NAACP (National Association for the Advancement of Colored People) launched a highly publicized protest against the *Amos ’n’ Andy* television show, the civil rights lobby group included *Beulah* in its condemnation. The series left the air the same time as *Amos ’n’ Andy*.

—Aniko Bodroghkozy

The Beverly Hillbillies

One of the most durable television sitcoms and one of the most successful of the popular rural comedies at CBS during the 1960s, *The Beverly Hillbillies* (1962-71) has withstood critical disdain and become a favorite with viewers in reruns. *The Beverly Hillbillies* is the old story of city slicker versus country bumpkin, of education versus wisdom; and though the laughs are at the *Hillbillies*’ expense, in the end they almost always come out on top despite their lack of sophistication. This simple account of simple country folk at odds with city folk hit a nerve in the country and was reflected in a number of other shows of the era, including fellow Paul Henning productions *Petticoat Junction* and *Green Acres*. *The Beverly Hillbillies* premiered to a critical blasting and yet within a few weeks was at the top of the ratings and remained popular for the length of its run.

In the theme song we learn the story of Jed Clampett (Buddy Ebsen), a mountain widower. One day, while hunting for food, Jed comes across some “bubbling crude” on his land: “Oil, that is, black gold, Texas tea.” Jed sells the rights to his oil to the OK Oil Company

The Beverly Hillbillies (clockwise from bottom left): Buddy Ebsen, Donna Douglas, Irene Ryan, and Max Baer, Jr.

and becomes a millionaire. He is advised to move from the hills and go to California. Along with him he takes his mother-in-law, Granny (Irene Ryan); his daughter, Elly May (Donna Douglas); and his nephew, Jethro Bodine (Max Baer, Jr.). In California Jed's money is kept at the Commerce Bank, and along with the bank comes its president, Milburn Drysdale (Raymond Bailey), and his plain but smart assistant, Jane Hathaway (Nancy Kulp). Most of the interactions involve the Clampetts and the Drysdale/Hathaway team and occasionally Drysdale's snobby wife.

To keep a closer eye on his largest depositor, Drysdale arranges for the Clampetts to move into the mansion next to his house in Beverly Hills. Drysdale is obsessed with the fear that the family will move back to the hills along with their money, and he will do practically anything to assuage them and help them feel comfortable in their new home. This simple premise remains essentially unchanged through the bulk of the show's run. City life is not difficult for the rube man-child Jethro, who fancies himself a playboy or secret agent or movie producer and wants to keep his "hick" family from making him look bad. Elly May is the pretty tomboy who seems content to live in the city as long as she has her "critters." But crusty old Granny is not happy here, where she has lost her stature in society and she can no longer be the doctor, matchmaker, and keeper of wisdom. Most of the characters in *The Beverly Hillbillies* are caricatures and stereotypes of rich and poor. The only real exception is Jed Clampett, who alone seems to appreciate both sides.

The humor in this show comes from many sources. Initially, the jokes and obvious humor come at the expense of the Hillbillies. The

ragged clothes, the fascination with even the most ordinary aspects of everyday life (they assume the billiard table is for formal dining and that the cues are for reaching across the table), and odd customs and ideas about high society based on silent movies that reached their hometown. But just as funny are the city folk, like Mr. Drysdale and his transparent efforts to get them to stay, or Miss Jane and her proper and humorous look. *The Beverly Hillbillies* is at its best in showing how foolish modern-day life looks through the eyes of the transplanted country folk. Jed is the center and the speaker, pointing out those things that seem to not make sense, and upon reflection we can often agree. While this show is no work of high art or philosophy, and the story lines and situations are often ludicrous and sometimes downright foolish, it does an excellent job of entertaining with a basic backdrop and characters for thirty minutes. In the weeks following the assassination of President Kennedy, this show had four of its highest rated shows, and some of the highest rated shows of all time. It is likely not a coincidence that people would turn to a simple comedy in a time of crisis.

The Beverly Hillbillies was finally dropped in 1971 as part of the derationalization at CBS. Several members returned in the 1980s for a reunion television movie, and in the 1990s, this was one of many old television shows to be made into a theatrical movie with an all-new cast reprising the old familiar roles. Hipper, more urban, with less focus on caricature, we see an updating of the premise again in the early 1990s on the hit show *The Fresh Prince of Bel Air*—this time with a nephew from the ghetto streets of the east sent to live in the sun and opulence of Bel Air and again pointing out the foolishness of the so-called better life.

Beverly Hills 90210

Premiering in October 1990, television teen drama *Beverly Hills 90210* became a cultural phenomenon, both in the United States and abroad, and was the precursor to the deluge of teen-based dramas that were to dominate prime-time television in the late 1990s. The show helped to establish the new Fox Television Network, and was the first network to challenge the traditional big three—ABC, CBS, and NBC—for the youth audience.

The title of the program refers to the location of its setting, the posh city of Beverly Hills, California (zip code 90210). Produced by Aaron Spelling, the program focused on a group of high school students. The ensemble cast, featured Jason Priestly (twice nominated for a Golden Globe for Best Actor in a TV Series—Drama in 1993 and

The cast of *Beverly Hills 90210*.

1995), Shannon Doherty, Jennie Garth, Luke Perry, Tori Spelling, Ian Ziering, and Gabrielle Carteris. They were catapulted into the realm of teen idols (despite the fact that most were in their twenties), and their images graced publications and commercial products. Because of the setting, the program presented glamorous lifestyles and paid great attention to fashion, an aspect which was not lost on its audience, who followed clothing, music, and hairstyle trends.

Much of the show's appeal has been attributed to the story lines, which presented issues and concerns relevant to its teenage audience: parental divorce, eating disorders, learning disabilities, sexuality, substance abuse, and date rape. As the actors aged, so did their characters, and by the sixth season several were attending the fictitious California University, encountering more adult problems and issues. Although the show was praised for tackling such important, and often controversial, teen issues in a serious manner, many found the program problematic because it upheld narrowly defined concepts of physical beauty, presented a luxurious world of upper-class materialism, rarely included people of color, and constructed the problems presented in unrealistic terms.

Bewitched

In this innovative and immensely popular sitcom—it ranked in TV's top twenty-five all but two of its eight years on the air and was nominated for twenty-two Emmy awards—suburbia meets the supernatural in the guise of Samantha, television's most loveable witch. Played by the talented and genial Elizabeth Montgomery, Samantha is the all-American wife of Darrin Stephens, a hapless advertising executive who asks his wife to curb her witchery in the interest of having a normal life together. Originally broadcast from 1964 to 1972, on the surface *Bewitched* seemed like simply another suburban

The stars of *Bewitched*, (l-r) Elizabeth Montgomery, Dick Sargent, and Agnes Moorehead.

sitcom, but in fact it captured the mood of the nation in dealing with a “mixed marriage” between a witch and a mortal, as well as the difficulties faced by a strong woman forced to subdue her powers for the sake of her marriage. A quarter of a century later, *Bewitched* remains a pop culture favorite, a nostalgic take on the 1960s that has remained surprisingly hip.

Bewitched was borne of the marriage of actress Elizabeth Montgomery and award-winning television director William Asher. The couple met and fell in love in 1963, when Elizabeth starred in Asher’s film, *Johnny Cool*, and they were married shortly thereafter. Suddenly, Montgomery—an Emmy nominee and a veteran of more than 200 television programs—began talking about retiring in order to raise a family. But Asher felt his wife was too talented to bow out of show business and suggested that they work together on a television series. When Elizabeth enthusiastically agreed, their search for the right property began.

Asher, an Emmy-award-winning director of *I Love Lucy*, forged an agreement with ABC, who forwarded him a script which had been written for Tammy Grimes. *The Witch of Westport* took as its premise a marriage between a witch and a mortal. Asher and Montgomery both liked the script and, with Grimes committed to a Broadway play, the couple worked to transform the series into a show suited to Montgomery’s talents and sensibilities, by increasing the comedic

elements and losing a lot of what they felt was stereotypical witchery and hocus pocus.

The Ashers shot the pilot for their new series, which they called *Bewitched*, in November, 1963. But when ABC saw the show, the network feared that in airing a show about the supernatural they risked losing both their sponsors and their audiences in the Bible Belt. But after Asher personally flew to Detroit to secure Chevrolet’s backing, ABC greenlighted *Bewitched* for their 1964 fall lineup.

From the start, *Bewitched* was a huge hit, climbing to number two in the ratings in its very first season. Much of the show’s success was due to the superb ensemble cast of top-notch actors delivering superb comic acting. With Elizabeth Montgomery as Samantha, Dick York (later Dick Sargent) as Darrin, and veteran actress Agnes Moorehead as Samantha’s meddling mother, Endora, at its core, the cast also featured David White as Darrin’s troublesome boss, Larry Tate; George Tobias and Alice Pearce (later Sandra Gould) as the nosy-next-door-neighbor Kravitzes; the inimitable Paul Lynde as Uncle Arthur; the hysterical Marian Lorne as bumbling Aunt Clara; and the great English actor, Maurice Evans, as Samantha’s father.

As Herbie J. Pilato writes in *The Bewitched Book*, “Each episode . . . is a new misadventure as Sam (as she’s affectionately known to Darrin) tries to adapt her unique ways to the life of the average suburban woman. Learning to live with witchcraft is one

thing, but Endora's petulant dislike of her son-in-law (due to his eagerness to succeed without witchcraft) is the story conflict that carried the sitcom through its extensive run. This dissension, coupled with the fact that Samantha and Darrin love each other in spite of their differences, is the core of the show's appeal."

Unquestionably, the star of the show was Elizabeth Montgomery, a gifted actress whose dramatic and comedic acting abilities made her immensely attractive to TV audiences of both sexes and all ages. The daughter of movie star Robert Montgomery, Elizabeth had been a professional actress since her teens, with many credits to her name. But *Bewitched* made her both a television star and a pop culture icon. Capitalizing on his wife's unconscious habit of twitching her upper lip, William Asher created a magical nose twitch by which Samantha, with a mischievous glint in her eye, cast her spells. Though fans loved the show's magic, Samantha's supernatural powers were never overused. As Montgomery herself would later remark, "If you have a weapon, be it a gun, witchcraft, or sharp-tongued wit, you recognize it as something you rely on. But your principles are such that you do not pull out the big guns unless you really have to. There's a certain dignity to Samantha's decision to hold back on her power. . . . It had to do with Samantha's promise to herself and to Darrin of not using witchcraft . . . her own self-expectations and living up to them."

Audiences quickly came to adore Samantha and to eagerly await the use of her powers. And they identified with the character, seeing her as an outsider in mainstream society, trying to do her best to fit in. The appeal of Montgomery, as a beautiful and talented woman who wasn't afraid to be funny, carried the show, and Montgomery attracted a large and loyal fan following.

Although most episodes centered around the Stephens' household and Darrin's advertising office, among the most popular shows were those featuring magical incarnations in the form of animals or famous people from history, such as Leonardo da Vinci or Julius Caesar. Other popular episodes included Darrin and Samantha's baby daughter, Tabitha, a little witch played by twins Erin and Diane Murphy.

A television fixture throughout the Sixties, *Bewitched* finally dropped out of TV's top twenty-five in 1970 when Dick York left the show, forced into early retirement because of a chronic back injury. Although the chemistry between Montgomery and York's replacement, Dick Sargent, was superb, audiences didn't warm to the casting change. As more cutting-edge sitcoms like *All in the Family* hit the airwaves in the early 1970s, *Bewitched* no longer seemed so innovative, and Montgomery decided to call it quits.

Although *Bewitched* went off the air in 1972, it soon found its way into syndication, where it became a perennial favorite, until moving to the immensely popular Nick at Nite cable lineup, where it is a permanent feature of their prime-time lineup. Now, more than twenty-five years since the last episode was filmed, *Bewitched* continues to enchant audiences with its winning blend of award-winning sitcom humor and its wry look at suburban American culture.

Bicycling

Although most Americans in the twentieth century associate bicycles and bicycling with children, Europeans, or fitness buffs, a bicycle craze among adults swept the United States in the late 1880s and 1890s that stimulated much excitement and new ways of thinking about transportation. Capitalists created a thriving and valuable bicycle manufacturing industry and a well-developed trade press, as leaders of substantial influence emerged and the industry made rapid advances in design and technology. Major pioneers in aviation (the Wright brothers) and the automobile industry (Henry Ford) got their start as bicycle designers and mechanics, applying their expertise to new motorized forms of transportation.

The early industry gained its footing in the late 1870s when Colonel Albert Pope, a successful Boston industrialist, converted an old sewing machine factory into a bicycle plant. Pope set about building an empire, hiring skilled machinists and die makers to craft interchangeable parts, enabling him to make his high-wheel bicycles for a mass market. Pope also founded the leading bicycle publication, *Outing*, in 1882. The industry became embroiled in a series of bitter legal battles over patent rights in the mid-1880s, but in 1886 everything changed with a major innovation in bicycle design from Europe: the "safety" bicycle. The new style introduced chain-driven gearing, allowing inventors to replace the dangerous high-wheel design with two equally sized wheels and the now-standard diamond frame. These changes significantly increased the safety of bicycles without sacrificing speed, thus creating a much larger market for bicycles. After 1886 prices fell, democratizing what had once been an elite sport. Bicycle clubs sprouted, and the nation developed bicycle fever. Sales soared as comfort and speed improved, reaching a peak in 1897 when about three thousand American manufacturers sold an estimated two million bicycles.

The popularity of bicycles in the 1890s engendered heated debates over the decency of the fashionable machines. Advocates catalogued their benefits: economic growth, the freedom of the open road, a push for improved roads, increased contact with the outdoors, and the leveling influence of providing cheap transportation for the workingman. Critics, however, attacked bicycles as dangerous (because they upset horses), detrimental to the nervous system (because riding required concentration), and antithetical to religion (because so many people rode on Sundays). In addition, many critics questioned the propriety of women riding bicycles. Particularly scandalous to the skeptics was the tendency of women cyclists to discard their corsets and don bloomers in place of long skirts, but censors also reprimanded courting couples for using bicycles to get away from parental supervision and criticized women's rights advocates for emphasizing the emancipatory qualities of their machines.

By the turn of the century the bicycle craze abated and, despite an urban indoor track racing subculture that persisted until World War II using European imports, bicycles survived for a number of decades primarily as children's toys. The quality of bicycles, which found their major retail outlets between 1900 and 1930 in department stores, deteriorated substantially. Then, in 1931, the Schwinn bicycle company sparked a minor revolution in the industry by introducing the balloon tire, an innovation from motorcycle technology that replaced

one-piece inflatable tires with an outside tire coupled with a separate inner tube. The strength and comfort of these new tires could accommodate much heavier, sturdier frames, which could better withstand the use (and abuse) of children riders. Taking a cue from the 1933 Century of Progress Exposition in Chicago, a showcase for Art Deco styling, Schwinn inspired more than a decade of streamlined bicycles—and innumerable suburban childhood dreams of freedom and exhilaration—with its 1934 Aerocycle. Bicycle design changed again slightly in the mid-1940s when manufacturers began to capitalize on the baby boom market. Following the practice of the automobile industry, bicycle designers created their own version of planned obsolescence by styling bicycles differently to appeal to different age groups.

Beginning in the mid-1950s and early 1960s, bicycles again became popular among adults, this time as a healthy form of exercise and recreation. A turning point came in September of 1955, when President Dwight Eisenhower suffered a heart attack. His personal physician, Dr. Paul Dudley White, happened to be an avid cyclist who believed that bicycling provided significant cardiovascular benefits. When he prescribed an exercise regimen featuring a stationary bicycle for the president, the ensuing publicity generated a real, if small, increase in bicycling among adults. Small local racing clubs in California kept the idea of cycling as adult recreation alive through the 1950s, but not until the exercise chic of the 1960s spread from the West Coast to other parts of the country did adult bicycles become a significant proportion of all sales. Bicycle manufacturers responded by introducing European-style ten-speed gearing, focusing on racing, touring, and fitness in their marketing. The popularity of bicycling made modest gains through the 1970s and 1980s as racing and touring clubs gained membership and local bicycle competitions became more common around the country, including races called triathlons that mixed running, bicycling, and swimming.

Beginning in the early 1980s, a new breed of bicycles called “mountain bikes”—sturdy bicycles designed with fat, knobby tires and greater ground clearance for off-road riding—overtook the adult market with astonishing rapidity. The new breed of bicycles first reached a mass market in 1981, and by 1993 sales approached 8.5 million bicycles, capturing the large majority of the United States market. Earning substantial profits from booming sales, designers made rapid improvements in frame design and components that made new bicycles appreciably lighter and more reliable than older designs. Off-road races grew in number to rival the popularity of road racing, and professional races gained corporate sponsorship through the 1980s and 1990s. Somewhat ironically, however, only a small percentage of mountain bike owners take their bicycles off-road. Buyers seem to prefer their more comfortable, upright style compared to road racing machines, but use them almost exclusively on paved roads for exercise and eco-friendly short-distance transportation.

The Big Apple

Among the great cities in the world—Paris, Chicago, or New Orleans, for example—none is better known by its nickname than New York City, “The Big Apple.” Paris may be “The City of Lights,” Chicago “The Windy City,” and New Orleans “The Big Easy,” but just mention “The Big Apple” and America’s metropolis immediately comes to mind. New York is the nation’s financial center, an entertainment, theater, and news capital, and the heart of the fashion and publishing industries. “The Big Apple,” meaning the biggest, best, and brightest, seems to fit quite nicely.

A number of theories exist regarding the origin of New York’s nickname. Some say it began as a term used in Harlem in the 1930s, meaning the biggest and best. Others have traced it to a dance craze called The Big Apple. The Museum of the City of New York found evidence in *The City in Slang*, a book published in 1995, of an earlier appearance. According to that book, a writer, Martin Wayfarer, used the term in 1909 as a metaphor to explain the vast wealth of New York compared to the rest of the nation. Wayfarer is cited as saying: “New York [was] merely one of the fruits of that great tree whose roots go down in the Mississippi Valley, and whose branches spread from one ocean to the other . . . [But] the big apple [New York City] gets a disproportionate share of the national sap.”

The term gained popularity in the 1920s after John J. FitzGerald, a newspaperman who wrote about horse racing, heard stable hands at a New Orleans track refer to the big-time racetracks in New York state as the Big Apple. FitzGerald called his racing column “Around the Big Apple,” which appeared in the *New York Morning Telegraph*. According to the Museum of the City of New York, FitzGerald’s February 18, 1924 column began: “The Big Apple. The dream of every lad that ever threw a leg over a thoroughbred and the goal of all horsemen. There’s only one Big Apple. That’s New York.”

Throughout the 1930s and 1940s, musicians used the term to make the point that when they played in New York, they were playing in the big time, not small-town musical dates. Later, the term fell somewhat out of favor. In the 1970s, however, when the city was suffering financial problems, in an act of boosterism the New York Convention and Visitor’s Bureau revived the term. Charles Gillett, the president of the convention bureau, started a promotional campaign by getting comedians and sports stars to hand out little red “Big Apple” lapel pins. The symbol caught on and The Big Apple theme was established.

As for racing writer FitzGerald, his recognition for contributing to The Big Apple legend came in 1997 when New York City’s Historic Landmarks Preservation Center placed a plaque on the corner where FitzGerald had lived, West 54th Street and Broadway. The plaque bore the name “Big Apple Corner.”

Big Bands

The Big Band Era (roughly 1935 to 1945) witnessed the emergence of jazz music into the American mainstream at a time, according to *Metronome* magazine in 1943, “as important to American music as the time of Emerson and Thoreau and Whitman and Hawthorne and Melville was to American literature.” Big band music evolved from the various forms of African American music—blues, ragtime, and dixieland jazz—performed by black and white musicians such as Bessie Smith, Buddy Bolden, Jelly Roll Morton, Scott Joplin, W.C. Handy, and the Original Dixieland Jazz Band (ODJB). The frenetic, chaotic, and spontaneous nature of 1920s jazz influenced the large orchestras, like Paul Whiteman’s, that specialized in dance music. Four- and five-piece Dixieland bands became ten-piece bands such as Fletcher Henderson’s, and eventually the twenty piece bands of Benny Goodman and Duke Ellington. The music not only marked a synthesis of rural African American music and European light classical music, but its widespread acceptance expressed the larger national search for a uniquely American culture during the Great Depression and World War II.

In the early decades of the twentieth century, popular music was dominated by theatrical music, minstrel shows, and vaudeville, produced primarily in New York City’s Tin Pan Alley. The music

followed typical European conventions of melody, harmony, tone, and rhythm, with melody receiving priority over all else. Even minstrel shows conformed to these conventions of western music despite their claims to represent African American culture. Emphasis on the melody was reinforced by the preferential status of lyrics in Tin Pan Alley music. Both elements lent themselves well to the fact that this music was primarily sold as sheet music for individual home use. Simple melodies and arrangements with clever and timely lyrics did not depend on a specific type or quality of performance for their appreciation or consumption. As recorded music and radio broadcasts became more widespread and available, emphasis shifted to the specific character and quality of musical performance and to the greater use of popular music in social dancing, which had previously been relegated to the elite realm of ballroom dancing or the folk realm of square dancing and other folk dancing forms.

At the same time that the central characteristic of popular music shifted from composition to performance, African American music gained in exposure and influence on popular music. The first adaptations of black music to European instrumentation and form occurred in New Orleans as black musicians began playing a version of spirituals and field hollers on European band instruments such as trumpets and clarinets. Integrating marches into black music, and emphasizing improvisation over arrangement, jazz music developed

into three distinct forms, the blues (the form most closely aligned with traditional African American music), dixieland (marching band instruments performing polyphonic, improvisational music), and ragtime (a more structured version of dixieland for piano). Each of these musical styles did enjoy a measure of popularity, but mainly in watered-down form such as the Tin Pan Alley practice of “ragging” a song, best exemplified by Irving Berlin’s “Alexander’s Ragtime Band” (1911).

With World War I, and the military’s forced closure of Storyville, the official red light district of New Orleans where many jazz musicians found employment, jazz music moved to other urban areas such as Kansas City, Chicago, New York, and Los Angeles. As jazz music spread, the audience for jazz increased, encompassing a young white audience searching for music more dynamic than theatrical music, in addition to a larger black audience. This younger audience also favored music for dancing over home performances or staged performances and therefore appreciated the largely instrumental and rhythmic nature of jazz. With this growing audience, bands grew to include sections of instruments instead of the traditional dixieland arrangement of four or five soloists. Louis Armstrong and Fletcher Henderson pioneered the larger band format by creating multiple trumpet and trombone parts, as well as multiple reeds (clarinet, alto, and tenor saxophones) and rhythm parts. In 1924, Henderson’s pathbreaking Roseland Ballroom Orchestra consisted of eleven players, including Coleman Hawkins, Don Redman, and Louis Armstrong. In 1927, the upscale Harlem nightclub, the Cotton Club, hired Duke Ellington and his band; Ellington created an orchestra and jazz style with his own compositions, arrangements, and direction. Ellington’s Cotton Club Orchestra reached an avant-garde white audience and sparked the careers of other black bands as well as the creation of white bands playing jazz music, such as Benny Goodman’s.

In August of 1935, Benny Goodman ushered in the “Swing Era” when he ended a national tour with his band at the Palomar Ballroom in Los Angeles. After receiving only lukewarm responses from audiences across the country, Goodman filled the final show of the tour with “hot” arrangements by Fletcher Henderson, as opposed to the more “acceptable” dance tunes of other orchestras. The young L.A. audience went crazy over the music and by the time Goodman returned to New York in 1936 he had been named “The King of Swing.” The early 1930s had been hard times for jazz musicians since many civic leaders, music critics, and clergy cited the “primitive” nature of jazz music as part of the cultural decline responsible for the Great Depression. Selective use of jazz idioms, such as George Gershwin’s symphonic piece “Rhapsody in Blue” (1924) and opera “Porgy and Bess” (1935), did gain respectability and praise for creating a uniquely American musical language, but “pure” jazz, even played by white musicians, was unacceptable. This thinking changed with the success of Benny Goodman and several other newly formed bands such as the Dorsey Brothers (with Glenn Miller as trombonist and arranger), Charlie Barnet, Jimmy Lunceford, Chick Webb, and Bob Crosby.

While live performances were the mainstay of big bands, many were able to increase their audiences through radio shows sponsored by companies eager to tap the youth market. Camel Cigarettes sponsored Benny Goodman and Bob Crosby; Chesterfield sponsored Hal Kemp, Glenn Miller, and Harry James. Philip Morris sponsored Horace Heidt; Raleigh sponsored Tommy Dorsey; Wildroot Cream Oil presented Woody Herman; and Coca-Cola sponsored a spotlight show featuring a variety of bands. Juke boxes also provided a way for

young people to access the music of the big bands, in many cases outside of parental control. Even movie theaters, searching for ways to increase declining depression audiences, booked bands which usually played after several “B” movies. In both dance halls and auditoriums, big bands attracted screaming, writhing crowds, who not only danced differently than their parents, but started dressing differently, most notably with the emergence of the Zoot suit. As big band music became more popular and lucrative, organized resistance to it declined, although it never disappeared. Respectability came in 1938 with the first appearance of a swing band at Carnegie Hall in New York, the bastion of respectable classical music. Benny Goodman and orchestra appeared in tuxedos and performed, among other songs, the lengthy and elaborate, “Sing, Sing, Sing,” which included drum solos by Gene Krupa.

The success of these bands, which usually featured about a dozen or more players along with vocalists, allowed band leaders to experiment with more jazz-influenced arrangements and longer sections of improvised solos between the highly arranged “riffs” and melodies. The music was still primarily for dancing, and the youthful audience demanded a more upbeat music to accompany its newer, more athletic style of jitterbug dancing, like the “Lindy Hop,” named for record-breaking pilot Charles Lindbergh. The *New York Times*, in 1939, recognized this new music as a form of music specifically representative of a youth culture. “Swing is the voice of youth striving to be heard in this fast-moving world of ours. Swing is the tempo of our time. Swing is real. Swing is alive.” Lewis A. Erenberg in *Swingin’ the Dream: Big Band Jazz and the Rebirth of American Culture*, sees swing music as an expression of youth culture which connects the youth culture of the 1920s to that of the 1950s. Not only did swing music and the big bands reinforce a new expressiveness among American youth, but big bands also crossed the color line by bringing black and white audiences together and through integrating the bands themselves, as Benny Goodman did in 1936 when he hired Teddy Wilson as his pianist. Even though most sponsored radio was segregated, audiences listening to Goodman’s broadcast would often hear black musicians such as Lionel Hampton, Ella Fitzgerald, Count Basie, and Billie Holiday. In addition, remote broadcasts from Harlem’s Cotton Club, Savoy Ballroom, and the Apollo Theater, while not national, found syndication to a primarily young, white, late-night audience. Big band swing music was, according to historian David W. Stowe in *Swing Changes: Big-Band Jazz in New Deal America*, “the preeminent musical expression of the New Deal: a cultural form of ‘the people,’ accessible, inclusive, distinctly democratic, and thus distinctly American.” He further states that “swing served to bridge polarities of race, of ideology, and of high and low culture.” As the most popular form of music during the Depression and World War II, swing music took advantage of newly developed and fast-spreading technologies such as radio, records, and film (many bands filmed performances which were shown, along with newsreels and serials, as part of a motion picture bill). Much of its appeal to young people was its newness—new arrangements of instruments, new musical elements, new rhythm and tempo, all using the newest media.

The big bands consisted of four sections: saxophones, trumpets, trombones, and rhythm section, in addition to vocalists (soloists, groups, or both). The saxophone section usually consisted of three to five players on soprano, alto, tenor, and baritone saxophones and doubling on clarinet and flute. The trumpet and trombones sections each consisted of three or four members, and the rhythm section

consisted of piano, string bass, drums, and sometimes guitar. In most big band arrangements, sections played rhythmically unified and harmonically diverse parts. While one section played the melody, other sections would provide accented “riffs,” short musical motifs repeated by one section. Arrangements often introduced riffs, highlighting one after another, culminating in all the riffs being played simultaneously in a polyphonic climax. These arrangements mimic the form of dixieland jazz, but since sections instead of soloists were involved, the music had to be highly arranged and written and not improvised. White bands, such as Goodman, Miller, and Herman’s, became known for their elaborate arrangements in songs like “Sing, Sing, Sing,” “In The Mood,” and “Woodchoppers Ball.” Black Bands, such as Ellington, Cab Calloway, and Count Basie, became known for a more driving beat and greater use of improvisation in songs like, “Take the ‘A’ Train,” “Minnie the Moocher,” and “Taxi War Dance.”

In addition to bringing more jazz influences into mainstream American music, the big bands also developed some new techniques. Duke Ellington trumpeter Bubber Miley was the first horn player to place the working end of a plumber’s helper over his trumpet’s bell to create a “wah-wah” effect. Swing music also favored a “four-beat” style in which emphasis was placed on all four beats per bar, while older styles of jazz favored a “two-beat” style. By combining elements of theatrical Tin Pan Alley style music, dance music, and jazz, the big bands developed a music which was acceptable to a widespread audience, while integrating elements of African American culture into the American mainstream. Many jazz purists see the big band era as a time of jazzmen “selling out” to commercialism and a period of creative stagnation, especially in light of the development of bebop, cool jazz, and fusion music in the late 1940s, 1950s, and 1960s.

The swing era ended as a result of the effects of World War II on American society. The human toll of war dwindled the ranks of the big bands, with notable losses like the death of Glenn Miller during a concert tour for the troops. The end of wartime restrictions on recorded music, and new developments in recording technology, electric guitars, and radio led to the development of smaller groups and a greater emphasis on singers over musicians. The growth of the postwar baby boom generation created a market for music which, like the swing music of their parents, was reinvigorated with elements of African American music. Swing music, with the use of electric guitars and infused with a blues tonality, became rock and roll music.

Big band music has continued to attract an audience, not only in the United States, but around the world. Throughout the 1960s and 1970s, bands such as the Toshiko Akihoshi-Lew Tabackin continued to further the big band sound, while Stan Kenton integrated third-stream influences into his arrangements by adding strings, french horns, and various percussion instruments, and Maynard Ferguson incorporated jazz/rock fusion elements into his compositions. Big band swing music has enjoyed its greatest resurgence in the late 1990s with the newer, and mainly smaller, bands such as Big Bad VooDoo Daddy, Royal Crown Revue (“Hey Pachuco”), Cherry Poppin’ Daddies (“Zoot Suit Riot”), and Squirrel Nut Zippers. Former rockabilly guitarist Brian Setzer, of the Stray Cats, formed his own big band using the same instrumentation as the most popular big bands of the swing era, and scored a hit with Louis Prima’s “Jump, Jive, and Wail.”

Big Bopper (1930-1959)

Moderately famous during his lifetime, recording artist J. P. (Jiles Perry) Richardson, better known as the Big Bopper, gained lasting notoriety through his death in the airplane crash that killed Buddy Holly and Ritchie Valens near Mason City, Iowa.

Richardson was a successful disc jockey in Beaumont, Texas, and a locally known songwriter and performer when he was discovered by a Mercury Records producer. Half-spoken, half-sung recordings of “Chantilly Lace” and “The Big Bopper’s Wedding” made it to the Top 40 during 1958 (the former to the Top Ten), while other songs written by Richardson were recorded by more established artists.

He became a familiar fixture on rock and roll tours. It was during a midwestern tour that a chartered airplane carrying three of the headliners crashed shortly after takeoff on February 3, 1959, subsequently called “the day the music died” in Don McLean’s song “American Pie.”

Big Little Books

The 1932 debut of Big Little Books was an important harbinger of the direction marketing to children would take in the future. The first inexpensive books available for children, Big Little Books were a precursor to the comics and such series as the Golden Books. The books were sold in dime stores such as Kresge and Woolworth where children could purchase them with their own spending money.

The Whitman Company, a subsidiary of the Western Publishing Company of Racine, Wisconsin, published the books. The first of the Big Little Books was *The Adventures of Dick Tracy Detective*, which was published in 1932. Mickey Mouse, Donald Duck, Orphan Annie, Popeye, Buck Rogers, Don Winslow, and Tarzan were among the many additional heroes. The popularity of the books had other publishers, such as Saalfield Publishing, Engel Van Wiseman, and

Lynn Publishing, soon producing their own similar series. Approximately 508 Big Little Books were published between 1932 and 1949, but in the late 1930s the name changed to Better Little Books.

In pre-television days, Big Little Books provided the popular “action hero” and “girl” stories for school age children. Eventually the line was expanded to include retellings of classical literature such as *Little Women* and *The Three Musketeers*, cartoon characters from the popular funny papers, and even heroes and heroines taken from radio and movies, such as two books about Mickey Rooney. The books continued to be published into the 1970s, but, once comic books and other children’s book series had come onto the market, were never as popular as they had been in the 1930s and 1940s.

In the 1990s Big Little Books were considered a collector’s item. Because the printing sizes varied with individual titles, some are scarcer than others and therefore, more valuable. Another factor affecting their value is their condition. Among the most sought after are *The Big Little Mother Goose* and the Whitman-produced premiums from cereal boxes and other products.

The Big Sleep

In *The Simple Act of Murder* (1935) Raymond Chandler (1888-1959), one of America’s premier hard-boiled novelists, wrote of his detective hero, Philip Marlowe, “. . . down these mean streets a man must go who is not himself mean, who is neither tarnished nor afraid. The detective in this kind of story must be such a man. He is the hero; he is everything.” Unlike James M. Cain and other hard-boiled novelists of his time, Chandler was a romantic whose famous detective was a knight in slightly battered armor. Marlowe appears in Chandler’s four most famous novels, *The Big Sleep* (1939), *Farewell My Lovely* (1940), *The Lady in the Lake* (1943), and *The Long Goodbye* (1953) as well as several lesser known works. Philip Marlowe was a character made for Hollywood: street smart, wise cracking but ultimately an honorable man—a prototype for the American detective hero ever since. Several of Chandler’s stories, including *The Big Sleep*, were made into Hollywood movies, some more than once.

In *The Big Sleep* Marlowe is hired by wealthy General Sternwood to track down a blackmailer who is trying to extort money out of him with nude pictures of his daughter Carmen. From this rather simple beginning, Marlowe is led into a tangled world of sexual perversion, drug addiction, murder, and deceit. The plot of *The Big Sleep* is complex, leading Howard Hawks, the first and most successful of the filmmakers to adapt it for the movies, to say that he never did

understand who killed one of the characters—and when he telegraphed Chandler for clarification, Chandler himself was unable to provide a definitive answer.

The world of *The Big Sleep* has much in common with the world in other hard-boiled novels and films noir. It is a dark world full of violent and twisted men and women—often the most beautiful and charming are the most savage of all. Chandler’s description of Carmen Sternwood is instructive: “She came over near me and smiled with her mouth and she had little sharp predatory teeth.” Even Carmen’s father describes her as “a child who likes to pull the wings off flies.”

What sets Chandler apart from other hard-boiled writers is that his work has a moral center in the honorable Marlowe who always prevails in the end—beaten up, disappointed, and cynical, but at the heart of a universe which has a moral standard no matter how threatened it is. Other novels in this genre, like *Double Indemnity*, are less reassuring on this score.

Howard Hawks cast Humphrey Bogart, one of Hollywood’s most famous tough guys, as Marlowe. No one has played Marlowe as successfully as Bogart, who had a world weary face and a suitably sarcastic delivery on such classic Chandler lines as “I’m thirty-three years old, went to college once, and can still speak English if there’s any demand for it. There isn’t much in my trade.”

Hawks’ *The Big Sleep* (1946) is better realized than the Michael Winner version in 1978 which starred Robert Mitchum and is set not in California (where many hard-boiled novels and films are set, and from which they take their flavor), but in London of the 1970s. However, the main problem with Hawks’ version, which has generated a good deal of critical interest on its own, is that it ends with Marlowe and Vivian Sternwood falling in love; in the novel Marlowe is the archetypal loner—he must stand apart from the world and its corruption. In true Hollywood fashion this change was made to capitalize on the real world relationship between Bogart and Lauren Bacall, who was cast as Vivian (Bogart left his wife for the very young Bacall during this time, causing a mild Hollywood scandal). This fiscally motivated plot change, however, weakens the noir aspect of the film, and along with the changes which the censorship laws of the era demanded, makes it a far less disturbing experience than the novel.

In some ways *The Big Sleep* seems to be unpromising material for Hawks, who tended to make either action films or comedies. Unlike Fritz Lang and Billy Wilder, who came to film noir from the downbeat German Expressionist cinema of the 1920s, Hawks’ cinema is an optimistic one, filled with action, charm, sly humor, and characters who value professionalism and who are “good enough” to get a job done. Analyses of the adaptation of novels to films, however, often founder on arguments about the faithfulness of the adaptation. The film is a new work with virtues of its own and as David Thomson writes, Hawks’ version is vastly different than Chandler’s original in that it “inaugurates a post-modern, camp, satirical view of movies being about other movies that extends to the New Wave and *Pulp Fiction*.”

Bigfoot

The North American equivalent of the legendary "Abominable Snowman" or Yeti of the Himalayas, "Bigfoot," whether he exists or not, has been a part of American popular culture since the late 1950s, with isolated reports stretching back even earlier. Bigfoot, also known as "Sasquatch" in Canada, is the generic name for an

unknown species of giant, hair-covered hominids that may or may not roam the forests and mountains of the American Northwest and the Alberta and British Columbia regions of Canada. According to a synthesis of hundreds of eyewitness sightings over the years, the creatures are bipedal, anywhere between seven to nine feet tall (with a few specimens reportedly even taller), and completely covered in black or reddish hair. They appear to be a hybrid of human and ape characteristics. Also, they are omnivorous and usually solitary. On occasion, they leave behind enormous footprints (hence the name "Bigfoot"), measuring roughly between 16 and 20 inches. Cryptozoologists (those who study animals still unknown to science) hold out at least some hope that Bigfoot, hidden away in the last really undeveloped wilderness areas of North America, may yet prove to be a reality and not merely a folk legend.

Hairy hominids have been reported in nearly every state in the nation. However, classic American Bigfoot sightings are typically confined to northern California, Oregon, Washington, and Idaho. Additionally, sightings outside of this region often involve some paranormal or supernatural overtones; by contrast, the Pacific Northwest Bigfoot seems decidedly flesh and blood, if elusive. Advocates of Bigfoot's existence often begin by pointing back to Native American legends of human-like giants, such as the Wendigo of the Algonkians, in the forests of these regions. The alleged capture of a

small Sasquatch (or escaped chimpanzee) named “Jacko” as reported in the British Columbia newspaper the *Daily British Colonist* in 1884 marks the introduction of Bigfoot to the modern mass media age. In the first few years of the 1900s, a spate of published eyewitness reports of Sasquatches in Canada grabbed attention throughout the Northwest. During the 1930s, the popular British Columbian writer J.W. Burns wrote about a Sasquatch who was a giant, atavistic Indian. However, it was not until 1958 that newspaper accounts of large, human-like footprints discovered by a bulldozer operator named Jerry Crew near a construction site in Willow Creek, California, popularized the term “Bigfoot” for the rest of America. At approximately the same time, a man from British Columbia named Albert Ostman made public his story of being kidnapped and held captive for six days by a group of Sasquatches back in 1924. Ostman only managed to escape, he claimed, when the Sasquatches became sick on his chewing tobacco. Over the years, in spite of skeptical questioning by a number of renowned cryptozoologists, Ostman stuck to his seemingly incredible story.

With the explosion of Bigfoot into public awareness, a number of investigators took to the American northwest to find anecdotal or physical evidence of the existence of the unknown hominid species. Some of the most famous of these investigators were Rene Dahinden, John Green, and Ivan T. Sanderson. The decade of the 1960s was somewhat of a “golden era” in the hunt for Bigfoot, when the mystery was new enough to most Americans to capture widespread interest and just plausible enough for many minds to remain open on the subject. Literally hundreds of eyewitness reports were collected and published in the many popular books written by these investigators. One of the most dramatic of the reports described a terrifying nocturnal attack by “apemen” upon miners in a remote cabin near Mt. St. Helens back in 1924. (The story has since been discredited.)

But by far the most sensational—and hotly disputed—physical evidence of that period is the 28-second, 16-millimeter film taken in 1967 by Roger Patterson in the Bluff Creek area of the Six Rivers

National Forest in California. The film shows what appears to be a female Bigfoot striding away from Patterson’s camera. Patterson, accompanied by Bob Gimlin, had taken to the woods in a specific attempt to find and photograph the elusive Bigfoot—a fact which was not lost upon the film’s numerous skeptics. However, if the film is a hoax, no one has ever confessed or turned up with a female Bigfoot suit. Frame-by-frame analysis and extensive investigation of the site and the backgrounds of the men involved has so far failed to provide conclusive evidence of deception. Patterson died in 1972, still insisting that he had filmed the real thing. Other Bigfoot films have surfaced from time to time, but unlike Patterson’s, most of them have been clearly bogus.

In the early 1970s, a series of popular books and documentaries about Bigfoot appeared and further ensured the cultural longevity of the phenomenon. Inevitably, Bigfoot became a tourist draw for some areas in the Pacific Northwest, and towns and businesses were quick to capitalize upon the name. A few highly publicized expeditions to find and/or capture Bigfoot met with no success. Since that time, the media furor over Bigfoot has subsided, but occasional reports still gain widespread publicity. For example, a sighting in the Umatilla National Forest in Washington in 1982 led to the collection of numerous plaster casts of alleged Bigfoot tracks. A respected anthropologist from Washington State University named Grover Krantz argued for the tracks’ authenticity, although other scientists remained unconvinced. The skepticism of the scientific community notwithstanding, Krantz and primatologist John Napier still remain open to the possibility that Bigfoot is more than a legend and mass delusion. For the most part, however, the case for Bigfoot’s existence has departed from the front pages and now remains in the keeping of a small number of dedicated investigators prowling through the Northwest woods with plaster and cameras and in some cases tranquilizer darts, ready to make cryptozoological history by presenting the scientific and journalistic world with irrefutable proof of America’s mysterious apeman.

Bilingual Education

Bilingual education developed into a particularly contentious topic for defining American identity in the twentieth century. While federal legislation since the 1960s has recognized the United States as a multilingual nation, the professed long-range goal of institutionalized bilingual education was not that students should achieve

bilingualism but proficiency in English. The vast majority of bilingual education programs were considered “transitional,” functioning to introduce younger students with limited English-speaking ability into the general education curriculum where English served historically as the language of instruction. Many bilingual programs were taught principally either in English or in the primary language of the student. However, by the end of the twentieth century, federally funded programs had begun to favor instruction in both English and the primary language, an apparent departure from the goal of achieving proficiency in a single language.

The country’s continued difficulty through the late twentieth century in educating immigrant children, mostly from Spanish-speaking countries, forced the federal legislature to institutionalize bilingual education. Following the passage of the Civil Rights Act (1964), Congress passed the Bilingual Education Act (1968), providing the first federal funds for bilingual education. The federal government elaborated its guidelines in the amended Bilingual Education Act of 1974, the same year the Supreme Court rendered its landmark *Lau vs. Nichols* decision, ruling that instructing students in a language they do not understand violates the Fourteenth Amendment of the Constitution.

“Bilingual” was often interpreted as “bicultural,” suggesting that the question of bilingual education belonged to a broader debate over the efficacy of a polyglot society. The discussion in the United States focused on the progress of social mobility and the development of a unique American culture. For many, proficiency in English appeared to facilitate social advancement and incorporation into a mainstream culture despite that culture’s multifaceted character. The letters of J. Hector St. Jean de Crèvecoeur in the late eighteenth century and Alexis de Tocqueville’s published travels *Democracy in America* in 1835 contributed to an understanding of American culture as a “melting pot” of ethnicity. This identity became increasingly complex with the country’s continued expansion through the nineteenth century and increasingly vexed with the rise of nationalism in the post bellum era. The nationalist urgency to homogenize the nation after the Civil War, accompanied by notions of Anglo-Saxon supremacy and the advent of eugenics, forced further eruptions of nationalist sentiment, including loud, jingoist cries for a single national language after the first World War. However, by the middle of the twentieth century, efforts to empower underrepresented communities contributed to an increased public interest in multiculturalism and ethnocentric agendas. A dramatic increase in immigration from Spanish-speaking countries during the second half of the twentieth century finally motivated the United States to institutionalize bilingual education.

But the strong opposition to the bilingual education legislation of the early 1970s, expressed in the influential editorial pages of the *Washington Post* and the *New York Times* between 1975 and 1976, suggested that bilingual programs never enjoyed overwhelming public support. The articulate arguments of Richard Rodriguez, an editor at the Pacific News Service and author of *Hunger for Memory* (1982), contributed to this opposition by distinguishing between private (primary language) and public (English) language while influential figures like Pulitzer Prize-winning historian Arthur M. Schlesinger, Jr., author of *The Disuniting of America* (1992), documented an increased national disenchantment with multiculturalism and bilingual education.

Discussions of bilingual education more often centered on Latino communities in metropolitan areas such as Miami, Los Angeles, and New York. But the debate was not exclusively Latino. The

Lau vs. Nichols verdict, which involved a Chinese-speaking student, along with the advent of post-Vietnam War Asian immigration, suggested that the debate was relevant to other communities in the country. Similar interests were present in localized but nationally observed efforts to incorporate the language of a surrounding community into a school’s curriculum. A particularly contentious and widely publicized debate arose over “Ebonics” in Oakland, California, in the early 1990s. Due in part to increasing black nationalism among African American intellectuals, prominent national political figures such as Reverend Jesse Jackson endorsed the incorporation of the local dialect and vernacular variations of language into the curriculum, while figures such as Harvard sociologist Cornel West and Harvard literary and social critic Henry Louis Gates, Jr., suggested that such programs lead to black ghettoization.

California showcased a national concern about bilingual education at the end of the twentieth century. Bilingual education became increasingly contentious in the state in the late 1990s with the passage of a proposition eliminating bilingual instruction. Approval of the initiative occurred in the shadow of two earlier state propositions and a vote by the regents of University of California to effectively terminate Affirmative Action, acts widely perceived in some underrepresented communities as attacks directed at Latino and immigrant communities. Bilingual programs enjoyed public support in cities with wide and long established minority political bases, such as Miami, where they were viewed as beneficial to developing international economies, but California continued to focus the debate primarily on social and cultural concerns.

Billboards

From simple barnside advertisements and other billboard techniques of the early 1900s, to today’s huge high-tech creations on Los Angeles’ Sunset Strip, billboards and outdoor advertising have been an integral part of both the landscape and the consciousness of America since the evolution of the American car culture of the early twentieth century.

Like many twentieth-century phenomena, the modern advertising spectacle, which the French have termed *gigantisme*, actually dates back to ancient times and the great obelisks of Egypt. By the late 1400s billboarding, or the mounting of promotional posters in conspicuous public places, had become an accepted practice in Europe. Wide-scale visual advertising came into its own with the invention of lithography in 1796, and by 1870 was further advanced by the technological progress of the Industrial Revolution.

A billboard in Birmingham, Alabama, 1937.

In America early advertising techniques were relatively naive, involving melodramatic situations, body ills, hygiene, and testimonials. Even so, the impact of subliminal suggestion was not unknown, and merchandising through association, with glamour, prestige, sex, and celebrities being the most popular ploys, was discovered early on. Thus, with few variations, the tenets of modern advertising were firmly in place by the twentieth century.

Predecessors of the modern billboard were posters for medicine shows, theatrical troupes, and spots events, and especially famous were those showing exaggerated versions of Barnum and Bailey's circus and Wild West acts. Initially no legal restrictions were placed on the posting of signs, and billboarding became part of the early entertainment world, with representatives traveling ahead of companies and competitively selecting choice locations which were then rented or leased. Thus these poster salesmen became the first pioneers of the outdoor advertising industry.

By the turn of the twentieth century, economic growth peaked in both Europe and America, creating new markets for both products and information. With the development of the automobile in the early 1900s, the stage was set for the rise of the roadside billboard. Sally Henderson notes: "An intense connection between the automobile, auto travel, and the outdoor poster (or billboard) was the natural outcome of a society in which individuals were becoming increasingly mobile. The outdoor ad had been waiting all along for the one product to come along that would change the world's habits, styles of living, and advertising modes: the automobile."

Early billboards were fairly austere, really posters with some kind of framing effect, but with the 1920s both design and the

billboard setting (or frame) developed along more aesthetic lines. The focus of a deluxe 1920s billboard was colorful and ornate illustration, in a stylized but usually realistic (if idealized) mode. Product names were emphasized; and messages, if any, were understated and concise. Frames were wooden, mostly painted white, and often mounted on a base of lattice-work panels. Elaborate set-ups included end supports in the form of female figures. These were similar to the caryatid figures found in Greek architecture and were called lizzies. Billboards in the 1920s might also be highly accessorized, including shaded electric light fixtures and illuminated globes, picket fences, and a plot of flowers.

While the first fully electrical billboards appeared in New York in 1891, standard billboard style did not really change a great deal until the 1950s, though with World War II advertisers promoted war bonds along with products, not only out of patriotism, but because they were also given tax breaks to do so. Propagandistic visions of battleships, explosive war scenes, along with promises for a brighter, better tomorrow (to be provided, of course, by the products of the companies sponsoring the billboards) shared space with familiar commercial trademarks during World War II.

In the affluent post war 1950s, an age of cultural paradox when social values were being both embraced and questioned, outdoor advertising finally entered the modern age. A burgeoning youth market also first emerged during this decade, and all these mixed trends were reflected in mass advertising that was both more innovative and less realistic. The 1950s were the "Golden Age of Paint." Painting made possible bigger, glossier presentations, enabling billboards (like the 3-D movies of the early 1950s) to transcend their flat surfaces, as TWA (Trans World Airlines) planes and Greyhound buses suddenly seemed to emerge from the previously circumscribed space of the traditional billboard.

Youth culture in the 1950s exploded into the mid-1960s psychedelic era, and was reflected in the color-drenched surrealism and Op Art effects of billboards now aimed at the under 30 generation, whose ruling passions were fashion, sexuality, and entertainment. Billboards increasingly suggested gigantic recreations of rock LP jackets, and (like certain album covers) sometimes did not even mention the name of the group or product. The Pop Art movement, an ironic, but wry comment on an increasingly materialistic society, blurred the distinction between the fine and commercial arts, and billboards, along with Campbell's soup cans, were considered worthy of critical appraisal. Evolving out of the youth mania was the young adult singles market, and images of the wholesome American family gave way to solo visions of the ruggedly independent Marlboro man and the sexy Black Velvet woman.

As 1970s consumerism replaced 1960s idealism another art movement, Photorealism, became an important element of outdoor advertising, as billboards came to resemble huge, meticulously detailed Photorealist paintings. In the 1980s and 1990s, the failure of any influential art movement to emerge after Photorealism, or indeed the absence of any discernible cultural movements comparable to those of the 1950s or 1960s, contributed to the increasingly generic, if admittedly grandiose high-tech quality of much mainstream advertising. Cued by rapid changes in signage laws and property ownership, a movable billboard was developed in the 1980s. Inflatables, both attached to signs (such as a killer whale crashing through a Marineland billboard) and free-standing like huge Claes Oldenburg soft sculptures, have heightened the surreality of modern life with advertising in three-dimensions.

While some critics view billboards as outdoor art and socio-cultural barometers, concern over the environment and anti-billboard lobbying commenced in the late 1950s, and a 1963 study drew the first connection between the prominent placement of billboards along the New York State Thruway and traffic accidents. Certain minimal standards were established, and today's most grandiose billboards are confined to urban districts such as New York's Times Square, and the Las Vegas and Los Angeles strips, modern meccas whose identities have been virtually defined by the blatant flaunting of their flashy commercial accouterments. But Sally Henderson has also called Los Angeles' famed Sunset Strip "a drive-through gallery, a lesson in contemporary art . . . a twentieth-century art experience, quick and to the point." In the entertainment capital of the world, however, a billboard on the Strip remains as much a gigantic status symbol as an advertising tool or Pop Art artifact.

Pop Art or visual pollution, the outcry against billboards of previous decades has subsided into stoic acceptance of an inescapable tool of capitalism, and one which relentlessly both tells and shows the public that the best things in life are emphatically not free (though actual prices remain conspicuously absent from most billboards). In a unique instance of one pervasive visual medium being used as an effective signifying device within another, however, critical comment on billboards has been immortalized in the movies. Billboards in films are often seen as characteristic signifiers of the ills and ironies of both the American landscape, and the American Dream itself.

In a more optimistic mode, older film musicals used electrical billboards to symbolize the glamour of the big city and stardom. *Singin' in the Rain* (1952) climaxes with a ballet in which a vast set composed of towering Broadway electric signs suddenly blazes to life to illuminate Gene Kelly, who had previously been isolated in darkness. While a visually spectacular moment, the shot also signifies that aspiring dancer Kelly has finally "arrived" at the apex of his dreams. The same message is reenforced at the film's end when Kelly and Debbie Reynolds are seen standing in front of a billboard that mirrors the couple in an advertisement for their first starring roles in a big movie musical. In a more satirical vein, *It Should Happen to You's* (1954) Judy Holliday makes a name for herself by plastering her moniker on a Columbus Circle billboard. The concept of the film was allegedly based on a real publicity stunt by Mamie Van Doren's agent, and similar billboards promoting Angelyne, a "personality" with no discernible talent or occupation, are still fixtures of modern day Los Angeles.

In later films, billboards were employed as an instantly recognizable symbol of a materialistic culture that constantly dangles visions of affluence in front of characters (and thus a public) who are then programmed for a struggle to achieve it. *No Down Payment* (1957), an exposé of suburban life, opens with shots of billboards hawking real Los Angeles housing developments, while glamorous but Musak-like music plays on the soundtrack. *No Down Payment* was among the first spate of 1950s films shot in CinemaScope, and the opening images of huge California billboards draw a perhaps unintentional parallel between the shape and scale of the American billboard, and the huge new wide-screen projection process that Hollywood hoped would lure patrons away from their new television sets and back into movie theaters.

Billboards are used to even more cynical effect in *Midnight Cowboy* (1969). With an outsider's sharp eye for the visual clutter of the American landscape, British director John Schlesinger (who had already shown keen awareness of the ironies of modern advertising in *Darling*, 1965) uses American billboards throughout the film as an

ironic counterpoint to a depressing saga of a naive Texan who aspires to make it as a hustler in the big city. Billboards cue flashbacks to Joe Buck's troubled past life on his bus journey to New York, taunt him with images of affluence as he later wanders destitute through the mean streets of the city, and finally, on their bus journey south at the end of the film, cruelly tantalize both Joe and his ailing companion, Ratso Rizzo, with glossy images of a paradisaical Florida which one of them will not live to see.

One of the more bizarre uses of billboard *gigantisme* in modern cinema is *Boccaccio '70* (1962), which also offers a wickedly sly comment on the obsessive use of larger-than-life sexual symbolism in modern outdoor advertising. In the Fellini "Temptation of Dr. Antonio" episode a gigantic figure of Anita Ekberg comes to life and steps down from a billboard on which the puritanical doctor has been obsessing to erotically torment him to the strains of an inane jingle imploring the public to "drink more milk!"

The Bionic Woman

One of the first female superheroes on prime-time television, the Bionic Woman originated as a character on the popular show *The Six Million Dollar Man*. The Bionic Woman was created on that show when Steve Austin's fiancée suffered a near-fatal parachute accident and was rebuilt with a bionic arm, legs, and ear. Her nuclear-powered prostheses gave her super strength, speed, and hearing, which complimented Steve Austin's bionic powers as they solved crimes and wrongdoings together. Lindsey Wagner starred as the bionic Jamie Sommers and parlayed the Bionic Woman's guest spots on *The Six Million Dollar Man* into a two-year run in her own series, which ran from 1976 to 1978, and later, years of syndication. *The Bionic Woman* could be seen on cable television in the late 1990s.

Bird, Larry (1956—)

Born in 1956 and raised in rural Indiana—a place where basketball has been popular as a spectator sport since the 1910s and 1920s, well before the establishment of successful professional leagues in the 1940s—Larry Bird emerged as one of the premiere sports superstars

Lindsey Wagner in a scene from *The Bionic Woman*.

of the 1980s, as well as one of the most marketable athletes in the National Basketball Association (NBA). Often credited with helping to revive a then-troubled league—along with Earvin “Magic” Johnson—Bird’s discipline, unselfish playing style, and enthusiasm for the game made him a hero to basketball fans around the world and a driving force in the NBA’s growth.

Bird attained celebrity early in his career; four thousand people, twice the population of his hometown of French Lick, Indiana, attended his final high school game there in 1974. After a short stint at Indiana University, Bird left to play for the Indiana State Sycamores in 1975. During his college career, season ticket sales for the formerly-lagging Sycamores tripled. His college years culminated in a host of honors for Bird, who finished college as the fifth highest scorer in college basketball history. He was named the College Player of the Year (1978-1979), and led his team to a number one ranking and the national championship game. This game, which the Sycamores lost to Earvin “Magic” Johnson’s Michigan State team, marked the beginning of the Bird-Johnson rivalry that would electrify professional basketball for the next 12 years.

Originally drafted by the Boston Celtics while he was still in college, Bird joined the team in the 1979-1980 season and proceeded

to lead it to one of the most dramatic single-season turnarounds in league history. The year before his NBA debut, the Celtics had won only 29 games and did not qualify for the league playoffs; the 1979-1980 team won 61 games and finished at the top of the Atlantic Division. Bird’s accomplishments as a player are remarkable: he was named the NBA’s Most Valuable Player in 1984, 1985, and 1986; he played on the Eastern Conference All-Star team for 12 of his 13 pro seasons; he led his team to NBA Championships in 1981, 1984, and 1986; and he won a gold medal in the 1992 Barcelona Olympics as a member of the “Dream Team” (an elite group that also featured his rival, Johnson, as well as Michael Jordan and other superstar players). Hobbled by back injuries and absent from many games in his last two seasons, Bird retired from basketball in 1992. He was inducted into the NBA Hall of Fame on October 2, 1998.

Contributing to the growing prosperity of the NBA in the 1980s and to its emergence as a popular and profitable segment of the entertainment industry were several factors, not least of which were the marketing efforts of league commissioner David Stern. The league used the appeal of its top stars—especially Bird, Johnson, and Jordan—to market itself to fans. Another factor in the league’s growth was the fan interest triggered by the intense rivalry between the league’s top two teams, the Celtics and the Los Angeles Lakers, which happened to be led by the league’s top two players, Bird and Johnson. The Celtics and Lakers met in the NBA Finals three times in the mid-1980s, the excitement of their rivalry being amplified by the charisma of Bird and Johnson; the historic competition between the two teams in the 1960s; and the contrast between their two fundamentally different styles of basketball—East Coast fundamentals vs. West Coast razzle-dazzle.

As Bird and Johnson became the league’s brightest stars and as their teams won championships, they helped the NBA to embark on a new era of soaring attendance, sold-out games, escalating salaries, and lucrative television and sponsorship deals in which the players themselves became heavily marketed international celebrities. Increasing both his own income and his stake with fans, Bird appeared in television commercials for several companies, most prominently McDonalds and Converse Shoes.

In order to allow the Celtics and Lakers to keep Bird and Johnson on their teams, the NBA restructured itself economically in 1984, passing an exception to its salary-cap rules that would become known as the “Larry Bird Exception.” This move allowed teams to re-sign their star players at exorbitant costs, regardless of the team’s salary limit, and led to skyrocketing player salaries in the late 1980s and 1990s.

In 1997, Bird was hired as head coach of the Indiana Pacers. In his first year of coaching, Bird had an effect on his team that recalled his impact as a player nearly two decades earlier. Whereas in 1996 the Pacers had won only 39 games, in 1997 they won 58 and competed in the Eastern Conference championship series against Michael Jordan’s Chicago Bulls. At the season’s conclusion, Bird was named NBA Coach of the Year.

In the sometimes racially-charged world of professional athletics, Bird’s position as a prominent white player garnered much commentary. “[Bird is] a white superstar,” Johnson said of his rival in a 1979 interview in *Sports Illustrated*. “Basketball sure needs him.” Early in its history, professional basketball had attracted few African American players (due both to societal racism and the success

Larry Bird (right)

of the all-black Harlem Globetrotters), but by 1980, 75 percent of NBA players were African American. Thus, Bird entered a scene in which white stars were indeed rare. Critics labeled his Celtics a “white boy’s team,” and sportswriters still debated whether African Americans might be somehow inherently more adept at sports than whites. Bird himself referred to this stereotype when he said that he had “proven that a white boy who can’t run and jump can play this game.”

Bird’s impact—both as a player and as a coach—is unparalleled; he helped to change losing teams into champions and a declining professional league into a vibrant and profitable sports and entertainment giant. From a humble high school gymnasium in rural Indiana, Bird came to international attention as one of the best known and most successful athletes in the history of professional sports.

Birkenstocks

Birkenstocks—the name commonly used for sandals made by the Birkenstock Company—are the parent of “comfort shoes” in the United States. Called hari krishna shoes, monk shoes, Jesus sandals, and nicknamed granolas, Jerusalem cruisers, tree huggers, Flintstone feet, hippie shoes, and beatniks, they have carried numerous social connotations. Nevertheless, the influence that Birkenstocks have had on what Americans wear on their feet goes beyond alternative trappings. Not only have they become a household word in the 1980s, but they have also joined the likes of Nikes in gaining name-brand recognition.

Birkenstocks were created by a family of German shoemakers. Emphasizing comfort rather than fashion, the original Birkenstocks were open-toed, leather-strapped, flat-heeled, slip-ons. In 1964, Karl Birkenstock combined a flexible arch support and a contoured sole—inventions his grandfather Konrad had engineered at the turn of the twentieth century—into an orthopedic shoe. The ergonomically designed sole is shaped like a footprint in wet sand, with cupped heel and raised bar where the toes meet the ball of the foot. The pliable insole is a cork/latex matrix sandwiched between layers of jute and covered in suede leather.

Margot Fraser introduced Birkenstocks to the United States in 1966. While visiting her native Germany she bought a pair to alleviate her foot pain. Back in northern California, she sold a few pairs to friends, never intending to start a business. Quickly convinced that everyone would benefit from such comfortable shoes, she began importing them. Retail shoe store owners, however, balked at selling an unconventional “ugly” shoe. Undaunted, Fraser took Birkenstocks to health fairs and found buyers among owners of health food stores and alternative shops. Having carved out a niche by 1971, she convinced the German parent company to give her sole United States distribution rights and she incorporated the company. The most recognizable and popular Birkenstock style, the Arizona, developed for the American market, was introduced the same year.

By the late 1970s the shoes had become a favorite of hippies, the back-to-the-earth crowd, and the health-conscious, especially women looking for alternatives to the popular narrow-toed, high-heels generally available. Still, the shoes were anti-fashion—they were cited as a fashion “don’t” in a women’s magazine in 1976. In 1979, the Boston, a closed toe style, was introduced.

The company grew gradually until the late 1980s when it finally got a foothold in the athletic/comfort shoe market. Americans’ desire for more comfortable clothing and a nostalgia for the trappings of the 1970s, coupled with Birkenstock’s aggressive marketing, set off the shoe’s phenomenal rise in popularity and sales in the 1990s. Countering a perceived association with Dead Heads, hippies, and grunge rockers, Birkenstock catalogs featured hip young urbans. Between 1989 and 1992 the company expanded 500 percent and, according to the *New York Times*, between 1992 and 1994 sold more shoes than it had in the previous 20 years. The popularity bred knock-offs by high-end shoemakers such as Rockport, Scholl, Ralph Lauren, and Reebok, and discount copies appeared in stores such as Fayva and Kmart in the 1990s. In 1992, shoemakers Susan Bennis and Warren Edwards created a formal imitation with rhinestone buckles for Marc Jacobs’ runway show. Competition from other “comfort shoe” companies such as Teva and Naot began. Birkenstock eventually opened its own stores and the shoes were made available in shops geared toward comfortable footwear and through mail order giants such as L.L.

Bean; mainstream retailers like Macy's and Nordstrom also began to carry Birkenstocks.

Originally Fraser sold four styles, but by the early 1980s the company offered over 20 different models with an expanded color selection. The company also introduced a completely non-leather shoe, the Alternative, for ethical vegetarians. Smaller sizes of the classic styles, made to fit children, were offered around the same time. In the late 1980s and early 1990s, the color selection moved out from neutral and earthy tones like tan, black, white, brown, crimson, and gold to include bright and neon colors like orange and turquoise. During the same time, closed shoes made specifically for professionals who spend most of their workday on their feet, such as restaurant and health care workers, showed up in shops and catalogs.

Birkenstocks, once the ugly duckling, moved to the center of fashion. *Vogue*, *GQ*, *Sassy*, and *Details* magazines all featured sandal and clog styles in fashion layouts throughout the 1990s. Birkenstocks were seen on the feet of stars such as Madonna, Tanya Tucker, Harrison Ford, Wesley Snipes, and Yvette Freeman; politicians Norman Schwarzkopf, Donna Shalala, and John F. Kennedy Jr.; sports greats Shaquille O'Neal, Dennis Rodman, and Dan O'Brien and the maven of taste, Martha Stewart, among others. Menswear designer John Scher had custom Birkenstocks made in gold leather, gray corduroy, and wine pinstripe for his fall 1998 collection. Perry Ellis, Sportmax, and Narciso Rodriguez have also featured Birkenstocks in their runway shows.

By the late 1990s Birkenstock had over 50 styles including rubber clogs, trekking shoes, women's wedge heels, multi-colored sandals, anti-static models, as well as mainstays like the Zurich, a style similar to the shoes Margot Fraser brought from Germany in 1966. Fraser is chief executive officer and 60 percent owner of the Novato, California, based company, called Birkenstock Footprint Sandals, Inc., with employees owning the balance. Fraser's corporation has over 3,600 retail accounts, 125 licensed shops, and four company-owned stores in the United States, including the San Francisco flagship store opened in 1997. Birkenstock's sales for fiscal 1997 were an estimated \$82 million.

The Birth of a Nation

D. W. Griffith's 1915 silent-film epic *The Birth of a Nation* remained as controversial at the end of the twentieth century as at the beginning, largely because of its sympathetic portrayal of the Ku Klux Klan and of white ascendancy in the defeated South during the

Reconstruction period following the American Civil War. Galvanized by the film's depiction of the newly freed slaves as brutal and ignorant, civil-rights groups like the National Association for the Advancement of Colored People (NAACP) picketed the film in many cities when it was released and protested again when the Library of Congress added the classic to the National Film Registry in 1992 (though a year later the Library excluded the film from an exhibit of 54 early film works). Still, *The Birth of a Nation* is highly regarded as a cinematographic triumph, a benchmark that helped define film syntax for future directors in a newly emerging genre. The ambiguous legacy of this film was capsulized by a *New York Times* reporter who wrote (Apr. 27, 1994): "Like an orator who says all the wrong things brilliantly . . . [it] manages to thrill and appall at the same time." Few of its most ardent critics deny credit to Griffith for having achieved a work of technical brilliance. Film historian Lewis Jacobs argued in *The Rise of the American Film: A Critical History*, that *The Birth of a Nation* and *Intolerance*, a sequel, released by Griffith in 1916, are "high points in the history of the American movie" that "far surpassed other native films in structure, imaginative power, and depth of content . . . They foreshadowed the best that was to come in cinema technique, earned for the screen its right to the status of an art, and demonstrated with finality that the movie was one of the most potent social agencies in America."

The iconic status of *The Birth of a Nation* is based on several factors. It was heavily promoted and advertised nationwide, making it the prototype of the modern "blockbuster." In a nickelodeon era, it was the first to break the \$2-per-ticket barrier, proving that mass audiences could be attracted to serious films that were more than novelty entertainments or melodramas. It was the first film shown in the White House, after which President Woodrow Wilson reputedly said, "It is like writing history with lightning." In addition to establishing D. W. Griffith as America's most important filmmaker, *The Birth of a Nation* also helped to propel the career of Lillian Gish, a 21-year-old actress who, with her sister Dorothy, had appeared in some of Griffith's earlier films. Most importantly, it was a groundbreaking production that set the standard for cinematography and the basic syntax of feature films. Although, in the 1960s, revisionist critics like Andrew Sarris speculated that Griffith's technical sophistication had been overrated, *The Birth of a Nation* is still revered for its pioneering use of creative camera angles and movement to create a sense of dramatic intensity, and the innovative use of closeups, transitions, and panoramic shots, "all fused by brilliant cutting," in the words of Lewis Jacobs. Even the protests engendered by the film helped Americans find their bearings in the first significant cultural wars involving artistic creativity, censorship, and identity politics in the age of the new mass media.

The Birth of a Nation was based on Thomas Dixon, Jr.'s 1905 drama *The Clansman*, which had already been adapted into a popular play that had toured American theaters. Screenwriter Frank Woods, who had prepared the scenario for Kinemacolor's earlier, abortive attempt to bring Dixon's work to the screen, convinced Griffith to take on the project. "I hoped at once it could be done," Griffith said, "for the story of the South had been absorbed into the very fiber of my being." Griffith also added material from *The Leopard's Spots*, another of Dixon's books that painted a negative picture of Southern blacks during the Reconstruction era. In a 1969 memoir, Lillian Gish recalled that Griffith had optioned *The Clansman* for \$2500 and offered the author a 25 percent interest in the picture, which made Dixon a multimillionaire. She quoted Griffith as telling the cast that "I'm going to use [*The Clansman*] to tell the truth about the War

Scene from the film *The Birth of a Nation*.

between the States. It hasn't been told accurately in history books." When the film was being shot at a lot on Sunset Boulevard in Los Angeles, the first-time-ever use of artificial lighting to illuminate battle scenes shot at night led to public fears that southern California was under enemy attack from the sea.

Although some scenes depicted the early arrival of slaves in America, the decades of the 1860s and 1870s—Civil War and Reconstruction—constitute the historical timeframe of *The Birth of a Nation*. The film includes enactments of several historical scenes, such as Sherman's march to the sea, the surrender at Appomattox, and the assassination of Lincoln, but the narrative focuses almost exclusively on the saga of two white dynasties, the Stonemans from the North and the Camerons from the South, interlinked by romantic attachments between the younger generations of the two families. An early scene depicts the Cameron plantation in South Carolina as an idyllic estate with benevolent white masters and happy slaves coexisting in mutual harmony until undermined by abolitionists, Union troops, and Yankee carpetbaggers. After the war, Austin Stoneman, the family patriarch, dispatches a friend of mixed-race, Silas Lynch, to abet the empowerment of ex-slaves by encouraging them to vote and run for public office in the former Confederacy. A horrified Ben

Cameron organizes the Ku Klux Klan as an engine of white resistance. The film's unflattering depiction of uncouth African American legislators and of Lynch's attempt to coax Elsie Stoneman into a mixed-race marriage fueled much controversy over the years for reinforcing stereotypes about Negro men vis-à-vis the "flower of Southern womanhood." To create dramatic tension, Griffith juxtaposed images of domestic bliss with unruly black mobs and used alternating close-up and panoramic scenes to give a sense of movement and to facilitate the emotional unfolding of the narrative. During a climactic scene in which the Ku Klux Klan rides to the rescue of the Cameron patriarch from his militant black captors, a title reads: "The former enemies of North and South are united again in common defense of their Aryan birthright." Bowing to protests, Griffith excised some of the more graphic scenes of anti-white violence before the film's premiere, and also added an epilogue, now lost, favorably portraying the Hampton Institute, a prominent black school in Virginia. Interviewed by his biographer, Barnet Bravermann in 1941, D. W. Griffith thought that *The Birth of a Nation* should, "in its present form be withheld from public exhibition" and shown only to film professionals and students. Griffith said "If *The Birth of a Nation* were done again, it would have to be made much clearer."

The title of the film remained *The Clansman* until a month before its premiere, and was altered to its familiar title upon Dixon's own enthusiastic recommendation. Both Griffith and Dixon defended their work against an avalanche of censorship threats, as in a letter by Dixon to the *Boston Journal* (April 26, 1915), in which he wrote "This play was not written to stir race hatred. It is the faithful record of the life of fifty years ago. It is no reflection on the cultured, decent negro of today. In it are sketched good negroes and bad negroes, good whites and bad whites." Griffith also ardently defended his viewpoint, as in a letter to the *New York Globe* (April 10, 1915) in which he criticized "pro-intermarriage" groups like the NAACP for trying "to suppress a production which was brought forth to reveal the beautiful possibilities of the art of motion pictures and to tell a story which is based upon truth in every vital detail."

The Birth of a Nation had its premiere at New York City's Liberty Theater on March 3, 1915, to critical and popular acclaim, though the NAACP and other groups organized major protests and violence broke out in Boston and other cities. Booker T. Washington refused to let Griffith make a film about his Tuskegee Institute because he did not want to be associated with the makers of a "hurtful, vicious play." W. E. B. Du Bois adopted a more proactive stance, urging members of his race to create films and works of art that would depict its own history in a positive light. But response in the mainstream press was generally favorable. Critic Mark Vance boasted in the March 12 issue of *Variety* how a film "laid, played, and made in America" marked "a great epoch in picturemaking" that would have universal appeal. Reviews in the southern papers were predictably partisan. A critic for the *Atlanta Journal*, Ward Greene, obviously inspired by scenes of triumphant Klan riders, crowed that Griffith's film "is the awakener of every feeling . . . Loathing, disgust, hate envelope you, hot blood cries for vengeance . . . [you are] mellowed into a deeper and purer understanding of the fires through which your forefathers battled to make this South of yours a nation reborn!" Over the years, *The Birth of a Nation* was used as a propaganda film both by the film's supporters and detractors. Film historian John Hope Franklin remarked to a 1994 Library of Congress panel discussion that the film was used by a resurgent Ku Klux Klan as a recruiting device from the 1920s onward, a point supported by other historians, though disputed by Thomas Cripps, author of several scholarly works on black cinema.

Despite the continuing controversy over the depiction of interracial conflict, *The Birth of a Nation* remains a landmark film in the history of world cinema and its director an important pioneer in the film medium. Writer James Agee, in a rhapsodic defense of Griffith, wrote of him in a 1971 essay: "He achieved what no other known man has ever achieved. To watch his work is like being witness to the beginning of melody, or the first conscious use of the lever or the wheel. . . ." *The Birth of a Nation*, continued Agee, was a collection of "tremendous magical images" that equaled "Brady's photographs, Lincoln's speeches, and Whitman's war poems" in evoking a true and dramatic representation of the Civil War era.

Birthing Practices

Historically speaking, an overview of changing practices of childbirth offers an overview of the changing dynamics of gender and the increasing authority of professional medicine, particularly in the United States and Western Europe. As midwives began to be "phased out" in the late eighteenth century, they were replaced by male doctors, and birthing practices changed as a result. Increasing medical knowledge and experience reinforced this shift, eventually pathologizing pregnancy and childbirth and tying childbirth to a hospital environment. In the late twentieth century, however, many women began calling for a return to the earlier, less medicalized, models of childbirth, and the debate about the costs and benefits of various birthing practices continues to develop today.

In colonial America, deliveries were attended by midwives as a matter of course. These women drew upon years of experience, often passing their knowledge from one generation to the next, and generally attending hundreds of childbirths during their careers. In some cases, a midwife might call a "barber-surgeon" to assist with a particularly difficult case (though often the surgeon's skills were no better than the midwife's, and the patient and child were lost), but for the most part women (mothers and midwives) controlled the birthing process. With the rise in medical schools, however, and the teaching of obstetrics as the first specialty in eighteenth-century American medical schools, medical doctors began to assume control over childbirth.

Beginning in the 1830s, having a medical doctor in attendance at a birth became a sign of social prestige—middle- and upper-class women could afford to call in a doctor and did so more out of a desire to display their economic and political clout than out of medical necessity. Class pressures ensured that women would choose childbirth assistance from someone of their own class (that is, a medical doctor for the middle and upper classes, a midwife for working classes). These pressures also meant that crusades to persuade middle- and upper-class women that they "deserved" physicians, that no precaution was too great, and so on, were enormously effective in shifting public opinion toward the presumed superiority of medical doctors. As this kind of social pressure continued to spread throughout the Victorian era, lay practitioners lost more and more status, and medical doctors gained more and more control. Furthermore, the systematic exclusion of women from the medical profession, particularly during the nineteenth century, ensured that women themselves began losing control of childbirth, giving it up to the increasing authority of the male medical community.

Throughout the 1800s, doctors employed medical privilege to protect their professional status from the economic and social threat

of midwives who lacked formal training. The Boston Women's Health Collective asserts that nineteenth-century physicians "waged a virulent campaign against midwives, stereotyping them as ignorant, dirty, and irresponsible. Physicians deliberately lied about midwifery outcomes to convince legislators that states should outlaw it." These strategies, coupled with the significant risks of childbirth (infant and maternal mortality rates remained high throughout the nineteenth century), helped to create a climate of fear surrounding pregnancy and birth. Rather than seeing childbirth as a natural practice, people began to see it as a medical emergency, one that should be relinquished to a physician's control.

Once childbirth had been pathologized, the door was opened to begin moving women in labor out of their homes and into hospitals where, according to the medical community, the "disease of childbirth" could best be battled. Until the beginning of the twentieth century, it was actually a stigma to have to give birth in a maternity ward, which had generally been reserved for the poor, immigrants, and unmarried girls. As better strategies were developed to prevent disease (especially deadly outbreaks of puerperal fever that had flourished in hospitals throughout the nineteenth century), the hospital birth, with its concomitant costs, was recast as a status symbol. Eventually, however, having babies in hospitals became a matter of course. According to Jessica Mitford, while only 5 percent of babies were born in hospitals in 1900, 75 percent were born in hospitals in 1935, and by the late 1960s, 95 percent of babies were born in hospitals. Eakins' *American Way of Birth* notes, "the relocation of obstetric care to the hospital provided the degree of control over both reproduction and women that would-be obstetricians needed in their ascent to professionalized power." This power was consolidated through non-medical channels, with advice columns, media attention, popular books, and community pressure working to reinforce the primacy of the professional medical community in managing women's childbirth experiences.

In the twentieth century, giving birth in a hospital environment has meant a loss of control for the mother as she becomes subject to numerous, standardized medical protocols; throughout her pregnancy, in fact, she will have been measured against statistics and fit into frameworks (low-risk vs. high-risk pregnancy; normal vs. abnormal pregnancy, and so on). As a result, the modern childbirth experience seems to depersonalize the mother, fitting her instead into a set of patient "guidelines." Women in labor enter alongside the ill, the injured, and the dying. Throughout most of the twentieth century, women were anesthetized as well, essentially being absent from their own birthing experience; fathers were forced to be absent as well, waiting for the announcement of his child's arrival in a hospital waiting room. If a woman's labor is judged to be progressing "too slowly" (a decision the doctor, rather than the mother, usually makes), she will find herself under the influence of artificial practices designed to speed up the process. More often than not, her pubic area will be shaved (a procedure that is essentially pointless) and sometimes cut (in an episiotomy) by medical personnel anxious to control the labor process. Further advances in medical technology, including usage of various technological devices and the rise in caesarian sections (Mitford cites rates as high as 30 percent in some hospitals), have also contributed to a climate of medicalization and fear for many women giving birth. This is not to say, of course, that many of these medical changes, including improved anesthetics (such as epidurals) and improved strategies for difficult birthing situations (breech births, fetal distress, etc.) have not been significant advances for women and their babies. But others argue that many of these changes have been

for the doctors' convenience: delivering a baby while lying on one's back with one's feet in stirrups is surely designed for the obstetrician's convenience, and the rise in caesarian sections has often been linked to doctors' preferences rather than the mothers'.

In the 1960s and 1970s, as a result of their dissatisfaction with the medical establishment and with the rising cost of medical care, various groups began encouraging a return to older attitudes toward childbirth, a renewal of approaches that treat birthing as a natural process requiring minimal (if any) medical intervention. One of the first steps toward shifting the birthing experience away from the control of the medical establishment involved the introduction of childbirth classes for expectant parents. These courses often stress strategies for dealing with the medical community, for taking control of the birthing process, and for maintaining a "natural childbirth" experience through education; the most famous methods of natural childbirth are based on work by Grantly Dick-Read (*Childbirth Without Fear*), Fernand Lamaze, and Robert Bradley.

Also significant were various feminist critiques of the standard birth practices. The publication of the Boston Women's Health Collective's *Our Bodies, Ourselves* in 1984 offered a resource to women who wanted to investigate what had been essentially "underground" alternatives to the medicalized childbirth experience. Through this work (and others), women learned how to question their doctors more assertively about the doctors' practices, to file "birth plans" (which set out the mother's wishes for the birth), and to find networks of like-minded parents, midwives, and doctors who can assist in homebirths, underwater births, and other childbirth techniques. In some states, midwives not attached to hospitals are still outlaws, and groups continue to campaign to change that fact.

Finally, many hospitals are recognizing women's desire to move away from the dehumanizing and pathological approaches to childbirth associated with the professional medical community. In deference to these desires (or, more cynically, in deference to their financial bottom lines), some hospitals have built "Birthing Centers," semi-detached facilities dedicated specifically to treating childbirth as a natural process. Women enter the Birthing Center, rather than the hospital. There they are encouraged to remain mobile, to have family and friends in attendance, and to maintain some measure of control over their bodies. Often patient rooms are designed to look "homey," and women (without complications) give birth in their own room, rather than in an operating theater. Many of these facilities employ Nurse Midwives, women and men who have been trained as nurses in the traditional medical establishment but who are dedicated to demedicalizing the childbirth practice while still offering the security of a hospital environment.

As women and men continue to demand that childbirth be recognized as a natural, rather than unnatural, process, the dominant birthing practices will continue to shift. Additionally, rising pressures from the insurance industry to decrease costs are also likely to contribute to a decrease in the medical surveillance of childbirth—already new mothers' hospital stays have been drastically reduced in length as a cost-cutting measure. Clearly the move in recent years has meant a gradual return to earlier models of childbirth with a return of control to the mother and child at the center of the process.

Black, Clint (1962—)

Since the release of his first album in 1989, Clint Black has become one of country music's biggest stars. He is also one of the most prominent symbols of country's revival in the 1980s and 1990s. It was in the mid-1980s that country music had been written off as dead. In 1985, *The New York Times* reported that this once mighty genre had fallen off the edge of the American entertainment table and it would never regain such stature with its audience. A year later, the same newspaper reversed itself in an article hailing the new creative and commercial vitality of country music, as traditionalists like Randy Travis and young iconoclasts like Steve Earle brought new life into old forms. That, however, was nothing compared to what was just around the corner. Country was about to be taken over by a new

Clint Black

generation of heartthrobs in cowboy hats who were going to capture the imagination of the American public to a degree hitherto unimagined.

Part of country music's revival was due to the creative groundwork that was laid for newcomers in the adventurous creativity of the mid-1980s. Angry song-writing geniuses like Earle, quirky originals like Lyle Lovett, and musical innovators like the O'Kanes all played a part in paving the way for young new artists. Interestingly, the aggressive urban anger of black music in the 1980s also influenced the country scene. Rap drove a lot of middle class whites to a music they could understand, and country radio was playing it. The audience for pop music was also growing older and, in the 1980s, for the first time, a generation over thirty-five continued to buy pop music. Although the children of these suburban middle-class consumers were buying rap, their parents were looking for the singer-songwriters of their youth—the new Dan Fogelbergs and James Taylors—and they found them wearing cowboy hats.

The country superheroes of the 1980s and 1990s were a new breed indeed. They did not have the down-home background of Lefty Frizzell, Porter Wagoner, or Johnny Cash, but they did have their own skills that would help them succeed in the music industry. Garth Brooks was a marketing major in college, and he knew how to market himself; Dwight Yoakam was a theater major, and he knew how to invent himself onstage; and Lyle Lovett's day job at the time he signed his first recording contract was helping his mother run high-level business management training seminars.

Clint Black, who arrived on the scene in 1989, was a "folkie" from the suburbs of Houston. His father advised him against going into country music precisely because he did not think he was country enough. "Stick to doing other folks' songs," he advised. "Real country songwriters, like Harlan Howard. Don't try to write your own. You haven't done enough living—shooting pool, drinking beer, getting into fights—to write a real country song." Black's "Nothing's News," which graced his first album, was an answer to his father and to all those other good old boys who "Spent a lifetime . . . Down at Ernie's icehouse liftin' longnecks to that good old country sound," only to discover ultimately that they had "worn out the same old lines, and now it seems that nothin's news . . ."

The 1980s were a time when the rock influence hit country with a vengeance. Rock acts like Exile and Sawyer Brown became country acts. Country radio adopted the tight playlists of pop radio. Record company executives from Los Angeles and New York started moving into the little frame houses that served as office buildings on Nashville's Music Row. And even among the neo-traditional acts, rock music management techniques became the norm. Clint Black's career blossomed under the managerial guidance of Bill Ham, who had made his reputation guiding ZZ Top's fortunes. Black's first album, *Killin' Time*, became the first debut album ever, in any genre, to place five singles at number one on the charts.

For many country artists, country superstardom seems to almost automatically raise the question, "Now what?" For Black, marriage was the answer to that question. He married Hollywood television star Lisa Hartman (*Knots Landing*) in 1991 and their marriage has lasted. It has also garnered him a certain amount of gossip column celebrity beyond the country circuit. Although Black also has a movie role in *Maverick* to his credit, his reputation rests solidly on what he does best: writing and singing country songs. Black seems to have settled in for the long haul.

Black Mask

One of the most important detective fiction magazines of the twentieth century, *Black Mask* began early in 1920 and introduced and developed the concept of the tough private eye. It also promoted, and in some cases introduced, the work of such writers as Dashiell Hammett, Raymond Chandler, Erle Stanley Gardner, and John D. MacDonald. Hammett's *The Dain Curse*, *Red Harvest*, *The Glass Key*, and *The Maltese Falcon* all appeared originally as serials in the magazine and Chandler sold his first detective story to *Black Mask*. In its over 300 issues the pulp showcased the work of dozens of other writers. Though many are forgotten today, such contributors as Frederick Nebel, Norbert Davis, W.T. Ballard, John K. Butler, Raoul Whitfield, Carroll John Daly, Horace McCoy, Lester Dent, and William Campbell Gault all helped shape and define the hardboiled school of mystery writing.

Early in 1919, H. L. Mencken, literary man and dedicated iconoclast, wrote a letter to a friend. "I am thinking of venturing into a new cheap magazine," he explained. "The opportunity is good and I need the money." Mencken and his partner, theater critic George Jean Nathan, required funds to keep their magazine *The Smart Set* afloat. He considered that a quality publication, but in his view the new one that he and Nathan launched early in 1920 was "a lousy magazine" that would cause them nothing but "disagreeable work." Their new publication was christened *The Black Mask* and featured mystery stories. Pretty much in the vein of Street & Smith's pioneering *Detective Story* pulp, the early issues offered very sedate, and often British, detective yarns. Nathan and Mencken soon sold out, leaving the magazine in other hands.

Then in 1923 two beginning writers started submitting stories about a new kind of detective. Carroll John Daly, a onetime motion picture projectionist and theater manager from New Jersey, introduced a series about a tough, gun-toting private investigator named Race Williams. Written in a clumsy, slangy first person, they recounted Williams' adventures in a nightmare urban world full of gangsters, crooked cops, and dames you could not trust. Williams explained himself and his mission this way—"The papers are either roasting me for shooting down some minor criminals or praising me for gunning out the big shots. But when you're hunting the top guy, you have to kick aside—or shoot aside—the gunmen he hires. You can't make hamburger without grinding up a little meat." This tough, humorless metropolitan cowboy became extremely popular with the magazine's readers, who were obviously tired of the cozy crime stories that the early *Black Mask* had depended on. For all his flaws, Race Williams is acknowledged by most critics and historians to be the first hardboiled detective, and the prototype for others to follow.

Unlike Daly, Dashiell Hammett knew what he was talking about. He had been a private investigator himself, having put in several years with the Pinkerton Agency. Exactly four months after the advent of Race Williams, Hammett sold his first story about the "Continental Op(erative)" to the magazine. Titled "Arson Plus," it introduced the plump middle-aged operative who worked out of the San Francisco office of the Continental Detective Agency. Although also in the first person, the Op stories were written in a terse and

Various covers of *Black Mask*.

believable vernacular style that made them sound real. Hammett's private detective never had to brag about being tough and good with a gun; readers could see that he was. His nameless operative soon became Race Williams' chief rival and after he had written nearly two dozen stories and novellas about him, Hammett put him into a novel. The first installment of *Red Harvest* appeared in the November 1927 issue of *Black Mask*. In November of the next year came the second Op serial, *The Dain Curse*. Then in 1929 Hammett introduced a new San Francisco private eye, a pragmatic tough guy he described as resembling a blond Satan. *The Maltese Falcon*, told in the third person, introduced Sam Spade and the quest for the jewel-encrusted bird. The story quickly moved into hardcovers, movies, and international renown. Hammett's *The Glass Key* ran in the magazine in 1930 and his final Op story in the November issue of that year. With the exception of *The Thin Man*, written initially for *Redbook* in the early 1930s, everything that Hammett is remembered for was published in *Black Mask* over a period of less than ten years.

Joseph Shaw was usually called Cap Shaw, because of his Army rank during World War I. Not at all familiar with pulp fiction or *Black Mask* when he took over as editor in 1926, he soon educated himself on the field. Shaw never much liked Daly's work, but kept him in the magazine because of his appeal to readers. Hammett, however, was an exceptional writer and Shaw used him to build the magazine into an important and influential one. "Hammett was the leader in the thought that finally brought the magazine its distinctive form," Shaw explained some years later. "Without that it was and would still have been just another magazine. Hammett began to set character before situation, and led some others along that path." In addition to

concentrating on character, one of the goals of the best *Black Mask* authors was to develop prose that sounded the way people talked and not the way writers wrote. In addition to Hammett, Cap Shaw encouraged other writers who had already been contributors when he joined as editor. Among them were Erle Stanley Gardner, Raoul Whitfield, and Frederick Nebel. He asked Nebel to create a new hardboiled private eye and the result was, as a blurb called him, “an iron-nerved private dick” named Donahue. One of the things he got from Whitfield was a serial titled “Death in a Bowl,” which introduced Ben Jardinn, the very first Hollywood private eye. In 1933, Shaw bought “Blackmailers Don’t Shoot” from Raymond Chandler, a failed middle-aged business man who was hoping he could add to his income by writing pulpwood fiction. The tough and articulate private eye Chandler wrote about for *Black Mask*, and later for its rival *Dime Detective*, was called Mallory and then John Dalmas. When he finally showed up in the novel *The Big Sleep* in 1939, he had changed his name to Philip Marlowe. Among the many other writers Shaw introduced to *Black Mask* were Horace McCoy, Paul Cain, Lester Dent, and George Harmon Coxe.

After Shaw quit the magazine in 1936 over a salary dispute, it changed somewhat. Chandler moved over to *Dime Detective*, where Nebel had already been lured, and the stories were not quite as “hardboiled” anymore. New writers were recruited by a succession of editors. Max Brand, Steve Fisher, Cornell Woolrich, and Frank Gruber became cover names in the later 1930s. *Black Mask* was bought out by Popular Publications in 1940 and started looking exactly like Popular’s *Dime Detective*. Kenneth S. White became the editor of both and put even more emphasis on series characters. Oldtime contributors such as H.H. Stinson and Norbert Davis provide recurring detectives, as did newcomers like Merle Constiner, D.L. Champion, and Robert Reeves. Later on John D. MacDonald, Richard Demming, and William Campbell Gault made frequent appearances.

The decade of the 1950s saw the decline and fall of all the pulp fiction magazines. *Black Mask* ceased to be after its July 1951 issue. By then, it was a smaller-sized magazine that included reprints from earlier years with few new detective tales. Attempts to revive it in the 1970s and the 1980s were unsuccessful.

Black Panthers

The Black Panther Party (BPP) came to represent the West Coast manifestation of Black Power as well as the angry mood within urban African American communities in the 1960s. The groups main influences were Malcolm X, especially after his 1964 break from the Nation of Islam, and Robert F. Williams, the then Cuban-based civil rights leader and advocate of armed self-defense. Philosophically, the

Black Panthers (from left): 2nd Lt. James Pelser, Capt. Jerry James, 1st Lt. Greg Criner and 1st Lt. Robert Reynolds.

organization was rooted in an eclectic blend of Marxist-Leninism, black nationalism, and in the revolutionary movements of Africa and Asia.

The BPP was founded in October 1966 by Huey Newton and Bobby Seale, two young black college students in Oakland, California. The name of the organization was taken from the Lowndes County Freedom Organization, which had used the symbol and name for organizing in the rural black belt of Alabama in 1965. The BPP was initially created to expand Newton and Seale’s political activity, particularly “patrolling the pigs”—that is, monitoring police activities in black communities to ensure that civil rights were respected.

Tactically, the BPP advocated “picking up the gun” as a means to achieve liberation for African Americans. Early on, Newton and Seale earned money to purchase guns by selling copies of Mao Tse-tung’s “Little Red Book” to white radicals on the University of California-Berkeley campus. The group’s “Ten Point Program” demanded self-determination for black communities, full employment, decent housing, better education, and an end to police brutality. In addition, the program included more radical goals: exemption from military service for black men, all-black juries for African Americans on trial and “an end to the robbery by the capitalists of our Black Community.” Newton, the intellectual leader of the group, was appointed its first Minister of Defense and Eldridge Cleaver, a prison activist and writer for the New Left journal *Ramparts*, became Minister of Information. Sporting paramilitary uniforms of black leather jackets, black berets, dark sunglasses, and conspicuously displayed firearms, the Panthers quickly won local celebrity.

A series of dramatic events earned the Black Panthers national notoriety in 1967. That spring, as a result of the Panthers' initial police surveillance efforts, members of the California state legislature introduced a bill banning the carrying of loaded guns in public. In response, a group of Black Panthers marched into the capitol building in Sacramento toting loaded weapons. Then, on October 28 of the same year, Newton was arrested on murder charges following an altercation with Oakland police which left one officer dead and Newton and another patrolman wounded. The arrest prompted the BPP to start a "Free Huey!" campaign which attracted national attention through the support of Hollywood celebrities and noted writers and spurred the formation of Black Panther chapters in major cities across the nation. In addition, Newton's arrest forced Seale and Cleaver into greater leadership roles in the organization. Cleaver, in particular, with his inflammatory rhetoric and powerful speaking skills, increasingly shaped public perceptions of the Panthers with incendiary calls for black retribution and scathing verbal attacks against African American "counter-revolutionaries." He claimed the choice before the United States was "total liberty for black people or total destruction for America."

In February 1968, former Student Non-Violent Coordinating Committee (SNCC) leader, Stokely Carmichael, who had been invited by Cleaver and Seale to speak at "Free Huey!" rallies, challenged Cleaver as the primary spokesman for the party. Carmichael's Pan-Africanism, emphasizing racial unity, contrasted sharply with other Panther leaders' emphasis on class struggle and their desire to attract white leftist support in the campaign to free Newton. The ideological tension underlying this conflict resulted in Carmichael's resignation as Prime Minister of the BPP in the summer of 1969 and signaled the beginning of a period of vicious infighting within the black militant community. In one incident, after the Panthers branded head of the Los Angeles-based black nationalist group US, Ron Karenga, a "pork chop nationalist," an escalating series of disputes between the groups culminated in the death of two Panthers during a shoot-out on the UCLA campus in January 1969.

At the same time, the federal government stepped up its efforts to infiltrate and undermine the BPP. In August 1967, the FBI targeted the Panthers and other radical groups in a covert counter-intelligence program, COINTELPRO, designed to prevent "a coalition of militant black nationalist groups" and the emergence of a "black messiah" who might "unify and electrify these violence-prone elements." FBI misinformation, infiltration by informers, wiretapping, harassment, and numerous police assaults contributed to the growing tendency among BPP leaders to suspect the motives of black militants who disagreed with the party's program. On April 6, 1968, police descended on a house containing several Panthers, killing the party's 17-year-old treasurer, Bobby Hutton, and wounding Cleaver, who was then returned to prison for a parole violation. In September, authorities convicted Newton of voluntary manslaughter. In December, two Chicago party leaders, Fred Hampton and Mark Clark, were killed in a police raid. By the end of the decade, 27 members of the BPP had been killed, Newton was in jail (although he was released after a successful appeal in 1970), Cleaver had fled to Algeria to avoid prison, and many other Panthers faced lengthy prison terms or continued repression. In 1970, the state of Connecticut unsuccessfully tried to convict Seale of murder in the death of another Panther in that state.

By the early 1970s, the BPP was severely weakened by external attack, internal division, and legal problems and declined rapidly. After his release from prison in 1970, Newton attempted to wrest

control of the party away from Cleaver and to revive the organization's popular base. In place of Cleaver's fiery rhetoric and support for immediate armed struggle, Newton stressed community organizing, set up free-breakfast programs for children and, ultimately, supported participation in electoral politics. These efforts, though, were undermined by widely published reports that the Panthers engaged in extortion and assault against other African Americans. By the mid-1970s, most veteran leaders, including Seale and Cleaver, had deserted the party and Newton, faced with a variety of criminal charges, fled to Cuba. After his return from exile, Newton earned a doctorate, but was also involved with the drug trade. In 1989, he was shot to death in a drug-related incident in Oakland. Eldridge Cleaver drifted rightward in the 1980s, supporting conservative political candidates in several races. He died on May 1, 1998, as a result of injuries he received in a mysterious mugging. Bobby Seale continued to do local organizing in California. In 1995, Mario Van Peebles directed the feature film, *Panther*, which attempted to bring the story of the BPP to another generation. The Panthers are remembered today as much for their cultural style and racial posturing as for their political program or ideology.

Black Sabbath

Formed in Birmingham, England in 1968, Black Sabbath was one of the most important influences on hard rock and grunge music. While the term "heavy metal" was taken from a Steppenwolf lyric and had already been applied to bands such as Cream and Led Zeppelin, in many ways Black Sabbath invented the genre. They were perhaps the first band to include occult references in their music, and they began to distance themselves from the blues-based music which was the norm, although they had started their career as a blues band.

Originally calling themselves Earth, they discovered another band with the same name. After renaming themselves Black Sabbath

Black Sabbath in 1998: Ozzy Osbourne (seated), (standing from left) Bill Ward, Tony Iommi, and Geezer Butler.

the group released their self-titled first album in 1970. *Black Sabbath* was recorded both quickly and inexpensively—it took only two days and cost six hundred pounds. In spite of that, the album reached number 23 on the American charts and would eventually sell over a million copies. *Paranoid* was released later the same year and cracked the top ten in the United States while topping the charts in Britain. Their third album, *Master of Reality*, was equally successful and remained on the Billboard charts in America for almost a year.

Those releases introduced themes which would become staples for future metal bands: madness, death, and the supernatural. Although some considered the band's lyrics satanic, there was often an element of camp present. The group got its name from the title of a Boris Karloff film, and songs such as "Fairies Wear Boots" are at least partly tongue-in-cheek. But vocalist John "Ozzy" Osbourne's haunting falsetto and Tony Iommi's simultaneously spare and thundering guitar work would become touchstones for scores of hard rock bands.

Sabbath released three more albums as well as a greatest hits collection before Osbourne left the group in 1977, reportedly because of drug and alcohol problems. He returned in 1978, then left permanently the following year to start his own solo career. Initially, both Osbourne and the new version of Black Sabbath enjoyed some degree of commercial success, although many of the Sabbath faithful insisted the whole greatly exceeded the sum of its parts. During the 1980s the band would go through an astonishing array of lineup changes and their popularity plummeted.

In the late 1980s and early 1990s, Soundgarden, Helmet, Nirvana, and others in the grunge and resurgent hard rock movements demonstrated that they had been heavily influenced by the early Black Sabbath, and this effectively rehabilitated the band's reputation. While Sabbath had often been viewed as a dated version of the arena rock of the 1970s, grunge indicated not only that their music remained vibrant, but also that it bore many surprising similarities to the Sex Pistols, Stooges, and other punk and proto-punk bands. Sabbath became heroes to a new generation of independent and alternative bands, and the group's first albums enjoyed an enormous resurgence in popularity. Their music returned to many radio stations and was even featured in television commercials. Osbourne organized Ozzfest, an annual and very successful tour which featured many of the most prominent heavy metal and hard rock acts, as well as his own band. Iommi continued to record and tour with Black Sabbath into the late 1990s, although he was the only original member, and listeners and audiences remained largely unimpressed.

Black Sox Scandal

Although gambling scandals have been a part of professional baseball since the sport's beginning, no scandal threatened the game's stature as "the national pastime" more than the revelations that eight members of the Chicago White Sox had conspired to throw the 1919 World Series. Termed the "Black Sox Scandal," the event will go down in history as one of the twentieth century's most notorious sports debacles.

The Chicago White Sox of the World War I period were one of the most popular teams in the major leagues. They were led on the field by "Shoeless" Joe Jackson, an illiterate South Carolinian whose .356 career batting average is the third highest ever, and pitchers Eddie Cicotte and Lefty Williams. The Sox were owned by Charles A. Comiskey, a nineteenth-century ballplayer notorious for paying his star players as little as possible; Cicotte, who led the American League with 29 wins in 1919, earned just \$5,500 that season. Comiskey's stinginess included not paying for the team's laundry in 1918—the team continued to play in their dirty uniforms, which is when the sobriquet "Black Sox" originated.

During the 1919 season, the White Sox dominated the American League standings. Several players on the team demanded that Comiskey

The 1919 Chicago White Sox.

give them raises. He refused. First baseman Chick Gandil began discussing throwing the World Series with his fellow players. The eight Sox players who attended meetings on throwing the Series were Cicotte, Gandil, Williams, Jackson, shortstop Swede Risberg, third basemen Fred McMullin and Buck Weaver, and outfielder Happy Felsch. In mid-September, Gandil met with small-time Boston gambler "Sport" Sullivan in New York, telling him his teammates were interested in throwing the upcoming World Series if Sullivan could deliver them \$80,000. Two more gamblers, ex-major league pitcher Bill Burns and former boxer Billy Maharg, agreed to contribute money. These three gamblers contacted New York kingpin Arnold Rothstein, who agreed to put up the full \$80,000.

Cicotte pitched the Series opener against the Reds. As a sign to the gamblers that the fix was on, he hit the first batter with a pitch. Almost instantly, the gambling odds across the country shifted from the White Sox to the Reds. The Sox fumbled their way to a 9-1 loss in Game One.

Throughout the Series, the White Sox made glaring mistakes on the field—fielders threw to the wrong cutoff men, baserunners were thrown out trying to get an extra base, reliable bunters could not make sacrifices, and control pitchers such as Williams began walking batters. Most contemporary sportswriters were convinced something was corrupt. Chicago sportswriter Hugh Fullerton marked dubious plays on his scorecard and later discussed them with Hall of Fame pitcher Christy Mathewson.

The 1919 Series was a best-of-nine affair, and the underdog Reds led four games to one after five games. When the gamblers' money had not yet arrived, the frustrated Sox began playing to win, beating Cincinnati in the sixth and seventh games. Before Williams started in the eighth game, gamblers approached him and warned him his wife would be harmed if he made it through the first inning.

Williams was knocked out of the box after allowing three runs in the first inning. The Cincinnati Reds won the Series with a commanding 10-5 win.

After the Series, Gandil, who had pocketed \$35,000 of the \$80,000, retired to California. Fullerton wrote columns during the following year, insisting that gamblers had reached the White Sox; he was roundly criticized by the baseball establishment and branded a malcontent.

The fixing of the 1919 Series became public in September 1920, when Billy Maharg announced that several of the World Series games had been thrown. Eddie Cicotte broke down and confessed his involvement in the fixing; he claimed he took part in taking money "for the wife and kiddies." Joe Jackson, who during the Series batted a robust .375, signed a confession acknowledging wrongdoing. Upon leaving the courthouse, legend has it that a tearful boy looked up to him and pleaded, "Say it ain't so, Joe." "I'm afraid it is," Jackson allegedly replied.

On September 28, 1920 a Chicago grand jury indicted the eight players. They were arraigned in early 1921. That summer they were tried on charges of defrauding the public. The accused were represented by a team of expensive lawyers paid for by Comiskey. At the trial it was revealed that the signed confessions of Jackson, Cicotte, and Williams had been stolen. The defense lawyers maintained that there were no laws on the books against fixing sporting events.

Following a brief deliberation, the eight were found not guilty on August 2, 1921. The impact of the allegation, however, was undeniable. Kennesaw Mountain Landis, a former Federal judge elected as organized baseball's first commissioner in November 1920, declared, "No player who throws a ball game, no player who undertakes or promises to throw a ball game, no player who sits in a conference with a bunch of crooked players and gamblers, where the ways and means

of throwing a ball game are planned and discussed and does not promptly tell his club about it, will ever play professional baseball.”

The eight Black Sox players spent the rest of their lives in exile. Jackson played semi-pro baseball under assumed names. Several appealed to be reinstated, but Landis and his successors invariably rejected them. Perhaps the saddest story of all was Buck Weaver’s. While he had attended meetings to fix the Series, he had never accepted money from the gamblers and had never been accused of fixing games by the prosecution (in fact, Weaver batted .324 during the Series). But for not having told Comiskey or baseball officials about the fix, he was tried with his seven teammates and thrown out of baseball with them. The last surviving member of the Black Sox, Swede Risberg, died in October 1975.

Most historians credit baseball’s subsequent survival to two figures. From on high, Landis ruled major league baseball with an iron fist until his death in 1944 and gambling scandals decreased substantially throughout organized baseball. On the field of play, Babe Ruth’s mythic personality and home run hitting ability brought back fans disillusioned by the 1919 scandal, while winning the game millions of new fans.

The Blackboard Jungle

Ten years after the end of World War II, writer-director Richard Brooks’ film, *The Blackboard Jungle* (1955) was released. The film remains as a moody, entertaining potboiler and an early formula for treating a theme—the rehabilitating education of delinquents and the inner-city underprivileged—that was still being explored in the cinema of the 1980s and 1990s. Films as diverse as the serious and specific *Stand and Deliver* (1988, Edward James Olmos played the beleaguered teacher), the comedic *Renaissance Man* (1994, Danny de Vito), and the sentimental *Dangerous Minds* (1995, Michelle Pfeiffer), can all find their origins in *The Blackboard Jungle*, which, although not a particularly masterful film, was unique in its time, and became a cultural marker in a number of respects. It is popularly remembered as the first movie ever to feature a rock ’n’ roll song (Bill Haley and the Comets, “Rock around the Clock”), and critically respected for its then frank treatment of juvenile delinquency and a powerful performance by actor Glenn Ford. It is notable, too, for establishing the hero image of African American Sidney Poitier, making him Hollywood’s first black box-office star, and for its polyglot cast that accurately reflected the social nature of inner-city ghetto communities.

The Blackboard Jungle, however, accrues greater significance when set against the cultural climate that produced it. Despite the post

war position of the United States as the world’s leading superpower, the country still believed itself under the threat of hostile forces. Public debate was couched exclusively in adversarial terms; under the constant onslaught, the nation succumbed to the general paranoia that detected menace in all things from music to motorcyclists, from people of color and the poor to intellectuals and poets. Even the young were a menace, a pernicious presence to be controlled, and protected from the rock ’n’ roll music they listened and danced to, which was rumored as part of a Communist plot designed to corrupt their morals.

From the mid-1940s on, a stream of novels, articles, sociological studies and, finally, movies, sought to explain, sensationalize, vilify, or idealize juvenile delinquency. It was precisely for the dual purpose of informing and sensationalizing that *The Blackboard Jungle* was made, but, like Marlon Brando’s *The Wild One* (1954), it served to inflame youthful sentiment, adding tinder to a fire that was already burning strong.

Adapted from a 1954 novel by Evan Hunter, Brooks’ film tells the story of Richard Dadier (Ford), a war veteran facing his first teaching assignment at a tough inner-city high school in an unspecified northern city. “This is the garbage can of the educational system,” a veteran teacher tells Dadier. “Don’t be a hero and never turn your back on the class.” Dadier’s class is the melting pot incarnate, a mixture of Puerto Ricans, Blacks, Irish, and Italians controlled by two students—Miller (Poitier) and West (Vic Morrow), an Irish youth. West is portrayed as an embryo criminal, beyond redemption, but Miller provides the emotional focus for the movie. He is intelligent, honest, and diligent, and it becomes Dadier’s mission to encourage him and develop his potential. However, in its antagonism to Dadier, the class presents a unified front. They are hostile to education in general and the teacher’s overtures in particular, and when he rescues a female teacher from a sexual attack by a student the hostility becomes a vendetta to force him into quitting. However, despite being physically attacked, witnessing the victimization of his colleagues, and withstanding wrongful accusations of bigotry while worrying about his wife’s difficult pregnancy, Dadier triumphs over the rebellious students and, by extension, the educational system. He retains his idealism, and in winning over his students overcomes his own prejudices.

In setting the film against the background of Dadier’s middle-class life and its attendant domestic dramas, it was assumed that audiences would identify with him, the embattled hero, rather than with the delinquent ghetto kids, but the film’s essentially moral tone is subverted by the style, the inflections, and exuberance of those kids. Following an assault by West and his cohorts, Dadier’s faith begins to waver. He visits a principal at a suburban high school. Over a soundtrack of students singing the “Star Spangled Banner” Dadier tours the classrooms filled with clean-cut white students, tractable and eager to learn. He may yearn for this safe environment, but to the teenage audiences that flocked to *The Blackboard Jungle*, it is Dadier’s inner city charges that seem vital and alive, while the suburban high school appears as lively as a morgue. The teen response to *The Blackboard Jungle* was overwhelming. “Suddenly, the festering connections between rock and roll, teenage rebellion, juvenile delinquency, and other assorted horrors were made explicit,” writes Greil Marcus. “Kids poured into the theaters, slashed the seats, rocked the balcony; they *liked it*.”

The instigation of teen rebellion was precisely the opposite reaction to what the filmmakers had intended. From the opening title

Sidney Poitier (far right) and Glenn Ford in a scene from the film *The Blackboard Jungle*.

sequence, with “Rock Around the Clock” blaring from the sound track as Glenn Ford makes his way through the school yard crowded with boys dancing, sullenly shaking their heads in time to the music, the tone was set. This massed gathering appeared at once threatening and appealing, something with which teenagers could identify, and the image of exuberant, youthful rebellion stayed with teen audiences.

The film’s moral, somewhat hectoring message, was more calculated to appeal to parents, while Brooks himself veiled his own sympathies in subtlety. “These kids were five and six years old in the last war,” a cynical police detective tells Dadier. “Father in the army, mother in the defense plant; no home life, no church life. Gang leaders have taken the place of parents.” Indeed, the specter of war pervades the film. In one scene, Dadier derides a fellow teacher for using his war injuries to gain the sympathy of his class; in another, he counsels the recalcitrant West, who responds that if his crime lands him in jail for a year, it will at least keep him out of the army, and hence, from becoming another nameless casualty on foreign soil.

One cannot say, however, that Richard Brooks offers a profound critique, or even a very good film. (“[It] it will be remembered for its timely production and release,” wrote film critic G.N. Fenin in

summation.) It was not so much the message or the quality of filmmaking that was of import, but the indelible image it left behind of the greasy-haired delinquent snapping his fingers to the beat of Bill Haley and the Comets. This is the nature, the calculus if you will, of exploitation films; that under the rubric of inoculation, they spread the very contagion they are ostensibly striving to contain.

Blackface Minstrelsy

Taboo since the early 1950s, blackface minstrelsy developed in the late 1820s just as the young United States was attempting to assert a national identity distinct from Britain's. Many scholars have identified it as the first uniquely American form of popular entertainment. Blackface minstrelsy was a performance style that usually consisted of several white male performers parodying the songs, dances, and speech patterns of Southern blacks. Performers blackened their faces with burnt cork and dressed in rags as they played the banjo, the bone

castanets, the fiddle, and the tambourine. They sang, danced, told malapropistic jokes, cross-dressed for "wench" routines, and gave comical stump speeches. From the late 1820s on, blackface minstrelsy dominated American popular entertainment. Americans saw it on the stages of theaters and circuses, read about it in the popular novels of the nineteenth century, heard it over the radio, and viewed it on film and television. Blackface minstrelsy can certainly be viewed as the commodification of racist stereotypes, but it can also be seen as the white fascination with and appropriation of African American cultural traditions that culminated in the popularization of jazz, the blues, rock 'n' roll, and rap music.

While there are accounts of blackface minstrel performances before the American Revolution, the performance style gained widespread appeal in the 1820s with the "Jump Jim Crow" routine of Thomas Dartmouth Rice. Rice is frequently referred to as "the father of blackface minstrelsy." In 1828 Rice, a white man, watched a black Louisville man with a deformed right shoulder and an arthritic left knee as he performed a song and dance called "Jump Jim Crow." Rice taught himself the foot-dragging dance steps, mimicked the

An example of blackface minstrelsy.

disfigurement of the old man, copied his motley dress, and trained himself to imitate his diction. When Rice first performed “Jump Jim Crow” in blackface during an 1828 performance of *The Rifle* in Louisville, Kentucky, the audience roared with delight. White audience members stopped the performance and demanded that Rice repeat the routine over 20 times. It is impossible to overstate the sensational popularity which Rice’s routine enjoyed throughout the 1830s and 1840s. Gary D. Engle has aptly described Rice as “America’s first entertainment superstar.” When Rice brought his routine to New York City’s Bowery Theater in 1832, the audience again stopped the show and called him back on stage to repeat the routine multiple times. He took his routine to England in 1836 where it was enthusiastically received, and he spawned a bevy of imitators who styled themselves “Ethiopian Delineators.”

In 1843 four of these “Ethiopian Delineators” decided to create a blackface minstrel troupe. They were the first group to call themselves “Minstrels” instead of “Delineators,” and their group *The Virginia Minstrels* made entertainment history when it served as the main attraction for an evening’s performance. Previous blackface shows had been performed in circuses or between the acts of plays. The troupe advertised its Boston debut as a “Negro Concert” in which it would exhibit the “Oddities, peculiarities, eccentricities, and comicalities of that Sable Genus of Humanity.” Dan Emmett played the violin, Frank Brower clacked the “bones” (a percussion instrument similar to castanets), Billy Whitlock strummed the banjo, and Dick Pelham beat the tambourine. Their show consisted of comedy skits and musical numbers, and it enjoyed a six week run in Boston before traveling to England. Dozens of imitators attempted to trade on its success. One of the most famous was *Christy’s Minstrels*, which opened in New York City in 1846 and enjoyed an unprecedented seven year run. During the 1840s blackface minstrelsy became the most popular form of entertainment in the nation. Americans who saw performances were captivated by them. “Everywhere it played,” writes Robert Toll, “minstrelsy seemed to have a magnetic, almost hypnotic impact on its audiences.”

Harriet Beecher Stowe’s novel *Uncle Tom’s Cabin*, published serially between 1851 and 1852, sold over 300,000 copies in its first year in part because it traded on the popularity of blackface minstrelsy. The book opens with a “Jump Jim Crow” routine, incorporates blackface malapropistic humor, gives its readers a blackface minstrel dancer in *Topsy*, and its hero Uncle Tom sings doleful hymns drawn from the blackface minstrel tradition. Indeed, Stowe’s entire novel can be read as a blackface minstrel performance in which a white New England woman “blacks up” to impersonate Southern slaves.

Uncle Tom’s Cabin was immediately adapted for the stage. It not only became the greatest dramatic success in the history of American theater, but it also quickly became what Harry Birdoff called “The World’s Greatest Hit.” “Tom shows” were traveling musical revues of *Uncle Tom’s Cabin* that continued the traditions of blackface minstrelsy. One historian has described them as “part circus and part minstrel show.” They featured bloodhounds chasing Eliza across the ice (a stage addition not present in Stowe’s novel), trick alligators, performing donkeys, and even live snakes. One 1880 performance included 50 actors, 12 dogs, a mule, and an elephant. The “Tom shows” competed directly with the traveling circuses of Barnum and Bailey.

After Thomas Edison’s invention of moving picture technology in 1889, film versions of *Uncle Tom’s Cabin* with whites in blackface were some of the very first films ever made. In 1903 Sigmund Lubin produced a film version of the play, and on July 30 of that same year

Edison himself released a 1-reel version directed by Edwin S. Porter. Edison’s film included 14 scenes and a closing tableaux with Abraham Lincoln promising to free the slaves. In 1914 Sam Lucas was the first black man to play Uncle Tom on screen.

Blackface minstrelsy remained on the leading edge of film technology with the advent of “talkies.” The first “talkie” ever made was *The Jazz Singer* in 1927, starring Al Jolson as a blackface “Mammy” singer. The movie’s debut marked the beginning of Jolson’s successful film career. A list of other film stars of the 1930s and 1940s who sang and danced in blackface is a Who’s Who of the period. Fred Astaire played a blackface minstrel man in RKO’s movie *Swing Time* (1936). Martha Raye put on blackface for Paramount Pictures’ *Artists and Models* (1937). Metro Goldwyn Mayer’s 1939 movie *Babes in Arms* closed with a minstrel jubilee in which Mickey Rooney blacked up to sing “My Daddy was a Minstrel Man,” and Judy Garland of *Wizard of Oz* fame blacked up with Rooney in the 1941 sequel *Babes on Broadway*. Bing Crosby blacked up to play Uncle Tom in Irving Berlin’s film *Holiday Inn* (1942), and Betty Grable, June Haver Leonard, and George M. Cohan were just a few of the other distinguished actors of the period who sang and danced in blackface.

The most successful blackface minstrel show of the twentieth century was not on the silver screen but over the radio waves. *The Amos ‘n Andy Show* began as a vaudeville blackface act called *Sam ‘n Henry*, performed by Freeman Fisher Gosden and Charles James Correll. In 1925 the *Sam ‘n Henry* radio show was first broadcast over Chicago radio. In 1928 the duo signed with Chicago radio station WMAQ and in March of that year they introduced the characters Amos and Andy. The show quickly became the most popular radio show in the country. In 1930 Gosden and Correll made the film *Check and Double Check*, in which they appeared in blackface, and in 1936 they returned to the silver screen for an encore.

The 15 minute version of *The Amos ‘n Andy Show* ran from 1928 until 1943, and it was by far the most listened to show during the Great Depression. Historian William Leonard writes that “America came virtually to a standstill six nights a week (reduced to five nights weekly in 1931) at 7:00 pm as fans listened to the 15-minute broadcast.” In 1943 the radio show became a 30 minute program, and in 1948 Gosden and Correll received \$2.5 million to take the show from NBC to CBS. In the late 1940s popular opinion began to shift against blackface performances, and Gosden and Correll bristled under criticism that they were propagating negative stereotypes of African Americans.

In 1951 *The Amos and Andy Show* first appeared on television, but with an all-black cast—it made television history as the first drama to have an all-black cast. The NAACP (National Association for the Advancement of Colored People) opposed the show, however, claiming that it demeaned blacks and hindered the Civil Rights Movement. It was canceled on June 11, 1953, but it remained in syndication until 1966.

African Americans have long objected to the stereotypes of the “plantation darcy” presented in blackface minstrel routines. Frederick Douglass expressed African American frustration with the phenomenon as early as 1848 when he wrote in the *North Star* that whites who put on blackface to perform in minstrel shows were “the filthy scum of white society, who have stolen from us a complexion denied to them by nature, in which to make money, and pander to the corrupt taste of their white fellow citizens.” Douglass was incensed that whites enslaved blacks in the South, discriminated against them in the North, and then had the temerity to pirate African American culture

for commercial purposes. While blackface minstrelsy has long been condemned as racist, it is historically significant as an early example of the ways in which whites appropriated and manipulated black cultural traditions.

Blacklisting

In 1947, the House Committee on Un-American Activities (HUAC), chaired by J. Parnell Thomas, held a series of hearings on alleged communist infiltration into the Hollywood motion picture industry. Twenty-four “friendly” witnesses—including Gary Cooper, Ronald Reagan, and Walt Disney—testified that Hollywood was infiltrated with communists, and identified a number of supposed subversives by name. Ten “unfriendly” witnesses—including Dalton Trumbo, Lester Cole, and Ring Lardner, Jr.—refused to cooperate with the Committee, contending that the investigations themselves were unconstitutional. The “Hollywood Ten,” as they came to be known, were convicted of contempt of Congress and eventually served sentences of six months to one year in jail.

Shortly after the hearings, more than 50 studio executives met secretly at the Waldorf-Astoria Hotel in New York. They emerged with the now infamous “Waldorf Statement,” with which they agreed to suspend the Hollywood Ten without pay, deny employment to anyone who did not cooperate with the HUAC investigations, and refuse to hire communists. When a second round of hearings convened in 1951, the Committee’s first witness, actor Larry Parks, pleaded: “Don’t present me with the choice of either being in contempt of this Committee and going to jail or forcing me to really crawl through the mud to be an informer.” But the choice was presented, the witness opted for the latter, and the ground rules for the decade were set.

From that day forward, it was not enough to answer the question “Are you now or have you ever been a member of the Communist Party?” Rather, those called to testify were advised by their attorneys that they had three choices: to invoke the First Amendment, with its guarantee of free speech and association, and risk going to prison like the Hollywood Ten; to invoke the Fifth Amendment, with its privilege against self-incrimination, and lose their jobs; or to cooperate with the Committee—to “purge” themselves of guilt by providing the names of others thought to be communists—in the hope of

continuing to work in the industry. By the mid-1950s, more than 200 suspected communists had been blacklisted by the major studios.

The Hollywood blacklist quickly spread to the entertainment industries on both coasts, and took on a new scope with the formation of free enterprise blacklisters such as American Business Consultants and Aware, Inc., which went into the business of peddling accusations and clearances; and the publication of the manual *Red Channels* and newsletter *Counterattack*, which listed entertainment workers with allegedly subversive associations. Senator Joseph McCarthy (R-Wisconsin), who built his political career on red-baiting and finally lent his name to the movement, was censured by the U.S. Senate in 1954. But the blacklist went virtually unchallenged until 1960, when screenwriter Dalton Trumbo worked openly for the first time since 1947. And it affected others, like actor Lionel Stander, well into the 1960s. The House Committee on Un-American Activities remained in existence until 1975.

That the HUAC investigations were meant to be punitive and threatening rather than fact-finding is evidenced by the Committee’s own eventual admission that it already had the information it was allegedly seeking. According to Victor Navasky, witnesses such as Larry Parks were called upon not to provide information that would lead to any conviction or acquittal, but rather to play a symbolic role in a surrealistic morality play. “The Committee was in essence serving as a kind of national parole board, whose job was to determine whether the ‘criminals’ had truly repented of their evil ways. Only by a witness’s naming names and giving details, it was said, could the Committee be certain that his break with the past was genuine. The demand for names was not a quest for evidence; it was a test of character. The naming of names had shifted from a means to an end.”

The effects of the blacklist on the Hollywood community were devastating. In addition to shattered careers, there were broken marriages, exiles, and suicides. According to Navasky, Larry Parks’ tortured testimony and consequent controversy resulted in the end of a career that had been on the brink of superstardom: “His memorable line, ‘Do not make me crawl through the mud like an informer,’ was remembered, and the names he named were forgotten by those in the blacklisting business.” Actress Dorothy Comingore, upon hearing her husband on the radio testifying before the Committee, was so ashamed that she had her head shaved. She lost a bitter custody battle over their child and never worked again. Director Joseph Losey’s last memory was of hiding in a darkened home to avoid service of a subpoena. He fled to England. Philip Loeb, who played Papa on *The Goldbergs*, checked into a room at the Hotel Taft and swallowed a fatal dose of sleeping pills.

There was also resilience, courage, and humor. Blacklisted writers hired “fronts” to pose as the authors of their scripts, and occasionally won Academy Awards under assumed names. Sam Ornitz urged his comrades in the Hollywood Ten to be “at least as brave as the people we write about” as they faced prison. Dalton Trumbo sardonically proclaimed his conviction a “completely just verdict” in that “I did have contempt for that Congress, and have had contempt for several since.” Ring Lardner, Jr., recalled becoming “reacquainted” with J. Parnell Thomas at the Federal Correctional Institution in Danbury, Connecticut, where Thomas was already an inmate, having been convicted of misappropriating government funds while Lardner exhausted his appeals.

Many years later, in an acceptance speech for the highest honor bestowed by the Screenwriters Guild, the Laurel Award, Dalton Trumbo tried to bring the bitterness surrounding the blacklist to an end. “When you [. . .] look back with curiosity on that dark time, as I

think occasionally you should, it will do no good to search for villains or heroes or saints or devils because there were none," he said, "there were only victims. Some suffered less than others, some grew and some diminished, but in the final tally we were all victims because almost without exception each of us felt compelled to say things he did not want to say, to do things he did not want to do, to deliver and receive wounds he truly did not want to exchange. That is why none of us—right, left, or center—emerged from that long nightmare without sin. None without sin."

Trumbo's "Only Victims" speech, delivered in 1970, was clearly meant to be healing. Instead, it rekindled a controversy that smoldered for years, with other members of the Hollywood Ten bristling at his sweeping conviction and implied pardon of everyone involved. The social, psychological, legal, and moral ramifications of the Hollywood blacklist have haunted American popular memory for more than half a century. The blacklist has been the subject of numerous books, plays, documentaries, and feature films, the titles of which speak for themselves: *Thirty Years of Treason*, *Scoundrel Time*, *Hollywood on Trial*, *Fear on Trial*, *Are You Now Or Have You Ever Been*, *Hollywood's Darkest Days*, *Naming Names*, *Tender Comrades*, *Fellow Traveler*, and *Guilty By Suspicion*, to name a few.

In 1997, the *New York Times* reported that "The blacklist still torments Hollywood." On the 50th anniversary of the 1947 hearings, the Writers Guild of America, one of several Hollywood unions that failed to support members blacklisted in the 1950s, announced that it was restoring the credits on nearly 50 films written by blacklisted screenwriters. There was talk of "putting closure to all of this" and feeling "forgiveness in the air." At the same time, however, a debate raged in the arts and editorial pages of the nation's newspapers over whether the Los Angeles Film Critics Association and the American Film Institute were guilty of "blacklisting" director Elia Kazan. Kazan appeared before the Committee in 1952 and informed on eight friends who had been fellow members of the Communist Party. His *On the Waterfront* is widely seen as a defense of those who named names. As Peter Biskind remarks, the film "presents a situation in which informing on criminal associates is the only honorable course of action for a just man."

Variety advocated a lifetime achievement award for Kazan, describing him as "an artist without honor in his own country, a celebrated filmmaker whose name cannot be mentioned for fear of knee-jerk reactions of scorn and disgust, a two-time Oscar winner not only politically incorrect but also politically unacceptable according to fashion and the dominant liberal-left Hollywood establishment." But as the *New York Times* pointed out, "Not only did [Kazan] name names, causing lasting damage to individual careers, but he lent his prestige and moral authority to what was essentially an immoral process, a brief but nevertheless damaging period of officially sponsored hysteria that exacted a huge toll on individual lives, on free speech, and on democracy." Kazan accepted his lifetime achievement award at the Academy Awards in 1999.

Blade Runner

Ridley Scott's 1982 film adaptation of Philip K. Dick's science fiction novel *Do Androids Dream of Electric Sheep?* (1968) received poor reviews when it opened. It did not take long, however, for *Blade Runner* to become known as one of the greatest science fiction films ever made. The film's depiction of Los Angeles in the year 2019 combines extrapolated social trends with technology and the darkness of film noir to create the movie that gave Cyberpunk literature its visual representation.

In true film noir style, the story follows Rick Deckard (Harrison Ford), who is a "Blade Runner," a hired gun whose job is to retire (kill) renegade "replicants" (androids who are genetically designed as slaves for off-world work). The story revolves around a group of replicants who escape from an off-world colony and come to earth to try to override their built-in four-year life span. Deckard hunts the replicants, but he falls in love with Rachael (Sean Young)—an experimental replicant. Deckard finally faces the lead replicant (Rutger Hauer) in a struggle that ends with him questioning his own humanity and the ethics of his blade running.

The production of *Blade Runner* was not without problems. Hampton Fancher had written the screenplay that offered a much darker vision than Dick's novel and only drew on its basic concepts. After the success of *Alien* (1979), Ridley Scott showed interest in directing the film. Scott replaced Fancher with David Peoples after eight drafts of the script. Scott's goal was to rework the script to be less action-oriented with a plot involving "clues" and more human-like adversaries. He worked closely with Douglas Trumbull—2001: *A Space Odyssey*—to design an original visual concept. Although some of the actors flourished under Scott's directing style, many were frustrated with his excessive attention to the set design and lighting. Eventually, the production company that was supporting the film pulled out after spending two million dollars. New funding was provided by three interests—a subsidiary of Warner Brothers, Run Run Shaw, and Tandem Productions (which gained rights to control the final version).

Preview audiences were befuddled by the film's ambiguous resolution and frustrated by the lack of light-hearted action they expected from Harrison Ford. The response was so weak that Tandem Productions decided to change the film. Scott was forced to include voice-overs, and to add a "feel good" ending in which Deckard and Rachael drive off into *Blade Runner's* equivalent of a sunset.

The film opened strong at the box office, but critics railed against the voice-overs and the happy ending. The release of Steven Spielberg's *E.T.: The Extra Terrestrial*, within two weeks of *Blade Runner*, eclipsed the film and ended its theater run. *Blade Runner* has,

Harrison Ford in a scene from the film *Blade Runner*.

however, endured. In 1993, the National Film Preservation Board selected to preserve *Blade Runner* as one of its annual 25 films deemed “culturally, historically, or aesthetically important.” The British Film Institute also included *Blade Runner* in its Modern Classics series.

Part of *Blade Runner*’s success is due to its serious treatment of important philosophical and ethical questions. Some look at *Blade Runner* as a rehashing of *Frankenstein*. In true Cyberpunk style, though, the monsters have already escaped and there is an explicit question about whether humans are the real monsters. *Blade Runner* goes beyond that, asking hard questions about religion, the ethics of genetic manipulation, racism and sexism, and human interaction with technology. The film also presents two other major questions: “What is it to be human?”; and “How should our society handle its ‘kipple?’”—the accumulating garbage (especially human “kipple”). These issues are so thought provoking that *Blade Runner* has become one of the most examined films in academic circles.

Blade Runner is often touted as the primary visual manifestation of the Cyberpunk movement and the first Cyberpunk film. The film

predated the beginning of the Cyberpunk movement (William Gibson’s *Neuromancer*), however, by two years. Hallmark themes of Cyberpunk fiction are the merging of man with machine and a dark, morbid view of the near future mixed with the delight of new technology. With dark and bleak imagery and androids that are “more human than human,” it is not surprising that *Blade Runner* became a Cyberpunk watershed, offering a hopeful vision of what technology can do and be.

In 1989, Warner Brothers uncovered a 70mm print of *Blade Runner* and showed it to an eager audience at a film festival. The studio showed this version in two theaters in 1991, setting house attendance records and quickly making them two of the top-grossing theaters in the country. Warner Brothers agreed to fund Scott’s creation of a “director’s cut” of the film. Scott reworked the film and re-released it in 1992 as *Blade Runner: The Director’s Cut*. The voice-overs were taken out, the happy ending was cut, and Scott’s “unicorn” scene was reintegrated.

Because this film was initially so poorly received, no film or television sequels resulted. *Blade Runner* did, however, vault Dick’s

books past their previous recognition. It also spawned two book sequels by K.W. Jeter both of which received marginal reviews. In 1997, Westwood Studios released the long-awaited CD-ROM game. The Internet bustles with dozens of pages dedicated to the film and discussion groups, which never tire of examining the movie.

Blade Runner's most important contribution has been to the film and television industries, creating a vision of the future that has continued to resonate in the media. Scott's dystopian images are reflected in films and television shows such as *Robocop*, *Brazil*, *Total Recall*, *Max Headroom*, *Strange Days*, and *Dark City*. *Blade Runner* has become one of the standards for science fiction imagery, standing right beside *Star Wars* and *2001: A Space Odyssey*. Many reviewers still use *Blade Runner* as the visual standard for science fiction comparisons. It has survived as a modern cult classic and it will certainly impact our culture for a long time to come.

Blades, Ruben (1948—)

Musician, actor, and social activist Ruben Blades grew up in Panama and grew to international fame in the United States, becoming in the process a perfect example of the multiculturalism of the Americas. Accepting as correct both the Spanish and English pronunciations of his last name, Blades likewise accepts the different facets of himself and demands no less of the greater culture that surrounds him. Overcoming enormous odds, Blades managed to juggle simultaneous careers as a lawyer, a salsa musician, a Hollywood actor, and finally a presidential candidate while maintaining his principles of social justice and pan-culturalism.

Blades was born in Panama City into a musical family; his father, a police detective, played bongos, and his Cuban-born mother sang and played piano. Along with the Afro-Cuban rhythms he grew up with, Blades was heavily influenced by the rock music of the Beatles, Frankie Lyman, and others. After studying law at the University of Panama ("to please my parents"), he began playing music with a band. In 1974, disenchanted with the political oppression of the military dictatorship in Panama and seeking new horizons in his music career, Blades left his native land and went to New York City.

He arrived in New York with only one hundred dollars in his pocket, but it wasn't long before he had found a job in a band playing salsa music. Salsa, a pan-American music which had been formed when the music of Cuban immigrants married American jazz, was just the kind of flexible Latin sound to absorb the rock and rhythm and blues influences that Blades loved. By the late 1970s, he was recording with salsa musician Willie Colon, and together they produced an album appropriately named *Siembre* (Seed), which became one of the seminal works of salsa music.

Blades also comes by his political activism naturally; his grandmother worked for women's rights in Panama in the 1940s and 1950s. Though Blades loved music, he never let it become an escape; rather he used it in his attempt to change the world, writing more than one hundred fifty songs, most of them political. He became one of the leading creators of the *Nuova Cancion* (New Song) movement, a Latin music movement that combined political message with poetic imagery and Latin rhythms. His songs, while embraced by those on the left, were often controversial in more conservative circles. His 1980 song "Tiberon" (Shark) about the intervention and imperialism of the superpowers, was banned on radio stations in Miami, and Blades received death threats when he performed there.

After taking a year off to earn a master's degree in international law from Harvard Law School, Blades moved from New York to Los Angeles in 1986. He starred in the low budget film *Crossover Dreams* (1985) about a young Latin American man trying to succeed as a musician in the United States. Blades proved to be a talented actor and continues to appear in major films, some, like Robert Redford's *The Milagro Beanfield War* (1988), with social significance and some, like *Fatal Beauty* (1987) with Whoopi Goldberg, pure Hollywood.

Perhaps Blades's most surprising role began when he returned to Panama in 1992. As the country was struggling to recover from the repressive politics of Manuel Noriega and invasion by the United States, Blades helped in the formation of a new populist political party to combat the dominant corporation-driven politics of Panama. The party, *Papa Egoro* (Mother Earth in the indigenous language), eventually asked Blades to be its candidate for president. Blades accepted reluctantly but ran enthusiastically, writing his own campaign song and encouraging his constituents to believe that change was possible. "I'm going to walk with the people who are the subjects of my songs," he said, "And I'm going to try to change their lives." One significant change he suggested was a requirement that a percentage of the corporate money that passed through Panama be invested back into the infrastructure of the country to benefit ordinary citizens. Blades lost his bid for the presidency, partly because of lack of campaign funds and a political machine, and partly because he had not lived in Panama for many years and was not taken seriously as a candidate by some voters. However, he came in third out of seven

Ruben Blades

candidates, which many saw as a hopeful sign of a growing populist movement.

Ruben Blades's life and career is an eclectic jumble of impossible feats and improbable juxtapositions. In the superficial world of commercial music and Hollywood film he has succeeded without neutralizing his politics. In the endless freeway that is Los Angeles he has never learned to drive or owned a car ("If I need something, it's only an hour-and-a-half walk to town"). His many releases include an album with Anglo singers singing with him in Spanish, an English album with rock rebels Lou Reed and Elvis Costello, and an album of contemporary Panamanian singers. Blades is proudly pan-American and wants to inspire all Americans to explore our connections. "I will always be viewed with suspicion by some, though not by all," he admits, "because I move against the current."

Blanc, Mel (1908-1989)

Mel Blanc, the "Man of a thousand voices," helped to develop animated cartoons into a new comedic art form by creating and performing the voices of hundreds of characters for cartoons, radio, and television.

Melvin Jerome Blanc was born on May 30, 1908 in San Francisco, California, to Frederick and Eva Blank, managers of a women's retail clothing business. A poor student and class cut-up, Blanc was popular with his peers but often annoyed his teachers and principals. At age 16, goaded by an insult from a teacher, Blanc changed the spelling of his last name from "Blank" to "Blanc." Blanc had made his class laugh by giving a response in four different voices, and the incensed teacher said, "You'll never amount to anything. You're just like your last name: blank." Nonetheless, high school gave Blanc some opportunity to practice future material. For example, he took advantage of the great acoustics of the school's cavernous hallways to develop the raucous laugh that eventually became Woody Woodpecker's signature.

After graduating from high school in 1927, Blanc started working part-time in radio, on a Friday evening program called *The Hoot Owls*, and playing tuba with two orchestras. He then went on to play in the NBC Trocadero radio orchestra. By age 22 he was the youngest musical director in the country, working as the pit conductor for Oregon's Orpheum Theatre. In 1931, Blanc returned to San Francisco to emcee a Tuesday night radio variety show called "The Road Show." The next year, he set out for Hollywood, hoping to make it big. Although his first foray into Tinseltown did not bring him much professional success, it did wonders for his personal life. In 1933, Blanc eloped with Estelle Rosenbaum, whom he had met while swing-dancing at the Ocean Park Ballroom in Santa Monica. The couple moved to Portland, Oregon, where Blanc (with help from Estelle) wrote, produced, and acted in a live, hour-long radio show, *Cobwebs and Nuts*.

In 1935, Blanc and his wife returned to Hollywood to try again. By 1941, Blanc's career as a voice actor had sky-rocketed. In 1936, he joined Warner Brothers, brought on to create a voice for an animated drunken bull for an upcoming production called *Picador Porky*, and starring Porky Pig. But soon afterward, Blanc was asked to replace the actor who provided Porky Pig's voice. In his first demonstration of his new creation, Blanc ad-libbed the famous "Th-uh-th-uh-th-that's all, folks!" Released in 1937, *Picador Porky* was Blanc's first cartoon for Warner Brothers. That same year, Blanc created his second lead character for Warner, Daffy Duck. Around this time, he also changed the way cartoons were recorded by suggesting that each character's lines be recorded separately and then reassembled in sequence. In 1940, Blanc helped create the character with whom he is most closely associated, Bugs Bunny. Bugs had been around in different forms for several years as "Happy Rabbit," but Blanc re-christened him after his animator, Ben "Bugs" Hardaway, and gave him a tough-edged Brooklyn accent. Bugs also provided the inspiration for the most famous ad-lib of his career, "Eh, what's up Doc?" Blanc completed the character by chewing on raw carrots, a vegetable which he detested. Unfortunately, other fruits and vegetables did not produce the right sound. In addition, Blanc found it impossible to chew, swallow, and say his next line. The solution? They stopped recording so that Blanc could spit the carrot into the wastebasket before continuing with the script.

Mel Blanc

In 1945, the studio introduced a romantic lead for Blanc, the skunk Pepe Le Pew. Blanc modeled the character on French matinee idol Charles Boyer, and received amorous fan mail from women who loved the character's accent. The final leading character that Blanc created for Warner Brothers was Speedy Gonzales, the Mexican mouse, the studio's most prolific character in its final years. Of the Warner Brothers characters, Blanc has described the voice of Yosemite Sam as the most difficult to perform, saying that it was like "screaming at the top of your lungs for an hour and a half." Another voice that required a lot of volume was Foghorn Leghorn. His easiest character, and one of his favorites, was Sylvester the Cat. According to Blanc, this voice is closest to his natural speaking voice, but "without the thspray." In his autobiography, Blanc revealed one of the little known tricks used by engineers to manipulate the voices for characters such as Daffy Duck, Henery Hawk, Speedy Gonzales, and Tweety. Using a variable-speed oscillator, lines were recorded below normal speed and then played back conventionally, which raised the pitch of the voices while retaining their clarity.

While at Warner Brothers Blanc worked with a talented group of animators, producers, and directors that included Friz Freleng, Milt Avery, Chuck Jones, and Leon Schlesinger. The studio's work earned five Oscars for cartoons. The first award came in 1947 for *Tweety Pie*, starring Sylvester and Tweety. Blanc calls the 1957 Oscar winner *Birds Anonymous* his all-time favorite cartoon, and producer Eddie Selzer bequeathed its Oscar to Blanc upon his death (cartoon Oscars are only awarded to producers). By the time Warner Brothers closed its animation shop in 1969, Blanc had performed around 700 human and animal characters, and created voices for 848 of the

studio's 1,003 cartoons. He also negotiated an unprecedented screen credit that enabled him to get freelance work with other studios and programs. In addition, Blanc occasionally acted as a dialect coach to film stars such as Clark Gable.

During World War II, Blanc appeared on several Armed Forces Radio Service programs, such as *G.I. Journal*, featuring his popular character Private Sad Sack. Hollywood legends who appeared on the show with Blanc included Lucille Ball, Groucho Marx, Frank Sinatra, and Orson Welles. Warner Brothers also produced several war-related cartoons such as *Wacky Blackouts* and *Tokyo Jokio*. In 1946, CBS and Colgate-Palmolive offered Blanc his own show, but it lasted only one season, due, in Blanc's opinion, to "lackluster scripts."

After leaving Warner Brothers, Blanc returned to broadcast full-time. One of his most well-known roles was a dour, forlorn character comically misnamed "The Happy Postman" who appeared on *The George Burns and Gracie Allen Show*. In 1939, Blanc joined the cast of Jack Benny's popular radio show on NBC. Blanc came to regard Benny as his "closest friend in all of Hollywood." On *The Jack Benny Program* many jokes featured Blanc's Union Depot train caller who would call, "Train leaving on track five for Anaheim, Azusa, and Cuc-amonga!" In one series of skits the pause between "Cuc" and "amonga" kept getting longer and longer until in one show a completely different skit was inserted between the first and second part of the phrase. In 1950, *The Jack Benny Program* made a successful transition to television, ranking in the top 20 shows for ten of the fifteen years it was on the air. Television provided even more voice work for Blanc, who began to perform characters for cartoons specifically produced for television. In 1960, Blanc received an offer from the Hanna-Barbera studio to play the voice role of Barney Rubble on a new animated series for adults called *The Flintstones*.

In 1961, Blanc and former Warner Brothers executive producer John Burton started a commercial production company called Mel Blanc Associates. Three days later, while driving to a radio taping, Blanc was hit head-on by a car that lost control on the S-shaped bend of Sunset Boulevard known as "Dead Man's Curve." Although the other driver sustained only minor injuries, Blanc broke nearly every bone in his body, lost nine pints of blood, and was in a coma for three weeks. After regaining consciousness, he stayed an additional two months in a full body cast. While in the hospital, he recorded several tracks for Warner Brothers, and then had a mini-studio installed in his home so that he could continue working while convalescing.

The Blanc's only child, a son Noel was born in 1938. Blanc has joked that he and his wife later realized that in French their son's name translated into "white Christmas," which Blanc noted was "a hell of a name for a Jewish boy." At age 22, Blanc's son Noel joined Mel Blanc Associates, eventually becoming company president. Later, Blanc taught his son the voices of the Warner Brothers characters, so that he could carry on his legacy.

Mel Blanc Associates quickly became known for its humorous commercials. Its client roster included Kool-Aid, Volkswagen, Ford, and Avis Rent-a-car. They also began producing syndicated radio programs. In conjunction with the company's thirtieth anniversary, the renamed Blanc Communications Corporation became a full-service advertising agency. In 1972, Blanc established the Mel Blanc School of Commercials, which offered six courses such as radio and television voiceovers and commercial acting principles. Proving too costly, however, the school only existed for two years. Meanwhile Blanc continued to do voice-work for commercials and programs. In 1988, he had a bit part as Daffy Duck in the film *Who Framed Roger Rabbit*.

Both Blanc and Bugs Bunny have their own stars on the Hollywood Walk of Fame (Blanc's resides at 6385 Hollywood Boulevard). Blanc has said that the honor of which he is most proud is his inclusion in the United States entertainment history collection of the Smithsonian Institution's National Museum of American History. Active in many philanthropic organizations, Blanc received a plethora of civic awards, including the United Jewish Welfare Fund Man of the Year and the First Show Business Shrine Club's Life Achievement Award.

Although Blanc was a pack-a-day smoker, who started when he was eight, a doctor who x-rayed Blanc's throat compared it to the musculature of Italian tenor Enrico Caruso. Blanc quit smoking later in life when he developed severe emphysema and required portable oxygen to breathe. In 1989, Blanc died at the age of 81 from heart disease. The epitaph on his headstone in Hollywood Memorial Park Cemetery reads, "That's All Folks."

Bland, Bobby Blue (1930—)

Bobby Blue Bland played a significant role in the development of the blues ballad. Generally ranked by blues fans in the highest echelon of the genre, he specializes in slower, prettier tunes, while remaining within the blues tradition. Bland, along with B. B. King, emerged from the Memphis blues scene. Born in Rosemark, Tennessee, he moved to Memphis at seventeen, and began recording shortly thereafter. During the 1950s, he developed his unique blues ballad sound: in his performances, he walks a thin line between self-control and ecstasy. In the 1960s, he had twelve major hits, including "I Pity the Fool," and the now standard "Turn on Your Love Light." Overall, he has had 51 top ten singles. Bland has never become a major crossover star, but still draws solid audiences on the blues concert circuit.

—Frank A. Salamone

Blass, Bill (1922—)

Bill Blass was the first American designer to emerge from the shadow of manufacturers and establish his name with authority. From a base in womenswear design, Blass achieved a collateral success in menswear with "Bill Blass for PBM" in 1968, another first for an American. Blass then used licensing to expand his brand name globally in a range of products from menswear to automobiles and even to chocolates at one point. A shrewd observer of European style, Blass used his talent to define American fashion, creating separates for day and evening; sportswear with active sports as inspiration; and the mix and match that allows customers to compose an individual and chic style on their own. Blass was one of the first designers to

come out of the backroom of design, mingle with clients, and become famous in his own right. To many, Blass is known as the "dean of American fashion."

Blaxploitation Films

Blaxploitation films were a phenomenon of the 1970s. Low-budget action movies aimed at African American audiences, blaxploitation films enjoyed great financial success for several years. Some blaxploitation pictures, such as *Shaft* and *Superfly* launched music and fashion trends as well. Eventually the controversy surrounding these movies brought an end to the genre, but not before nearly one hundred blaxploitation films had been released.

Even during the silent movie period, producers had been making films with all-black casts. An African American entrepreneur named

Pam Grier in a scene from *Foxy Brown*.

William Foster released a series of all-black comedy films beginning in 1910. Oscar Micheaux produced, wrote, and directed nearly forty films between 1919 and 1948. Hundreds of “black only” theaters existed in the United States from the 1920s to the 1950s, and there were low-budget African American films of all genres: musicals, westerns, comedies, horror films, and so forth. The market for these black films started to disappear in the 1950s, when integration brought an end to the “blacks only” theaters and Hollywood began using African American performers more prominently in mainstream studio productions.

By the end of the 1960s, it was common to see films starring African American performers. When Sidney Poitier won the Academy Award in 1964 for his role in *Lilies of the Field*, his victory was seen as a sign of great progress for African American actors. However, a more important role for Poitier was that of police detective Virgil Tibbs in the film *In the Heat of the Night*. He played Tibbs in two more films, *They Call Me MISTER Tibbs* and *The Organization*. Both those movies were released at the beginning of the blaxploitation cycle and clearly influenced many blaxploitation pictures: the forceful, articulate, handsome, and well-educated Virgil Tibbs appears to have been the model for the protagonists of many blaxploitation pictures. The success of *In the Heat of the Night*—it won the Oscar as best picture of 1967—and the ongoing civil rights movement in America led to more films that dealt with racial tensions, particularly in small Southern towns, including *If He Hollers, Let Him Go*; *tick . . . tick . . . tick . . .*; and *The Liberation of L.B. Jones*. But all of these movies were mainstream productions from major Hollywood studios; none could be considered a blaxploitation picture.

The Red, White and Black, a low-budget, extremely violent western with a predominantly African American cast can be called the first blaxploitation film. Directed by John Bud Carlos and released in 1969, the movie was the first black western since the 1930s, addressing the discrimination faced by African Americans in post-Civil War America. The most influential movie of this period, however, was *Sweet Sweetback's Baadasssss Song*, which was written, produced, and directed by Melvin van Peebles, who also starred. The protagonist, Sweetback, is a pimp who kills a police officer to save an innocent black man and then has to flee the country. The film became one of the most financially successful independent films in history, and its explicit sex, extreme violence, criticism of white society, and powerful antihero protagonist became standards of the genre.

Shaft further solidified the conventions of the blaxploitation genre. John Shaft is a private detective who is hired to find the daughter of an African American mobster; the daughter has been kidnapped by the Mafia. Shaft, portrayed by Richard Roundtree, is similar to Virgil Tibbs character (both Shaft and Tibbs first appeared in novels by author Ernest Tidyman) and many suave private detectives from film and television. *Shaft* was extremely popular with African American audiences and was widely imitated by other blaxploitation filmmakers: the cool and aloof hero, white villains, sex with both black and white women, heavy emphasis on action and gunplay, and the depiction of the problems of lower income African Americans all became staples of the blaxploitation movie. Isaac Hayes' Academy Award winning “Theme from Shaft” was frequently imitated. Two sequels were made to *Shaft*: *Shaft's Big Score* and *Shaft in Africa*. Roundtree also starred in a brief *Shaft* television series in 1973.

The peak period for blaxploitation films was 1972-74, during which seventy-six blaxploitation films were released, an average of more than two per month. It was in 1972 that *Variety* and other

publications began using the term blaxploitation to describe these new action pictures, creating the term by combining “black” with “exploitation.” That same year two former football players, Jim Brown and Fred Williamson, both began what would be long-running blaxploitation film careers. Brown starred in *Slaughter*, about a ghetto resident who seeks revenge on the Mafia after hoodlums murder his parents, and in *Black Gunn*, in which he seeks revenge on the Mafia after hoodlums murder his brother. Williamson starred in *Hammer* (Williamson's nickname while playing football), in which he portrayed a boxer who has conflicts with the Mafia. While former athletes Brown and Williamson might have dominated the genre, more accomplished African American actors were also willing to perform in the lucrative blaxploitation market: Robert Hooks starred in *Trouble Man*, William Marshall in *Blacula*, Hari Rhodes in *Detroit 9000*, and Calvin Lockhart in *Melinda*.

The blaxploitation films of this period were extremely popular with audiences and successful financially as well, but they also were the subject of much criticism from community leaders and the black press. These movies were being made by major Hollywood studios but on lower budgets than most of their other pictures, and many critics of blaxploitation films felt that the studios were cynically producing violent junk for the African American audience rather than making uplifting films with better production values, such as the 1972 release *Sounder*. Blaxploitation films were also dismissed as simply black variations on hackneyed material; *Jet* magazine once called blaxploitation films “James Bond in black face.” Criticism grew with a second wave of blaxploitation films whose characters were less socially acceptable to segments of the public. The 1973 release *Superfly* is the best known among these films and was the subject of the intense protest at the time of its release. The film is about a cocaine dealer, Priest, who plans to retire after making one last, very large deal. Priest was never explicitly condemned in the movie, and, as portrayed by the charismatic Ron O'Neal, actually became something of a hero to some viewers, who responded by imitating Priest's wardrobe and haircut. Other blaxploitation films of the period that featured criminal protagonists were *Black Caesar* (Fred Williamson as a gangster); *Willie Dynamite* (a pimp); *Sweet Jesus, Preacher Man* (a hitman); and *The Mack* (another pimp).

As the controversy around blaxploitation films grew, producers moved away from crime films for black audiences and attempted making black versions of familiar film genres. Particularly popular were black horror movies, including *Blacula* and its sequel *Scream, Blacula, Scream*; *Blackenstein*; *Alabama's Ghost*; and *Abby*, which so resembled *The Exorcist* that its producers were sued for plagiarism. Black westerns, such as *Adios, Amigo*, were also popular, and there were a few black martial arts films, like *Black Belt Jones*. Many producers simply added the word “black” to the title of a previously existing picture, so that audiences were treated to *Black Lolita*, *Black Shampoo*, and *The Black Godfather*. Comedian Rudy Ray Moore had a brief film career with *Dolemite* and *The Human Tornado*.

The greatest success of the second wave of blaxploitation pictures came from American International Pictures and its series of movies featuring sexy female characters. After appearing in some prison movies for the studio, Pam Grier starred in *Coffy* in 1973, playing a nurse who tries to avenge the death of her sister, a drug addict. Grier subsequently starred in *Foxy Brown*, *Sheba Baby*, and *Friday Foster* for American International. AIP also made a few “sexy women” blaxploitation films with other actresses: Tamara Dobson starred in *Cleopatra Jones* and *Cleopatra Jones and the Casino of Gold*, and Jeanne Bell played the title role in *TNT Jackson*.

By the late 1970s, the blaxploitation film had run its course. From a high of two dozen blaxploitation films released in 1973, studios moved to four blaxploitation films in 1977 and none at all in 1978. Major studios were now making mainstream black films with performers like Richard Pryor. With the exception of Fred Williamson, who moved to Europe where he continued to produce and appear in low-budget movies, no one was making blaxploitation films by the end of the 1970s. There have been a few attempts to revive the format. Brown, Williamson, O'Neal, and martial artist Jim Kelly appeared in *One Down, Three to Go* in 1982, and *The Return of Superfly* was released in 1990 with a new actor in the lead. Keenen Ivory Wayans parodied blaxploitation films in *I'm Gonna Get You, Sucka*.

Like many movie trends, the blaxploitation film genre enjoyed a rapid success and an almost equally rapid demise, probably hastened by the highly repetitive content of most of the movies. Blaxploitation films were undeniably influential and remained so into the 1990s. Filmmakers such as John Singleton or the Hughes brothers frequently spoke with admiration of the blaxploitation pictures they enjoyed growing up, and Spike Lee frequently asserted that without *Sweet Sweetback's Baaaadasssss Song* there would be no black cinema today. Despite their frequent excesses, blaxploitation films were an important part of American motion pictures in the 1970s.

The Blob

The Blob (1958) is one of a long string of largely forgettable 1950s teenage horror films. The film's action revolves around a purple blob from outer space that has the nasty habit of eating people. At the time, the title was what drew audiences to watch this otherwise ordinary film. It has since achieved notoriety as both a sublimely bad film and the film in which Steve McQueen had his first starring role.

Blockbusters

The term blockbuster was originally coined during World War II to describe an eight-ton American aerial bomb which contained enough explosive to level an entire city block. After the war, the term

quickly caught the public's attention and became part of the American vernacular to describe any occurrence that was considered to be epic in scale. However, there was no universal agreement as to what events actually qualified as blockbusters so the post war world was inundated with colossal art exhibitions, epic athletic events, and even "larger than life" department store sales all lumped under the heading of blockbuster.

By the mid-1950s, though, the term began to be increasingly applied to the motion picture screen as a catch-all term for the wide-screen cinemascope epics that Hollywood created to fend off the threat of television, which was taking over the nation's living rooms. Such films as Cecil B. DeMille's *The Ten Commandments*, a remake of his earlier silent film, Michael Anderson's *Around the World in 80 Days*, and King Vidor's *War and Peace*, all released in 1956, established the standards for the blockbuster motion picture. Every effort was made to create sheer visual magnitude in wide film (usually 70mm) processes, full stereophonic sound, and lavish stunts and special effects.

These films were also characterized by higher than average production budgets (between \$6,000,000 and \$15,000,000), longer running times (more than 3 hours), and the need to achieve extremely high box office grosses to break even, let alone make a profit. Subject matter was generally drawn from history or the Bible and occasionally from an epic novel which provide a seemingly inexhaustible supply of colorful characters, broad vistas, and gripping stories.

By this definition, the blockbuster has a history as old as Hollywood itself. As early as 1898, a version of the passion play was filmed on the roof of a New York high-rise and a one reel version of *Ben Hur* was filmed in 1907. Yet, by 1912, it was Italy that was establishing the conventions of large scale spectacles through such lavish productions as Enrico Guazzoni's *Quo Vadis?* (1912) and Giovanni Pastrone's *Cabiria* (1914). Indeed, it was the latter film—with its enormous (for the time) production budget of \$100,000 and its world-wide following—that played a major role in taking the motion picture out of the Nickelodeons into modern theaters and in establishing the viability of the feature film as a profitable entertainment medium.

According to some sources, American film pioneer D.W. Griffith was so impressed by *Cabiria* that he owned his own personal copy of the film and studied its spectacular sets, its lighting, and its camera movement as a source of inspiration for his own epics *The Birth of a Nation* (1915) and *Intolerance* (1916). Indeed, *The Birth of a Nation* was not only the first important product of the American cinema, it set the standard for the films to follow. Its budget has been placed at \$110,000, which translates into millions of dollars by today's standards. Its gross, however, was much higher approaching 100 million dollars. In fact, a number of historians attest that it may have been seen by more people than any film in history—a fact that might be disputed by proponents of *Gone with the Wind* (1939) and *Titanic* (1997).

The Birth of a Nation did, however, change forever the demographics of the motion picture audience. Prior to its release, films were considered to be primarily for the working classes, mostly immigrants who viewed them in small storefront theaters. Griffith's film, which treated the U.S. Civil War and related it as an epic human drama, captured an audience that had previously only attended the legitimate theater. Through the use of sophisticated camera work, editing, and storytelling, Griffith created a masterpiece that has been re-released many times and still maintains the power to shock and move an audience.

The theatrical poster for the film *The Blob*.

Griffith's second attempt at a blockbuster one year later exposed the inherent risks of big-budget filmmaking. Though *Intolerance* is generally considered as an artistic milestone and is generally credited with influencing the fledgling Soviet film industry in the 1920s, it was a financial disaster for its director. Made on a budget of \$500,000 (several million in today's dollars), it never found its audience. Its pacifist tone was out of step with a public gearing itself for America's entry into World War I. Also, instead of one straight forward narrative, it shifted back and forth between a modern story, sixteenth-century France, ancient Babylon, and the life of Christ; the stories were all linked by the common theme of intolerance. The human drama was played out against giant sets and spectacular pageantry. Yet, audiences appeared to balk at the four storylines and stayed away from the theater, making it arguably the first big budget disaster in the history of film.

Although film budgets grew considerably during the next two decades, leading to some notable blockbusters as *Ben-Hur* (1926) and *San Francisco* (1936), it was not until 1939 with the release of *Gone with the Wind* that the form reasserted itself as a major force on the

level of contemporary "event pictures." The film, which was based on a nation-wide best-selling novel by Margaret Mitchell, was produced by David O. Selznick and returned to the theme of the U.S. Civil War covered by Griffith. Although box office star Clark Gable was the popular choice for the role of Rhett Butler, Selznick was able to milk maximum publicity value by conducting a high profile public search for an actress to play the role of Scarlett O'Hara. Fan magazines polled their readers for suggestions but the producer ultimately selected British actress Vivian Leigh, a virtual unknown in the United States. Another publicity stunt was the "burning of Atlanta" on a Culver City backlot consisting of old sets and other debris as the official first scene to be filmed. By the time that the film had its official premiere in Atlanta in 1939, the entire world was ready to experience the "big screen," Technicolor experience that was *Gone with the Wind*.

The film was a monumental success during its initial run and continued to pack audiences in during subsequent reissues in 1947, 1954, 1961, 1967, and 1998. In the 1967 run, the film was blown up to 70mm to effectively compete with the large screen blockbusters of the

1960s such as *Lawrence of Arabia* (1962) and *The Sound of Music* (1965). Thus removed from its natural aspect ratio, it did not fare particularly well against its modern competition. A decade later, when restored to its normal screen size, it made its debut on NBC and drew the largest audience in television history. In terms of sheer hype, marketing, and production values, *Gone with the Wind* constituted the prototype for what the blockbuster would come to be. From the time of its release until 1980, it became, in terms of un-inflated dollar value, the most profitable film ever made.

The blockbuster phenomenon died down until the mid-1950s when the emergence of new wide-screen technologies and the onslaught of television prompted Hollywood to give its viewers a spectacle that could not be duplicated on the much smaller screen in the living room. Although first dismissed as novelties, these films built on the precedents established by *Gone with the Wind* and built their success on lavish production budgets, biblical and literary source material, and sheer big screen spectacle. The first major success was King Vidor's *War and Peace* in 1956. With a running time of nearly three and one half hours, it was a true visual epic. It was quickly followed by Cecil B. DeMille's remake of his silent epic *The Ten Commandments*, and Michael Anderson's *Around the World in 80 Days*.

Yet, within the very success of these blockbusters were the ingredients that would bring them to a halt in the 1960s. In order to create the large screen spectacles that were the trademark of the wide-screen 1950s films, the producers had to allocate larger production budgets than were the average for their standard releases. This meant that the studio had to drastically decrease the number of films that it made during a given year. Also, the longer running time of the blockbusters reduced the number of showings that a film would receive in the neighborhood theater.

To get around this situation, distributors created the road show exhibition scheme. A large budget film such as *West Side Story* (1961) would open only at large theaters in major metropolitan areas for, in some cases, as long as a year. The film would become an event much like a Broadway play and could command top dollar at the box-office. Both sound and projection systems would feature the latest technology to captivate the audience and make the evening a true theatrical experience. Once this market began to diminish, the film would be released to neighborhood theaters with considerably inferior exhibition facilities. Still, the public flocked to these motion pictures to see what all of the shouting was about.

This production and distribution strategy was based on the film being a hit. Unfortunately, most of the films that followed the widescreen extravaganzas of the mid-1950s failed to make their money back. The most notable example was Joseph L. Mankiewicz's 1963 *Cleopatra*, which cost Twentieth Century-Fox more than 40 million dollars to produce over a four year period. Although it had a number of theoretically "sure fire" ingredients—the pairing of Elizabeth Taylor and her then-lover Richard Burton (who were at the center of a highly publicized Hollywood divorce case) and every element of big screen spectacle that its producers could muster—it bombed at the box-office and never made its money back. This debacle almost brought Fox to its knees and illustrated the damage that an ill conceived blockbuster could do to a studio.

Thus although several films, such as *The Sound of Music*, which cost only \$8 million to make and which returned \$72 million in the domestic market alone, continued to show the profit potential of the blockbuster concept, the practice temporarily died out simply because

studios could not afford to put all of their financial eggs in one cinematic basket.

During the 1970s, production costs for all films began to rise substantially, causing the studios to produce fewer and fewer films and to place a significantly larger share of the budget into advertising and promotion in an attempt to pre-sell their films. This idea was enhanced through a variety of market and audience research to determine the viability of specific subjects, stories, and actors. Such practices led to the production of films carefully tailored to fit the audience's built-in expectations and reduced the number of edgy, experimental projects that studios would be willing to invest in.

The financial success of several conventionally-themed big-budget films at the beginning of the decade, including *Love Story* (1970), *Airport* (1970), and *The Godfather* (1972), proved that the theory indeed worked and proved that the right amount of research, glitz, and hype would pay huge dividends at the box-office. By the end of the decade two other films—*Star Wars* (1977) and *Jaws* (1975)—demonstrated that the equation could even be stretched to generate grosses in the hundreds of millions of dollars if the formula was on target. The latter two films demonstrated that the success of even one blockbuster could effect the financial position of a studio. In 1997, for example, the six top grossing films in the U.S. market accounted for more than one-third of the total revenues of distributors.

Despite the failure of the \$40 million *Heaven's Gate* in 1980 and the increasingly high stakes faced by studios in order to compete, the trend toward blockbusters continued unabated into the 1980s. A major factor in this development, however, was the fact that most of the major studios were being acquired by large conglomerates with financial interests in a variety of media types. These companies viewed the motion picture as simply the first stage in the marketing of a product that would have blockbuster potential in a variety of interlocking media including books, toys, games, clothing, and personal products. In the case of a successful film, *Star Wars* or *Batman*, for example, the earnings for these items would far exceed the box office revenues and at the same time create an appetite for a sequel.

This situation often affected the subject matter dealt with by the film. The question thus became "How well can the film stimulate the after-markets." Established products such as sequels and remakes of popular films were deemed to be the most commercial vehicles for developing related lines of merchandise. Original screenplays—unless they were based on successful "crossover" products from best-selling novels, comic books, or stage plays with built-in audiences—were deemed to be the least commercial subjects.

At the same time, studios were re-thinking their distribution strategy. Whereas the road show method had worked during the 1960s the merchandising needs of linked media conglomerates required a new concept of saturation booking. According to this strategy, a film would be released simultaneously in more than 2000 theaters all over the United States to create the largest opening weekend possible and generate enough strong "word of mouth" recommendations to create a chain reaction that would open up all of the additional markets world wide and trigger additional markets in video sales, pay TV, and network TV as well as toys and other merchandise.

The primary criteria for creating films that lend themselves to multi-media marketing was to choose subjects which were appealing to the prime 14- to 25-year-old age group but which also had attractions for a family audience. Thus, event films were usually pegged to the two heaviest theater going periods of the year, summer and Christmas. This insures that if the film is targeted at a younger

audience, it will still attract the parents of children or teenagers who might accompany them to the theater.

Additionally, the video and television markets also assisted in creating the reception for theatrical projects. The highly successful *Rambo* series of the 1980s began with a moderately successful medium-budget theatrical film, *First Blood* (1982), which might never have generated a sequel had it not been a runaway video hit. The success of the video created a built-in audience for the much higher budgeted *Rambo: First Blood, Part Two* (1985), which in turn generated toys, action figures, video games, and an animated TV series.

In the 1990s, the stakes rose even higher, with higher budgeted films requiring correspondingly higher grosses. Such large budgeted films as *Batman and Robin* (1997) and *Waterworld* (1995) were deemed “failures” because their fairly respectable grosses still did not allow the film to break even due to the scale of their production costs. The ultimate plateau may have been reached with James Cameron’s *Titanic*, with a production budget so large—over \$200 million—that it took two studios (Twentieth Century-Fox and Paramount) to pay for it.

Titanic became the biggest moneymaking film in the history of motion pictures, with a gross approaching \$1 billion worldwide. Such success is largely due to the fact that writer/director James Cameron created a film that appealed to every major audience demographic possible. For the young girls, there was its star Leonardo Di Caprio, the 1990s heartthrob, and a love story; for young men there was the action of the sinking ship; for the adults, there was the historical epic and the love story.

As for the future, the success of *Titanic* will undoubtedly tempt producers to create even larger budgeted films crammed with ever more expensive special effects. Some of these productions will be so large that they will have to be funded by increasingly intricate financial partnerships between two or more production entities simply to get the film off the ground. The stakes will, of course, be enormous, with the fate of an entire studio or production company riding on the outcome of a single feature. Yet, despite the high risk factor, the blockbuster trend will continue to exert a siren-like allure for those at the controls of Hollywood’s destiny. Unlike the days of Griffith and Selznick, it is no longer enough to simply tell a good story in a cinematic way. If a film cannot sell toys and software, it may not even get made.

Blondie (comic strip)

One of the longest-running marriages in the funnies is that of Blondie Boopadoop and Dagwood Bumstead. The couple first met in 1930, when Blondie was a flighty flapper and Dagwood was a somewhat dense rich boy, and they were married in 1933. They’re still living a happy, though joke-ridden life, in close to 2000 newspapers around the world. The *Blondie* strip was created by Murat “Chic” Young, who’d begun drawing comics about pretty young women in 1921.

After several false starts—including such strips as *Beautiful Bab* and *Dumb Dora*—Young came up with *Blondie* and King Features began syndicating it in September of 1930. Initially *Blondie* read like Young’s other strips. But after the couple married and the disinherited Dagwood took a sort of generic office job with Mr. Dithers, the feature changed and became domesticated. Blondie turned out to be far from flighty and proved to be a model housewife, gently manipulating her sometimes befuddled husband. The gags, and the short continuities, centered increasingly around the home and the office, frequently concentrating on basics like sleeping, eating, and working.

A four-frame strip from the comic *Blondie*.

The birth of their first child, Baby Dumpling, in the spring of 1934 provided a new source of gags and helped win the strip an even larger audience. Young perfected running gags built around such props and situations as Dagwood's naps on the sofa, his monumental sandwiches, his conflicts with door-to-door salesmen, Blondie's new hats, and his wild rushes to catch the bus to work. Other regular characters were neighbors Herb and Tootsie Woodley, Daisy the Bumstead dog and, eventually, her pups, and Mr. Beasley the postman, with whom Dagwood frequently collided in his headlong rushes to the bus stop. The Bumstead's second child, daughter Cookie, was born in 1941.

King effectively merchandised the strip in a variety of mediums. There were reprints in comic books and Big Little Books and, because of Dagwood's affinity for food, there were also occasional cookbooks. More importantly, Young's characters were brought to the screen by Columbia Pictures in 1938. Arthur Lake, who looked born for the part, played Dagwood and Penny Singleton, her hair freshly bleached, was Blondie. Immediately successful, the series of "B" movies lasted until 1950 and ran to over two dozen titles. The radio version of *Blondie* took to the air on CBS in the summer of 1939, also starring Singleton and Lake. Like the movies, it was more specific about Dagwood's office job and had him working for the J.C. Dithers Construction Company. The final broadcast was in 1950 and by that time Ann Rutherford was Blondie. For the first television version on NBC in 1957 Lake was once again Dagwood, but Pamela Briton portrayed Blondie. The show survived for only eight months and a 1968 attempt on CBS with Will Hutchins and Patricia Harty lasted for just four. Despite occasional rumors about a musical, the Bumsteads have thus far failed to trod the boards on Broadway.

A journeyman cartoonist at best, Young early on hired assistants to help him with the drawing of *Blondie*. Among them were Alex Raymond (in the days before he graduated to *Flash Gordon*), Ray McGill and Jim Raymond, Alex' brother. It was the latter Raymond who eventually did most of the drawing Young signed his name to. When Young died in 1973, Jim Raymond was given a credit. Dean Young, Chic's son, managed the strip and got a credit, too. After Raymond's death, Stan Drake became the artist. Currently Denis Lebrun draws the still popular strip.

Blondie (rock band)

The 1970s were a transitional period in popular music. Emerging from the new wave and punk rock scene, the band Blondie, featuring Deborah Harry, achieved both critical and commercial success. Blondie transcended mere popularity by moving away from blues-based rock and capitalizing on the personality and musical ingenuity of its lead singer. Blondie successfully incorporated elements from a number of different musical forms into its music, including rap, reggae, disco, pop, punk, and rock.

After a number of early failures, Deborah Harry and Chris Stein formed Blondie in 1973. The name for the band came from the cat calls truck drivers used to taunt Deborah Harry, "Come on Blondie, give us a screw!" Harry parodied the dumb blonde stereotype into platinum. She appeared on stage in torn swimsuit and high heels, vacantly staring into space. In 1977 the act and the talent paid off in the band's hit "Denis," and was soon followed by "Heart of Glass."

The strength of Blondie, Deborah Harry, also proved its weakness. Jealousy led to the dissolution of the group in 1984. Harry went on her own, achieving some success—her tours continually sold-out whether she was alone or with the Jazz Passengers. But her solo success has never reached that of the group Blondie.

By 1997, Blondie had reunited for a tour, completed an album in 1998, and had begun touring once again. The band members claimed not to remember why they split and seemed eager to reunite. Their fans also eagerly anticipated a more permanent reunion. Blondie has greatly influenced the bands that have come after it, and Deborah Harry has continued to explore new genres with success.

—Frank A. Salamone, Ph.D.

Bloom County

A popular daily comic strip of the 1980s, *Bloom County* was written and drawn by Berkeley Breathed. During its run, the comic strip reveled in political, cultural, and social satire. Capturing popular attention with witty comment, the strip also offered a new perspective in the comics.

Bloom County began in 1980 with the setting of the Bloom Boarding House in the mythical Bloom County. Both boarding house and county appeared to be named for a local family, originally represented in the comic strip by the eccentric Major Bloom, retired, and his grandson Milo. Other original residents included Mike Binkley, a neurotic friend of Milo; Binkley's father; Bobbi Harlow, a progressive feminist school teacher; Steve Dallas, a macho despicable lawyer; and Cutter John, a paralyzed Vietnam vet. Over the years, the boarding house residents changed; the Major and Bobbi Harlow vanished and the human inhabitants were joined by a host of animals including Portnoy, a hedgehog, and Hodge Podge, a rabbit. But two other animals became the most famous characters of the strip. One, a parody of Garfield, was Bill the Cat, a disgusting feline that usually just said "aack." The other was the big-nosed penguin named Opus, who first appeared with a much more diminutive honker as Binkley's pet, a sorry substitute for a dog. Opus eventually became the star of the strip and when Breathed ended the comic, he was the last character to appear.

Breathed used his comic menagerie to ridicule American society, culture, and politics. Reading through the strip is like reading through a who's who of 1980s references: Caspar Weinberger, Oliver North, Sean Penn and Madonna, Gary Hart. Breathed made fun of them all. In the later years of the strip, Donald Trump and his outrageous wealth became a chief focus of Breathed's satire. In the world of *Bloom County*, Donald Trump's brain was put in the body of Bill the Cat. The strip supposedly ended because Trump the Cat bought the comic and fired all of the "actors."

Breathed didn't restrain himself to ridiculing individuals. He also attacked American fads, institutions, and corporations. Opus had a nose job and constantly bought stupid gadgets advertised on TV.

Milo and Opus both worked for *the Bloom Picayune*, the local newspaper, and Breathed used them to launch many attacks on the media. He lampooned the American military through the creation of Rosebud, a basselope (part basset hound, part antelope) that the military wanted to use to smuggle bombs into Russia. Corporations such as McDonalds and Crayola felt the barb of Breathed's wit, though not as much as Mary Kay Cosmetics. Breathed had Opus's mother being held in a Mary Kay testing lab. Breathed used this to point out the cruelties of animal testing as well as the extremism of the animal rights terrorists. The terrorists faced off against the Mary Kay Commandos, complete with pink uzis.

Breathed was adept at political satire as well. Whenever the country faced a presidential election, The Meadow Party would emerge with its candidates: Bill the Cat for President and an often reluctant Opus for V.P. Breathed used the two to ridicule not only politicians but the election process and the American public's willingness to believe the media campaigns. Breathed had a definite political slant to his comic, but he made fun of the follies of both conservatives and liberals.

Bloom County was a unique creation not only because of its humor, but because of the unusual perspectives Breathed used. Unlike other comics, *Bloom County's* animal and human characters interacted as equals and spoke to each other. Breathed also made the strip self-reflexive, often breaking from the comic to give comments from the "management" or from the characters themselves. One sequence featured Opus confused because he hadn't read the script. Setting the comic up as a job for the characters to act in, Breathed was able to acknowledge the existence of other strips, making jokes about them and featuring guest appearances by characters from other comic strips. As *Bloom County* came to an end, Breathed had the characters go off in search of jobs in the other comics strips, such as Family Circle and Marmaduke. While some other comics have used this technique as well, notably *Doonesbury*, it remains rare in comics, and *Bloom County* was most often compared to *Doonesbury* for content and attitude. Also like *Doonesbury*, in 1987 *Bloom County* won the Pulitzer Prize for editorial cartooning.

The strip was not without its flaws, the chief one being a lack of strong female characters, a lack Breathed was well aware of (and commented on in the strip). While the male characters stayed strong, the female characters dropped out. When the strip ended, the only female characters were Ronald-Ann, a poverty stricken African American girl and Rosebud the Basselope who earlier in the comic's run turned out to be female. Besides a lack of women characters, many readers felt that the comic was offensive and not funny and often lodged complaints with Breathed.

Breathed ended the strip in 1989 when he felt he had reached the end of what he could do with these characters. He followed *Bloom County* with a Sunday-only strip called *Outland*. The strip at first featured Opus and Ronald-Ann though most of *Bloom County's* cast eventually showed up. It never gained the popularity of its predecessor, and Breathed stopped writing comics and turned to the writing of children's books.

Blount, Roy, Jr. (1941—)

An heir to the Southern humor writing tradition of Mark Twain and *Pogo*, Roy Blount, Jr. has covered a wide array of subjects—from a season with an NFL team to the Jimmy Carter presidency—with equal parts incisiveness and whimsy.

Roy Blount, Jr. was born in Indianapolis on October 5, 1941. As an infant, he moved with his parents to their native Georgia, where his father became a civic leader in Decatur, and his family lived a comfortably middle-class life during the 1950s. He attended Vanderbilt University in Nashville on a Grantland Rice scholarship, and much of his early journalism work was, like Rice's, in sportswriting. In 1968, Blount began writing for *Sports Illustrated*, where he quickly became known for his offbeat subjects.

In 1973 Blount decided to follow a professional football team around for one year—from the offseason through a bruising NFL campaign—in order to get a more nuanced look at players and the game. He chose the Pittsburgh Steelers, a historically inept franchise on the verge of four Super Bowl victories. His 1973-1974 season with the Steelers became *About Three Bricks Shy of a Load*. Blount studied each element of the team, from its working-class fans to its front office to its coaches and players, with lively digressions on the city of Pittsburgh, country-western music (Blount once penned a country ballad entitled, "I'm Just a Bug on the Windshield of Life"), and sports nicknames.

With the success of *About Three Bricks Shy of a Load*, Blount became a full-time free-lance humor writer, with contributions in dozens of magazines including *Playboy*, *Organic Gardening*, *The New Yorker*, and *Rolling Stone*. In the late 1980s he even contributed a regular "un-British cryptic crossword puzzle" to *Spy Magazine*.

The administration of fellow Southerner Jimmy Carter led to Blount's 1980 book *Crackers*, which featured fictional Carter cousins ("Dr. J.E.M. McMethane Carter, 45, Rolla, Missouri, interdisciplinary professor at the Hugh B. Ferguson University of Plain Sense and Mysterophysics"; "Martha Carter Kelvinator, 48, Bullard Dam, Georgia, who is married to a top-loading automatic washer") and angst-ridden verses about the 39th President:

I've got the redneck White House blues.
The man just makes me more and more confused.
He's in all the right churches,
and all the wrong pews,
I've got the redneck White House blues.

Blount's most significant chapter focused on Billy Carter, who frequently embarrassed his brother's White House with impolitic comments and behavior. Blount came to like the younger Carter, and found that his fallibility made the Carters more likable: "I don't want people to be *right* all the time."

Throughout the 1980s Blount continued free-lancing articles and publishing books, with such offbeat titles as *What Men Don't Tell*

Women, One Fell Soup, and *Not Exactly What I Had in Mind*. Blount's subject matter included orgasms, waffles (he wrote a poem to them), baseball batting practice, and the federal budget deficit (Blount suggested that every American buy and throw away \$1,000 worth of stamps each, to fill the Treasury's coffers). He eulogized Elvis Presley (titled "He Took the Guilt out of the Blues") and profiled "Saturday Night Live" cast members Bill Murray and Gilda Radner. And the former sportswriter delivered essays on Joe DiMaggio and Roberto Clemente to baseball anthologies, while also attending a Chicago Cubs fantasy camp under the direction of Hall of Fame manager Leo Durocher.

Blount's first novel was the best-selling *First Hubby*, a comic account of the bemused husband of America's first woman president. His writing attracted the attention of film critic and producer Pauline Kael, who encouraged him to develop screenplays. His first produced effort was the 1996 major motion picture comedy *Larger than Life*, starring Bill Murray, Janeane Garafolo, and a giant elephant.

Blount became one of the most visible humorists in America as a frequent guest on *The Tonight Show with Johnny Carson*, and he often appeared on the long-running *A Prairie Home Companion* radio series, hosted by close friend Garrison Keillor. Despite possessing what he acknowledged as a weak singing voice, Blount triumphantly joined the chorus of the Rock Bottom Remainers, a 1990s novelty rock band composed of such best-selling authors as Dave Barry, Stephen King, and Amy Tan.

Divorced twice, Blount has two children. In 1998 he wrote a best-selling memoir, *Be Sweet*, where he acknowledged his ambivalent feelings towards his parents (at one point actually writing, "I hated my mother."). Later that year he also contributed text to a picture book on one of his favorite subjects, dogs, with a truly Blountesque title: *If Only You Knew How Much I Smell You*.

Blue Velvet

Among the most critically acclaimed movies of 1986, *Blue Velvet* was director David Lynch's commentary on small-town America, showing the sordid backside of the sunny facade. That said, the film is not strictly a condemnation of the American small-town so much as it is a kind of coming-of-age story. Lynch described the film as "a story of love and mystery." This statement may ostensibly refer to the relationship between the film's protagonist Jeffrey Beaumont (Kyle MacLachlan) and the police detective's daughter Sandy Williams

Isabella Rossellini in a scene from the film *Blue Velvet*.

(Laura Dern) and the mystery they attempt to solve in plucky Nancy Drew style, but it might also be seen as a statement about the mingling of affection and fear that arises in the movie's examination of the fictional but truthful setting, Lumbertown. One can see *Blue Velvet* as a coming-of-age story, not only for Jeffrey, but for the idea of the idyllic American small town. The loss of innocence may be regrettable, but is ultimately necessary.

The opening scene summarily characterizes *Blue Velvet* in theme and plot. Following the lush, fifties-style opening credits, the screen shows a blue sky, flowers, the local firefighters riding through town waving, and Jeffrey's father watering the lawn, all in brilliant, almost surreal color. Then the scene, which might have come from a generation earlier, is interrupted by a massive stroke that drops Mr. Beaumont to his back. The camera pans deeply into the well groomed lawn and uncovers combating insects. Likewise, the camera plunges unflinchingly into the unseen, discomfiting side of Lumbertown.

The story really begins when Jeffrey, walking back from visiting his father in the hospital, discovers a severed ear in the grass by a lake. After turning the ear over to the police, Jeffrey decides to find out the story for himself, and with the help of Sandy, gets enough information to start his own investigation. The trail leads to Dorothy Vallens (Isabella Rossellini) a nightclub singer whose husband and son have been kidnapped. Thus, the story begins as a rather traditional mystery, but the tradition drops away as Jeffrey comes face to face with the most disturbing of people, particularly the demonic kidnapper, Frank Booth (Dennis Hopper). Frank is a killer and drug dealer of almost inhuman proportions and perversions. He alternately calls himself "daddy" and "baby" as he beats and rapes Dorothy.

That the story has a reasonably happy ending, with villains vanquished and Jeffrey united with Sandy, is not altogether comforting. The film may return to the bright colors and idyllic lifestyle presented in the opening scene, but the audience now knows that something else goes on below the surface. Jeffrey and Sandy tell each other that it's a strange world, but they say it whimsically, the facade restored for the characters, if not for the audience. Perhaps the most significant scene of the film is when, in his own sexual encounter with Dorothy, Jeffrey strikes her on her command. With the blow Jeffrey crosses over from an innocent trapped in a situation beyond his control to a part of the things that go on behind the closed doors of Lumbertown.

The film was a risky one. David Lynch, though recognized for work on films like *The Elephant Man* and *Eraserhead*, was coming off the financial failure of *Dune*. Moreover, this was the first film that was entirely his. He had written the script and insisted on full artistic freedom on what was to clearly be a rather disturbing film, with a violent sexual content unlike any that had previously been seen on screen. He was granted such freedom after agreeing to a minute budget of five million dollars, and half salary for himself. The other half would be paid if the film was a success. It was. The film garnered Lynch an Academy Award nomination for his direction. Despite such accolades, the film was not embraced whole-heartedly by all. The Venice Film Festival, for instance, rejected it as pornography.

The stunning direction of the film combines bald faced directness in presenting repelling scenes of sex and violence with subtle examinations of the mundane. By slowing the film, for instance, the pleasantness of Lumbertown in the open air seems dreamlike and unreal. While shots like these establish an expressionistic, symbolic screen world, others realistically place us in a situation where we see what the characters see, hear what they hear, and these perceptions form an incomplete picture of the action. Similar techniques crop up in earlier Lynch films, but it is here, in what many consider the director's masterpiece, that they come to full fruition. The direction of *Blue Velvet* paved the road for the similar world of *Twin Peaks*, Lynch's foray into television, which itself widened the possibilities of TV drama.

Stylistically, Lynch's body of work, and particularly *Blue Velvet* has greatly influenced filmmakers, especially those working independently from the major Hollywood studios, and even television. Moreover, *Blue Velvet* strongly affected many of its viewers. The large cult following of the movie suggests that it perhaps opened many eyes to the different facets of life, not only in small towns, but in all of idealized America. Or more likely, the film articulated what many already saw. Frank may rage like a demon on screen, like a creature from our darkest nightmares, but the discomfort with the pleasant simplicity of Americana, the knowledge that things are rarely what they seem, is quite real. *Blue Velvet* reminds us of that, even as it looks back longingly, if now soberly, at the false but comforting memory of a romance with the American ideal.

Blueboy

From its first issue in 1975, *Blueboy* was a pioneer in gay monthly magazines. Its focus was on an upscale, urban gay market. While containing slick, full frontal male nude photography, the publication also strove to include contemporary gay authors. Writings by Patricia Nell Warren, Christopher Isherwood, Truman Capote, John Rechy, Randy Shilts, and many others graced the pages. Led by former *TV Guide* ad manager Donald Embinder, the magazine quickly went from a bimonthly to monthly publication in a year and a half. By the late 1970s *Blueboy* was cited in the press as a publishing empire, producing the monthly magazine and a small paperback press collection, and trading on Wall Street. *Blueboy's* style was soon mimicked by other publications. Due to changes in style, content, and format *Blueboy* lost its appeal during the 1980s and 1990s. At the same time, an ever increasing range of competing glossy male magazines, modeled upon *Blueboy* principles, diminished its readership.

Bluegrass

Since its development in the mid-1940s, bluegrass music has become one of the most distinctive American musical forms, attracting an intense audience of supporters who collectively form one of popular music's most vibrant subcultures. A close cousin of country music, bluegrass music is an acoustic musical style that features at its core banjo, mandolin, guitar, double bass, and fiddle along with close vocal harmonies, especially high-tenor harmony singing called the "high lonesome sound." Because of its largely acoustic nature, bluegrass is a term often used to describe all kinds of acoustic, non-commercial, "old-timey" music popular among rural people in the United States in the decades prior to World War II. That characterization, however, is incorrect. Bluegrass was developed, and has continued ever since, as a commercial musical form by professional recording and touring musicians. Often seen as being a throwback to this pre-World War II era, bluegrass is instead a constantly evolving musical style that maintains its connections to the past while reaching out to incorporate influences from other musical styles such as jazz and rock music. As such, it remains a vibrant musical form in touch with the past and constantly looking toward the future.

Although bluegrass has connections to old-timey rural music from the American south, as a complete and distinct musical form, bluegrass is largely the creation of one man—Bill Monroe. Born near Rosine, Kentucky on September 13, 1911, Monroe grew up in a musical family. His mother was a talented amateur musician who imparted a strong love of music in all of her eight children, several of whom became musicians. As a child, Bill Monroe learned to play guitar with a local black musician, Arnold Schultz (often accompanying Schultz at local dances), and received additional training from his

IIRD Tyme Out vocal group, on stage at the IBMA Bluegrass Fan Fest in Kentucky.

uncle, Pendelton Vandiver, a fiddle player who bequeathed to Monroe a vast storehouse of old tunes in addition to lessons about such important musical concepts as timing. Although his early training was on the guitar, Monroe switched to the mandolin in the late 1920s in order to play along with his older brothers Birch and Charlie, who already played fiddle and guitar, respectively. In 1934, Charlie and Bill formed a professional duet team, the Monroe Brothers, and set out on a career in music. They became very popular, particularly in the Carolinas, and recorded a number of records, including *My Long Journey Home* and *What Would You Give in Exchange for Your Soul*. Their partnership was a brief one, however, as their personal differences, often expressed in physical and verbal fighting, sent them in separate directions in 1938.

On his own, and out from under his older brother's shadow, Bill Monroe began to develop his own style of playing that would evolve into bluegrass. He organized a short-lived band called the Kentuckians in 1938. Moving to Atlanta that same year, he formed a new band which he named the Blue Grass Boys in honor of his native Kentucky. The group, consisting of Monroe on mandolin, Cleo Davis on guitar, and Art Wooten on fiddle, proved popular with audiences, and in October 1939 Monroe and the Blue Grass Boys earned a spot on Nashville radio station WSM's popular *Grand Ole Opry* program. The group's appearances on the *Opry* brought Monroe national recognition.

Throughout the war years, Monroe began to put together the major musical elements of bluegrass, including his trademark high-tenor singing, the distinctive rhythm provided by his "chopping" mandolin chords, and a repertoire of old-timey and original tunes.

But it was not until Monroe formed a new version of the Blue Grass Boys at the end of World War II that the classic bluegrass sound finally emerged. In 1945, he added guitarist Lester Flatt, fiddler Chubby Wise, bass player Cedric Rainwater (Howard Watts), and banjoist Earl Scruggs. Of these, the most important was Scruggs, who at the age of 20 had already developed one of the most distinctive banjo styles ever created, the Scruggs "three-finger" style. This playing style, accomplished by using the thumb, forefinger, and index fingers to pick the strings, allowed Scruggs to play in a "rolling" style that permitted a torrent of notes to fly out of his banjo at amazingly fast speeds. This style has since become the standard banjo playing style, and despite many imitators, Scruggs's playing has never quite been equaled. Scruggs, more than anyone else, was responsible for making the banjo the signature instrument in bluegrass, and it is the Scruggs banjo sound that most people think of when bluegrass is mentioned. According to country music historian Bill Malone, with this new band Monroe's bluegrass style fully matured and became "an ensemble style of music, much like jazz in the improvised solo work of the individual instruments."

Like jazz, the bluegrass songs created by Bill Monroe and the Blue Grass Boys began with an instrumental introduction, then a statement of the song's melody and lyric lines, followed by successive instrumental breaks, with the mandolin, banjo, and fiddle all taking solos. Behind them, the guitar and bass kept a steady rhythm, and the mandolin and banjo would add to that rhythm when not soloing. To many bluegrass admirers, this version of the Blue Grass Boys, which lasted from 1945 to 1948, represents the pinnacle of bluegrass music. During their short existence, just over three years, this version of the Blue Grass Boys recorded a number of songs that have since become bluegrass classics, including "Blue Moon of Kentucky," "Will You Be Loving Another Man?," "Wicked Path of Sin," "I'm Going Back to Old Kentucky," "Bluegrass Breakdown," "Little Cabin Home on the Hill," and "Molly and Tenbrooks." Throughout this period as well, Monroe and his group toured relentlessly. They were so popular that many towns did not have an auditorium large enough to accommodate all those wishing to hear the band. To accommodate them, Monroe traveled with a large circus tent and chairs. Arriving in a town, they would also frequently challenge local townspeople to a baseball game. This provided not only much-needed stress relief from the grueling travel schedule, but also helped advertise their shows.

The success of Bill Monroe and his Blue Grass Boys was so great by the later 1940s that the music began to spawn imitators and followers in other musicians, broadening bluegrass' appeal. It should be noted that the name "bluegrass" was not Monroe's invention, and the term did not come about until at least the mid-1950s, when people began referring to bands following in Monroe's footsteps as playing in the "blue grass" style, after the name of the Blue Grass Boys. The first "new" band in the bluegrass style was that formed by two of Monroe's greatest sidemen, Lester Flatt and Earl Scruggs, who left Monroe in 1948 to form their own band, the Foggy Mountain Boys. Flatt and Scruggs deemphasized the role of the mandolin in their new band, preferring to put the banjo talents of Scruggs front and center. They toured constantly in the late 1940s and throughout the 1950s, building a strong and loyal following among listeners hungry for the bluegrass sound. Their popularity also resulted in a recording contract with Mercury Records. There, they laid down their own body of classic bluegrass material, much of it penned by Flatt. There were blisteringly fast instrumental numbers such as "Pike County Breakdown" and "Foggy Mountain Breakdown," and vocal numbers such as "My Little Girl in Tennessee," "Roll in My Sweet Baby's Arms," "My Cabin in Caroline," and "Old Salty Dog Blues," all of which have become standards in the bluegrass repertoire. These songs, much like Monroe's as well, often invoked themes of longing, loneliness, and loss, and were almost always rooted in rural images of mother, home, and country life. During their 20-year collaboration, Flatt and Scruggs became not only important innovators in bluegrass, extending its stylistic capacities, but they helped broaden the appeal of bluegrass, both with their relentless touring and also by producing bluegrass music such as the theme to the early 1960s television show *The Beverly Hillbillies* ("The Ballad of Jed Clampett"), and the aforementioned "Foggy Mountain Breakdown," used as the title song to the 1967 film *Bonnie and Clyde*.

As successful as Flatt and Scruggs were, they were not the only followers of the Monroe style. As historian Bill Malone noted, "the bluegrass 'sound' did not become a 'style' until other musical organizations began copying the instrumental and vocal traits first featured in Bill Monroe's performances." In fact, many later bluegrass greats got their starts as Blue Grass Boys, including, in addition

to Flatt and Scruggs, Mac Wiseman, Carter Stanley, Don Reno, Jimmy Martin, Vassar Clements, Sonny Osborne, Del McCoury, and many others. Under Monroe's tutelage, they learned the essential elements of bluegrass which they later took to their own groups. Among the other important early followers of Monroe was the brother duo of Ralph and Carter Stanley, the Stanley Brothers. They followed very closely on Monroe's heels, imitating his style almost note-for-note. But they were more than simply imitators; they continued and extended the bluegrass tradition with their playing and singing and through Carter Stanley's often bittersweet songs such as "I Long to See the Old Folks" and "Our Last Goodbye."

Along with the Stanley Brothers, other Monroe-inspired bluegrass bands came to prominence in the 1950s, including Mac Wiseman, Don Reno and Red Smiley, Jimmy Martin, the Osborne Brothers, and Jim and Jesse McReynolds. Each brought their own distinctive styles to the emerging bluegrass genre. Don Reno, in addition to his stellar banjo playing, brought the guitar to greater prominence in bluegrass, using it to play lead lines in addition to its usual role as a rhythm instrument. Reno and Smiley also brought bluegrass closer to country music, playing songs in the honky-tonk style that dominated country music in the early 1950s. Guitarist and singer Mac Wiseman was also instrumental in maintaining the strong connections between bluegrass and country, always willing to incorporate country songs and styles into his bluegrass repertoire. In addition, he often revived older songs from the pre-World War II era and brought them into the bluegrass tradition. Also rising to popularity during the 1950s were the Osborne Brothers, Bobby and Sonny. Their country-tinged bluegrass style, which they developed with singer Red Allen, made them one of the most successful bluegrass acts of the 1950s, 1960s, and beyond.

Despite the innovations and success of Monroe, Flatt, and Scruggs, the Osborne Brothers, the Stanley Brothers, and others, the market for bluegrass suffered heavily in the late 1950s as both electrified country and rock 'n' roll took listeners' attention away from bluegrass. While there was still a niche market for bluegrass, its growth and overall popularity fell as a result of this competition. The folk revival of the early 1960s, however, centered in northern cities and on college campuses, brought renewed interest in bluegrass. The folk revival was largely a generational phenomenon as younger musicians and listeners began rediscovering the older folk and old-timey music styles. To many of these young people, these earlier styles were refreshing in their authenticity, their close connection to the folk a welcome relief from commercial America. And, while old blues musicians from the 1920s and 1930s were brought back to stages of the many folk festivals alongside such newcomers as Bob Dylan, the acoustic sounds of bluegrass were also featured. Although it had never dipped that much, Bill Monroe in particular saw his career revive, and he was particularly pleased that the music he created was reaching a new, younger audience.

While bluegrass was reaching new audiences through the folk revival festivals, bluegrass made new inroads and attracted both old and new listeners through the many bluegrass festivals that began in the 1960s. Musician Bill Clifton organized an early one-day festival in 1961 in Luray, Virginia. In 1965, promoter Carlton Haney began the annual Roanoke Bluegrass Festival, a three-day affair that focused solely on bluegrass, where the faithful could see such greats as Bill Monroe, the Stanley Brothers, Don Reno, and others. The success of the Roanoke festival sparked others across the South and Midwest. In 1967, Bill Monroe himself began the Bean Blossom Festival on his property in Brown County, Indiana. More than simply performance spaces, these festivals have become meeting grounds for bluegrass

enthusiasts to share their passion for the music in addition to seeing some of the greats of the genre. Many guests camp nearby or often on the festival grounds themselves, and the campsites become the sites of endless after-hours jam sessions where amateur musicians can trade songs and instrumental licks. The festivals are also very informal affairs, and bluegrass fans can often meet and talk with the performers in ways that rarely occur at jazz or rock concerts. These festivals were instrumental in the 1960s and beyond in both expanding the reach of the music while simultaneously providing a form of community for bluegrass fans and musicians.

In the late 1960s and into the 1970s, bluegrass began to move in new directions as younger practitioners of the style brought new rock and jazz elements into the music, including the use of electric basses. This trend, which continued through the 1990s, was not always welcomed by the bluegrass faithful. Many accepted and welcomed it, but others looked at bluegrass as a last bastion of acoustic music, and any fooling around with the classic bluegrass style seemed heresy indeed. Many of those who resisted change were older and often more politically conservative, disliking the long hair and liberal politics of many of the younger bluegrass musicians as much as the new sounds these musicians were introducing. This conflict even prompted the breakup of Flatt and Scruggs's musical partnership as Earl Scruggs formed a new band, the Earl Scruggs Revue, with his sons playing electric instruments and incorporating rock elements into their sound. Lester Flatt preferred the old style and continued to play it with his band the Nashville Grass until his death in 1979.

Among the practitioners of the new "newgrass" or "progressive" bluegrass style, as it was called, were such younger artists and groups as The Country Gentlemen, the Dillards, the New Grass Revival, the Seldom Scene, David Grisman, and J.D. Crowe and the New South. The Country Gentlemen had mixed rock songs and electric instruments into their sound as early as the mid-1960s, and they were a formative influence on later progressive bluegrass artists. A California band, the Dillards, combined traditional bluegrass styles with Ozark humor and songs from the folk revival. They also enjoyed popularity for their appearances on *The Andy Griffith Show* in the early 1960s. By the early 1970s, the progressive bluegrass sound reached a creative peak with the New Grass Revival, formed in 1972 by mandolinist-fiddler Sam Bush. The New Grass Revival brought new jazz elements into bluegrass, including extended improvisations, and also experimented with a wide variety of musical styles. Mandolinist David Grisman began by studying the great masters of his instrument, but he eventually developed a unique hybrid of bluegrass and jazz styles that he later labeled "Dawg" music, performing with other progressive bluegrass artists such as guitarist Tony Rice and fiddler Mark O'Connor, and such jazz greats as Stéphane Grappelli. Banjoist Bela Fleck, himself an early member of the New Grass Revival, extended his instrument's reach from bluegrass into jazz and world music styles with his group Bela Fleck and the Flecktones.

As important as progressive bluegrass was in moving the genre in new directions, the break it represented from the traditional style did not signal an end to the classic sound pioneered by Bill Monroe and Flatt and Scruggs. Instead, both styles continued to have ardent practitioners that kept both forms of bluegrass alive. Northern musicians such as Larry Sparks and Del McCoury continued to play traditional bluegrass, bringing it new audiences. And the grand master himself, Bill Monroe, continued to play his original brand of bluegrass with an ever-changing arrangement of younger Blue Grass Boys until his death in 1996 at the age of 85. Other musicians crossed the boundaries between the two bluegrass styles. Most notably among

these was mandolinist-fiddler Ricky Skaggs. Skaggs had apprenticed with traditionalists such as Ralph Stanley's Clinch Mountain Boys, but was just as much at home with newer bands such as J.D. Crowe and the New South and with country artists such as Emmylou Harris.

By the 1990s, bluegrass was not as popular as it had been in the early 1960s, but it continued to draw a devoted following among a small segment of the listening audience. Few bluegrass artists had major-label recording contracts, but many prospered on small labels that served this niche market, selling records via mail order or at concerts. Bluegrass festivals continued to serve the faithful, drawing spirited crowds, many eager to hear both traditional and progressive bluegrass. The 1990s also saw the emergence of a new bluegrass star—fiddler, singer, and bandleader Alison Krauss—one of the few major female stars the genre has ever seen. Her popularity, based on her unique cross of bluegrass, pop, and country elements, retained enough of the classic bluegrass sound to please purists while feeling fresh and contemporary enough to draw new listeners. Her success, and the continuing, if limited, popularity of bluegrass in the 1990s was a strong indication that the genre was alive and well, a healthy mix of tradition and innovation that made it one of the United States' most unique musical traditions.

—Timothy Berg

Blues

Blues music emerged in the early twentieth century in the United States as one of the most distinctive and original of American musical forms. It is an African American creation and, like its distant relative jazz, blues music is one of the great contributions to American popular culture. Blues music encompasses a wide variety of styles, including unique regional and stylistic variations, and it lends itself

Blues musician Muddy Waters (left) and his band.

well to both individual and group performance. As a cultural expression, blues music is often thought of as being sad music, a form to express the hardships endured by African Americans. And, while it certainly can be that, the blues is also a way to deal with that hardship and celebrate good times as well as bad. Thus, in its long history throughout the twentieth century, blues music has found resonance with a wide variety of people. Although it is still largely an African American art form, the style has had a good number of white performers as well. The audience for blues has also been wide, indicating the essential truths that often lie at the heart of this musical form.

The origins of blues music are not easily traced due to its largely aural tradition, which often lacks written sources, and because there are no blues recordings prior to about 1920. Thus, tracing its evolution out of the distant past is difficult. Still, some of the influences that make up blues music are known. Blues music originated within the African American community in the deep South. Elements of the blues singing style, and the use of primitive stringed instruments, can be traced to the griot singers of West Africa. Griot singers acted as storytellers for their communities, expressing the hopes and feelings of its members through song. African musical traditions undoubtedly came with the large numbers of African slaves brought to the United States in the eighteenth and nineteenth centuries. The mixture of

African peoples who made up the slave population in the South allowed for a mixture of African song and musical styles as well. Those styles would eventually evolve into the blues as the hardships endured by the freed slaves and their descendants continued well into the twentieth century.

The style of music now known as the blues emerged in its mature form after the turn of the twentieth century. No one knows who the first singers or musicians were that put this style together into its now familiar form, as the music evolved before the invention of recording technology. As a musical style, the blues is centered around a 12-bar form with three lines of four bars each. And, while it does use standard chords and instrumentation, it is an innovative music known for the off-pitch “blue notes” which give the music its deeper feeling. These blue notes are produced by bending tones, and the need to produce these tones made certain instruments key to playing blues music: the guitar, the harmonica, and the human voice. It is a rather informal music, with plenty of room for singers and musicians to express themselves in unique ways. Thus, the music has given the world a wide variety of unique blues artists whose styles are not easily replicated.

Among the earliest blues recordings were those by black female singers in the 1920s. In fact, the entire decade of the 1920s, the first in which blues music was recorded for a commercial market, was dominated by women. Among the most significant were Bessie

Smith, Ma Rainey, Lucille Bogan, Sippie Wallace, Alberta Hunter, Victoria Spivey, and Mamie Smith. Mamie Smith's "Crazy Blues," recorded in 1920, is largely acknowledged as the first blues recording. These singers incorporated a more urban, jazz style into their singing, and they were often backed by some of the great early jazz musicians, including trumpeter Louis Armstrong. The greatest of these early female blues singers were Ma Rainey and Bessie Smith. Smith's version of W. C. Handy's "St. Louis Blues" and Ma Rainey's version of "See See Rider" are among the classics of blues music. Their styles were earthier than many of their contemporaries, and they sang songs about love, loss, and heartbreak, as well as strong statements about female sexuality and power the likes of which have not been seen since in the blues field. The era of the great female blues singers ended with the coming of the Depression in 1929, as record companies made fewer recordings, preferring to focus their attention on white popular singers. Bessie Smith and Ma Rainey were both dead by 1940, and most of the other popular female singers of the decade drifted off into obscurity, although some had brief revivals in the 1960s.

Other blues styles rose to prominence during the 1930s. The dominant form was Mississippi delta blues, a rural form that originated in the delta of northwest Mississippi. The style was dominated by male singers who accompanied themselves on acoustic guitars that could be carried easily from place to place, allowing these musicians to play for the many poor black farming communities in the area. A number of important bluesmen made their living, at least in part, following an itinerant lifestyle playing blues throughout the delta region. Among the most important innovators in the delta blues style were Tommy Johnson, Bukka White, Charley Patton, Son House, and Robert Johnson. All of these musicians made important recordings during the 1930s that have proven highly influential. Some, such as Robert Johnson, achieved almost mythic status. Johnson recorded only several dozen songs before his death in 1938. His apocryphal story of selling his soul to the devil in order to be the best blues musician (related in his song "Cross Road Blues") drew from an image with a long history in African American culture. Although details about Johnson's life are sketchy, stories of his being a poor guitar player, then disappearing for several months and reappearing as one of the best guitarists around, gave credence to the story of his deal with the devil; his murder in 1938 only added to his legend. The delta blues style practiced by Johnson and others became one of the most important blues forms, and one that proved highly adaptable to electric instruments and to blues-rock forms in later years.

While delta blues may have been a dominant style, it was by no means the only blues style around. In the 1930s and early 1940s, a number of important regional styles also evolved out of the early blues forms. Among these were Piedmont style blues and Texas blues. The Piedmont style was also an acoustic guitar-based form practiced on the east coast, from Richmond, Virginia to Atlanta, Georgia. It featured more syncopated finger-picking with the bass strings providing rhythmic accompaniment to the melody which was played on the upper strings. It was often a more up-tempo style, particularly in the hands of such Atlanta-based musicians as Blind Willie McTell and Barbecue Bob. Both incorporated ragtime elements into their playing, making music that was much more lighthearted than the delta blues style. The Texas blues style, played by musicians such as Blind Lemon Jefferson, Huddie Leadbetter ("Leadbelly"), and Alger "Texas" Alexander in the 1920s and 1930s, was closely connected with the delta style. In the 1940s, the

music took on a more up-tempo, often swinging style in the hands of musicians such as T-Bone Walker. In addition to these two styles, other areas such as Memphis, Tennessee, and the west coast, gave rise to their own distinct regional variations on the classic blues format.

With the migration of a large number of African Americans to northern cities during and after World War II, blues music evolved into new forms that reflected the quicker pace of life in these new environments. The formation of new communities in the north led to new innovations in blues music. Two distinct styles emerged, urban blues and electric, or Chicago blues. Urban blues was a more upscale blues style that featured smooth-voiced singers and horn sections that had more in common with jazz and the emerging rhythm and blues style than it did with rural Mississippi delta blues. The urban blues was epitomized by such artists as Dinah Washington, Eddie Vinson, Jimmy Witherspoon, Charles Brown, and even early recordings by Ray Charles.

More influential was the electric, or Chicago blues style, a more direct descendant of the Mississippi delta blues. Although many musicians contributed to its development, none was more important than McKinley Morganfield, known as Muddy Waters. Waters came of age in the Mississippi delta itself, and learned to play in the local acoustic delta blues style. Moving to Chicago in the mid-1940s, Waters played in local clubs at first, but he had a hard time being heard over the din of tavern conversation. To overcome that obstacle, he switched to an electric guitar and amplifier to play his delta blues. His earliest recordings, on Chess Records in 1948, were "I Can't Be Satisfied" and "I Feel Like Going Home," both of which featured Waters on solo electric guitar playing in the delta blues style. Soon, however, Waters began to add more instruments to his sound, including piano, harmonica, drums, bass, and occasionally a second guitar. This arrangement was to become the classic Chicago blues sound. Instead of the plaintive singing of the delta, Muddy Waters and his band transformed the blues into a hard-edged, driving sound, with a strong beat punctuated by boogie-woogie piano stylings, electric lead guitar solos, and over-amplified harmonicas, all of which created a literally electrifying sound. Throughout the 1950s, Muddy Waters recorded a string of great blues songs that have remained among the finest expressions of the blues, including "Hoochie Coochie Man," "I Just Want to Make Love to You," "Mannish Boy," "I'm Ready," and many, many, others. Waters's innovations were highly influential, spawning hundreds of imitators, and were so influential in fact that the Chicago blues style he helped pioneer still dominates the blues sound.

Muddy Waters was not alone, however, in creating the great Chicago blues style. A number of great artists coalesced under the direction of Leonard and Phil Chess, two Polish immigrant brothers who started Chess Records in the late 1940s. Operating a nightclub on Chicago's south side, in the heart of the African American community, the Chess brothers saw the popularity of the emerging electric blues sound. They moved into record production shortly thereafter to take advantage of this new market and new sound. Their roster of blues artists reads like a who's who of blues greats. In addition to Muddy Waters, Chess recorded Howlin' Wolf, Lowell Fulson, Sonny Boy Williamson, Little Walter, John Lee Hooker, Sunnyland Slim, Memphis Minnie, and Koko Taylor, as well as a host of lesser names. While each of these performers brought their unique approach to the blues to Chess Records, the label managed to produce a rather coherent sound. The Chess brothers hired blues songwriter and bassist Willie Dixon as their in-house producer, and Dixon supplied

many of the songs and supervised the supporting musicians behind each of the Chess blues artists, creating a unique blues sound.

In the 1960s, blues music experienced a wider popularity than ever before. This was due to a number of factors. First, Chicago continued to be an important center for blues music, and the city was host to important performers such as harmonica player Junior Wells, guitarist Buddy Guy, singer Hound Dog Taylor, and Magic Sam. These performers were often seen at blues and folk festivals across the country, bringing the music to new listeners. Secondly, other blues artists rose to national prominence during the decade, spreading the blues sound even further. Most important was Memphis bluesman B.B. King, whose rich voice and stinging guitar sound proved immensely important and influential. Third, the folk revival that occurred among white college students during the early 1960s throughout the North and West revived an interest in all forms of blues, and many of the acoustic bluesmen who first recorded in the 1920s and 1930s were rediscovered and brought back to perform for these new audiences. Notable among these were such performers as Mississippi John Hurt, Mississippi Fred McDowell, and Bukka White. This revival was a conscious attempt on the part of this younger generation to recover authentic folk music as an antidote to the increasing commercialism of American life in the 1950s and 1960s. All of these factors both revived blues music's popularity and influence and greatly extended its audience.

While many of the great blues performers such as Muddy Waters and Howlin' Wolf continued to perform throughout the 1960s and 1970s, the blues and folk revival of the early 1960s spawned a new crop of white blues performers in both the United States and Great Britain. Some performers, such as Paul Butterfield and John Mayall, played in a straightforward blues style taken from the great Chicago blues masters. But the blues also infected its close cousin, rock 'n' roll. English musicians such as the Rolling Stones covered blues classics on their early albums, influencing the development of rock music during the 1960s. In the later years of the decade new bands incorporated the blues into their overall sound, with British bands such as Cream (with guitarist Eric Clapton) and Led Zeppelin foremost among them. Many of these groups not only played Chicago blues classics, but they reached even further back to rework Robert Johnson's delta blues style in such songs as "Stop Breaking Down" (The Rolling Stones), "Crossroads" (Cream), and "Travelling Riverside Blues" (Led Zeppelin). These developments, both in playing in the blues style and in extending its range into rock music, were important innovations in the history of blues music, and popular music more generally, in the 1960s and early 1970s.

After the blues revival of the 1960s, blues music seemed to settle into a holding pattern. While many of the great bluesmen continued to record and perform in the 1970s, 1980s, and beyond, and while there were new performers such as Robert Cray and Stevie Ray Vaughn who found great success in the blues field during the 1980s, many people bemoan the fact that blues has not seen any major developments that have extended the music in new directions. Instead, the Chicago blues sound continues to dominate the blues scene, attracting new performers to the genre, but they seemed to many people to be more like classical musicians, acting as artisans keeping an older form of music alive rather than making new innovations themselves. Despite, or because of, that fact, blues music in the 1990s continued to draw a devoted group of listeners; most major cities have nightclubs devoted to blues music. Buddy Guy, for example, has had great success with his Legends club in Chicago, not far from the old Chess

studios. More corporate enterprises like the chain of blues clubs called "The House of Blues" have also entered the scene to great success. Blues music at the end of the twentieth century may be a largely static musical form, more devoted to the past than the future, but it remains an immensely important cultural form, with its own rich tradition and an influential legacy that has reached well beyond its original core audience.

The Blues Brothers

Jake and Elwood Blues' "mission from God" was to find \$5,000 to rescue a Catholic orphanage from closure. Instead, they set a new standard for movie excess and reinvented the careers of many Blues and Soul Music stars, including Aretha Franklin, Cab Calloway, and Ray Charles. In light of the roots of the Blues Brothers Band, this was the true mission of a movie that critics reviled as excessive but has since become a bona fide cult classic.

The Blues Brothers Band was born during a road trip from New York to Los Angeles. *Saturday Night Live* stars Dan Aykroyd and John Belushi discovered a common love for Blues music. They were already cooperating on writing sketches for *Saturday Night Live*, and they took this love of Blues music and developed a warm-up act for the television show. The popularity of The Blues Brothers in the studio gave them the ammunition they needed to convince the producers to put The Blues Brothers on the telecast, and the reaction was phenomenal.

The Blues Brothers soon followed up their television success with a best-selling album (*Briefcase Full of Blues*), a hit single ("Soul Man"), and a promotional tour. Aykroyd, meanwhile, was working with John Landis (director of *National Lampoon's Animal House*) to bring the band to the big screen. The script they came up with began with Jake Blues being released from Joliet State Penitentiary and returning with his brother to the orphanage where they were raised. Learning it is to close unless they can get the \$5,000, the brothers decide to put their band back together. Most of the remainder of the first part of the movie focuses on their attempts to find the rest of the band, while the second half's focus is on the band's fundraising efforts.

Throughout the movie the brothers get involved in many car chases, destroying a mall in one scene, and most of the Chicago Police

Dan Aykroyd and John Belushi as *The Blues Brothers*.

Department's cars in another. The film has been universally criticized for the excessive car chases, but this is a part of the cult status *The Blues Brothers* has since earned. Another part of this cult status is influenced by the performers the brothers encounter on their "Mission from God." In cameos, Blues and Soul performers such as James Brown (a gospel preacher), Cab Calloway (the caretaker at the orphanage), Aretha Franklin (wife of a band member), and Ray Charles (a music storekeeper), appear and steal scenes from the Blues Brothers. Audiences especially remember Aretha Franklin's thundering rendition of "Think."

The Blues Brothers opened in 1980 to a mixed reception. The *Animal House* audience loved it, seeing the return of the Belushi they had missed in his other movies. While his character was not Bluto, it was the familiar back-flipping, blues-howling Joliet Jake Blues from *Saturday Night Live*. Critics, however, thought it was terrible, and one went as far as to criticize Landis for keeping Belushi's eyes covered for most of the movie with Jake's trademark Ray Bans. Yet, one of the most lasting impressions of the movie is the "cool look" of the brothers in their black suits, shades, and hats.

We best remember the movie for its music. The band has released albums, both before and after the movie, that cover some of the best of rhythm and blues music. Since Belushi's death, the band has gone on, at times bringing in his younger brother James Belushi in his place. Aykroyd, too, has continued to develop the Blues legacy, with his House of Blues restaurant and nightclub chain, and, with Landis, a sequel movie, *Blues Brothers 2000* (1998). The latter has Elwood Blues (Aykroyd) coming out of prison to learn that Jake is dead. Rehashing part of the plot of the first movie, Elwood puts the

band back together, with John Goodman standing in for Belushi (and Jake Blues) as Mighty Mack. Besides the obligatory car chases, the sequel is much more of a musical, with many of the same Blues stars returning. Aretha Franklin steals the show again, belting out a new version of her signature song, "Respect." The Blues Brothers, as the title of the new movie implies, are alive and well, and ready for the next millennium.

Blume, Judy (1938—)

Before Judy Blume's adolescent novels appeared, no author had ever realistically addressed the fears and concerns of kids, especially in regard to puberty and interest in the opposite sex. Beginning in 1970 with the perennially popular *Are You There God? It's Me, Margaret*, Blume's fiction honestly depicted the insecurities of changing bodies, peer-group conflicts, and family dynamics. Often Blume has been faulted for constraining her characters to a white, middle-class suburban milieu, but has received far more criticism from the educational establishment for her deadpan prose, and even worse vilification from religious conservatives for what is construed as the titillating nature of her work. Many of the 21 titles she has written consistently appear on the American Library Association's list of "most-challenged" books across the country, but have sold a record 65 million copies in the three decades of her career.

Born in 1938, Blume grew up in a Jewish household in New Jersey that was partly the inspiration for her 1977 book *Starring Sally J. Freedman as Herself*. A New York University graduate, Blume was married to an attorney and had two children when she took a writing course in which an assignment became her first book, *Iggie's House*. Published by Bradbury Press in 1970, the young-adult story dealt with a black family moving into an all-white neighborhood, a timely topic at the time when civil rights laws had eliminated many of the legal barriers segregating communities in America, yet ingrained prejudices remained.

But it was another book of Blume's published that same year, *Are You There God? It's Me, Margaret*, that caused a greater stir. It begins with 11 year-old Margaret's recent move from Manhattan to New Jersey—perhaps her parents' strategy to woo her from her doting grandmother, Sylvia, who is appalled that her son and daughter-in-law, an interfaith marriage, are "allowing" Margaret to choose her own religion. Margaret immediately makes a group of sixth-grade girlfriends at her new school, suffers embarrassment because she has no religious affiliation, buys her first bra and worries when her friends begin menstruating before she does, and prays to God to help her deal with all of this. Only a 1965 novel by Louise Fitzhugh, *The Long Secret*, had dared broach this last concern, and had been met with

Judy Blume

criticism by the literary establishment for what was termed “unsuitable” subject matter for juvenile fiction. Feminist historian Joan Jacobs Brumberg wrote in her 1997 treatise, *The Body Project: An Intimate History of American Girls*, that as a professor she discovered Blume’s book was cited as the favorite novel from their adolescence by young women who had come of age in the 1980s. “My students realized that this was not sophisticated literature,” Brumberg wrote, “but they were more than willing to suspend that kind of aesthetic judgment because the subject—how a girl adjusts to her sexually maturing body—was treated so realistically and hit so close to home.”

Other works with similar themes followed. *Then Again, Maybe I Won’t* followed the various life crises of Tony, who feels out of sorts when his Italian-American family moves to a ritzier New Jersey suburb. He fantasizes about the older teen girl next door, is shocked and fearful when he experiences his first nocturnal emission, and makes his way through the social rituals of the new community. Tony discovers that class differences do not always place the more affluent on a higher moral ground. Blume’s third young-adult work, *It’s Not the End of the World*, opens with the kind of dinner-table debacle that convinces most older children that their parents are headed for divorce court. In sixth-grader Karen’s case, her worst fears come true, and the 1972 novel does not flinch from portraying the nasty side of adult breakups. As in many of Blume’s other works, parents—even the caring, educated ones of *Are You There God?*, *Forever*, and *Blubber*—are a source of continual embarrassment.

Blume’s 1973 novel *Deenie* is a recommended book for discussion groups about disabilities and diversity. The attractive, slightly egotistical seventh-grader of the title learns she has scoliosis, or curvature of the spine, and overnight becomes almost a disabled person when she is fitted with a drastic, cage-like brace to correct it. Like all of Blume’s young-adult works, it also deals with emerging feelings for the opposite sex and tentative explorations into physical pleasure, both solo and participatory. But Blume’s 1975 novel *Forever*, written for older teenagers, gave every maturing Blume fan

what they had longed for: a work that wrote honestly about losing one’s virginity. *Forever*, Blume admitted, was written after a suggestion from her 14 year-old daughter, Randy. There was a great deal of teen fiction, beginning in the late 1960s, that discussed premarital sex and pregnancy, but the boy was usually depicted as irresponsible, and the female character had made her choices for all the wrong reasons—everything but love—then was punished for it in the end.

In *Forever*, high-schooler Katherine meets Michael at a party, and their dating leads to heavy petting and eventually Katherine’s decision to “go all the way.” She assumes responsibility for birth control by visiting a doctor and getting a prescription for birth-control pills. *Forever* became the most controversial of all Blume’s books, the target of numerous challenges to have it removed from school and public libraries by parents and religious groups, according to the American Library Association, which tracks such attempts to censor reading materials. In some cases the threats have led to free speech protests by students. Blume noted in a 1998 interview on the *Cable News Network* that controversy surrounding her books has intensified rather than abated over the years.

Aside from her racy themes, as an author Blume has been criticized for her matter-of-fact prose, written in the first person and infused with the sardonic wit of the jaded adolescent. Yet Blume felt that it was important that her writing ring true to actual teen speech; anything less would be utterly unconvincing to her readers. Because her works seem to touch such a nerve among kids, many have written to her over the years, at one point to the tune of 2,000 letters per month. The painful confessions, and admissions that Blume’s characters and their dilemmas had made such an impact upon their lives, led to the publication of her 1986 non-fiction book, *Letters to Judy: What Your Kids Wish They Could Tell You*. Blume has also written novels for adults—*Wifey* (1978) and *Summer Sisters* (1998).

Though her books have been updated for the 1990s, the dilemmas of her characters are timeless. Ellen Barry, writing in the *Boston Phoenix*, termed *Forever* “the book that made high school sex seem normal.” A later edition of the novel, published in the 1990s, included a foreword by the author that urged readers to practice safe sex. Two academics at Cambridge University collected female rite-of-passage stories for their 1997 book *Sweet Secrets: Stories of Menstruation*, and as Kathleen O’Grady told Barry, she and co-author Paula Wansbrough found that women who came of age after 1970 had a much less traumatic menarcheal experience. Naomi Decker, in a 1980 essay for *Commentary*, theorized that “there is, indeed, scarcely a literate girl of novel-reading age who has not read one or more Blume books.”

The *Boston Phoenix*’s Barry deemed Blume’s books “fourth-grade samizdat: the homes were suburban, the moms swore, kids were sometimes mean, there was frequently no moral to the story, and sex was something that people talked about all the time.” Barry noted, “Much of that information has seen us safely into adulthood. We all have different parents, and we all had different social-studies teachers, but there was only one sex-ed teacher, and that was Judy Blume.” Postmodern feminist magazines such as *Bust*, *Ben Is Dead* have run articles on the impact of Blume and her books on a generation of women. Chicago’s Annoyance Theater, which gained fame with its re-creations of *Brady Bunch* episodes in the early 1990s, staged *What Every Girl Should Know . . . An Ode to Judy Blume* in its 1998 season. Mark Oppenheimer, writing in the *New York Times Book Review* in 1997, noted that though the academic establishment has largely ignored the impact of Blume’s books, “when I got to college, there

was no author, except Shakespeare, whom more of my peers had read.” Oppenheimer concluded his essay by reflecting upon the immense social changes that have taken place since Blume’s books first attracted notoriety in the 1970s, and that “‘in this age of ‘Heather Has Two Mommies,’ we clearly live after the flood . . . We might pause to thank the author who opened the gates.’”

Bly, Robert (1926—)

In the early 1990s, mention of the name “Robert Bly” conjured up primordial images of half-naked men gathered in forest settings to drum and chant in a mythic quest both for their absent fathers and their submerged assets of boldness and audacity. It was Bly and his best-selling book *Iron John* that catalyzed a new masculinized movement urging males (especially white, middle-class American baby-boomer ones) to rediscover their traditional powers by casting off the expectations of aggressive behavior. Although this search for the inner Wild Man sometimes approached caricature and cliché, satirized in the popular television sitcom *Home Improvement*, the avuncular Bly is universally acknowledged as an avatar of the modern “male movement” who draws on mythology and fairy tales to help men heal their wounds by getting in touch with fundamental emotions. *Iron John* had such a powerful impact on American popular culture that it has all but overshadowed Bly’s other significant achievements as a poet, translator, and social critic.

Robert Bly was born in Madison, Minnesota on December 23, 1926, the son of Jacob Thomas Bly, a farmer and Alice (Aws) Bly, a courthouse employee. After Navy service in World War II, he spent a year in the premedical program at St. Olaf College in Northfield, Minnesota, before transferring to Harvard University where he graduated with a bachelor’s degree in English literature, magna cum laude, in 1950. He later wrote that at Harvard, “I learned to trust my obsessions,” so it was natural for him to choose a vocation as a poet after studying a poem by Yeats one day. After a half-year period of solitude in a Minnesota cabin, he moved to New York City, where he eked out a modest existence on the fringes of the Beat movement. He married short-story writer Carol McLean in 1955 and moved back to a Madison farm a year later, after receiving his M.A. from the University of Iowa Writing Workshop. With a Fulbright grant, he spent a year translating Scandinavian poetry in Norway, his ancestral homeland.

Back in Minnesota, far from the centers of the American literary establishment, Bly founded a journal of literature that turned away from the prevailing New Criticism of T. S. Eliot in favor of contemporary poetry that used surreal imagery. The journal, originally named *The Fifties*, underwent a name change with the beginning of each new decade; it has been known as *The Nineties* since 1990, the year Bly published *Iron John*. In 1962, Bly published his first poetry collection, *Silence in the Snowy Fields*, whose images were deeply informed by the rural landscapes of his native Minnesota. Over the years, Bly has also published dozens of translations of works by such luminaries as Knut Hamsun, Federico García Lorca, Pablo Neruda, Rainier Maria Rilke, St. John of the Cross, and Georg Trakl, among others.

As one of the organizers of American Writers Against the Vietnam War, Bly was one of the first writers to mount a strong vocal protest against that conflict. He toured college campuses around the country delivering sharply polemical speeches and poetry that condemned American policy. When his second collection, *The Light Around the Body*, won a National Book Award for poetry in 1968, he used the occasion to deliver an assault against the awards committee and his own publisher, Harper & Row, for contributing taxes to the war effort, and donated his \$1000 prize to a draft-resistance organization. His 1973 poetry collection, *Sleepers Joining Hands*, carried forth his anti war stance. During the 1970s, Bly published more than two dozen poetry collections, mostly with small presses, though Harper & Row published three more volumes, *The Morning Glory* (1975), *This Body is Made of Camphor and Gopherwood* (1979), and *This Tree Will Be Here For a Thousand Years* (1979). In 1981, Dial Press published his *The Man in the Black Coat Turns*. Over the years, Bly has continued to publish small collections of poetry; he has long made it a discipline of writing a new poem every morning.

Influenced by the work of Robert Graves, Bly was already demonstrating interest in mythology and pre-Christian religion and wrote in a book review of Graves’s work how matriarchal religion had been submerged by the patriarchs, much to the detriment of Western culture. After his divorce in 1979, he underwent a soul-searching identity crisis and began leading men’s seminars at a commune in New Mexico. It was during this period that he adopted the Iron John character from a Brothers Grimm fairy tale as an archetype to help men get in touch with their inner powers. Bly recognized that contemporary men were being spiritually damaged by the absence of intergenerational male role models and initiation rituals as found in premodern cultures. As he wrote in his 1990 preface to his best-known work, *Iron John*, “The grief in men has been increasing steadily since the start of the Industrial Revolution and the grief has reached a depth now that cannot be ignored.” To critics who responded that Bly was leading an anti-feminist crusade, the author replied by acknowledging and denouncing the dark side of male domination and exploitation. Still, some feminists argued that Bly was advocating a return to traditional gender roles for both men and women, and other critics assailed what they saw as Bly’s indiscriminate New Age salad of tidbits from many traditions. Still, the book was at the top of the *New York Times* best-seller list for ten weeks and stayed on the list for more than a year.

In 1996, Vintage Books published Bly’s *The Sibling Society*, in which Bly warns that our dismantling of patriarchies and matriarchies has led to a society of confused, impulsive siblings. “People don’t bother to grow up, and we are all fish swimming in a tank of half-adults,” he wrote in the book’s preface, calling for a reinvention of

shared community. Bly's collaboration with psychologist Marion Woodman on workshops integrating women's issues into the *Iron John* paradigm led to the publication of a jointly written book, *The Maiden King: The Reunion of Masculine and Feminine* (1998).

Board Games

Board games have been around for thousands of years. Some of the oldest games are some of the most popular, including chess and checkers. Backgammon dates back at least to the first century C.E. when the Roman Emperor Claudius played it. Chess probably had its origin in Persia or India, over 4,000 years ago. Checkers was played as early as 1400 B.C.E. in Egypt. In the United States, board games have become deeply embedded in popular culture, and their myriad forms and examples in this country serve as a reflection of American tastes and attitudes. Major producers such as Parker Brothers and Milton Bradley have made fortunes by developing hundreds of games promising entertainment for players of all ages.

Success at many games is for the most part a matter of luck; the spin of the wheel determines the winner in *The Game of Life*. In fact, everything in life, from the career one chooses to the number of children one has, is reduced to spins on a wheel. Most games, though, involve a combination of problem solving and luck. In the game of *Risk*, opponents attempt to conquer the world. Although the final outcome is closely tied to the throw of dice, the players must use strategy and wisdom to know when to attack an opponent. In the popular game of *Clue*, a player's goal is to be the first to solve a murder by figuring out the murderer, the weapon, and the room where the crime took place. But the dice also have a bearing on how quickly players can position themselves to solve the crime. *Scrabble* tests the ability of competitors to make words out of wooden tiles containing

A family plays the board game *Sorry*.

the letters of the alphabet. Although luck plays a role, since players must select their tiles without knowing what letter they bear, the challenge of building words from random letters has made this challenging game a favorite of many over the years.

One of the most enduring board games of this century is *Monopoly*, the invention of which is usually attributed to Charles Darrow in 1933, although that claim has been challenged by some who contend that the game existed before Darrow developed it. The strategy of the game is to amass money to buy property, build houses and hotels, and ultimately bankrupt other players. One charming feature of the game is its distinctive metal game pieces, which include a dog, a top hat, an iron, and a wheelbarrow. Darrow named the streets in his game after streets in Atlantic City, New Jersey, where he vacationed. Initially, he sold handmade sets to make money for himself while he was unemployed during the Great Depression. In 1935, Parker Brothers purchased the rights to the game. From this small beginning, the game soon achieved national even international fame. *Monopoly* continues to be one of the most popular board games, and a World Championship attracts participants from all parts of the globe each year.

Most board games are designed for small groups, usually two to four players. But some games are popular at parties. *Twister* is unusual because the game board is placed on the floor. Players step on colored spots. As the game progresses, competitors must step over and twist around other players in order to step from one colored spot to another on the game board. *Trivial Pursuit*, a popular game of the 1980s, pits players or groups of players against each other as they answer trivia questions under certain categories such as geography,

sports, and literature. The game was so popular that it resulted in various “spin-offs,” such as a version designed especially for baby boomers.

Television and the movies have done more to spawn new board games than probably anything else. When children flocked to see Flash Gordon serials at local Saturday matinees in the 1930s people saw the market for Flash Gordon merchandise including a Flash Gordon board game.

Television became the main source of inspiration for board games beginning in the 1950s. A TV series might only last a year or two, but if it was popular with children, related games would inevitably be developed. Cowboy shows produced games about Roy Rogers, the Lone Ranger and Tonto, the Rifleman, and Hopalong Cassidy.

Astronauts replaced cowboys as heroes during the space race of the 1960s. Even before the space race, children played with the game based on the *Tom Corbett* TV show. *Men into Space* was a TV series known for its realistic attempt to picture what initial space travel would be like. A game with rocket ships and cards containing space missions and space dangers allowed the players to “travel into space” as they watched the TV show. As space travel progressed, so did TV shows. *Star Trek*, *Buck Rogers*, *Battlestar Galactica*, and *Space 1999* all resulted in games that children put on their Christmas lists or asked for on their birthdays.

Games did not have to involve heroes. Every popular TV show seemed to produce a new game that was actually designed to keep people watching the shows and, of course, the commercials. *The Beverly Hillbillies*, *Seahunt*, *Mork and Mindy*, *Gilligan’s Island*, *The Honeymooners*, *The Six Million Dollar Man*, *Charlie’s Angels*, *The Partridge Family*, and *Happy Days* are only a few of literally dozens of shows that inspired board games. Many games were based on TV game shows such as *The Price Is Right* or *The Wheel of Fortune*, replicating the game show experience in the home. While the popularity of some of these games quickly waned as audience interest in the particular show declined, they were wildly popular for short periods of time.

Movies inspired the creation of board games in much the same way as television shows. The *Star Wars* trilogy has produced numerous games. One combined Monopoly with *Star Wars* characters and themes. The movie *Titanic* generated its own game, marketed in 1998 after the success of the motion picture. The duration of these games’ popularity also rested on the popularity of the corresponding movies.

Comic strips also provided material for new board games. A very popular comic strip for many years, *Little Orphan Annie* came alive to children in the *Little Orphan Annie’s Treasure* board game, which was produced in 1933. Children could also play with Batman, Winnie the Pooh, and Charlie Brown and Snoopy through board games.

Many aspects of life have been crafted into board games. *Careers*, *Payday*, *The Game of Life*, and *Dream Date* were designed to help children think about things they would do as they grew up. But the most enduring life-based games are war games, such as *Battleship*, *Risk*, and *Stratego*, which have been popular from one generation to the next. In the 1960s Milton Bradley produced the *American Heritage* series, a set of four games based on American wars. This was done during the Civil War centennial celebrations that drew people to battlefield sights. Civil War was a unique game that featured movers shaped like infantry, cavalry, and artillery. Children moved troops by

rail and fought battles in reenacting this war. *Broadsides* was based on the War of 1812. Ships were strategically positioned for battle on the high seas and in harbors. *Dog Fight* involved World War I bi-planes that were maneuvered into battle. Players flew their planes in barrel rolls and loops to shoot down the enemy squadrons. *Hit the Beach* was based on World War II.

While entertainment remained the goal of most games, some were meant to educate as well. *Meet the Presidents* was an attractive game in the 1960s. The game pieces looked like silver coins. Even when the game was not being played, the coins served as showpieces. Each coin portrayed a president of the United States on one side and information about him on the other side. Players had to answer questions about the presidents, based on the information on the coins. *The Game of the States* taught geography and other subjects. As players moved trucks from state to state, they learned the products of each state and how to get from one state to another.

Board games have continued to have a place in popular culture, even in an electronic age. Though computer versions of many popular board games, including Monopoly, offer special effects and graphics that traditional board games cannot, people continue to enjoy sitting around a table playing board games. Seemingly, they never tire of the entertaining, friendly banter that accompanies playing board games with friends and family.

Boat People

With the images of Vietnam still fresh on their minds, Americans in the mid-1970s were confronted with horrifying news footage of half-starved Vietnamese refugees reaching the shores of Hong Kong, Malaysia, Thailand, Indonesia, and the Philippines on small, makeshift boats. Many of the men, women, and children who survived the perilous journey across the South China Sea were rescued

by passing ships. Over one million boat people from Cambodia, Laos, and Vietnam were eventually granted asylum in the United States and several other countries. Most were lost at sea, thousands of others perished of disease, starvation, and dehydration, or were murdered by pirates. This final chapter in the history of the Vietnam War would live in the collective memory of an entire generation. Personal accounts of the refugees' hardships and courage would inspire countless books, movies, websites, documentaries, magazine articles, and television news reports in the United States. For years to come, the boat people would serve as an enduring testimony to the tragic aftermath of America's defeat in Vietnam.

The Vietnamese exodus began after the fall of Saigon in 1975. Many of the survivors would languish for almost twenty years in refugee camps throughout Asia, awaiting asylum, exile, or forced repatriation. Those boat people who escaped Vietnam in the late 1980s were labeled "economic migrants" and not granted refugee status. Finally in 1989, an agreement between the United Nations and the Vietnamese government resulted in the "orderly departure program," which forcibly returned over 100,000 Vietnamese boat people to their homeland. The agreement in Geneva stipulated that the boat people were not to be punished for attempting to escape. By the late 1990s, another 1.6 million boat people had been resettled in various countries around the world.

The term "boat people" acquired special significance in the U.S. context during the 1980s and 1990s, when hundreds of thousands of Cubans and Haitians journeyed across the Caribbean Sea in homemade rafts and unseaworthy boats seeking political asylum in the United States. In the years following the 1959 Revolution, the number of Cubans attempting the perilous journey to freedom across the Florida straits on boats and rafts remained relatively small. But in 1980, after several thousand Cubans stormed the Peruvian Embassy in Havana seeking asylum, Castro temporarily eased restrictions on emigration and prompted a flotilla of refugees headed towards Florida's shores. The Mariel boat lift resulted in the mass exodus of an estimated 125,000 Cuban refugees. For the first time in history, Americans experienced a flood of boat people first-hand, watching the events unfold on national television. As thousands of arriving Cubans were greeted by relatives living in exile, the American public responded with increasing fear to the sensational media accounts of prison and insane asylum inmates deported along with the refugees. Later studies would show that the image of the "Marielitos" popularized by the press was inaccurate, as only about 1 percent of the Mariel refugees had criminal pasts. But President Jimmy Carter, who had initially welcomed the immigrants, responded by imposing stiff penalties on any vessels returning to U.S. waters carrying Cuban refugees. Boats were impounded and their owners fined or imprisoned. In 1984, Cuba and the United States reached an agreement that capped the flow of boat people.

The agreement was short-lived, however, as economic conditions worsened in Cuba and another wave of about 35,000 Cuban boat people, or "rafters," hit Florida's shores in the 1990s. The U.S. government, in a precedent-breaking decision, refused to grant the Cuban rafters entry. Instead, they set up a tent city in the military base at Guantanamo Bay, Cuba, where thousands of rafters awaited their fate. Those who could prove that they were political refugees fearing death or persecution by the Cuban government were eventually granted asylum and relocated in the United States. Most were

absorbed into the Cuban exile community in Miami. Others were sent back to Cuba, where they faced an uncertain future.

Between the late 1970s and mid-1990s, over 100,000 Haitian boat people also sought asylum in the United States. In 1981, President Reagan issued an Executive Order directing the U.S. Coast Guard to intercept Haitian boat people at sea. The majority were labeled economic migrants and repatriated. When President Aristide was ousted in the 1991 coup, political repression and economic hardships increased in Haiti, prompting another exodus. The U.S. Naval Base in Guantanamo Bay again served as a screening facility for boat people seeking refuge in the United States. Most of the 34,000 Haitians interdicted at sea between 1991 and 1992 were taken to Guantanamo and repatriated. Many of those who were granted permission to stay settled in a section of Miami, Florida, that came to be known as "Little Haiti."

As late twentieth-century Americans (particularly in Florida) witnessed the first large-scale migration into the United States to occur via make-shift boats, rafts, and inner tubes, they greeted the boat people from neighboring Caribbean countries with both hostility and pity. In Miami, particularly, newspapers carried almost daily reports of bodies washed ashore or emaciated Cubans and Haitians picked up at sea by the U.S. Coast Guard or by volunteer pilots with the Cuban-American organization, Brothers to the Rescue. Popular reaction to the U.S. government's policies towards boat people was also mixed: public outcries alternately charged U.S. government officials with racism, cruelty, or laxity. But one thing was certain: the phenomenon had altered America's—particularly Miami's—demographics forever. It had also added new ingredients to the American cultural stew, as Cuban and Haitian cuisine, art, literature, and music would continue to gain popularity around the country.

Bob and Ray

Bob Elliott (1923—) and Ray Goulding (1922-1990) brought a new kind of low-key satire to radio in the late 1940s. They developed such memorable characters as the drawling cowboy Tex and Wally Ballou, "radio's highly regarded and totally inept" remote broadcast reporter who invariably began his reports in mid-sentence, having forgotten to turn on his microphone. Wally often spoke of his wife "Hulla Ballou" and son "Little Boy Ballou." Another popular

Bob Elliot (left) and Ray Goulding

creation was Mary McGoon, a quirky talk show hostess who was a combination of Mary Margaret McBride (the First Lady of radio talk shows from 1934 to 1954) and Julia Childs, the radio and television chef.

The creative pair also set their satiric stun guns on popular long-running radio shows of their day, running their version, *One Feller's Family*, as a parody of the popular program *One Man's Family*. Also popular was their *Mary Backstayge*, *Noble Wife*, a soap opera sketch that spoofed the daytime radio series *Mary Noble*, *Backstage Wife*. Other vehicles for their offbeat wit included such pseudo programs as *The Transatlantic Bridge*, *Robin Hood of Sherman Forest*, *Mr. District Defender*, and *Tales Well Calculated to Keep You in Anxiety*. *Widen Your Horizons* was a "self-help" program on which experts would explain how to look up names in a telephone directory or how to put salt in salt shakers.

Bob and Ray began their professional career at Boston radio station WHDH on an early morning talk and music program. Bob was the show's host and Ray the announcer, with each playing a variety of characters in different voices. All of the shows ended with their trademark salutations, "Write if you get work" and "Hang by your thumbs." They added more fans with the show *Matinee with Bob and Ray*, which preceded the Red Sox baseball games and filled the afternoon with their improvised comedy on rain-out days.

After their on-air shenanigans became the talk of Boston, NBC executives offered them a network radio show of their own in 1953. After two years in the Saturday at 8:00 p.m. time slot, during the 1955-1956 season they moved to the Mutual network for a Monday to Friday program at 5:00 p.m. When television took its toll on network

radio, Bob and Ray appeared frequently on local stations in Boston and New York as well as on National Public Radio.

They were also guest stars on a number of television variety shows, including *The Colgate Comedy Hour* (1952) and *The Ed Sullivan Show* (1955). In the fall of 1951, the pair began performing on their own NBC television show in a 15 minute format, Monday through Friday at 7:15 p.m. The show also featured comic actress Audrey Meadows, who played the part of Linda Lovely in their ongoing spoof of soap operas. They hosted a half-hour NBC show featuring Cloris Leachman, playing the part of Mary Backstayge, during the summer of 1952 and returned to the quarter-hour format in the fall in a show known as *Club Embassy* or *Club Time*, again featuring Audrey Meadows. Critics were almost unanimous in the opinion that the satirists' unique brand of wit played better on radio than television.

In 1970 Bob and Ray wrote and performed a two-man stage production, *The Two of Us*, which had a long run on Broadway as well as at various regional theaters and colleges throughout the United States. In the 1970s the pair worked at radio station WOR, along with their television guest and stage appearances. Their voices became known to millions as Burt and Ernie Piel on Piel's beer commercials.

Bob and Ray were forced to retire in the late 1980s due to the illness of Ray, who died of a heart attack in 1990. Bob continues to make television talk show appearances and is a frequent guest speaker at college seminars and at conferences about the "Golden Age of Radio."

The Bobbsey Twins

The very term "Bobbsey Twins" has become a kind of slang abbreviation for earnest wholesomeness and do-gooder duos. Generations of American children have grown up with the fictional family of Nan, Bert, Flossie, and Freddie, but the 115 books, dating back to 1904, have always reflected societal changes over the decades. Still, even the modern *Bobbsey Twins* books showcase a perfect world of doting parents, unlimited access to material goods, and just enough adventure and drama to refresh appreciation for the comfort and safety of home and hearth. The books sold millions of copies and were still found on library shelves in America almost a century after their initial debut.

The Bobbsey Twins series was just one of several extremely successful works for children written by the Stratemeyer Syndicate. Founder Edward Stratemeyer had once ghostwritten some of the

popular “Horatio Alger” stories that fictionalized the myth of the American dream for millions of nineteenth-century young-adult readers, tales in which a poor boy prospers fantastically through hard work, honesty, and the American free-enterprise system. The Stratemeyer Syndicate’s first series was launched in 1899 with *The Rover Boys*, and would later include *The Hardy Boys* and *Nancy Drew* books. All were penned in accordance with a strict plot formula by writers-for-hire contracted to the Syndicate, most of whom earned about \$125 per book. The Southern-sounding Laura Lee Hope was the collective pen name for *The Bobbsey Twins* series, which began in 1904 with *The Bobbsey Twins: Or, Merry Days Indoors and Out* (The work was revised in 1961 and retitled *The Bobbsey Twins of Lakeport*).

The Bobbsey plots revolved around away-from-home adventures, the purchase of a miniature railroad or Shetland pony, the mysterious disappearance of a toy, or other mishaps or acquisitions. The twins of the title were the two sets of Bobbsey offspring: older twins Nan and Bert and their juniors Flossie and Freddie. The older duo are dark-haired and serious, while their siblings are mischievous and blonde; the genetic discrepancy is, of course, never explained in the plot. The family lives in Lakeport, perhaps somewhere in the East or Upper Midwest, since it snows in the winter and Mr. Bobbsey owns a lumber business on the shore of Lake Metoka. Mrs. Bobbsey is homemaker, and is assisted in her duties around “their large, rambling house” by an African-American servant, Dinah; Dinah’s husband Sam is first a handyman there and later an employee of the lumber business. Though the books always start off in Lakeport, often the family travels to visit relatives in different locales—sometimes a farm, in other instances the seashore. Mr. Bobbsey is usually available to travel with them, despite the demands of his business, and Mrs. Bobbsey exemplifies the patient, cool-headed, but warm-hearted American middle-class mom. Academics have explained the appeal of *The Bobbsey Twins* by citing how the books tap into Sigmund Freud’s theory of “family romance,” in which an imaginative child creates a substitute family, replete with a more loving set of parents and an elevated economic status.

Like the other so-called “tots” series from the Stratemeyer Syndicate, in *The Bobbsey Twins* books “the predominant image is of cheerful, contented families leading lives bounded on all sides by security and abundance,” wrote Deidre Johnson in *Edward Stratemeyer and the Stratemeyer Syndicate*. The Bobbsey Twins are characters that “seem surrounded by a special radiance, blessed by fortune . . . They are born into lives that guarantee them three things: emotional security, or being loved by family; material bounty, or having and perpetually receiving good things; and continual activity, or doing interesting things and visiting different places,” noted Johnson.

What is lacking in *The Bobbsey Twins* series is any form of strife or misfortune. Nan and Bert eagerly take daily responsibility for the younger twins, and never inflict cruelty upon them. This seems to be their only real duty; the vast amount of leisure time for the children is never constricted by piano lessons, dance classes, or onerous household chores. The Great Depression did not occur in the series, nor do either World War. Even when typical juvenile carelessness gets a Bobbsey child into trouble, he or she is only mildly reprimanded and never punished. Predominant in the pages of all the books is wholesome food, warm clothing, wonderful toys, and—every child’s dream—surprise presents for no reason at all. There are detailed descriptions of celebratory meals, such as Flossie and Freddie’s birthday soiree,

complete with creamed chicken, mashed potatoes, and dual cakes. “A more than adequate income makes their lifestyles and vacations possible and shelters them from the type of misfortune others face,” wrote Johnson about the Bobbseys in her book. Sometimes they meet children who live in far less fortunate circumstances—orphans, or children who have to work and are treated severely—but always inflict their own charity and ingenuous solutions upon them.

Up until the 1930s, *The Bobbsey Twins* plots were simple adventure stories, mostly concerned with vacations, but the family began becoming embroiled in more complex plots in the 1930s with *The Bobbsey Twins Solve a Mystery* and *The Bobbsey Twins at Mystery Mansion*, among others. By 1937, the series had sold over five million copies, and their popularity continued unabated in the postwar baby boom of the 1950s. The Stratemeyer Syndicate saw fit to revise the older works in the 1950s, books whose text and tone “contributed to sustaining racial and ethnic prejudice in their stock presentations of blacks, Jews, Italians, Irish, and other non-WASP groups,” explained Carol Billman in her 1986 book *The Secret of the Stratemeyer Syndicate: Nancy Drew, The Hardy Boys, and the Million Dollar Fiction Factory*.

When Edward Stratemeyer died in 1930, his daughter Harriet Stratemeyer Adams took over the Syndicate. *The Bobbsey Twins* books were published by Grosset & Dunlap after 1912, and early manuscripts and related materials from this era were donated to the New York Public Library for its Rare Books and Manuscripts Division in 1993.

Bobby Socks

Bobby socks (or bobby sox) are ankle-length socks, usually cotton, worn since the 1930s by children, teens, and adult women. By 1935, many teenage girls wore them to school with saddle shoes (two-tones) or loafers, and stores marketed them as campus fashion. They gained widespread fame in 1943 when national media equated them with teenage girls, especially screaming fans of Frank Sinatra, and claimed that ordinary ankle socks instantly became bobby sox when teenagers bought them. *Newsweek* initially defined “bobby soxers” as female juvenile delinquents with loose morals, but the prevailing stereotype declared them silly, uncontrolled swooners who loved to gab on the phone and buy the latest records and fashions. Teenage girls continued to wear the socks, but did not define themselves as “bobby soxers.”

Bochco, Steven (1943—)

Although he wrote feature film screenplays early in his career, Steven Bochco has made his mark as the creator and producer of successful television series, thus having an impact upon a larger audience than most filmmakers can claim. With such groundbreaking series as *Hill Street Blues*, *L.A. Law*, and *N.Y.P.D. Blue*, Bochco has managed to up the ante on televised social realism and, at the same time, he has pushed the envelope on the broadcast treatment of sexuality. Bochco’s series are noted for well-written scripts featuring a variety of characters portrayed by an expert ensemble cast. The storylines and subplots, overlapping many individual episodes, feature sharp twists and quirky mood swings, from gritty confrontation and sexual banter to unexpected acts of violence. A moment of macabre humor may be juxtaposed with a tender exchange between two characters, followed by the sudden demise of another character. In a medium rife with programming of a bland, repetitious, and formulaic nature, Bochco has distinguished himself by experimenting with fresh concepts. Although, inevitably, some of these ventures—*Cop Rock*, for example—have not proven as successful as others, Bochco’s successes have put him at the top of his field. Clear-eyed about the reality that television is a medium whose primary purpose is to advertise, Bochco has nonetheless done work of considerable sophistication which, in turn, has helped pave the way for other producers of adventuresome programming.

Born Steven Ronald Bochco in New York City on December 16, 1943, he was the son of a Russian immigrant who had been a child prodigy on the violin. Growing up with his sister in a tough West Side neighborhood left its mark on young Bochco. In a sense, the violence around him both provided Bochco with a drive to succeed and, ultimately, provided him with the inspiration for the art and craft with which he would do so. An indifferent student, he nevertheless obtained a scholarship at New York University. Within a year, however, he had transferred to the distinguished theater department at Carnegie Institute of Technology (now Carnegie-Mellon University). The winner of an MCA writing fellowship, Bochco eventually secured a summer job at Universal Studios, where he was in charge of other budding screenwriters. This led, following his 1966 graduation from college, to a job assisting the head of Universal’s story department. Although Bochco’s name would eventually appear in the credits of a respected science fiction film, *Silent Running* (1972), he has focused most of his energies, and earned his greatest rewards, toiling in the vineyards of television. After a variegated apprenticeship, Bochco began writing scripts for the NBC series *The Name of*

the Game in 1968. Within a few years, he was made story editor on the highly popular Peter Falk series *Columbo*.

After *Columbo* Bochco was associated with a number of series and projects which were nowhere near as successful as the Falk mysteries had been. But on one of these shows—*Vampire* (1979)—Bochco served as executive producer and co-writer with Michael Kozoll, who would soon prove to be a most significant collaborator. The following year, the two men were invited by Fred Silverman, president of NBC, to create a police show. The pair accepted the challenge, provided they would be allowed to devise something other than just another run-of-the-mill cop program. Taking as their inspiration a piece of public television cinema vérité called *The Police Tapes*, Bochco and Kozoll came up with *Hill Street Blues*, one of the most groundbreaking and successful shows in television history. The main concept, as Bochco later explained to one reporter, was for *Hill Street Blues* “to be a show about people who happen to be cops, as opposed to cops who, in some small corner of their lives, happen to be people.” Furthermore, the co-creators saw their show as an expression of their “strong belief in the cop as hero . . . in the sense of an individual performing a thankless task under extreme physical and emotional stress, with no reward to speak of—social, psychological, or financial. . . .”

In casting the new series, Bochco called upon talented troupers he had known in his days at college, such as Charles Haid, Bruce Weitz, and Barbara Bosson (then Mrs. Bochco). Although the show would make stars out of some of its leading players, such as Daniel J. Travanti, *Hill Street Blues* was an ensemble piece roaming from character to character and from plot to plot—most of them overlapping several episodes. In addition to this sense of a free-floating slice of life, what distinguished *Hill Street Blues* from other cop shows—and set the mold for future Bochco enterprises—was an edgy, off-beat tone, a mixture of quirky characters, raw social realism, gallows humor, and frank sexuality (at least, the verbal expression thereof). At the climax of the opening episode, a moment of comedy is followed immediately by the shocking and vicious gunning-down of two of the leading characters.

Hill Street Blues, an MTM production, soared in the ratings and cleaned up at the Emmys for years. It set a high standard for television series drama, and developed a gritty, quirky tone which is still in evidence not only on the tube but in the big-screen projects of Quentin Tarantino and other filmmakers. In 1985, Bochco left MTM under a cloud, though it was not clear whether his differences with the production company had been budgetary—as MTM claimed—or personal, as Bochco asserted. In any event, Bochco re-emerged at Twentieth-Century Fox with a new collaborator, Terry Louise Fisher, a former deputy district attorney and a writer-producer for *Cagney and Lacey*. The result of their creativity was *L.A. Law*, which debuted on NBC in 1986. Although a series about a law firm was by its nature less prone to portray violence than one about a police precinct, *L.A. Law* displayed all the Bochco hallmarks, from an ensemble cast (including Michael Tucker, another old college buddy) and sophisticated dialogue, to high drama and low black comedy. In the opening moments of the premiere episode, a recently deceased lawyer lies face down in his take-out dinner, while the surviving attorneys argue over who shall inherit his office. Once again, a controversial but highly successful, award-winning series was born.

Whatever one’s assessment of his products, credit must be given to Bochco for following up *Hill Street Blues* and *L.A. Law* with series

concepts that could not be accused of being just more doctor or cop shows. *Doogie Howser, M.D.* (1989), about a teenage surgeon, was inspired by Bochco's father's early years as a child prodigy. *Doogie* ran successfully for several seasons, but the fate of *Cop Rock*, a serious police show with musical numbers, was another story. This 1990s drama was short-lived and, for once, it seemed that Bochco had finally gone too far . . . out. Nevertheless, he has continued to stretch himself and experiment with the conventions of television. Much controversy was aroused when it was announced that Bochco's newest series, *N.Y.P.D. Blue*—created with David Milch—would attempt to reclaim for network television some of the large audience lost to cable by purposefully pushing the envelope of language, sex (i.e., partial nudity), and violence past the commonly accepted broadcast norms and closer to the look and feel of R-rated movies. When it finally debuted on ABC, *N.Y.P.D. Blue* proved to be exactly as advertised, and it has weathered the initial storm of protests to prove itself another durable Bochco success.

Body Decoration

Body Decoration is an ancient form of self-expression, which experienced a twentieth-century revival in a variety of forms. The broad category of body decoration, so thoroughly studied by anthropologist Robert Brain and others, includes everything from styles of dress, to cosmetics, to jewelry, to hair dye, to war paint. More specifically, in an American sense, the term refers to the patterned arts of body decoration, such as tattoos or piercing (or even mehndi or branding).

In a number of traditional cultures, body painting exists for an assortment of purposes, from the purely decorative to the ceremonial. Typically, the designs are in a symbolic form that is based on specific cultural or spiritual beliefs. In their American manifestations, however, these designs ordinarily lack a deeply rooted cultural basis. Rather, the symbols are reappropriated by different groups and imbued with new meanings.

Tattoos are one such example, a permanent form of body decoration. For most of the twentieth century, tattooing was a predominately male phenomenon, often accompanying activities considered traditionally male, such as military outings or gang events. Although there were tattoo-devotee subcultures, such as motorcycle gangs, it was not considered an "acceptable" form of adornment by the mainstream American population.

At the end of the 1980s and early 1990s, tattooing experienced a resurgence as a part of the "Generation X" look. American youth, from the working and middle classes, appropriated tattoo markings to symbolize their youth culture. Arm-band and ankle tattoos replaced the older designs usually sported by military men, such as sailors, whose tattoos of mermaids and anchors were well-known during the earlier part of the century.

This subculture, not unlike others, utilized fashion as an outward manifestation or symbol of their identity. In 1991, the term "Generation X" was used by Douglas Copeland to describe "Forty-six million Americans between 18 and 29 [who are] generally blase and bitter over problems created or made worse by their parents, some seventy-two million baby-boomers." Although Copeland's classification was disputed by some, the 1990s was seen by others as "the age of diminished expectations," with a social climate of racism, skyrocketing divorce rates, increased acceptance of social and sexual deviance (as seen on talk shows) and higher rates of unemployment for the college educated. Many of these social factors are similar to the environment in London which spawned the punk movement in the 1970s, when body piercing became a significant fashion symbol.

The American "Gen X" aesthetic of the 1990s was derived from a variety of sources. In addition to the aforementioned social climate, music and fashion media replicated nihilistic images. "Grunge" bands such as Nirvana, Pearl Jam, and Alice in Chains created music which reflected the despair of the Gen Xers. The fashion industry encouraged the grunge image, which progressed to "waif," then to "heroin-chic." Perhaps the most visible designer who embraced and promoted the movement was Calvin Klein with his waifish star model, Kate Moss.

The grunge look was marked by dark and loose clothing, and the conscious attempt to appear disinterested in personal grooming, often expressed by unwashed hair and thrift-shop attire. The "waif" look captured a self-starvation appearance—hollowed-out, sad eyes, and a gray complexion. An interesting paradox ensued in marketing to the Gen-X population: the very styles which attempted to reject commercialism by this anti-establishment youth culture could soon be achieved through commercial outlets. In other words, "vintage," or "retro" clothes were created by designers and marketed in mainstream department stores. Clothing production modeled that which could be found in thrift stores or garage sales.

For Generation Xers, nihilism was brought to the forefront when rock icon Kurt Cobain committed suicide, and his heroin-chic widow Courtney Love rose to fame. (Later in the 1990s, artists such as Marilyn Manson reinforced Cobain-esque nihilism, while Courtney Love traded in her heroin-chic style to model for Versace).

Body piercing also became a popular form of self-expression among Gen Xers, early on as third-hole ear-piercings and eventually as a pierce-anything phenomenon—noses, eyebrows, tongues, lips, nipples, navels, etc. Beyond simple earrings or hoops, other "piercings" surfaced, such as rods, tusks, and bolts, adornments which became increasingly available at specialty stores. Some cultural historians argued that the nationwide body piercing trend originated in California, where navel piercing was popular on the beach. Here, however, it was relatively isolated from the larger Gen X aesthetic, in which it was later nearly essential.

Whether fad or fashion, trend or movement, body piercing became widespread and extreme in the 1990s. Once such example was revealed on a November 21, 1995 broadcast of the Dr. Judy Love Phones show, a syndicated nightly radio call-in show on WHTZ in New York, when a male caller expressed concern over the fact that his girlfriend had recently pierced her clitoris. Body piercing even invaded interior decors: Club USA, and now defunct Manhattan nightclub in Times Square, was decorated with large, theater-sized photographs and props of sexual, sadomasochistic images. One bar

Nineteen-year-old Rainy Blue Cloud Greensfelder displays twenty-one body piercings and flowing purple hair.

doubled as a glass display case, and contained close-up photographs of various clitoral rings and pierced penises. The display was completed by photos of the piercer at work, suggesting that at least in Manhattan, there is someone available to pierce any part of the body.

Another extreme, or even masochistic, form of body decoration is branding or scarring, which became mildly popular among 1990s American youth, but never to the extent of either piercing or tattooing. Branding, the melting of a symbol into human flesh, was offered at some New York City shops.

Significant to most American youth trends is the conspicuous disregard for or rebellion against cultural tradition. Unlike the ornaments worn by Papuan natives, for example, to signify as a religious tradition, American body piercing and tattoos were not connected to any form of formal ceremony. And whereas branding first appeared in the United States with slavery, it reemerged as a trend among mostly white, middle class young persons. This paradox was further complicated by the nature of Gen Xers in general, often despairing individuals searching for identity amidst a pervasive consumer environment in which everything seemed to be commodified, including identity.

Whether rock stars or images, most everything was neatly packaged and depicted in the mass media. Cultural expression among American youth is important to their attempt to self-define. As one Los Angeles teenager said in reference to body piercing, “You feel a common bond when you see others.”

Incidentally, in the mid-1990s, researchers noticed an elevated incidence of a clinical condition known as self-mutilation, wherein teenagers injure themselves as a way of easing emotional distress. It is believed that there were over two million sufferers in the United States in 1997. That year, an article entitled “The Thin Red Line” appeared in the *New York Times* magazine, which examined the causes of the behavior and its treatment by researchers. Although experts disagreed about the connection of the behavior to other forms of body modification, they were all keenly aware of the simultaneous rise in both.

After these forms of body decoration became more widely accepted, other forms of body decoration also debuted. One extreme manifestation of the appropriation of other cultural symbols was the sudden interest in 1998 in mehndi, or the Indian art of henna painting.

This was largely made popular by the release of Madonna's *Ray of Light* album and a corresponding music video, in which she is adorned in exotic fabrics and wears mehndi. Here, it is totally decontextualized from its ritual use for Indian brides. After the video, prefabricated mehndi kits were available in a variety of gift and fashion stores.

Bodybuilding

The term “bodybuilding” has taken on several meanings in popular discourse. The most common usage refers to the organized sport in which men and women compete by posing to display the physiques they have created through weight training, careful dieting, and, in some cases, ergogenic drugs such as anabolic steroids. The term is also used generically to describe the lifestyle followed by many men and women who simply train for greater muscle mass and leanness even though they never compete. These non-competitors train for the “look”—a physical ideal featuring large rounded muscles and minimal body fat. Although the “look” requires enormous dedication and personal sacrifice—and, frequently, drugs—to achieve, it has become pervasive in Western culture. Films, television, comic books, and magazine advertising had all fallen under its sway by the end of the twentieth century.

Although surviving sculpture from Ancient Greece and Rome suggests that both cultures were deeply interested in physical training and body symmetry, there is no evidence to suggest that physique contests were held during these eras. However, the heroic proportions of these early Hellenic and Roman statues are important, for they served as the impetus for the birth of the bodybuilding movement of the nineteenth century. With the importation of the Elgin Marbles to Britain in 1806, a widespread interest in Greek Revivalism spread across Europe, Great Britain, and the United States. This interest in resurrecting the art, architecture, literature and educational systems of Ancient Greece fostered the development of a number of systems of physical training during the nineteenth century and helped create the new science of physical anthropometry—the study of human measurements. Full-sized plaster cast replicas were installed in many colleges, smaller likenesses of ancient statues were manufactured as household ornaments, and advances in printing technology disseminated illustrations and engravings, giving men models of physical perfection against which they could compare themselves. And, as one might expect, sedentary city dwellers discovered that they did not measure up to the ideals presented by the ancient classical civilizations.

Greek Revivalism hit its apex on the shores of Lake Michigan, just outside Chicago, at the 1893 World's Columbian Exhibition. The managers of the World's Fair designed an entire city in the mode of Ancient Greece, and throughout this plaster-of-Paris city they placed

Lou Ferrigno (left) and Arnold Schwarzenegger flex their muscles.

large copies of ancient statuary. Reports from the 1893 Chicago World's Fair nearly all remark on the symbolic importance of these statues, which forced fairgoers to take stock of their own physical condition. Many of the reports also commented on the “living embodiment” of Ancient Greece, strongman Eugen Sandow, who performed in Chicago on a daily basis, and is rightfully recognized as the first major “bodybuilder.” Author David Chapman argues that Sandow is the transitional figure from the large and often graceless strongmen, who were ubiquitous in the circuses of the mid- to late-nineteenth century, to the physique stars of the twentieth century. Florenz Ziegfeld (who would later produce the *Ziegfeld Follies*) became Sandow's manager in 1893 and convinced him to alter his act to capitalize on his unique muscularity and physical beauty. Thus, in addition to weightlifting, Sandow added a series of poses at the end of his act. To replicate the classical ideal, he covered himself with white powder and stood against a black velvet backdrop, simulating the poses of classical statuary.

Sandow's appearances at the Chicago World's Fair and his subsequent tours of the United States made him an international celebrity and set off a mania for physical training in the United States and abroad. Back in England in the late 1890s, he began *Sandow's Magazine*, published books, opened a physical training institute, and became the darling of the English upper classes. In 1898, a group of

British aristocrats inspired by Sandow's example joined forces with a local physician, Professor John Atkinson, and held a "Best Developed Man Contest" in conjunction with a weightlifting championships. The winner of that first bodybuilding prize was 1896 Olympic Games heavyweight champion Launceston Elliott (1874-1930), who soon went on the stage and imitated Sandow, both in his grooming and by including poses in his strength act.

The first successful bodybuilding promoter was Sandow himself. In 1898, the year he began his magazine, Sandow announced an ambitious plan to sponsor physique contests in every county in England and then bring the winners together in a magnificent final competition in London. That contest, with 15,000 people in the audience, was held on 14 September 1901 at the Albert Hall, and was won by the 189-pound W.L. Murray of Nottingham, perhaps the least known champion in the history of bodybuilding. Following his victory, Murray, too, became a professional showman, billing himself as "The Most Perfectly Developed Athlete of Modern Times."

The first physique contests in the United States were organized by the eccentric and controversial magazine publisher and health fanatic, Bernarr Macfadden, who was inspired by Sandow's act at the Chicago World's Fair. A gifted promoter, Macfadden began publishing *Physical Culture* magazine in 1898 and by 1900 had reportedly attracted 100,000 subscribers. Quick to understand the value of photography and personal success stories to the magazine's growth, Macfadden announced a world-wide contest for the "Best and Most Perfectly Developed Man and Woman." Contestants submitted photos and measurements that Macfadden then used in his magazine. The most suitable candidates then competed in 13 regional competitions in the United States and England for the privilege of entering the finals. Macfadden's first "Physical Culture Extravaganza" began on December 28, 1903 in Madison Square Garden. With representatives from England competing in both the men's and women's divisions, it was the first international bodybuilding contest and was won by Albert Toof Jennings (1873-1960) and Emma Newkirk. Jennings, a professional strongman known professionally as Al Treloar, was hired as the physical director of the Los Angeles Athletic Club in 1907, a position he held for the next 42 years. Emma Newkirk, from Santa Monica, California, appears to have had no subsequent involvement with women's bodybuilding.

Macfadden held a second competition for men and women in October of 1905, and over the next several decades he sponsored a variety of other physique contests. Some were simply postal meets in which physiques were judged on the strength of photographs and measurements. Others, however, were real competitions, such as the 1921 "America's Most Perfectly Developed Man Contest" won by artist's model Angelo Siciliano (1892-1972), who would go on to revolutionize the mail order training business under the world renowned name of Charles Atlas. The problem with Macfadden's contests, however, was that the judging criteria varied considerably from event to event. The early shows were largely judged by artists and physicians or by prominent people from other walks of life. There were no written rules, no set poses, and no clearly stated aesthetics. Also, with no regular schedule of bodybuilding competitions, the men who entered the early shows rarely worked solely on their physiques. Most were weightlifters, artists' models, or professional strongmen who entered physique contests as a sideline. But that would soon change.

In the 1930s, the British magazine *Health and Strength* began sponsoring a bodybuilding contest as part of its annual physical culture extravaganza. Interest in physique competitions also blossomed in France, where a national championship was held for the first

time in 1934. Across the Atlantic, 28-year-old Johnny Hordines sponsored the "Finest Physique Contest" on December 1, 1938 in Schenectady, New York. No overall winner was named in the contest although prizes were given for best body parts and in three height divisions. The following year, on June 10, 1939, Hordines organized a much larger and more elaborate show in which the 30 bodybuilders posed to music on a revolving dais. Although this contest, won by Bert Goodrich, is frequently referred to as the first "Mr. America" contest, Hordines did not advertise it as such. He called it "America's Finest Physique Contest."

The first contest to be held on a regular basis in the United States was the Amateur Athletic Union (AAU) Mr. America contest. The first meet took place on July 4, 1939 in conjunction with the AAU National Weightlifting Championships. As would be the case for many years in the AAU, the physique show was held after the weightlifting, almost as an afterthought. At the 1939 show, no contestant could enter the physique contest who had not competed in the weightlifting event. Ronald Essmaker won the tall class in that first AAU contest, and is thus regarded as the first Mr. America. On May 25, 1940 a Mr. America contest was again held following the National Weightlifting Championships. John Grimek won the overall title for that year and the next, thus becoming the only champion to win two Mr. America titles. In fact, Grimek's physique was so far ahead of his competitors in the early 1940s that the AAU passed a rule forbidding winners from competing in subsequent Mr. America contests.

The establishment of the Mr. America contest validated bodybuilding as a sport. However, for a number of years, nearly all American bodybuilding competitions continued to be held after weightlifting events. The bodybuilding shows often ended well beyond midnight, and thus attracted small audiences and little publicity. Furthermore, in order to fight the notion that large muscles made a person muscle-bound and unathletic, the AAU established an athleticism requirement for all competitors. Men who wanted to be in the physique shows had either to compete in the weightlifting event or prove that they were athletes involved in such things as team sports or track and field. The guiding force behind these regulations was Robert (Bob) Hoffman (1898-1984), owner of the York Barbell Company. Hoffman was a staunch supporter of the Olympic sport of weightlifting, and a strong presence in the AAU. He didn't dislike bodybuilders, and was Grimek's employer, but he worried that the new sport would take young men away from weightlifting. In his magazine, *Strength & Health*, which by the mid-1940s was the most widely circulated muscle magazine in the world, Hoffman gave less space to physique men than he did to weightlifters. These attitudes, coupled with the AAU's continued presentation of bodybuilding as a second class sport, opened the door for the young Weider brothers of Montreal, Canada, and allowed them to take control of the sport.

Joe Weider (1923—) was only 17 years old when he published his first issue of *Your Physique* magazine in 1940. From that inauspicious, mimeographed beginning, *Your Physique's* circulation grew almost geometrically. By 1943, his readership had spread across Canada, and he began selling exercise equipment as well. In 1946, with his younger brother Ben (1925—) home from the war, Joe organized the first Mr. Canada contest, but after experiencing problems, the ambitious entrepreneurs decided to form their own bodybuilding federation. Ben Weider explained their decision in a 1998 magazine article: "At that time the AAU controlled bodybuilding, not only in America but in Canada as well, through the Weight Lifting

Federation. Although we had asked for and received a permit from the AAU to organize the [1946 Mr. Canada] contest, on the night of the contest, their Canadian representatives . . . arrived and threatened the bodybuilders that they would be expelled from the AAU if they participated. The reaction of Bob Hoffman and the International Weightlifting Federation was aggressive and mean. They did everything to try to destroy and humiliate us. That's when Joe and I decided to organize our own federation and not be under the control of the AAU."

Over the next several years, Joe and Ben Weider sponsored dozens of contests and traveled throughout the world to enlist member nations for their new International Federation of Bodybuilders (IFBB). During the 1950s and 1960s the IFBB grew steadily in membership and in stature. At the same time, the Weiders' magazine, equipment, and food supplement businesses turned into an empire. By the early 1970s, when the International Weightlifting Federation finally decided to give up what little control they had of bodybuilding, the IFBB was able to assume total control of international bodybuilding. Ben Weider also stepped up his campaign for the acceptance of bodybuilding as an Olympic sport. Although it took another quarter century to see it finally happen, Ben Weider's tireless crusade finally resulted in the International Olympic Committee admitting the IFBB as a "recognized Olympic sport" on January 30, 1998. By that time, the IFBB was one of the most international bodies in sport, with well over 100 member nations.

It was clear, however, that before the IFBB would be able to send athletes to the Olympics, it would have to deal more effectively with the drug use that pervaded the sport. The International Olympic Committee has had many drug scandals in other sports, and it would be unlikely fully to embrace a sport that has been dominated by drug use since the 1960s. Because ergogenic drugs such as anabolic steroids and Human Growth Hormone build muscle and reduce body fat, they provide virtually unbeatable advantages to those who use them. The IFBB has attempted, with varying degrees of rigor and with very limited success, to curtail their use by the top competitors, but because the drugs are easy to obtain and, in most cases, relatively inexpensive, and because most drug testing programs have been either half-hearted or short-lived, bodybuilders are drawn to their use. The irony of unhealthy men and women winning competitions that have traditionally symbolized health must be resolved before bodybuilding can become a full-fledged Olympic sport.

Although there were women's beauty contests at Muscle Beach in the 1940s and 1950s, and although some men's contests during the 1950s and 1960s also contained a bikini or beauty contest for women, the first competition at which women were judged on muscularity and symmetry was a 1978 meet promoted by Henry McGhee, a Canton, Ohio, YMCA director. One of the competitors in that contest was a 46-year-old Florida grandmother, Doris Barrilleaux, who decided to form a bodybuilding association for women. The Superior Physique Association sponsored several contests in the southeastern United States but, ultimately, could not compete with the National Physique Committee—the American arm of the IFBB. The first NPC show, The World Pro Championships, was held in 1979. Lisa Lyon, who won that first contest, was heavily promoted by Joe Weider in *Muscle and Fitness* magazine and, seemingly overnight, women's bodybuilding took off. Within two years, the NPC had state, regional, and national meets in place, and in 1980 the IFBB sanctioned the first Ms. Olympia contest, which was won by Rachel McLish of Harlingen, Texas.

Throughout the early and mid-1980s, women's bodybuilding seemed to be on a steady growth curve. However, as women bodybuilders trained harder, and as drug use became more commonplace, concerns began to be raised about the aesthetic direction of the sport. Charles Gaines and George Butler gave voice to some of these concerns in both the film and book *Pumping Iron II: The Unprecedented Woman*. Both were released in 1983 and both juxtaposed the elegant McLish with the larger and more heavily muscled Australian power-lifter, Beverly Francis, who was then making a move into bodybuilding. Since 1983, as the level of muscularity in women's bodybuilding gradually increased, women's bodybuilding seems to have taken a path that fewer and fewer women have cared to follow. As bodybuilding has continued to reward size and muscularity, women bodybuilders have gotten bigger and still bigger; by the mid-1990s they had lost much of the mainstream appeal they enjoyed in the 1980s.

While bodybuilding continued to struggle with its aesthetic direction, another type of contest emerged in reaction to the hyper-muscular bodybuilders. Generically referred to as "Ms. Fitness" competitions, the new contests combine elements of bodybuilding, aerobic dance, and gymnastics. By the end of the 1990s, these contests had far surpassed women's bodybuilding in popularity both on television and in the muscle magazines. Apparently, this occurred because of the more traditionally feminine physiques of the competitors. A 1998 study of the covers of *Flex*, *Muscle and Fitness*, *Iron Man* and *Muscle Mag International*—the four leading muscle magazines—found that these publications were far more likely to feature fitness competitors than they were women bodybuilders, both inside the magazine and on the cover. In fact, by that time women bodybuilders were almost never featured on the covers of such magazines.

Since its inception in the nineteenth century, bodybuilding has been linked to the entertainment industry. Although most people are aware that there were circus and vaudeville strongmen, some bodybuilder/strongmen also played an important role in the early cinema. For example, Thomas Edison asked Eugen Sandow to pose for his new Kinetoscope in 1894. The brief film clip shows Sandow posing, lifting a barbell, and performing a back flip. It played in Kinetoscopic "parlors" where patrons paid only a penny or so to peep through a small hole in a large box-like machine. Sandow also appeared in four brief films for the Biograph company, which he showed as the finale of his act in the mid-1890s.

Over the past century, a number of bodybuilders and strongmen have worked in the film industry largely because their physiques. Josef Grafl, the world heavyweight lifting champion from 1908-1911 played Ursus, the bodyguard of the heroine in the 1913 version of *Quo Vadis*; and Bartolomeo Pagano, under the stage name of Maciste, appeared in a number of films between 1914 and the early 1920s in which his strength and muscularity advanced the script. Joe Bonomo, the training partner of Charles Atlas and a winner of an early physique contest in his own right, worked throughout the 1920s as a Hollywood stunt man and character actor, while Elmo Lincoln found fame as the first screen Tarzan in that same decade.

In the 1950s, a number of largely Italian-made costume epics employed bodybuilders as gladiators and mythic heroes. Mickey Hargitay, who had been part of Mae West's bodybuilder revue, married actress Jayne Mansfield and played in a couple of these, such as *Revenge of the Gladiators* (1968). South African bodybuilding star Reg Park made five Hercules pictures between 1961 and 1965, while former Tarzan Gordon Scott starred in *Goliath and the Vampires* (1961). Until the advent of Arnold Schwarzenegger, the brightest star

in this genre was Steve Reeves, whose series of film roles in the 1950s and 1960s made him the number one box-office draw in the world for a brief time.

Many other film stars also have connections to the world of bodybuilding. Oscar winner Sean Connery was a serious bodybuilder in his early adulthood and entered the Mr. Universe contest in 1953. David Prowse, who played Darth Vader in *Star Wars*, looked so large and menacing because he was in reality a 6'7," 280-pound former Mr. Universe competitor. And, finally, Schwarzenegger's participation in such early films as *Pumping Iron* (1977) and *Stay Hungry* (1976) helped to popularize the bodybuilding aesthetic and lifestyle to the general public. What's more, many leading actors in the last decades of the twentieth century undertook serious bodybuilding training in order to portray "action characters" to audiences grown used to seeing bodybuilders in magazines and heroically built comic-book characters. Stars such as Clint Walker, Harrison Ford, Clint Eastwood, Mel Gibson, Sylvester Stallone, Jean Claude Van Damme, Robert DeNiro, Christopher Reeves, Nicholas Cage, Carl Weathers, Brendan Frasier, and Ving Rhames realized how much more believable they are when their muscular bodies match their masculine roles. And women such as Linda Hamilton, Jane Fonda, and Sigourney Weaver have also trained and dieted to prepare for roles in which the condition of their bodies was critical.

Other media, too, have been influenced by bodybuilding. Comic books, for instance, have considerably altered the proportions of their superheroes as the years have passed. When Superman, Captain Marvel, and Batman first appeared in the 1930s, they were shown to have athletic but relatively non-muscular physiques. However, as the bodies of the top physique men have become increasingly exaggerated, so have the drawings of the superheroes in comic books, on television cartoons, and in films. Some scholars believe that the depiction of these ultra-hypertrophied superheroes has been a factor in the growing public acceptance of bodybuilding. Television, of course, has also played a major role. Beginning in 1951 with Jack LaLanne's show, bodybuilders have preached the gospel of fitness over the airwaves. In the 1990s, the proliferation of cable television resulted in much more on-air coverage of bodybuilding competitions and many more instructional shows. By far the biggest bodybuilding star on television, however, was Lou Ferrigno, who was very convincing as the Incredible Hulk from 1977 to 1982.

Bogart, Humphrey (1899-1957)

The man who would tell Ingrid Bergman, "Here's Looking at You, Kid," at the conclusion of *Casablanca* (1942) was born Humphrey DeForest Bogart in 1899. He would become one of the twentieth century's greatest icons of tough masculinity, a complex blend of "good guy" and "bad guy" at a time when World War II had many Americans re-examining their personal codes of loyalty, honor, and character. Underneath his coarse exterior, Bogart, or simply "Bogie," betrayed an underdog vulnerability and a genuine desire to find the "right" answer in a world that was increasingly chaotic and off-kilter. The star was also well known for his celebrated marriage to co-star Lauren Bacall, whose sultry wit reflected his cynicism but who always drew out his romantic, heroic side.

Although Bogart became known for playing brutish characters from the wrong side of town, he was raised in the world of upper-middle-class New York City. He was eventually expelled from the Phillips Academy in Andover, Massachusetts, and joined the Navy for service during World War I. It was in the war that he suffered an injury which left his lip slightly paralyzed, resulting in the stiff and affected facial gestures which became one of the actor's trademarks.

Bogart began his career on stage in the 1920s and entered Hollywood by playing minor roles a decade later. But when Leslie Howard lobbied for him to co-star in *The Petrified Forest* (1935), he proved that he was well-suited for gangster or villain characters. He generally played this type until *High Sierra* (1941) in which he (with the film's screenwriter John Huston) developed a trope of masculinity which was complicated by ambivalence, pragmatism, and complex moral fortitude. Here, Bogart starred as Mad Dog Earle, an ex-convict on the run and destined for his own demise, who lays bare a particular emotional sensitivity through his sympathy for a simpler, gentler Joan Leslie. He continued to develop his star persona through this kind of role in *The Maltese Falcon* (1941) and *Casablanca* (1941), both of which are considered his watershed films. Though he maintained a turbulent relationship with Warner Brothers, the studio which helped forge his image, Bogart made a comfortable fit with its house style which relied on the gangster genre and films which drew on the topical social problems of the day.

In 1943, the star met his match in Lauren Bacall on the set of *To Have and Have Not* (1944). Twenty-five years his junior, Bacall was a fashion model who had recently been discovered by director Howard Hawks' wife. She was precocious and demure and with Hawks' help, the two stars launched a chemistry that would be re-lived in *The Big Sleep* (1945, also directed by Hawks) and result in a famous and closely-watched marriage that lasted until Bogart's death. He had been married three times with little success—when he encountered Bacall he was husband to former actress Mayo Methot and their violent feuding had earned them the title "the Battling Bogarts." It took over a year for him to extricate himself from this marriage and fans initially viewed the Bogie/Bacall union with skepticism.

The verbal sparring between Bogart and Bacall in *To Have and Have Not*—in which the latter utters the notorious "put your lips

Humphrey Bogart in a scene from the film *The Maltese Falcon*.

together and blow” phrase—became a signature of their interpersonal dynamic off-screen as well. Film critic Molly Haskell celebrates them as one of “the best of the classical couples” because they brought to the screen “the kind of morally and socially beneficial ‘pedagogic’ relationship that Lionel Trilling finds in Jane Austen’s characters, the ‘intelligent love’ in which two partners instruct, inform, educate, and influence each other in the continuous college of love.” Bogart, who was known for his misogyny and violent temper, had found a woman who knew how to put him in his place with an economical glance or a spontaneous retort. It was common for his “rat pack” of male friends to populate the house but Bacall was perceived as a wife who rarely relinquished the upper hand. Their marriage produced two children, Stephen (after Bogart’s character in *To Have and Have Not*) and Leslie (after Leslie Howard).

A noticeable shift occurred in the kinds of characters Bogart played in the 1940s. The tough guy attempting to be moral in an immoral world became less socially acceptable as many American husbands and wives tried to settle into a home life that would help anesthetize them from the trauma of war. The complicated and reactive principles associated with the star’s persona suddenly seemed more troublesome and less containable. His film *Treasure of the*

Sierra Madre (1948), in which Bogart plays a greedy, conniving prospector, marks this trend but *In a Lonely Place* (1948) is a lesser known and equally remarkable film, partly because his role is that of a screenwriter disenchanted with Hollywood. It was at this time that he also formed his Santana production company which granted him more autonomy in his choice and development of projects.

In the early 1950s, Bogart became one of the key figures to speak out against the House Un-American Activities Committee which gave him an opportunity to voice his ideals of democracy and free speech. He also revived his career with *The African Queen* (1951), for which he won an Academy Award. Later, he experimented with more comedic roles in films such as Billy Wilder’s *Sabrina* (1954) and *We’re No Angels* (1955). In 1956, the long-time smoker underwent surgery for cancer of the esophagus and he died of emphysema in early 1957.

Bogart’s status as a cultural icon was renewed in the 1960s when counter-culture audiences were introduced to his films through film festivals in Boston and New York which then spread to small college towns. The Bogart “cult” offered a retreat into macho, rugged individualism at a time when burgeoning social movements contributed to increased anxiety over masculine norms. This cult saw a

resurgence in the 1990s with a spate of biographies about the star and the issuance of a commemorative postage stamp.

Bok, Edward (1863-1930)

An immigrant from the Netherlands, journalist and social reformer Edward Bok emphasized the virtues of hard work and assimilation in his 1920 autobiography, *The Americanization of Edward Bok*, which won the Pulitzer Prize for biography and was reprinted in 60 editions over the next two decades. As one of America's most prominent magazine editors around the turn of the twentieth century, Bok originated the concept of the modern mass-circulation women's magazine during his 30-year tenure (1889-1919) as editor of the *Ladies' Home Journal*. His editorship coincided with a period of profound change, as the United States shifted from an agrarian to an urban society, and his was a prominent voice in defining and explaining these changes to a newly emergent middle class often unsure of its role in the new order of things. "He outdid his readers in his faith in the myths and hopes of his adopted country," wrote Salmé Harju Steinberg in her 1979 study, *Reformer in the Marketplace*. "His sentiments were all the more compelling because they reflected not so much what his readers did believe as what they thought they should believe." Under his guidance, the *Ladies' Home Journal* was the first magazine to reach a circulation of one million readers, which then doubled to two million as it became an advocate of many progressive causes of its era, such as conservation, public health, birth control, sanitation, and educational reform. Paradoxically, the magazine remained neutral on the issue of women's suffrage until Bok finally expressed opposition to it in a March 1912 editorial, claiming that women were not yet ready for the vote.

Edward Bok was born to a politically prominent family in Den Helder, the Netherlands, on October 9, 1863, the younger son of William John Hidde Bok and Sieke Gertrude van Herwerden Bok. After suffering financial reverses, the family emigrated to the United States and settled in Brooklyn, New York, where from the age of ten,

young Edward began working in a variety of jobs, including window washer, office boy, and stringer for the *Brooklyn Daily Eagle*. His first publishing jobs were as a stenographer with Henry Holt & Company and Charles Scribner's Sons. In the 1880s, Bok became editor of the *Brooklyn Magazine*, which had evolved from a publication he edited for Henry Ward Beecher's Plymouth Church. In 1886 he and Frederic L. Colver launched Bok Syndicate Press, the first to widely employ women as contributors. The following year, *Scribner's Magazine* hired Bok as advertising manager.

In 1889, shortly after his 26th birthday, Bok became editor-in-chief of the *Ladies' Home Journal*, which had been founded six years earlier by Cyrus H. K. Curtis, whose only daughter, Mary Louise, became Bok's wife in 1896. Although Bok made the *Ladies' Home Journal* a vehicle for social change, he avoided taking sides in the controversial labor vs. capital political issues of the day. With a solid appeal to the emerging middle classes, Bok's editorials preached a Protestant work ethic couched in an Emersonian language of individual betterment. By employing contributing writers such as Jane Addams, Edward Bellamy, and Helen Keller, Bok helped create a national climate of opinion that dovetailed with the growing progressive movement. While advocacy of "do-good" projects put the *Journal* at odds with more radical muckraking periodicals of the period, Bok can still be credited with raising popular consciousness about the ills of unbridled industrialism. His "Beautiful America" campaign, for example, raised public ire against the erection of mammoth billboards on the rim of the Grand Canyon, and against the further despoiling of Niagara Falls by electric-power plants. Riding the crest of the "City Beautiful" movement that followed the 1892 Chicago World's Fair, Bok opened the pages of the *Journal* to architects, who offered building plans and specifications for attractive, low-cost homes, thousands of which were built in the newer suburban developments. Praising this initiative, President Theodore Roosevelt said "Bok is the only man I ever heard of who changed, for the better, the architecture of an entire nation, and he did it so quickly and yet so effectively that we didn't know it was begun before it was finished."

The *Ladies' Home Journal* became the first magazine to ban advertising of patent medicines, and Bok campaigned strenuously against alcohol-based nostrums, a catalyst for the landmark Food and Drug Act in 1906. The magazine was also ahead of its time in advocating sex education, though its editorials were hardly explicit by late-twentieth-century standards. Even before the United States had entered World War I, Bok, who was vice president of the Belgian Relief Fund and an advisor to President Woodrow Wilson, editorialized that American women could contribute to peace and democracy through preparedness, food conservation, and support of the Red Cross and other relief efforts.

After his forced retirement in 1919, Bok published his autobiography and devoted himself to humanitarian causes. Swimming against the tide of isolationism after World War I, Bok tried to get Americans interested in the League of Nations and the World Court. In 1923, he established the American Peace Award, a prize of \$100,000 to be awarded for plans for international cooperation. He also endowed the Woodrow Wilson Chair of Government at Williams College, named for the beleaguered president who failed to convince his fellow citizens to join the League of Nations. Bok died on January 9, 1930 and was buried at the foot of the Singing Tower, a carillon he built in a bird preserve in Lake Wales, Florida.

The Bomb

For many observers, “Living with the Bomb” has become the evocative phrase to describe life in twentieth-century America. The cultural fallout from this technological innovation has influenced economics, politics, and social policy and life long after its first testing in the New Mexican desert in 1945. Americans have taken fear of attack so seriously that school policies include provisions for nuclear attack. Global politics became “polarized” by the two nations in possession of nuclear technology. In the 1990s, global relations remained extremely influenced by proliferation and the threat of hostile nations acquiring nuclear capabilities. Clearly, “the

bomb” and all of atomic technology has carved a deep crater of influence.

The technology to manage atomic reactions did not long remain the sole domain of the military. The influence of nuclear weapons and power generation has defined a great deal of domestic politics since the 1960s. In recent years, such attention has come because of nuclear technology's environmental impact. If one considers these broader implications and the related technologies, twentieth-century life has been significantly influenced by “the bomb,” even though it has been used sparingly—nearly not at all. The broader legacy of the bomb can be seen on the landscape, from Chernobyl to the Bikini Atoll or from Hiroshima to Hanford, Washington. Hanford's legacy with the bomb spans more time than possibly any other site. In fact, it frames consideration of this issue by serving as site for the creation of the raw material to construct the first nuclear weapons and consequently as the “single most infected” site in the United States, now awaiting Superfund cleanup. The site is a symbol of technological accomplishment but also of ethical lessons learned.

In February 1943, the U.S. military through General Leslie Groves acquired 500,000 acres of land near Hanford. This would be the third location in the triad that would produce the atomic technology. The coordinated activity of these three sites under the auspices of the U.S. military became a path-breaking illustration of the planning and strategy that would define many modern corporations. Hanford used water power to separate plutonium and produce the grade necessary for weapons use. Oak Ridge in Tennessee coordinated the production of uranium. These production facilities then fueled the heart of the undertaking, contained in Los Alamos, New Mexico, under the direction of J. Robert Oppenheimer.

Oppenheimer, a physicist, supervised the team of nuclear theoreticians who would devise the formulas making such atomic reactions possible and manageable. Scientists from a variety of fields were

An atomic bomb mushroom cloud.

involved in this highly complex theoretical mission. Once theories were in place and materials delivered, the project became assembling and testing the technology in the form of a bomb. All of this needed to take place on the vast Los Alamos, New Mexico, compound under complete secrecy. However, the urgency of war revealed that this well-orchestrated, corporate-like enterprise remained the best bet to save thousands of American lives.

By 1944, World War II had wrought a terrible price on the world. The European theater would soon close with Germany's surrender. While Germany's pursuit of atomic weapons technology had fueled the efforts of American scientists, the surrender did not end the project. The Pacific front remained active, and Japan did not accept offers to surrender. "Project Trinity" moved forward, and it would involve Japanese cities, Hiroshima and Nagasaki, as the test laboratories of initial atomic bomb explosions. *Enola Gay* released a uranium bomb on the city of Hiroshima on August 6 and *Bock's Car* released a plutonium bomb on Nagasaki on August 9. Death tolls vary between 300-500,000, and most were Japanese civilians. The atomic age, and life with the bomb, had begun.

Bomb tests in an effort to perfect the technology as well as to design other types of weapons, including Hydrogen bombs, would continue throughout the 1950s, particularly following the Soviet Union's successful detonation in 1949. Many of these tests became publicity opportunities. For instance, the 1946 Pacific tests on the Bikini Atoll were viewed on television and through print media by millions worldwide. The technology became so awe-inspiring and ubiquitous that a French designer named his new, two-piece women's bathing suit after the test. The bikini, linked with terms such as "bombshell," became an enduring representation of the significant impression of this new technology on the world's psyche.

For Oppenheimer and many of the other scientists, the experience of working for the military had brought increasing alarm about what the impact of their theoretical accomplishments would be. Many watched in horror as the weapons were used on Japanese civilians. Oppenheimer eventually felt that the public had changed attitudes toward scientific exploration due to the bomb. "We have made a thing," he said in a 1946 speech, "a most terrible weapon, that has altered abruptly and profoundly the nature of the world . . . a thing that by all the standards of the world we grew up in is an evil thing." It brings up the question of whether or not, he went on, this technology as well as all of science should be controlled or limited.

Many of the scientists involved believed that atomic technology required controls unlike any previous innovation. Shortly after the bombings, a movement began to establish a global board of scientists who would administer the technology with no political affiliation. While there were many problems with such a plan in the 1940s, it proved impossible to wrest this new tool for global influence from the American military and political leaders. The Atomic Energy Commission (AEC), formed in 1946, would place the U.S. military and governmental authority in control of the weapons technology and other uses to which it might be put. With the "nuclear trump card," the United States catapulted to the top of global leadership.

Such technological supremacy only enhanced Americans' post war expansion and optimism. The bomb became an important plank to re-stoking American confidence in the security of its borders and its place in the world. In addition to alcoholic drinks and cereal-box prizes, atomic technology would creep into many facets of American life. Polls show that few Americans considered moral implications to the bombs' use in 1945; instead, 85 percent approved, citing the need to end the war and save American lives that might have been lost in a

Japanese invasion. Soon, the AEC seized this sensibility and began plans for "domesticating the atom." These ideas led to a barrage of popular articles concerning a future in which roads were created through the use of atomic bombs and radiation employed to cure cancer.

Atomic dreaming took many additional forms as well, particularly when the AEC began speculating about power generation. Initially, images of atomic-powered agriculture and automobiles were sketched and speculated about in many popular periodicals. In one book published during this wave of technological optimism, the writer speculates that, "No baseball game will be called off on account of rain in the Era of Atomic Energy." After continuing this litany of activities no longer to be influenced by climate or nature, the author sums up the argument: "For the first time in the history of the world man will have at his disposal energy in amounts sufficient to cope with the forces of Mother Nature." For many Americans, this new technology meant control of everyday life. For the Eisenhower Administration, the technology meant expansion of our economic and commercial capabilities.

The Eisenhower Administration repeatedly sought ways of "domesticating" the atom. Primarily, this effort grew out of a desire to educate the public without creating fear of possible attack. However, educating the public on actual facts clearly took a subsidiary position to instilling confidence. Most famously, "Project Plowshares" grew out of the Administration's effort to take the destructive weapon and make it a domestic power producer. The list was awe-inspiring: laser-cut highways passing through mountains, nuclear-powered greenhouses built by federal funds in the Midwest to routinize crop production, and irradiating soils to simplify weed and pest management. While domestic power production, with massive federal subsidies, would be the long-term product of these actions, the atom could never fully escape its military capabilities.

Americans of the 1950s could not at once stake military dominance on a technology's horrific power while also accepting it into their everyday life. The leap was simply too great. This became particularly difficult in 1949 when the Soviet Union tested its own atomic weapon. The arms race had officially begun; a technology that brought comfort following the "war to end all wars" now forced an entire culture to realize its volatility—to live in fear of nuclear annihilation.

Eisenhower's efforts sought to manage the fear of nuclear attack, and wound up creating a unique atomic culture. Civil defense efforts constructed bomb shelters in public buildings and enforced school children to practice "duck and cover" drills, just as students today have fire drills. Many families purchased plans for personal bomb shelters to be constructed in their backyards. Some followed through with construction and outfitting the shelter for months of survival should the United States experience a nuclear attack. Social controls also limited the availability of the film *On the Beach*, which depicted the effects of a nuclear attack, and David Bradley's book *No Place to Hide*. It was the censorship of Bradley, a scientist and physician working for the Navy at the Bikini tests, that was the most troubling oversight. Bradley's account of his work after the tests presented the public with its first knowledge of radiation—the realization that there was more to the bomb than its immediate blast. The culture of control was orchestrated informally, but Eisenhower also took strong political action internationally. "Atoms for Peace" composed an international series of policies during the 1950s that sought to have the Soviets and Americans each offer the United Nations fissionable material to be applied to peaceful uses. While the Cold War still had

many chapters through which to pass, Eisenhower stimulated discourse on the topic of nuclear weapons from the outset.

Eisenhower's "Atoms for Peace" speech, given at the United Nations in 1953, clearly instructed the world on the technological stand-off that confronted it. The "two atomic colossi," he forecasted, could continue to "eye each other indefinitely across a trembling world." But eventually their failure to find peace would result in war and "the probability of civilization destroyed," forcing "mankind to begin all over again the age-old struggle upward from savagery toward decency and right, and justice." To Eisenhower, "no sane member of the human race" could want this. In his estimation, the only way out was discourse and understanding. With exactly these battle lines, a war—referred to as cold, because it never escalates (heats) to direct conflict—unfolded over the coming decades. With ideology—communism versus capitalism—as its point of difference, the conflict was fought through economics, diplomacy, and the stockpiling of a military arsenal. With each side possessing a weapon that could annihilate not just the opponent but the entire world, the bomb defined a new philosophy of warfare.

The Cold War, lasting from 1949-1990, then may best be viewed as an ongoing chess game, involving diplomats and physicists, while the entire world prayed that neither player made the incorrect move. Redefining ideas of attack and confrontation, the Cold War's nuclear arsenal required that each side live on the brink of war—referred to as brinkmanship by American policy makers. Each "super power," or nuclear weapons nation, sought to remain militarily on the brink while diplomatically dueling over economic and political influence throughout the globe. Each nation sought to increase its "sphere of influence" (or nations signed-on as like minded) and to limit the others. Diplomats began to view the entire globe in such terms, leading to wars in Korea and Vietnam over the "domino" assumption that there were certain key nations that, if allowed to ally with a superpower, could take an entire region with them. These two conflicts defined the term "limited" warfare, which meant that nuclear weapons were not used. However, in each conflict the use of such weapons was hotly debated.

Finally, as the potential impact of the use of the bomb became more clearly understood, the technological side of the Cold War escalated into an "arms race" meant to stockpile resources more quickly and in greater numbers than the other superpower. Historians will remember this effort as possibly the most ridiculous outlet of Cold War anxiety, because by 1990 the Soviets and Americans each possessed the capability to destroy the earth hundreds of times. The arms race grew out of one of the most disturbing aspects of the Cold War, which was described by policy-makers as "MAD: mutually assured destruction." By 1960, each nation had adopted the philosophy that any launch of a nuclear warhead would initiate massive retaliation of its entire arsenal. Even a mistaken launch, of course, could result in retaliatory action to destroy all life.

On an individual basis, humans had lived before in a tenuous balance with survival as they struggled for food supplies with little technology; however, never before had such a tenuous balance derived only from man's own technological innovation. Everyday human life changed significantly with the realization that extinction could arrive at any moment. Some Americans applied the lesson by striving to live within limits of technology and resource use. Anti-nuclear activists composed some of the earliest portions of the 1960s counter culture and the modern environmental movement, including Sea Shepherds and Greenpeace which grew out of protesting nuclear testing. Other Americans were moved to live with fewer constraints

than ever before: for instance, some historians have traced the culture of excessive consumption to the realization that an attack was imminent. Regardless of the exact reaction, American everyday life had been significantly altered.

If Americans had managed to remain naive to the atomic possibilities, the crisis of 1962 made the reality perfectly obvious. U.S. intelligence sources located Soviet missiles in Cuba, 90 miles from the American coast. Many options were entertained, including bombing the missile sights; President John F. Kennedy, though, elected to push "brinkmanship" further than it had ever before gone. He stated that the missiles pressed the nuclear balance to the Soviet's advantage and that they must be removed. Kennedy squared off against Soviet Premier Nikita Khrushchev in a direct confrontation with the use of nuclear weapons as the only subsequent possibility for escalation. Thirteen Days later, the Soviet Premier backed down and removed the missiles. The world breathed a sigh of relief, realizing it had come closer to destruction than ever before. For many observers, there was also an unstated vow that the Cuban Missile Crisis must be the last such threat.

The period of crisis created a new level of anxiety, however, that revealed itself in a number of arenas. The well-known "atomic clock," calculated by a group of physicists, alerted the public to how great the danger of nuclear war had become. The anxiety caused by such potentialities, however, played out in a fascinating array of popular films. An entire genre of science fiction films focused around the unknown effects of radiation on subjects ranging from a beautiful woman, to grasshoppers, to plants. Most impressively, the *Godzilla* films dealt with Japanese feelings toward the effects of nuclear technology. All of these films found a terrific following in the United States. Over-sized lizards aside, another genre of film dealt with the possibilities of nuclear war. *On the Beach* blazed the trail for many films, including the well-known *The Day After* television mini-series. Finally, the cult-classic of this genre, *Dr. Strangelove* starred Peter Sellers in multiple performances as it posed the possibility of a deranged individual initiating a worldwide nuclear holocaust. The appeal of such films reveals the construction of what historian Paul Boyer dubs an American "nuclear consciousness."

Such faith in nationalism, technological supremacy, and authority helped make Americans comfortable to watch above-ground testing in the American West through the late 1950s. Since the danger of radiation was not discussed, Americans often sat in cars or on lawn chairs to witness the mushroom clouds from a "safe" distance. Documentary films such as *Atomic Cafe* chronicle the effort to delude or at least not fully inform the American public about dangers. Since the testing, "down-winders" in Utah and elsewhere have reported significant rises in leukemia rates as well as that of other types of cancer. Maps of air patterns show that actually much of the nation experienced some fall-out from these tests. The Cold War forced the U.S. military to operate as if it were a period of war and certain types of risks were necessary on the "home front." At the time, a population of Americans who were familiar with World War II proved to be willing to make whatever sacrifices were necessary; later generations would be less accepting.

Ironically, the first emphasis of this shift in public opinion would not be nuclear arms, but its relative, nuclear power. While groups argued for a freeze in the construction of nuclear arms and forced the government to discontinue atomic weapons tests, Americans grew increasingly comfortable with nuclear reactors in their neighborhoods. The "Atoms for Peace" program of the 1950s aided in the development of domestic energy production based on the nuclear

reaction. The exuberance for such power production became the complete lack of immediate waste. There were other potential problems, but those were not yet clearly known to the American public. In 1979, a nuclear reactor at Three Mile Island, Pennsylvania, which is located within a working-class neighborhood outside of a major population center, nearly experienced a nuclear melt down. As pregnant women and children were evacuated from Pennsylvania's nearby capital, Harrisburg, the American public learned through the media about the dangers of this technology. Most important, they learned the vast amount that was not clearly understood about this power source. As much of the nation waited for the cooling tower to erupt in the mushroom cloud of an atomic blast, a clear connection was finally made between the power source and the weapon. While the danger passed quickly from Three Mile Island, nuclear power would never recover from this momentary connection to potential destruction; films such as *China Syndrome* (1979) and others made certain.

When Ronald Reagan took office in 1980, he clearly perceived the Cold War as an ongoing military confrontation with the bomb and its production as its main battlefield. While presidents since Richard Nixon had begun to negotiate with the Soviets for arms control agreements, Reagan escalated production of weapons in an effort to "win" the Cold War without a shot ever being fired. While it resulted in mammoth debt, Reagan's strategy pressed the Soviets to keep pace, which ultimately exacerbated weaknesses within the Soviet economy. By 1990, the leaders of the two super powers agreed that the Cold War was finished. While the Soviet Union crumbled, the nuclear arsenal became a concern of a new type. Negotiations immediately began to initiate dismantling much of the arsenal. However, the control provided by bipolarity was shattered, and the disintegration of the Soviet Union allowed for their nuclear weapons and knowledge to become available to other countries for a cost. Nuclear proliferation had become a reality.

In the 1990s, the domestic story of the bomb took dramatic turns as the blind faith of patriotism broke and Americans began to confront the nation's atomic legacy. Vast sections of infected lands were identified and lawsuits were brought by many "down-winders." Under the administration of President Bill Clinton, the Department of Energy released classified information that documented the government's knowledge of radiation and its effects on humans. Some of this information had been gathered through tests conducted on military and civilian personnel. Leading the list of fall-out from the age of the bomb, Hanford, Washington, has been identified as one of the nation's most infected sites. Buried waste products have left the area uninhabitable.

The panacea of nuclear safety has, ultimately, been completely abandoned. Massive vaults, such as that in Yucca Mountain, Nevada, have been constructed for the storage of spent fuel from nuclear power plants and nuclear warheads. The Cold War lasted thirty to forty years; the toxicity of much of the radioactive material will last for nearly 50,000 years. The massive over-production of such material has created an enormous management burden for contemporary Americans. This has become the next chapter in the story of the bomb and its influence on American life.

—Brian Black

Bombeck, Erma (1927-1996)

Erma Bombeck, writer, humorist, and television personality, was primarily identified as a housewife and mother. Because she knew it so well, she was able to offer the housewife's-eye-view of the world in her writing. And it is because she took those roles so seriously that she was able to show the humorous side of the life of homemaker and mother so effectively.

She was born Erma Louise Fiste in Dayton, Ohio. Bombeck's mother, who worked in a factory, was only sixteen when Bombeck was born, and her father was a crane operator who died when she was nine years old. When little Erma showed talent for dancing and singing, her mother hoped to make her into a child star—the next Shirley Temple. But her daughter had other ideas. Drawn to writing very early, Bombeck wrote her first humor column for her school newspaper at age 13. By high school, she had started another paper at school, and begun to work at the Dayton Herald as a copy girl and reporter.

It was while working for the Herald that she met Bill Bombeck and set her cap for him. They married in 1949. Bombeck continued to write for the newspaper until 1953, when she and Bill adopted a child. She stopped working to stay home with the baby and gave birth to two more children over the next five years. Until 1965, Bombeck lived the life of the suburban housewife, using humor to get her through the everyday stress.

When her youngest child entered school, Bombeck wrote a column and offered it to the Dayton newspaper, which bought it for three dollars. Within a year "At Wit's End" had been syndicated across the country, and it would eventually be published by 600 papers. Bombeck also published collections of her columns, in books with names like *The Grass is Always Greener Over the Septic Tank* (1976) and *Family: The Ties that Bind . . . and Gag* (1987). Out of twelve collections, eleven were bestsellers, and from 1975 to 1981, she gained popularity on television with a regular spot on *Good Morning America*.

Beginning in the 1960s when most media tried hard to glorify the role of the homemaker with the likes of June Cleaver, Bombeck approached the daily dilemmas of real life at home with the kids with irreverence and affection. Because she was one of them, housewives loved her gentle skewering of housework, kids, and husbands. Even in the 1970s, with the rise of women's liberation, Bombeck's columns retained their popularity. Because she treated her subject with respect—she never made fun of housewives themselves, but of the many obstacles they face—feminists could appreciate her humor. Both mothers with careers and stay-at-home moms could find themselves in Bombeck's columns—and laugh at the little absurdities of life she was so skilled at pointing out.

Though Bombeck never called herself a feminist, she supported women's rights and actively worked in the 1970s for passage of the

Equal Rights Amendment. She also worked for various humanitarian causes, such as cancer research. One of her books, *I Want to Grow Hair, I Want to Grow Up, I Want to Go to Boise*, describes her interactions with children with cancer, something Bombeck herself faced in 1992 when she was diagnosed with breast cancer and had a mastectomy. She managed to find humor to share in writing about even that experience. Shortly after her mastectomy, her kidneys failed, due to a hereditary disease. Refusing to use her celebrity to facilitate a transplant, she underwent daily dialysis for four years before a kidney was available. She died at age 69 from complications from the transplant.

In spite of her fame and success, Bombeck remained unpretentious. She was able to write about American life from the point of view of one of its most invisible participants, the housewife. From that perspective, she discussed many social issues and united diverse women by pointing out commonalities and finding humor in the problems in their lives. Her tone was never condescending, but was always lighthearted and conspiratorial. Fellow columnist Art Buchwald said of Bombeck's writing, "That stuff wouldn't work if it was jokes. What it was, was the truth."

Bon Jovi

Slippery When Wet, Bon Jovi's 1986 break-out album, brought "metal" inspired pop music to the forefront of American popular culture. The album was Bon Jovi's third effort for Mercury Records, which had gone through a bidding war to get the group in 1984. *Slippery When Wet* was different from Bon Jovi's earlier albums, the self-titled *Bon Jovi* and *7800 Fahrenheit*, because the group hired a professional songwriter to work on the project. Mercury Records also invested an unprecedented amount of marketing research into the album. The group recorded about 30 songs, which were played for focus groups of teenagers, and the resulting album spawned two number one singles, sold more than 10 million copies, and established Bon Jovi as the premier "hair metal" band of the 1980s.

The band had humble beginnings. New Jersey rocker Jon Bongiovi had recorded a single called "Runaway" with a group of local notables, and when the single received good radio play he decided to get a more permanent group together for local performances. Along with Bongiovi, who changed his last name to Bon Jovi, guitarist Richie Sambora, bassist Alec John Such, keyboardist David Rashbaum (changed to Bryan), and drummer Tico Torres were the members of a the new group Bon Jovi. Alec John Such eventually left

Jon Bon Jovi

the group in the early 1990s, and after that time no other members have officially been added to Bon Jovi.

After the success of *Slippery When Wet*, the group came back with *New Jersey* in 1988. The album was a big commercial success, selling 8 million copies, but after the *New Jersey* tour the group took some time apart for solo projects. Jon Bon Jovi found success working on the soundtrack to *Young Guns II* in 1990, and guitarist Sambora released *Stranger in this Town* in 1991.

Bon Jovi reunited to release *Keep the Faith* in the midst of the Seattle-based grunge rock movement. Its sales were lower than previous Bon Jovi efforts, but their tenth anniversary hits collection, *Crossroads*, went multi-platinum. The release of *These Days* in 1994 was a departure from their rock-pop roots and had a more contemporary sound. In the late 1990s, Jon Bon Jovi worked on solo projects and an acting career. His first solo album, *Destination Anywhere*, was released in 1997. It was accompanied by a mini-movie that got exposure on MTV.

Bonanza

The television series *Bonanza* was more than just another western in an age that had an abundance of them; it was also a clever marketing idea. First aired in 1959, it was especially developed to be filmed for color viewing, in order to compel Americans to buy color televisions. The series' appeal derived from *Bonanza's* gentle, family orientation, which, of course, differed from *Gunslinger* and most other westerns. In most westerns, writes literary scholar Jane Tompkins, the west "functions as a symbol of freedom, and of the . . . escape from conditions of life in modern industrial society." *Bonanza* met this basic criteria, but it also contained more fistfights than gunfights and centered around the occurrences of the Cartwrights, a loving, loyal family. Many episodes dealt with important issues like prejudice at a time when such themes were not common on television. In sum, *Bonanza* used the touchstones of the western genre to package a family drama that ran for fourteen years, until 1973.

Typical of westerns, *Bonanza* sought to detail the male world of ranching. Untypical of the genre, *Bonanza* had a softer side to most of its plots that combined with attractive actors to allow the show transgender appeal. The Cartwrights, of course, began with Ben, played by Canadian Lorne Greene. Generally serious and reasonable, Ben kept the ranch running. Thrice widowed, he raised three boys on his own with a little help from the cook, Hop Sing. There were no women on the Ponderosa. *Bonanza*, like *My Three Sons* and *Family Affair*, created a stable family without the traditional gender roles so palpable in 1950s and 1960s America. Part of the popularity of such series derives from the family's success despite its lack of conformity.

Each Cartwright brother served a different constituency of viewers. Adam, the eldest son, was played by Pernell Roberts. More intense than his brothers, Adam had attended college and was less likely to be involved in wild antics or love affairs. Dan Blocker played Hoss Cartwright, gullible and not terribly bright yet as sweet and gentle as he was huge. When not providing the might to defeat a situation or individual, Hoss faced a series of hilarious situations, often created by his younger brother, Little Joe. Michael Landon, who played Little Joe, proved to be the most enduring of these 1960s-style "hunks." The youngest member of the family, he was fun loving, lighthearted, and often in love. The care-free son, Little Joe brought levity to the family and the program. He was looked on by his father and older brothers with affection, and was usually at the center of the most humorous episodes. Landon came to *Bonanza* having starred in feature films, including *I Was A Teenage Werewolf*, and he wrote and directed many of the later episodes of *Bonanza* (though the series was primarily directed by Lewis Allen and Robert Altman).

The West, of course, would always be more than backdrop to the program. The general activities of the Cartwrights dealt with maintaining control and influence over the Ponderosa, their vast ranch. "Conquest," writes historian Patricia Nelson Limerick, "was a literal, territorial form of economic growth. Westward expansion was the most concrete, down-to-earth demonstration of the economic habit on which the entire nation became dependent." The West, and at least partly the genre of westerns, become a fascinating representation for assessing America's faith in this vision of progress. The success of the Cartwrights was never in doubt; yet the exotic frontier life consistently made viewers uncertain. The greatest appeal of *Bonanza* was also what attracted many settlers westward: the Cartwrights controlled their own fate. However, though plots involved them in maintaining or controlling problems on the Ponderosa,

the family's existence was not in the balance. The series succeeded by taking necessary elements from the western and the family drama in order to make *Bonanza* different from other programs in each genre. This balance allowed *Bonanza* to appeal across gender lines and age groups.

Bonnie and Clyde

Despite their lowly deaths at the hands of Texas Rangers in 1934, Bonnie Parker and Clyde Barrow have enjoyed second lives within America's popular imagination. Gunned down by Texas authorities after a murderous bank-robbing spree, Parker and Barrow occupied a dusty backroom of the national memory until 1967, when a Warner Brothers feature film brought their tale of love, crime, and violence back to the nation's attention. Written by David Newman and Robert Benton and directed by Arthur Penn, *Bonnie and Clyde* tells a historically based yet heavily stylized story of romance and escalating violence that announced the arrival of a "New American Cinema" obsessed with picaresque crime stories and realistic violence. A major box-office hit, the film and its sympathetic depiction of its outlaw protagonists struck a nerve on both sides of the "generation gap" of the late 1960s, moving some with its portrayal of strong, independent cultural rebels while infuriating others by romanticizing uncommonly vicious criminals.

Inspired by the success of John Toland's book *The Dillinger Days* (1963), writers Newman and Benton distilled their screenplay from real-life events. In 1930, Bonnie Parker, a twenty-year-old unemployed waitress whose first husband had been jailed, fell in love with Clyde Barrow, a twenty-one-year-old, down-on-his-heels petty thief. In 1934, following Barrow's parole from the Texas state penitentiary, Barrow and Parker and a growing number of accomplices set off on a peripatetic crime spree. Travelling around the countryside in a Ford V-8, the Barrow gang held up filling stations, dry-cleaners, grocery stores, and even banks in ten states in the

Clyde Barrow and Bonnie Parker.

Southwest and Midwest. In the process, they murdered—in a particularly wanton manner—between twelve and fifteen innocent people. Bonnie and Clyde's bankrobbing binge came to a violent end in May 1934, when a former Texas Ranger named Frank Hamer, along with three deputies, tricked the outlaws into a fatal ambush along a highway outside Arcadia, Louisiana.

The Warner Brothers' cinematic retelling of these events creates the appearance of historical accuracy but makes a few revealing additions and embellishments. The film opens when Bonnie Parker (Faye Dunaway), first seen through the bars of her cage-like bed, restlessly peers out of her window, catching Clyde Barrow (Warren Beatty) attempting to steal her mother's car. Young and bored, Bonnie falls for the excitement that Clyde seems to represent. She taunts the insecure Clyde, whose gun and suggestive toothpick hint at a deep insecurity, into robbing the store across the street. Bonnie's quest for adventure and Clyde's masculine overcompensation drive the film, leading the two into an initially fun-filled and adventurous life of petty larceny. Having exchanged poverty and ennui for the excitement of the highway, the criminal couple soon attract accomplices: Clyde's brother Buck (Gene Hackman), his sister-in-law Blanche (Estelle Parsons), and C.W. (Michael J. Pollard), a mechanically adept small-time thief. In a scene modelled after John Dillinger's life, the film makes Bonnie and Clyde into modern-day Robin

Hoods. While hiding out in an abandoned farmhouse, Bonnie and Clyde meet its former owner, a farmer who lost it to a bank. They show sympathy for him and even claim to rob banks, as if some kind of social agenda motivated their crimes.

Careening around country roads to lively banjo tunes (performed by Lester Flatt and Earl Scruggs), the gang's encounters with the authorities soon escalate, abruptly turning their light-hearted romp into a growing nightmare. Playful scenes of mad-capped fun segue into brutal, bloody shootouts. One police raid ends with Buck's death, Blanche's capture, and a hair-raising getaway by Bonnie, Clyde, and C.W. At this point, apparently tiring of their rootless escapades, Bonnie and Clyde pine for a more traditional family life, but, tragically, find themselves trapped in a cycle of violent confrontations. Their escape comes when C.W.'s father agrees to lure Bonnie and Clyde into a trap in return for immunity for his son. To the tune of joyful bluegrass, the colorful outlaws drive blithely into the ambush, innocently unaware of the gory slow-motion deaths that await them.

The incongruous brutality of this dark ending left audiences speechless and set off a national debate on film, violence, and individual responsibility. Magazines such as *Newsweek* featured *Bonnie and Clyde* on their covers. Many of the film's themes, it appeared—economic inequality, a younger generation's search for meaning, changing women's roles, celebrity-making, escalation and confrontation, violence—resonated with American audiences struggling to make sense of JFK's assassination, the Vietnam War, the counterculture, student protests, and a mid-1960s explosion of violent crime. Precisely because of Bonnie and Clyde's contemporary relevance, critics such as Bosley Crowther of the *New York Times* decried its claims to historical authenticity. Clearly they had a point: by transforming homely and heartless desperadoes into glamorous folk heroes and by degrading and demonizing the authorities, especially former Texas Ranger Hamer, whom many considered the real hero of the story, the film did distort the historical record.

But glamorizing rebellion and violence, other critics such as Pauline Kael contended, was not the point of the film, which instead aimed to explore how ordinary people come to embrace reckless attitudes toward violence. The film, they point out, punishes Bonnie and Clyde—and by extension the audience—for their insouciant acceptance of lawbreaking. Interestingly, the popular and critical reception of *Bonnie and Clyde* appeared to recreate many of the divides it sought to discuss.

Bono, Sonny

See Sonny and Cher

Booker T. and the MG's

The longtime Stax Records house band achieved fame not only due to their musical abilities, but as an integrated band (two blacks and two whites) working at a time of significant racial tension in the United States. Though their most significant contribution was as a backup band for Stax artists including Wilson Pickett, Otis Redding, and Albert King, they also produced a number of their own Top 40 instrumentals, including "Green Onions," which reached number three in 1962. Through 1969, they produced five more Top 40 singles.

Though the group officially disbanded in 1971, they were working on a reunion album in 1975 when drummer Al Jackson, Jr. was killed tragically. Since then, the remaining members have continued to record both together and separately. Steve Cropper and Donald "Duck" Dunn, the group's guitarist and bass player respectively, also joined the Blues Brothers Band and appeared in both of their major motion pictures.

Book-of-the-Month Club

When advertising copywriter Harry Scherman founded the Book-of-the-Month Club in 1926, he could hardly have predicted the lasting impact his company would have on the literary and cultural tastes of future generations. The Book-of-the-Month Club (BOMC) developed over time into a cultural artifact of the twentieth century, considered by many to be a formative element of "middlebrow" culture. With the monthly arrival of a book endorsed by a panel of experts, aspirants to middle-class learnedness could be kept abreast of literary trends through the convenience of mail order. The success of this unique approach to book marketing is evidenced by the fact that membership had grown to over one million by the end of the twentieth century.

Born in Montreal, Canada, in 1887, Harry Scherman was a highly resourceful marketer and a devout reader. He believed that the love of reading and of owning books could be effectively marketed to the "general reader," an audience often neglected in the book publishing industry of that period. Scherman's first book marketing scheme involved a partnership with Whitman Candy, in which a box of candy and a small leatherbound book were wedded into one package. These classic works, which he called the Little Leather Library, eventually sold over thirty million copies.

Scherman's ultimate goal was to create an effective means of large-scale book distribution through mail order. The success of direct-mail marketing had already been proven in other industries by the 1920s, but no one had figured out how to successfully market books in this fashion. The difficulty was in applying a blanket marketing approach to a group of unique titles with different topics and different audiences. Scherman's solution was to promote the idea of the "new book" as a commodity that was worthy of ownership

solely because of its newness. His approach focused attention on consumers owning and benefiting from these new objects, rather than on the unique qualities of the objects themselves. In 1926, Scherman's idea came to fruition, and with an initial investment of forty thousand dollars by Scherman and his two partners, the Book-of-the-Month Club was born.

Two elements in his design of the early Book-of-the-Month Club were key to its lasting success. First, an editorial panel would carefully select each new book that would be presented to the club's members. Scherman selected five editors to serve on the first panel: Dorothy Canfield Fisher, Harry Canby (editor of *The Saturday Review*), William Allen White, Heywood Brown, and Christopher Morley. Each was known and respected as a writer or journalist, which helped reinforce the recognition of BOMC as a brand name. These literary authorities would save the reader time by recommending which new book to buy. Readers were assured that their selections were "the best new books published each month" and that they would stand the test of time and eventually become classics.

The second vital element to the success of BOMC was the institution of the subscription model, by which subscribers would commit to purchasing a number of books over a period of time. Each month, subscribers to the club would receive BOMC's newest selection in the mail. Later, BOMC modified this approach so that subscribers could exercise their "negative option" and decline the selection of the month in favor of a title from a list of alternates. The automatic approach to purchasing new books allowed BOMC to rely on future book sales before the titles themselves were even announced. Scherman targeted the desire of the club's middle-class subscribers to stay current and was able to successfully convince the public that owning the newest and best objects of cultural production was the most expedient way to accomplish this goal.

BOMC posed an immediate challenge to the insularity of bourgeois culture by presenting a shortcut method for achieving literary knowledge. Janice Radway remarked that the club's critics "traditionally suggested that it either inspired consumers to purchase the mere signs of taste or prompted them to buy a specious imitation of true culture." Skeptics were wary of the transformation of books into a commodity that would be purchased for the sake of its novelty. They were not wrongly suspicious; as Radway explained, BOMC "promised not simply to treat cultural objects as commodities, but even more significantly, it promised to foster a more widespread ability among the population to treat culture itself as a recognizable, highly liquid currency." The market forces that drive the publishing world were laid bare in the direct mail model, and it posed a clear threat to the idea that literature should be published because it is good, not because it appeals to the tastes of the "general public."

Behind that very real concern, however, was a discomfort with the populist approach taken by BOMC. The company's mission was to popularize and sell the book, an object which had previously been considered the domain of society's elite. Middlebrow culture, as it came to be known, developed in opposition to the exclusive academic realm of literary criticism, and it threatened the dominant cultural position of that group. At the other end of the spectrum, middlebrow taste also excluded anything avant-garde or experimental. This centrist orientation continued to make producers of culture uneasy throughout the twentieth century, because it reinforced the exclusion of alternative movements from the mainstream. This mainstream readership, however timid and predictable its taste might be, was a formidable economic group with great influence in the book marketplace.

The club's membership continued to grow past the one million mark by the end of the twentieth century as BOMC's strength in the book marketplace endured. BOMC selection has the power to skyrocket little-known authors to instant fame and lucrative book deals, so the competition for a spot in the catalog has been fierce. Books are carefully chosen based on criteria that weigh a book's literary merit as well as its likelihood of appealing to a cross-section of the membership. For example, even books successful in the traditional marketplace might not succeed with BOMC if their content cannot be clearly conveyed in the tight space of a catalog description. BOMC's selection process embodies the larger conflict in the publishing world between quality and marketability. The club's focus on the desires of its subscribers forces an exclusion of both overly commercial titles and the specialized, academic or literary material that would not appeal to the general reader. This customer-focused approach has also fueled a move at BOMC toward the industrywide trend of niche marketing. By the late 1990s, there were ten specialty book clubs that fell under the larger BOMC umbrella, in interest areas including spirituality, cooking, money, and history.

Time, Inc. purchased BOMC in 1977, and as the era of mergers and acquisitions in the 1980s and 1990s progressed, it brought major changes to Harry Scherman's original conception of a book distribution service featuring books selected by an elite group of literary professionals. In 1994, under the ownership of media conglomerate Time-Warner, the BOMC's editorial board was dismantled altogether in favor of a more market-driven approach to acquiring new titles. This decision reflected the trend in the 1990s toward a "bestseller mentality" in the publishing industry, under which editorial judiciousness appeared to be almost a luxury.

With so much attention focused on the bottom line, it is not surprising that the company ventured onto the internet to increase sales, an unusual and risky move for a direct-mail marketer. Customers could begin going to the company's website (www.bomc.com) to decline the month's selection online, and, the company presumed, order additional titles at the same time. While the paper catalogs mailed 17 times per year contain only about 200 selections each, on the website customers may choose from over 3,200 selections.

The proliferation of online marketing, including many book-sellers that offer discounted books via the internet, is certain to have an impact on BOMC's trademark approach to book distribution. In the end, the internet may be the final step in the process begun by Harry Scherman to promote widespread book distribution; customers can choose from thousands of books from dozens of companies at the click of a mouse. Regardless of the direction that the Book-of-the-Month Club takes in the future, it will always be known as a significant architect of twentieth-century literary taste.

Boone, Pat (1934—)

With his boyish charm, unfailingly cordial manners, and firm beliefs in religion and the family, singer Pat Boone became the parentally approved antidote to the sexually charged rock 'n' roll acts of the 1950s. The precursor to the "safe" teen idols of the late 1950s and early 1960s, Boone has long been lampooned by critics and historians for his squeaky-clean image, and because he rose to fame by singing cover versions of tunes initially performed by black artists. But by no means was Boone an untalented nor an irrelevant musical force.

At the time that he was delivering renditions of Little Richard's "Tutti Frutti" and Fats Domino's "Blueberry Hill," many mainstream radio stations did not play so-called "race" artists. Certainly, Boone's versions were tame compared to the raw delivery of the original artists, but they also allowed the music to be introduced to audiences who otherwise wouldn't have heard it. Moreover, once Boone moved into pop ballads, with songs such as "April Love" and "Moody River," he became a respected artist in his own right. The mellow-voiced singer was unquestionably popular: following the volatile Elvis Presley, Boone was the second top-selling artist of the era. Since both Boone and Presley hailed from the South, and because they appeared to be polar opposites, they were frequently pitted against one another in the press. In truth, the men were friends; each respected the other's work. But where Presley was single and on the prowl, Boone was a devoted family man who advised young women of the day to refrain from premarital sex. In many ways they represented the duality of the decade.

The great-great-great-great grandson of frontiersman Daniel Boone was born Charles Eugene Pat Boone in Jacksonville, Florida. Raised in Nashville, he grew up singing at picnics, ladies' club meetings, fraternal organizations, and prayer meetings. A high school overachiever, he was captain of the baseball team, president of the student body, and voted most popular in his class. At seventeen he was singing on his own Nashville radio show. At eighteen he won a talent contest which took him to New York, where he appeared on a trio of *Ted Mack's Amateur Hour* television shows. He was nineteen when he married high school sweetheart Shirley Foley, daughter of country star Red Foley. At twenty, following an appearance on TV's *Arthur Godfrey's Talent Scouts*, he was contracted by Dot Records.

Boone enjoyed his first hit with a cover of Fats Domino's "Ain't That a Shame," which went gold. Ensuing tunes climbed the charts. By 1956, Boone had signed a seven-year contract, worth one million dollars, with Twentieth Century-Fox. He also had one million dollar contract with ABC for his own weekly television series, *The Pat Boone Chevy Showroom*, which premiered in October 1957, airing in prime time for three years. Ever pragmatic, Boone also continued his studies. Majoring in speech and English at Columbia University in New York, he was graduated magna cum laude in 1958. By this time he was the father of three daughters. There would later be a fourth.

Boone's movie career began with the back-to-back 1957 teen-oriented musical romances *Bernardine* and *April Love*. Both films

generated number one singles, “Love Letters in the Sand” and “April Love,” respectively. With the latter, Boone made headlines with his refusal to kiss leading lady Shirley Jones on the lips. In later years, in more adult roles, he did kiss his female costars; but as an actor, he was never able to transcend his image.

Known for the white buck shoes, which inadvertently became a trademark, Boone never made any attempt to downplay his God-fearing beliefs. For instance, the Pat Boone charm bracelet included charms of a 45 rpm record, shoes, a TV set, and a tiny Bible. Nor did Boone hesitate to moralize when he authored *Twixt Twelve and Twenty*, the 1959 teenage advice book. The year’s number two nonfiction best-seller, it sold an amazing 207,000 copies during its first eight weeks. In discussing the subject of kissing, Boone wrote, “Kissing for fun is like playing with a beautiful candle in a roomful of dynamite! And it’s like any other beautiful thing—when it ceases to be rare it loses its value . . . I really think it’s better to amuse ourselves in some other way . . . I say go bowling, or to a basketball game.” The man who had married at nineteen also said he did not approve of teenage marriages, “unless your maturity check sheet is literally covered with gold stars.”

Like many of his contemporaries, Boone saw his career go stagnant in the midsixties, but he proved resilient, even taking his wholesome singing act to Las Vegas showrooms. In the seventies, he became heavily aligned with Christian ventures, including Jim and Tammy Bakker’s PTL Club. He also poked fun at his goody-two-shoes image by doing TV commercials for milk. Following the success of daughter Debby Boone’s 1977 single “You Light Up My Life,” father and daughter sometimes performed together.

The 1980s found the healthy-looking Boone delivering workout tips to the over-forty crowd via the video *Take Time with Pat Boone*, and he was a pervasive presence on Christian broadcasting venues. In the nineties, he found eager audiences in the resort town of Branson, Missouri, marketed an extensive line of Christian publications and videos, and briefly reinvented himself with a turn as a heavy-metal performer. In the 1997 album *In a Metal Mood: No More Mr. Nice Guy*, Boone delivered versions of Ozzy Osbourne’s “Crazy Train” and Metallica’s “Enter Sandman” with big band arrangements and guest musicians including Alice Cooper, Eddie Van Halen, and Slash. To promote the venture, Boone appeared on TV in black leather and wearing an earring. Not surprisingly, the novelty was off-putting to some of his older fans, but the younger generation accepted it for what it was: a grand put-on. The music world’s biggest square had pulled off a hip act.

Borge, Victor (1909—)

Funny man of the piano, Victor Borge has enjoyed a seven-decade-long international career as a witty pianist-raconteur and popular radio, film, and television personality. His spontaneous comic talents, slapstick comedy routines, and satirical spoofs of classical music mannerisms made him one of the most popular and highest paid entertainers during the early 1940s. His 1950s Broadway show still holds a place in *The Guinness Book of World Records* as the longest running one-man show in theater history. Borge’s ability to make light-hearted fun out of “serious” concert music has endeared him to audiences who might otherwise feel intimidated or bored by the traditional decorum of classical music repertoire and presentation.

Børge Rosenbaum (his name before emigrating to the United States) was born on January 3, 1909, in Copenhagen, Denmark. His mother was a pianist, and his father was a violinist with the Royal Danish Philharmonic and Opera orchestras for 35 years (“When he finally came home, my mother hardly recognized him!”). A child prodigy, Rosenbaum studied piano at the Royal Danish Music Conservatory, and later studied with Frederic Lamond and Egon Petri in Berlin. Following his 1926 recital debut in Copenhagen, he became one of Denmark’s most popular concert pianists during the 1930s.

Victor Borge

Partly to circumvent his recurring stage fright, Borge developed a performance style combining classical music and quirky comedy. This appealing “cross-over” combination established him as a leading nightclub, stage, and film personality in Scandinavia. He had his revue debut in 1933, and in 1937 made the first of his six pre-World War II Danish films. Because of his Jewish background and his pointed satirical critiques of the Nazi regime, Borge was blacklisted and forced to flee Europe when the Germans invaded Denmark in 1940. He traveled to New York with his first wife, Elsie Shilton, an American citizen, and became a United States citizen himself in 1948. This first marriage ended in divorce in 1951, and Borge married again in 1953; he has five children and numerous grandchildren.

After an unsuccessful first appearance in a 1941 Broadway revue, Borge’s comic talents were recognized on bandleader Rudy Vallee’s radio show the same year. One of Borge’s earliest successes was his trademark “phonetic pronunciation” act, in which non-verbal sounds indicate punctuation marks in a recited text. This act led to a regular slot on Bing Crosby’s *Kraft Music Hall* radio show during the next two years (totaling 54 appearances). In 1943, Borge spoofed himself in a Hollywood film, playing con man “Sir Victor Fitzroy Victor, K.B.O.B.E.” in RKO’s *Higher and Higher*, which also featured Frank Sinatra in his first starring role. Borge had his own NBC radio show in 1946, and his one-man *Comedy in Music* show enjoyed a phenomenal run at the Golden Theatre in New York from 1953 to 1956, running a record-setting 849 performances.

Borge’s hilarious comedy routines include his demonstration of how modern composers write song hits (by cutting and pasting music from the old masters), his insertion of “Happy Birthday” into serious classical piano works, his falls off the piano bench at the start of the Tchaikovsky concerto, or his constant admonition to singers not to lean on his instrument (which causes the grand piano’s curved indentation). Raising the piano lid to begin a performance, he mutters, “Maybe we should get some fresh air in here.”

Also known for saying that “the smile is the shortest distance between people,” Borge has been called “The Great Dane” for his charitable contributions and international goodwill efforts. To acknowledge the heroism of Scandinavians who sheltered persecuted Jews during the Holocaust, he founded the Thanks to Scandinavia Foundation in 1963. Borge has been honored by the United States Congress and the United Nations, and knighted by the five Scandinavian nations.

Borscht Belt

The area of the New York Catskills called the Borscht Belt came into being at the turn of the twentieth century and grew in popularity through the 1970s. During summers and holidays, Jews—primarily of

Eastern European descent, from working to upper-middle class, and frequently first generation Americans—flocked to the Borscht Belt, where they enjoyed mainstream American leisure activities and entertainment in a place where they knew they’d be welcomed as Jews. Many people also came to the Borscht Belt to work—as waiters, owners, chefs, musicians, comics, and busboys. Not only did many students earn money for college by working summers in the Borscht Belt resorts, but many nationally known entertainers, especially comedians, got their start there. The Jewish culture that flourished in the Borscht Belt gradually overflowed into the mainstream, where it significantly influenced American popular culture.

The Borscht Belt was about 100 miles northwest of New York City in Sullivan and Ulster counties in the foothills of the Catskill Mountains. Sometimes known as the “Jewish Alps,” it covered an area of about 250 square miles. Jewish farmers, encouraged by the Jewish Agricultural Society, started settling this rural area beginning in the 1820s. Prefiguring the “back-to-the-earth communes” of the 1960s, some Jewish settlers founded socialist agricultural communities, and some of the bungalow colonies fomented much left-wing activity. In the Mirth Bungalow Colony, for example, “entertainment” included political discussions and poetry readings.

As early as the 1870s, middle- and upper-class Jews began to spend summers in this region, but as their numbers increased they were excluded from many resorts due to anti-Semitism. By the late 1890s and early 1900s, farmers started to offer their places as Jewish boarding houses and hotels that served kosher food. One of the largest resorts, The Nevele, continued to be a working farm until 1938. Eventually, most of the farmers realized it was more profitable to rent to visitors than to farm and they completely gave up farming. In the early 1900s, the Workmen’s Circle, a left-leaning Jewish group, opened a sanitarium in the Catskills, providing “fresh air” for Jewish tuberculosis patients excluded from other sanitariums because of anti-Semitism. Unions such as the ILGWU opened up resorts where workers could recuperate. And perhaps most significantly, Yiddish actor Boris Thomashevsky opened a resort with large indoor and outdoor theaters, thus beginning the Borscht Belt’s influential entertainment tradition.

The postwar boom of the 1950s greatly helped the growth of the Borscht Belt. Not only did more people have disposable income, but also many owned cars, and the government built more highways on which to drive them. By 1952, there were 509 hotels and boarding houses in Sullivan County. During this period of popularity, more than a million people came to the Borscht Belt in the summers. The general trend was for “stay-at home” mothers, grandparents, and children to live in these rustic to resort dwellings all summer, while “working” fathers came for weekends. The larger resorts became known for their grand (kosher) all-you-can-eat feasts and higher caliber entertainers. However, whether small or large, all the establishments tried to feed the “American Dream” of leisure time and excess: advertising exaggerated the caliber of entertainers, the quality of food, and the size of basketball courts and other recreational facilities. Conversely, Jewish guests who were trying to assimilate into mainstream American culture sensationalized, to themselves and others, what was really available to them.

Despite exaggeration, the Borscht Belt birthed innumerable nationally known figures, especially in the entertainment world. Many Jewish entertainers started in the Borscht Belt because of anti-Semitism that excluded them from working in other venues. Additionally, their work included Jewish cultural references, not understood outside the Jewish world. However, as these entertainers

became nationally popular, the Jewish content of their work became more familiar and understood in the mainstream and their work became more mainstream—with less specific Jewish content. Jewish life became known and integrated into American life and vice versa, often because of Borscht Belt entertainers.

A plethora of well-known comedians got their start in the Borscht Belt, including Henny Youngman, Milton Berle, Rodney Dangerfield, Danny Kaye, Buddy Hackett, Lenny Bruce, and Sid Caesar. Five-year-old Jerry Lewis debuted at a Borscht Belt hotel singing “Brother Can You Spare A Dime.” Others started out as comedians but moved to other areas of the entertainment world, especially TV. Jack Barry, for instance, was a standup comedian who met and teamed up with Dan Enright in Borscht Belt clubs. They started *Winky Dink and You*, a children’s show known for the special transparent covers children had to put over the TV screen so they could draw the “hidden pictures” during Winky’s adventures. Barry and Enright were also instrumental in producing and hosting early game shows, such as *Concentration* and *Tic Tac Dough*.

Cultural changes beginning in the late 1970s brought on the downfall of the Borscht Belt. As airplane transportation became more affordable, it was both easier and more enticing to travel to places further than the Catskills. Women, especially middle-class women, again entered the work force en masse, which prevented them from spending entire summers in the resorts. Many Jews became more assimilated and felt less of a need to be in separate establishments. Anti-Semitism lessened and many Jewish entertainers did not need to start in Jewish-only establishments.

By the 1980s and 1990s, only a few of the large hotels remained, and their cultural influence was virtually non-existent. Some smaller establishments were burned for insurance and some were sold as meditation centers, ashrams, or drug rehabilitation centers. Bungalow colonies were bought and occupied by Orthodox and Hassidic Jews, whose lifestyle necessitated separate communities. Some Yiddish culture, however, periodically still came alive in the Catskills through the 1990s. For example, *Klezkamp* is a weeklong annual event held in the Catskills at the end of December. Although primarily billed for Klezmer musicians, *Klezkamp* is attended by many families of all ages who go to Yiddish classes, lectures, cooking classes, dances, concerts and more, to experience and preserve rich Yiddish culture.

While some are critical of the term Borscht Belt—believing it to be pejorative—whatever the name, clearly the specific Jewish culture born there affected popular culture for many decades.

The Boston Celtics

Perhaps no other team in professional sports is as respected, revered, and successful as the Boston Celtics. The Celtics controlled the ranks of professional basketball in the late 1950s and during the 1960s, overshadowing the entire league. Not until the Chicago Bulls of the 1990s has a team even come close to the heights the Boston Celtics reached at the peak of their success. The team produced some of the most memorable moments in sports history on its way to a record 16 NBA World Championships.

Created as one of the original members of the Basketball Association of America (BAA) on June 6, 1946, the Celtics found hard times in their initial years because Bostonians were much more interested in baseball and hockey in the early years of the franchise. However, their opening home game on November 5, 1946, proved exciting. Future actor and star of *The Rifleman* Chuck Connors broke a backboard with a slam-dunk, delaying the game. The BAA became the National Basketball Association (NBA) after the 1949/50 season, and with the hiring of coach Arnold “Red” Auerbach in 1950, the Celtics started on their road to sports history at the dawn of a new and consolidated league.

The Auerbach years of the Celtics were some of the most magical in all of sports. He revolutionized the way basketball was played by emphasizing the concept of the fast break and the sixth man. In the process, he built one of the most dominant teams in the history of professional sports. The Celtics also made history in the 1950s by drafting the first black player in the NBA, Charles Cooper. In 1956, big man Bill Russell joined the Celtics, thus giving them the most amazing player of the times. Russell also contributed to change in the way basketball was played, doing things on the court that no other player of his size had ever done. Combined with star guard Bob Cousy, Russell led a strong supporting cast of players to the 1957 NBA Championship, the franchise’s first, but far from last, victory.

Starting in 1959, the Celtics won the next eight NBA titles in a row, and a total of 11 in a 13-year span. During this stretch, they at one time had three future basketball Hall of Fame members who didn’t even start. The Celtics finished off the decade with victories in 1968 and 1969 after which, by their high standards, the team declined somewhat. Nonetheless, they won another pair of NBA titles in 1974 and 1976. Larry Bird, one of the next generation’s dominant players, joined the Celtics for the 1979/80 season and, along with teammates Robert Parrish and Kevin McHale, returned the Celtics to their former glory and dominance by leading them to championship seasons in 1981, 1984, and 1986. Some of the greatest players basketball has known wore the Celtic green, among them John Havlicek, K.C. Jones, Dave Cowens, Don Nelson, Tom Heinsohn, and Frank Ramsey.

The Boston Celtics defined what it means to be a dynasty in sports. Their appeal as a hard-working, blue-collar team under Red Auerbach appealed to the city of Boston and gained widespread

support, giving definition to the term “Celtic Pride.” The familiar parquet floor, the leprechaun mascot, and Celtic green have become familiar images to all followers of basketball, as well as sports fans in general.

Boston Garden

One of the most beloved landmarks in New England, the Boston Garden opened in 1928. It was best known as the home court of the Boston Celtics, who won 16 titles while playing there. When the Garden closed in 1995, its bricks and seats were sold as mementos. The arena's parquet basketball floor was its most famous feature. Because of post-World War II lumber shortages, the floor had to be made of small squares of wood which were then pieced together. The floor was notorious for dead spots and warped boards which the Celtics used as an advantage over visiting teams.

—Austin Booth

Boston Marathon

The Boston Marathon is one of the greatest racing events in the world. The idea for the Marathon began in the late nineteenth century when United States Olympic team manager, John Graham, wanted to establish a counterpart to the Olympic Marathon held in Greece in 1896. He wanted to do this in his adopted city of Boston, Massachusetts. Graham drove his horse carriage outside of Boston to try to find a place that resembled the Grecian terrain. He found it in Ashland and began making plans for laying out the course that would stretch to Boston. The Boston Athletic Association (B.A.A.) was the official organizer of the event. The running of the inaugural Boston Marathon occurred on April 19, 1897, Patriot's Day in Massachusetts. There were only eighteen competitors. The Boston Marathon helped bring distance running to the forefront of the American sports world. Equally important, the race has grown into a legitimate event that tests the waters of Olympic and international competition. Even though women were initially banned from the event the Marathon paved the way for the impressive expansion of women's distance running, as well as wheelchair racing, beginning in the 1970s.

In the 1920s the official start of the Marathon would be moved to Hopkington. That town and the surrounding area became quickly absorbed into the marathon world and residents became captivated by the popularity of the event. One negative trait during the first seven

decades of the Boston Marathon was that women were not allowed to compete. There were “reports,” however, over the years about women running incognito. The Boston Marathon would ultimately have its share of winners, losers, legends, and notorious individuals. Americans like champion-runner Clarence DeMar dominated the Marathon during the race's early period in the 1910s and 1920s. Americans made their mark as sufficient competitors in the world's athletic stage. Yet, some people criticized the Marathon for the lack of foreigners participating in it. But even as early as 1900 the Boston Marathon had an international flavor to it as Canadians competed along with Americans and did extremely well, winning the event.

The 1920s were significant years for the Boston Marathon. The race, for example, witnessed its first European-born winner as Greek national Peter Trivouldas crossed the finish line ahead of everyone else. In 1920 a radio station began broadcasting live coverage of the Marathon. People could now tune-in and receive up to the minute reports and results of the race. It was also announced in that decade that the Boston Marathon would be accepted as the American Olympic Trials to see which American distance runner earned the right to compete in the Olympic Marathon. The “foreign invasion” really began in earnest during the post-World War II era. In fact, from 1946 to 1957 Americans would not win the Marathon. Over the next several decades Boston Marathon winners would include Asians, Europeans, Africans, and Latin Americans making it a true international competitive race.

The groundbreaking years for the Boston Marathon were the 1970s. In 1972, the 76th running of the Boston Marathon, women were officially allowed to compete. Women ran the Boston Marathon during the previous decade but they were not officially acknowledged as entrants or competitors. In 1966, for instance, 23 year-old Roberta Gibb became the first woman to complete the distance. She had applied for entry during that year but was denied so she decided to take matters into her own hands. Before the race she stood on the curb with her hood over her head and patiently waited for the start. When the race started she began running with the hood still over her head. Several miles into the race she took the hood off and felt more comfortable as the crowds acknowledged her and even cheered her on. She finished in under three and a half hours. The Marathon reached another milestone in the 1970s. In 1975, it became the first significant marathon in the country to allow wheelchair athletes to compete. As the number of wheelchair entrants increased in the succeeding years so did the quality of competition and the equipment which the wheelchair racers used. During these years the Marathon became home to the National Wheelchair Marathon Championships and, soon after, wheelchair athletes achieved a tremendous feat by breaking the two-hour barrier. Ever since the 1970s both women and wheelchair racing at the Boston Marathon has grown in popularity and have received tremendous support.

Yet, the Boston Marathon is also filled with controversy. Take, for instance, the infamous Rosie Ruiz episode in 1980. Ruiz is considered a villain of the Marathon. She jumped into the race with about a mile to go and claimed victory despite the fact that no one had seen her at the mile markers and the water stations, nor had the cameras picked her up as well. Ruiz was ultimately stripped of her title a week after she “won” the event because of cheating. She was disqualified from the B.A.A. Her case though was not an isolated one in the history of the race. Cheating had been attempted twice before

during the early twentieth century and, in both instances, the men were promptly caught and suspended or disqualified by the B.A.A.

In the late twentieth century the Boston Marathon opened the door for many foreign athletes to display their athletic talents in front of America and the world. It has become common for foreigners to do well at Boston. This trend can be seen in other American marathons such as the New York City, Chicago, and Los Angeles Marathons. The Marathon has become a major trendsetter in American society, helping advance distance running in the wake of the physical fitness craze.

To understand the growth of American road racing over the years one only has to look at the gradual but sure emergence of the popularity of the Boston Marathon in the United States. The two run parallel to each other and, naturally, complement one another. The Boston Marathon itself is an institutional icon in the sports world. No other race is representative of the overall trends, both positive and negative, that have occurred in American society. The Marathon shaped women's running allowing them to compete in a distance event that draws females from around the world in what one hopes to be "friendly," yet very intense, competition. Similarly, wheelchair athletes also enjoy the spotlight that is cast upon the people who run in the Marathon. Both women and wheelchair racing, as a consequence, have grown into legitimate forms of racing divisions that have Olympic ramifications. With regard to the men, the Marathon showcases the best the world has to offer in the sport of running and racing. Winning times seem to get lower which each passing year. The greatest influence the Marathon has on American society is that it inspires many individuals, both young and old, to enter the race. It has become a personal challenge to Americans to enter and finish the event, with a little hard work along the way of course, not necessarily to win it. The identity and lure of the Marathon, then, permeates throughout society and satisfies America's free-spirited fascination with self-gratification.

Boston Strangler

The term "Boston Strangler" refers to the person or persons who committed a series of thirteen brutal murders of women in

Albert DeSalvo (aka The Boston Strangler).

Boston and the surrounding area in the early 1960s. Although Albert DeSalvo did eventually confess to the killings, neither he nor anyone else ever went to trial for them.

The murderous activities of the Boston Strangler began in June of 1962 and lasted until January of 1964. In twelve of the thirteen murders, the victim was strangled, and some of the victims were also struck violently on the head and/or stabbed. One victim was stabbed repeatedly in the throat and breast in lieu of strangulation. The victims were usually attacked sexually, and the bodies were generally left in degrading positions. The first six murder victims were between 55 and 85 years of age, as were two of the later ones. Five victims were between the ages of 19 and 23.

The serial killings greatly frightened the community. Responding to public concern, Edward Brooke, the Attorney General of Massachusetts, created what was popularly called a "Strangler Bureau" whose mission was to hunt down the murderer(s). A Medical-Psychiatric Committee was constituted in order to develop a profile of the criminal(s). The Committee came up with a multiple-strangler theory, positing one man ("Mr. S") as the killer of the older victims and another man or men as the killer of the younger women. The profile described Mr. S to be a man suffering from impotence and an oedipal complex, both of which supposedly drove him to murderous rages against his victims. This profile did not match DeSalvo, causing the science of profiling to lose esteem in criminal justice circles, although more sophisticated profiling techniques would subsequently be developed.

The Strangler Bureau even called in a Dutch psychic who claimed to be able to learn about people from being in their presence

or touching items associated with them. The psychic gave a description of the killer, allegedly based on the auras given off by items associated with the murders. Again, the killer described by the psychic did not match DeSalvo's characteristics.

Neither psychological nor psychic investigation was able to solve the case. Then Albert DeSalvo, a man with a long criminal history, confessed to being the Strangler. After serving time in a juvenile home, he committed a string of burglaries until he joined the Army at 17. While serving in the American forces in Germany, he met and married a German woman, and also became the Army's middle-weight boxing champion. He was also accused of molesting a nine-year-old girl, but he was not convicted because the child's parents did not want to pursue the matter. DeSalvo was awarded an honorable discharge in 1956, and brought his wife back with him to the United States.

Convinced that his wife could not satisfy his sexual needs, DeSalvo started visiting the apartments of young women, gaining entrance by pretending to be from a modeling agency. Using this ruse, he tried to fondle the women. Police knew DeSalvo as the "Measuring Man" because he pretended to take the measurements of the women he was molesting. He served a few months in prison for breaking and entering, and soon after his release his activities escalated from molestation to rape. This time, he was known as the "Green Man" on account of the color of the clothes he wore while seeking victims. It was as the Green Man, not as the Boston Strangler, that DeSalvo was finally arrested in 1964.

DeSalvo confessed to being the Strangler while awaiting trial in a psychiatric facility at Bridgewater. The confession was quite detailed, displaying a knowledge of details about the murders that were not available to the public. Either DeSalvo had been fed the information by police, or else he was describing crimes he had actually committed. In 1967, DeSalvo went on trial for the Green Man sexual assaults. He was represented at trial by the nationally famous Boston attorney F. Lee Bailey. The jury convicted DeSalvo on a range of charges, and he was sentenced to life in prison for the Green Man crimes. He was never charged with the Strangler killings, however. In 1973, DeSalvo was killed by a fellow-inmate.

In addition to the obligatory true-crime book, the murders inspired a 1968 movie entitled *The Boston Strangler*, with a cast that included Tony Curtis as Albert DeSalvo, and Henry Fonda. In 1971, the Texas House passed a resolution that commended Albert DeSalvo for his work in the area of population control. The resolution was a practical joke by a legislator who wanted to demonstrate how little attention his colleagues paid to the bills they passed.

The Boston Symphony Orchestra

At the beginning of the 1880s, America had no symphony orchestra to equal the great European ensembles. Major Henry Lee Higginson would permanently change that situation by creating the Boston Symphony Orchestra (BSO), which not only set musical standards and became a model for other American orchestras but demonstrated that large audiences could be attracted to what was considered "elitist" culture.

The New York Philharmonic, the nation's oldest orchestra in 1880, had been organized some 40 years earlier. It offered only six concerts and six public rehearsals a season. Players elected conductors and sent last minute substitutes for concerts if more lucrative engagements became available. In fairness to the players, membership dues and fines levied on absentees at concerts served as the orchestra's financial mainstays. Earnings from ticket sales were appallingly low. In 1878, each musician earned only \$17.50; in 1886, a relatively good year, each earned just \$225.

Audiences responded to the haphazard nature of the enterprise by becoming boisterous, especially if players were openly contemptuous of the conductor. Newspaper accounts discouragingly noted an "ebulliently of animal spirits [that] sometimes overcame . . . [any] sense of decorum."

Except possibly for the behavior of audiences, symphony orchestras fared no better in Boston. Which was why a March 1881 notice in local newspapers, placed by Higginson, generated immediate interest. He called for: "The Boston Symphony Orchestra in the Interest of Good Music." Higginson emphasized that "Notwithstanding the development of musical taste in Boston, we have never yet possessed a full and permanent orchestra, offering the best music at low prices, such as may be found in all the large European cities, or even in the smaller musical centres of Germany."

The real problem was how to finance such an ensemble. Higginson advised that during the course of a season he would present "sixty selected musicians" in 20 concerts and sell subscriptions for "either \$10 or \$5, according to position," and single tickets at 75¢ or 25¢ each. In addition, tickets would be available for a public rehearsal during "one afternoon of every week."

Higginson understood that ticket sales alone could not finance the orchestra. He was personally worth \$750,000 and forthrightly declared that he would provide up to \$50,000 of an estimated annual \$100,000 budget. The rest of the operational budget would come from ticket sales and from selling the orchestra's services to opera companies—in the summer of 1885, Higginson announced a series of concerts of "lighter music," which became famous as the Boston Pops. Economically inclined, he decided against a pension plan for musicians and would not even entertain the idea of a musicians' union.

As for repertory, Higginson thought "anything worthy could be put on programs, which were to be relatively brief, an hour and three quarters being the upper limit." He defined "unworthy" as the "trash . . . heard in the theatres, sentimental or sensational nonsense." Wagner could be performed, but the composer was not among the Major's favorites. Late Beethoven, possibly "the work of a lunatic," could also be played, since as a fair-minded person, the Major could not see barring "serious music."

Higginson's first choice for conductor turned out to be a mistake. Georg Henschel, a young local musician, allowed regional loyalties to

figure in his recruitment of players, so it was an easygoing band of Bostonians who performed in the city's Music Hall on Saturday nights for the relatively high fees of \$6 per concert and \$3 per rehearsal. Henschel departed Boston in 1884. Higginson's later choices won the approval of critics but were not without controversy. Thus, Arthur Nikisch was described in the local press as having an "undue passion in comparatively passionless melody."

What could not be questioned was that the quality Higginson demanded of his musicians had an enormous impact on audiences. From the very first concert, BSO subscribers clamored for tickets. More than 83,000 people attended the first season, and as early as 1886, the orchestra earned \$100,000 in five days of advance sales for 24 concerts and 24 public rehearsals of the "severest classical music."

By October 1900, just 19 years after its founding, the orchestra had inspired such confidence in its stability that donors gladly made possible a permanent home after Higginson threatened that if a hall was not built, he would disband the ensemble. In 1903, a pension fund was established by and for the musicians, for the benefit of which Higginson permitted a special concert annually.

By the time the BSO was 25 years old, in 1906, it had served as a model for orchestras in Chicago, Cincinnati, and Pittsburgh. Higginson was constantly sought out for advice and solicited for donations to various enterprises. As he lengthened the BSO season, he tried to keep ticket prices as low as possible to attract audiences of all classes. As late as the 1907-08 season, subscriptions were still only \$18 and \$10.

Higginson himself paid the highest price of all for attendance; up to June 1893, he is known to have contributed \$250,000. His players appreciated his generosity. The orchestra's fourth conductor, Emil Paur, declared, "The reason why the Boston Orchestra plays better than all other existing orchestras is—besides the excellent quality of the men—the comfortable living the men are able to enjoy."

After Higginson's retirement at the age of 82, the only major change in the BSO's operations occurred in the early 1940s, when the American Federation of Musicians threatened to boycott the orchestra's broadcasts and recordings, prevent guest conductors and soloists from appearing with it, and blacklist concert halls in which it appeared while on tour, unless it unionized. This time forces arrayed against management were too strong. In 1942, the BSO, the only non-unionized ensemble in the nation, came to terms with the union and joined.

Bouton, Jim (1939—)

Right-handed pitcher Jim Bouton concluded his unspectacular major league career in 1978 with a record of 62-63. But it was the

impact he made off the field, with his bestselling clubhouse memoir *Ball Four*, that earned him a place in baseball history. As a New York Yankee between 1962 and 1968, the urbane Bouton was an uneasy presence on one of the hardest-living 25-man squads in the majors. Apparently he was taking notes. *Ball Four*, published in 1970, pulled no punches in describing the drinking and carousing of some of the game's most idealized figures, including Mickey Mantle. The tight-knit ballplayer's fraternity, enraged over Bouton's betrayal of confidence, ostracized the pitcher for decades. Scandalous at the time, *Ball Four* is considered tame in comparison to subsequent tell-all accounts. Nevertheless, the book was selected by the New York Public Library as one of the "Books of the Century."

Bow, Clara (1905-1965)

With her performance in the 1927 silent movie, *It*, rising film star Clara Bow transformed herself almost overnight into the Jazz Age icon called "the 'It' Girl." The movie's record-breaking popularity turned the single word "It" into a national euphemism for sex appeal, and helped make Bow, two years later, the highest paid female actor in Hollywood. Writer and Hollywood trendsetter, Elinor Glyn, first coined the expression in her novella, *It*, then selected Bow as its embodiment in the role of Betty Lou Spence. As "the 'It' Girl," Bow became the dominant sex symbol of the 1920s and 1930s, and a singular identity within Hollywood history as the first wholly American vision of erotic appeal. Before Bow, depictions of bold female sexuality were associated with foreignness, as in the career of the 1910s' star, Theda Bara, whose studio-manufactured image feigned Arabic heritage. Bow's portrayals expressed unabashed attraction to men in ways that American-identified female stars, such as "virginal" Lillian Gish, eschewed. Bow's spontaneous style of acting exasperated camera crews of the day, but her abandonment and intuitive skill were the qualities that translated as 'It' to spectators, and to directors like *It*'s Clarence Badger, who learned to "explain the scene to her and just let her go."

With her natural red hair, cupid bow lips and hourglass figure, Clara Bow's persona mirrored the liberated decade itself. Onscreen and off, she epitomized the high living, carefree and carnally-emancipated "flapper." Sporting bobbed hair, glittery dresses falling above the knee, and headbands, "flappers" were 1920s good-time girls who smoked, drank, frequented jazz clubs and reveled in the nation's prosperity by flouting turn-of-the-century rules for feminine behavior. F. Scott Fitzgerald, the writer who dubbed the decade "the Jazz Age," observed, "Clara Bow is the quintessence of what the term 'flapper' signifies as a definite description: pretty, impudent, superbly assured, as worldly-wise, briefly-clad, and 'hard-berled' as possible. . . . there are thousands more patterning themselves after her girls, all sorts of girls, their one common trait being that they are

Clara Bow

young things with a splendid talent for living.” Many novice actresses, including Joan Crawford, also viewed Bow as a role model and imitated her screen type.

Bow’s acting ability was innate, but her “talent for living” was acquired. Born July 29, 1905 to impoverished parents eking out an abject existence in the tenement slums of Brooklyn, Bow’s childhood was marked by brutal neglect. Her mother, Sarah Bow, née Gordon, struggled with severe mental illness and despised her primarily absent husband, Robert Bow. Oppressive emotional and economic conditions affected Bow the way many a movie star’s bleak background did: she sought escape in movie houses and moving picture fan magazines like *Motion Picture Classic* and *Photoplay*. Poring over stories of “America’s Sweetheart,” Mary Pickford, and the swashbuckling Douglas Fairbanks, Bow vowed to join their ranks. When she confided her dreams of stardom to her mother, Sarah castigated her desires as a prostitute’s. Bow’s conflict with her mother was not unique. As Nickelodeons across the country gave way to theatrical movie houses in the 1910s and 1920s, movie-going united cross-segments of the culture. But this new entertainment activity also provoked 1920s sensibilities concerned with religious virtue and

threatened by perceptions of movies’ degenerate influence on youths. This gap between the public’s values and Hollywood’s profligate spending, depictions of moral laxity, and offscreen scandals like the rape trial of Fatty Arbuckle, features as a constant in the history of American movie culture. For example, a related outrage over movie violence spurred 1996 Republican presidential candidate Robert Dole to attack the industry as part of his campaign. To impugn his opponent, President Clinton, Dole accused him of being a “Hollywood insider.” Had she lived to witness it, Bow’s mother would have been horrified by “the ‘It’ Girl’s” appearance in movies titled *Wild Party*, *Daughters of Pleasure*, *Dangerous Curves*, *Kiss Me Again* and *Call Her Savage*.

Bow established a professional Hollywood reputation as hard-working, kind-hearted and unpretentious. She also developed a notoriety that blurred with her fun-loving screen personality and shaded into promiscuity. Her lovers included co-stars Gary Cooper, Gilbert Roland, Frederic March, and director Victor Fleming. Her stardom occurred simultaneously with the increasing popularity of scandal sheets, and the press tracked her every dalliance. What Americans loved onscreen, appalled them in tabloid reports of Bow’s refusal to

marry. Involved in several financial scandals, she diminished further in the Depression-era public's esteem when details of her spending were publicized during a trial involving a personal secretary, who had attempted to blackmail Bow based on records she secretly kept of Bow's bedroom visitors.

Bow ended her film career in 1933, in response to her loss of fans' affections and a career sagging under the weight of stock roles in uninspired films. Having discovered the Clara Bow formula, Paramount studio exploited it and her unequalled popularity by sticking her in a series of low budget, predictable vehicles co-starring unknowns. Despite reviewers' praise for 1933's *Hoopla*, constant typecasting as the seductive girl with endless self-confidence—dimensions lacking in her own increasingly fragile identity—disgusted Bow. Her retirement also coincided with the emergence of the "talkies." Though she completed several successful movies requiring dialogue, and her voice did not doom her as it did other stars attempting the silent-to-talkie transition (e.g. Pola Negri and John Gilbert), the strain of controlling her Brooklyn accent and memorizing lines took its toll. She abandoned her film career for marriage and motherhood. As other seminal Hollywood personalities like Greta Garbo would, Bow fled Hollywood and entered into seclusion. Despite her escape from the fishbowl pressures of fading stardom, she experienced severe breakdowns requiring hospitalization.

Bow disappeared from the public eye, but "The 'It' Girl's" legend resurfaced in various cultural expressions. In the 1950s, *Life* magazine featured a photo spread of Marilyn Monroe made up as Bow. In the 1980s, entertainer Madonna billed herself as the new "'It' Girl," and musician Prince featured Bow's picture on the cover of an album. In 1998, a cover of *Vanity Fair* posed the question of whether Hollywood newcomer, Gretchen Mol, might not be the next "'It' Girl." Bow herself identified with Marilyn Monroe, saying of her death, "A sex symbol is a heavy load to carry when one is tired, hurt, and bewildered."

Bowie, David (1947—)

David Bowie is a performer on the cutting edge of music culture, whose glamour, fluid sexual identity, and mystery influenced musicians such as Michael Jackson and Culture Club. Bowie shifted like a chameleon over a career spanning seedy British club performances in the 1960s to successful and extravagant world tours in the 1980s. His incarnations include androgynous space messiah Ziggy Stardust, film roles in art house movies, music videos with Mick Jagger and collaborations with electronic music pioneer Brian Eno. He incited

David Bowie

outrage with frank interviews about his bisexuality and his appearance in a dress on the LP cover of the hard rock album *The Man Who Sold the World* (1970). In the 1990s, the artist invented himself anew as a suave, elegant eccentric and faded from the music mainstream, but he continues to be a style icon and reference point.

—Petra Kuppers

Bowling

Bowling, the sport of throwing a heavy ball down a lane and knocking over pins, has been around for centuries, and has become one of America's most democratic pastimes. Often referred to as the "great cultural leveler," bowling is affordable, allows for the participation of both genders, all ages, skill levels, and classes, and encourages a social camaraderie rare in other competitive sports. In fact, an instructional book written in 1987 said that "one of the greatest benefits of bowling is the development of friendships."

Bowling became widely popular almost as soon as it reached the shores of America, in the early 1800s. The Dutch, Germans, and English helped establish the sport in American colonies. English bowls, or lawn bowling, a sport for blue-bloods, was played outdoors on a bowling green. But the modern form of American bowling derives mainly from the German game of *Kegelspiel*, or kegeling, which used nine pins set in a diamond formation. By the 1800s,

kegeling Germans established New York as the country's "bowling capital." Kegeling, unlike lawn bowling, was enjoyed by German peasants; this reputation as a common-man's sport has characterized bowling throughout its American history. The first indoor alley, Knickerbocker's in New York City, was built in 1840; soon after this, various establishments attracted the lower classes and genteel alike. By the mid-1800s nine-pins became a widely played sport, and even reached the midwest.

After the Civil War, more Germans began their own clubs with bowling lanes, and tried to establish these as clean and family-oriented places. Their efforts at constructing wholesome reputations for their alleys were largely in vain, as most remained dark places located in saloon basements alongside alcohol consumption, gambling, and prostitution. Reformers' attempts to outlaw nine-pins at the end of the nineteenth century, it is fabled, caused alley owners to add an extra pin.

John Brunswick founded the Brunswick Corporation in 1845, which manufactured billiard tables and fine bar fixtures. In 1884 Brunswick added bowling equipment to his line, becoming the first manufacturer of his kind in America. In 1914, he introduced the Mineralite ball made of hard rubber and organized a world tour with which to promote it; considered so revolutionary, the ball was put on display at the Century of Progress Exposition in 1934.

At the turn of the century most bowling alleys were small establishments that provided the working classes with much needed, if less than wholesome, recreation. The cultural impetus toward rationalization and organization at the end of the nineteenth century also influenced bowling. By the 1880s and 1890s people attempted to standardize the rules and the play, and to improve the reputation of individual alleys and of the sport as a whole. Bowling associations were formed in order to attract more female bowlers. In 1887 A.G. Spalding, who was instrumental in forming baseball's National League, wrote *Standard Rules for Bowling in the United States*.

It was Joe Thum, however, who created what most resembled twentieth-century lanes, and therefore became known as the "father of bowling." In 1886 he opened his first successful alley in the basement of his Bavarian restaurant in New York City. In 1891 he built six lanes in Germania Hall, and in 1901 he opened the world's most elegant alley, "The White Elephant," which featured state-of-the-art lanes, electric lighting, and extravagant interior design in order to redefine bowling as a genteel sport, and to compete with other upper-class recreational areas of the time, like theaters and opera houses.

Thum also encouraged other smaller alley owners to adopt standard rules. By the mid-1890s the United Bowling Clubs (UBC) was organized and had 120 members. The American Bowling Congress (ABC), bowling's official governing body, was established in 1895, and held its first tournament in 1901. Women's bowling evolved alongside men's, with the first women's leagues appearing in 1907, and the Women's International Bowling Congress (WIBC) instituted in the 1910s. These bodies continued to push for standardized rules and regulations for the sport, and also maintained the quest to improve the image of the sport, which was still considered a dirty and tawdry pastime chiefly for lower-class gamblers and drinkers.

The various bowling organizations were successful in determining standards for bowling play and the alleys themselves, which have remained constant throughout the twentieth century. Each lane consists of a pin area, the lane itself, and the approach. Ten pins, each 15 inches high and 5 inches at their widest point and made of wood covered with hard plastic, are arranged twelve inches apart in an equilateral triangle at the far end of the lane. Each lane is 41 1/2 inches

wide, 62 5/6 feet long, made of maple and pine, and bordered by two gutters. The balls themselves, which are rolled at the pins, are of hard rubber or plastic, at most 27 inches in circumference, and between eight and sixteen pounds. Each player's turn consists of a "frame"—two chances to knock down all of the pins. Knocking down all ten pins on the first try is a strike, while succeeding with two balls is a spare. Because the scores for strikes and spares are compounded, a perfect game in bowling is 300 points.

By 1920 there were about 450 ABC-sanctioned alleys, a number which grew to about 2,000 by 1929. Prohibition led to the trend of "dry" alleys, and once again helped define the sport as one fit for the entire family. The repeal of Prohibition in 1933 caused an almost immediate push by the breweries for sponsorship. Anxious to get their company names in newspaper sports pages by subsidizing local bowling leagues, beer makers such as Pabst, Schlitz, Blatz, Stroh's, and Budweiser attached their names to teams and individual bowlers, forever cementing bowling's reputation as a working-class sport. Beer-drinking has remained an activity stereotypically associated with bowling; among some players, the fifth frame has been dubbed the "beer frame" and requires the lowest scorer in that frame to buy a round of drinks for the other players.

Also after Prohibition, bowling lanes shifted in style from the fancy Victorian venues and the seedier saloon locales to more independent establishments that embraced the modern Art Deco style. As bowling chronicler Howard Stallings has noted, "The imagery and implements of bowling—the glossy, hard ball speeding down a super-slick blonde, wooden surface, smashing into mathematically arranged, streamlined pins—meshed perfectly with the era's 'need for speed,' the aerodynamic zeitgeist, if you will."

Throughout its history, bowling has remained an affordable sport for the common person. Alleys were located close by, the special shoes needed could be rented, balls were provided by the alley, and the fee for the games themselves was very affordable. It is no surprise, then, that the sport prospered during the Depression and war years, remaining a viable respite for people taxed by financial and emotional burdens. At this time larger institutions also noticed the potential healthful benefits of bowling, causing many alleys to be built in church basements, lodge halls, student unions, industrial plants, and even private homes.

The late 1940s through the 1960s proved to be the golden age of bowling. In 1947 Harry Truman installed lanes in the White House, helping bowling's continual legitimating process among the various classes even more, and defining it as a true national pastime. The same year also saw the first bowling telecast, which helped popularize the sport even more—ABC membership for that year was 1,105,000 (a figure which would grow to 4,575,000 in 1963), and sanctioned individual lanes numbered 44,500 (up to 159,000 by 1963). By 1949, there were over 6,000 bowling centers nationwide. Television proved the perfect medium for bowling because games were easy to shoot and inexpensive to produce. They also fostered the careers of famous bowlers like Don Carter, Earl Anthony, and Dick and Pete Weber. Described as a "quiz show with muscle," the televised bowling program was ubiquitous in the 1950s, and included such telecasts as *Celebrity Bowling*, *Make That Spare*, *Bowling for Dollars*, *ABC's Pro Bowler's Tour*, and *Jackpot Bowling*, hosted by Milton Berle. By 1958 bowling had become a \$350,000,000 industry.

Other factors also contributed to bowling's wide-scale success in the 1950s. The automatic pinsetter patented by Gottfried Schmidt and purchased by AMF (American Machine and Foundry) in 1945, was

An example of bowling.

first put into use in 1952, when the first fully operational system was installed. This marked a revolution in alley technology, because owners and players were no longer reliant on the “pin boys” to reset the pins manually. These young workers, who had the dangerous job of standing at the end of the alley dodging balls and careening pins, were often ill-behaved delinquents and troublemakers. The automatic pinsetter made pin resetting and ball retrieval safer, faster, and reliable, making the game itself more fluid. Brunswick produced their first pinsetter in 1955, and also added air conditioning to their new alleys.

In the late 1950s the alleys themselves became more luxurious, incorporating the latest design trends and materials, with tables and seats made of brightly-colored Formica and looking like something from outer space. A 1959 issue of *Life* magazine described the modern bowling alley as an “all-purpose pleasure palace.” Indeed, much like drive-in theaters, they tried to be all things for all family members, offering services like child care and beauty parlors, and containing carpeted lobbies, restaurants, cocktail lounges, and billiard tables. League play at this time was also at its peak, affording regular and organized opportunities for various groups to form teams and bowl in “friendly competition.”

As the 1960s came to an end, bowling alleys experienced the end of their golden age. Bowling, still rooted in working-class ethics and

camaraderie, could not compete with larger and more exciting spectator sports. This era also marked the decline of serious league play as dedicated bowlers were growing older and younger potential bowlers were opting for other recreational activities that took them out of doors, like jogging and tennis. In spite of this decline, about 79 million people went bowling in 1993, and it was still the most popular participatory sport in the United States, confirming its overwhelming popularity only a few decades before.

As a sport with an indelible blue-collar image, bowling has achieved the status of being an “everyman’s” sport, more synonymous with the American individual character than baseball. It is a uniquely non-competitive sport in which people try to better their own games more than beating others, who are usually friends or family members. In the 1990s it experienced a resurgence in popularity due to its “retro” image, and was a key element in the comedy movies *Kingpin* and *The Big Lebowski*.

Boxing

From John L. Sullivan, the last of the bare-knuckle champions and the first of the gloved, to “Iron Mike” Tyson, the world’s youngest heavyweight champion, the sport of boxing has been consistently dominated by American fighters since the beginning of the twentieth century. No other sport arouses the degree of fascination and distaste as the “Noble Art,” nor has any sport been so consistently vilified. The “Sweet Science” is a world unto itself, rich in tradition, ritual, and argot. Boxing generated a genre of Hollywood film all its own and its implicit drama has been assayed in loving detail by some of America’s greatest writers. While nowhere near as popular now as they were before World War II, championship fights still draw celebrities in droves to Las Vegas and Atlantic City for often disappointing matches. Although a prize fight can still muster some of the frisson of boxing’s heyday, by late in the century the sport was in a period of decline, its status angrily contested.

Boxing traces its roots back to ancient Egypt, where hieroglyphics dating to 4000 B.C. show Egyptian soldiers engaging in a primitive form of the sport, their hands protected by leather straps. From the Nile Delta, boxing spread along the trade routes, south to Ethiopia and along the Aegean coast up to Cyprus, Crete, and the Greek mainland. The Greeks took readily to boxing, including it in their olympic contests, refining the leather coverings for the fist, the cestus, and later, adding a spiked metal attachment to it—the murmex, or limb piercer—that could inflict terrible, often fatal damage. Indeed, bouts went on until one opponent died or was no longer able to stand. Boxers figure heavily in Greek mythology. Theseus, who killed the Minotaur, was a boxing champion as was Odysseus, hero of the

A heavyweight fight between champion Mike Tyson (center) and challenger Frank Bruno (right), 1989.

Trojan Wars and Homer's *Odyssey*, and said to be undefeated in the ring.

The Greek, Aeneas, brought the sport to Rome where it grew in popularity and brutality until with the decline of the Roman Empire, the decadent sport waned in popularity, and then disappeared for a little over a millennium, resurfacing finally in seventeenth century England. Its resurrection has been attributed to the England's republican form of government as well as the English people's affection for the backword contest. For whatever reason, even before 1650 the blind poet Milton, author of *Paradise Lost*, was advocating the practice of boxing as indispensable to the education of the young gentleman in his *Treatise on Education*. It was the eighteenth century champion, Jack Broughton, who refined boxing into roughly the form of the modern fight. In 1742, Broughton erected an amphitheater for the promotion of bare-knuckle contests and to instruct contenders. The following year he published a rule-book which explicated the proper conduct of fighters and their seconds. Broughton also invented the boxing glove, which he patterned after the Roman cestus, filling a leather glove with soft batting. The glove was only used in training;

bouts were still fought with bare knuckles, and would continue to be until the end of the nineteenth century.

Boxing first came to America by way of the aristocratic Old South, as a result of that cultural fealty wealthy families paid to England. According to John V. Grombach, author of *Saga of Sock*, "No family who took itself seriously, and these all did, considered its children had acquired the proper polish unless they were educated in England. . . . These youngsters went to prizefights and were taught boxing in the fast and fashionable company of which they were part. . . . Naturally, when these young dandies returned home they had to show off all they had learned abroad, so they boxed against each other. However, since distances between plantations were great . . . they turned to their personal young slaves." In fact, many of the early professional boxers in America were slaves freed by their masters after the latter had made a considerable fortune off their chattel. In the early nineteenth century, for instance, Tom Molyneux, the son and grandson of boxing slaves, was defeated by the British champion Tom Cribb. Molyneux can be thought of as an anomaly of boxing history, however, for it would be nearly a century before a black

fighter, the heavyweight Jack Johnson, was allowed a shot at a title fight.

Although Grombach assigns the beginning of modern boxing to 1700 A.D., the American era begins with John L. Sullivan, the last of the bare-knuckle fighters. His reign as champion, from 1881 to 1892, saw the introduction of the Marquis of Queensbury rules, which called for gloves, weight classes, and three-minute rounds with one minute intervals of rest in between. His losing bout to “Gentleman Jim” Corbett was held under these new provisions. A flamboyant personality, Sullivan was the first boxer to promote himself as such, touring in theatrical productions between matches. Consequently, his fights drew tremendous crowds; seemingly no one was immune from the desire to witness a loudmouth’s disgrace. Typical of his time, he was violently racist and refused to fight a black man, thus depriving the worthy Peter Jackson, the Australian heavyweight champion, of a chance at the title.

It would take Jack Johnson’s 1908 capture of the heavyweight title from Tommy Burns to overcome the color barrier. After his 1910 defeat of James J. Jeffries, a white heavyweight champion who came out of retirement to vanquish the Negro upstart, the novelist Jack London publicly sought “a great white hope” to challenge Johnson. Johnson’s victory was greeted with public outrage, inflamed by the new champion’s profligate lifestyle. The moral character of a fighter has always been a part of his draw. Johnson drank, caroused, and lived openly with a white women, inflaming public sentiment already predisposed against him. He was finally indicted on a morals charge, and fled the country to avoid prosecution.

“To see race as a predominant factor in American boxing is inevitable,” writes Joyce Carol Oates in her thoughtful book *On Boxing*, “but the moral issues, as always in this paradoxical sport, are ambiguous. Is there a moral distinction between the spectacle of black slaves in the Old South being forced by their white owners to fight to the death, for purposes of gambling, and the spectacle of contemporary blacks fighting for multi-million-dollar paydays, for TV coverage from Las Vegas and Atlantic City?” Over time, the parameters of the racial subtext have shifted, but in 1937 when Joe Louis, a former garage mechanic, won the heavyweight title from James J. Braddock, his managers, leery perhaps of the furor Jack Johnson had caused, carefully vetted their fighter’s public persona, making sure Louis was always sober, polite, and far away from any white women when in the public eye. The colorful “Sugar Ray” Robinson was a showman in the Johnson tradition, but he, too, was careful not to overstep the invisible line of decency.

Black boxers up to the present have been made to play symbolic roles in and outside of the ring. Floyd Patterson, the integrationist civil-rights Negro (who was, incidentally, forced to move from his new house in New Jersey by the hostility of his white neighbors) played the “great white hope” role against Sonny Liston, an unrepentant ex-con street-fighter controlled by the mob. Muhammad Ali, who refused to play the good Negro/bad Negro game, was vilified in the press throughout the 1960s, unpopular among reporters as much for his cocky behavior as for his religious and political militancy. Perhaps race was never quite as crucial an issue in boxing following his reign, but as recently as Mike Tyson’s bouts with Evander Holyfield in the 1990s, racial constructs were still very much a part of the attraction, with Holyfield’s prominently displayed Christianity facing off in a symbolic battle against the converted Muslim and convicted rapist Tyson.

Class is as much a construct in modern boxing as race. Since before the turn of the century, boxing has offered a way out of poverty

for young toughs. For 30 years after Jack Johnson’s reign, boxing champions were uniformly white and were often immigrants or sons of immigrants, Irish, Italian, or Eastern European. Boxing’s audience was similarly comprised. The wealthy might flock to a championship match at Madison Square Garden, but the garden variety bouts were held in small, smoky fight clubs and appealed to either aficionados, gamblers, or the working class. This provided up-and-coming fighters with the chance to practice their skills on a regular basis, and more importantly, made it possible for fighters, trainers, and managers to make a marginal living off the fight game. As entertainment whose appeal marginally crossed class lines, boxing’s status was always contested, and the repeal of prohibition would only exacerbate matters. Organized crime, looking for new sources of income to replace their profits from bootleg liquor, took to fixing fights or controlling the fighters outright (Sonny Liston’s mob affiliations were out in the open, adding to his suspect moral rectitude). In the 1940s and 1950s, Jake LaMotta, for example, a contender from the Bronx, was denied a chance at a championship bout until he knuckled under to the demands of the local Mafia patriarch.

Nourished by the many boxing clubs in the New York area—the undisputed capitol of boxing (to fighters and managers, out-of-town meant anywhere not within the five boroughs of New York)—controlled by the mob, the city was the center of a vital boxing culture. Legendary gyms like Stillman’s Gym on Eighth Avenue were home to a colorful array of boxers and managers. Fighters like Sugar Ray Robinson, Jake “The Bronx Bull” LaMotta, and “Jersey Joe” Walcott were the heroes of the sport. Trainer Cus D’Amato, the Aristotle of boxing, became a legend for discovering new talent among the city’s underclass and resisting all incursions from the mob. D’Amato specialized in saving up-and-coming delinquents from the vagaries of the streets. He would discover heavyweight champion Floyd Patterson and, towards the end of his life, Michael Tyson. Legend has it he slept at his gym with a gun under his pillow. *New Yorker* scribe A. J. Liebling covered the fights and the fighters, leaving an especially vivid portrait of the boxing culture from this time. In his portrait of Manhattan’s boxing milieu, he chronicled not only the fights but the bars, the gyms, and the personalities that made boxing such a colorful sport. Stillman’s (dubbed by Liebling the University of Eighth Avenue), The Neutral Corner, and Robinson’s Harlem Club, Sugar Ray’s, its walls festooned with collaged photos of the flamboyant middleweight, all appear in Liebling’s many boxing pieces. With his characteristic savoir-faire, he chronicled the last great era of live boxing, or as some would say, the beginning of its decline. Television had killed the small boxing clubs. Fighters who showed promise were pushed up through the ranks too quickly, and without the clubs, their inexperience was sadly apparent on the small screen. Championship bouts still drew large crowds, but for the small time managers, let alone boxers, television could not sustain the vibrant culture so characteristic of boxing up to World War II.

Perhaps to fill this void, a string of boxing pictures started to issue from Hollywood starting in the 1940s. Because of boxing’s physicality, moral and psychological truths can be presented in stark contrast. The drama is enacted on the boxer’s body, the repository of truth and deception, and the fighter’s failure/success is inscribed upon it. Aside from the standard boxing biopic (*Golden Boy*, 1939; *Body and Soul*, 1947; *Champion*, 1949; *Somebody Up There Likes Me*, 1956; *Raging Bull*, 1980), two myths predominate: the triumph of the underdog through perseverance, and the set-up, in which the boxer (the innocent) is undone by the system. The *Rocky* films are perhaps the best known of the former category, recasting the myth in an

unabashedly sentimental light. Among the latter, Elia Kazan's *On The Waterfront* (1954), while not technically about boxing, manages to depict the frustrating position of the boxer, dependent on the vagaries of luck and the cooperation of organized crime for a successful career. (Marlon Brando's "I shoulda been a contender" speech immediately entered the popular lexicon, as has his portrait of the paradox of the gentle boxer, murderous in the ring, good-natured outside it). Other films in the latter category include *Requiem for a Heavyweight* (1962), *The Harder They Fall* (1956; based on the preposterous career of Italian circus strong-man, the giant Primo Carnera), and *The Set-Up* (1949), as is Martin Scorsese's triumphant *Raging Bull*, perhaps the most psychologically penetrating of any boxing film.

Boxing has also inspired some great writing. From the chronicler of the English Prize Ring, Pierce Egan, author of *Boxiana* (frequently quoted by Liebling) to Norman Mailer's celebrated book of essays on Muhammad Ali, boxing, being a wordless sport, invites others to define it, to complete it. Hemingway, Ring Lardner, Budd Schulberg, Nelson Algren, Jack London, and many others have written stories on boxing, and some of the best American journalists, not necessarily sports writers, have devoted considerable cogitation to the sport. The locus of modern boxing writing is Muhammad Ali, who was as much a cultural phenomenon as a sports figure, but this does not begin to describe the reason why an anthology of essays was published chronicling his career, nor that writers of the stature of a Tom Wolfe or Hunter S. Thompson have felt it incumbent to weigh in on the subject.

Perhaps it is because boxing is such a personal endeavor, so lacking in artifice, that one cannot hide, neither from one's opponent or from oneself. "Each boxing match is a story—a unique and highly condensed drama without words," writes Joyce Carol Oates. "In the boxing ring there are two principal players, overseen by a shadowy third. The ceremonial ringing of the bell is a summoning to full wakefulness. . . . It sets in motion, too, the authority of Time." This then, is boxing's allure: In the unadorned ring under the harsh, blazing lights, as if in an unconscious distillation of the blinding light of tragedy, the boxer is stripped down to his essence. In other words, boxing "celebrates the physicality of men even as it dramatizes the limitations," in the words of Oates, "sometimes tragic, more often poignant, of the physical."

There can be no secrets in the ring, and sometimes painful truths the boxer is unaware of are revealed before the assembled audience and spectral television viewer. In the three bouts that destroyed Floyd Patterson's career—two against Sonny Liston, and one against Muhammad Ali—Patterson was so demoralized, his faults and emotional weaknesses set in such high relief, that it is a wonder he didn't retire immediately following the 1965 Ali bout (he was already known for packing a fake beard in his luggage, the better to flee the arena). More vividly, Mike Tyson's frustrated mastication of champion Evander Holyfield's ear during their 1997 rematch revealed not only Tyson's physical vulnerability but confirmed an emotional instability first hinted at after his 1993 rape conviction.

Boxing, it would seem, is a sport that runs through periodic cycles. Recently, it has been taken up by women—who have begun to fight professionally—and affluent professionals who have taken up the sport not so much to compete as to train, a boxer's regimen being perhaps the most arduous of any sport. New gyms have sprung up to accommodate this new-found popularity, but they are more often franchises than owner-run establishments. Already a new generation, nourished on *Rocky* pictures, seems to have taken to the arenas to

enjoy the live spectacle of two men—or women—slugging it out. But in essential ways, boxing has changed. There are now four different federations—the WBC, the IBF, the WBA, and the WBO—and 68 World Champions, as compared to eight in "the old days." The cynic would attribute this fragmentation to economics: the more championship bouts, the more pay-per-view cable TV profits (the money from box-office revenues comprises only a small fraction of the net profit). Consequently, championship bouts have lost much of their inherent drama inherent in a unified championship match, and the quality of the matches have also decreased, since fighters have so few chances to practice their craft.

Regardless of the devitalizing effects of cable television and multiple boxing federations, boxing still retains a powerful attraction. No sport is so fraught with metaphorical implications, nor has any sport endured for quite so long. Boxing, as Oates points out, aside from going through periods of "crisis" is a sport of crisis. Its very nature speaks to someplace deep in our collective psyche that recognizes the paradoxical nature of violence. Managers and promoters may cheat and steal, matches may be fixed, but when that rare bout occurs where the fighters demonstrate their courage, skill, and intelligence, the sport is redeemed. Boxing is a cyclical sport, rooted ultimately in the vagaries of chance. When will a new crop of talented contenders emerge? That is something no one can predict. The public awaits the rising of new champion worthy of the name, and the promoters await him just as eagerly.

Boy Scouts of America

The young people, dressed in uniform, seem part of a tradition from a bygone era. Some cheer as the small, homemade go-carts spin down the track; others struggle to make the perfect knot or pitch in to help clean up the local park. They serve as a emblem of the conformity of the 1950s and the desire to connect our children with

A group of Boy Scouts with their Scout Master.

“rustic” ways of life. In the final judgment, though, these contemporary kids are simply having fun while learning valuable lessons. In an era when scouting has needed to redefine its mission, many of its basic initiatives still possess great worth to society.

Even though contemporary organizations have appealed to boys and girls, scouting began as a gendered organization. At the dawn of the twentieth century, an American boy’s life was often either idyllic or full of drudgery, depending on his family’s circumstances. During the decade before the Boy Scouts of America (BSA) were founded in 1910, the families of a handful of industrialists lived sumptuously while the vast majority of the population lived much more simply. The Gilded Age of the nineteenth century had brought wealthy Americans a genuine interest in rustic living and the outdoors. Many wealthy urbanites began sending children to summer camps that could provide their children with a connection to the culture of outdoors. Theodore Roosevelt and others began organizations such as the Boone and Crockett Club or the Izaak Walton League. Each group had an offspring for younger male members, with Sons of Daniel Boone proving the most popular. Neither, however, truly sought to reach young men of all economic classes. Ernest Thompson Seton, artist and wildlife expert, founded the Woodcraft Indians in 1902.

Interestingly, he chose to unveil the group through articles in the *Ladies Home Journal*. Shortly afterwards, Seton became the first Chief Scout of BSA when it was established by Robert Stephenson Smyth Baden-Powell.

Early scouting undoubtedly fostered male aggression; however, such feelings were meant to be channeled and applied to “wilderness” activities. Many scholars see such an impulse as a reaction to the 1893 speech by historian Frederick Jackson Turner when he pronounced the frontier “closed.” Turner and many Americans wondered how the nation could continue to foster the aggressive, expansionist perspective that had contributed so much to its identity and success. The first BSA handbook explained that a century prior, all boys lived “close to nature.” But since then country had undergone an “unfortunate change” marked by industrialization and the “growth of immense cities.” The resulting “degeneracy” could be altered by BSA leading boys back to nature.

Roosevelt’s personality guided many Americans to seek adventure in the outdoors and the military. BSA sought to acculturate young men into this culture with an unabashed connection to the military. Weapons and their careful use, as well as survival skills, constructed the basis for a great deal of the activities and exercises conducted by

Baden-Powell, a major-general in the British Army. The original Boy Scout guidebook was partly based on the Army manual that Baden-Powell had written for young recruits. World War I would only intensify youth involvement in scouting. The perpetuation of scouting during the post-1950 Cold War era, however, is more attributable to a national interest in conformity and not in militancy. It was only during the early years that such associations with the military were openly fostered.

Seton visited Baden-Powell in London in 1906, where he learned about the Boy Scouts organization. Upon returning to the United States, Seton began gathering support for an organization that would “offer instruction in the many valuable qualities which go to make a good Citizen equally with a good Scout.” The first Boy Scout manual, *Scouting for Boys*, contained chapters titled Scoutcraft, Campaigning, Camp Life, Tracking, Woodcraft, Endurance for Scouts, Chivalry, Saving Lives, and Our Duties as Citizens. In 30 years the handbook sold an alleged seven million copies in the United States, second only to the Bible.

Working in cooperation with YMCA (Young Men’s Christian Association), the BSA was popular from its outset in 1908. This coordination was particularly orchestrated by William D. Boyce, who guided the official formation of BSA in 1910. The BSA network spread throughout the nation, and in 1912 included *Boys’ Life*, which would grow into the nation’s largest youth magazine. Most educators and parents welcomed scouting as a wholesome influence on youth. Scores of articles proclaimed such status in periodicals such as *Harper’s Weekly*, *Outlook*, *Good Housekeeping*, and *Century*.

Within the attributes derived from scouting were embedded stereotypes that contributed to gender roles throughout the twentieth century. Girl scout activities followed scouting for males, yet possessed a dramatically different agenda. Instruction in domestic skills made up the core activities of early scouting for females. Maintaining a connection with nature or providing an outlet for aggressions did not cohere with the ideals associated with the female gender in the early twentieth century. Such shifts would only begin after 1950; however, even today, scouting for girls is most associated with bake sales and the famous girl scout cookies. Still, scouting for both genders has become similar, particularly emphasizing outdoor experiences

Contemporary scouting has changed somewhat, but it also maintains the basic initiatives of early scouting. Most attractive to many parents, scouting involves young people in community outreach activities. In an era when many families find themselves in suburban developments away from community centers or frequently moving, scouting offers basic values including service to others in the community. The proverbial scout aiding an older woman across a street may be a thing of the past, but scouts still work in a variety of community service tasks. These values also continue to include patriotism under the rubric “service to God and country.” The inclusion of God, however, has not held as firmly in contemporary scouting. Some parents have refused to let their children participate in any of the quasi-religious portions of scouting, which has led to a few scouts being released. Over BSA’s century of life, though, the basic values of scouting have remained strong, while activities have been somewhat modified. Though well known activities such as the “pinewood derby” and “jamborees” continue, the culture of scouting has begun to reflect a changing generation. While its popularity does not near that of the earlier era, the culture of scouting continues to help young Americans grow and mature into solid citizens.

Bra

The brassiere, more commonly referred to as “the bra,” was one of the most influential pieces of women’s apparel in the twentieth century. As an item of underwear that was never intended to be seen in public, it shaped women’s breasts and presented them to the public in ways that responded to and reflected ideas about women’s bodies and their roles in American culture. That the bra went through so many radical changes in design shows how important breasts themselves were in a culture that eroticized, idolized, and objectified them.

Until the first decade of the twentieth century, women relied on the corset as their main undergarment. Rigid, tightly laced to form a “wasp waist,” and covering the area from the crotch to the shoulders, the corset was an oppressive article that made it difficult for women to breathe, bend over, or even sit down. In the first decade of the twentieth century, however, breasts were liberated from the corset through the invention of a separate garment which would provide them shape and support. The brassiere, first sold in France in 1907, allowed women to be more comfortable but also meant that society began considering breasts more as objects—almost as separate entities from women’s bodies themselves. The “ideal” breast shape changed with developing technologies, fashions, and perceived roles of women.

New York debutante Mary Phelps Jacobs patented the first bra in the United States in 1914, a device which supported the breasts from shoulder straps above rather than pressure from below, as the corset had done. Jacobs eventually sold the rights to her “Backless Brassiere” to the Warner Brothers Corset Company. In 1926, Ida Rosenthal and Enid Bissett, partners in a New York dress firm who did not like the 1920s flapper look that preferred flat chests and boyish figures, sewed more shapely forms right into the dresses they made, and eventually patented a separate bra “to support the bust in a natural position”; they went on to found the successful Maiden Form Brassiere Company.

By the 1930s the separate bra and underpants had become the staples of women’s undergarments. In this same decade the Warner Company popularized Lastex, a stretchable fabric that allowed women even more freedom from their formerly constrictive underclothing. In 1935 Warner’s introduced the cup sizing system (A through D), which was very quickly adopted by all companies, and assumed that women’s bodies could easily fit into distinct and standard categories of size.

Rationing during World War II meant that women had to forego fancy bras of the latest materials, but after the war they reaped the benefits of wartime technology. Bras appeared in nylon, rayon, and parachute silk. In addition, they incorporated “whirlpool” stitching

A woman displays her divested bra during Anti-Bra Day in San Francisco, 1969.

which formed the individual cups into aggressive cones. Maiden Form's 1949 Chansonette, more popularly known as the "bullet bra," became its most popular model, and was a clear example of how women's bodies were shaped by the aesthetics and mindset of the time. After the war, jutting breasts recalled the designs of weaponry like rockets used in the conflict, and also symbolized society's desire for women to forego their wartime jobs and retreat back into the homes to become capable wives and mothers. As if to circumscribe their roles even more, in 1949 Maiden Form also inaugurated its long-lasting "Dream" advertising series, which showed women in numerous situations "dreaming" of various accomplishments, clad only in their Maidenform bras. In the 1950s Playtex began the first bra and girdle advertising on television, but the bras were modeled on plastic bust forms. It was not until the 1990s that television allowed bras to be shown on live models.

While the shape and relative status given to women's breasts in the 1950s reflected women's domestication, their liberation in the 1960s equally expressed women's newly perceived freedom. More and more women saw their breasts as items packaged to suit men's tastes. Acting against this, many went braless and preferred the androgynous appearance of their flapper grandmothers celebrated in the waif-like look of models like Twiggy. Brassiere companies made consultations to accommodate this new sensibility as well. Their

designs became relaxed, giving breasts a more "natural" shape than their pointed precursors. Rudi Gernreich, most famously known for his topless bathing suit, designed the "no-bra bra" in 1965, which was meant to support the breasts but to be invisible. In 1969 Warner's finally caught up with this trend, designing and producing their own Invisible Bra.

By the late 1960s the bra itself became an important political symbol. The first "bra burning" demonstration happened at the 1968 Miss America Pageant, when poet Robin Morgan and members of the Women's Liberation Party picketed the event and threw their bras in a trash can as a gesture against women's objectification. That they actually burned their bras at this demonstration was a myth started by a reporter who likened the event to flag-burning and other incendiary activities of popular protest. After that, bra burning became an overt statement of feminism and women's liberation, and "bra burners" a derisive label for activist women involved in the struggle for equal rights.

By the 1980s and 1990s, America saw a return to more delicate lingerie, hastened by the opening and rapid franchising of Victoria's Secret lingerie stores beginning in 1982. As in the 1950s, breasts were seen as something to display—status symbols for the women who possessed them and the men who possessed the women. In 1988 the push-up bra returned as a less-than-permanent alternative to breast enhancement surgery, which was just becoming popular. The value of

large breasts during the late 1980s and through the 1990s was seen alternatively as a positive embodiment of women's new power and assertiveness in the business world and a backlash against feminism that continued to objectify women and their body parts.

Madonna encapsulated these tensions in her 1991 *Truth or Dare* film, a documentary showing a behind-the-scenes glimpse of her performances. In it, she sported a pin-striped business suit whose slits opened to reveal the cups of a large, cone-shaped pink bra designed by Jean-Paul Gaultier. The juxtaposition of the oversized bra cups, dangling garter belts, and business suit presented a parody of traditional gender roles. Her use of these symbols best expressed the power of clothing—layers which could be seen and those which could not, equally—and the power of women to present their bodies in ways that either acquiesced to or subverted the current power dynamics between the genders.

Bradbury, Ray (1920—)

Although well-known to and beloved by many as a leading writer of science fiction, Ray Bradbury is a far more complicated subject than most may realize. In the world of science fiction, he is an object of admiration and dismay, while outside the genre, he is an enigmatic figure who blends a lyricism, nostalgia, and scientific possibility in ways that surprise and delight.

Ray Bradbury was born on August 22, 1920 in Waukegan, Illinois, the third son of Spaulding Bradbury and Esther Marie Moberg Bradbury. By age eight, Bradbury had discovered pulps like *Amazing Stories*, which he began to read voraciously. His father suffered the trials of most Depression-era Americans, moving his family from and back to Waukegan three times, before finally settling in Los Angeles in 1934. That year, Bradbury began to write in earnest, publishing in an amateur fan magazine in 1938 his first story, "Hollerbochen's Dilemma." In 1939 Bradbury started publishing his own fan magazine, *Futura Fantasia*; in 1941 he began attending a weekly writing class taught by science fiction master Robert Heinlein.

In 1941, Bradbury, with coauthor Henry Hasse, published his first paid short story, "Pendulum," in *Super Science Stories*. Up until this time, Bradbury had been selling papers, a job he gave up in 1942 in order to write full-time. That year he wrote "The Lake," the first story written in the true "Bradbury style." Three years later, he began to publish in the better magazines, at which point various short stories started to receive national recognition: "The Big Black and White Game" was selected for the *Best American Short Stories 1945*;

Ray Bradbury

"Homecoming" for the O. Henry Awards *Prize Stories of 1947*; "Powerhouse" for an O. Henry Award in 1948; and "I See You Never" for *Best American Short Stories 1948*. In 1949, Bradbury was selected by the National Fantasy Fan Federation as best author in 1949. Meanwhile, as he collected more accolades, his personal life also took a fateful swing. In 1947 he married Marguerite McClure, by whom he had four daughters.

Bradbury's major breakthrough came in 1950 with *The Martian Chronicles*, his story cycle of Earth's colonization and eventual destruction of its Martian neighbor. Although the quality of work could easily have stood on its own merits, the strong praise it received from Christopher Isherwood, Orville Prescott, Angus Wilson, and Gilbert Highet established Bradbury as a writer of national merit. Bradbury capitalized on the confidence expressed in his capacity to imagine and write boldly with such seminal works as *The Illustrated Man* (1951), *Fahrenheit 451* (1953), *Dandelion Wine* (1957), *Something Wicked This Way Comes* (1962), and his many excellent short-story collections.

Despite his apparent dominance of the science fiction field, a number of science fiction writers thought the prominence given him by literati unfamiliar with the genre was both unfair and uninformed. Mutterings against Bradbury's qualifications as a writer of "true" science fiction surfaced in 1951 with Edward Wood's "The Case Against Ray Bradbury," in the *Journal of Science Fiction*. This was followed by more substantive criticisms in James Blish's *The Issue at Hand* (1964) and Damon Knight's *In Search of Wonder* (1967). In general Blish and Knight, as well as Thomas M. Disch, Anthony Boucher, and L. Sprague de Camp, would argue that Bradbury's

lyrical approach to his topic emanated from a boyish nostalgia that was, at heart, anti-scientific. Yet despite this vigorous criticism, Bradbury fans have remained legion, while more than enough critics have pointed out in return that such criticisms of Bradbury's brand of science fiction offer counter definitions of the genre so narrow they denied it the very richness Bradbury's own fictional style imparted to it.

Whatever the case may be, there is no sidestepping Bradbury's achievement as a writer. What he brings to science fiction is a vision that transformed the steady-state prose of science—applied with so much rigor to fiction by such writers as Isaac Asimov and Arthur C. Clarke—into the lyricism of poetry. Kingsley Amis latches on to this very quality in Bradbury's prose when he writes in *The Maps of Hell*, "Another much more unlikely reason for Bradbury's fame is that, despite his tendency to dime-a-dozen sensitivity, he is a good writer, wider in range than any of his colleagues, capable of seeing life on another planet as something extraordinary instead of just challenging or horrific." By way of example consider the lyricality of the first sentence in Bradbury's description of the colonization of Mars in *The Martian Chronicles*: "Mars was a distant shore, and the men spread upon it in waves." The artfulness of this one sentence, in which "shore" functions as a metaphor that resonates with "waves," is a small illustration of the poetic sensibility so often absent from the common-sense anti-lyricism of postwar science fiction prose. In short, Bradbury's achievement was not to write science fiction in a prose that was anti-scientific in spirit, but to create a subgenre of science fiction that no longer treated poetry as a form of anti-science. In short, Bradbury restored wonder to a genre that, without him, might have proven dull, indeed.

Despite Bradbury's association in the public mind with science fiction, he has shown himself far too ambitious to be limited to a single genre. Bradbury has successfully published in other genres. A closer reading of much of his fiction will reveal tales that, despite their lyrical and overimaginative tone, are, for all intents and purpose, exemplars of light realist fiction, from his autobiographical novel *Dandelion Wine* to the amusing "Have I Got a Candy Bar for You!" Bradbury also has taken stabs at writing drama, poetry, screenplays, detective fiction, and even musical compositions. Although he has never achieved the fame in these genres that he has in his science fiction, there is little doubt the extension of his horizons as a writer into these genres is the direct result of his continuing interest in challenging his limits as a writer, just as he once challenged the limits of science fiction itself.

—Bennett Lovett-Graff

Bradley, Bill (1943—)

A man of many talents, former New Jersey Senator Bill Bradley perhaps best embodies the modern idea of a Renaissance man. Bradley was an All-American basketball player at Princeton University, then went on to star with the New York Knicks after a stint in Oxford, England as a Rhodes Scholar. Public service beckoned Bradley and he won his first political office in 1978. Despite his wealthy upbringing, Bradley has had to work hard for every success in his life.

Born July 28, 1943, William Warren Bradley led a very organized and orderly childhood. He used to set aside four hours per day for basketball practice. At the time of his high school graduation in 1961, Bradley had scored 3,066 points and had been named to *Scholastic* magazine's All-American team twice. This success on the court earned the attention of many prominent college coaches. Despite offers from better known basketball powerhouses, Bradley chose to attend Princeton University for its prestigious academic environment.

While starring at Princeton, Bradley made All-American three times and was named National Association of Basketball Coaches Player of the Year in 1965. One of Bradley's highlights as an amateur athlete was being a member of the gold medal winning American Olympic team in 1964. After his career, several professional basketball teams courted him for his services. Undeterred, Bradley chose instead to pursue further study at Oxford University as a Rhodes Scholar. While overseas, Bradley picked up the game again and saw that he missed the athletic competition. After playing some for an Italian professional team, he decided to join the New York Knicks in 1967.

Professional basketball in the 1970s was not the kind of place one would expect to find the intellectual Bradley. Teammates once cool toward Bradley warmed to this Ivy League golden boy after they realized his tremendous heart and work ethic. The Knicks went on to win two NBA championships with Bradley playing integral roles in both. He retired from the game in 1977 and was named to the Basketball Hall of Fame in 1982.

With one career complete, Bradley turned down several business offers and decided to pursue public service. The popular ex-Knicker won his first office in 1978, as he defeated Republican nominee Jeffrey K. Bell for the New Jersey senatorial race, a seat he would hold for three terms. Senator Bradley would champion issues like the environment, education, and natural resources. He is perhaps best known for the Tax Reform Act of 1986, which followed many of the ideas on tax reform he laid out in his book, *The Fair Tax*. He was briefly mentioned as a candidate for the presidency in 1988, then again in 1992. A moderate Democrat, Bradley became respected and revered throughout the senate and the nation. After his retirement from the Senate, Bradley wrote *Values of the Game* in 1998, about the life lessons he learned from basketball. Its publication again brought Bradley to the media forefront and sparked rumors about his candidacy for the Democratic presidential nomination in 2000.

Bradshaw, Terry (1948—)

A country-bred, southern farm boy with a strong passing arm, Terry Bradshaw used the principles of discipline and hard work that he learned as a child to become one of the greatest quarterbacks the game of football has ever seen. His career statistics still stand as a substantial lifetime achievement for any player: two Super Bowl MVPs, 27,989 yards gained, 212 touchdowns passed, and 32 touchdowns rushed in his fourteen-year National Football League career. Though his football fame ensured him a shot at a career as a sports commentator, it is Bradshaw's down-to-earth, unpretentious style that continues to endear him to his audience.

Bradshaw was born in Shreveport, Louisiana, and raised in a farming family. "I was born to work, taught to work, love to work," he said. Even on the football field, he performed his job faultlessly, developing the pinpoint accurate passing that would become his trademark. He attended college at Louisiana Technical University, where he made All-American, an unusual honor since Louisiana Tech was not a Division I team. In 1970, quarterback Bradshaw was the first player selected in the professional football draft.

For the next twelve years the Louisiana boy with the perfect spiral pass led the Pittsburgh Steelers to victory after victory, including four Super Bowl championships. The Steelers were the first team

Terry Bradshaw

to win four Super Bowls, and, in 1979 and 1980, Bradshaw was only the second player ever to win recognition as Most Valuable Player in two back-to-back Super Bowls. Bradshaw was the unanimous choice for the MVP honor in Super Bowls XIII and XIV, a phenomenon that had not occurred since Bart Starr won back-to-back MVP honors in Super Bowls I and II.

By 1982, Bradshaw's amazing passing arm was beginning to show signs of damage. He toughed it out, playing in pain through much of the 1982 season, but the doctors' diagnosis was chronic muscle deterioration, and the prescription was surgery. In March of 1983, Bradshaw underwent the surgery, but he could not withstand pressure from Steelers coach Chuck Noll to return to the game. He resumed playing too soon, causing permanent damage to his elbow. Bradshaw played only a few games in the 1983 season, then was forced to retire.

Though regretting that his retirement from the playing field had not been on his own terms, Bradshaw continued to make football his career. In 1989, he was inducted into the Football Hall of Fame, and the next year he went to work for CBS as co-anchor of *NFL Today*. He worked for CBS for four years, then the FOX network doubled his salary and hired him as a game-day commentator and host of *FOX NFL*. FOX also made surprising use of Bradshaw's homespun talents by giving him a daytime talk show. *Home Team with Terry Bradshaw* was described by one executive as "Martha Stewart meets Monday Night Football." Pundits wondered how the rugged football veteran would handle the traditionally female forum of daytime talk, but Bradshaw's easygoing style seemed to take it all in stride. In fact, it is Bradshaw's unapologetic country-boy persona that seems to appeal to fans. Though critics have called his commentary incompetent and even buffoonish, Bradshaw's "just folks" approach continues to make him popular. His response to critics has been typically disarming, "I stutter, I stammer, I scratch, and I do it all on live television . . . I can't help it. It's me. What are you going to do about it? You can't change who you are."

Bradshaw has appeared in many movies, often alongside fellow ex-football star Burt Reynolds, and has ambitions to have his own television situation comedy. A Christian who found his religion while watching Monday Night Football, he has released two successful gospel albums. However, he has never become part of the entertainment establishment, and he is happiest at home on his Texas cattle ranch, working hard.

The Brady Bunch

The Brady Bunch was one of the last domestic situation comedies which populated television during the 1950s and 1960s. While it flew below Nielsen radar in its original run, its popularity in syndication led to frequent reincarnations through the 1990s. Generation X viewers treated the series with a combination of irony and reverence.

The cast of *The Brady Bunch*.

In 1966, *Gilligan's Island* executive producer Sherwood Schwartz read a newspaper item stating that 30 percent of American families were stepfamilies—where one or both parents were bringing into a second marriage children from a first marriage ended by death or divorce. Schwartz quickly realized that while TV sitcoms either featured traditional, two-parent families (*Make Room for Daddy*, *Leave it to Beaver*) or families headed by a widow or widower (*The Ghost and Mrs. Muir*, *My Three Sons*), no comedy had yet focused on a merging of two families. He spent the next three years developing a series based on this premise. By the time *The Brady Bunch* debuted in the fall of 1969, Hollywood had explored the subject with two box-office hits, *With Six You Get Eggroll* and *Yours, Mine, and Ours* (Schwartz planned to call his sitcom *Yours and Mine*).

The simple theme song laid out the storyline: Mike Brady (played by Robert Reed), a widower architect with three sons—Greg, Peter, and Bobby—met and wed Carol (Florence Henderson), a single mother with three blonde daughters—Marcia, Jan, and Cindy. The series never explained what happened to Carol's first husband; Schwartz intended Carol to be TV's first divorcee with children. The blended family moved into a giant house designed by Mike in the Los

Angeles suburbs, complete with a practical and seemingly tireless maid, Alice (Ann B. Davis).

Most of the plots dealt with the six Brady children and the travails of growing up. Schwartz has said the series “dealt with real emotional problems—the difficulty of being the middle girl, a boy being too short when he wants to be taller, going to the prom with zits on your face.” Frequently the storylines centered around one of the children developing an inflated ego after receiving a compliment or award; Greg becoming a baseball maven after being coached by Hall of Fame pitcher Don Drysdale, or Cindy turning into an arrogant snob upon being chosen for a TV quiz show. Invariably public or private humiliation followed and, with the loving support of parents and siblings, the prodigal child was inevitably welcomed back into the Brady fold. In contrast to the “real” problems dealt with on the show, *The Brady Bunch* explored more fantastic stories on location several times, including vacations to the Grand Canyon (where the family was taken prisoner by a demented prospector) and, more famously, to Hawaii (where the Brady sons were taken prisoner by a demented archaeologist).

The series never cracked the Top 25 ratings during its initial run, but was enormously popular with the 17-and-under age group. The

child actors were prominently featured in teen magazines of the early 1970s, and even formed a pop music group in the style of such TV-inspired groups as *The Monkees* and *The Partridge Family*. Barry Williams, who played eldest son Greg, received upwards of 6,500 fan letters a week. There was also a Saturday morning cartoon spun off from the show, *The Brady Kids*.

The show was cancelled in 1974, and that fall entered syndication, generally airing during the late afternoons. In this child-friendly time period, *The Brady Bunch* became a runaway syndicated hit. In 1977, the cast (minus Eve Plumb, the original Jan) reunited on ABC for *The Brady Bunch Variety Hour*, a bizarre hour-long series featuring inane skits and production numbers; most of the cast could not even dance in step. It was cancelled after several months and is often considered the worst variety show in television history.

The original series' popularity in reruns spurred more reunions, however. *The Brady Girls Get Married* was a 1980 NBC special where Marcia and Jan find husbands. The special led to another short-lived sitcom, *The Brady Brides*, with the two newlywed couples sharing living quarters (in typical sitcom fashion, one husband was an uptight academic, while the other was a laid-back toy salesman).

The biggest Brady-related TV event came in December 1988, with the broadcast of the TV movie *A Very Brady Christmas*. The six children (most with spouses, significant others and children in tow) congregated at the Brady manse to celebrate the holidays. While working at a construction site, Mike was trapped under debris after an accident. Carol and the extended family sang Christmas carols as he was rescued; ironically enough, the location of this Christmas miracle was on 34th Street. It was the highest rated TV movie of the 1988-1989 season, and launched yet another Brady series. *The Bradys* (CBS, 1990) was an hour-long drama attempting to bring serious problems to the Brady landscape. In the series debut, Bobby, now a racecar driver, was paralyzed in a NASCAR accident. Jan and her husband tried in vain to conceive a child. Mike ran for Los Angeles City Council, and stood accused of taking bribes. Marcia became an alcoholic. The series lasted only half a season.

But the original series continues to fascinate. During the early 1990s, theater groups in New York and Chicago staged *The Real Life Brady Bunch*, reenacting complete episodes of the series, on occasion using actual *Brady Bunch* actors in cameo roles.

The series was something of a touchstone to people born during the 1960s and 1970s, many of whom grew up in single-family households or who, like the children in the series, became part of a stepfamily. "The *Brady Bunch*, the way I look at it," Schwartz said in 1993, "became an extended family to those kids." *Brady Bunch* fans developed the singular ability to identify a given episode after only the first line of that episode's dialogue. The 1970s dialogue ("Groovy!" "Far out!") and outrageously colored polyester clothes inspired laughs from 1980s and 1990s audiences. Many of the curious production elements (Why would an accomplished architect such as Mike Brady build a home for six teenagers with only one bathroom? And why didn't that bathroom have a toilet? Why was the backyard lawn merely carpeting? Why didn't any of the windows in the house have panes?) were cause for late-night debate in college dorms and coffee shops. *Letter to the Next Generation*, Jim Klein's 1990 documentary on apathetic college students, had a montage of disparate cliques of Kent State University students singing the complete *Brady Bunch* theme song.

In the spring of 1992 Barry Williams's *Growing Up Brady* was published, a hilarious bestseller recounting the history of the series

and reflecting on what being a "Brady" meant. Williams shared inside gossip:

Reed, a classically-trained actor and veteran of the acclaimed TV drama *The Defenders* (1961-1965), regularly sent sarcastic notes to Schwartz and the production staff attacking the simplistic storylines and character development. Had the series continued for a sixth season, Schwartz was willing to kill off Mike Brady and have the series revolve around the six kids fixing up the newly single Carol.

The 15-year-old Williams went on a chaste date with the married Henderson. Williams also stated that he dated "Marcia," and that "Peter" and "Jan," and "Bobby" and "Cindy" had similar relationships during the show's run.

Williams admitted that he filmed part of one 1972 episode ("Law and Disorder") while under the influence of marijuana.

Shortly after Williams's book was published, Robert Reed died of colon cancer at age 59. It was subsequently announced that Reed's cancer was caused due to the AIDS virus. The revelation that Reed, the head of TV's most self-consciously wholesome family, had a hidden homosexual life was as stunning to Generation X viewers as news of Rock Hudson's homosexuality had been to many of their parents.

In the tradition of *Star Trek* and *The Beverly Hillbillies*, *The Brady Bunch* became fodder for a full-length motion picture. To the surprise of many, *The Brady Bunch Movie* (1995) was a critical and box-office smash. The film wisely took a tongue-in-cheek approach to the material, planting the defiantly-1970s Brady family smack dab in the middle of 1990s urban Los Angeles. "Hey there, groovy chicks!" the fringe-wearing Greg courted grunge classmates. There were numerous references to *Brady Bunch* episodes, and cameos from Williams, Henderson, and Ann B. Davis. *A Very Brady Sequel* (1996) continued the approach to equal acclaim.

Schwartz came to comedy writing after receiving an master's degree in biochemistry, and began as a writer for Bob Hope prior to World War II. He won an Emmy as a writer for *The Red Skelton Show* in 1961. The knack for creating popular entertainment clearly runs in the family—brother Elroy wrote for *The Addams Family* and *My Three Sons*, son Lloyd co-produced *The Brady Bunch*, and two of his nephews created the international hit TV series *Baywatch*.

Brand, Max (1892-1944)

Pulp novelist Max Brand earned millions of dollars from his writing. Like many pulp writers, however, he did not feel that his work was worth very much. Brand wrote over 300 novels in genres such as detective fiction, spy stories, medicine, and fantasy. But he is primarily known for westerns such as *The Bells of San Carlos*, *The Bells of San Filipo*, *Bull Hunter*, and *Donnegan*. Clearly able to diversify his talents, Brand also achieved great fame and fortune through his Hollywood film writing. His *Destry Rides Again* inspired numerous imitators, including television's *Maverick*.

Brand, born Frederick Faust, was orphaned at an early age and raised in poverty, but grew up with high literary ambitions. Despite being known as a great western writer, Brand preferred to live in an Italian villa. He spent his time there writing pulp fiction in the morning and serious poetry in the afternoon. He was well read in the classics and often used themes from them in his western tales, for example he used the Iliad in *Hired Gun*. Without question the King of the Pulps, Brand averaged about one million words a year. Outside of his westerns, Dr. Kildare was his most famous creation. His readers were intensely loyal and reached into the millions. Although he preferred that his personal life remain mysterious, he did occasionally offer fans glimpses of himself in autobiographical short stories. In *A Special Occasion*, for example, one of the main characters shares many similarities with Brand—his marriage is on the rocks, he has a mistress who is a clinging vine, he longs for a better profession, and sometimes drinks to excess.

Brando, Marlon (1924—)

Marlon Brando remains unchallenged as the most important actor in modern American Cinema, if not the greatest of all time. Though a number of mainstream critics were initially put off by his slouching, brooding “method” style, he was nominated for an Academy Award in only his second film, *A Streetcar Named Desire* (1951), and went on to repeat the accomplishment with each of his next three performances: *Viva Zapata* (1952), *Julius Caesar* (1953), and *On The Waterfront* (1954), with the latter performance finally resulting in the Oscar for best actor.

Handsome enough to be a leading man and gifted enough to lose himself in his characters, Brando brought an animalistic sensuality and rebelliousness to his portrayals unseen in Hollywood before. Not

Marlon Brando

content with simply learning his lines and playing the character as written or directed, the actor became the author of his portrayals. He maintained the view throughout his life that actors cannot achieve greatness without holding a point of view about society, politics, and personal ethics. This has been reflected both in the characters that he has chosen to play (rebels on the fringes of society) and in the shadings that he has brought to them (ethical conflicts about living within or outside the law).

This philosophy was initially ingrained in Brando through his stint at New York's Actor's Studio where he studied with Elia Kazan and Stella Adler, who taught him “The Stanislavsky Method,” a style of acting in which the performer internalizes the character he is playing to literally become one with his subject. This was considered a major revision of classic acting styles during the 1950s. Before The Actor's Studio, performers externalized their characters, merely adopting the physical features and gestures conducive to portraying them. Up-and-coming actors including Brando, Paul Newman, and James Dean shocked traditional actors and theater critics with the new style, but there was no argument that it was effective, as Brando was selected Broadway's most promising actor for his role in *Truckline Café* (1946).

As early as his first motion picture acting stint in Fred Zinneman's war film *The Men* (1950), Brando prepared for his part as a wheel chair-bound veteran by spending a month in a hospital viewing first hand the treatment and experiences of paraplegics. Based on his observations, he played his character as an embittered social reject straining against the restraints of his daily existence. From this point on, his performances came to symbolize the frustrations of a post war

generation of Americans trying to come to terms with a society that had forgotten them.

His subsequent characters, including Stanley Kowalski in *Streetcar* and Terry Molloy in *On the Waterfront*, to cite two, were literally drawn from the ash heap of society. Brando's interpretation of the two men's speech patterns—though decried by critics as mumbling—actually conveyed a hint of innate if not animalistic intelligence as well as a suppressed power which threatened to erupt in violence. The force of this power is best seen in *The Wild One*, in which Brando plays Johnny, the rebellious leader of an outlaw motorcycle gang that takes over a small town in Northern California. Based on an actual 1947 incident in which a gang vandalized the town of Hollister, California, over the Fourth of July weekend, the story was the perfect vehicle for Brando to display his menacing, barely-controlled rage. When Brando is asked what he is rebelling against, he responds with the now famous, "What have you got?"

His rage seems more compelling when played against the overt violence of the other bikers because he appears to be so angry that he can't find the words. The audience dreads what will happen when he finally lets go. The interesting thing about the characterization is the fine line that Brando is walking. He is at once the protagonist of the film and, at the same time, potentially the villain, reminiscent of Humphrey Bogart's ambivalent Duke Mantee in *The Petrified Forest* (1936). As long as the violence bubbles beneath the surface, it is possible for the Brando character to be both sympathetic and menacing at the same time, as was Stanley Kowalski in *Streetcar* and the young Nazi officer in *The Young Lions* (1958).

Brando's interpretation marked a turning point in American films and effectively launched the era of the "rebel." Following the film's 1954 release, a succession of young outlaws appeared on the screen: James Dean in *Rebel Without a Cause* (1955); Elvis Presley in *Jailhouse Rock* (1957) and a string of low budget biker films. Even Peter Fonda's hippie rebel character in 1969's *Easy Rider* and Charlie Sheen's rebel pitcher in 1989's *Major League* can trace their roots back to Brando's performance.

In his more finely modulated performances, the violence is translated into a brooding passion that is inner directed and reflects his characters' disillusionment with having whatever idealism and ideological purity they began with tempered by a reality that they are powerless to control. This is the Brando of *Viva Zapata*, *The Godfather* (1972), *Last Tango in Paris* (1972), and *Quemada!* (1969). In the first three, he is a man living outside the system who is battling in his own way to preserve his manhood and to keep from being ground beneath mainstream society's rules. In the final film, he is a man who has lost whatever idealism and freedom he once maintained and has learned that in order to survive he must not only play by but enforce the rules even though he is unhappy doing so.

In *Zapata*, Brando confronts the dilemma of an individual torn between spontaneous rebellion against injustice versus a full scale revolution to promulgate an abstract ideal. His Zapata is a contradictory character; on one hand full of zeal to right the wrongs that the government has done to the people and fighting for agrarian land reform; on the other, ill at ease with the larger issues of social reform and the institution of a new system of government. The character's inner naiveté is revealed in one particularly sensitive scene preceding Zapata's meeting with President Madero in which he confides to his new bride that he is ill at ease because he does not know how to read. The two sit on the edge of the bed and she begins to teach him in one of the most emotional moments in the film. This scene is reminiscent of Johnny's attempt at making love to Kathie in *The Wild One* in which

he displays a conflicted vulnerability and allows the woman to take charge.

This fundamental contradiction in Brando's characters is evident in his depiction of Don Corleone in *The Godfather*, in which he presents a Mafia chieftain who is comfortable killing men who oppose him and yet can express the deepest tenderness toward the downtrodden and those that he loves. Corleone is no less of a rebel than Zapata. Living on the outskirts of a system that he routinely circumvents for profit and, in a strange way, to achieve justice for the lower echelons of society, he is still, at heart, a rebel. Brando carries this portrayal a step farther in *Last Tango in Paris* when his depiction of Paul not only reveals a man's internal conflicts but actually questions the idea of animal masculinity that typified his characters in the 1950s.

Yet, between his dominant performances in the 1950s and what many consider to be his re-emergence in 1972, his career was sidetracked, in the opinion of many critics, by some dubious roles during the 1960's. Such films as *One Eyed Jacks* (1961), *Mutiny on the Bounty* (1962), *The Ugly American* (1962), *The Chase* (1966), *Reflections in a Golden Eye* (1967), and *A Countess from Hong Kong* (1967), however, still indicate his concern for social injustice and display his characteristic shaping of his characters to reveal the basic conflicts inside all men.

In what a number of film scholars consider to be Brando's real renaissance, 1969's *Quemada!* (*Burn*), directed by Italy's revolutionary filmmaker Gilo Pontecorvo, he gave what may arguably be his finest performance as a conflicted anti-revolutionary. In his previous film, *Battle of Algiers* (1965), Pontecorvo established a film tantamount to a textbook both for initiating and defeating terrorism. But in *Burn*, through the character of British Governor Sir William, Pontecorvo establishes the premise and the practice for effecting a revolution and at the same time shows why it could never succeed. Brando's performance as a man who, as a youth, shared the idealism and concepts of social freedom promulgated by the revolutionaries, but who now knows why such movements must necessarily fail, is a tour de force. He comes across as a man who is still a rebel but who is also aware of the path of military history. Emotionally he is storming the barricades but intellectually he knows what the inevitable outcome will be. On the latter level, his manner reflects the attitude of his earlier character, Major Penderton (in *Reflections*), but on the former level he is the emotional voice crying out to the deaf ears of imperialists as in 1963's *The Ugly American*.

Brando's social sympathies can be seen in his own life as well. For example he had an American Indian woman pick up his second Oscar for the *Godfather* and make some remarks about the treatment of native Americans in the United States. He lives outside of the Hollywood milieu, sometimes in the South Pacific working on environmental concerns, other times in the San Fernando Valley. He works only infrequently and expresses a disdain for the type of material currently being produced in Hollywood, although he does emerge every so often for outrageous sums of money if a role that interests him presents itself. He usually imbues these characters with qualities and social concerns that were not in the original scripts and tends to play them a bit "over the top" (see *Superman* [1978] and *Apocalypse Now* [1979]). Yet, he is also not above poking fun at himself as he did in 1990's *The Freshman*, in which he reprised his Don Corleone role, albeit in a satirical manner.

Marlon Brando is one of the few actors of his generation whose entire body of work—both good performances and those of lesser

impact—reflect his social concerns, his celebration of the downtrodden, and his examination of the nature of man and the exercise of power. In this respect, he is a true auteur in every sense of the word, shading all of his portrayals with the contradictions inherent in the individual and in society itself. As Mark Kram stated in a November, 1989, *Esquire* article: “there are people who, when they cease to shock us, cease to interest us. Brando no longer shocks, yet, he continues to be of perennial interest, some of it because of what he did on film, some of it because he resists definition, and maybe mostly because he rejects, by his style of living and his attitudes, much of what we are about as a nation and people. He seems to have glided into the realm of folk mystery, the kind that fires attempts at solution.”

—Steve Hanson

Brat Pack

A term that describes a bunch of young upstarts in any industry, the Brat Pack was first used in the 1980s to refer to a group of actors that included Molly Ringwald, Judd Nelson, Ally Sheedy, Andrew McCarthy, Emilio Estevez, Anthony Michael Hall, and Rob Lowe. Honorary Brat Pack members were Demi Moore, Kiefer Sutherland, Mare Winningham, Charlie Sheen, John Cryer, Christian Slater, Robert Downey, Jr., James Spader, John Cusack, Eric Stoltz, Matt Dillon, C. Thomas Howell, and Matthew Broderick. The name is a play on the Rat Pack, a term used for the 1960s Vegas clique of Frank Sinatra, Dean Martin, Sammy Davis, Jr., Peter Lawford, and Joey Bishop.

The den mother of the Brat Pack was writer/director John Hughes, who changed the teen film genre forever. Not content to

leave the celluloid teenage experience at lookin'-to-get-laid comedies, Hughes explored the premise that high school life could be serious and harrowing, and that teenagers were not just a bundle of walking hormones. It was no accident that this became his oeuvre in the 1980s, a decade classified by obsession with money and status. Parents in Hughes' films were often portrayed as well-off but absent, too busy working to notice what was really going on with their kids, who had to learn the important lessons on their own. In Hughes's films, as in Steven Spielberg's, adults were almost always the bad guys. White, middle-class teenage angst, set mostly in the suburbs surrounding Chicago, became the vehicle through which Hughes chastised the confusing values of this superficial decade. And he used a company of young actors, most notably the crimson-tressed Ringwald, to explore this angst.

Sixteen Candles, *The Breakfast Club*, and *Pretty in Pink* was Hughes' Ringwald trilogy. In *Sixteen Candles* (1984), Samantha (Ringwald) is pursued by a geek (Hall), lusts after a hunk (Dillon), and worst of all, her whole family forgets her sixteenth birthday. The slightly heavier *Pretty in Pink* is about Andie (Ringwald), a girl from the wrong side of the tracks who falls for “richie” Blane (McCarthy). Blane's snotty friend Stef (Spader) tells him to stay away from Andie, whom he calls a mutant. The rich and the poor are mutually prejudiced against each other, and the poor are portrayed as the better people. Andie's oddball friend Duckie (Cryer), doesn't want Andie with Blane either, but that's mostly because he's in love with her. Blane finally takes the risk and goes for Andie, after listening to his snobby friends and their values for too long. The original script called for Andie to end up with Duckie, but Hughes thought that such an ending would send the message that the rich and the poor really don't belong together.

The Breakfast Club (1985) was the definitive Brat Pack movie; it focused on the interactions of five high-school students who are stuck in all-day Saturday detention. Each of the students represents a different high school clique. The popular, stuck-up Claire (Ringwald), the princess, and Andy (Estevez), the athlete, might hang out together, but normally they wouldn't associate with smart, nerdy Brian (Hall), the brain, compulsive liar and weirdo Allison (Sheedy), the basket case, and violent, sarcastic Bender (Nelson), the criminal. As the movie unfolds, the students fight and they bond, leaving their stereotypes behind and growing closer together. Face-value judgments are rejected for truer understanding because the students take the time to know each other, something they wouldn't do in the high school hallways. Hughes uses their interactions to explore the universal teen anthem “I'm not gonna be anything like my parents when I grow up!” and to reject the superficial classifications that adults put on teens.

What kind of adults will these angst-ridden teenagers grow into? The answer could be found in a film that wasn't from Hughes (the director was Joel Schumacher), but could have been, *St. Elmo's Fire*, the story of an ensemble of overprivileged recent Georgetown University grads trying to adjust to life and disillusionment in the real world. *St. Elmo's Fire* featured Nelson, Sheedy, and Estevez (probably relieved to be playing closer to their ages) as well as McCarthy, Moore, and Lowe.

For a while, Hollywood was on the lookout for any film featuring an ensemble cast of pretty young men and women. Thus moviegoers were treated to *Three Musketeers*, with Sutherland and Sheen, and *Young Guns*, a western with Sutherland, Sheen, and Estevez, among others. But real Brat Pack movies had to include that honorary Brat Pack member, angst. When these actors approached the

The Brat Pack as they appeared in the film *St. Elmo's Fire*: (from left) Ally Sheedy, Judd Nelson, Emilio Estevez, Demi Moore, Rob Lowe, Marc Winingham, and Andrew McCarthy.

age of thirty (in the early 1990s), the Brat Pack wore thin. None of the principal Brats have been able to score as well separately as they did as a youthful, angst-ridden ensemble.

—Karen Lurie

Brautigan, Richard (1935-1984)

Author of the widely popular novel *Trout Fishing in America*, Richard Brautigan was a countercultural hero in the United States in the 1960s. Although he never aligned himself with any group,

Brautigan, with his long hair, broad-brimmed hat, wire-rim glasses, and hobnail boots, became a hippie icon comparable during his generation to Jack Kerouac and John Lennon.

Brautigan was born on January 30, 1935, in Tacoma, Washington. He moved to San Francisco in the mid-1950s where he met Allen Ginsberg and Lawrence Ferlinghetti and became loosely associated with the Beat poetry movement. In the 1960s, he wrote and published his first three novels, which would be his most popular: *A Confederate General from Big Sur*, *Trout Fishing in America*, and *In Watermelon Sugar*.

Trout Fishing in America was by far the most enduring and important of these. Published in 1967, it went through four printings before being reissued as mass paperback by Dell and selling two million copies. It was a favorite with college students, and Brautigan developed a cult following. Written in short, self-contained chapters, the book had almost nothing to do with trout fishing and was deceptively easy to read. It was structured such that the reader could open to any page and still enjoy and understand the diary-like ruminations. Some said that Brautigan was to literature what the Grateful Dead was to music—enjoyable while on dope.

Because of the youth of his fans and his status among the counterculture, some critics suggested that Brautigan was a passing fad. Like Kurt Vonnegut and Tom Robbins (who alludes to *Trout*

Fishing in his first novel, *Another Roadside Attraction*), Brautigan was a writer of his time, sometimes even a writer of his “instant.” He was the quintessential 1960s writer, sometimes dismissed as dated and insubstantial. To one reviewer, he was “the last gasp of the Beat Generation,” but others believed him to be an authentic American literary voice.

Between the 1960s and the early 1980s Brautigan produced ten novels, eleven books of poetry, a book of short stories, and *Please Plant This Book*, a set of poems sold with seed packets. Many of his books played with and parodied mainstream genres, with jokey titles including *The Abortion: An Historical Romance*, *The Hawkline Monster: A Gothic Western*, and *Dreaming of Babylon: A Private Eye Novel*. In his prose, his humor and childlike philosophies often masked deeper themes of solitude and despair, and his poetry was characterized by offbeat metaphors—comparisons of snow to washing machines, or sex to fried potatoes.

Brautigan was poet-in-residence at California Institute of Technology from 1966-67, but in the early 1970s, he left California for Montana. There he led a hermit-like existence, refusing to give interviews and generally avoiding the public for a decade. His later novels were financial and critical failures, and he had a history of drinking problems and depressions. In 1982, his last book, *So the Wind Won't Blow It All Away*, was published. Two years later, at the age of forty-nine, Brautigan apparently committed suicide—he was found in October of 1984 with a gunshot wound to the head.

His casual, innovative style was widely influential, prompting one critic to say that in the future, authors would write “Brautigans” the way they currently wrote novels. Critics waited for the Brautigan cult to fade, but it was still present at the end of the twentieth century. A folk-rock band called Trout Fishing in America formed in 1979 and was still active after twenty years, and a Brautigan-esque literary journal, *Kumquat Meringue*, was founded in 1990 in Illinois and dedicated to his memory.

Breakfast at Tiffany's

Paramount Pictures' release of *Breakfast at Tiffany's* in 1961 solidified the cosmopolitan image of Audrey Hepburn and solidified one of the most enduring fashion trends: the little black dress. The movie was based closely on Truman Capote's 1959 short novel by the same name, which most critics called Capote's best work.

The story adeptly portrays the glamorous romantic illusions of Holly Golightly, a young woman travelling in search of a perfect home. She is so driven by her quest that she refuses to name her cat until she finds a home. But her inability to resolve the lingering issues of her past keeps her from finding peace. Only while looking through the window of Tiffany's jewelry store does Holly feel a sense of calm.

Audrey Hepburn as she appeared in the film *Breakfast at Tiffany's*.

Most films about young women, in the early 1960s, portrayed them as living under parental influences until they were married. *Breakfast at Tiffany's* broke that mold and showed Holly as a young woman living on her own the best way she could, as an escort to men she referred to as “rats.” While Capote imagined Marilyn Monroe as the perfect actress for the part because her troubled past closely reflected the turmoil in the life of his character, Paramount Pictures instead cast Audrey Hepburn for the part and downplayed the dark past of the character. In doing so, the film heightened the dramatic importance of Holly's past and allowed Hepburn to bring a sense of mystery to her seemingly flighty character.

Audrey Hepburn's acting was not alone in effecting the romantic qualities of this film. Dressing Holly Golightly in sleeveless black shifts, big black hats, and large black sunglasses, fashion designer Givenchy made the little black dress—a standard cocktail dress since the 1920s—an essential component of stylish women's wardrobes. And Audrey Hepburn inspired Henry Mancini to write the score to “Moon River,” the movie's sentimental theme song. Johnny Mercer wrote the lyrics, and the song won two Academy Awards. By the 1990s, *Breakfast at Tiffany's* had long since been considered a classic film and remained the film most associated with Audrey Hepburn's portrayal of a cosmopolitan and youthful romantic sensibility.

The Breakfast Club

The Breakfast Club, director/script writer John Hughes' 1985 film about five teenagers coping with the difficulty of crossing boundaries and connecting in high school, set the tone for coming of age films in the 1980s, and catapulted Hughes into the major filmmaker chronicling the problems of a young America in the Reagan years. While lacking in racial and sexual diversity, *The Breakfast Club* tackled issues of self-image, drug use, sex, and social acceptance, as well as the stratification between rich and poor. *The Breakfast Club* also launched the 1980's "brat pack" of marketable actors, Emilio Estevez, Ally Sheedy, Molly Ringwald, Judd Nelson, and Anthony Michael Hall.

—Andrew Spieldenner

Breast Implants

Between one and two million women have breast implants. Before 1992—when the controversy over possible side effects made world headlines—about 150,000 women received implants annually, and since 1994 about 70,000 women a year undergo implantation. About one-fifth of all implant operations are performed for reconstructive purposes following mastectomies, with the remaining 80 percent for cosmetic purposes. The two most common types of implants are silicone and saline, silicone being associated with the greater number of health risks. Few objects are more emblematic of the male obsession with the female breast and the sacrifices women are willing to make in order to live up to the male ideal, with thousands of women now suffering ill effects from having undergone the operation. Some blame the mass media—and even the Barbie doll, which if life-size would measure 40-18-32—for giving women a false self-image. The popularity of implants has alternatively been reviled for and praised for such phenomena as "Penthouse" magazine, the Hooters restaurant chain, and the television show *Baywatch*, and has spawned such backlash products as "Perfect 10" magazine (advertised as bringing you "The world's most naturally beautiful women, NO IMPLANTS!") and the "Playboy" version, "Natural Beauties" (advertised as "a silicone-free zone!").

Derived from sand and quartz, silicone was developed in the early 1940s, and its applications ranged from sealant and lubricant to infant pacifiers and Silly Putty. Immediately after World War II, Japanese cosmetologists began experimenting with ways to enlarge the breasts of Japanese women, mainly prostitutes, because it was known that the U.S. soldiers who were occupying the country preferred women with breasts larger than those of most Japanese

women. The practice of injecting breasts with silicone was soon exported to the United States and, by 1965, more than 75 plastic surgeons in Los Angeles alone were injecting silicone. Topless dancer Carol Doda placed the procedure in the national psyche when she went from an average 36-inch-bust go-go dancer to a 44-inch-bust superstar. But many of the 50,000 American women receiving these injections were soon experiencing health problems, including at least four deaths. In the mid-1960s, the Food and Drug Administration (FDA) defined silicone as a "drug," so they could begin regulating its use. But at the time, medical devices were not regulated by the FDA, and Drs. Frank Gerow and Thomas Cronin came up with the idea of encasing saline inside a silicone shell, with a Dow Corning public relations representative convincing them that filling the bag with silicone gel would more closely duplicate the feel of the female breast. The doctors designed their first breast implant in 1961, they surgically implanted it in 1962, and in 1963 Cronin introduced the implant to the International Society of Plastic and Reconstructive Surgeons (ISPRS), claiming that silicone was a totally inert substance. Cronin patented the device and assigned the rights to Dow Corning, which launched its breast implant business that same year, offering eight sizes, ranging from mini to large extra-fill. Over time, improvements in breast implants evolved, along with psychological justifications for their use; study after study claimed that breast enhancement improved everything from self-esteem to marital bliss. At one point, ISPRS proclaimed small breasts to be deformities that are really a disease—"micromastia"—"which in most patients result in feelings of inadequacy, lack of self-confidence, distortion of body image and a total lack of well-being due to a lack of self-perceived femininity." By proclaiming small breasts to be a disease, there was always the outside chance that insurers would start covering the operation.

In the late 1970s, the medical literature started reporting serious health complications from leaking and ruptured implants. In 1988, the FDA reclassified implants as medical devices requiring the strictest scrutiny, giving implant manufacturers 30 months to provide safety data. Document discovery in a 1991 jury trial, *Hopkins v. Dow Corning Corp.*, produced reams of internal documents—including some "smoking guns" implying that the manufacturers knew of and concealed the health risks associated with their product. When the private watchdog organization Public Citizen won a suit against Dow Corning and the FDA for these and other documents, they became available to plaintiffs' attorneys across the country, and the litigious floodgates opened, with thousands of suits being filed, including several class action suits. In January 1992, FDA Chairman David Kessler declared a moratorium on silicone-gel breast implants. By the end of 1993, more than 12,000 women had filed suit, and by mid-1998, about 136,000 claims had been filed in the United States against Dow Corning alone. As the 1990s ended, breast implants remained symbolic of male fantasies and distorted female self-image, but also had come to symbolize the bias of supposedly objective scientific results, with several manufacturer-financed scientific studies concluding that silicone breast implants have no harmful effects.

Brenda Starr

Sixty years a journalist, red-haired Brenda Starr began her career as a funny paper version of the pretty girl daredevil reporter who was a staple of movies and radio over a half century ago. Created by a woman named Dale Messick, *Brenda Starr, Reporter* made its first appearance in 1940. It was a combination of newspaper melodrama and frilly romance. There had been female reporters in the comic sections before her, notably Jane Arden, but Brenda seemed to epitomize the type and she managed to outlast all the competition.

The strip owes its existence in part to the *Chicago Tribune's* uneasiness about the phenomenal success of comic books. The advent of Superman, Batman and then a host of other costumed heroes had caused hundreds of adventure-based comic books to hit the newsstands and, in many cases, to thrive. To offer its younger readers something similar that would hopefully boost sales, the *Trib* created a *Chicago Tribune Comic Book* that was tucked in with the Sunday funnies as of the spring of 1940. On June 30, 1940 Messick's strip was added to the uncertain mix of reprints and new material. The only feature to become a palpable success, it was eventually transferred to the regular *Trib* lineup. Captain Joseph Medill Patterson, who headed up the Chicago Tribune-New York News Syndicate and was the publisher of the *News*, disliked women cartoonists in general and *Brenda Starr* in particular and the strip never ran in his paper until after his death. He was not opposed, however, to his syndicate selling to as many other newspapers as possible.

Feisty and pretty, Brenda covered all sorts of stories for her paper and that put her in frequent danger from crooks, killers, and commen. But her job also introduced her to a succession of handsome, attractive, though not always suitable, men. Most notable among them was the mysterious Basil St. John, who wore an eye patch, raised black orchids, and appeared frequently over the years until he and Brenda finally were wed.

Brenda's managing editor was a fellow named Livewright and her closest friend on the paper was a somewhat masculine lady reporter named Hank O'Hair. For her feminine readers Messick included frequent paper dolls in the Sunday page. Messick apparently also drew all the fashionable clothes her characters wore, but for the action stuff and such props as guns, fast cars, and shadowy locales she relied on assistants. John J. Olson worked with her for several decades.

Brenda had a limited merchandising life. The strip was reprinted in Big Little Books as well as comic books, but there was little other activity. She was first seen on the screen by the Saturday matinee crowd. Columbia Pictures released a 13-chapter serial in 1945, starring B-movie veteran Joan Woodbury as the daring reporter. Roughly four decades later a movie was made with Brook Shields as Brenda. The film, which Leonard Maltin has dubbed "a fiasco," was kept on the shelf for three years before being released. When Messick

was retired from the strip, Ramona Fraddon, who'd drawn such comic book heroes as Aquaman, took over as artist. More recently June Brigman assumed the drawing.

Brice, Fanny (1891-1951)

One of the funniest women of her (or any other) day, singer and comedienne Fanny Brice starred in the *Ziegfeld Follies* for thirteen years becoming, in the process, one of America's most famous women. Combining innate comic talent with a great singing voice, Fanny was a vaudeville star when still a teenager. After signing with Florenz Ziegfeld at nineteen, Brice performed in all but two of the *Ziegfeld Follies* from 1910 to 1923. With her signature song, *My Man*, Brice went on to star on Broadway; she also appeared in eight films. But she was best known around the world as radio's *Baby Snooks*. Married to gambler Nick Arnstein and producer Billy Rose, Brice's life became the subject of the Broadway musical and 1968 film, *Funny Girl*, and its 1975 sequel, *Funny Lady*, starring Barbra Streisand. Her comic legacy—always a lady, Brice nonetheless shocked her audiences with her raunchy humor—is carried on by such contemporary comediennes as Joan Rivers and Bette Midler.

Brideshead Revisited

The lavish adaptation of Evelyn Waugh's novel *Brideshead Revisited* was fashioned by Granada Television and first aired on the British channel, ITV, in 1981. Comprising 11 episodes of some 50 minutes each, it chronicles the relationship of a young man with the aristocratic, English Marchmain family between the World Wars. The adaptation proved popular on both sides of the Atlantic; it appeared in the United States under the auspices of PBS in 1982 to great acclaim. Praised for its production values and aura of quality, the series is credited with ushering in a number of heritage England screen representations that appeared during the 1980s. These heritage representations include *The Jewel in the Crown* and *A Room with a View*. Like *Brideshead*, they are distinguished by a nostalgic tone, elegant costumes, and stately locations depicted via lush photography. *Brideshead* and other heritage representations were challenged by cultural critics in the 1990s as being conservative and retrograde.

Bridge

Bridge, a competitive four-person card game, began in the late nineteenth century as a version of partnership whist which incorporated bidding and suit hierarchy. First called bridge-whist, by the turn of the twentieth century its name had been shortened to simply bridge, and was a popular American high-class club game.

Contract bridge, the most commonly played version, was invented by millionaire Harold S. Vanderbilt in 1925—he made technical improvements over a French variety of the game. Soon after this and into the 1930s, bridge became a faddish leisure activity of the upper class in Newport and Southampton.

By the 1950s card games of all kinds were popular forms of leisure that required thinking skills, incorporated competition, encouraged sociability, and demanded little financial outlay. Bridge was no exception and the game became a popular pastime for the upper and upper middle classes. Although daily bridge columns appeared as syndicated features in hundreds of newspapers, most contract bridge players, in fact, tended to be older, better educated, and from higher income brackets than the general population. Through the decades the game continued to be popular and according to the American Contract Bridge League, about 11 million people played bridge in the United States and Canada in 1986.

The game itself was played with two sets of partners who were each dealt 13 cards from a regular deck. The cards ranked from ace high to two low, and the suits were also ranked in the following way, from lowest to highest: clubs, diamonds, hearts, spades, and no trump. The bidding, or "auction" before the actual play of the cards determined the "contract"—optimally, the highest possible tricks that could be won by the most deserving hand, and the designated trump suit. This pre-play succession of bids among the players was as important as the play itself, and served also as an opportunity for players to signal to their partners the general makeup of their hands. The play itself required people to be alert, to keep track of cards played, and to continually refine their strategies as tricks were taken, making it an intellectual activity regardless of whether it was "social" or "duplicate" bridge.

Social, or party bridge, was a casual version of the game that allowed people to converse during play, and had more relaxed rules about proper play and etiquette. Very often people would throw bridge parties, popular especially from the 1950s to the 1970s, as a way to show their hospitality but with little obligation to bear the burden of socializing for an entire evening: playing bridge enabled people to engage in small talk while the intellectual requirements of the game gave people an excuse not to converse if they were not so inclined. Other forms of social bridge were practiced by local bridge clubs, informal groups that met once or twice a week and played for small stakes—usually between \$1.50 and \$3.00 per session. It was common for members of these bridge groups and those who engaged

in regular games of party bridge, usually husbands and wives (who often chose not to play as a team in order to avoid marital tension), to alternate their hosting obligations, establishing reciprocal social relations while setting up informal games of competition. People enjoyed this form of entertainment because it was relaxing, enjoyable, somewhat refined, and inexpensive.

While this form of bridge largely had the reputation of being high-class and a bit priggish, with people believing that only rich white older women played the game as they sat around nibbling crustless sandwiches in the shapes of hearts, spades, clubs, and diamonds, bridge actually had a large influence on the general population. College students took to playing less exacting forms of the game that also employed bidding systems and suit hierarchies, including hearts, spades, euchre, and pinochle.

In contrast, competitive bridge was more combative. People earning "master points" (basic units by which skill was measured according to the American Contract Bridge League—300 points gained one "Life Master" status) would join tournaments with similarly-minded serious bridge players. The most common form of competitive bridge was "duplicate," a game in which competing players at different tables would play the same hand. In this game it was not enough to just win a hand against one's immediate opponents, but it was also necessary to have played the same hand better than rivals at other tables. Competitive bridge players commonly scoffed at social bridge, deeming it too casual a game that allowed for too much luck and chance.

As with many other forms of leisure activities and hobbies, bridge allowed a vast number of Americans to engage in an enjoyable activity on their own terms. While there were basic rules to bridge that defined it as an identifiable game, people incorporated it into their lives in radically different ways. Social players used the game as an excuse to gather among friends and relatives, making games regular (weekly or monthly) occurrences that encouraged group camaraderie. In contrast, duplicate bridge players who sought out more competitive games, often in the form of tournaments, took the game much more seriously and thought of it as a test of their intellect rather than an innocuous pastime.

The Bridge on the River Kwai

As Colonel Nicholson's captured British troops march into the Japanese P.O.W. camp on the River Kwai, they whistle the jaunty "Colonel Bogey March." Nicholson (Alec Guinness) soon enters into a battle of wills with the camp commandant, Colonel Saito (Sessue Hayakawa). Nicholson wins that battle and assumes command of Saito's chief project, the construction of a railroad bridge over the river. Meanwhile, a cynical American sailor, Shears (William Holden), escapes from the camp but is forced to return with a

Jack Hawkins (left) and William Holden (center) in a scene from the film *The Bridge on the River Kwai*.

commando unit on a mission to blow up the bridge. *The Bridge on the River Kwai* (1957) critiques notions of pride, honor, and courage with penetrating character studies of Nicholson, Saito, and Shears. In the end, Doctor Clipton (James Donald) looks on the devastation and offers the final assessment: “Madness!”

The Bridges of Madison County

The Bridges of Madison County, first a book and then a film, remains controversial in popular culture, with people divided into

vehement fans and foes of the sentimental love story. Written in 1992 by novice Midwestern writer Robert James Waller, the plot revolves around two lonely, middle-aged people—an Iowan housewife and a worldly photographer—whose paths cross, resulting in a brief but unforgettable love affair. A subplot opens the story, with the grown children of the female character, upon her death, finding a diary recounting the affair; thus, they get a chance to learn more about who their mother really was and her secret life. The book, residing somewhere between romance, literature, and adult fairy tale, holds a fascination for people because of the popular themes it explores: love, passion, opportunity, regret, loyalty, and consequence. As a result, the book has been translated into 25 languages; it topped *Gone with the Wind* as the best-selling hardcover fiction book of all time, and made its author, previously an unknown writer, into an overnight success. Finally, in 1995, it was made into a film (scripted by Richard LaGravenese) directed by Clint Eastwood, who temporarily shed his “Dirty Harry” persona to play the sensitive loner who woos a small-town housewife, played by Meryl Streep.

Other factors have contributed to the worldwide dissemination of *The Bridges of Madison County*. The simplistic prose and maudlin story have sparked a debate in and out of writer’s circles as to whether the book should be characterized as “literature” or “romance.” Some say, in the book’s defense, that the prose style should not be

judged harshly because the book is really story-driven and its themes, although trite, are universal. Yet others say that it is romance fiction disguised and wrongly praised as literature. The author says he prefers “ordinary people, the kind you meet in a checkout line at the hardware store.” He chooses moments in which “the ordinary can take on rather extraordinary qualities.” Peculiarly, the prose, when combined with the story, does seem to blend the ordinary with the extraordinary. Because of its enormous popularity, more people have read the book than if it had simply been categorized as a “romance,” and that has helped to incite an ongoing and larger critique about how the book and its author should be perceived. The film also generated a similar, divided response in people: just as many seem to cry as well as laugh at its sad ending.

No one can deny that Robert James Waller has managed to present a story that deals with engrossing themes. People grow up with ideas of romantic love, nourished—especially in the United States—by the media and visions of celebrities engaged in storybook romances. Due to the uncanny nature of love, there is much room for people to fantasize, and fantasies are not usually practical. Because it is questionable just how much control individuals have over their lives, fate and destiny are appealing and common musings. Romantic love has dominated the subject matter of songs and stories for millennia, and continues to do so. What makes a story like the one in *The Bridges of Madison County* resonate is its attempt to portray the choices that people must make regarding their happiness, and the idea that fate can bring two unlikely people together.

One of the main characters—the woman—commits adultery, which is always a complicated and dramatically satisfying issue. In her case, she is an Italian immigrant who married an American and ended up in a small town in Iowa. She has kept her disappointment to herself because she loves her family, but she feels compromised, being more sophisticated than she lets on. For her, meeting Clint Eastwood’s character and hearing stories of his travels reawakens her yearning for a more worldly life. Temporarily alone while her family is away, she is able to succumb to emotions that have been dormant in her. Both experience a passion requited on all levels—emotional and sexual—and end up falling powerfully in love. In the end, she chooses to stay with her husband (mainly because of her children), but does not feel guilty about having had the experience of the affair. He, in turn, walks away as well, respecting her choice and although they separate, their bond is present throughout their lives. The tragedy is complicated but satisfying (for dramatic purposes) in that although the reader wants the two to be together, people tend to be more attracted to yearning and regret (most everyone has an episode of lost love in their history) versus a happier ending; when people get what they want, it is often not as interesting.

Brill Building

The Brill Building, located at 1619 Broadway in New York City, was the center of Tin Pan Alley, New York’s songwriting and music publishing industry during the 1920s and 1930s. Although changes in the music industry ended the Tin Pan Alley era by 1945, in the late 1950s the Brill Building again emerged as the center of professional songwriting and music publishing when a number of companies gathered there to cater to the new rock and roll market. In the process, they created what has become known as the “Brill Building Sound,” a marriage of finely crafted, professional songwriting in the best Tin Pan Alley tradition with the youthful urgency and drive of rock and roll.

The most important and influential of these companies was Aldon Music, founded by Al Nevins and Don Kirschner in 1958 and located across the street from the Brill Building. Nevins and Kirschner sought to meet two crucial market demands that emerged in the late 1950s. First, the established music industry, represented by such record labels as Columbia, RCA, Capitol, and others, were surprised by the rapid rise of rock and roll, and by the late 1950s they were attempting to find a way to make rock music fit into the long-established Tin Pan Alley mode of music-selling, where professional songwriters wrote music for a variety of artists and groups. Secondly, these record companies, and even prominent upstarts such as Atlantic Records, had an acute need for quality songs that could become hits for their many recording stars. To meet these needs, Nevins and Kirschner established a stable of great young songwriters including Gerry Goffin, Carole King, Barry Mann, Cynthia Weil, Neil Sedaka, and Howard Greenfield, among many others. Often working in teams (Goffin-King, Mann-Weil, Sedaka-Greenfield), they churned out one hit after another for such groups as the Shangri-Las, the Shirelles, the Ronettes, the Righteous Brothers, and the Chiffons. Usually accomplished singers as well as writers, a few had hits of their own as performers, like Neil Sedaka with “Calendar Girl” and Barry Mann with “Who Put the Bomp.”

Working in close proximity on a day-to-day basis, these songwriters developed a common style that became the “Brill Building Sound.” Songs such as “Will You Love Me Tomorrow?” “Happy Birthday Sweet Sixteen,” “Then He Kissed Me,” and “You’ve Lost That Lovin’ Feeling,” and hundreds of others, spoke directly to teenagers, expressing their thoughts, dreams, and feelings in a simple and straightforward language that made many of these songs huge hits between 1958 and 1965. By assembling a team of gifted songwriters, Nevins and Kirschner brought the standards of professional songwriting to rock and roll music.

Aldon Music’s success prompted other companies and songwriters to follow. Among these other songwriters, the most prominent were Doc Pomus and Mort Schuman, who crafted such pop gems as “This Magic Moment,” “Save the Last Dance for Me” (both huge hits for the Drifters on Atlantic Records), and “Teenager in Love” (recorded by Dion and the Belmonts); and Jeff Barry and Ellie Greenwich, whose hits include “Da Doo Ron Ron” (a success for the Crystals) and “Baby I Love You” (a hit for the Ronettes), all on the Philles Label led by legendary producer Phil Spector.

The most successful challenge to the dominance of Aldon Music’s stable of writers came from Jerry Leiber and Mike Stoller.

Leiber and Stoller were actually precursors to Aldon Music, for they began writing hit songs in the rhythm and blues vein beginning in 1950. Although white, they had a true feeling for black rhythm and blues music, and they were responsible for a number of hits on Atlantic Records, one of the pioneer rhythm and blues labels. They later wrote a string of hits for Atlantic with the Coasters such as “Charlie Brown,” “Young Blood,” “Searchin’,” and “Poison Ivy.” They were also crucial in the creation of rock and roll, using their rhythm and blues sensibilities to write some of Elvis Presley’s biggest hits in the 1950s, including “Hound Dog,” “Jailhouse Rock,” and “Treat Me Nice.” They continued their success into the 1960s, adding to the larger world of Brill Building pop.

The “Brill Building Sound” was essentially over by 1965. With the arrival of the Beatles in 1964, the music industry underwent an important shift. Groups such as the Beatles were not simply great performers; they were great songwriters as well. As rock and roll matured as a musical style, its sound diversified as a wide variety of artists and groups began writing and performing their own music. As a result, the need for professional songwriting lessened, although it did continue in the hands of songwriters such as Burt Bacharach and Hal David, who became producers as well as songwriters in the later 1960s. The great songwriting teams also began to feel the constraints of what has been called “assembly-line” songwriting, and most eventually went their separate ways. Some had solo careers as performers, most notably Carole King, whose *Tapestry* album was a milestone in the singer-songwriter genre of the 1970s and one of the best selling albums of that decade.

The legacy of the “Brill Building Sound” transcends anything resembling an assembly-line. Despite the constraints of pumping out songs on a daily basis, these songwriters produced some of the most enduring rock and pop tunes that defined popular music in the early 1960s. Those songs are among the gems not only of popular music, but of American culture as well.

Bringing Up Baby

Though *Bringing Up Baby* was not a box-office success when released in 1938, it has since become a favorite of film critics and audiences. Directed by Howard Hawks, the film is an example of screwball comedy, a genre which emerged in the early 1930s. Known as a genre depicting “a battle of the sexes,” the films present independent women, fast paced dialogue, and moments of slapstick in absurd storylines that eventually lead to romance between the male

and female leads, in this case played by Katherine Hepburn and Cary Grant. Like most comedies, the film serves to critique society, particularly masculinity and class.

Brinkley, David (1920—)

As co-anchor of the landmark *Huntley-Brinkley Report* on NBC from 1956 to 1970, as well as a veteran reporter and news show host known for his low-key and witty style, David Brinkley is regarded as one of the most influential journalists in the history of broadcast news. When media historians name the pioneers of television journalism, Brinkley regularly joins the ranks of such notables as Edward R. Murrow and Walter Cronkite.

Brinkley was born on July 10, 1920, in Wilmington, North Carolina. The youngest of five children, Brinkley has described his relatives as a Southern family representing generations of physicians and Presbyterian ministers. His father was a railroad employee who died when Brinkley was eight. Because his siblings were older than him, the younger Brinkley was a loner who occupied himself with the prolific reading of books. At New Hanover High School, Brinkley joined the school newspaper staff, and seemed to apply himself academically only in English classes. After being encouraged by one of his teachers to go into journalism, Brinkley served as an intern at a local newspaper while he was in high school. He dropped out of high school in his senior year to take a job as a full-time reporter for the Wilmington paper.

Between 1940 and 1943, Brinkley tried his hand at a variety of jobs and activities, including serving in the United States Army as a supply sergeant in Fort Jackson, South Carolina; working as a Southern stringer for the United Press International; and being a part-time English student at Emory and Vanderbilt universities. Because of his strong writing ability, Brinkley wrote for UP’s radio wire. NBC was so impressed with his talent that the network hired him away from UP. His initial duties in Washington, D.C., were to write news scripts for staff radio announcers, but then expanded to doing journalistic legwork at the White House and on Capitol Hill.

Brinkley broke into the new medium of television in the 1940s, broadcasting reports at a time when radio was still the influential medium. As Brinkley once remarked, “I had a chance to learn while nobody was watching.” By the early 1950s, television had established itself as the prominent medium, with Brinkley providing reports on John Cameron Swayze’s *Camel News Caravan* from 1951 to 1956. Brinkley also gained notoriety for being among the NBC television reporters who discussed topical issues on the network series *Comment* during the summer of 1954. Critics lauded Brinkley for his pungent and economical prose style, his engaging demeanor, and his dry, sardonic tone of voice.

By the mid-1950s, television's popularity was spreading rapidly. A major point in Brinkley's career came in 1956 when NBC teamed him with Chet Huntley for political convention coverage that did surprisingly well in the ratings. This led to the development of the *Huntley-Brinkley Report*, placing the team at the forefront when television news changed from simply newsreading to information gathering. NBC took full advantage of the differences between the two anchormen, cross-cutting between Brinkley in Washington, D.C., and Huntley in New York City. While Brinkley's approach was often light-hearted and his delivery style was lively, Huntley's style was solemn and very deliberate. Ending each broadcast with "Goodnight, Chet . . . Good night, David . . . and Goodnight for NBC News," the program became a ratings leader. Brinkley received the prestigious Dupont Award in 1958 for his "inquiring mind sensitive to both the elusive fact and the background that illuminates its meaning." In addition, the *Huntley-Brinkley Report* won Emmys in 1959 and 1960, and in 1960 the team's political convention coverage captured 51 percent of the viewing audience. NBC also aired *David Brinkley's Journal* from 1961 to 1963, which earned the host a George Foster Peabody Award and an Emmy.

When Huntley retired in 1970 (he died four years later), NBC slipped in the ratings when it experimented with rotating between Brinkley and two other anchors in the renamed *NBC Nightly News*. In August of 1971, John Chancellor became sole anchor, with Brinkley for the following five years providing commentary for the news show. In June of 1976, Brinkley returned as a co-anchor of the *NBC Nightly News*, where he remained until October of 1979. In the fall of 1980, the network launched the weekly show *NBC Magazine with David Brinkley*, which failed to survive. On September 4, 1981, Brinkley announced he was leaving NBC in order to engage in more extensive political coverage, and two weeks later he was signed by ABC for assignments that included a weekly news and discussion show, political coverage for *World News Tonight*, and coverage of the 1982 and 1984 elections. The hour-long show, *This Week with David Brinkley*, debuted on Sunday morning November 15, 1981. Its format was a departure from typical Sunday fare, beginning with a short newscast by Brinkley, followed by a background report on the program's main topic, a panel interview with invited guests, and a roundtable discussion with correspondents and news analysts. Within less than a year, Brinkley's program overtook *Meet the Press* (NBC) and *Face the Nation* (CBS) in the Sunday morning ratings.

Brinkley remained at ABC until his retirement in 1998, with television journalists Sam Donaldson and Cokie Roberts named to host the Sunday morning program. Since retiring, Brinkley has published several nonfiction books and has appeared in commercial endorsements. Brinkley's impact on television journalism was far-reaching, spanning the dawn of TV news to the high-technology reporting of the late 1990s. Author Barbara Matusow summed up Brinkley's legacy by observing, "Brinkley mastered the art of writing for the air in a way that no one had ever done before. He had a knack for reducing the most complex stories to their barest essentials, writing with a clarity that may be unequaled to this day. In part, he wrote clearly because he thought clearly; he is one of the most brilliant and original people ever to have worked in broadcast news."
